Letter returned unclaimed from former office, Boston, Mass. Robt. Linn, president; Dr. C. A. B. Peters, vice-president; Geo. Tomkins, second vice-president; Geo. A. Ackler, secretary; M. V. Little, treasurer. Organized, 1907, under laws of Arizona, with capitalization \$10,000,000 shares \$1 par. Is said to have 2 groups of claims in Alaska, and is presumed to have some connection with the Alaska Amalgamated Copper Co., or to have secured lands from same.

**COPPER RIVER MINING CO. ALASKA.**

Office: 1347-25 Broad St., New York, N. Y. F. M. Bradshaw, president; Frank Conrad Helm, secretary and treasurer; preceding officers, Hon. Robt. Gwynne, Jr., and John Q. Denny, directors. A. J. Stewart denies that his brother, Hon. W. F. Bay Stewart, ever was a director, though the name was given by the secretary, Helm, who is a consummate liar and finished rascal. Capitalization, \$50,000,000. Lands claimed were 128 claims, area 2,360 acres, including the Bonanza group, which never was owned by the Copper River Mining Co. Lands, if any, are located about 185 miles inland, by trail, from Valdez, Alaska, having "plenty of wood and water, with coal in the vicinity," the timber being a sparse growth of spruce and cottonwood, and the coal being lignite of poor quality. The Copper River Mining Co. is a swindle, and its promoters should be in jail. Fully described Vol. IV.

**COPPER ROCK GOLD MINING & MILLING CO. COLORADO & WYOMING.**

Office: 105 North 7th St., St. Louis, Mo. Mine offices: Sunset, Boulder Co., Colo., and Encampment, Carbon Co., Wyo. H. Lee Servoss, president; Dan G. Kirshbaum, secretary and manager; John Wessels, superintendent.

Capitalization \$1,500,000, shares \$1 par. The Colorado property, 60 acres, in the Sugar Loaf district, near Sunset, has a 300' shaft, showing ores giving good assay values in copper, gold and silver. The Wyoming property, 6 claims, 120 acres, known as the Copper Link, has shafts of 50', 100' and 285', showing a little leached copper ore, carrying up to \$4 gold per ton. Wyoming lands possibly sold.

**COPPER ROCK & GOLD QUARTZ MINING CO.****ARIZONA.**

Dead. Lands sold to Calumet & Boston Copper Co. Formerly at Bisbee, Cochise Co., Ariz.

**COPPER SECURITIES CO.****MONTANA.**

Office: 42 Broadway, New York, N. Y. F. Augustus Heinze, general manager. Organized July, 1905, under laws of Arizona, with capitalization \$10,000,000, shares \$10 par. Apparently is a subsidiary corporation of the United Copper Co., property being \$2,000,000 common stock of La France Copper Co., secured in exchange for same amount of common stock of Copper Securities Co. Reason for existence of company is not apparent.

**COPPER SELECTION SYNDICATE, LTD.****AUSTRALIA.**

Office: Broad Street House, London, E. C., Eng. Organized Aug. 22, 1902, under laws of Great Britain, with capitalization £15,000, in 14,000 ordinary £1 shares and 20,000 deferred shares, 1s. par. Property was options on sundry mining and smelting properties, in New South Wales. Moribund.

**COPPER SHARE SYNDICATE.****WYOMING.**

Office: 7 Union Court, Old Broad St., London, E. C., Eng. Walter Broomfield, secretary. Organized Jan. 9, 1906, under laws of Great Britain, with capitalization £5,000, shares £1 par, as Penn-Wyoming Copper Share Syndicate, Ltd., and name changed, March, 1906, to present title. Was promoted to place shares of the Penn-Wyoming Copper Co. in Great Britain.

**COPPER SHIELD MINING CO.****NEVADA.**

Letter returned unclaimed from former office, Salt Lake City, Utah. Mine office: Contact, Elko Co., Nev. Dr. C. I. Douglas, president; U. U. Hiskey, vice-president; J. A. DeValley, secretary and treasurer; preceding officers, C. R. Strock and H. M. Shields, directors. Organized, 1907, under laws of Nevada, with capitalization \$1,000,000, shares \$1 par. Lands, 11 claims, in the Salmon River district, showing ore assaying 3 to 56% copper, with gold and silver values.

**COPPER-SILVER MONTANA MINING CO.****MONTANA.**

Letter returned unclaimed from former office and mine, Helena, Lewis & Clark Co., Mont. Lands, in the Scratch Gravel district, just north of Helena, adjoining the Sacajewea Gold & Copper Mining Co., have a 350' shaft in oxidized copper ore. Idle.

**COPPER STAR MINING CO.****COLORADO.**

Dead. Eugene B. Estes was president, and Edwin Wallace secretary. Was a swindle that paid "dividends" while peddling stock. Formerly at Salida, Chaffee Co., Colo.

**COPPER STAR MINING CO.****UTAH.**

Mine office: Springville, Utah Co., Utah. T. Y. Shepherd, vice-president; T. L. Hatch, secretary and treasurer; T. T. Hatch, superintendent; preceding officers and Jas. H. Okey, directors. Organized 1908, under laws of Utah, with capitalization \$25,000, shares 2½ cents par.

**COPPER STATE MINING CO.****MONTANA.**

Mine office: White Sulphur Springs, Meagher Co., Mont. Geo. P. Wells, president. Lands, circa 15 miles northeast of White Sulphur Springs, have a 2-compartment 100' shaft, with crosscuts said to show a 12' vein of ore assaying 5% copper and 16% zinc, with small silver and gold values. Has a hoist and plans installing an air-compressor.

**COPPER STATE MINING CO.**

WYOMING.

Dead. Formerly at Encampment, Carbon Co., Wyo.

**COPPERTOWN MINING & SMELTING CO.**

CALIFORNIA.

Dead. Formerly at Hornitos, Mariposa Co., Cal. Fully described Vol. VI.  
**COPPER TRUST, LTD.**

Office: 20 Laurence Lane, London, E. C., Eng. Geo. Thompson, secretary. Organized Dec. 9, 1905, under laws of Great Britain with capitalization £50,000, shares £1 par. Apparently moribund.

**COPPER TRUST MINING CO.**Dead. In 1901 had an office in Plankinton Bank Bldg., Milwaukee, Wis.  
**COPPER & URANIUM MINING CO.**

IDAHO.

Office: Rexburg, Idaho. Henry Flamm, president; M. H. James, vice-president; Alfred James, secretary and treasurer; preceding officers and James Shail, directors. Lands, in the Hamilton district of Blaine county, Idaho, have a 125' shaft on a 10' contact vein between limestone and quartzite, said to show copper and uranium ores. Plans driving a 600' tunnel.

**COPPER VEIL MINING CO.**

WASHINGTON.

Dead. Formerly at Index, Snohomish Co., Wash.

**COPPER VENTURE SYNDICATE, LTD.**

Dead. Voluntarily liquidated, June, 1905. Formerly had an office at 10 St. Helen's Place, London, E. C., Eng.

**COPPER WORLD EXTENSION MINING CO.**

WASHINGTON.

Office: 503 New Hayden Bldg., Columbus, Ohio. Mine office: Loomis, Okanogan Co., Wash. Walter A. Boyle, president; Edw. H. Taylor, vice-president; Alfred F. Carman, secretary and treasurer; R. J. Thomas, superintendent; preceding officers, Samuel Bachtell and Clarence E. Ferree, directors. Organized Jan. 11, 1904, under laws of Washington, with capitalization \$1,500,000, shares \$1 par. Lands, 8 claims, area 160 acres, on Palmer Mountain, in the Wanapum Lake district, showing an ore body, estimated by company to be 100' to 300' in width, opened by a 300' two-compartment shaft, with south crosscut on the 210' level showing a 17' vein of chalcopyrite assaying circa 8% copper, 4 oz. silver and \$1.40 gold per ton. Has a steam plant with 2 hoists, good for 500' each, and a 5-drill air-compressor. Plans diamond drilling.

**COPPER WORLD GOLD MINING CO.**

WASHINGTON.

Office: care of Jerome L. Drumheller, Spokane, Wash. Mine office: Loomis, Okanogan Co., Wash. John Wentworth, superintendent. Lands, sundry claims on the apex of Palmer Mountain, lying between the Copper World Extension and Leadville mines, 4½ miles northeast of Loomis, showing a 100' gossan, with pyrite near surface and chalcopyrite at little depth. Has several shallow shafts and short tunnels, showing ore giving assay values of \$10 to \$15 per ton, in copper, gold and silver.

**COPPER WORLD MINING CO.**

CALIFORNIA.

Dead. Formerly at Manvel, San Bernardino Co., Cal. Described Vol. V.

**COPPER WORLD MINING CO.**

NORTH CAROLINA.

Dead. Merged, 1903, in Carolina King Mining Co. Formerly at Holloway, Person Co., N. C.

**COPPER WORLD MINING & SMELTING CO.**

WASHINGTON.

Dead. Succeeded by Copper World Gold Mining Co. Formerly at Loomis, Okanogan Co., Wash. Described Vol. IV.

**COPPER ZONE MINING CO.**

NEW MEXICO.

Dead. Lost lands. Formerly at Watrous, Mora Co., N. M.

**SOCIEDAD MINERA COQUIMBANA.**

CHILE.

Mine office: La Serena, Coquimbo, Chile. Property includes the Rosario, Socavon and other mines. Idle for some years.

**CORBIN CONSOLIDATED MINING CO.****MONTANA.**

Office: Butte, Mont. Mine office: Corbin, Jefferson Co., Mont. J. L. Meixell, F. L. Case, D. M. Armstead, H. K. Welch and M. J. Jenkins, directors. Organized 1908, with capitalization \$500,000, shares \$5 par. Lands, 4 claims, 1 held under bond and lease on Alta Hill, adjoining the Boston & Corbin, having a 405' tunnel cutting 3 veins, one showing auriferous and argentiferous copper ore of good average tenor.

**CORBIN MINE.****ALASKA.**

Owned by United Metals Co.

**CORBIN-MONTANA COPPER CO.****MONTANA.**

Mine office: Corbin, Jefferson Co., Mont. Thos. R. Hinds, Fayette Harrington, M. W. Bacon, John Hoye and J. A. Zzezek, directors. Organized 1907, with capitalization \$1,000,000, shares \$1 par. Is a twin of the Jefferson-Montana Copper Mines Co.

**CORBIN-MONTANA MINES CO.****MONTANA.**

Office: care of Clarence K. McCornick, vice-president and general manager, Salt Lake City, Utah. Mine office: Corbin, Jefferson Co., Mont. Arthur H. S. Bird, president; C. H. Post, secretary-treasurer; preceding officers, H. A. McCornick and B. T. King, directors. Organized 1904, under laws of Utah, with capitalization \$600,000, shares \$2 par. Lands, in the vicinity of Corbin, were diamond-drilled, 1904-5; since idle.

**CORBIN-VALPARAISO COPPER MINING CO.****MONTANA.**

Mine office: Corbin, Jefferson Co., Mont. A. G. Gross, H. J. Dewey, Thos. F. Casey, J. P. Daly, Frank W. Richards and G. P. Paul directors. Organized 1907, with capitalization \$1,000,000, shares \$1 par. Mine, on Big Valparaiso Mountain, has tunnels of 600' and 800', latter with back of about 780', cutting 4 veins, showing ore assaying 3 to 8% copper, with average assays of 26 oz. silver and \$3 to \$9 gold per ton. Made small ore shipments, circa 1885, under former ownership.

**CORBIN-WICKES COPPER MINING CO.****MONTANA.**

Office: 19 East Broadway, Butte, Mont. Mine office: Corbin, Jefferson Co., Mont. Chas. H. Lane, president; W. C. Dierks, vice-president; Edwin L. Mayo, treasurer; J. L. Meixell, secretary; preceding officers, I. A. Heilbronner, W. F. Davis, I. M. Symons and H. A. Sullivan, directors. Organized 1904, with capitalization \$1,000,000, shares \$1 par, apparently as successor of Colorado Mining & Development Co. Lands, 2 claims, known as the Hidden Treasure and Copper King, circa one-half mile from the Alta, and across Picnic gulch from the Bertha mine of the Boston & Corbin, supposed to carry the extension of the Bluebird vein. Has a 300' tunnel and 105' shaft, crosscut from latter said to show an 18' vein carrying hanging-wall and footwall paystreaks, assaying 4% copper, 8 oz. silver and 40 cents gold per ton, with occasional assays up to 12% copper, 34 oz. silver and 60 cents gold per ton.

**COREDILLEO MINING CO.****BRITISH COLUMBIA.**

Office: 332 Lumber Exchange, Seattle, Wash. Mine office: Van Anda, Texada Island, B. C. Alfred Raper, manager. Lands, 3 claims, adjoining the Cornell mine, having a 120' tunnel. Operated, 1905-1906, the Cornell mine, since sold to Texada Consolidated Mining Co. Company's present holdings produced, 1905, circa 100 tons of ore.

**CORDONERA MINING CO.****MEXICO.**

Mine office: Suaqui Grande, Hermosillo, Sonora, Mex. W. S. Morrow, manager. Has argentiferous copper ores, with steam power and a 5-stamp mill. Presumably idle.

**CORINTH COPPER CO.****VERMONT.**

Office: 703-68 William St., New York, N. Y. Organized 1906, under laws of New York, with capitalization \$3,000. Lands supposedly are in Vermont.

Digitized by Google

**GEWERKSCHAFT CORIOLAN.****GERMANY.**

Mine office: Wissen am Sieg, Rheinprovinz, Germany. Has lead, copper, cobalt and antimony ores, opened by one shaft. Was a very small producer at last accounts.

**CORK MINERAL DEVELOPMENT SYNDICATE, LTD.****IRELAND.**

Office: Finsbury Pavement House, London, E. C., Eng. Mine office: Skibbereen, County Cork, Ireland. A. J. M. Brown, secretary. Organized June 22, 1903, under laws of Great Britain, with capitalization £15,000, shares £1 par. Property is a 31-year lease of 1,040 acres on Mount Gabriel, from which small quantities of copper ore and barytes have been produced.

**CORNELIA COPPER CO.****ARIZONA.**

Office: 610 Wright Bldg., St. Louis, Mo. Mine office: Gila Bend, Maricopa Co., Ariz. Geo. H. Augustine, president; H. W. Mann, vice-president; John R. Boddie, secretary; C. W. Chamberlain, treasurer; preceding officers, E. W. Huie, C. E. Neeley, C. A. Bowman, T. G. Ratcliffe, Herman Diel, L. O. Branch, H. B. Salls, Buck Williams, J. W. Sanders, John Brod and M. E. Chamberlain, directors; C. L. Chamberlain, manager; L. T. Reynolds, foreman.

Organized May 14, 1900, under laws of Arizona, with capitalization \$1,000,000, shares \$10 par, increased, Feb. 19, 1907, to \$3,000,000, shares \$10 par, on which latter date the Rescue Copper Co., a formerly affiliated corporation, was absorbed.

Lands, 13 claims, partly patented, area 260 acres, showing a wide ore body with limestone foot and granite hanging, carrying silicious copper oxides and carbonates, mainly latter, estimated by company at 10% average copper tenor, with gold and silver values, which is excessive, as ores are low in grade, probably averaging 2.5 to 3% only in copper tenor. Company estimates 25,000,000 tons of ore in sight, which also is a serious overestimate, though the mine unquestionably has a large ore tonnage. Development is by tunnels of 30' and 60', and by shafts of 125' and 225', the 200' level showing a 15' to 20' vein of sulphide ore assaying 3 to 15% copper, with small gold and silver values. Mine has a small steam plant. Company claims to be able to deliver ore to the crusher for 25 cents per ton, which cost cannot be attained.

In 1906 the company contracted with one "Prof." Fred L. McGahan for a so-called vacuum smelter, planned to operate on principles that will prove successful when water runs uphill, and not before. The description of this process, given in Vol. VI of the Copper Handbook, is perhaps the most remarkable piece of literature extant in the technical field. The smelter proving an inglorious failure, after costing \$30,000, McGahan was arrested, and a nephew of McGahan's was shot three times, while trying to dismantle the plant. The Cornelia Copper Co. sued McGahan for damages, and had him indicted criminally, May, 1907, on 3 counts, for obtaining money under false pretenses.

Having lost considerable money through the McGahan fiasco, the company, nothing daunted, turned to another new and untried process, invented by an electrician named Anderson, which is claimed to have been in use more or less successfully for 4 or 5 years, though specific evidence on this point seems lacking.

An Anderson electrolytic reduction plant, built at the mine, is rated at 5 tons daily capacity, but the first day's run was 320 lbs. fine copper, and the largest run apparently was 600 lbs., or 6% of the estimated capacity. The plant is terraced, having three 5-ton leaching tanks, followed by 3 settling tanks and 52 square electrolytic tanks placed in four rows, terraced for circulation of electrolyte. Anodes are of carbon, and cathodes of the usual thin copper plates. Electrodes are spaced about 3" apart, and connected in multiple, with tanks connected in series. Current density is 100 amperes at 110 volts, and electrolyte is handled by pump. The ore is crushed to 20-mesh size before

delivery to the leaching tanks, the charge per tank ranging from 2 to 5 tons, according to assay values in copper. The charges are covered with acid solution for 18 hours, at the end of which time the acid, in theory, is supposed to have dissolved the copper, forming a bluestone solution, which passes from the leaching tanks to settling tanks, where impurities are allowed to settle. The clarified solution flows from the settling tanks, by trough, to the electrolytic tanks. Cathodes are built up to about 80 lbs. weight.

The Anderson process, which is planned to treat silicious oxidized copper ores only, provides for dissolving the soluble copper compounds with hydro fluorilic acid, filtering the electrolyte and depositing copper by electrolysis, using carbon anodes. According to the theory, the electrolyte, on depositing its copper, regains its hydrogen, thus being regenerated for further use. The inventor claims that the acid does not exhaust or deteriorate more than 10% in a year, which statement remains to be demonstrated, and it is claimed that the hydrofluorsilic acid does not destroy the carbon anodes, as does sulphuric acid. The inventor claims that a small experimental plant, at Webster Grove, near St. Louis, Mo., can produce pure electrolytic copper at a cost not to exceed 4 cents per pound, which is important, if true.

The acid, which the inventor terms hydrofluosilic, is made out of about one-third each sulphuric acid, quartz and fluorspar, with the addition of an ingredient kept secret by the inventor. Acid, as used, is said to be of about 15% strength. The inventor claims that the apparatus at the Cornelia can make a special acid for 8 cents per gallon, and that fluorspar can be obtained at a cost of \$25 per ton. The inventor was advertising, October, 1907, for fluorspar to be delivered at Webster Grove, Mo. It was first claimed that the Anderson process could produce copper for less than 3 cents per pound, which figures were increased gradually to about 8 cents per pound, but in October, 1907, the mine was partly closed down, because losing money on 13-cent copper. The practicability of the Anderson electrolytic process remains to be demonstrated, but the inventor is of an entirely different stripe from "Prof." McGahan, and it is certain that his process actually will make copper, the crux of the matter lying in the question of costs.

The officers of the Cornelia are residents of St. Louis and vicinity, of excellent local standing, and perfectly sincere in their operations, but are totally lacking in practical knowledge of the copper business, and prone to overmuch experimentation with new processes.

**CORNELL GOLD, SILVER & COPPER MINING CO.** NEW MEXICO.

Dead. Formerly at Silver City, Grant Co., N. M. Described Vol. VI.

**CORNELL MINE.** BRITISH COLUMBIA.

Held, at last accounts, by Texada Consolidated Mining Co.

**CORNELL OPERATING CO.** BRITISH COLUMBIA.

Dead. Formerly at Van Anda, Texada Island, B. C.

**MINA EL CORNETA.** MEXICO.

Mine office: San Miguel Mezquital, Nieves, Zacatecas, Mex. Henry Wininghoff, owner and manager. Presumably idle.

**CORNISH COPPER CO.**

Office: care of Andrew B. Hardryx, New Haven, Conn. Organized December, 1903, under laws of Connecticut, with capitalization \$300,000. Location of lands, if any, unknown. Presumably moribund.

**CORNUCOPIA COPPER CO.** OREGON.

Dead. Formerly at Cornucopia, Grant Co., Ore.

**CORNUCOPIA GOLD & COPPER MINING CO.**

Dead. Formerly at Cherry, Yavapai Co., Ariz.

ARIZONA.

**CORNWALL COPPER CO.**

Office: 1206-71 Broadway, New York, N. Y. Location of lands, if any, unknown.

**CORNWALL MINES.****MISSOURI.**

Mine office: Cornwall, Madison Co., Mo. Were worked on a small scale, circa 1860. Ores are greater in variety than in quantity, those found including cuprite, melaconite, malachite, azurite, chalcocite, covellite, bornite, chalcopyrite, chalcanthite and chrysocolla. Idle many years.

**COMPÀNIA CORO CORO DE BOLIVIA.****BOLIVIA.**

Office: Santiago de Chile. Mine office: Coro Coro, La Paz, Bolivia. Organized Apr. 23, 1873, under laws of Bolivia, with capitalization 1,025,000 bolivianos. Property is the largest copper mine in Bolivia. Mine, 460 meters deep, is opened on conglomerate strata carrying native copper, with occasional cuprite and chalcocite, and silver, which occurs native with copper, as in the Lake Superior mines, is an important by-product. Has steam power, and has been said to have a small smelter, but probably latter is a mill, as product is exported as copper mineral, production ranging 600 to 800 quintals monthly, of barillas de cobre of about 80% average copper tenor, estimated, by the Bolivian government, to cost 7.8 bolivianos per quintal. Production, 1907, estimated at 1,750,000 lbs. fine copper. Employs circa 500 men.

**CORONA CONSOLIDATED GOLD & COPPER CO.****ARIZONA.**

Office: Union Blk., Prescott, Ariz. Mine office: Turkey, Yavapai Co., Ariz. Geo. H. Schuerman, president and general manager; Jas. I. Gardner, vice-president; Eugene Newman, secretary; N. B. Hazeltine, treasurer; preceding officers, J. S. Acker and W. B. Brown, directors; Ambrose Stewart, superintendent. Organized Apr. 9, 1903, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands, 16 claims, area 320 acres, 8 miles from a railroad, first located 1880, showing 5 contact deposits between porphyry and schist, of 2' to 6' width, of which 3 are developed by 5 shallow shafts, deepest 80', and by several tunnels, longest 520', estimated to show 40,000 tons of carbonate and sulphide ores, with 6,000 tons blocked out for stoping, ranging in tenor from 3 to 16% copper, 2 to 12 oz. silver and \$5.50 to \$60 gold per ton. Mine shipped a little ore, under previous ownership, some years ago, and had a mill, circa 1890. Idle for several years.

**CORONA COPPER CO.****ARIZONA.**

Dead. Formerly at Clifton, Graham Co., Ariz.

**CORONA COPPER CO.****WISCONSIN.**

Dead. Lands sold by sheriff, September, 1906, for \$1,137. Formerly at Superior, Douglas Co., Wis. Described Vol. VI.

**CORONADO COPPER CO.****NEW MEXICO.**

Letter returned unclaimed from former office, Wichita, Kas. John W. Foster, manager; Henry W. Queen, secretary; H. E. Noah, treasurer. Organized circa 1905, under laws of Oklahoma, with capitalization \$5,000,000, shares \$1 par. Lands, 18 claims, in Union county, New Mexico, 45 miles from a railroad, having a 65' shaft. Average of 41 assays is said to have given 16% copper.

**CORONADO GOLD & COPPER MINING CO.****ARIZONA.**

Office and mine: Prescott, Ariz. Chas. P. Myers, president and general manager. Lands, 14 claims, area 285 acres, including the Black Warrior group, in the Black Hills district, said to show considerable ore. Idle for several years and apparently moribund.

**CORONADO MINING CO.****ARIZONA.**

Office: 52 Broadway, New York, N. Y. Mine office: Metcalf, Graham Co., Ariz. Wm. B. Thompson, president; J. W. Belches, vice-president; Wm. J. Palmer, secretary; Henry L. Westlake, general manager; John L. Scofield,

superintendent. Organized July 12, 1902, under laws of Maine, with capitalization \$1,000,000, shares \$10 par. Is controlled, through ownership of 51% of stock, by Shannon Copper Co. Lands, 23 claims, area circa 400 acres, adjoining the Coronado mine of the Arizona Copper Co., carrying what is supposed to be the extension of the Coronado vein. Development is by several short tunnels and shallow shafts, with a 2-compartment working shaft on the Garnet claim, showing a good body of auriferous and argentiferous chalcopyrite on the 200' level. The Emerald mine shows a considerable body of sulphide ore, giving average assays of about 9% copper. Property considered promising.

**CORONA GOLD & COPPER CO.**

NEW MEXICO.

Dead. Formerly at Santa Rita, Grant Co., N. M.

**CORONA QUEEN MINING CO.**

NEW MEXICO.

Office: care of Hon. M. A. Otero, president, Santa Fé, N. M. Mine office: Corona, Lincoln Co., N. M. Thos. M. Du Bois, superintendent. Is under English control. Lands, in the Red Cloud district, give a considerable surface showing of iron ore, apparently of commercial grade, and copper ore up to 67% in tenor has been found. Idle since 1906.

**NUEVA COMPAÑIA MINERA DE CORPUS CHRISTI.**

MEXICO.

Mine office: Matehuala, Catorce, San Luis Potosí, Mex. W. B. A. Dingwall, president and manager. Has auriferous copper and argentiferous silver ores, developed by an 1,800' tunnel. Presumably idle.

**CORRA MINE.**

MONTANA.

Owned by Butte Coalition Mining Co.

**SOCIEDAD DE MINAS Y FUNDICIONES DE CORRALES.** ARGENTINA.

Mine and works office: Chilecito, Rioja, Argentina. Has auriferous and argentiferous copper ores, with a 12-ton smelter and small gas power plant. Was a small producer, circa 1903. Presumably idle.

**CORRA-ROCK ISLAND MINING CO.**

MONTANA.

Dead. Property sold, 1906, to Butte Coalition Mining Co. Formerly at Butte, Silver Bow Co., Mont. Described Vol. V.

**JOSÉ FRANCISCO CORREA.**

CHILE.

Office and mine: San Fernando, Colchagua, Chile. Has a small smelter, producing matte, and employed about 100 men circa 1902. Presumably idle.

**CORRIGAN, MCKINNEY & CO.**

MEXICO.

Office: Cleveland, Ohio. Mine office: Terrazas, Chihuahua, Mex. R. B. Hutchinson, superintendent. Lands include the San Rafael copper mines, bought for \$50,000, and formerly included the Conchero gold-silver mines, sold to the Greene Gold-Silver Co. In August, 1907, planned sinking 2 new shafts on the San Rafael. Firm is strong and experienced, being one of the oldest and largest independent iron ore operators of the Lake Superior district.

**CORTLAND GOLD & SILVER MINING CO.**

COLORADO.

Mine office: Ohio, Gunnison Co., Colo. Victor Reno, superintendent, at last accounts. Ores carry gold, silver, lead, copper and zinc. Has gasoline power. Presumably idle.

**CORUÑA COPPER CO., LTD.**

SPAIN.

Dead. Liquidated June 27, 1906. Formerly at Pino Area, Coruña, Spain. Described Vol. VI.

**CORY BROS. MINING CO.**

MONTANA.

Office and mine: Helena, Deer Lodge Co., Mont. Lands, on Beaver creek, north of Helena, show gold-copper ores. Presumably idle.

**COSTELLO COPPER CO.**

ARIZONA.

Office: care of Martin Costello, Tombstone, Ariz. Organized August, 1903. Location of lands unknown, but presumably in Cochise county, Arizona.

**COTTONWOOD COPPER CO.****ARIZONA.**

Dead. Was promoted by the Southwestern Securities Co., of Los Angeles. Was organized under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands were 6 claims, near Groom Creek, 6 miles south of Prescott, having a 100' tunnel and shallow shafts, said to show 4' of low-grade auriferous and argentiferous copper ore. Company was a strong believer in full-page advertisements, and was not hampered by regard for the truth in its promotion. Formerly at Prescott, Yavapai Co., Ariz.

**COW CREEK COPPER MINING CO.****WYOMING.**

Dead. Formerly at Encampment, Carbon Co., Wyo.

**COXHEATH MINE.****NOVA SCOTIA.**

Owned by Cape Breton Copper Co., Ltd.

**CRADOCK DISTRICT COPPER (BEKKERS****CAPE COLONY.****KLOOF) SYNDICATE, LTD.**

Office and mine: 28 Market Square, Cradock, Cradock Co., Cape Colony. W. L. Williams, secretary. Organized Aug. 13, 1907, under laws of Cape Colony, with capitalization £3,500, shares £1 par. Lands, on the Farm Bekkers Kloof, have several shallow shafts and 4 tunnels, longest apparently 210', showing ores assaying up to 36.08% copper, 52 oz. silver and 2 oz. 2 dwts. gold per long ton, with occasional cobalt. Has secured good assays from surface ores.

**CRAWFORD COPPER CO.****WISCONSIN.**

Letter returned unclaimed from former office, 531-A Marquette Bldg., Chicago, Ills. Mine office: Prairie du Chien, Crawford Co., Wis. John Peacock, president and general manager; Chas. Greele, vice-president; W. H. Herrington, secretary and treasurer; preceding officers, W. T. Pinkerton, Edw. T. Martner, Francis A. Harper and G. R. Turley, directors. Organized circa 1907, under laws of Maine, with capitalization \$1,000,000, shares \$1 par. Property is an old mine, on which a little work was done, previous to 1862, and on which new shafts were started by present company, old workings having caved in. Has secured ores assaying up to 40% copper. Idle and apparently moribund.

**CRAWFORD GOLD MINING CO.****ARIZONA.**

Office: Clifton, Graham Co., Ariz. Benj. M. Crawford, manager. Has auriferous copper ores and steam power.

**CREEDE COPPER MINING CO.****WYOMING.**

Dead. Formerly at Rawlins, Carbon Co., Wyo.

**CRESCENT COPPER CO.****COLORADO.**

Office: Edinboro, Pa. Mine office: Boulder, Boulder Co., Colo. Organized under laws of Colorado, with capitalization \$1,000,000, shares \$1 par. Claims to have sundry rich copper claims somewhere on the line of the Moffat railroad. Not regarded favorably. Presumably idle.

**CRESCENT COPPER CO.****UTAH.**

Mine office: Park City, Summit Co., Utah. Idle for several years.

**CRESCENT COPPER CO.****WYOMING.**

Dead. Formerly at Encampment, Carbon Co., Wyo. Described Vol. VI.

**CRESCENT COPPER MINING CO.****ARIZONA.**

Office and mine: Bisbee, Ariz. Carl Clausen, president and general manager; W. A. Eckerly, secretary. Organized 1903, under laws of Arizona, with capitalization \$2,500,000, shares \$2.50 par. Lands, 12 claims, in Tombstone Cañon, circa 2 miles northwest of Bisbee, showing oxide and carbonate ores, and small quantities of chalcocite and iron ore, with quartz gangue, claiming to give average assays of 19.1% copper and 41 oz. silver per ton, from a vein said to range 8' to 30' in width. Idle almost from birth and moribund.

**CRESCENT MINES, LTD.**

Mine office: Phoenix, Boundary district, B. C. Edw. Ford Johnson, secretary. Has a 225' shaft with one level opened, and asked a \$50,000 bonus of the town council to aid in driving a 3-mile tunnel through the mountain between Phoenix and Greenwood. Has an air-compressor. Tunnel project is not considered feasible.

**CRYSTAL COPPER MINING CO.**

Mine office: Taos, Taos Co., N. M. Is said to have an 8' ore body, opened by a 100' tunnel, on lands in the South Fork district. Presumably idle.

**CROESUS GOLD & COPPER MINING CO.**

Office: Beatrice, Neb. Mine office: Hailey, Blaine Co., Idaho. Frank H. Plummer, secretary; W. G. Page, superintendent. Mine has a 3-compartment 800' shaft, bottom workings showing auriferous and slightly argentiferous chalcopyrite of fair average tenor. Has steam power and a 10-stamp mill. Idle at last accounts.

**CROFTON SMELTER.**

Owned by Britannia Smelting Co., Ltd.

**BRITISH COLUMBIA.****CRONA COPPER CO.**

Office: Clay Centre, Kan. Mine office: Lyons, Boulder Co., Colo. Chas. A. Southwick, president; C. W. Strong, secretary and treasurer. Organized, 1901, under laws of New Mexico, with capitalization \$1,000,000, shares \$1 par. Lands, 14 claims, 2 miles from Lyons. Idle several years.

**CRONNEBANNE MINES.**

Owned by Ovoca Copper Syndicate, Ltd.

**IRELAND.****CROWL CREEK COPPER MINING CO.**

Dead. Merged December, 1906, in the Crowl-Creek-Shuttleton Copper Mining Co. Formerly at Shuttleton, Mouramba Co., N. S. W., Australia. Described Vol. VI.

**CROWL CREEK-SHUTTLETON MINING CO.**

Dead. Was organized, 1907, under laws of New South Wales, with capitalization £150,000, shares £1 par, as a merger of the Crowl Creek Copper Mining Co. and Shuttleton Copper Mining Co. Lands were 260 acres in the Nymagee district, carrying about one mile of the strike of the ore body. The Crowl Creek mine had a 680' main shaft, on a 14' vein with a 30" paystreak said to average 12% copper on the 530' level, with reserves of 15,000 tons of oxidized ore in the upper levels, claimed to average 10% copper. The Shuttleton mine, adjoining the Crowl Creek, was opened to depth of 330', the bottom level showing a 40' vein with a 4' paystreak of chalcopyrite, claimed to average 22% copper, which probably was an overestimate. Equipment included steam power and air-compressors, with a concentrator and smelter. Production, 1906, is estimated at 1,000,000 lbs. fine copper. Property was sold, circa January, 1908, to a London syndicate, for £2,500. Formerly at Shuttleton, Mouramba Co., N. S. W., Australia.

**CROWN COPPER CO.**

Office: 234 Pioneer Bldg., Seattle, Wash. Mine office: Valdez, Alaska. T. D. Bradford, president and treasurer; Chas. C. Wheeler, secretary; preceding officers, C. D. Yendell, Hon. John Lyons, W. H. Yendell, J. B. Young and Fred S. Fogg, directors. Organized under laws of Washington, with capitalization \$2,000,000, shares \$1 par. Lands, 54 claims, area 1,100 acres, in 3 groups, 2 on Knights Island, Prince William Sound, Alaska, located with tidewater on either side. Has several tunnels of 25' to 100' length, 2 showing ore, and employed circa 25 men at last accounts.

**CROWN LYELL, LTD.****TASMANIA.**

Dead. Dissolved, December, 1902. Formerly at Mt. Lyell, Montagu Co., Tasmania. Described Vol. V.

**CROWN LYELL COPPER CO., N. L.****TASMANIA.**

Office: 60 Queen St., Melbourne, Australia. Mine office: Mt. Lyell, Montagu Co., Tasmania. Wm. Madden, manager. Capitalization £250,000, shares 25s. par; issued, 160,000 shares, 20s. 11d. paid in. Lands, 30 acres, having a 514' shaft showing a little medium grade ore, and a tunnel of circa 900' length. Company planned increasing capitalization to deepen shaft, and, in 1908, was endeavoring to sell its property to the Mount Lyell Mining & Railway Co., Ltd., for £25,000 cash or 17,000 shares of Mount Lyell Mining & Railway Co., Ltd.

**CROWN LYELL MINING CO., N. L.****TASMANIA.**

Dead. Succeeded by Crown Lyell Copper Co., N. L. Formerly at Mt. Lyell, Montagu Co., Tasmania.

**CROWN POINT COPPER CO.****ARIZONA.**

Mine office: Globe, Gila Co., Ariz. Organized circa 1907. Lands, known as the Grand Staff group, on Lower Pinto Creek, have a 400' tunnel.

**CROWN POINT MINING CO.****WASHINGTON.**

Office: 709 Grant Bldg., Los Angeles, Cal. Lands, in Chelan county, Washington, are asserted to show copper, silver and molybdenum ores. Apparently organized to sell stock.

**CROWN PRINCESS MINING CO.****ARIZONA.**

Dead. Merged circa September, 1908, in Clara Consolidated Gold & Copper Mining Co. Formerly at Planet, Yuma Co., Ariz.

**CROWN QUEEN MINES CO.****ARIZONA.**

Dead. Merged circa September, 1908, in Clara Consolidated Gold & Copper Mining Co. Formerly at Planet, Yuma Co., Ariz.

**MINA LA CRUZ.****MEXICO.**

Office and mine: Indé, Durango, Mexico. Ernesto Avila, owner. Has a 40-ton matting furnace. Presumably idle.

**COMPÀNIA MINERA DE LA CRUZ.****MEXICO.**

Dead. Formerly at La Cruz, Centro, Tamaulipas, Mex.

**CRYSTALINA COPPER CO.****ARIZONA.**

Dead. Formerly at Clifton, Graham Co., Ariz.

**CRYSTAL LAKE GOLD & COPPER MINING &****COLORADO.****SMEILING CO.**

Office: 915 Barristers' Hall, Pemberton Sq., Boston, Mass. Letter returned unclaimed from former mine office, Lake City, Hinsdale Co., Colo. Philip G. Dawson, president; Kendrie P. Crawford, treasurer and general manager; A. D. Wise, secretary. Capitalization \$1,500,000, shares \$1 par. Lands, 10 claims, 4 on Hotchkiss Mountain, and others in vicinity, showing ores of gold, silver, copper and lead. Idle and apparently moribund.

**CRYSTAL MINING CO.****WASHINGTON.**

Office: 45 Jamison Blk., Spokane, Wash. Letter returned unclaimed from former mine office, Bolster, Okanogan Co., Wash. Ores carry gold, silver, lead and copper. Had steam power and a small smelter. Idle some years and apparently moribund.

**CRYSTAL MOUNTAIN MINING & DRAINAGE CO.****COLORADO.**

Mine office: Crystal, Gunnison Co., Colo. Mine has a tunnel showing auriferous and argentiferous copper ore. Had a steam plant. Idle.

**C. S. A. BLOCK TEN MINING CO.****AUSTRALIA.**

Dead. Organized 1906, and merged, 1907, in C. S. A. Mines, Ltd. Formerly at Cobar, Robinson Co., N. S. W., Australia.

**C. S. A. MINES, LTD.**

Office: 18 O'Connell St., Sydney, Australia. Mine office: Cobar, Robinson Co., N. S. W., Australia. L. J. Winton, superintendent; F. N. Yarwood, secretary; Dr. Richard Head, chairman. Capitalization increased, 1907, to £60,000, shares £1 par. In 1907 absorbed the C. S. A. Block 10 Mining Co., N. L., an adjoining company. Lands, 7 miles from Cobar, known as the Cornish, Scottish and Australian mine, show a very prominent gossan, underlaid by low grade sulphide ores. Production is mainly silver-lead carbonates, with copper values increasing at depth. Main shaft, at 472', carried ore assaying 13% copper and 2,393 oz. silver per long ton. Production, 1907, was 3,800 long tons of ore averaging 24% lead, 1 oz. silver and .1 dwt. 6 grains gold per ton. Mine has shafts of 250' and 481', timbered with ironbark and Oregon pine, using square sets and filling depleted stopes with mullock. Has a good machinery plant, with new hoist and air-compressor, installed 1907, steam plant having condensers, district being arid. Production, first quarter 1907, was 2,641 long tons of ore netting £8,304. Employs 65 men.

**AUSTRALIA.****C. S. A. NORTH SILVER & LEAD MINING CO.****AUSTRALIA.**

Mine office: Cobar, Robinson Co., N. S. W., Australia. Mine is opened to depth of about 300'. Idle at last accounts.

**CUAUHTEMOC MINING CO.****MEXICO.**

Office: 508 Germania Bank Bldg., Pittsburg, Pa. Mine office: Ocotlán, Oaxaca, Mex. James McKay, president; Frank A. Vickery, vice-president; J. Albert McKay, treasurer; Oscar A. Rogers, secretary; Guillermo W. Thompson, general manager. Organized 1904, under laws of West Virginia, with capitalization \$400,000. Lands, 21 hectares, including the Carpintero y Anexas group, in the campa of Tavicé, San José and San Martín, showing auriferous and argentiferous lead and copper ores. Presumably idle.

**CUARTAS MINING CO.****MEXICO.**

Office: care of Harry McIntosh, president, Railway Exchange Bldg., Chicago, Ills. Mine office: Ayutla, Autlán, Jalisco, Mex. Wm. H. Lees, vice-president and general manager; Wm. T. Sheffield, secretary and treasurer; Thos. M. Hughes, superintendent. Capitalization, £100,000. Property is the old Cuartas mine, in the Bautista district, area circa 250 acres, also sundry adjoining timber lands. Mine is an antigua, worked by the Spaniards, and abandoned, circa A. D. 1745, at depth of 275', on account of water and base ore. There is a legend that the mine caved in, burying 7 men. It is stated that ores left in old workings assayed 2,268 oz. silver and 1 oz. gold per ton, which is more than doubtful, as neither Spaniards nor Mexicans left any considerable quantity of such ore in any abandoned mine, except from dire necessity. The veta madre of the Cuartas is about 30' in average width, carrying mainly silver and gold values. Assays from old dumps are claimed to run circa 400 oz. silver and \$30 gold per ton, which either is untrue, or samples were selected with unusual care.

**CUATRO GRANDE MINING CO., S. A.****MEXICO**

Is the Mexican incorporation of the Pittsburg & Sonora Development Co.

**COMPAÑIA MINERA CUATRO SEÑORES, S. A.****MEXICO.**

Office: Chihuahua, Mex. Mine office: Coyamé, Iturbide, Chihuahua, Mex. Lands, 74 hectares, leased from Las Vigas Mining Co., said to show 19 ore bodies, as fissures in sandstone and as contact deposits between sandstone and clay-slate, ore occurring mainly as impregnations and replacements in the sandstone. Four ore bodies under development are reported to average 7' to 12' width, and are claimed to give average returns of 7.5% copper and 3 oz. silver per ton, mainly from bornite and chalcopyrite, with occasional oxidized ores and native copper. Has shafts of 61', 98', 125' and 179', with

3 short tunnels, estimated to develop 60,000 tons of ore. Has steam power, hoist and air-compressor, with an office building, store and 19 dwellings. Ore is hauled 43 miles, to Las Trancas station, by a Buffalo-Pitts traction engine.

#### CUBA COPPER CO.

CUBA.

Office: 2401-60 Wall St., New York, N. Y. Mine office: El Cobre, Santiago de Cuba. Benj. B. Lawrence, president; Colgate Hoyt, vice-president; Jas. T. Nelson, secretary and treasurer; Morrison B. Yung, general manager; E. H. Emerson, mine superintendent. Organized Jan. 5, 1907, under laws of West Virginia, with capitalization \$2,000,000, shares \$100 par, divided into \$1,500,000 non-cumulative 6% preferred and \$500,000 common shares, as successor of El Cobre Mines. Annual meeting, first Tuesday in March.

El Cobre mines were opened by the Spanish, A. D. 1532, and probably produced the first copper made in America by Europeans, the first product of the Cuban mines having been used for casting Spanish cannon. The properties were taken over, circa 1832, by a Hispano-English company, ore mined being shipped to Swansea for reduction. The custom-house records of Santiago are said to show exports of 610,210 tons of ore, valued at \$50,186,225, (probably in depreciated Spanish currency) from 1851 to 1869, inclusive, ores as shipped assaying from 12.69% upwards, and probably averaging about 16% in copper tenor. During the revolution of 1868, the big Cornish pump was burned, which flooded the mines, and they remained idle until taken over, 1902, by predecessor of present company.

Lands are extensive, lying 8 miles west of Santiago Bay on which the company has wharves. The property shows a mineralized zone of 200' width, traceable circa 6,500', carrying 3 parallel veins, intervening rock being much altered. Ore is primarily chalcopyrite, associated with pyrrhotite, in a quartz gangue, the grains of chalcopyrite frequently being coated with covellite. Ore bodies occur in lenticular chutes, along fracture planes, in serpentine, the largest lenses being about 30' in extreme width, with length of 200', lenses averaging about 7' width with occasional widenings to 20' and even 30'. The oxidized zone is of 50' to 75' depth only, succeeded by sulphide ores averaging 5 to 6% in copper tenor, without either gold or silver in important quantities.

The old workings were extensive, including some 40 shafts, of which the 4 deepest were about 1,200' each, with 17 miles of underground openings, timbered mainly with mahogany. Some of the old stopes were 20' to 30' in width, but, when unwatered, 1903, many of the old workings caved in, and the mine was allowed to fill again. During the rainy season the mine makes 500 to 1,200 gallons per minute of strongly acid water, requiring pumps of composition metal, with lead or wood-lined pipes. The pumps have a combined capacity of 5,000 gallons per minute, and water, after forked from the mine, is leached over scrap-iron, producing considerable copper precipitate. The old waste dumps contain about 250,000 tons of rejected material, averaging circa 2% in copper tenor. Considerable ore has been blocked out in open cuts, this averaging about 4% copper.

El Cobre railroad, 9 miles in length, owned by the company, connects the mine with Santiago Harbor at Punta Sal, equipment consisting of 2 locomotives and 40 cars.

The smelter, of 200 tons rated daily capacity, is at Punta Sal, but is idle, and apparently has not been in blast for several years. Company employs circa 450 men, and ore is shipped to Atlantic coast smelters, in the United States, ore being mined both from the old workings, and from a new vein, previously unworked. Ore produced, 1907-1908, is reported by company as of 6.5% average copper tenor. Production, 1907, was 6,483,000 lbs. fine copper.

**CUBA MINING CO.**

UTAH.

Mine office: Bingham Canyon, Salt Lake Co., Utah. Has a tunnel, showing auriferous copper ores. Idle several years.

**CUBANA CONSOLIDATED COPPER CO.**

MEXICO.

Office: care of R. M. Fitzgerald, 16-309 Montgomery St., San Francisco, Cal. Mine office: Arizpe, Sonora, Mex. Don Ray, president; A. H. Rose, vice-president; M. A. Nurse, secretary; Geo. H. McLean, superintendent. Organized Jan. 6, 1903, under laws of Arizona, with capitalization \$500,000, shares \$1 par. Lands, 244 hectares, bought for \$20,000, showing 6 ore bodies, of 4' to 20' width, of which 3, carrying estimated values of 12% copper, 10 oz. silver and \$2 gold per ton, are opened by 6 shafts, deepest 102', and by a number of tunnels, longest 250' and 575', with a total of 1,415' of underground openings. Mine is about 40 miles from La Cananea, the nearest railroad point, and is connected therewith by a good wagon road. Sample carload smelter shipments returned 23% copper, with fair gold and silver values. Property considered promising. Presumably idle.

**COMPANIA MINERA CUBANA DEL BRILLADOR.**

CHILE.

Office: Valparaiso, Chile. Mine office: Compañía, Coquimbo, Chile. Organized Oct. 20, 1906, under laws of Chile, with capitalization 320,000 pesos, shares 20 pesos par.

**CUBAN EXPLORATION CO.**

CUBA.

Office: 11 Nassau St., New York. Letter returned unclaimed from former mine office, El Caney, Santiago, Cuba. W. A. Dennis, vice-president and general manager. Did a little exploratory work, circa 1904. Apparently moribund.

**CUBAN LAND & DEVELOPMENT CO., LTD.**

CUBA.

Office: Dashwood House, London, E. C., Eng. Cuban office: Bahia Honda, Pinar del Río, Cuba. W. R. Beit, agent. Organized Oct. 26, 1905, as successor to Cuban Mining & Development Co., Ltd. Property is the Finca Nazareno, a plantation on which present company is centering its operations, also 2,766 acres of mineral territory in vicinity of Bahia Honda, and two gold claims in the province of Santa Clara. The copper mines have 5 old shafts, with workings of considerable extent, but in very bad condition. Company plans no mining operations in the near future.

**CUBAN MINING & DEVELOPMENT CO., LTD.**

CUBA.

Dead. Reorganized Oct. 26, 1905, as Cuban Land & Development Co., Ltd. Formerly at Bahia Honda, Pinar del Rio, Cuba. Described Vol. IV.

**COMPANIA MINERA CUCHARA.**

MEXICO.

Mine office: Culiacán, Sinaloa, Mex. Lands show argentiferous and auriferous copper and lead ores. Presumably idle.

**CUCHARAS MINING CO.**

MEXICO.

Mine office: Acaponeta, Tepic, Mex. J. M. Winston, manager, at last accounts. Operates the San Juan copper mine, opened by shaft and tunnel. Has steam power and a 40-ton smelter. Production, 1903, was 200,618 lbs. fine copper. Presumably idle.

**MINAS LA CUEVA Y PEDRO ESTEBAN.**

MEXICO.

Mine office: Mazapil, Zacatecas, Mex. J. S. Morrison Estate, owner; Manuel R. Orozco, manager. Has highly argentiferous and auriferous copper ores, and when working makes a small amount of copper as a by-product. Has a 25-ton smelter. Presumably idle.

**MINA CULEBRA.**

MEXICO.

Mine office: Etzatlán, Ahualulco, Jalisco, Mex. T. C. & H. K. Myers, owners. Mine is an antigua, developed by several hundred feet of shafts and tunnels, showing auriferous and argentiferous copper sulphides, in a vein of 1 to 3 metres width. Idle.

**CULGOA MINES.****AUSTRALIA.**

Mine office: Kilkivan, Queensland, Australia. G. Turner, manager. Lands on Thunder Creek, 15 miles. north of Kilkivan, show several 8" to 15" veins, assaying 3 to 24% copper. Ore is shipped to the Waratah smelter. In 1906 employed 45 men and produced 114,388 lbs. fine copper.

**CULLIGAN MINING CO.****WISCONSIN.**

Dead. Lost lands circa 1903. Formerly at West Superior, Douglas Co., Wis.

**CULLOWHEE COPPER CO.****NORTH CAROLINA.**

Dead. Reorganized, 1905, as Cullowhee Mining & Reduction Co. Formerly at Cullowhee, Jackson Co., N. C.

**CULLOWHEE COPPER CO.****NORTH CAROLINA.**

Office: Spartansburg, S. C. Mine office: Cullowhee, Jackson Co., N. C. J. R. Aiken, president. Lands are an extensive tract in the vicinity of Cullowhee. Presumably idle.

**CULLOWHEE MINING & REDUCTION CO.****NORTH CAROLINA.**

Office and mine: Cullowhee, Jackson Co., N. C. S. B. Ezell, president; D. D. Davies, vice-president; Thos. C. Cox, secretary. Organized, 1905, as successor of Cullowhee Copper Co. Lands, 1,300 acres, showing a large body of sulphide ore said to average about 5% copper and \$4 gold per ton, though occasionally ranging up to 15% copper, with increased gold values. Has steam and water power, with hoists and Sullivan air-compressor, and was developing steadily at last accounts. Property considered promising, and management good.

**CUMARAL MINES & DEVELOPMENT CO.****ARIZONA.**

Letter returned unclaimed from former office, Oakland, Cal. Mine office: Old Glory, Pima Co., Ariz. Mine shows auriferous and argentiferous copper ore. Had gasoline power. Idle several years.

**CUMBERLAND COPPER CO., LTD.****NEVADA.**

Office: 1038-141 Milk St., Boston, Mass. Organized under laws of Maine, with capitalization \$6,000,000. Is some relation to the Cumberland-Ely Copper Co., but whether an ancestor, offspring or a collateral relative, or some sort of connection on the distaff side, has not been learned.

**CUMBERLAND COPPER CO.****NOVA SCOTIA.**

Dead. Lands sold under foreclosure, circa January, 1907, to Wentworth Copper Co., Ltd. Formerly at Wentworth, Cumberland Co., N. S.

**CUMBERLAND-ELY COPPER CO.****NEVADA.**

Office: 165 Broadway, New York, N. Y. Mine office: Ely, White Pine Co., Nev. Silas W. Eccles, president; Wm. B. Thompson, vice-president; W. E. Bennett, secretary; Geo E. Gunn, general manager; preceding officers, F. W. Hills, J. K. MacGowan and J. G. Hopkins, directors; C. K. Lipman, treasurer; A. C. Cruikshank, superintendent; Llewellyn Humphrey, consulting engineer.

Organized Nov. 28, 1905, under laws of Maine, with capitalization \$5,000,000, increased, December, 1906, to \$6,500,000, shares \$5 par, fully issued. Supposedly is controlled by the Guggenheim interests, through ownership of 51% of stock, held by American Smelters Securities Co. or the Coppermines Co. Is very closely affiliated, in ownership and operation, with the Nevada Consolidated Copper Co., owning joint interests, with that corporation, in the Steptoe smelter and the Nevada Northern railway, the half interest in the latter having been bought of the Nevada Consolidated for \$1,000,000 in shares. Begun 1908 with cash on hand, \$1,077,243. Annual meeting, second Monday in February.

Lands, 51 claims, area circa 1,000 acres, including the Veteran group of

14 claims, the Jupiter group of 22 claims and a tract of 15 claims adjoining the Giroux Consolidated. Lands partly surround the holdings of the Nevada Consolidated, and carry a continuation of the ore bodies of that company. Property has been extensively tested, by churn drills, showing much ore, and has a number of exploratory shafts. The ores, as developed, especially in the Veteran mine, are somewhat higher in grade than those of the Nevada Consolidated, and carry considerable gold and silver values, said to range about \$10 per ton of blister copper.

The Wedge mine has a shaft showing ore of about 3.5% average copper tenor.

The Jupiter mine, having 4 shallow shafts, shows ore up to 9% in copper tenor, but the average is about one-third as high.

The Veteran mine, which is the principal property, both in development and promise, shows an ore body of about 500x1,000' known length, and apparently circs 200' deep, averaging about 3.5% in copper tenor, and there are indications that this ore body may be nearly or quite 2,000' long. The Veteran, as developed, has at least 3,000,000 tons of ore in sight, with prospects of a considerably larger tonnage. The Veteran has a tunnel, but principal development is by a 4-compartment 400' shaft, which was sunk 142' in December, 1907, constituting a record. The Veteran mine has 2 levels opened, the bottom at 400'. The shaft is similar in plan and equipment to the Star Pointer shaft of the Nevada Consolidated, and has a 300-h. p. electric hoist raising 5-ton automatic skips, shaft being capable of producing 2,000 to 3,000 tons of ore daily, from a depth of 1,000' or less. Mine is being worked by top-slicing and caving, the blanket formation being excellently adapted to this system.

Water supply for the mine is brought through an 8-mile pipe-line, owned jointly by the Cumberland-Ely and the Nevada Consolidated. The mine has necessary buildings and a number of dwellings for employes.

Ore is sent to the Steptoe reduction plant, which is operated in 2 sections, one for the Cumberland-Ely and one for the Nevada Consolidated. Production was begun on a small scale, May 15, 1908. The ore concentrates about 4 into 1, with about 70% extraction, giving returns of about 2.25 to 2.5% copper from the ore. Costs apparently are estimated by company at about 8 cents per pound, but are likely to prove somewhat higher. The property is one of great possibilities, and bids fair to develop into one of the big copper mines of the world.

#### CUMBERLAND MINING CO.

ARIZONA.

Mine office: Turkey, Yavapai Co., Ariz. Lands are about one-half mile north of the Corona Consolidated Gold & Copper Co. Presumably idle.

#### CUNNINGHAM PASS COPPER MINING CO.

ARIZONA.

Mine office: Wendendale, Yuma Co., Ariz. Lands include the Josephi group of 4 claims, held under a \$50,000 bond and lease, having a 115' shaft with surface ores giving fair assays in copper and gold. Has started a vertical shaft in the hanging wall of the Bullard group, planned to be sunk 400', to develop a wide ledge traceable for entire length of property. Under former ownership the Bullard shipped considerable ore, to the Humboldt smelter, returning \$50 to \$100 per ton. Employed circa 50 men at last accounts.

#### CUPRIC MINES CO.

UTAH.

Mine office: Frisco, Beaver Co., Utah. A. J. Harrison, president; M. C. Morris, manager. Organized under laws of New Jersey, with capitalization \$1,000,000, shares \$1 par. Property, formerly known as the Washington mine, near the Horn Silver and Imperial mines, was a considerable producer in early days. Mine has 2 old incline shafts, with a new shaft, started near the

adit of the Cactus mine. Ores are chiefly silver-lead, and property is said to have good ore on the 300' level.

**CUPRITE COPPER CO.**

**ALASKA.**

Mine office: Sulzer, Prince of Wales Island, Alaska. Lands, lying north-east of the Jumbo group of the Alaska Industrial Co., show a contact vein between granite and limestone, carrying chalcopyrite, opened by a 100' tunnel.

**CUPRITE COPPER CO.**

**ARIZONA.**

Office: Columbus, Ohio. Mine Office: Clifton, Graham Co., Ariz. N. W. Lord, president; Isaac N. Stevens, vice-president; L. B. Kauffman, secretary; Geo. B. Kauffman, treasurer; F. C. Alsdorf, superintendent; Frank A. Ray, engineer; preceding officers and Frank B. Laine, directors. Organized March, 1904, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 26 claims, area 490 acres, in the Copper Mountain district, opened by shafts of 30' and 320' and by tunnels of 150' and 260', showing ore bodies of 5' to 100' width. Work performed has been done in the leached zone, which carries isolated pockets of rich ore, from which sundry small shipments have given returns of 15 to 30% copper, and up to \$5 gold per ton. Company also owns about 2,000 linear feet of strong hematitic outcrops, ranging 5' to 100' in width. It is likely that the copper veins, which are parallel with and similar to the Big Coronado vein of the Arizona Copper Co., are leached to very considerable depths, but prospects for developing large and profitable bodies of low and medium grade sulphides at depth seem good. Property considered promising. Presumably idle.

**CUPRITE COPPER CO.**

**ARIZONA.**

Dead. Formerly at Vail, Pima Co., Ariz.

**CUPRITE COPPER MINING CO.**

**NEVADA.**

Letter returned unclaimed from former office and mine, 42 Nixon Bldg., Goldfield, Esmeralda Co., Nev. G. S. Johnson, president; Oliver Mathews, vice-president; Herbert S. Cook, treasurer; Ellsworth Oldt, managing director; preceding officers and S. E. Vermilyea, directors. Organized Dec. 28, 1905, with capitalization \$1,000,000, shares \$1 par. Lands, 6 claims, 3 fractional, area circa 85 acres, in the Cuprite district, about 17 miles south of Goldfield, showing argentiferous and auriferous copper ores, assaying 10 to 20% copper and 20 to 100 oz. silver per ton. Planned sinking a 100' shaft. Idle and apparently moribund.

**CUPRITE MINING CO.**

**WYOMING.**

Mine office: Holmes, Albany Co., Wyo. Idle since circa 1904.

**CUPRITE MINING & SMELTING CO.**

**ARIZONA.**

Office: Tucson, Ariz. Letter returned unclaimed from former mine office, Vail, Pima Co., Ariz. E. N. Fish, president; F. W. Fish, treasurer. Capitalization \$1,000,000, shares \$1 par. Lands, 8 claims, opened by a 120' shaft, with about 500' of workings, showing sulphide ores between limestone and porphyry. Idle and apparently moribund.

**CUPRUM MINE.**

**CALIFORNIA.**

Office: care of Omara & Co., owners, Tonopah, Nev. Mine office: Needles, San Bernardino Co., Cal. Early 1907 shipped 15 tons of ore.

**CURLEW MINE.**

**MONTANA.**

Office: care of A. M. Holter, owner, Butte, Mont. Mine office: Victor, Ravalli Co., Mont. Thos. Cowan, superintendent. Mine, formerly a silver producer, also shows zinc ores and a vein claimed to be 12' wide said to show ore carrying 10% copper, with lead, silver and gold ores, opened 1906.

**CUSTER PEAK MINING CO.**

**SOUTH DAKOTA.**

Mine office: Deadwood, Lawrence Co., S. D. Property shows copper ores, slightly developed. Late in 1907 company planned resumption of work.

**COMPAÑIA MINERA DE CUTTER COVE.****CHILE.**

Dead. Succeeded May 20, 1906, by Sociedad de Minas de Cobre Cutter cove. Formerly at Cutter Cove, Magallanes, Chile.

**SOCIEDAD DE MINAS DE COBRE DE CUTTER COVE.****CHILE.**

Mine office: Cutter Cove, Magallanes, Chile. Organized May 20, 1906, under laws of Chile, as a reconstruction of Compañía Minera de Cutter Cove, with capitalization £400,000, shares £1 par. Lands, 15 pertenencias, showing country rocks of diorite and syenite, with veins of 4 to 6 meters width, carrying chalcopyrite with quartz gangue said to average 6% copper. Has a concentrator with Krupp ball mills, and a small reverberatory furnace.

**CUZCO COPPER & SILVER CO., LTD.****PERÚ.**

Office: 62 London Wall, London, E. C., Eng. Edgar Anderson, chairman; Sidney Fawns, consulting engineer; Lionel Perry, mine manager; H. Bacon, secretary. Organized Nov. 28, 1907, under laws of Great Britain, with capitalization £3,000, in 2,925 preferred ordinary shares of £1 par and 2,000 deferred shares of 6d. par. Lands, circa 2,000 acres, in the district of Chumbivilcas, Perú.

**CYMRU COPPER CO.****ALASKA.**

Office: 117½ South Tenth St., Tacoma, Wash. Mine office: Baldwin, Prince of Wales Island, Alaska. J. M. Miller, Jr., president; F. P. Hicks, vice-president; Frank D. Nash, secretary and treasurer; J. Cuthbert Welch, manager; A. I. Jones, superintendent. Organized 1905, under laws of Washington, with capitalization \$50,000, shares \$1 par. Lands, 6 claims, area 100 acres, on Moira Sound, showing 3 lenticular ore bodies, reported by company as of 40' aggregate width, assaying 6 to 10% copper, 4 to 6 oz. silver and \$2 gold per ton, mainly from chalcopyrite, with occasional carbonate ores and native copper. Has a 100' shaft and a 187' tunnel, with hoist and 6-drill Laidlaw-Dunn-Gordon air-compressor. Has a 4,000' ground tram, of 36" gauge, laid with 20-lb. steel rails, leading to a 1,600-ton ore bunker on tidewater, with a gasoline locomotive. Fire destroyed old machinery plant, which was replaced circa June, 1908.

**DACOTAH HEIGHTS LAND CO.****MICHIGAN.**

Office and mine: Houghton, Houghton Co., Mich. Lands are the fractional Southwest ¼ of Section 35, Town 55 North, Range 54 West, lying just west of the Isle Royale, in the western limits of Houghton. Was organized as a land company, to promote a townsite, but has mineral rights to the entire tract, and explored the property, 1908, with a diamond drill.

**DACOTAH MINING CO.****MICHIGAN.**

Dead. Lands sold, 1905, to Dacotah Heights Land Co. Formerly at Houghton, Houghton Co., Mich.

**DAILEY COPPER MINING & SMELTING CO.****MONTANA.**

Mine office: Wickes, Jefferson Co., Mont. Wm. Dailey, president and general manager. Has developed mainly medium grade ore, with some ore of higher tenor, and was shipping, to the Washoe works, circa May, 1908.

**DAIRY FARM MINING CO.****CALIFORNIA.**

Office: 165 Broadway, New York, N. Y. Mine office: Van Trent, Placer Co., Cal. Daniel Guggenheim, president; Corey C. Brayton, manager. Organized circa 1903, under laws of California. Company is controlled, through stock ownership, by American Smelters Securities Co.

Lands, 160 acres, showing a mineralized fractured zone of circa 80' width, in rhyolite and andesite, having a north and south strike, with dip of 60°, opened by a 500' shaft. Ore is auriferous copper oxides, becoming lean at depth of circa 500'. Mine, opened 1903, was closed September, 1907, because of inability to complete the San Bruno smelter. Equipment includes a 600-

h. p. electric plant, with a 140-h. p. hoist, good for 1,000' depth, and a 20-drill air-compressor. Buildings, about 25 in number, include a 20x40' wooden machine-shop, 30x50' carpenter-shop, 30x20' smithy, office, store and dwellings.

A small concentrator has Chilean mills, and a 100-ton leaching plant treats oxidized ores from the gossan.

Survey has been made for a railroad, from Lincoln to Van Trent. Property is reported to have proven somewhat disappointing, but apparently was closed down by reason of depression in the metal market, and inability to complete the projected San Bruno smelter, rather than because found worthless, as reported, as the mine is in shape to begin considerable production, and probably will be heard from in the future.

#### **DAISY BELL COPPER-GOLD MINING CO.**

**MONTANA.**

Office: Butte, Mont. Mine office: Whitehall, Jefferson Co., Mont. Malcolm Gillis, president. Capitalization \$600,000, shares \$1 par. Lands, 8 miles from Whitehall, have a 160' shaft, showing ore assaying up to \$350 gold per ton, with fair copper and silver values, and with indications of increasing copper values at depth.

#### **DAISY BELL GOLD & COPPER DEVELOPMENT CO.**

**MONTANA.**

Dead. Organized circa June, 1906, under laws of Montana, with capitalization \$600,000, as successor of Daisy Bell Gold & Copper Mining Co., and was succeeded by Daisy Bell Copper-Gold Mining Co. Formerly at Whitehall, Jefferson Co., Mont.

#### **DAISY BELL GOLD & COPPER MINING CO.**

**MONTANA.**

Dead. Organized Nov. 22, 1905, under laws of Montana, with capitalization \$120,000, shares 20 cents par, as a reorganization of a previous Daisy Bell, and succeeded, circa June, 1906, by Daisy Bell Gold & Copper Development Co. Formerly at Whitehall, Jefferson Co., Mont.

#### **DAKOTA-CALUMET CO.**

**SOUTH DAKOTA.**

Office: Lima, Ohio. Mine office: Hill City, Pennington Co., S. D. Geo. Edward Reed, vice-president; Henry G. Ellison, treasurer; W. J. Boothe, assistant secretary; A. C. Overpeck, superintendent. Organized 1902, under laws of South Dakota, with capitalization \$3,000,000, shares \$1 par. Is controlled, through ownership of circa two-thirds of stock issue, by Continental Copper Mining & Smelting Co., which, March, 1907, succeeded the Continental Copper Co.

Lands, 19 claims, patented, including the Lilian group, area 179 acres, and a 20-acre millsite, with total landed holdings of 319 acres. Mine has a 380' tunnel and a 3-compartment 385' shaft, also shafts of 40' and 80', with a 40-h. p. hoist and 10-drill Sullivan air-compressor. Has 15 buildings, including a 16x50' wooden machine-shop and a 30x40' wooden carpenter-shop.

The smelter, of wood on stone foundations, connected with the mine by a 300' Bleichert aerial tram, has a 150-ton Colorado Iron Works blast-furnace and a 120-h. p. steam plant. Smelter, never in blast, is 4 miles from limestone and 6 miles from a railroad, and was built before the mine was developed. Company employs circa 30 men.

#### **DALTON & LARK MINING & MILLING CO.**

**UTAH.**

Mine office: Lark, Salt Lake Co., Utah. Was controlled, through stock ownership, by Bingham Consolidated Mining & Smelting Co. Has shafts of 815' and 1,150', also 4 tunnels with electric haulage plant, bottom level being said to show ore averaging 7% copper and 60 oz. silver, which estimate is considered excessive.

#### **DALY COPPER MINING CO.**

**AUSTRALIA.**

Mine office: Leighs Creek, South Australia. F. Sutherland, manager at last accounts. Has steam power. Presumably idle.

**DALY JUDGE MINING CO.****UTAH.**

Office: Salt Lake City, Utah. Mine office: Park City, Summit Co., Utah. Otto Hanke, president; Moylan C. Fox, vice-president; Geo. W. Lamourne, secretary and treasurer; Fredk. P. Burrell, general superintendent. Organized 1901, under laws of Utah. A \$300,000 bond issue, at 7%, was retired, 1906.

Lands, 146 claims, area 715 acres, including the Anchor mine, with 3 ore bodies, known as the South, Contact and North veins, the middle or Contact vein, which is the more important, showing a strong outerop for 3,000'. Property also includes the Bonanza group, slightly developed, but considered promising. Ore values are in lead, silver, zinc, copper and gold, approximately in the order given. The mine has nearly 10 miles of workings, making circa 400 gallons of water per minute, which is sufficient, not only for the use of the company's concentrator, but also to supply the Daly-West, under contract, and there is a lake 2 miles from the mine, affording an alternative water supply. The 3-compartment Anchor shaft, having a powerful hoist operating double-deck cages, is 1,650' deep, connecting, on the 1,200' level, with the 6,000' Anchor tunnel, which has an electric haulage system. The Anchor workings have a large ore tonnage blocked out for stoping, and extraction was begun, 1907, on the 1,500' level.

The concentrator, of 300 tons daily capacity, puts 6 into 1, using the Sherman slimes process.

Production, 1907, was 76,914 tons of ore, costs being \$3.03 for mining, 95 cents concentrating, \$1.08 marketing, 40 cents prospecting and dead work and 23 cents general expenses. Net earnings, 1906, were \$500,015.05, or 51.2% of gross earnings, a remarkably good showing. Quarterly dividends were begun, 1907, but second quarterly dividend was passed on account of depression in the metal market. Property considered valuable and management good.

**DALY MINING CO.****MONTANA.**

Office: care of Marcus Daly Estate, Butte, Mont. Letter returned unclaimed from former mine office, Copperopolis, Meagher Co., Mont. Organized 1903, under laws of Arizona, with capitalization \$1,000,000, to take over sundry mining properties of the Marcus Daly estate, in Meagher, Silver Bow and Lewis & Clark counties, Montana. Properties in Meagher county are the Copperopolis, Daly, North Pacific, Darling Fraction and others. The Copperopolis mines have 3 shafts, deepest 500', with a good surface equipment, and were small producers of high-grade ore for many years, but have been idle since 1903.

**DALY WEST MINING CO.****UTAH.**

Office: 163 South Main St., Salt Lake City, Utah. Mine office: Park City, Summit Co., Utah. Employs circa 250 men. J. Ernest Bamberger, president; H. G. McMillan, vice-president; J. Barnett, secretary; W. S. McCornick, treasurer; preceding officers, W. H. Dickson and S. J. Hagenbarth, directors; Ernest Bamberger, general manager; P. L. Williams, Jr., superintendent; E. L. Talbot, mine superintendent; F. W. Sherman, mill superintendent; F. I. Williams, engineer.

Organized Feb. 14, 1902, under laws of Colorado, with capitalization \$3,600,000, shares \$20 par. Has paid dividends, to end of 1907, of \$5,877,000, largest disbursement, 1903, having been \$1,332,000; 1907 dividends were \$378,000. Regular quarterly dividends were passed first half of 1908. Company ended 1907 with \$305,067.31 cash on hand. Has circa 2,800 shareholders. Corporation Trust Co., New York; North American Trust Co., New York; McCornick & Co., Salt Lake City, registrars. American Loan & Trust Co., Boston; North American Trust Co., New York; McCornick & Co., Salt Lake City, transfer agents.

Lands, 50 claims, patented, area 250 acres, in the Uintah district, showing extensive ore bodies carrying argentiferous and auriferous chalcopyrite, galena and sphalerite, with silicious gangue, values being mainly in silver and lead, with small copper values and still smaller gold values. Lead ores apparently are declining in value. Ore production is about equally divided between smelting and concentrating grades. The property has 3 principal veins, of 4' to 6' minimum, and up to 40' maximum width, and additional ore bodies have been developed, to some extent.

The main shaft is 1,640' deep, though no mining is in progress below the 1,400' level, and the mine has about 12 miles of workings, 4,269' having been opened in 1907. The Ontario drain tunnel, about 3 miles long, has been extended into the Daly West property, at the expense of this company, which pays therefor \$750 monthly rental. The tunnel in October, 1908, was 155' in Daly West ground, and was expected to connect, circa April, 1909, with the shaft, at a depth of about 2,000'.

The Quincy mine, operated in connection with the Daly West mine, and owned by the company, shows considerable ore reserves, and, in 1907, produced 3,199 tons of first class ore and 7,953 tons of second class ore.

The 350-ton concentrator has crushers, rolls, automatic sorting belt, two 5' Huntington mills and Wilfley tables, putting about 6 tons into 1, with an average extraction of 98% lead and 70.5% silver, the practice being exceptionally advanced and successful.

The tailings mill, 56x82' in size, 400' northeast of the concentrator, has a 5' Huntington regrinding mill, two 2-compartment jigs, 6 concentrating tables, 1 Wilfley table and 7 slime, settling and classifying tanks, treating tailings at a cost of circa 20 cents per ton, when in operation. Water supply for both mills is secured, under contract, from the Daly-Judge mine.

Operations were suspended, late 1907, and resumed circa June 1, 1908. Maximum production, 1903, was 3,160,824 lbs. fine copper, 35,744,000 lbs. lead, 4,382,222 oz. silver and 3,195 oz. gold. Production, 1906, was 830,307 lbs. fine copper, 12,150,000 lbs. lead, 1,200,837 oz. silver and 1,016 oz. gold, and 1907, was 673,890 lbs. fine copper, 8,086,000 lbs. lead, 1,042,062 oz. silver and 949 oz. gold, of the gross value of \$771,679.44.

Former large reserves of high grade ore were greatly depleted by undue crowding for several years, culminating in 1903, and the principal reliance for the future is upon large bodies of low grade ore, and some newly opened high grade ore. The mine has about 3 years' supply of milling ore blocked out. Management, since 1904, has been improved, though shareholders remain dissatisfied, and the property is valuable.

#### DAMARALAND COPPER SYNDICATE, LTD.

Dead. Voluntarily liquidated, February, 1903. Formerly at Windhoek, German Southwest Africa.

#### DANA COPPER CO.

Office: 68 Devonshire St., Boston, Mass. Mine office: Phoenix, Keweenaw Co., Mich. C. O. Burbank, secretary and treasurer; preceding officer, John C. Watson and Joseph H. Chandler, directors. Organized April, 1853, under laws of Michigan, with capitalization \$500,000, and reorganized with capitalization \$1,000,000, shares \$25 par. Is controlled, through ownership of 35,450 shares, out of the capitalization of 40,000, by the Calumet & Hecla Mining Co. To Dec. 1, 1871, had levied assessments of circa \$68,000.

Lands, 640 acres, being the East  $\frac{1}{2}$  of Section 25, Town 58 North, Range 31 West, bounded on the north by the Arnold and on the other three sides by

#### GERMAN SOUTHWEST AFRICA.

#### MICHIGAN.

the Central. Mine was opened 1851, and never was a producer, having been idle since 1857.

#### DANES LEA MINING CO.

CALIFORNIA.

Office: San Diego, Cal. Mine office: Encinitas, San Diego Co., Cal. W. C. Harland, president; W. H. McKinnon, manager. Lands, 20 claims, 8 miles east of Encinitas, with shafts of 100' and 280', also a tunnel, showing a 3' vein of medium-grade chalcopyrite, traversing porphyry. Has gasoline power. Idle for several years.

#### DANIA COPPER MINES.

NATAL.

Mine office: Undweni, Ngutu, Zululand, Natal. Lands, 570 acres, in the Ngutu district, on government lands, circa 30 miles from Vryheid. Mine has a 215' shaft, in a vein of ore of fair grade, of 16' to 20' width, traceable by outerop circa 2 miles. Has a small mill and planned beginning production 1908. Is the first producing copper mine of Natal, and is a property of considerable promise.

#### DANNEMORA GOLD & COPPER MINING CO.

IDAHO.

Office: Wallaee, Idaho. Mine office: Mullan, Shoshone Co., Idaho. Frank L. Foreman, manager; Henry Klackers, superintendent. Has a 900' tunnel, showing spathic iron ore, said to change to copper assaying up to 14% in tenor, with 40 oz. silver and \$2 gold per ton.

#### DANUBE COPPER MINING CO., LTD.

HUNGARY.

Office: care of E. D. Tupper, 6 Holborn Viaduct, London, E. C., Eng. Organized December, 1907, under laws of Great Britain, with capitalization £1,000, shares £4 par. Lands supposedly are in Hungary.

#### DANVILLE & VIRGINIA COPPER MINING CO.

VIRGINIA.

Dead. Merged, 1903, in Carolina King Mining Co. Formerly at Virgilina, Halifax Co., Va.

#### DAEGIN & RICHARDSON.

MEXICO.

Office and mine: Unión de Tula, Autlán, Jalisco, Mex. Lands, 60 pertenencias, 7 miles southwest of Ayutla, showing a fissure vein of 5' to 10' width, in diorite, carrying argentiferous oxides and carbonates, associated with hematite. Has a 130' shaft and 325' tunnel, with some ore blocked out for stoping.

#### DARNELL MINING & MILLING CO.

WASHINGTON.

Dead. Formerly at Kalama, Cowlitz Co., Wash. Described Vol. VI.

#### DARRINGTON-INDIANA MINING CO.

WASHINGTON.

Office: care of Geo. H. Crawford, secretary, Seattle, Wash. Mine office: Darrington, Snohomish Co., Wash. G. A. C. Rochester, president; Jas. G. Gibbons, vice-president. Organized 1906, under laws of Washington, with capitalization \$1,000,000, shares \$1 par. Lands, 2 unpatented claims.

#### DAULTON COPPER CO.

CALIFORNIA.

Dead. Formerly at Daulton, Madera Co., Cal.

#### DAVID HARUM COPPER CO.

TEXAS.

Office: 30 Broad St., New York, N. Y. Mine office: Van Horn, El Paso Co., Texas. Organized 1901. Lands, in the Diablo Mountains, 12 miles east of Van Horn, showed a 12x40' pothole, carrying good ore, which was exhausted quickly. Idle and apparently moribund.

#### DAVIDSON O'SHEA COPPERS, LTD.

TRANSVAAL.

Office: P. O. Box 22, Johannesburg, Transvaal. Mine office: Zoutpansberg, Transvaal. Organized 1907, under laws of Transvaal, with capitalization £20,000, shares £1 par, with £12,500 issued to vendors, £5,000 issued for working capital and £2,500 unissued. Lands, 96 claims, on Government Farm Rotterdam No. 1,450, 96 claims on Government Farm Lilliput No. 1,445, and 96 claims on Scrutton's Concession, unsurveyed government ground, all in the Zoutpansberg district, Transvaal. Property has been slightly prospected.

**DAVIS-DALY COPPER CO.****MONTANA.**

Office: 1611-42 Broadway, New York, N. Y. Mine office: Butte, Silver Bow Co., Mont. It is planned to organize this company, with a capitalization of \$10,050,000, shares \$10 par, as successor of the Davis-Daly Estates Copper Co., having a similar capitalization, to take over the wreck of the latter. A full description of the disreputable career of the Davis-Daly Estates Copper Co. will be found under the title of the latter-named corporation.

The plan of reorganization provides for turning over the assets, such as they are, of the Davis-Daly Estates Copper Co., to the new corporation, which plans devoting circa \$500,000 to the liquidation of the debts of the old company, leaving about \$300,000 for working capital. Capital of the new company is to be provided by a practically forced assessment of \$2 per share on old stockholders, payable in 50-cent installments Oct. 1 and Dec. 15, 1908, and Feb. 15 and March 15, 1909, old stockholders turning in their shares, in addition to the assessment. Stockholders who refused to furnish more money are said to be entitled to a dividend of 50 cents in liquidation, and it is to be hoped that they get it before it disappears.

It is said that Messrs. Coram, Leonard and Heinze, promoters of the old company, intend, with rare generosity, to donate an additional undivided fourth interest in the Daly Estate, which never was owned originally by the Davis-Daly Estates Copper Co., the present landed "holdings" of that corporation consisting merely of a six-elevenths undivided interest in most of its properties. With the addition of the additional fourth interest this would give the new company an undivided interest of thirty-five forty-fourths in the Daly Estate lands. Just what the other proportions may be seems unknown to the public.

The plan of organization calling for a continuance of the management that foisted the former rotten company on the credulous public, discriminating investors can have no confidence in the new company or in any promises made in its behalf. Once bit, twice shy.

**DAVIS-DALY ESTATES COPPER CO.****MONTANA.**

Office: 1611-42 Broadway, New York, N. Y. Mine office: Butte, Silver Bow Co., Mont. J. A. Coram, president; N. Willis Burnstead, vice-president; preceding officers, F. Augustus Heinze (chairman), H. M. Burton and S. S. Rosenstamm, executive committee; preceding officers, E. L. White, Geo. H. Flint, Geo. Baglin, John MacGinnis, Henry Mueller, M. S. Largey, C. F. W. Dillaway, Chester D. Coram and Chas. R. Leonard, directors; W. J. Freeman, secretary; R. A. Cornachan, treasurer; Albert Frank, general manager; Wm. A. Kidney, superintendent.

Organized May 29, 1906, under laws of Maine, with capitalization \$10,050,000, shares \$15 par. Has circa 3,500 shareholders. Supposedly is controlled, through stock ownership, by United Copper Co. Controls, through stock ownership, the Smokehouse Mining Co., which owns the Detroit, National and Copper Bottom claims. Empire Trust Co., New York, transfer agent; Colonial Trust Co., New York, registrar.

Lands, circa 400 acres, "bought" of the estates of A. J. Davis and Marcus Daly, or rather supposed to have been bought, though apparently the company secured only an undivided interest of six-elevenths in most of its properties, this not having been known to shareholders until after the smash. The Davis lands are said to have been bought for \$1,393,196, part of which was paid, balance being owned, this also coming out in the wash. Lands include the Owsley ranch and water rights, the mineral lands lying to the south and west of the proven mineral zone of Butte, though very close thereto, stretching over an area of approximately  $\frac{1}{2}$  mile wide and  $1\frac{1}{2}$  miles long, including old prop-

erties claimed to have yielded profits of \$2,000,000, mainly from silver production, these figures apparently being estimates only. Mines were idle from circa 1890 until taken over by present company. Property, in addition to sundry old exploring shafts, has four 3-compartment working shafts, on the Colorado, Smokehouse, Mount Moriah and Silver King claims.

The Mount Moriah has a 640' shaft, and a crosscut of circa 2,000' length has been driven to the Mount Moriah claim from the 1,800' level of the Original mine, this showing occasional stringers of ore and leached veins, apparently there being nothing of workable value developed by the long crosscut, notwithstanding many flourishes of trumpets in the press.

The Colorado mine has a shaft of circa 1,400' depth, with short crosscuts north and south, showing several veins carrying bunchy values in copper, but heavy in zinc.

The Smokehouse mine consists of one city lot, circa 50x125' in size, with a 500' shaft, vein having been lost on the 500' level. It is planned opening the Smokehouse at greater depth by a crosscut from the Colorado shaft. Equipment, which completely fills the lot, includes a gallows-frame, electric hoist and electric air-compressor.

The Silver King claim, worked, 1907, by lessees, shows considerable good silver ore, with lead and zinc, but is only slightly developed.

The Lizzie mine, about  $\frac{1}{4}$  mile east of the Colorado, has a shaft of about 100' depth, on the Holy lease, claimed to show a 30' vein carrying up to 8% copper. This claim was worked, 1907, by lessees, under a 25% royalty, producing some good silver ore.

The Plymouth claim was worked, 1908, in a small way, by lessees.

The only production of the Davis-Daly Estates Copper Co. consisted of ore carrying a little copper and considerable silver, taken out, 1907, by lessees. Work was suspended November, 1907, and resumed, in the Colorado shaft, circa June, 1908. Property has been attached for debts.

Some extremely and apparently deliberately misleading statements have appeared in the press regarding the size and value of the ore bodies of this company. In fact, most of the information appearing in the press has ranged from half-truth to nearly or complete falsehood.

The shares of the company were floated at \$12.50 each, and it was stated in the press, apparently in an inspired article, that the actual cost to the promoters was \$12.48 per share, leaving to those philanthropic gentlemen the beggarly profit of 2 cents per share, or 16 cents on every \$100. In view of the actual facts disclosed upon the company's failure this statement must be considered the prime joke of the season, though it may appear but a scurvy jest to the deluded shareholders who swallowed the bait.

The Davis-Daly Estates Copper Co. was promoted by Messrs. Coram, Leonard and Heinze, Leonard apparently acting as Heinze's agent, the latter remaining in the background. The company was supposed to have begun business with \$2,000,000 working capital, but actually started with \$500,000 cash, and an agreement that the vendors, J. A. Coram and Chas. R. Leonard, guaranteed by F. Augustus Heinze, would furnish \$1,500,000 more when needed. This arrangement was kept sub rosa, but there was a sub-cellars and private trap-door under even this basement arrangement, in the form of an agreement between the company and the vendors of the company, about which the stockholders knew nothing, providing that the vendors were to furnish \$2,000,000 cash capital, failing which they could return the stock of the company at \$15 per share. The vendors actually provided only \$516,401 under this agreement, and met the balance of their "contract" by turning over to the treasury of the company 95,000 shares of stock at \$15, at a time when the stock was selling

at about \$5 per share, which arrangement effectually choked off what little wind remained to the company, and rendered the balance of the stock practically worthless. It is obvious that if the stock had been selling at a premium the cash would have been paid. Under this agreement the vendors played the old game, "Heads I win, tails you lose."

In December, 1907, the company was supposed to have had about 225,000 shares unissued, but a few months later had circa 600,000 shares issued out of the capitalization of 670,000 shares.

The company's financial statement of September, 1907, gave liabilities of only \$46,866, which figures were brought out by a juggling of the books, now comprehensible, but at that time unguessable by any shareholder, hence the statement was nothing less than a lie, no matter on what grounds of casuistry it may be defended. The company's statement of June 30, 1908, showed a "surplus" of \$1,999,000, with liabilities of only about \$90,000, while as a matter of fact the company at that date was bankrupt, and instead of about \$90,000 of liabilities, the company had a floating debt of that amount, and owed somewhere between \$300,000 and \$450,000 remaining unpaid on its lands. The defense of the company, or its promoters, is that this money was owed, not by the company, but by the vendors, but, inasmuch as the property was liable to forfeiture by reason of non-payment of these balances, and the vendors got out from under by turning back worthless stock to a depleted treasury, it is evident that the company's financial statements were willful and deliberate lies, and no juggling with words can change this ugly fact.

Payments of about \$180,000 were due July 1, 1908, to the owners of lands, but the time was extended.

In the total collapse of this rotten corporation, other facts of prime importance, carefully concealed at the time of flotation, have come to light. Not only was the alleged \$2,000,000 cash capital a myth, and the alleged landed holdings held upon part payments, but the company never had any title or claim, no matter how poor, to more than a fractional interest in the lands. It transpired that the Davis-Daly Estates Copper Co. owned, or was supposed to own, merely a six-elevenths undivided interest in most of its properties. It is claimed that the vendors, by an act of rare generosity, will convey to the reorganized company an undivided fourth interest in the Daly Estate, which the Davis-Daly Estates Copper Co. never owned. In view of the promises broken, and the crooked methods employed throughout in the flotation and management of this company, any shareholder who places any confidence in any statement now made by the vendors writes himself down an ass.

The Davis-Daly Estates Copper Co. being hopelessly bankrupt in both cash and reputation, efforts are being made to resuscitate the corpse as the Davis-Daly Copper Co., and the proposed plan of reorganization is set forth in the description of the Davis-Daly Copper Co. Shareholders who failed to pay the practically enforced assessment on their shares Oct. 1, 1908, are said to be entitled to a dividend of 50 cents, in liquidation, presumably supposing nobody steals the funeral baked meats.

The Davis-Daly Estates Copper Co. is a swindle, and were justice done the people responsible for the frauds would be jailed.

#### DAVIS MINING & SMELTING CO.

Dead. Formerly at Halleck, San Bernardino Co., Cal.

CALIFORNIA.

#### DAWES RANGE COPPER & GOLD MINING CO.

OF QUEENSLAND, N. L.

AUSTRALIA.

Offices: 78 Queen St., Melbourne, Australia, and 76 Bishopsgate St., London, E. C., Eng. Mine office: Glassford Creek, Queensland, Australia. Hon. Henry Foster, J. P., chairman; John Brown, manager; Stobbs & Roscoe, British

agents. Organized January, 1900, under laws of Victoria, with capitalization £300,000, shares £1 par; issued, £250,000. Lands, 240 acres, in the Gladstone district of Queensland. Idle several years, owing to lack of funds.

**DAY DREAM & BRETONARTE COPPER MINING CO. AUSTRALIA.**

Mine office: Leigh Creek, South Australia. F. M. Montague, manager, at last accounts. Has steam power. Idle and apparently moribund.

**DEADWOOD GOLD & COPPER MINES CO. SOUTH DAKOTA.**

Dead. Formerly at Deadwood, Lawrence Co., S. D.

**DEATH VALLEY COPPER GLANCE MINING CO. CALIFORNIA.**

Office: 407-346 Fourth Ave., Pittsburgh, Pa. Mine office: Greenwater, Inyo Co., Cal. Capitalization \$1,000,000, shares \$1 par. Claimed, early 1907, to have nearly \$15,000 in treasury for development purposes, but it cannot be found that any work has been done. Lands, 6 claims, known as the Poorman group. Idle.

**DEATH VALLEY COPPER MINES & SMELTING CO. CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Jerry Rourke, manager. Lands are said to comprise several hundred acres, prospected by numerous pits and shallow shafts. Employed about 50 men in spring of 1907.

**DeBORGIA COPPER MINING CO. MONTANA.**

Office: Ritzville, Wash. Mine office: DeBorgia, Missoula Co., Mont. Wm. Weiland, president; C. H. Clodius, treasurer; W. Greenough, superintendent. Lands, on Goat Mountain, just east of the Idaho line, have a 265' tunnel, showing a 6' fissure vein carrying cuprite, melaconite and bornite, with quartz gangue. Idle.

**DECATUR COPPER MINING CO. ARIZONA.**

Office: 503 North Main St., Decatur, Ills. Mine office: Jerome, Yavapai Co., Ariz. W. J. Wayne, president; Frank P. Wills, vice-president and treasurer; Geo. R. Bacon, secretary. Organized 1907, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands, 10 claims, area 180 acres, also a 10-acre millsite and 10-acre smelter site, 2 miles south of Jerome, in the Verde district, claimed to show 10 fissure veins and lenses, of which 4, slightly developed, are claimed to have an average width of 4', giving average assays of 5 to 8% copper, 20 oz. silver and \$10 gold per ton, which is too high. Has 6 shafts, deepest 280', and tunnels of 70' and 150'. Idle since circa 1904, and out of cash, with poor prospects of ever obtaining any.

**DEDHAM COPPER MINING CO. WISCONSIN.**

Office and mine: West Superior, Douglas Co., Wis. Abram G. Ross, president; Wm. C. Burke, secretary. Organized November, 1902, under laws of Wisconsin, with capitalization \$1,300,000, shares \$25 par; debentures, \$150,000 authorized at 6%. Lands, 320 acres, also a 12-acre millsite, with waterfall estimated at 2,400 h. p. available. Has 34 pits and a shallow shaft, showing 3 cupiferous amygdaloid beds, each claimed to average 90' width and to be about one-third mineralized. Idle for several years and apparently moribund.

**DEEMS MINING CO. UTAH.**

Office: Salt Lake City, Utah. Letter returned unclaimed from former mine office, Bingham Canyon, Salt Lake Co., Utah. C. D. Rookridge, president; Abram Hanauer, Jr., secretary and treasurer. Organized 1904, with capitalization \$75,000, shares 25 cents par. Idle and apparently moribund.

**DEEP RIVER GOLD MINING CO. NORTH CAROLINA.**

Mine office: High Point, Guilford Co., N. C. W. G. Gaither, manager, at last accounts. Mine, opened many years ago, has auriferous and argentiferous copper ores. Idle for several years.

**DEER CREEK DEVELOPMENT CO. UTAH.**

Mine office: American Fork, Utah Co., Utah. John Cleghorn, president;

**Henry Johnson, secretary.** Organized, 1903, with capitalization \$125,000, shares 25 cents par. Lands, 7 claims, in the Deer Creek district, showing a fissure vein in granite of 3' to 6' width, carrying ores assaying up to 22% copper and 7 oz. silver per ton. Idle for several years.

**DEER CREEK GOLD & COPPER MINING CO.**

WASHINGTON.

Dead. Formerly at Silverton, Snohomish Co., Wash.

**DEER LODGE CONSOLIDATED MINES, LTD.**

MONTANA.

Office: 16 St. Helen's Place, London, E. C., Eng. Organized July 2, 1907, under laws of Great Britain, with capitalization £250,000, shares £1 par, to acquire properties, in Deer Lodge county, Montana, said to carry gold, silver, lead, zinc, copper, iron, sulphur, tin and coal, some of which minerals, in Deer Lodge county, apparently are mere figments of the imagination.

**SOCIEDAD MINERA DEFENSO y TODOS SANTOS.**

CHILE.

Mine office: Taltal, Antofagasta, Chile. Daniel Olivia, superintendent, at last accounts. Has auriferous copper ores, employing circa 40 men.

**DEGILBO COPPER MINING SYNDICATE, LTD.**

AUSTRALIA.

Dead. Was organized Feb. 18, 1907, with capitalization £960, shares £10 par, and was liquidated August, 1907. Former office, Queen St., Brisbane, Australia.

**DE KAAP COPPER MINES, LTD.**

TRANSVAAL.

Mine office: Barberton, Middelburg, Transvaal. Capitalization, £2,000. Lands, 158 claims, near Barberton, having a tunnel and a 64' shaft showing small quantities of oxidized ores and copper sulphides.

**DE LAMAR'S COPPER REFINING CO.**

NEW JERSEY.

Dead. Succeeded, Oct. 15, 1906, by United States Metals Refining Co. Formerly at Chrome, Middlesex Co., N. J. Very fully described Vol. VI.

**DE LAMAR-WALL MINING & MILLING CO.**

UTAH.

Dead. Sold lands, 1903, to Utah Copper Co. Formerly at Bingham Canyon, Salt Lake Co., Utah.

**DELAWARE MINE.**

MICHIGAN.

Owned by Manitou Mining Co. Very fully described Vol. II.

**DELAWARE MINING CO.**

MICHIGAN.

Dead. Formerly at Delaware Mine, Keweenaw Co., Mich. Exhaustively described, under title Oneida, Vol. II.

**DEL COBRE CONSOLIDATED MINING CO.**

ARIZONA.

Letter returned unclaimed from former mine office, Red Rock, Pinal Co., Ariz. W. Humphrey Read, secretary and treasurer. Organized, 1903, under laws of Delaware. Lands, 15 claims, held under bond and lease, 12 miles east of Florence, having a 200' shaft, showing auriferous and argentiferous copper ore. Idle several years and moribund.

**DELFINA MINING CO.**

MEXICO.

Office: Centro Mercantil 3er, Piso, Mexico, D. F. Mine office: Chilpancingo, Bravos, Guerrero, Mex. Paul Merienne, superintendent. Lands include the Delfina, Argentina and Esperanza mines, carrying argentiferous and auriferous copper ores. Has steam power and a 5-stamp mill. Employed circa 100 men at last accounts.

**DELMAS COPPER CO.**

NEVADA.

Office: Salt Lake City, Utah. Mine office: Lee, Elko Co., Nev. J. D. Wood, president; P. D. Delmas, vice-president and general manager; W. Earls, secretary and treasurer. Lands, in Lee Cañon, 6 miles from a railroad, show contact deposits in wollastonite near granite, also a 30" fissure vein carrying high grade argentiferous ore. Development is by a 170' tunnel, planned to give a back of 800' at length of 1,400'. Mine is said to show 6' of ore assay-

ing up to 14% copper, 211 oz. silver and \$9.60 gold per ton. Property considered promising.

**DEL NORTE COPPER CO.**

**ARIZONA.**

Dead. Formerly at Kirtland, Yavapai Co., Ariz.

**DEL NORTE COPPER CO.**

**CALIFORNIA.**

Dead. Formerly at Smith River, Del Norte Co., Cal.

**DEL ROY COPPER MINING & SMELTING CO.**

**NEW MEXICO.**

Dead. Formerly at Alamagordo, Socorro Co., N. M. Was a fraud, promoted from El Paso by Wm. Moeller, W. J. Harris, H. F. Kettler, M. D. Gaylord and others. Sold stock on strength of options to purchase sundry lands. Fully described Vol. VI.

**DEL VERDE TUNNEL CO.**

**UTAH.**

Office and mine: Ogden, Weber Co., Utah. Albert Scowcroft, president; F. L. Woods and Moroni Poulter, vice-presidents; C. H. Hussey, secretary and treasurer; B. F. Critchlow, Willard Scowcroft, F. M. Driggs, W. L. Porter and J. C. Platt, directors. Organized circa January, 1908, with capitalization \$200,000, shares 10 cents par, as a merger of Utah Buckhorn Mining Co. and Weber County Mining & Milling Co. Lands, 19 claims, east of Ogden, including the Weber group of 8 claims, and the Buckhorn group of 11 claims in Coldwater Cañon. Company is said to plan a one-mile tunnel.

**P. P. DEMIDOFF ESTATE.**

**RUSSIA.**

Mine and works office: Nijni Tagilsk, Perm, Russia. Smelter is known as the Vjaski Works. Mine was flooded in 1905, reducing production in that year to 2,962,250 lbs. fine copper, as compared with 4,917,896 lbs. in 1902.

**DEMOCRATA CANANEA SONORA COPPER CO.**

**MEXICO.**

Office: 815 Fourth National Bank Bldg., Cincinnati, Ohio. Mine office: La Cananea, Arizpe, Sonora, Mex. H. H. Hoffman, president, secretary and treasurer; C. E. Hoffman, vice-president and general manager; Adolph Ehler, mine superintendent; Wm. Harris, smelter superintendent; H. S. McKay, engineer. Organized May 8, 1905, under laws of Arizona, with capitalization \$3,000,000, shares \$10 par; issued, \$2,800,000. Central Trust Co., registrar. Annual meeting, last Tuesday in May.

Lands, 18 hectares, lying in the heart of the Greene Cananea mines, between the Veta Grande and Capote. Development is by an 800' tunnel, in ore, a 3,000' crosscut tunnel and a 500' shaft, latter with collar at bottom of gulch, giving an advantage of circa 800' in depth, as compared with the neighboring Capote shafts. Property has 2 miles of workings, estimated to show circa 350,000 tons of ore, averaging 6% copper, with combined gold and silver values of about \$3 per ton, which estimate probably is too high.

Equipment includes three 80-h. p. hoists, two 120-h. p. hoists and a 15-drill Sullivan air-compressor.

Company owns 15 buildings, including a 20x35' machine-shop, 15x25' carpenter-shop, assay office, warehouse, general store and several other buildings.

The reduction works include a 125-ton concentrator and a smelter with blast furnaces of 125 tons and 250 tons rated daily capacity, making matte, which is sent to the Greene Cananea works for conversion, when mine is in operation.

Production, 1907, was 8,067,039 lbs. fine copper, 94,434 oz. silver and 271 oz. gold, and company plans increasing capacity to an annual production of circa 10,000,000 lbs. fine copper. Mine considered valuable, though small.

**DEMOCRATA MINING CO.**

**MEXICO.**

Dead. Succeeded, 1905, by Democrata Cananea Sonora Copper Co. Formerly at La Cananea, Arizpe, Sonora, Mex.

**DENN-ARIZONA COPPER CO.****ARIZONA.**

Office: 600 First National Bank Bldg., Duluth, Minn. Mine office: Bisbee, Cochise Co., Ariz. Martin Pattison, president; A. Guthrie, vice-president; Lemuel C. Shattuck, treasurer; Byron M. Pattison, superintendent; preceding officers, Thos. Bardon, Archibald M. Chisholm and Maurice Denn, directors; John G. Williams, secretary. Organized Jan. 14, 1907, under laws of Minnesota, with capitalization \$3,500,000, shares \$10 par, fully issued, as successor of Denn-Arizona Development Co.

Lands, 13 claims, patented, area circa 200 acres, partly owned in fee and partly held under bond and lease, final bond payment, \$15,000, to Maurice Denn, falling due Apr. 4, 1910. Lands are well located, immediately north of the Junction shaft of the Superior & Pittsburg. The Dividend fault traverses the company's ground for about 1,000', and big ore bodies have been found near this fault on other properties. Development is by a 3-compartment 1,225' shaft, sunk in the conglomerate capping, but penetrating limestone at depth of 840'. Mine has circa 5,000' of workings, on the 1,000' and 1,100' levels, showing considerable leached ore, but little ore of commercial grade, deposits being very irregular, as in the other Bisbee mines. A 55' body of leached ore is said to be shown on the 1,100' level. Company estimates average tenor of ore, exclusively oxides and carbonates, at 8% copper. The mine has a 1,000-gallon triple-expansion Prescott pump on the 1,000' level, and three 800-gallon sinking pumps. Diamond drilling, 1908, on the 1,100' level, apparently has given no important results.

A second shaft was started May, 1906, on the Lee claim. This has a temporary hoist and a 6-drill Sullivan air-compressor.

Equipment includes a 1,600-h. p. steam plant, with two 6-drill Sullivan air-compressors and an 18x36" Ottumwa Corliss first-motion hoist, raising double deck cages. Buildings include an 18x24' carpenter-shop, an 18x24' smithy and several minor structures. There is a railroad spur to the mine.

A little ore was shipped, 1907, but mine was closed, November, 1907, because of too much water and too little cash. Company plans resuming work, early 1909, on the 1,200' level. While little ore has been found so far, there are excellent indications of good ore bodies at slightly greater depth than yet reached. Management considered good.

**DENN-ARIZONA DEVELOPMENT CO.****ARIZONA.**

Dead. Reorganized Jan. 14, 1907, as Denn-Arizona Copper Co. Formerly at Bisbee, Cochise Co., Ariz. Fully described Vol. VI.

**DENORO MINES, LTD.****BRITISH COLUMBIA.**

Dead. Lands sold June, 1906, to British Columbia Copper Co., Ltd. Formerly at Eholt, Trail district, B. C. Fully described Vol. VI.

**DENVER COPPER MINING & LEASING CO.****COLORADO.**

Mine office: Morrison, Jefferson Co., Colo. Everett B. Curtis, secretary and treasurer. Capitalization, \$1,000,000, shares \$1 par. Lands, 2 claims, in the Cup Creek district, also sundry coal lands. Idle for some years.

**DENVER & GLOBE MINING & SMELTING CO.****ARIZONA.**

Mine office: Globe, Gila Co., Ariz. Organized Sept. 4, 1906, under laws of Arizona, with capitalization \$750,000, shares \$1 par, by W. J. Mallory, Silas H. Coplen and H. G. Stephenson. Lands, known as the Darby group, carrying circa 4,500' of the strike of a vein with a prominent outcrop, are near the Inspiration and Live Oak mines, in the western part of the Globe district.

**DENVER GROUP GOLD & COPPER CO.****ARIZONA.**

Office: 319 Douglas Bldg., Los Angeles, Cal. Letter returned unclaimed from former mine office, Wickenburg, Maricopa Co., Ariz. Thos. S. Wadsworth, president. Capitalization \$2,000,000, shares \$1 par. Lands, 10 claims,

patented, area 194 acres, 12 miles northeast of Wickenburg, showing a mineralized zone of 80' to 300' width, traceable 6,000', showing scattered parallel veins and stringers, opened by 5 prospecting shafts, and tunnels of 225' and 600', showing occasional native copper and sulphide ore assaying up to 15% copper and \$10 gold per ton. Idle since circa 1904, and presumably moribund.  
**DENVER & ROCK ISLAND MINING CO.**

IDAHO.

Mine office: Mullan, Shoshone Co., Idaho. Has a shaft of circa 100' showing ore assaying up to 16% copper, with a \$6,000 wagon road from the mine to nearest railroad. Has a saw-mill of about 35,000' board measure daily capacity.

**DERBY COPPER SYNDICATE.**

AUSTRALIA.

Office: Adelaide, South Australia. Mine office: Derby, Western Australia. Lands, fairly timbered and watered, show outcrops of high grade copper ores in a formation of schist and slate. Shipped, 1906, circa 20 tons of 20% copper ore, to Wallaroo & Moonta smelter. Presumably idle.

**DERBY SYNDICATE, LTD.**

AUSTRALIA.

Dead. Voluntarily liquidated, July, 1902. Formerly at Derby, Western Australia.

**DEBOFFSKI MINE.**

SIBERIA.

Mine office: Semipalatinsk, Siberia. Was a small producer at last accounts.

**DERWENT PROSPECTING ASSOCIATION.**

TASMANIA.

Mine office: Liéna, Tasmania. Lands, 24 miles from Liéna, in the Cradle Mountains, include the Derwent, Cradle Mountain and Lake Windermere mines, showing large quantities of low grade ore occurring as stockworks in Archaean schist. Property is estimated, by Dr. Fritz Noetling, to show 2,000,000 tons of ore on surface, which possibly is the case.

**COMPÀNIA MINERA y FUNDIDORA DESCUBRIDORA.**

MEXICO.

Is the Mexican incorporation of the Descubridora Mining & Smelting Co.

**DESCUBRIDORA MINING & SMELTING CO.**

MEXICO.

Office: 17 Battery Place, New York, N. Y. Mine office: Conejos, Mapimí, Durango, Mex. R. Brendel, general manager; D. Gough, superintendent. Lands include the Descubridora, an antigua, opened by a 500' shaft, showing very large quantities of very low grade basic silver-copper carbonates, requiring silicious ores for flux, latter being bought in the market, as not produced by the company's mines. Has steam and electric power and built, 1902, a 600-ton smelter, but part of equipment was sold later to Continental Copper Co. Property was leased for several years to Guggenheim Exploration Co., but supposedly was turned back to company, early 1908. Production, 1903, was 4,964,272 lbs. fine copper.

**SOCIEDAD DESENGAÑO DE PABELLON DE PICA.**

CHILE.

Office: Iquique, Chile. Mine office: Pica, Tarapacá, Chile. Organized May 29, 1906, under laws of Chile, with capitalization £25,000, shares £1 par.

**DESERET MINING & REDUCTION CO.**

CALIFORNIA.

Office: 930 South Second West St., Salt Lake City, Utah. Mine office: Leastalk, San Bernardino Co., Cal. Lands, 9 claims, 3 miles from Leastalk, having circa 500' of workings, said to show auriferous and argentiferous copper ore.

**DESERET MOUNTAIN COPPER KING MINING CO.**

UTAH.

Office: care of E. B. McCabe, Salt Lake City, Utah. Letter returned unclaimed from former mine office, Eureka, Juab Co., Utah. Organized circa 1907.

**DESERT QUEEN COPPER MINING CO.**

ARIZONA.

Mine office: Quartzsite, Yuma Co., Ariz. Organized circa May, 1907, under

laws of Arizona, with capitalization \$1,000,000. Lands, 11 claims, in 2 groups, opened by crosscut tunnels, intersecting veins at 300' to 500' depth, with 600' of drifting on the ore bodies. Has a 40-h. p. gasoline engine, air-compressor and power drills. Has been under development since circa 1902. Ores have given smelter returns of 10% copper, 25 oz. silver and \$12 gold per ton.

#### **DE SOTO MINING CO.**

#### **ARIZONA.**

Office: 1206-71 Broadway, New York, N. Y. Mine office: Middelton, Yavapai Co., Ariz. John L. Elliott, president; Cyrus Robinson, vice-president; Benj. Prince, secretary; preceding officers, Francis Risk, LeRoy T. Harkness and Albert Kerr, directors. Organized January, 1905, under laws of New Jersey, with capitalization \$100,000, shares \$100 par. Bonds, \$1,000,000 authorized, at 6%; issued, \$500,000. Is controlled, through ownership of practically entire stock issue, by Consolidated Arizona Smelting Co.

Lands, 82 claims, area 1,400 acres, about 40 miles southeast of Prescott and circa midway between Crown King and Mayer, in the Peck district, Bradshaw Mountains, carrying 6½ miles of the strike of a very persistent copper formation. Country rocks, of porphyry and quartzite, show 5 parallel veins, of 10' to 60' width, carrying cuprite, melaconite, malachite, azurite, bornite and chalcopyrite, with schistose gangue, all having fair values in copper, gold and silver.

Development is by 2 tunnels, the Copper Link of 800', and the Hot Number of 2,400' length, latter 400' vertically lower than the former, giving a back of 1,374', with a double tram track laid with 20-lb. steel rails. Mine has nearly 2 miles of workings, showing a large amount of medium grade ore. A 4,000' Bleichert aerial tram, of 2,000 tons rated capacity, connects the mouth of the Hot Number tunnel with 2,000-ton ore bins on the railway.

Mining equipment includes two 80-h. p. boilers and a 24-drill Ingersoll-Sergeant air-compressor. There are 9 miles of air and water pipes.

A 160x200' steel concentrator has 2 Blake crushers, 2 centrifugal crushers, 2 sets of rolls, 2 Hancock jigs, 16 vanners, 16 Overstrom tables and 8 sizers.

Production, 1906, was 1,128,327 lbs. fine copper, 19,259 oz. silver and 903 oz. gold; production, 1907, was 1,016,170 lbs. fine copper, 22,216 oz. silver and 933 oz. gold. Property, though low in average grade, has large ore bodies, and is considered valuable.

#### **DESPATCH COPPER-GOLD MINING CO.**

#### **COLORADO.**

Office: care of R. A. Gurley, secretary and treasurer, Denver, Colo. Mine office: Morrison, Jefferson Co., Colo. Henry Appel, president; O. M. Deemer, managing director; Geo. Q. Adams, vice-president and superintendent. Organized Apr. 12, 1903, with capitalization \$150,000, shares 10 cents par. Lands, 8 patented claims, adjoining the F. M. & D. Copper Mining Co., circa 10 miles west of Morrison, opened by shafts, showing stringers of ore assaying 9 to 14% copper. District apparently has not developed continuous ore bodies of fair size. Has steam power. Idle.

#### **DESSIE BOYER COPPER-GOLD MINE, LTD.**

#### **CALIFORNIA.**

Dead. Succeeded, circa 1908, by Copper Mines & Smelters Corporation of America. W. C. Fellows, president and general manager; E. H. Kramer, vice-president; H. M. Bowen, secretary and treasurer. Organized July, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Formerly at Vontrigger, San Bernardino Co., Cal.

#### **DETROIT & COLORADO MINING CO.**

#### **COLORADO.**

Mine office: Silverton, San Juan Co., Colo. L. L. Haines, superintendent, at last accounts. Has auriferous and argentiferous copper ores, with a small steam plant.

**DETROIT COPPER MINING CO. OF ARIZONA.****ARIZONA.**

Office: 99 John St., New York, N. Y. Mine and works office: Morenci, Graham Co., Ariz. Employs about 1,000 men. Jas. Douglas, president; Jas. McLean, vice-president; Gco. Notman, secretary and treasurer; Chas. E. Mills, general superintendent; H. H. McLean, mine superintendent; G. E. Hunt, mill superintendent; H. S. Van Gorder, supply and mercantile superintendent; J. B. Fleming, mechanical engineer. Organized under laws of Michigan, with capitalization \$1,000,000, shares \$25 par. Is operated as a close corporation, by Phelps, Dodge & Co.

Lands are extensive, including the Ryerson, Arizona Central, Copper Mountain, Yankee, West Yankee, Montezuma and Santa Rosa mines, at and near Morenci. Mine, opened circa 1880, originally was worked open-cast, but has been developed latterly by tunnels and shafts, deepest workings being only about 400'. Ores are mainly sulphide, with but trivial gold and silver values, and are highly silicious, with gangue carrying up to 40% alumina, hence very careful handling is required. About 95% of the production is ore of concentrating grade that gives an average extraction of 35 to 40 lbs. fine copper per ton, ore treated being about half oxidized and half sulphide. A 240' ore-bin at the Ryerson mine is connected with the mill by belt conveyor.

Gas power is used extensively throughout the mines and works, being employed for practically all machinery except hoists and locomotives. A Loomis generator, with capacity to supply gas for developing 1,000 h. p., consumes New Mexico bituminous coal, giving an efficiency of about one horse-power-hour from 1.5 to 1.75 lbs. coal. The power-house, 64x200', of steel frame on concrete foundations, has Crossley gas-engines aggregating 1,920 h. p. This plant includes three 100-h. p. engines driving blowers that are connected with the furnaces by a 300' blast-main; a 500-h. p. air-compressor furnishing converter blast, at 8 lbs. pressure only, and two 200-h. p. 250-volt electric generators furnishing current that is stepped up to 2,500 volts at the power-house, and carried by 4 feed-wires to a second set of transformers at the West Yankee mine, there stepped down to 250 volts, and distributed to the various mines. There also is a complete electric lighting plant.

The 1,200-ton concentrator, having two 600-ton units, is 166x240' in size, and cost about \$1,000,000. Equipment includes Chilean mills, 6 sets of 16x42" rolls, 28 revolving screens, 80 Frue vanners and 40 Wilfley tables, the mill putting about 7 tons into 1. A pumping station 6 miles distant raises water from wells on the San Francisco river to a height of 600', whence it is fed by gravity to the mill, which uses about 4,400 gallons per minute, with a consumption of new water of only about 80 gallons per minute, new water being supplemented by clarified water from an ingenious and highly efficient settling system designed by Mr. Hunt that includes tanks and settlers, with a steel dam, and a pond for tailings. Only about 400 gallons of water are used in the concentration of a ton of ore.

The 100-ton sampling mill is connected with the concentrator by a 400' belt-conveyor. Experiments, 1904, with oil concentration, did not lead to the adoption of that process.

The smelter has four 54x144" blast-furnaces, and one 42x264" furnace, and a converter plant was added, 1906. Flue dust is briquetted for resmelting. The smelter has 2,000-ton ore bins, surmounted by steel railroad trestle.

A 36" gauge railway connects the mines and smelters with the Arizona & New Mexico railroad, at Guthrie, this line having a maximum grade of 3.5%, with 4 complete loops within an air-line distance of 1½ miles near Morenci.

The company operates a large department store and an excellent hotel, and maintains a library, gymnasium and clubroom for employees.

Production, 1907, was 17,346,411 lbs. fine copper, 4,814 oz. silver and 176 oz. gold, comparing with an output of 16,906,348 lbs. fine copper in 1906. The property is managed with great skill, and is an exceptionally fine example of a successful low grade mine.

#### **DETROIT & LAKE SUPERIOR COPPER CO.**

**CONNECTICUT.**

Office and works: Waterbury, New Haven Co., Conn. Is a half owner of the stock of the Lake Superior Smelting Co., which bought the plants of the Detroit & Lake Superior Copper Co. at Hancock and Dollar Bay, Houghton Co., Mich. Built a smelter at Detroit, 1850, and shortly after built another at Hancock, being the pioneer in Michigan smelting.

#### **DETROIT-OROVILLE EXPLORATION CO.**

**WASHINGTON.**

Office: 406 Gladwin Bldg., Detroit, Mich. Mine office: Oroville, Okanogan Co., Wash. F. A. Kelsey, president; Chas. E. Kanter, vice-president; Milton T. Watson, secretary and treasurer. Organized June 1, 1908, under laws of Michigan, with capitalization \$3,000, shares \$10 par. Lands, 15 claims, area 300 acres, with a smelter site, showing Carboniferous limestone resting on graywacke slates, carrying chalcopyrite giving assays up to 15% copper. Property has been partially explored by diamond drilling.

#### **DETROIT & PARRY SOUND MINING CO., LTD.**

**ONTARIO.**

Office: 311 Wetherbee Bldg., Detroit, Mich. Mine office: Parry Sound, Parry Sound district, Ont. W. A. Phillips, president; H. C. Morris, vice-president; E. A. Covell, secretary. Organized June 3, 1903, under laws of South Dakota, with capitalization \$3,000,000, shares \$1 par; issued, at last accounts, \$490,750. Lands have given specimens of ore assaying well in copper. Idle for several years.

#### **DETROIT QUO VADIS COPPER CO.**

**MEXICO.**

Office: 1001 Majestic Bldg., Detroit, Mich. Mine office. Moctezuma, Bravos, Chihuahua, Mex. Frank C. Houston, secretary; A. C. Simkins, superintendent. Organized 1906, and bought property Aug. 16, 1906. Presumably idle.

#### **DETROIT SONORA MINING CO.**

**MEXICO.**

Office: care of R. G. Lambrecht, secretary, Detroit, Mich. Letter returned unclaimed from former mine office, La Cananea, Arizpe, Sonora, Mex. M. H. Gilbert, president; F. O. Bostwick, vice-president and general manager. Organized, circa 1906, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 3 groups, area 214 acres, circa 25 miles from La Cananea, having a 300' tunnel on the Abigail claim, said to show 200' of ore of medium grade.

#### **DEVELOPMENT COMPANY OF AMERICA.**

**ARIZONA.**

Office: 11 Pine St., New York, N. Y. Mine office: Tombstone, Cochise Co., Ariz. E. B. Gage, president; Frank M. Murphy, vice-president; A. N. Gage, secretary and treasurer; W. Dietz, assistant treasurer; W. F. Staunton, general manager; preceding officers, E. C. Gage, W. F. Staunton, Wallace Fairbank and H. M. Robinson, directors. Organized Nov. 23, 1901, under laws of Delaware, and capitalization increased, 1906, to \$5,000,000. Is a holding company only, controlling, through stock ownership, the Imperial Copper Co., Tombstone Consolidated Mines Co., Ltd., Congress Consolidated Mines Co., Ltd., Poland Mining Co. and Mexican-American Lumber Co.

#### **DEVINE MINING CO.**

**WASHINGTON.**

Office: 703 New York Blk., Seattle, Wash. Mine office: Cle Elum, Kittitas Co., Wash. C. P. Devine, president and general manager; F. A. Pontius, vice-president; Henry S. Noon, secretary; Wm. T. Kipp, treasurer; Clancy M. Lewis, engineer. Organized, 1904, under laws of Washington, with cap-

italization \$1,000,000, shares \$1 par. Annual meeting, second Monday in April.

Lands, 2 claims, area 40 acres, also two 5-acre millsites and a water right, in the Gold Creek district, circa 12 miles north of the Northern Pacific railroad, showing andesite and rhyolite with lenticular chutes, of 45' estimated average width, carrying sulphide ores, reported to average 5% copper, 25 oz. silver and \$4 gold per ton, with traces of lead and zinc. Apparently values are mainly in a 40" footwall paystreak, balance of vein carrying concentrating ore of 2.5 to 5% copper tenor, with small gold and silver values. Development is by tunnels of 800', 75', 300', 220' and 125', with 1,520' of workings, estimated by company to show 100,000 tons of ore, with 50,000 tons blocked out for stoping.

#### **DEVLIN ARIZONA COPPER CO.**

Letter returned unclaimed from former mine office, Bouse, Yuma Co., Ariz. Lands, 9 claims, known as the Bullion group, 9 miles west of Bouse, said to have been bought for circa \$250,000. Property has a number of shallow shafts, one of which is said to show, in a crosscut, at depth of 70', circa 35' of sulphide ore, claimed to assay 10% copper and \$3 gold per ton.

#### **DEVON UNITED MINES SYNDICATE, LTD.**

Office: 6 Pall Mall, London, S. W., Eng. Mine office: Peter Tavy, Devonshire, Eng. Edward B. Haynes, chairman; F. N. B. Hill, secretary; Robert Sach, consulting engineer. Organized June 19, 1901, under laws of Great Britain, with capitalization £10,000, shares £1 par; issued, £7,797. Debentures, £5,000, at 6%. Lands, 100 acres, on the river Tavy, carrying tin, copper and arsenic ores, including the South mine, a tin property, and the Central mine, latter being considered the most promising copper prospect opened in Cornwall for some years. Has a tin-mill with 28 stamps. Presumably idle.

#### **DEWEY CONSOLIDATED COPPER & GOLD MINING & MILLING CO.**

**IDAHO.**

Dead. Formerly at Grangeville, Idaho Co., Idaho.

#### **DEWEY MINING CO.**

**IDAHO.**

Dead. Formerly at Bear, Washington Co., Idaho.

#### **DIAMOND MINE.**

**MONTANA.**

Owned by Anaconda Copper Mining Co.

#### **FERNANDO DÍAZ.**

**MEXICO.**

Office and mine: Túxpam, Santiago Ixcuintla, Tepic, Mex. A. C. González, superintendent. Property is the Cardenillo mine, carrying argentiferous copper ores. Has steam power and employed circa 50 men at last accounts.

#### **DICKERSON MINING CO.**

**MONTANA.**

Mine office: care of J. W. Dickerson, manager, Basin, Jefferson Co., Mont. Mine is slightly developed by tunnel, with steam and water power. Idle several years.

#### **DILL GOLD & COPPER MINING CO.**

**WYOMING.**

Office: Prescott, Wis. Mine office: Rambler, Carbon Co., Wyo. M. T. Dill, president; Geo. S. Hollister, vice-president and treasurer; Edw. H. Wallace, secretary. Organized July, 1903, under laws of Wyoming, with capitalization \$1,500,000, shares \$1 par. Lands, 4 claims, area 80 acres, next north of the Doane, in the Battle Lake district, opened by 100' tunnel and shafts of 42' and 100', with circa 1,000' of openings, showing several quartz veins carrying more or less copper. Has a 40-h. p. boiler, 6x8" hoist and Cameron sinking pump. Idle for several years.

#### **DILLON-ARGENTA MINING CO.**

**MONTANA.**

Office: Dillon, Mont. Mine office: Argenta, Beaverhead Co., Mont. E.

Digitized by Google

R. Hall, president. Property has an air-compressor, and was working, 1907. Presumably idle.

**DILLON CONSOLIDATED MINING & TUNNEL CO.** WYOMING.

Mine office: Dillon, Carbon Co., Wyo. Organized 1904, to drive a 3,500' tunnel across the formation at Dillon, to cut 6 copper veins, located on surface. Idle and tunnel remains an iridescent dream.

**DILUVIO GOLD & COPPER MINING CO.** ARIZONA.

Mine office: Bouse, Yuma Co., Ariz. W. D. Tremain, manager. Property is said to be 5 groups of claims. Presumably idle.

**DINGO COPPER MINING CO.** AUSTRALIA.

Mine office: Essington, N. S. W., Australia. Produced circa 200 tons of high-grade hand-picked ore in 1901. Idle some years.

**DIRIGO-LA SAL GOLD & COPPER MINING CO.** UTAH.

Office: care of C. S. Richardson, secretary, Salt Lake City, Utah. Mine office: Castleton, Grand Co., Utah. Geo. E. McCann, manager. Lands, 31 claims, circa 600 acres, in the Deep Creek district. Presumably idle.

**SOCIÉTÉ FRANÇAISE D'ELECTRO-METALLURGIE DE DIVES.** FRANCE.

Office: 11 bis, Rue Roquèpine, Paris, France. Works office: Dives, France. Plant is an electrolytic refinery, treating Chile bars, having four 170-kw. generators, with 216 tanks, electrodes being arranged on the Elmore plan. Capacity is 10 to 12 tons of copper daily.

**DIVIDEND MINING & MILLING CO.** NEW MEXICO.

Office: 65 Journal Bldg., Boston, Mass. Mine office: Estey, Socorro Co., N. M. J. M. Bryson, president and general manager; J. E. Simpson, vice-president; B. F. Coburn, secretary and treasurer; preceding officers, F. B. Street, J. Wm. Rice, Samuel Porter, A. B. Spear, Jas. B. Putnam and Halbert E. Parkhurst, directors; W. E. Morong, superintendent. Organized September, 1902, with capitalization \$3,000,000. Has authorized a 5-year bond issue of \$150,000, at 7%.

Lands, circa 2,000 acres, also sundry coal lands about 16 miles distant. It is claimed that about \$250,000 has been expended on the mine, which shows a fair body of sulphide ore, carrying good values in copper, with a little lead and with small values in gold and silver.

A 100-ton concentrator, apparently since enlarged to 250 tons rated daily capacity, and a small smelter, were inherited from the Estey Mining & Milling Co., previous owners, and company is supposed to have begun milling, circa July, 1907.

The company has been very prolific of "estimates" and promises, demonstrating—on paper—how, by merely producing 14,400,000 lbs. of copper yearly, profits of millions of dollars could be earned. Company's advertising is indefensible, and the statement that "there has been no such opportunity for investment since the Calumet & Hecla and United Verde were first put on the market" leads to the conclusion that the promoters of the company are sadly lacking either in sense or truth. Property is considered one of fair promise, but the management is not well regarded.

**DIVIDEND MINING & SMELTING CO.** MEXICO.

Office: 25 East Ninth St., Kansas City, Mo. Mine office: Suaqui de Batuc, Ures, Sonora, Mex. Louis Fournie, president; W. E. Flanery, vice-president and mine manager; R. E. Kirtley, secretary; John W. Opie, treasurer; preceding officers and James Muir, directors. Organized October, 1904, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands, 195 acres, opened by a 75' shaft and 230' tunnel, showing ores carrying copper, lead and silver values, with occasional gold.

**D'JELELE COPPER SYNDICATE.****TRANSVAAL.**

Office and mine: Pietersburg, Zoutpansberg, Transvaal. Organized circa July, 1907, but apparently not incorporated, with capitalization £4,000, shares £10 par. Lands, 96 claims, near the D'Jelete river, in the northeastern part of the Zoutpansberg district, having a 44' shaft showing ore assaying up to 15% copper.

**DOANE-VERDE MINING CO.****WYOMING.**

Office: 1301 Monadnock Bldg., Chicago, Illa. Letter returned unclaimed from former mine office, Rambler, Carbon Co., Wyo. John C. Clarke, president; Oliver S. Brown, vice-president; Robert H. Young, general manager. Organized June, 1902, under laws of Wyoming, with capitalization \$1,500,000, shares \$1 par. Lands, 7 claims, on which a little development work was done, in the hope of striking the extension of the Doane-Rambler ore body, but without results. Idle some years.

**DOGAMARU MINE.****JAPAN.**

Mine office: Ago-mura, Ochi-gori, Iwami, Japan. B. Hori, owner; J. Stajaki, general manager. Opened circa 1845, reopened 1873. Ore is chalcopyrite, associated with argentiferous galena, sphalerite and iron pyrites, with quartz gangue. Principal vein, of 10' to 25' width, traverses granite-porphry, with frequent faults. Has steam and electric power and a small smelter, employing circa 600 hands. Production, 1906, was 445,105 lbs. fine copper and 1,141,482 grams fine silver, and 1907 was 403,505 lbs. fine copper and 258,393 momme fine silver. Owner does not pay his debts.

**DOLCOATH MINE, LTD.****ENGLAND.**

Office: 28 St. Swithin's Lane, London, E. C. Eng. Mine office: Camborne, Cornwall, Eng. Frank Harvey, J. P., chairman; Oliver Wethered, vice-chairman; R. Arthur Thomas, mine manager. Organized July 15, 1895, under laws of Great Britain, with capitalization £350,000, shares £1 par; issued, £285,114. Lands include the Dolcoath mine, held on lease expiring June, 1955, under royalty, and the West Dolcoath mine, freehold. The Dolcoath is the principal mine of Cornwall, and is a large producer of tin, securing a little copper as a by-product. Main shaft is nearly  $\frac{1}{2}$  mile in depth. Ore in the upper levels is a complex mixture of chalcopyrite, pyrite and other sulphides, all more or less arsenical, carrying 2 to 3% copper and 1 to 2% tin. Complexity of the ore has caused considerable trouble heretofore in the extraction of full values, but a new Elmore vacuum flotation process plant saves the copper in the first milling, this formerly having been largely lost, the tin passing over in the tailings and being retreated. Property has a strong and capable management.

**DOLGELLY COPPER MINES, LTD.****WALES.**

Office: 11 Coleman St., London, E. C., Eng. Mine office: Dolgelly, Merionethshire, Wales. B. Gillman Brown, technical director; R. Arthur Thomas, consulting engineer. Organized March 7, 1907, under laws of Great Britain, with capitalization £60,000, shares £1 par. Has a large body of ore of low average tenor, ore being complex and difficult of reduction, having yielded, under former milling process, only about 15% of assay values, but a new 120-ton mill, planned as the first unit of a 360-ton mill, using the Elmore vacuum flotation process, similar to that of the Dolcoath, has given test extractions averaging 80.9% of assay values, from complex sulphide ores, very difficult of reduction by any ordinary process.

**DOLLY VARDEN COPPER CO.****NEVADA.**

Mine office: Ely, White Pine Co., Nev. Geo. Nix, manager. Organized circa 1907, with capitalization \$1,000,000, shares \$1 par. Lands are near Curry station, adjoining the Dolly Varden United Copper Co.

**DOLLY VARDEN UNITED COPPER CO.****NEVADA.**

Office and mine: care of Frank A. Herrell, president, Ely, White Pine Co., Nev. Organized 1907, with capitalization \$1,000,000, shares \$1 par. Lands, 9 claims, adjoining the Dolly Varden Copper Co.

**MINAS DOLORES y ANEXAS.****MEXICO.**

Owned by Guggenheim Exploration Co.

**DOLORES COPPER MINING CO.****MEXICO.**

Dead. Property sold to Guggenheim Exploration Co. Formerly at Matehuala, Catorce, San Luis Potosí, Mex.

**DOMINGUEZ COPPER MINING CO.****COLORADO.**

Mine office: Delta, Delta Co., Colo. Lands, sundry claims, known as the Flossie B. group, near Dominguez Cañon. Idle for some years.

**DOMINGO MINING, MILLING & SMELTING CO.****WASHINGTON.**

Letter returned unclaimed from former mine office, Republic, Ferry Co., Wash. Development is by a 200' tunnel, on the Little Giant claim, showing ore giving good assays in copper, silver and gold.

**DOMINION COPPER CO., LTD.****BRITISH COLUMBIA.**

Office: 37 Wall St., New York, N. Y. Mine office: Phoenix, Boundary district, B. C. Works office: Boundary Falls, Boundary district, B. C. C. J. Cull, vice-president; Samuel Newhouse, general manager; Maurice M. Johnson, consulting engineer; P. F. Roosa, mine manager and receiver; John H. Sampson, mine superintendent; John Kawyle, smelter superintendent.

Organized Apr. 26, 1899, under laws of British Columbia, and reorganized, 1906, with capitalization \$5,000,000, shares \$10 par. Bonds, \$1,000,000 authorized, at 6%, for 10 years, retirable 10% annually; outstanding, \$800,000. Acquired, July 28, 1905, upwards of 75% of the capital stock of the Montreal & Boston Consolidated Mining & Smelting Co., Ltd., giving one share of stock for two shares of Montreal & Boston, and is supposed to have absorbed practically the entire stock issue of the latter named corporation.

Lands, 15 claims, area 500 acres, also fractional interests in 94 claims additional, and a smelter site. Mining lands are in 4 groups, in the Phoenix, Deadwood, Wellington and Summit camps. Country rocks are limestone and greenstone, ore bodies occurring as contact deposits, and largely as replacements in greenstone. Properties show 8 different veins, all more or less developed, of about 25' average width, having a generally north and south strike, with average dip of about 40°. The ores are low in average grade, but, though showing large ore bodies, the amount of ground blocked out is comparatively small. For fiscal year ending July 31, 1907, the mines made 8,519' of new openings.

The Phoenix group, area 366 acres, includes the Brooklyn, Idaho, Rawhide, Stemwinder, Montezuma and Standard mines. The Brooklyn and Idaho are adjoining properties, that produced 55,548 tons of ore in 1907, and the Rawhide is about  $\frac{1}{2}$  mile distant.

The Brooklyn mine, which is the principal property, has a 430' main shaft, with about 8,000' of workings, showing a 40' vein, estimated to average 1.43% copper, 25 cents silver and \$1.32 gold per ton.

The Idaho mine, connected with the Brooklyn on the 250' level, is opened by tunnel and shaft, latter having an electric hoist, but is worked mainly open-cast.

The Stemwinder mine, opened on a vein parallel with and about 1,000' east of the Brooklyn, has a 400' shaft, with about  $\frac{1}{2}$  mile of workings, ore giving average assays of 1.4% copper, 25 cents silver and \$1 gold per ton.

The Rawhide mine, adjoining the Gold Drop mine of the Granby, has a 180' shaft, 6 tunnels, and various open-cuts, exposing circa 250,000 tons of

ore averaging about 1.4% copper, 25 cents silver and 90 cents gold per ton. Equipment includes a 500' Ingersoll-Sergeant electric air-compressor, and production, 1907, was 64,873 tons of ore.

The Montezuma and Standard claims are but slightly developed, showing ores similar to those of the other mines in the Phoenix camp.

The Deadwood group, area 110 acres, includes the Sunset, Morrison, Crown Silver and C. O. D. mines. The Sunset has shafts of 200' and 412', with large open-cast workings, and shows a large body of ore valuable chiefly for fluxing, carrying excess of iron, silica and lime, with only small copper, silver and gold values. Production, 1907, was 31,258 tons. A trestle from the Sunset mine runs to a 2,000-ton ore-bin on the railroad siding, whence ore is shipped to the smelter. Equipment includes a 14x20" Jenckes duplex link-motion hoist, 14x20" Lidgerwood double-cylinder hoist and a 10-drill Ingersoll-Sergeant duplex air-compressor.

The Crown Silver mine adjoins the Sunset, and is practically a part thereof. Development is by a 265' shaft and an 880' tunnel.

The Morrison mine has a 364' shaft, with 4,300' of tunnels, showing ore averaging circa 0.6% copper, 0.5 oz. silver and up to \$4 gold per ton. Equipment includes a 110-h. p. steam plant, with 7x9" hoist and a 5-drill Rand air-compressor.

The Wellington group includes the Athelstan and Jack Pot mines, with combined area of 34 acres. These show a large outcrop of oxidized ore carrying very low values in copper, about 1 oz. silver and up to \$7.50 gold per ton, expected to carry somewhat better copper values below the oxidized zone.

Property in the Summit camp includes a half interest in the Lancashire mine and a three-fourths interest in the Mountain Rose mine, with combined area of 74 acres, carrying fluxing ores. Apparently the Lancashire, which has a silver vein, is idle, but the Mountain Rose, owned one-fourth by the Hall Mining & Smelting Co., has 2 tunnels, opening a vein of about 15' width, which produced 3,999 tons of fluxing ore in 1907.

Power for the mine and works is mainly electric, current being furnished by the South Kootenay Power Co. from Bonnington Falls, circa 25 miles distant. The Phoenix group has electric hoists and a 25-drill Canadian Rand air-compressor, driven by a 450-h. p. Canadian Westinghouse electric motor. The largest crusher is a Jenckes-Farrel-Bacon, with 42x30" jaw openings, weighing circa 125,000 lbs., with an hourly capacity of 150 tons of ore crushed to 6" size, being one of the largest ever built.

Ore is transported 4 to 25 miles from the various mines to the smelter, by rail. The matter of building a 5-mile aerial tram to cost circa \$100,000 has been given tentative consideration. Rail freights are 17 cents per ton on Deadwood ore, and 30 cents per ton on ore from the Phoenix and Summit camps.

The smelter, 4 miles from Greenwood, of 1,500 tons rated daily capacity, was built by the Standard Pyritic Co., passing later to the Montreal & Boston, and eventually to the Dominion. The old smelter was not well located, and was poorly equipped, but has been overhauled and modernized by the present owners. Extra land has been secured for slag room.

The works include a small sampling mill, equipped with crushers, rolls, belt-conveyors and Vezin and Bridgeman automatic samplers.

The blast furnace building is 120x182', having in the building sixteen 10x24' ore bins, with 3 large ore and coke bins outside, with railroad tracks running above. There are two 325-ton water-jacket blast furnaces, 40x176" at the tuyeres, and one 600-ton 44x255" furnace, all having automatic feed. The

dust-flue, 200' long, has a 30x50' brick dust-chamber, and leads to a stack 112' high and 9' 6" in diameter, and a self-supporting stack 100' high and 8' in diameter. Slag is handled by a 7x12" locomotive, on railroad track of 40" gauge.

The power plant at the works includes No. 7 Connersville blowers and a 250-light dynamo. The old machinery plant was burned 1908, but was rebuilt. The works include a machine-shop.

The smelter works three 8-hour shifts when operated, and product is a matte carrying about 45% copper, 18 oz. silver and 3 oz. gold per ton, shipped to the British Columbia smelter at Greenwood, for refining. The smelter also does custom work.

Production for year ending July 31, 1907, was 187,981 tons of ore, yielding 2,910,695 lbs. fine copper, 42,606 oz. silver and 10,321 oz. gold, realizing \$820,184.84, with total operating expenses of \$740,002.72, giving a net mining profit of \$80,942.91. Company claimed, late 1906, to be making circa 750,000 lbs. of copper monthly, at a cost of 8 cents per pound. Company's financial statement showed a profit, on operations for 18 months ending July 31, 1906, of \$139,144. Production for year ending July 31, 1907, averaged 15.5 lbs. fine copper, 0.5 oz. silver and \$1.10 gold per ton. New management is said to show costs of \$1.34 per ton for mining, including freight, and \$1.32 for smelting, or total mining and smelting costs of \$2.66 per ton. Allowing 34 cents miscellaneous expenses, the cost would be \$3 per ton on ore reduced to matte, to which should be added 40 to 50 cents per ton for conversion, refining, smelting and miscellaneous expenses, giving total costs of about \$3.50 per ton on ore, exclusive of interest on bonded indebtedness. Deducting therefrom \$1.40 per ton for including gold and silver values, cost of copper contained in a ton of ore, amounting to 15.5 lbs., would be \$2.10, or 13.5 cents per pound, instead of the alleged cost of 8 cents per pound.

The company began 1907 with a treasury surplus of circa \$400,000, which was expended, mainly on improvements at the mine and smelter, the company suffering also, in common with others, by reason of the slump in the metal market. There was some talk of dividends, early 1907, which was entirely unwarranted. Mine and works were closed down, circa November, 1907, and resumed, circa July 1, 1908.

The company was unable to meet a bond interest payment of \$24,000, due June, 1908, but this payment was made by some of the larger shareholders. On October 2, 1908, a receiver was appointed, on application of the mortgage trustee, by reason of the company's default in not setting aside 10% of the amount of its outstanding bond issue, for the sinking fund, as required to be done annually. The company is in such shape that reorganization seems obligatory. The property is dangerously low in grade, but has enormous ore bodies, and, with adequate capital and prudent management, should become a large and profitable producer, in time.

#### **DOMINION FAIRVIEW COPPER CO., LTD.**

#### **BRITISH COLUMBIA.**

Office: Terminus Chambers, Holborn Viaduct, London, E. C., Eng. Mine office: Fairview, Boundary district, B. C. Wm. J. Spratling, secretary. Organized Sept. 22, 1901, as Dominion Fairview Klondike Syndicate, Ltd., and name changed to present title March, 1907, with capitalization £130,000, shares £1 par; issued, £42,637. Lands, 4 claims, area 200 acres, circa 4 miles north of the international boundary line, carrying a 6" vein, opened by shafts of 50' and 55' and the beginning of a tunnel, showing a little copper ore of fair assay tenor.

#### **DOMINION MINING & SMELTING CO.**

#### **CANADA.**

Works office: Pictou, Pictou Co., N. S. Property is a 70-ton furnace, blown in circa May, 1907, making matte of about 35% copper tenor.

**DOMINION SMELTING CO., LTD.****ONTARIO.**

Works office: Parry Sound, Parry Sound district, Ont. Was said, September, 1907, to plan building a \$1,500,000 custom smelter, at Parry Sound. Presumably abortive.

**MINA DON CARLOS.****MEXICO.**

Office: care of Avery T. Holmes, owner, Laramie, Wyo. Mine office: Nacozari, Sonora, Mex. Main shaft, 120', shows ore running up to 43% copper, and from 60 to 7,000 oz. silver per ton. Shipped several carloads of high-grade ore to the El Paso smelter circa 1905. Presumably idle.

**DON CARLOS & EUREKA CONSOLIDATED COPPER MINING CO.****MEXICO.**

Letter returned unclaimed from former office, Detroit, Mich. Mine office: Nombre de Dios, Durango, Mex. Property includes the Don Carlos y Anexa, Eureka and other mines, showing a vein about 150' wide, carrying small stringers and pockets of high-grade auriferous and argentiferous bornite, assaying up to 18% copper, 3 kgs. silver and 7 grams gold per ton. Production, about 75 tons of ore in three years. Idle and apparently moribund.

**DON FULANO COPPER MINES, LTD.****SPAIN.**

Office: Dashwood House, London, E. C., Eng. Col. C. E. Macdonald, chairman; C. E. Lawson, mining engineer; A. S. Hammond, secretary. Organized July 7, 1905, under laws of Great Britain, with capitalization £130,000, shares £1 par, fully issued. Property is 60 full paid shares, of 500 pesetas par, in the Compañía Minera Bilbaino Asturiano.

**DONA LOUISA CONSOLIDATED COPPER CO.****MEXICO.**

Office: 42 Broadway, New York, N. Y. Mine office: Coapa, Morelia, Michoacán, Mex. Organized circa 1907, to merge the Dona Luisa Copper & Gold Mining Co. and La Natividad Mining Co., latter a rank swindle that paid dividends from stock sales, and former a dubious proposition that also paid dividends from stock sales.

**DONA LOUISA COPPER & GOLD MINING CO.****MEXICO.**

Letter returned unclaimed from former office, 69 Wall St., New York, N. Y. Mine office: Coapa, Morelia, Michoacán, Mex. Wm. A. Buckman, president; Chas. M. Heath, vice-president; Manuel L. Ward, secretary, treasurer and general manager; Joseph J. Collinson, superintendent. Organized April, 1903, under laws of Delaware, with capitalization \$500,000, shares \$5 par. Paid dividends of \$4,200 on treasury stock, presumably from stock sales.

Lands, 45 hectares, 24 miles from the Mexican National railway, showing 4 fissure veins, of 3' average width, 2 under development, giving assays of 9 to 63% copper, up to 120 oz. silver and \$32. gold per ton, from oxidized ores, slightly developed by shafts and tunnels.

Equipment includes a 60-h. p. boiler, Lidgerwood hoist good for 1,000' depth, and Cameron pump. A 5-ton test shipment, 1906, netted \$59.62 per ton. Development and equipment seem along sensible lines, but the company paid 10% dividends while selling stock, hence is viewed with suspicion. Probably succeeded by Dona Luisa Consolidated Copper Co.

**DONNA DOBA MINING CO.****NEW MEXICO.**

Office: 220 Broadway, New York. Mine office: Kent, Donna Ana Co., N. M. Jos. Willetts, president; Edwin L. Scott, secretary and treasurer; Gerald W. Kent, general manager. Lands, sundry claims on the eastern slope of the Organ Mountains, developed by a 400' tunnel and a shallow shaft, on a 5' vein carrying copper, lead, silver and gold values. Equipment includes a 150-ton concentrator, 100-h. p. hoist, 10-drill Rand air-compressor and a small electric light plant. Employs about 20 men.

**DORA COPPER MINES, LTD.****TRANSVAAL.**

Office: 34 Coleman St., London, E. C., Eng. Mine office: Pretoria, Transvaal, South Africa. W. Vaughan-Williams, chairman; J. H. Bailey, secretary. Organized May 10, 1905, under laws of Great Britain, with capitalization £150,000, shares £1 par; issued, £100,010. Property is mining rights to the northwestern half of the Farm Kamelpoort No. 278, area 4,027 morgen, near Pretoria.

**DORAN & GALLAGHER.****ARIZONA.**

Office and mine: Paradise, Cochise Co., Ariz. Is a co-partnership composed of D. J. Doran and Chas. J. Gallagher. Lands, 10 claims, opened by a 110' shaft, mainly in ore, and a 250' tunnel, showing melaconite giving assays of 10% and upwards in copper.

**DOROTEA MINING CO.****MEXICO.**

Dead. Lands sold, circa 1905, to Fay-Cananea Copper Co. Formerly at La Cananea, Arizpe, Sonora, Mex.

**GEWERKSCHAFT DES BLEI- UND KUPFER-ERZBERGWERKE DOROTHEA.****GERMANY.**

Mine office: Jannowitz, Schlesien, Germany. Herman Schönfelder, agent. Has one shaft. Idle several years.

**DOS CABEZOS CONSOLIDATED MINES CO.****ARIZONA.**

Mine office: Dos Cabezos, Cochise Co., Ariz. Has auriferous and argentiferous copper ores, with steam power and a small smelter. Idle several years.

**DOS DE ABRIL MINING CO.****MEXICO.**

Mine office: El Dorado, Jiménez, Chihuahua, Mex. Heffron & Piper, lessees. Has auriferous and argentiferous lead and copper ores, with 7-stamp mill, employing circa 50 men at last accounts.

**DOS ESTRELLAS MINES & DEVELOPMENT CO.****MEXICO.**

Office: care of Mutual Trust Co., Mexico, D. F. Hon. Alberto Pro, president; Hon. José Marie Gamboa, vice-president; Hon. Lic. Liscendro Maldonado, secretary; Geo. W. Emanuel & Co., fiscal agents. Organized under laws of Arizona, with capitalization, \$2,500,000, shares \$1 par. Lands are the Jennie mine, a gold-silver property, and the Mina Conquistadora, a copper property, area circa 130 acres, in El Oro district, Guerrero, Mexico, said to be held under lease. Company claims to have a mill and cyanide plant, and claims to have \$2,500,000 worth of ore blocked out. Company claims that these mines produced \$4,000,000 in ore values, in 4 years preceding 1907, and that 1906 production was sufficient to pay a dividend of 50% on the capital. Company claims to be paying 2-cent monthly dividends, guaranteed, and is peddling stock industriously, which leads to the unavoidable conclusion that it is a highly dubious enterprise, notwithstanding the good standing of some of its officers. No honest mining company pays 24% annually and peddles stock. Verbum sapienti.

**DOS NACIONES MINING CO.****MEXICO.**

Dead. Lands sold to Cananea-Duluth Mining Co. Formerly at La Cananea, Arizpe, Sónora, Mex.

**DOUBLE SUNSET MINING & MILLING CO.****ARIZONA.**

Office: care of A. Stamps, manager, Farrisville, Kas. Mine office: Paradise, Cochise Co., Ariz.

**DOUGLAS COPPER CO.****MEXICO.**

Office: 1547-42 Broadway, New York, N. Y. Mine office: Cocorit, Alamos, Sonora, Mex. Theo. Douglas, president; Victor M. Tyler, vice-president; John C. Rowe, second vice-president; C. R. Templeton, secretary and assistant treasurer; Wm. S. Higgins, treasurer; Melbert B. Cary, chairman; Gustave M. Gouyard, consulting engineer; preceding officers, Max Muller, E. C. Frisbie, Robt.

B. Armstrong, A. Heaton Robertson, Ronald E. Curtis and W. Stockton Higgins, directors; Edwin H. Davidson, superintendent.

Organized July 23, 1903, under laws of Maine, with capitalization \$3,000,000, shares \$5 par. Bonds, \$900,000 authorized, at 6%; \$572,800 outstanding, of which \$400,000 are convertible into stock, part at par and part at 110. Is said to be controlled, through ownership of 51% of stock, by the Mexican Exploration & Milling Co. Is a securities holding company only, owning the entire capital stock of the Anita Copper Mines Co., Ltd., and Pacific Smelting & Refining Co., Ltd., and controlling, through ownership of majority of stock, the Sonora Consolidated Gold Mines Co., Ltd. Company began 1908, according to statement, with cash and accounts receivable of \$58,793, only liabilities being \$572,800 on bonds outstanding. Empire Trust Co., New York, registrar. Annual meeting, third Tuesday in January.

Lands, held through subsidiary companies, are 494 acres, a 115-acre mill-site and 19,716 acres of ranch, timber and coal lands, in the Baroyeca division of the Alamos district, including the Anita, Baroyeca, Consolidada, London, Juanita and Maria mines. Ore bodies occur in a crush-zone of 115' claimed average width, in series of bedded eruptives consisting of diorite, andesite and trachyte, as contact deposits and replacements in diorite, carrying cuprite, melanconite, malachite, azurite, chalcocite, covellite, bornite, chalcopyrite, brochantite and chrysocolla, from which average assays are said to have returned 8.5% copper, 5.5 oz. silver and \$5 gold per ton, which figures probably are considerably above the average extraction that can be secured on regular mining operations upon a commercial basis.

Development is by 5 shafts, No. 1, the deepest, being circa 700', with 7,415' of workings in the Anita mine, Jan. 1, 1907, since increased. Company claims to have sufficient ore blocked out for 5 years production, which is considered doubtful, and ore reserves are estimated, by Messrs. Gouyard and Pritchett, to be of the value of \$5,817,681.94, with copper at 14 cents per pound. This sort of estimate is not in favor with the best engineers, who prefer to estimate in tons and percentages, not in dollars, and, especially, not in cents. Such estimates, giving the odd pennies, may attract the credulous, but are considered a danger signal by the experienced.

The mine has steam and electric hoists, with one 250-h. p. Risdon hoist, a Rand cross-compound two-stage air-compressor with piston capacity of 3,700' of free air per minute, and an electric light plant. Mine has 21 buildings, including necessary shops and offices.

Mine being some distance from a railroad, ore is shipped to the smelter by five 110-h. p. traction engines and 24 ore-trucks, one engine hauling 5 trucks carrying three 4-ton ore buckets each.

The smelter is described separately, under title of Pacific Smelting & Refining Co., Ltd., the owner.

Production was begun May 19, 1908, previous statements in the press that the mine was treating 500 tons of ore daily having been absolutely unfounded. The first lot of matte, two carloads, was said to assay 40% copper, 5 oz. silver and 2.5 oz. gold per ton. Costs are said by company to be \$3.99 per ton for mining, \$2.21 for transportation, and \$2.48 per ton for smelting, with indirect costs of \$2.88, a total of \$9.65 per ton, while miscellaneous charges, including refining, marketing and taxes, bring total costs to \$15.73 per ton. On 6% ore this would make a copper cost of 13 cents per lb., from which should be deducted gold and silver values, these being, according to figures of first matte shipped, about 6.6 cents per lb. Company figures on an extraction of \$5.65 copper and \$9.63. per ton gold and silver, and, deducting the latter, estimates that it can obtain copper at a net cost of 5.64 cents per

pound, but these figures are not apt to be borne out by actual production on a large scale, and, instead of gold and silver values amounting to 170% of the copper values, as estimated by the company, the actual gold and silver values, in the first lot of matte, were only a trifle more than 50% of the copper values, showing a very marked discrepancy, the shortage in gold and silver values being more than three-fourths. On May 1, 1905, President Douglas stated that the company could make its copper at 2.8 cents per pound, but revised figures, 1908, from the same authority, showed much higher estimated costs. Mr. Douglas calculated that the net profits of the first operating year would be \$700,000, or 23.8% of the company's capitalization, and it will be interesting to see how close this estimate comes to the actual facts. The company figured on a production of 9,000,000 lbs. fine copper, from 6% ore, at 10 cents per lb., with gold and silver values nearly paying for the copper, giving copper at a net cost of only 1½ cents per pound, which figures must have been prompted by sheer ignorance, or intent to deceive. Company has given out estimates of net earnings as high as \$1,500,000 yearly, which is ridiculous. The property is considered promising, though poorly located as to transportation facilities, but such wild and utterly indefensible "estimates" have been made by its officers and promoters, regarding percentage of ore, production, costs and profits, that the company is not regarded favorably.

**DOUGLAS COPPER MINING CO.**

NEVADA.

Dead. Succeeded, circa 1906, by Nevada-Douglas Copper Co. Formerly at Yerington, Lyon Co., Nev. Described Vol. VI.

**DOUGLAS-ELY MINES CO.**

NEVADA.

Office: 63 Wall St., New York, N. Y. Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. John W. Keller, president; Sidney S. Darling, vice-president; Cornelius A. Haggerty, treasurer; J. E. Simons, secretary; preceding officers, Max Oberfelder, Samuel Joseph, Hon. Jas. J. Towners, Max G. Nickelsburg and Sidney Nickelsburg, directors. Organized under laws of Arizona, with capitalization \$3,000,000, shares \$1 par.

Lands, circa 600 acres, of which about 180 acres show copper indications, and 420 acres carry indications of gold, silver and lead. Lands are on Cave Creek, near the Success mine, in the Duck Creek district, circa 14 miles southeast of Ely. In May, 1908, property had a 60' tunnel, three 10' test-pits and a 70' incline shaft, said to show ore giving good assays, and was said to employ 12 men. Is not regarded favorably.

**DOUGLAS, LACEY & CO.**

U. S. A.

Office: 66 Broadway, New York, N. Y. This firm of swindlers has defrauded upwards of 20,000 individuals out of several millions of dollars. Firm formerly had about 40 branch offices, in the United States and Canada, from which utterly worthless mining stocks were peddled. In earlier years considerable bluffing was done, in the way of crude mining operations, but these evidently were merely for the purpose of keeping up appearances. Dividends were paid on shares that had earned no profits, for which Douglas, Lacey & Co. should have been jailed, for the common swindlers that they are, and doubtless would have been jailed, were the laws of the United States better administered.

Efforts, begun November, 1903, to have the methods of this firm investigated by the United States Postal Department, have come to naught, although the matter was pushed persistently, and finally was taken to the president of the United States, and by him referred back to one George Bruce Cortelyou, then Postmaster-General, and later Secretary of the Treasury of the United States, who "investigated" the firm by advising them privately of the charges made against them, and accepted their answer, which was that the

Copper Handbook is a blackmailing publication, this answer being perfectly satisfactory to the Hon. Mr. Cortelyou, best known as the gentleman who "fried the fat" out of sundry insurance companies and other corporations, for the presidential campaign of 1904.

There is reason to hope that with the new administration, Mr. Cortelyou will be permitted to apply otherwise the talents and energy that he has been devoting, for some years past, to the public affairs of the United States, and it is possible that Messrs. Douglas, Lacey & Co. will be overtaken, eventually, by the punishment that they deserve.

**DOUGLAS MINING & MILLING CO.****WYOMING.**

Dead. Formerly at Rambler, Carbon Co., Wyo. Described Vol. VI.

**DOUGLAS MINING & SMELTING CO.****NEVADA.**

Dead. Succeeded by Douglas Copper Mining Co., latter bankrupt, 1905. Formerly at Yerington, Lyon Co., Nev. Described Vol. IV.

**DOUGLAS MOUNTAIN GOLD MINING & TUNNEL CO.** **WASHINGTON.**

Office: 38 West Gay St., Columbus, Ohio. Mine office: Loomis, Okanogan county, Wash. G. E. Bazler, general manager; J. J. Bennett, superintendent. Lands, 20 claims, showing several veins of 7" to 8' width. A 50' tunnel, on the Little Falls claim, shows a 2' vein carrying auriferous chalcopyrite, galena and iron pyrites. Idle.

**DOUGLAS SMELTER.****ARIZONA.**

Owned by Copper Queen Consolidated Mining Co.

**DOVER MINING CO.****COLORADO.**

Mine office: Idaho Springs, Clear Creek Co., Colo. David Ellis, superintendent, at last accounts. Ores carry gold, silver and copper. Has steam power. Presumably idle.

**DRAGOON COPPER CO.**

Office: 924 Columbus Ave., Boston, Mass. Moribund.

**DRAGOON COPPER MINING & SMELTING CO.****ARIZONA.**

Office: 310 Frost Bldg., Los Angeles, Cal. Mine office: Tombstone, Cochise Co., Ariz. C. M. Renaud, president; Maj. W. Arthur Phipps, vice-president; G. H. Mosher, secretary and treasurer; Geo. M. Henry, general manager. Organized May, 1902, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands, 20 claims, area 400 acres, near the Middle-march and opposite the Black Diamond, showing 3 contact veins between limestone and porphyry, giving assays of 16% copper, 11% lead and 14 oz. silver per ton, from azurite, malachite, bornite and chalcopyrite. Has 4 short tunnels and a 465' shaft, bottomed in good ore. Has steam power and a 34-h. p. hoist, good for depth of 1,000'. Property considered promising. Practically idle since 1904, owing to lack of funds.

**DRAGOON MINING CO.****ARIZONA.**

Dead. Lands sold circa 1907, to Bonanza Belt Copper Co. Formerly at Johnson, Cochise Co., Ariz.

**DRAGOON MINING & DEVELOPMENT CO.****MEXICO.**

Mine office: Terrazas, Chihuahua, Mex. P. W. Robertson, manager. Has argentiferous and auriferous copper ore. Employs circa 35 men.

**DRAGOON MOUNTAIN MINING CO.****ARIZONA.**

Letter returned unclaimed from former mine office, 533 Kearney St., San Francisco, Cal. Mine office: Pearce, Cochise Co., Ariz. Lee Wee, president; Chu C. Mow, vice-president; Louis Fon, secretary; Leung Ting Mai, treasurer; S. E. Lake, superintendent, at last accounts. Organized under laws of Arizona, with capitalization \$300,000. Lands, sundry claims near Middle Pass, in the Dragoon Mountains, opened by shaft and tunnol, giving a promising showing of ores carrying copper, silver and gold. Company was organized by Chinese

residents of San Francisco and Tombstone, Arizona. A little ore was shipped in 1905-06. Idle.

#### **DRIPPING SPRINGS MINES & SMELTERS.**

**ARIZONA.**

Dead. Was succeeded, 1907, by London-Arizona Copper Co. Chas. E. Finney was president and general manager; F. L. Wright, vice-president; E. W. Brooks, treasurer; Robt. K. Porter, secretary and assistant treasurer; preceding officers, Hon. R. E. Sloan and Paul Burk, directors. Was organized, 1907, with capitalization \$5,000,000, shares \$10 par. Formerly at Kelvin, Pinal Co., Ariz.

#### **DROGSET KOBBERVAERK.**

**NORWAY.**

Mine office: Röros, Trondhjem, Norway. Ore is slightly cupriferous pyrite. Latest recorded production was 2,718 long tons ore in 1900. Idle for some years.

#### **DEMMERS DEVELOPMENT CO.**

**WASHINGTON.**

Office: 15 Jamison Bldg., Spokane, Wash. Letter returned unclaimed from former mine office, Chelan, Chelan Co., Wash. R. D. Johnson, president; Thomas Maloney, secretary. Capitalization \$100,000, shares 10 cents par. Property, slightly prospected, shows ore of fair grade. Idle for several years.

#### **DUBUQUE MINING & TUNNEL CO.**

**COLORADO.**

Office: Colburn Bldg., Denver, Colo. Mine office: Idaho Springs, Clear Creek Co., Colo. E. A. Colburn, president; W. W. Kirby, vice-president; J. A. Wright, secretary and treasurer; preceding officers, B. L. Gorich and D. C. Waugh, directors. Organized Dec. 4, 1905, under laws of Colorado, with capitalization \$2,000,000, shares \$1 par. Lands, 2 claims, known as the Dubuque mine, opened by a 460' tunnel, said to show a 6' vein carrying a 3' paystreak showing copper carbonates and melaconite, with good gold values.

#### **DUCHESS MINING, MILLING & SMELTING CO.**

**WYOMING.**

Letters returned unclaimed from former office, Cheyenne, Wyo., and former mine office, Holmes, Albany Co., Wyo. Lands, west of the Blanche, are developed by a 100' shaft, with steam plant. Did a little work in 1906.

#### **DUCKTOWN SULPHUR, COPPER & IRON CO., LTD.**

**TENNESSEE.**

Office: 1 Gresham House, Old Broad St., London, E. C., Eng. Mine office: Isabella, Polk Co., Tenn. Col. Jaa. LeGeyt Daniell, chairman; Jos. Gordon Gordon, managing director; preceding officers, F. Brown, L. G. Mortimer and H. G. Palmer, directors; Henry Godber, secretary; W. H. Freeland, general manager; Chas. W. Kennrick, assistant manager.

Organized Feb. 16, 1891, under laws of Great Britain, with capitalization £75,000, shares £1 par, in £74,800 ordinary and £200 founder's shares; issued, £66,000 ordinary and £200 founder's shares. Profits are divisible on the basis of 7%, plus one-half of the net remaining profits, to ordinary shares, balance of profits going to founder's shares. Debentures, £28,500, first-mortgage bonds, at 7%. Profits, 1905, were £65,741 net, and for 1906 were £104,388 net. Dividends, 1905, were 53½% on ordinary shares, and £152 18s. on founder's shares, and 1906 were 82½% on ordinary shares and £249 3s. on founder's shares, giving a dividend record, to Dec. 31, 1906, of 1,069% on ordinary shares and 51,785% on founder's shares.

Lands include the Mary, Callowell and other mines, bought for £68,057. Main shaft is circa 600' deep, and ores are exclusively sulphide, averaging slightly under 3% in copper tenor, without either gold or silver values. Mine equipment includes steam and electric power.

The smelter has a Herreshoff furnace, with daily capacity of circa 500 tons of crude ore, and a No. 6 Connersville blower, driven by a direct-connected engine. The process of smelting was changed, 1905, and instead of heap roasting the ore, as formerly, semi-pyritic smelting is employed, producing

a 20% first-fusion matte and a 50% second-fusion matte. The change in smelting system at first reduced the capacity of the furnace by 48%, but eventually was brought to 16.5% net tonnage loss only, but effected a great saving in fuel charges, resulting in a saving of nearly 3 cents per pound on the cost of finished copper. The semi-pyritic smelting process first introduced by the Ducktown has been adopted by a number of other progressive smelters, and is highly commended by metallurgists. There is a small acid plant in connection with the smelter.

Production of fine copper has been as follows: 5,287,321 lbs. in 1904; 6,547,212 lbs. in 1905; 6,659,726 lbs. in 1906; 6,238,952 lbs. in 1907. The property is managed with great ability, both technically and financially, and ranks second only to the Tennessee among the copper mines of the Appalachian field.

#### DUGWAY COPPER MINING CO. UTAH

Mine office: Callao, Juab Co., Utah. O. F. Peterson, general manager. Lands, in the Deep Creek district, have a 200' shaft on a 15' contact vein between limestone and porphyry, showing sulphide ore assaying up to 7.32% copper, 45% lead, 17 oz. silver and \$1.60 gold per ton. Idle.

#### DUKE MINE.

#### NORTH CAROLINA.

Office: care of Brodie L. Duke, owner, Durham, N. C. Mine office: Roxboro, Person Co., N. C. Thos. Morecom, superintendent. Lands, 470 acres, formerly known as the Tingen mine, showing fissure veins carrying copper ores, with gangue of epidote, calcite and quartz. Has 4 shafts, deepest circa 200'. Mine has produced some high grade ore, the last carload shipped averaging circa 17% copper and netting \$1,100. Has steam power. Mine probably will be reopened.

#### DULUTH & ARIZONA COPPER MINING CO.

#### ARIZONA.

Office: 219 West Superior St., Duluth, Minn. Letters returned unclaimed from former mine office, Prescott, Yavapai Co., Ariz. Chas. W. Ericson, president; Gideon Schelin, secretary. Organized circa 1902, with capitalization \$1,000,000, shares \$1 par. Lands, 4 claims, south of Prescott, showing ores said to give average assay values of 11% copper and \$6 gold per ton. Idle for several years.

#### DULUTH & CHIRICAHUA DEVELOPMENT CO.

#### ARIZONA.

Office: Duluth, Minn. Mine office: Paradise, Cochise Co., Ariz. Martin Pattison, president; Edward F. Sweeney, vice-president and general manager; Geo. H. Crosby, secretary and treasurer; preceding officers, Byron M. Pattison and Thomas Bardon, directors. Lands, 37 claims, including the Sullivan, Copperopolis and Horace Mountain groups. The Sullivan group, 7 claims, circa 4 miles west of the San Simon, has open-cuts, showing leached copper ore and a little very rich ore, and has a 60' tunnel showing lead ore. The Copperopolis group, 8 claims, near the Sullivan, is slightly developed. Litigation over the Sullivan group was settled in company's favor, 1908. Management considered good and property promising. Idle except for annual assessment work.

#### DULUTH CONSOLIDATED COPPER CO.

#### IDAHO.

Office: care of W. J. Holman, secretary and treasurer, Calumet, Mich. Mine office: Baker, Lemhi Co., Idaho. W. A. Eaton, president; Lucien Merritt, vice-president; Thos. W. Hamilton, general manager; preceding officers, John H. Holman, H. S. Palmer, Geo. W. Logan, John E. Merritt, John Lefevre and Sam P. Dingee, directors. Organized circa 1906, under laws of Arizona, with capitalization \$5,000,000, shares \$10 par. Lands are near the Calumet & Montana, in the Salmon River valley. Presumably idle.

#### DULUTH & UTAH DEVELOPMENT CO.

#### UTAH.

Office: 26 Mesaba Blk., Duluth, Minn. Operating office: 208 Atlas Bldg., Salt Lake City, Utah. Letter returned unclaimed from former mine office,

Stockton, Toocle Co., Utah. H. F. Smith, president; Peter Porter, vice-president; Harvey J. Jones, secretary; E. J. Raddatz, treasurer and general manager. Organized under laws of Utah, apparently as successor of No-U-Dont Mining & Milling Co. Lands, 4 fractional claims, area 50 acres, near the Honerine tunnel, adjoining the Honerine mine on the north, which carries copper at considerable depth, and copper is expected in the Duluth & Utah at depth. Mine has circa 3,000' of workings, deepest 500', and ships ore carrying, 35 to 60% lead and 20 to 30 oz. silver per ton. Has produced circa \$250,000 worth of silver-lead ores above the 500' level.

**DUNCAN MINING & DEVELOPMENT CO., LTD. BRITISH COLUMBIA.**

Mine office: Duncans, Vancouver Island, B. C. Lands, 4 claims, in the Cowichan Lake district, showing ore giving assays up to 4% copper, 50% lead, 5 to 10 oz. silver and \$2.50 to \$5 gold per ton. Idle since circa 1901.

**DUNKIRK GOLD & SILVER MINING CO. ARIZONA.**

Office and mine: Prescott, Yavapai Co., Ariz. E. N. Mitchell, superintendent. Lands, in the Slate Creek district, show auriferous and argentiferous copper and lead sulphides. Has gasoline power and a small mill.

**DUPLEX GOLD & COPPER MINING CO.**

Office: 57-209 Washington St., Boston, Mass. Location of lands, if any, unknown.

**DUQUESNE MINING & REDUCTION CO.**

**ARIZONA.**

Office: 820 Pennsylvania Ave., Pittsburg, Pa. Mine office: Duquesne, Santa Cruz Co., Ariz. H. T. Herr, vice-president and general manager; H. S. Stewart, superintendent. Lands, circa 800 acres, near the Pride of the West and several miles south of the Mowry mines, in the Patagonia Mountains, showing a contact vein between limestone and granite porphyry, carrying chalcopyrite, associated with sphalerite, galena and pyrite, opened by a shaft of circa 1,000' depth. Plans building an electric railway from mine to the smelter at Calabasas, which has reverberatory furnaces, and begun production, 1907, on a small scale, employing circa 100 men. Property considered promising and management good. Idle at last accounts.

**COMPÀNIA MINERA DE COBRE DE DURANGO.**

**MEXICO.**

Dead. Formerly at Otaez, Santiago Papasquiaro, Durango, Mex.

**DURANGO COPPER SYNDICATE, LTD.**

**MEXICO.**

Dead. Lands sold, 1900, to Avino Mines of Mexico. Ltd. Formerly at Avino, San Juan del Rio, Durango. Mex.

**FUNDICIÓN EL DURAÑO.**

**CHILE.**

Office and works: Combarbalá, Coquimbo, Chile. Franciso Greve G., owner. Property is a smelter with one reverberatory furnace, which, in 1903, employed 16 men at average wages of 1 peso daily, treated 810 metric tons of 15% ore from mines in Los Vilos district, producing therefrom 119 metric tons of bars averaging 97% copper, the slags averaging about 1% copper tenor.

**DUTCH MILLER MINING & SMELTING CO.**

**WASHINGTON.**

Letter returned unclaimed from former office, 202 Denny Way, Seattle, Wash. Mine office: Skykomish, King Co., Wash. H. P. Fogh, general manager. Capitalization \$2,000,000. Property was leased, for 3 years, with privilege of one-year extension, to Seattle-Boston Copper Co. Creditors of the Dutch Miller asked, 1907, for a receiver, alleging mismanagement on the part of the lessee.

Lands, 2 claims, in the Burns district, 12 miles south of Skykomish, carrying a vein of about 15' average width, exposed for circa 400', and opened by tunnels, shaft and trenches showing auriferous chalcopyrite. Property considered promising.

**DUTTON MINE.**

**MONTANA.**

Owned by East Butte Mining Co.

**DWIGHT FURNESS CO.****MEXICO.**

Office: Guanajuato, Gto., Mex. Mine office: Etzatlán, Ahualulco, Jalisco, Mex. Dwight Furness, president; W. M. Cummings, manager. Property includes various groups of mines, in the Etzatlán, Ameca and Ahualulco districts. The Mina Grande group, 31 hectares, 21 miles west of Hostotipaquito, shows veins of 6' to 50' width, carrying native silver and gold and silver sulphide ore, fairly developed by shafts and tunnels, with considerable ore exposed. The Casadas group, 21 hectares, 25 miles west of Hostotipaquito, shows veins of 3' to 10' width, carrying native gold and silver and silver sulphides. The Magistral y Anexas group, 24 hectares, 12 miles southwest of Ameca, shows a wide vein, carrying paystreaks and chutes with workable values, of oxidized and sulphide copper ores, both carrying gold and silver, extensively developed by shafts and tunnels. Ores of the oxidized zone are largely worked out, from extensive operations in the past, mainly for the production of bluestone and sulphuric acid. The Calabaza group, 24 hectares, 4 miles south of Etzatlán, shows 4 fissure veins, of 4' to 12' width, carrying mainly auriferous and argentiferous sphalerite and galena, with 650' of workings, estimated to show 20,000 tons of ore.

**EAGLE BIRD MINING & MILLING CO.****UTAH.**

Office: care of Geo. A. Whittaker, president, Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Geo. Yeadon, general manager; J. E. Meyer, secretary; E. G. Mahon, treasurer. Organized 1907, under laws of Utah, with capitalization, \$400,000. Lands, 14 claims, area circa 280 acres, near the Highland Boy mine, having a 260' tunnel and a 42' shaft, showing a 14' vein of ore assaying up to 37% lead.

**EAGLE & BLUE BELL MINING CO.****UTAH.**

Office: 60 State St., Boston, Mass. Operating office: 700 McCornick Bldg., Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. E. L. White, president; Willard F. Snider, vice-president; H. H. Green secretary; Walter S. McCornick, treasurer; preceding officers and Jos. A. Coram, directors; Wm. Clarke, superintendent. Capitalization \$250,000, shares \$1 par. Was controlled, through ownership of circa \$190,000 stock, by Bingham Consolidated Mining & Smelting Co., which failed, and was under bond, March, 1908, to Bingham Mines Co., successor of the Bingham Consolidated.

Lands, 6 claims, between the Centennial-Eureka and Grand Central mines, on the Mammoth limestone, show considerable bodies of silicious copper ore and lead sulphides, former carrying only small copper percentages, but circa \$10 per ton in combined gold and silver values. Development is by tunnel and a 1,100' blind shaft, planned to be sunk to 1,400', showing an ore body up to 66' in width on the bottom level, said to carry values of \$10 to \$20 per ton in copper, silver and gold. The mine has considerable reserves, and normal ore output is about 75 tons daily. Production, 1907, was 227 carloads of ore. Mine was closed, late 1907, and reopened circa July, 1908. The property has a good machinery plant, including a powerful hoist.

**EAGLE CONSOLIDATED GOLD MINING & MILLING CO. WASHINGTON.**

Dead. Lands sold, 1908, for \$13,000, to Blue Star Mining Co. Formerly at Chewelah, Stevens Co., Wash.

**EAGLE CONSOLIDATED MINES CO.****ARIZONA.**

Office: care of T. J. Morrison, secretary, Prescott, Ariz. Letter returned unclaimed from former mine office, Wendendale, Yuma Co., Ariz. A. J. Haddon, president; Dr. R. N. Looney, vice-president; C. A. Peter, Jr., treasurer; T. J. Morrison, secretary; preceding officers, A. J. Dolan, Michael McHale and James Macklin, directors. Organized circa September, 1907. Lands, 5 claims, 6 miles north of Wendendale, having a 112' shaft showing a 10' vein giving fair assay values in copper and gold.

**EAGLE COPPER CO.**

Digitized by Google

Dead. Formerly at Encampment, Carbon Co., Wyo. Described Vol. VI.

**EAGLE COPPER-GOLD MINING CO.****ARIZONA.**

Office: 2072 East Fortieth St. S. E., Cleveland, Ohio. Letter returned unclaimed from former mine office, Wickenburg, Maricopa Co., Ariz. Wm. F. Kuder, president; E. L. Motts, vice-president; A. L. Motts, secretary; J. L. Zesiger, treasurer; preceding officers, Alex. M. Fulford and Henry Ehner, directors; Nicholas McCarver, superintendent. Organized Sept. 8, 1902, under laws of South Dakota, with capitalization \$1,000,000, shares \$1 par.

Lands, 7 claims, 1 fractional, area 130 acres, known as the Profusion group, in the Blue Tank and Black Rock districts, in the foothills of the Bradshaw Mountains, 12 miles east of Wickenburg, with connection by 10 miles of good and 2 miles of bad wagon roads. Lands are reported to show 5 ore bodies, of which 2 are partially developed, one of 12' average reported width, traceable 3,000', carrying native copper, cuprite, malachite and chalcopyrite, giving average assays of 4% copper, 2 oz. silver and \$3.10 gold per ton. Development is by tunnels of 35' and 193', and by shafts of 50', 60', 100' and 150'. Has a 16-h. p. hoist and 4-drill air-compressor, with 7 mine buildings. Company plans deepening shaft to 300' and building a 50-ton concentrator.

**EAGLE COPPER & GOLD MINING CO.****IDAHO.**

Office: Wallace, Idaho. Mine office: Mullan, Shoshone Co., Idaho. Organized 1902, under laws of Idaho, by J. H. Nordquist, et al., with capitalization \$1,000,000, shares \$1 par. Lands, sundry claims near the Leslie, opened by a 150' tunnel, showing copper ore, associated with hematite. Idle.

**EAGLE COPPER MINING CO.****WASHINGTON.**

Mine office: Chewelah, Stevens Co., Wash. Lands, 3 claims, lying south of the Wonderful group, on Stevens Peak, slightly developed by shaft and tunnel, showing auriferous and argentiferous lead and copper ores. Idle.

**EAGLE METALLIC COPPER CO.****PENNSYLVANIA.**

Office and mine: Belvidere, Warren Co., N. J. Henry D. Deshler, president; Samuel J. Kochler, treasurer; preceding officers, Frank C. H. Schweyer, Thos. Zellner, J. N. Boone, Owen H. Nagle and Thos. S. Downing, directors; Miss Millie Deshler, secretary. Organized 1903, under laws of New Jersey, with capitalization \$500,000, shares \$1 par.

Lands, 500 acres in Adams county, Pennsylvania, including an old copper mine, never worked successfully, on the western Maryland railroad. Property shows a mineralized zone of 400' average width, carrying native copper, chalcocite, bornite, chalcopyrite and tetrahedrite, averaging about 2 oz. silver per ton, with traces of gold. Development is by a 300' shaft at 40° incline, in ore from surface, giving assays up to 6% copper, and it is planned deepening the shaft 200'.

Equipment includes a steam plant and a 2½" core-drill. Has a 24x30' office and laboratory, and plans a 200-ton mill. Has circa 5,000 tons of ore on the dump, ready for treatment.

**EAGLE MINING CO.****ALASKA.**

Letter returned unclaimed from mine office, Ketchikan, Alaska. E. M. Aldrich, consulting engineer. Lands, in the Martin's Arm district, on the coast, circa 40 miles from Ketchikan and 3 miles from tidewater, have a 5' to 6' vein traceable for 1,100', said to give average assays of 18% copper. Plans a tram-line and bunkers, for ore shipment.

**EAGLE MINING CO.****CALIFORNIA.**

Mine office: Needles, San Bernardino Co., Cal. Idle.

**EAGLE MINING CO.****MONTANA.**

Office and mine: care of Hon. Patrick Mullins, director, Butte, Silver Bow Co., Mont. Organized March 10, 1906, under laws of Montana, with capitalization \$150,000, shares \$1 par, and is supposed to have increased capitalization,

Apr. 29, 1907, to \$250,000, shares 50 cents par. Lands, north of La France, have a 250' shaft, showing a 5' vein. Formerly was a silver mine, shipping ore running up to 1.7% copper and 186 oz. silver per ton.

**EAGLE MINING & SMELTING CO.****MONTANA.**

Dead. Title changed, 1907, to Copper Eagle Mining & Smelting Co. Formerly at Butte, Silver Bow Co., Mont.

**EAGLE MOUNTAIN COPPER MINING CO.****OREGON.**

Office: 912-131 LaSalle St., Chicago, Ills. Mine office: Harrisburg, Linn Co., Ore. Wm. Henry Harris, president; W. K. West, vice-president; D. J. McAllister, secretary and treasurer; preceding officers, Peter Basche, Geo. H. Foster and Hon. W. G. Drowley, directors; Geo. E. Alexander, superintendent; D. W. C. Nelson, consulting engineer. Organized under laws of Arizona, with capitalization \$2,500,000, shares \$1 par. Lands, 8 claims, including the Cox and Van groups, near the Indiana mine, in the Goose Creek camp, 28 miles east of Baker City, showing a prominent gossan on a contact vein between porphyry and limestone. Company claims primary sulphide ores at depth of 10' to 20'. Has a 10' pit and several tunnels, of 30' to 237' length, latter said to be in a 14' ore body showing sulphide ore assaying 3 to 20% copper, with short tunnel showing a 4' vein carrying chalcocite and bornite assaying 10 to 40% copper. Nelson estimates long tunnel to show a 14' vein averaging 3 to 4% copper, which has given ore assaying 3 to 20% in tenor. Company claims to have \$1,750,000 worth of ore in sight, by actual measurement, and claims that it might claim \$324,000,000 worth of ore in sight, this being one of the most monumental prevarications in the history of mining literature, so richly dowered with wild flights of the imagination. Has several substantial mine buildings, with 80-h. p. boiler and small Leyner air-compressor. Has a good water power on Rice creek, which it is planned to harness for a 350-ton mill. Property is reached by a good wagon road, and company hopes to obtain a railroad. Employed circa 20 men at last accounts. Property considered promising, but company's promises of dividends certainly were not warranted by the present showing and status of developments, and the so-called stock guarantee merely is that anyone who visits the property and finds same misrepresented may have his money back with interest.

**EAGLE RIVER COPPER CO.****MICHIGAN.**

Dead. Lands sold, circa 1905, to a subsidiary company of the Calumet & Hecla. Formerly at Eagle River, Keweenaw Co., Mich.

**BANKOPS COPPER MINING & SMELTING CO.**

Office: Spokane, Wash. Organized 1906, under laws of Washington, with capitalization \$1,500,000, by A. M. Baldwin, H. M. Allen, John H. Shaw and W. S. McCrea. Location of lands, if any, unknown.

**EAST BUFFALO MINING CO.****MONTANA.**

Mine office: Saltese, Missoula Co., Mont. Has a tunnel and shallow shaft, showing ore assaying 5% copper, 15% lead and 8 to 10 oz. silver per ton.

**EAST BUTTE COPPER MINING CO.****MONTANA.**

Office: 82 Devonshire St., Boston, Mass. Mine office: Butte, Silver Bow Co., Mont. Robt. H. Gross, president and general manager; Frank M. Sullivan, secretary; preceding officers, Frank P. Son, Wm. H. Everts and Chas. R. Leonard, directors. Organized Oct. 14, 1905, under laws of Arizona, with capitalization \$3,000,000, shares \$10 par. Is said to have begun business with \$150,000 cash.

Lands, 134 acres, freehold, including the Dutton mine and 9 other fractional claims, with total area of 19 acres, in the southeastern part of the Butte camp, near the Pennsylvania mine. The various properties are said to carry nearly 20 veins, of more or less value, and have 11 shafts, of 50' to 1,000' depth.

The principal shafts are No. 1, at the extreme north, and No. 11, at the extreme south of the Dutton group, connected by tunnel. Shafts are 16x4' 6" in the clear, being the largest in Butte. No. 1 shaft, 1,000' deep, is planned to be sunk to 2,000', and No. 11 is 500' in depth. Good ore has been opened on the 200', 400', 600' and 800' levels, and the mine was claimed, September, 1907, to have blocked out, on the 400' level and above, 597,404 tons of ore, the 400' level having a 6' vein of 5% ore, with estimates of 1,000,000 tons of ore of 3 to 4% copper tenor blocked out in the entire property. The Dutton mine carries the extension of the Glengarry vein, about 20' in width, but of low grade. The Oneida mine, having shaft No. 11, has yielded considerable rich ore, up to 16% in tenor. The Lassen mine has produced a little ore carrying up to 16% copper and 10 oz. silver per ton. The Yankee Boy mine is said to show a 9' vein of ore averaging 14% copper, which is an exaggeration.

Equipment includes a 150-h. p. Lidgerwood hoist, good for 1,500' depth. The mine has an office building and several other structures.

The precipitation plant, one of the largest in Butte, doubled in size, 1908, leaches water from the East Butte mines, and also secures the leachings from the old Parrot waste-dumps. This plant apparently was sublet, for reasons of dubious validity, and difficult of comprehension, to other interests that paid a royalty of 25% on gross values extracted, which royalty is inadequate.

The property has 2 small old concentrators, operated by lessees, including the 100-ton Yankee Boy mill, and the management was said to plan a 500-ton concentrator, to cost about \$135,000.

The South Butte Mining Co. has been sued for damages caused by the blowing up of the mine, and removal of ore. There also is litigation with the Red Metal Company, started by the latter, intended merely to restrain the pernicious activity of East Butte lessees in going beyond the boundary lines.

Production, 1907, is estimated at 1,250,000 lbs. fine copper, secured exclusively by lessees, about one-half of the output being smelting ore and balance of concentrating grade, operations of lessees being entirely above the 400' level. From Jan. 1, 1906, to Sept. 1, 1907, the royalties of the company, being one-fourth of the gross values extracted, amounted to \$149,728.84. Property is considered good, and management, changed 1908, also is good.

#### **EAST BUTTE EXTENSION COPPER MINING CO.**

**MONTANA.**

Office and mine: Butte, Silver Bow Co., Mont. Chas. J. Schatzlein, president; A. C. McCallum, vice-president; Frank H. Cooney, secretary and general manager; J. K. Heslet, treasurer; preceding officers, John H. McQueeny, Jas. Maher and Dr. P. A. Green, directors; A. F. Monroe, engineer; Chas. Wyburg, superintendent. Organized Apr. 10, 1906, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par; issued, \$560,000. Paid, Oct. 1, 1906, a 1% dividend, amounting to \$2,486.

Lands, sundry fractional claims, freehold, area circa 30 acres, lying west of the East Butte and between the Dutton, Belmont and Pennsylvania mines.

The Westlake and Wall mines are said to have produced, under former ownership, circa \$300,000 worth of ore. No. 1 shaft on the Great Northern claim, 120' deep, has 2 compartments. No. 2 shaft, circa 200' deep, shows ore giving assays up to 13% copper and 1 oz. silver per ton. No. 3 shaft, formerly known as the Westlake, is 1,040' deep. A little ore was produced, 1906, shipments reaching 40 tons daily, and there is a small precipitation plant at No. 3 shaft.

#### **EAST COBAR MINING CO., N. L.**

**AUSTRALIA.**

Mine office: Cobar, Robinson Co., N. S. W., Australia. H. R. Treatt, manager. Organized 1907, under laws of New South Wales, with capitalization £1,200, shares 10s. par.

**EAST COLUSA MINE.****MONTANA.**

Owned by Boston & Montana Consolidated Copper & Silver Mining Co.  
**EAST CUMBERLAND ELY CO.**

**NEVADA.**

Mine office: Ely, White Pine Co., Nev. Organized Nov. 1, 1906, under laws of Maine, with capitalization \$500,000, shares \$1 par. Lands, 2 claims, south of the Chainman mine, known as the Rabbit mine, which formerly shipped some ore carrying up to 25% lead, 12 oz. silver and \$12 gold per ton. Has a 600' tunnel with a 100' winze.

**EASTERN NATIONAL COPPER CO., LTD.****NOVA SCOTIA.**

Dead. Succeeded, 1904, by Cheticamp Copper Co., Ltd. Formerly at Cheticamp, Inverness Co., N. S.

**EASTER SUNDAY MINING CO.****ARIZONA.**

Office and mine: Bisbee, Cochise Co., Ariz. Has gold and copper ores. Idle since circa 1905.

**EAST GREENWATER COPPER CO.****CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Geo. Badget, superintendent. Lands, circa 6 miles east of Greenwater, adjoining the Greenwater Vindicator, have a 100' shaft. Idle.

**EAST GREY ROCK MINE.****MONTANA.**

Owned by Butte & Boston Consolidated Mining Co.

**EAST GWANDA MINES, LTD.****RHODESIA.**

Office: 32 Old Jewry, London, E. C., Eng. Mine office: P. O. Box 414, Bulawayo, Rhodesia. T. B. Reynolds, chairman; Maj. Maurice Heany, managing director; A. H. Lawrence, consulting engineer; F. Mackenzie Greene, mine manager; Tom Prest, secretary; Geo. Young, local secretary. Organized Jan. 18, 1905, under laws of Great Britain, with capitalization £600,000, shares £1 par; issued, £460,607. Has a bond issue of £125,000 debentures, at 6%, convertible into stock at par, on 3 months' notice. Lands, 284 claims and a 10-acre millsite, in the Gwanda district of Matabeleland, south of Bulawayo, including the West Nicholson, Jessie and Valley mines. Latter has a fissure vein in granite, carrying auriferous chalcopyrite and pyrrhotite, with reserves estimated at 25,000 tons, assaying circa 1.5% copper and 12 dwts. gold per ton. Has a 110-stamp mill, cyanide plant and concentrator. Has a smelter, the first in Rhodesia, blown in 1906, having a 24" water-jacket blast-furnace and a reverberatory furnace. To end of May, 1907, smelter had shipped 560 tons of matte, of presumably about 45% copper tenor. Production, 1906, from 61,875 tons of ore milled, was gold and silver values of £77,480, and 2,255 long tons of concentrates, yielding £31,017, and 323 long tons of copper matte, of £14,406 estimated value, carrying circa 725,000 lbs. fine copper. Forces are 60 white men and 400 natives. Company made some serious mistakes at first, but these have been rectified, and present development and future prospects are much improved.

**EAST HECLA MINING CO.****IDAHO.**

Office and mine: Wallace, Shoshone Co., Idaho. C. F. O. Merriam, president; A. H. Featherstone, vice-president; P. L. Everhardt, secretary; preceding officers, Jas. F. McCarthy, W. H. North and Dr. Geo. Gray, directors. Lands, 25 claims, between the National and Hecla mines. Is driving a 2,500' crosscut tunnel from Deadman Gulch, in connection with the Copper King, to develop the vein circa 1,000' below present workings. Property considered promising.

**EAST PACIFIC MINING CO.****MONTANA.**

Mine office: Winston, Broadwater Co., Mont. Robt. A. Bell, president and general manager; C. N. Kessler, vice-president; A. L. Smith, treasurer; W. H. Dickinson, cashier; preceding officers and C. C. Newman, directors. Capitalization \$1,000,000, shares \$1 par. Lands, 14 claims, area 220 acres. Mine has

about 4 miles of workings, carrying mainly silver-lead ores, with some auriferous copper ore. Has a 60-ton mill, and, to end of 1906, had produced ore worth \$1,366,527.

#### **EAST-SIDE GOLD MINING CO.**

**ARIZONA.**

Dead. Formerly at Bisbee, Cochise Co., Ariz. Fully described Vol. VII.

#### **EAST SNOWSTORM-COEUR D'ALENE MINING CO.**

**IDAHO.**

Mine office: Mullan, Shoshone Co., Idaho. Capitalization \$1,500,000, shares \$1 par. Apparently was promoted, circa 1906, by the late Rev. Col. W. P. Fife, whose promotions proved more profitable to Rev. Col. Fife than to the purchasers of shares.

#### **EAST SNOWSTORM MINING CO.**

**IDAHO.**

Office: 300 Columbia Bldg., Spokane, Wash. Mine office: Mullan, Shoshone Co., Idaho. A. Herman, president; J. F. Pasold, vice-president; R. H. Dunn, treasurer; John M. Scrafford, manager. Organized 1906, under laws of Washington, with capitalization \$1,500,000, shares \$1 par. Lands, 4 claims, area 75 acres, in the Hunter district, east of the Snowstorm, and supposed to carry circa 3,000' of the Snowstorm vein. Mine has 2 tunnels, longest circa 900', planned to cut the Snowstorm vein by a 600' crosscut; also a shallow shaft on a 6' vein carrying an 8" paystreak of chalocite, bornite, chalcopyrite and tetrahedrite, all auriferous. Ores, as developed, carry mainly gold values.

#### **EAST YERINGTON COPPER CO.**

**NEVADA.**

Office: care of Matthew Domm, treasurer, Salt Lake City, Utah. Mine office: Yerington, Lyar Co., Nev. Lands, adjoining the Contact group, were slightly prospected, 1907, showing a little high-grade copper ore.

#### **J. M. ECHEVARRIA.**

**CHILE.**

Office and mine: Illapel, Coquimbo, Chile. Property is the Quilomeneo mine, opened 1892, which formerly made about 100 long tons fine copper yearly. Presumably idle.

#### **ECHO COPPER MINING & MILLING CO.**

**WYOMING.**

Office: 413-95 Dearborn St., Chicago, Ills. Mine office: Rudelfha, Carbon Co., Wyo. Dr. Geo. Illingsworth, president; W. D. Meeker, vice-president; W. R. Stiles, secretary; W. T. Peryam, managing director. Organized Dec. 21, 1902, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par. Lands, 4 claims, area 80 acres, adjoining the Ferris-Haggarty mine on the northeast, opened by a 114' shaft, showing copper stains. Did a little work in 1906. Idle.

#### **ECHO MINING CO.**

**IDAHO.**

Dead. Formerly at Sandpoint, Kootenai Co., Idaho. Described Vol. VII.

#### **ECLIPSE-ARGO MINING CO.**

**MONTANA.**

Office: New Britain, Conn. Operating office: Helena, Mont. Mine office: Argo, Broadwater Co., Mont. W. F. Quade, president; Frank L. Sizer, vice-president and general manager; E. J. Hoffman, secretary and treasurer; preceding officers, John Boyle, F. R. Bill, I. F. Pulcifer and E. G. Warner, directors; E. J. Clemo, superintendent.

Organized March 6, 1904, under laws of Montana, with capitalization \$300,000, increased, circa November, 1906, to \$400,000, shares \$1 par, as a merger of the Eclipse Gold & Copper Mining Co. and Argo Gold & Copper Mining Co. Receipts for fiscal year ending June 1, 1908, were \$119,093.30, including \$88,041.85 from ore sales, and cash on hand was \$1,371.59, with \$5,943.89 in accounts receivable; accounts and bills payable aggregating \$17,107.57.

Lands, 5 claims, 2 patented, area 100 acres, and a 10-acre millsite, north of Helena. Property shows a 10' fissure vein, in slate, traced circa one-half mile, carrying bornite and chalcopyrite assaying circa 7% copper, opened by tunnels of about 700' and 1,300', with about 3,000' of workings.

Equipment includes a 40-h. p. steam plant with a 15-h. p. hoist and 3-drill air-compressor. There are 12 buildings, including a 20x25' wooden carpenter-shop and a 14x18' smithy.

The 50-ton mill, 60x140', of logs and lumber, has a Blake crusher, 2 sets of rolls, 3 Hartz jigs, 2 Wilfley tables and a slime table.

Management was changed, June, 1906, and circa 50 men were employed until November, 1907, when work was suspended. Production, 1903, was 204,570 lbs. fine copper, and in the fiscal year ending June 1, 1907, was 1,124,000 lbs. fine copper.

#### ECLIPSE (BARBERTON) COPPER, LTD.

#### TRANSVAAL.

Office: Johannesburg, Transvaal. Mine office: Barberton, Middelburg district, Transvaal. Percy B. Byass, manager. Organized under laws of Transvaal, with capitalization £600,000, shares £1 par. Lands, 72 base metal claims, in the DeKaap Valley, near Barberton, opened by 3 shallow shafts, Nos. 1 and 2 showing good ore. Shipped, early 1908, a little ore of about 20% copper tenor. Property considered promising.

#### ECLIPSE GOLD & COPPER MINING CO.

#### MONTANA.

Dead. Was merged, 1904, in Eclipse-Argo Mining Co. Formerly at Argo, Broadwater Co., Mont.

#### EDDY GOLD, SILVER & COPPER MINING CO.

#### ARIZONA.

Office: P. O. Box 596, Phoenix, Ariz. Mine office: Glendale, Maricopa Co., Ariz. F. L. Eddy, president and general manager; J. R. Aich, vice-president; S. P. Donnell, secretary and treasurer. Organized Aug. 22, 1902, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 10 claims, area 200 acres, also a 5-acre millsite, in the Frog Tank Mountains, Old Baldy district. A 3' fissure vein in porphyry, opened by six 10' pits, a shaft of 65' and tunnels of 55' and 105', carries oxide and carbonate ores, assaying 4 to 6% copper, 12 to 60% lead, 10 to 62 oz. silver and \$5 to \$32 gold per ton. Idle several years.

#### EDDY MINING CO.

#### MONTANA.

Office: Missoula, Mont. Mine office: Saltese, Missoula Co., Mont. A. M. Stevens, secretary. Lands, on Clark's Fork, near Copper Mountain, show a vein up to 34' in width, proven for about 6,000' length by numerous pits and crosscuts, with a tunnel of 355'.

#### EDISON MINING CO.

#### BRITISH COLUMBIA.

Mine office: Yreka, Vancouver Island, B. C. Property is the Superior group, adjoining the Yreka, said to show good ore. Idle for several years.

#### EDMUNDIAN (MANICALAND)

#### PORUGUESE EAST AFRICA.

#### COPPER CO., LTD.

Dead. Voluntarily liquidated, July, 1902. Formerly at Umtali, Manicaland, Portuguese East Africa.

#### EDMUNDIAN COPPER MINING CO.

#### PORUGUESE EAST AFRICA.

Office: 8 Old Jewry, London, E. C., Eng. Mine office: Umtali, Mozambique, Portuguese East Africa. H. D. Boyle, chairman; preceding officer, J. Seear and E. R. Tymms, directors; N. S. Sidgreaves, secretary; Consolidated Goldfields of South Africa, Ltd., consulting engineers. Organized Aug. 7, 1907, under laws of Great Britain, with capitalization £135,000, shares £1 par; issued, £95,000. Was promoted by the Consolidated African Copper Trust, Ltd., which controls through stock ownership, and which advanced working capital, repayable Aug. 15, 1910, in cash or shares.

Lands, 202½ copper claims, including the Edmundian mine, which, circa 1906, shipped 2,377 long tons of 20% copper ore to England for test smelting. Mine is opened to the 7th level, with estimated ore reserves of 22,799 long tons of 5% copper tenor. A small smelter, with a reverberatory furnace, was built,

circa 1906, and company planned beginning smelting October, 1908. Property considered promising.

**EIGHTY-FIVE MINING & MILLING CO.**

**NEW MEXICO.**

Office: care of Jas. Barclay, Moline, Ills. Mine office: Lordsburg, Grant Co., N. M. Organized late in 1907, with capitalization \$1,000,000, apparently succeeding the Eighty-Five Mining Co. Lands, in the Virginia district, show ore carrying good values in gold, silver and copper.

**EINASLEIGH AMALGAMATED COPPER MINES, LTD.**

**AUSTRALIA.**

Office: Adelaide, South Australia. Mine office: Einasleigh, Queensland, Australia. Organized circa May, 1908, with capitalization £52,500, shares £1 par, as a merger of the Einasleigh Proprietary, Ltd., and an exploring syndicate that held Block 55, adjoining.

**EINASLEIGH EXPLORATION SYNDICATE, LTD.**

**AUSTRALIA.**

Offices: 20 Copthall Ave., London, E. C., Eng. Mine office: Einasleigh, Gilbert Co., Queensland, Australia. W. H. Woodhead, managing director; Thos. Mullett, secretary. Organized Aug. 16, 1899, with capitalization £4,000, shares £50 par; issued, £3,850. Lands, 100 acres, on the Einasleigh river, Gilbert county, Queensland, Australia. Idle practically since birth.

**EINASLEIGH FREEHOLD COPPER MINES, LTD.**

**AUSTRALIA.**

Dead. Reorganized, Jan. 17, 1907, as New Einasleigh Copper Mines, Ltd. Formerly at Einasleigh, Gilbert Co., Queensland, Australia. Fully described Vol. VI.

**EINASLEIGH PROPRIETARY, LTD.**

**AUSTRALIA.**

Office: Rockhampton, Queensland, Australia. Mine office: Einasleigh, Queensland, Australia. R. S. Sarcher, chairman. At last accounts, May, 1908, planned amalgamating with an Adelaide syndicate owning lease No. 55, under title of Einasleigh Amalgamated Copper Mines, Ltd.

**EINASLEIGH SOUTH BLOCKS.**

**AUSTRALIA.**

Mine office: Einasleigh, Gilbert Co., Queensland, Australia. Lands, sundry claims lying south of the Einasleigh Freehold. Idle some years.

**EISFELDER KUPFERGEWERKSCHAFT.**

**GERMANY.**

Mine office: Glücksbrunn, Saxe-Meiningen, Germany. Capitalization, 600,000 marks. W. A. Mertens, smelter superintendent, at last accounts. Development is by 2 shafts. Presumably idle.

**EL CAPITAN COPPER CO.**

**ARIZONA.**

Dead. Was a swindle, perpetrated by the notorious firm of Douglas, Lacey & Co. This firm reported, Jan. 30, 1904, that the property had been absorbed, and that its stock was to be exchanged, but, for purposes best known to the firm, the company apparently has been kept alive, and the office address in New York continued in the city directory. Formerly at Kirkland, Yavapai Co., Ariz.

**EL CAPITAN MINING CO.**

**ARIZONA.**

Letter returned unclaimed from former mine office, Kirkland, Yavapai Co., Ariz. Lands, 5 claims, 5 miles from Kirkland, having a 60' two-compartment shaft showing a quartz vein, of 18" to 3' width, carrying auriferous and argentiferous copper ore.

**EL CARMEN COPPER CO.**

**MEXICO.**

Office: 52 Front St., New York, N. Y. Mine office: San Juan de Heredia, El Oro, Durango, Mex. Thos. P. Ball, president; Stephen A. Levy, secretary and treasurer; I. Wayne Von Leer, general manager. Organized August, 1899, under laws of New York, with capitalization \$750,000, shares \$100 par. Lands, 400 acres, 45 miles from a railroad, also 31,000 acres miscellaneous lands. Development has shown a considerable body of auriferous and argentiferous cop-

per ore, of concentrating grade. Has a large pumping plant, with a 3½-mile pipe-line, and a 40-stamp mill. Idle.

**EL CARMEN MINING CO.****MEXICO.**

Mine office: San Javier, Hermosillo, Sonora, Mexico. Organized 1905, under laws of Arizona. Presumably idle.

**EL COBRE MINES.****CUBA.**

Dead. Succeeded Jan. 5, 1907, by Cuba Copper Co. Formerly at El Cobre, Santiago de Cuba. Very fully described Vol. VI.

**EL COBRE MINING CO.****MEXICO.**

Office: 248 Equitable Bldg., Denver, Colo. Mine office: Hermosillo, Sonora, Mex. A. S. Mackenzie, vice-president and general manager; Guy C. Clemens, secretary. Organized under laws of District of Columbia, with capitalization \$5,000,000, shares \$1 par.

Lands, circa 1,000 acres, including La Gran Duquesa and Transvaal mines, and a smelter site, in the Ures district, about 60 miles east of Hermosillo, to which point there is a good wagon road. Ores are claimed to give average smelter returns of 20.1% copper, 1.75 oz. silver and \$4 gold per ton. The company's fiscal agent, F. A. Wright, of Chicago, advertised, October, 1904, that it was estimated by experts that on less than 50 acres of this ground the first 10 feet in depth would give more than 500,000 tons of gold-copper ore that, when smelted, would yield a net profit of over \$10,000,000. Such abominable lies necessarily place both management and property under suspicion. Idle and apparently moribund.

**EL DIAZ GOLD & COPPER CO.****MEXICO.**

Dead. Formerly at San Martin Hidalgo, Ameca, Jalisco, Mex. Described Vol. V.

**EL DORADO COPPER CO.****ARIZONA.**

Office and mine: Globe, Gila Co., Ariz. J. M. Bice, Chas. E. Beck, Forest L. Zimmerman, Jas. Rocks and H. C. Hanawalt, directors. Organized Jan. 29, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

**EL DORADO COPPER MINING CO.****CALIFORNIA.**

Dead. Succeeded, circa 1906, by Woodside-Eureka Mining Co. Formerly at Georgetown, El Dorado Co., Cal.

**ELDORADO GOLD MINING & MILLING CO.****UTAH.**

Office: 549 25th St., Ogden, Utah. Mine office: Hot Springs, Box Elder Co., Utah. Don Maguire, manager. Ores carry silver, lead and copper. Idle.

**ELDORADO MINING CO.****IDAHO.**

Letter returned unclaimed from former mine office, Kellogg, Shoshone Co., Idaho. Organized circa July, 1907. Lands, 4 claims, about 1 mile east of Kellogg.

**ELDORA ENTERPRISE GOLD MINING CO.****COLORADO.**

Mine office: Eldora, Gilpin Co., Colo. Ores carry gold, silver and copper. Has steam power and a 10-ton smelter. Presumably idle.

**ELECTRA MINING & MILLING CO.****ARIZONA.**

Office: care of Alfred Day, fiscal agent, P. O. Box 513, Steubenville, Ohio. Lands, somewhere in Arizona, are claimed to show ore giving average assays of \$27 per ton. Out of money, idle and apparently moribund.

**ELECTRIC IRON & STEEL CO.****CALIFORNIA.**

Dead. A fraud, perpetrated by W. C. Brunson and J. W. Turner, who falsely claimed to own 7,000 acres of rich mining land in Shasta county, California.

**ELECTRIC MINING & MILLING CO.****NEW MEXICO.**

Mine office: Orogrande, Otero Co., N. M. In 1907 planned building a concentrator.

**ELECTRIC SMELTING & REFINING CO.****ONTARIO.**

Works office: Sturgeon Falls, Nipissing, Ont. Was said, early 1908, to have completed a custom smelter.

**SOCIEDAD ELECTROLITICA MANUFACTURERA DE COBRE.****CHILE.**

Office and works: Santiago de Chile. Organized Jan. 13, 1906, under laws of Chile, with capitalization 500,000 pesos, shares 100 pesos par.

**ELECTROLYTIC COPPER CO.****OREGON.**

Office: 14 Century Blk., Mason City, Iowa. A. L. Ober, chairman; preceding officer, F. S. Kingsbury, F. B. Platt and J. F. Ferry, executive committee. Organized under laws of Washington, with capitalization \$1,500,000, shares \$1 par. Has no connection with the Electrolytic Copper Mining & Smelting Co. Lands, 28 claims, partly fractional, said to be located somewhere in Oregon, showing 5 ore bodies, said to range 10' to 25' in width, with a large gossan covering the wider ledge, veins being crosscut by tunnel.

**ELECTROLYTIC COPPER MINING & SMELTING CO.****OREGON.**

Dead. Formerly at Imnaha, Wallowa Co., Ore.

**ELECTROLYTIC REFINING & SMELTING CO OF AUSTRALIA, LTD.****AUSTRALIA.**

Works office: Port Kembla, N. S. W., Australia. Capt. G. A. Richard, general manager; Benj. Mangus, supervising engineer. Organized 1907, with capitalization £150,000, practically as a subsidiary corporation of the Mount Morgan Gold Mining Co., Ltd. Lands, 50 acres, at Port Kembla, in vicinity of Sydney, but said, November, 1907, to be negotiating with the Queensland government for new site, owing to trouble with government over an attempt to levy oppressive harbor dues, the Australian federal and state governments seeming very obtuse, and perniciously active in penalizing new industries. Works are planned to smelt copper ores and concentrates, and to convert matte to blister copper, and are planned to include, ultimately, an electrolytic refinery. Works have a capacity of about 40 tons daily of refined metal, and are planned to treat ores and blister copper from the Mount Morgan and other Australian mines now shipping their products abroad for refining.

**ELENITA DEVELOPMENT CO.****MEXICO.**

Office: Wolvin Bldg., Duluth, Minn. Letter returned unclaimed from former mine office, La Cananea, Arizpe, Sonora, Mex. Louis W. Powell, manager. Capitalization \$200,000, shares \$10 par; \$5 paid in. Lands, circa 700 hectares, including property formerly owned by Bonanza de Cobre Mining Co., lying north of the Greene smelter, and extending to a point nearly opposite the Puertecitos mines of the Greene-Cananea. Mine gives a promising surface showing, and has 2 shafts, in good ore. Property considered promising and management good.

**EL GLOBO MINING & MILLING CO.****MEXICO.**

Office: 821 Railway Exchange Bldg., Milwaukee, Wis. Mine office: Nacozari, Moctezuma, Sonora, Mex. Chas. A. Romadka, president and general manager; C. G. Porter, secretary. Organized 1905, under laws of Arizona, with capitalization \$400,000, shares \$100 par. Ores carry mainly gold and silver values. Has a 15-stamp mill and cyanide plant.

**AGUSTO ELGÜE.****CHILE.**

Mine office: Guayacan, Peña Blanca, Aconcagua, Chile. Property is the San Pablo mine, 15 kilometers from Peña Blanca, showing a vein of about 1 meter average width, which has produced about 600 metric tons of 9% copper ore.

**ELITE GOLD & COPPER MINING CO.****WASHINGTON.**

Dead. Formerly at Index, Snohomish Co., Wash.

**KUPFERBERGWERK ELIZA.****GERMANY.**

Mine office: Mallau, Elsass, Germany. Idle some years.

**ELIZABETH COPPER CO.****VERMONT.**

Dead. Succeeded, circa 1907, by Vermont Copper Co. Formerly at South Strafford, Orange Co., Vt. Fully described Vol. VI.

**ELIZABETH MINING CO.****VERMONT.**

Dead. Succeeded, 1905, by Elizabeth Copper Co. Formerly at South Strafford, Orange Co., Vt. Fully described Vol. V.

**ELKHORN COPPER MINING CO.****MONTANA.**

Office: Dillon, Mont. Mine office: Argenta, Beaverhead Co., Mont. H. H. Swain, secretary. Mine, known as the Blue Eyed Annie, has a 100' shaft. Presumably idle.

**ELKHORN GOLD & COPPER MINING CO.****UTAH.**

Office and mine: Ogden, Weber Co., Utah. S. W. Cragun, president; M. S. Poulton, vice-president; Carl Allison, secretary and treasurer. Organized circa November, 1907, under laws of Utah, with capitalization \$500,000, shares 10 cents par. Lands are in the Sierra Madre district of Box Elder county, Utah.

**ELKHORN MINING CO., LTD.****BRITISH COLUMBIA.**

Mine office: Greenwood, Boundary district, B. C. Jas. Sutherland, president. Mine, under development at last accounts, had auriferous and argentiferous lead and copper ores.

**ELK MOUNTAIN MINING CO.****NEVADA.**

Mine office: Three Creek, Owyhee Co., Idaho. M. S. Estes, president and general manager; Neil Beaton, vice-president; C. W. Robinett, secretary and treasurer. Capitalization \$500,000, shares \$1 par. Lands, 5 claims, in Elko county, Nevada, 8 miles from the Idaho line, about 16 miles northwest of Constaet, Nev., and connected therewith by a good wagon road. Has a 14' contact vein, between limestone and granite, of silicious sulphide ore, said by company to average 6% copper, 7 oz. silver and 0.04 oz. gold per ton, apparently from a paystreak, opened by a 40' tunnel. Company planned installing a smelter, 1908, but such installation is not justified by the limited development secured.

**ELK MOUNTAIN MINING & MILLING CO.****WYOMING.**

Office and mine: Encampment, Carbon Co., Wyo. T. B. Smith, president; M. R. Phelps, vice-president; S. E. Phelps, secretary and treasurer; J. F. Tillou, general manager; G. S. Taylor, superintendent. Organized 1900, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par. Lands, 640 acres, patented, well timbered, in the northernmost hills of the Medicine Bow Mountains, showing contact deposits between limestone and schist, opened by an 80' tunnel and 3 shafts, deepest 183', carrying bunches of chalcoite in upper workings, giving place at depth to chalcopyrite. Has steam and electric power. Property considered promising. Idle.

**ELLA COPPER MINING & DEVELOPMENT CO.****CALIFORNIA.**

Letter returned unclaimed from former office, San José, Cal. Mine office: New Almaden, Santa Clara Co., Cal. Lands, near the New Almaden cinnabar mine, are claimed to show a 40' vein of 10% copper ore, which is a wilful and monstrous exaggeration.

**ELLAMAR MINING CO.****ALASKA.**

Mine office: Ellamar, Prince William Sound, Alaska. J. D. Meenach, manager; Wm. Page, superintendent. Lands, on Virgin Bay, circa 20 miles south of Valdez, known as the Gladhaugh mine, have a 600' shaft, with 6 levels opened, on a lense that is about 80' wide and 190' long, on the 200' level, ore occurring as a contact vein between limestone and slate, carrying mainly chalcopyrite, associated with pyrite and pyrrhotite in a gangue of country rock,

with occasional massive sulphides, ore bodies apparently improving in depth. Was the first copper producer of Alaska, beginning shipments circa 1901. Ore, as shipped, averages about 7.4% copper and 1 oz. silver per ton, with a trace of gold. Has substantial mine buildings. Was said in press, May, 1907, to have been sold to the Hubbard-Elliott Copper Mines Development Co., but apparently this was not true. Production, 1907, estimated at 1,000,000 lbs. fine copper. Property considered promising.

**ELLA MINING CO.****MONTANA.**

Dead. Was capitalized at 16,000 shares. Lands, lying next east of the Reins, were sold, Dec. 1, 1906, for a reported consideration of \$240,000, to the Reins Copper Co. Formerly at Butte, Silver Bow Co., Mont.

**EL MAGISTRAL COPPER CO.****MEXICO.**

Office: 1 Madison Ave., New York, N. Y. Mine office: Choix, Fuerte, Sinaloa, Mex. H. L. McNair, president; Hon. C. F. Wright, vice-president; A. G. Nash, secretary and treasurer; preceding officers, Hon. W. S. Leib, Thos. H. Carvin, H. R. Woodward, John J. Dowdle, John P. Fiebig, John G. Whitmore and Hon. G. E. Green, directors. Property is the entire capital stock of the San Lucas Copper Co.

**EL MAJIN COPPER CO.****MEXICO.**

Dead. Formerly at Hermosillo, Sonora, Mex.

**ELM ORLU MINING CO.****MONTANA.**

Office and mine: Butte, Silver Bow Co., Mont. Arthur H. Wethey, manager; preceding officer, Hon. Wm. A. Clark, Wm. A. Clark, Jr., Wm. Bickford and A. J. McGinn, directors. Organized January, 1907, with capitalization \$1,000,000, shares \$1 par.

Lands, 2 claims, known as the Elm Orlu and Poser, north of Walkerville and west of the Black Rock group of the Superior & Boston. Mine has a 1,000' shaft, showing, at depth of 500', a 6' vein of highly argentiferous copper ore, assaying up to 4.5% copper and 100 to 300 oz. silver per ton, with small gold values. The 700' level shows chalcocite, and management plans cross-cutting extensively on the 1,000' level. Property considered promising and management good.

**ELM RIVER COPPER CO.****MICHIGAN.**

Office: 60 State St., Boston, Mass. Mine office: Winona, Houghton Co., Mich. H. F. Fay, president; Geo. G. Endicott, secretary and treasurer; preceding officers, John C. Watson, Stephen R. Dow and Chas. N. King, directors; Capt. Samuel Chynoweth, superintendent. Organized Apr. 20, 1899, under laws of New Jersey, with capitalization \$1,200,000, shares \$12 par, fully paid. Old Colony Trust Co., Boston, registrar. Annual meeting, third Wednesday in April, at Jersey City.

Expenditures, 1907, were \$40,274.92, leaving a balance on hand, Jan. 1, 1908, of \$86,341.74, with liabilities of only \$980.62.

Lands, 2,300 acres, in Section 6, Town 52 North, Range 35 West; Sections 1, 2, 11 and 12, Town 52 North, Range 36 West, and Section 36, Town 53 North, Range 36 West; also a millsite in Section 30, Town 54 North, Range 36 West, on the shore of Lake Superior. Nearly a complete cross-section of the tract has been secured by upwards of 5,000' of diamond drill borings, these showing a heavy overburden on nearly all of the lands. Borings have given cores carrying copper, in variable quantities, from a number of different beds.

Considerable sinking and drifting has been done on several copper-bearing beds, at different points. Shafts No. 1 and 2, former 800' and latter 200' deep, are on the Winona lode. No. 3 shaft, 100', and No. 4 shaft, 50', are on the Shawmut lode. No. 5 shaft was sunk on an unidentified lode, located by diamond drill. No. 1 shaft, the first shaft started, was abandoned at 100', but was re-

opened, 1903. No. 1 shaft is 9x14' in size, sunk in the footwall of the Winona amygdaloid, at an angle of 72°. Crosscuts and drifts on the 500' level show a 35' amygdaloid carrying copper in unpayable quantities. On the 800' level north and south drifts show a healthy bed of 12' to 16' width, but no profitable ground was opened there. In crosscutting west from the Winona lode 12 other capiferous amygdaloids were cut, but none were found of commercial value.

In 1907 the equipment was moved from No. 1 shaft to a new site, about 2,000' east of the Winona lode, and No. 7 shaft was started, in virgin territory, to open unidentified bed from which a core showing copper had been secured some years previously.

A new vertical shaft is being sunk in search of the Lake bed. This is located about 1 mile northeast of the former workings, north of the center of the Southeast  $\frac{1}{4}$  of Section 11, somewhat west of the hypothetical horizon of the Lake lode. This shaft was 104' deep, Oct. 15, 1908, having cut a few stringers of copper, and is planned to be sunk to a depth of 200' or 300', thence crosscutting to the eastward, in search of the Lake lode. A drill-hole, bored 1906, showed a little copper in an amygdaloid occupying the hypothetical horizon of the Lake lode.

Equipment includes a duplex hoist good for 1,000' depth, 2 Burt marine boilers and a 4-drill air-compressor. Water is taken from a dam by a Blake pump. Buildings include a 40x40' carpenter-shop, 28x65' two-story warehouse, a boarding house with accommodations for 100 men, schoolhouse and a number of dwellings.

The Elm River has been searching nearly ten years for some payable copper bed on which to open a mine, and, while results to date have been of a negative nature, the company is following the correct policy in continuing work, and its prospects are perhaps better than ever before, notwithstanding a decade of work without results.

#### **EL PORVENIR MINING & MILLING CO.**

**MEXICO.**

Office: 406 Wilson Bldg., Dallas, Tex. Mine office: Cuatro Ciénegas, Monclova, Coahuila, Mex. J. Y. Webb, Jr., president; W. W. Batcheler, vice-president; Frank Reedy, secretary and treasurer. Organized under laws of Arizona, with capitalization \$1,000,000. Lands, 244 acres, 30 miles northwest of Cuatro Ciénegas. Company expects to have railroad transportation within 6 miles. Deepest shaft, circa 250', remains in the oxidized zone, mine having a quarter mile of workings, with one tunnel in ore. Has shipped several car-loads of low grade ore, returning circa 4.3% copper and 300 grams silver per ton.

#### **EL PROGRESO COPPER MINING CO.**

**MEXICO.**

Dead. Stockholders were given shares of Imperial Corona Gold Mining Co. in exchange. Formerly at Ayutla, Autlán, Jalisco, Mex. Described Vol. III.

#### **EL REY GOLD & COPPER MINING CO.**

**WYOMING.**

Letter returned unclaimed from former office and mine, Encampment, Carbon Co., Wyo. J. W. Hedding, secretary. Idle since 1905, but annual meeting held at Encampment, July 15, 1908.

#### **EL RICO COPPER MINING CO.**

**MEXICO.**

Mine office: Tepezalá, Ocampo, Aguascalientes, Mex. J. Frank Gray, secretary and treasurer. Organized 1907, under laws of Colorado, with capitalization \$1,000,000.

#### **ELSIE ADAIR COPPER MINING CO.**

**AUSTRALIA.**

Mine office: Port Augusta, South Australia. A. M. Hardy, manager, at last accounts. Has steam power. Presumably idle.

#### **ELSIE MINING CO.**

**COLORADO.**

Dead. Formerly at Winfield, Chaffee Co., Colo.

**EL SUEÑO MINING CO.****MEXICO.**

Mine office: Tijuana, Norte, Baja California, Mex. Hugh T. Duff, superintendent. Has auriferous and argentiferous copper ores. Has gasoline power and Huntington mill, and is said to have a very small smelter, known as El Cuera de Venado.

**MINA EL TESORA.****MEXICO.**

Office and mine: care of Don Emiliano Ybarra, owner, Calmali, Sur, Baja California, Mex. Has highly auriferous and argentiferous copper ores, with steam power and 10-stamp mill.

**EL TIRO COPPER CO.****ARIZONA.**

Office: 5 Nassau St., New York, N. Y. Mine office: Red Rock, Pinal Co., Ariz. Employs circa 80 men. Franklin B. Richards, president; Edw. B. Kurtz, vice-president; Chas. E. Ellis, secretary and treasurer; preceding officers, Wm. Grief, Clement A. Griscom, Jr., Henry G. Moore and Geo. K. Barnes, directors; H. C. Smith, general manager; Louis S. Noble, consulting engineer. Organized May 22, 1907, under laws of Arizona, with capitalization \$4,500,000, shares \$10 par, fully issued. Bonds, \$1,000,000 authorized, first mortgage, at 6%; issued, \$550,000. Was promoted by the American Finance & Securities Co., practically as successor of Cleveland-Arizona Mining Co. Annual meeting, third Thursday of April.

Lands, 14 claims, 10 patented, area 250 acres, also a 5-acre millsite, in the Silver Bell district, near the Imperial mine. Property shows various contact deposits between quartz-porphyry and limestone, and there are large masses of porphyry containing disseminated chalcocite, with local segregations of oxidized ores, the zone of oxidation being 50' to 150' in depth. Ores developed are cuprite, melaconite, chalcocite and chalcopyrite, with decomposed porphyritic and limestone gangue. Two ore bodies are under development, these being irregular in shape, apparently about 10 acres in combined area, and proven to depth of about 300'.

Development is by several shafts of 50' to 400' depth, including the 220' Daisy shaft, 400' Kurtz shaft and 120' Burtie shaft, with tunnels of 750', 430', 350', 250' and 200', there being several shorter tunnels, mine having about 6,000' of workings, estimated to show 250,000 tons of ore, a large body of oxidized ore on the 120' level carrying mainly cuprite and melaconite.

Equipment includes a 600-h. p. steam plant, a 150-kw. electric plant and a 120-h. p. gasoline plant. The 600-h. p. mining plant has a 16x20" hoist with double drum, good for 1,000' depth, and 3 gasoline hoists. There are Nordberg and Sullivan air-compressors, of 18 drills aggregate capacity. Buildings are 18 in number, and a complete surface plant is being built.

A 50-ton concentrator, 60x60", of wood, built 1907, for test purposes, has a 7x10" Blake crusher, 30-ton Huntington mill, 2 rolls, 1 vanner, 5 Wilfley tables, Vezin automatic sampler, Richards pulsator and hydraulic sizer. It is planned to enlarge this mill to 250 tons, when the nature of the permanent ore bodies is fully developed. Smelting ore and concentrates will go to the Sasco smelter, 10 miles distant. Property is served by the Arizona Southern railway.

In 1907 ten carloads of mine-run ore returned 7.55 to 14.6% copper, with an average of 9.92%, shipments realizing \$11,390. The company plans sinking the Kurtz and Daisy shafts below the 200' level, and doing extensive opening. No attempt has been made at regular production, but about 400 tons of 10% ore, extracted in regular development work, has been shipped to smelters at Douglas, El Paso and Kansas City, and several thousand tons of 3% ore were treated for experimental purposes, mill giving an average extraction of better than 75%.

The principal officers of the company draw salaries for their services,

which is proper. The argument that none of the officials are salaried is a poor one, frequently used by developing companies. There is no reason why an official of a mining company should work for nothing, and very few do so, those who draw no salaries usually finding their account otherwise. Property is considered promising and management good.

#### EL TRIUNFO CONSOLIDATED MINING CO.

MEXICO.

Office: 28 Greene St., New York, N. Y. Mine office: Bacoachi, Arizpe, Sonora, Mex. Company gives its mine address as El Triunfo, Arizpe, Sonora, Mex., but there is no such postoffice, and the postmaster at Bocoachi returned a letter addressed to this company, stating there was no such company in existence. Bocoachi, however, apparently is the nearest postoffice point, being circa 10 miles from the company's mine. A. C. Charlott, president and general manager; Dr. S. Newton Leo, vice-president; Robt. Friedman, secretary; Julius G. Miller, treasurer; preceding officers, W. B. Hunnewell and Dr. Harry Bock, directors; Antoino Acuna, superintendent; Augustin Rieutard, mine superintendent; John W. Ward, mill superintendent; F. E. Mansfield, smelter superintendent; W. C. Albers, engineer.

Company is organized under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Property is held through a Mexican incorporation, capitalization 10,000 pesos, shares 100 pesos par, stock of which is owned outright by El Triunfo Consolidated Mining Co. Annual meeting, first Monday in October.

Lands, 55 pertenencias, area 136 acres, circa 10 miles southwest of Bacoachi and 2 miles from the Sonora river, said to be within 4 miles of the Picacho mine, circa 30 miles northwest of Las Chispas mine, and about 75 miles, by wagon road, from La Cananea. Company claims to have in operation the Triunfo, Louisiana, Providencia and Esmeralda mines, with 5 ore bodies under development, of 2' to 5' average width, traceable 2 miles, carrying malachite, azurite, bornite, chalcopyrite and chrysocolla, all silicious, and occasional native silver, with an estimated average of 5% copper, 25 to 600 oz. silver and \$3 gold per ton. Mine is reported as having 3,300' of workings, showing 3,000 tons of ore, with about 3,000 tons on the dump, stated to range \$20 to \$150 per ton in value. Development is by 5 shafts, 6 tunnels and various opencuts. The main vein is a fissure of 4' to 5' width, and practically vertical dip, carrying oxidized ores above and sulphides below.

The equipment includes a 90-h. p. steam plant at the mine, and there are 26 buildings, including dwellings. There also is a small sawmill. Wells provide water for boilers and potable use.

The mill, of 50 tons daily capacity, has 4 Behrend tables and a 25-h. p. steam engine.

The smelter,  $\frac{1}{2}$  mile from the mine, having a 40-h. p. engine, has a 30-ton Medbery rotary furnace, turning out matte carrying 56% copper, 600 oz. silver and 15 oz. gold per ton. The smelter was blown in circa April, 1908, and is said to have worked well, but did not remain in blast, owing to poor transportation facilities, nearest railroad being at Cos, 38 miles distant by mule trail, but the company hopes to get a wagon road.

The company claims to have expended about \$150,000, and to be out of debt, and stated, August, 1908, that it expected to declare a dividend in December, but on what grounds such expectations were entertained is not readily apparent, as further development seems necessary to put the property on a satisfactorily productive basis.

#### EL VERDE GRANDE COPPER CO.

MEXICO.

Office: care of Percy Sharpe, Nogales, Ariz. Letter returned unclaimed from former mine office, Imuris, Magdalena, Sonora, Mex. Capitalization

\$2,000,000, shares \$1 par. Lands are in the foothills of the Sierra Azul, 14 miles from Imuris, which is on the Sonora railroad. Idle.

#### **ELY AMALGAMATED COPPER CO.**

**NEVADA.**

Office: Salt Lake City, Utah. Mine office: Ely, White Pine Co., Nev. J. R. Murdock, president; B. F. Grant, vice-president; S. Y. Taylor, secretary and treasurer; preceding officers, J. B. Taylor and A. B. Kingsbury, directors. Capitalization \$100,000, shares 10 cents par. Lands, 30 claims, in the Duck Creek district, ownership of 3 of which, lying near the Steptoe smelter, is in dispute with the Steptoe Valley Mining & Smelting Co.

#### **ELY AMALGAMATED COPPER CO.**

**NEVADA.**

Office: 407 Jackson Bldg., Denver, Colo. Mine office: Ely, White Pine Co., Nev. F. H. Harding, president; J. E. Romer, vice-president; G. A. Killan, secretary and treasurer; preceding officers, Fred L. Humphrey and Mat R. Root, directors. Organized November, 1906, under laws of Arizona, with capitalization \$2,500,000, shares \$5 par. Lands, 6 claims, area 120 acres, in the northwestern section of the Ely district. Operations confined mainly to very lurid advertising.

#### **ELY ARCH COPPER CO.**

**NEVADA.**

Mine office: Ely, White Pine Co., Nev. Organized circa March, 1907, with capitalization \$5,000,000, shares \$5 par.

#### **ELY BELL MINING CO.**

**NEVADA & UTAH.**

Office: Salt Lake City, Utah. Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. F. O. McFall, president and general manager; W. T. Binford, vice-president; J. E. Hanway, secretary and treasurer. Organized April, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 3 unpatented claims, in the Ely district, and 15 claims, area 300 acres, in the Draper district, adjoining the Little Cottonwood district of Salt Lake county, Utah, held under bond and lease, said to show a 12' vein. Was negotiating, late 1907, for sale of property to Corona Consolidated Mines Co.

#### **ELY BLACKHORSE MINING CO.**

**NEVADA.**

Letter returned unclaimed from former mine office, Blackhorse, White Pine Co., Nev. Organized 1907, under laws of Colorado, with capitalization \$1,250,000, by M. D. McKane, et al. Is said to have a fair showing of copper ore.

#### **ELY-BONANZA COPPER CO.**

**NEVADA.**

Dead. Letters returned unclaimed from former office, 148 Broad St., New York, N. Y., and former mine office, Ely, White Pine Co., Nev. Francis H. Sherrerd was manager. Organized 1907, under laws of New Jersey, with capitalization \$1,000,000, shares \$1 par. Lands were 12 claims, south of the Giroux Consolidated, having a 350' shaft, with gasoline hoist.

#### **ELY-CALUMET COPPER CO.**

**NEVADA.**

Mine office: Ely, White Pine Co., Nev. A. D. Myers, manager. Capitalization \$5,000,000, shares \$5 par. Lands, 21 claims, said to have cost \$75,000.

#### **ELY CENTRAL COPPER CO.**

**NEVADA.**

Office: 211 Keyser Bldg., Baltimore, Md. Mine office: Ely, White Pine Co., Nev. O. A. Turner, president; B. A. Hazell, vice-president; H. S. Turner, secretary; E. S. S. Turner, treasurer; Fred S. Pheby, general manager; preceding officers and J. H. Preston, directors. Organized March 31, 1906, under laws of Delaware, with capitalization \$12,000,000, shares \$10 par, fully issued. Was said, March, 1907, to have paid \$323,000 for property. Trust Co. of North America, Philadelphia, registrar.

Lands, 35 claims, unpatented, area 508 acres, centrally located in the Robinson district, being surrounded by the Nevada Consolidated and Ely

Mines Co., showing limestone carrying a monzonite dyke of 3,000' claimed width, estimated to carry average values of 3% copper, 1 oz. silver and 40 cents gold per ton. Property also has an ore body of 20' to 95' estimated width giving assays of 2 to 17% copper, and shows native copper and chalocite. The Weber shaft shows copper sulphides at a depth of 400', and the company plans sinking a working shaft, and has started a tunnel planned to be driven 1,000'. The tract has been quite thoroughly tested by churn drilling, about 150 holes having been bored.

**ELY CONSOLIDATED COPPER CO.****NEVADA.**

Office: 1111-25 Broad St., New York, N. Y. Mine office: Ely, White Pine Co., Nev. Willard F. Snyder, president; J. H. Everett, vice-president; Chas. O. Collingwood, secretary and treasurer; preceding officers, Col. Nicholas Treweek and Gideon Snyder, directors; Olaus Jeldness, manager. Organized Oct. 2, 1906, under laws of Utah, with capitalization \$10,000,000, shares \$1 par. Windsor Trust Co., New York, registrar. Lands, 15 claims, area circa 300 acres, near the Ruth group of the Nevada Consolidated and Jupiter group of the Cumberland-Ely, bought for circa \$125,000, and considered well located. The Brilliant shaft, 625', is said to show 55' of cupriferous pyrite on the bottom level, carrying about 3% copper and \$1.50 per ton combined gold and silver values. The American shaft is 500' and the Zack shaft 360' deep. Shipped a little ore, 1907, carrying excess of iron, reducing smelting cost to 3 cents per ton, and netting \$81.99 per ton. Property considered promising.

**ELY CONSOLIDATED MINING CO.****NEVADA.**

Mine office: Ely, White Pine Co., Nev. Capitalization, \$5,000,000, shares \$5 par. Presumably idle.

**ELY COPPER CO.****NEVADA.**

Office: 815 Ernest & Cranmer Bldg., Denver, Colo. Mine office: Ely, White Pine Co., Nev. Geo. F. Fry, president; F. P. Berchy, vice-president; R. J. Grant, secretary; E. C. Newcombe, treasurer; preceding officers and F. J. Shipman, directors; Lee Lockner, engineer. Organized September, 1906, under laws of Wyoming, with capitalization \$5,000,000, shares \$5 par.

Lands, 7 claims, 2 fractional, area 225 acres, lying west of the Giroux Consolidated, having some open-cuts and a shaft, reported by company as 405' deep, having a 25-h. p. hoist.

Stock in this company was placed through the General Finance Co., of Denver, on 25% commission, the fiscal agency advertising that: "The Ely copper district has been held within the clutches of the captains of finance, but by Yankee aggressiveness, the captains of industry and high finance have been thwarted, and after an outlay of vast expense we are able to burst through their phalanxes, and cut the Gordian knot that has kept the investor from obtaining even a small interest in this, the world's newest, and, without doubt, the greatest copper camp ever known since the production of copper as a commercial commodity." It would be a work of supererogation to criticise such a literary gem of purest ray serene as the foregoing excerpt, which would have been a credit to Sir Boyle Roche, though it is not on record that Sir Boyle ever turned his talents toward peddling cheap and dubious mining shares. Idle.

**ELY COPPER QUEEN MINING CO.****NEVADA.**

Mine office: Ely, White Pine Co., Nev. Organized circa December, 1906, under laws of Arizona, with capitalization \$1,250,000, shares \$5 par by E. J. Daughters and W. J. Wallace.

**ELY-COPPERTON MINING CO.****NEVADA.**

Office: 16 East South Temple St., Salt Lake City, Utah. Mine office: McGill, White Pine Co., Nev. Lorenzo L. Stahl, president; Jas. B. Taylor,

vice-president; N. Y. Stringham, secretary and treasurer; preceding officers, R. B. Kingsbury and John Stringham, directors. Organized May 1, 1907, under laws of Nevada, with capitalization \$100,000, shares 10 cents par; issued, \$60,000. Annual meeting, first Monday in February.

Lands are in the Duck Creek district, which is mainly a lead camp, but property shows surface ores carrying up to 3% copper. Idle.

**ELY-DUCK CREEK LEAD & COPPER CO.**

NEVADA.

Office: care of David Westwood, secretary and treasurer, Provo, Utah. Mine office, Ely, White Pine Co., Nev. Chas. F. Ruffner, president. Organized circa December, 1906, with capitalization \$50,000, shares 10 cents par. Lands are sundry claims in the Duck Creek district.

**ELY-GIBRALTER COPPER CO.**

NEVADA.

Dead. Formerly at Ely, White Pine Co., Nev.

**ELY-GIROUX EXTENSION COPPER CO.**

NEVADA.

Office: 25 Broad St., New York, N. Y. Mine office: Ely, White Pine Co., Nev. Arthur U. Magnan, president; Ramón McCue, vice-president; E. B. Tustin, treasurer; Richard Stewart, secretary; preceding officers, R. P. Russell, Henry C. Haun and Zeno B. Drum, directors. Capitalization \$5,000,000, shares \$5 par. Lands, 130 acres, south of the Giroux Consolidated and east of the Ely Central, lands being considered fairly located. Advertised its stock on the strength of its neighbor's work, not its own. Apparently idle.

**ELY GLOBE COPPER CO.**

NEVADA.

Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. C. L. Fuller, manager. Lands are in the northern part of the Ely district. Idle and apparently moribund.

**ELY-GOLDEN LEDGE MINING CO.**

NEVADA & UTAH.

Mine offices: Ely, White Pine Co., Nev., and Callao, Juab Co., Utah. Jos. F. Schweswohl, general manager; R. N. Lesher, superintendent. Lands include claims at Ely, claims in the vicinity of Callao and 320 acres of placer lands on Red Hill, near Hogum. Presumably idle.

**ELY-GRAND CENTRAL COPPER MINING CO.**

NEVADA.

Office: care of S. D. Crump, president and general manager, Denver, Colo. Mine office: Ely, White Pine Co., Nev. Organized, 1906, under laws of Arizona, with a capitalization \$1,000,000, shares \$1 par.

**ELY-HERCULES MINING CO.**

COLORADO & NEVADA.

Office: 215 Kittredge Bldg., Denver, Colo. Mine offices: Lake City, Hinsdale Co., Colo., and Blackhorse, White Pine Co., Nev. Chas. T. Eckhardt, president; C. C. Moon, vice-president; Geo. E. Denny, secretary and treasurer; Wm. Jenkins, assistant secretary; T. R. Cudahy, superintendent. Organized January, 1907, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par.

Colorado lands are 5 claims, on Henson Creek, and a millsite, near Lake City, having tunnels of 165' and 258', cutting a 3' vein carrying ore assaying up to 40% lead, with small values in copper, silver and gold. Has several mine buildings and is said to have been a considerable producer in the past.

The Nevada property includes 4 claims known as the Atlas group, in the Robinson district, near Ely, White Pine county, and 5 claims near Blackhorse, latter showing argentiferous and slightly auriferous copper sulphides. Cost of lands is said to have been \$12,000, and company is said to have agreed to pay \$15,000 for a 51% interest therein.

**ELY HIDDEN TREASURE CONSOLIDATED MINING CO.**

NEVADA.

Mine office: Ely, White Pine Co., Nev. Capitalization \$1,500,000, shares \$1 par. Lands, 6 claims, having a 400' tunnel, driven by previous owners, and a 115' shaft, showing ore up to 15% copper, 40% lead and \$15 gold per ton.

**ELY-JACKPOT MINING CO.****NEVADA.**

Office and mine: Ely, White Pine Co., Nev. P. J. Killcullen, president; Jas. A. Curran, vice-president; Eugene Cullity, secretary and treasurer; M. S. Fitz-Morris, general manager; preceding officers and P. Metzdorf, directors. Organized 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 10 claims, area 200 acres, in the eastern portion of the Ely district. Presumably idle.

**ELY-JUMBO COPPER CO.****NEVADA.**

Dead. Was promoted by G. L. Rickard, and merged, circa 1907, in Ely National Copper Co. Formerly at Ely, White Pine Co., Nev.

**ELY KING COPPER & LEAD CO.****NEVADA.**

Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. Organized 1907, under laws of Utah, with capitalization, \$3,000,000, by Alfred Adams, J. Norton, et al. Idle and apparently abortive.

**ELY MINES CO.****NEVADA.**

Dead. Was capitalized at \$1,000,000, shares \$5 par. Property sold, Aug. 8, 1907, to Consolidated Copper Co. Formerly at Ely, White Pine Co., Nev.

**ELY MINING CO.****NEVADA.**

Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. Was organized, circa 1900, as a gold mining company. Lands, 13 claims, having considerable development, showing gold ores. Has a cyanide plant. At last accounts was under option to Hon. Thos. Kearns and David Keith.

**ELY MINING & MILLING CO.****NEVADA.**

Dead. Lands sold, 1906. Formerly at Ely, White Pine Co., Nev. Described Vol. VI.

**ELY-MIZPAH COPPER CO.****NEVADA.**

Office: 346 Commonwealth Bldg., Denver, Colo. Mine office: 10 Ely Trust Bldg., Ely, White Pine Co., Nev. Geo. D. Wilson, president; Jas. D. Conway, vice-president; A. M. Kearns, secretary. Organized June 28, 1907, under laws of Arizona, with capitalization, \$2,000,000, shares \$1 par. Lands, 7 claims, area 140 acres, known as the Modoc group, near the Vulcan-Ely, circa 4 miles southeast of Ely, on which only assessment work has been done. Is said also to have 4 claims near Goldfield, Esmeralda county, Nevada. Apparently organized mainly to sell stock.

**ELY NATIONAL COPPER CO.****NEVADA.**

Office: 314 Century Blk., Denver, Colo. Mine office: Ely, White Pine Co., Nev. Max Straus, president; Hon. Jas. B. Grant, vice-president; Edw. B. Morgan, secretary; Thos. Keeley, treasurer; G. L. Rickard, resident manager; John D. Murphy, mine manager; preceding officers, Henry E. Wood, A. B. Whitehead and Hon. Samuel D. Crump, directors; Richard A. Parker, consulting engineer. Organized circa 1907, as successor of the Ely Jumbo, Mizpah Verde and Anaconda companies, with capitalization \$5,000,000, shares \$2.50 par; issued, \$3,750,000.

Lands, 24 claims, area 480 acres, including the Cowen group of 4 claims adjoining the Nevada Consolidated on the south, property being located southwest of the Nevada Consolidated and immediately south of the Manhattan & Ely Copper Co. At last accounts, 1907, company contemplated diamond drilling and sinking a shaft. Presumably idle.

**ELY-NEVADA COPPER CO.****NEVADA.**

Office: 35 Wall St., New York, N. Y. Mine office: Ely, White Pine Co., Nev. Voilney D. Williamson, president; F. L. Underwood, vice-president; Chester S. Bonham, second vice-president and secretary; Hamilton H. Durand, treasurer; R. H. Eggleston, assistant treasurer; preceding officers, G. L. Rickard, E. A. Davidson and J. Markham Marshall, directors. Organized May 17,

1906, under laws of Maine, with capitalization \$1,000,000, shares \$1 par. Trust Company of America, New York, transfer agent. Lands, 9 claims, area 170 acres, near the Cumberland-Ely, considered fairly located.

**ELY NEVADA EXPLORATION CO.**

NEVADA.

Mine office: Ely, White Pine Co., Nev. Capitalization \$250,000, shares \$5 par.

**ELY NORTHERN COPPER CO.**

NEVADA.

Office and mine: Ely, White Pine Co., Nev. Thos. B. Pheby, president; Jos. Pheby, vice-president; J. W. Biggane, secretary and treasurer; Fredk. S. Pheby, general manager. Organized May, 1906, under laws of Nevada, as successor of Nevada Northern Copper Co., with capitalization \$1,000,000, shares \$1 par; issued, \$750,000.

Lands, 8 claims, patented, area 97 acres, adjoining the Vesta mine, said to show numerous ore bodies, of which 3, under development, are reported by company as of 15' average width, carrying oxidized ores as replacements in limestone, of 3% copper average tenor, the zone of secondary enrichment not having been reached. Mine has about 1,000' of workings.

**ELY-OGDEN MINING CO.**

NEVADA.

Mine office: Ely, White Pine Co., Nev. Capitalization \$1,000,000, shares \$1 par.

**ELY & OSCEOLA LEDGE MINING & MILLING CO.**

NEVADA.

Letters returned unclaimed from former office, care of North American Banking & Trust Co., Philadelphia, Pa., and former mine offices, Ely, White Pine Co., Nev., and Osceola, White Pine Co., Nev. Jos. F. Schwohl, vice-president; B. N. Lesher, superintendent. Lands, 9 lode claims, area circa 180 acres, at Ely, and 8 placer claims, area 320 acres, at Osceola. Employed about 25 men, late in 1907. Idle.

**ELY-PHOENIX COPPER MINING CO.**

NEVADA.

Dead. Organized circa 1907, with capitalization \$1,000,000, shares \$1 par. Formerly at Ely, White Pine Co., Nev.

**ELY-RAND COPPER CO.**

NEVADA.

Mine office: Ely, White Pine Co., Nev. Organized 1907, under laws of Arizona, with capitalization \$2,000,000, by Alfred Adams, Norton Adams and Hunter B. Supple. Presumably idle.

**ELY-RESURRECTION COPPER CO.**

NEVADA.

Office: Herald Bldg., Salt Lake City, Utah. Mine office: Ely, White Pine Co., Nev. C. Freed, president; Jos. Lippman, vice-president; Frank Knox, treasurer; C. R. Raymond, secretary and manager; preceding officers, T. Jacobson, G. W. Lynch and Wm. L. Moyer, directors. Organized 1906, under laws of Arizona, with capitalization \$1,000,000, shares \$5 par. Lands, 30 claims, patented, area circa 550 acres, lying north and east of Ely and considered promising, though somewhat out of the center of the district. Mine has 2 short tunnels and a 140' shaft, showing 18' of ore assaying up to 5% copper, with gold and silver values. Also has some high grade ore assaying up to 46% lead and 110 oz. silver per ton, with good gold values.

**ELY REVENUE COPPER CO.**

NEVADA.

Office: Durango, Colo. Mine office: Ely, White Pine Co., Nev. C. E. McConnell, president. Organized circa January, 1907, with capitalization \$1,000,000, shares \$1 par. Lands, known as the Revenue group, are near the Chainman and Altman mines.

**ELY-ROCHELLE COPPER CO.**

NEVADA.

Mine office: Ely, White Pine Co., Nev. Organized Nov. 23, 1906, under laws of Maine, with capitalization \$1,000,000, shares \$1 par.

**ELY SILVER, LEAD & COPPER CO.****NEVADA.**

Office: Whinery Blk., Union, Iowa. Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. H. J. Benson, president; R. L. Birby, vice-president; E. A. Corfe, secretary; F. K. Long, treasurer; C. E. Fuller, general manager; preceding officers, J. D. Cundiff and A. R. Bavender, directors. Lands, 9 claims, area circa 180 acres, having several shallow shafts and short tunnels, said to have produced a little silver-lead ore in the past. Idle.

**ELY STANDARD COPPER CO.****NEVADA.**

Office: care of W. F. Snyder, Salt Lake City, Utah. Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. Organized circa January, 1907. Lands, circa 1,000 acres. Idle.

**ELY SULPHIDE COPPER CO.****NEVADA.**

Mine office: Ely, White Pine Co., Nev. Organized 1907, with capitalization \$1,000,000, shares \$1 par.

**ELY WANETA MINING & MILLING CO.****NEVADA.**

Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. Organized circa March, 1907, to operate in vicinity of Ely. Idle and apparently moribund.

**ELY WESTERN COPPER CO.****NEVADA.**

Mine office: Ely, White Pine Co., Nev. Organized July, 1906, with capitalization \$1,000,000, shares \$1 par. Lands, 40 acres. Presumably idle.

**ELY-WILDHORSE COPPER CO.****NEVADA.**

Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. Organized circa February, 1907, to develop a group of about 18 claims, in the vicinity of Pilot Knob. Idle and apparently moribund.

**ELY-WITCH COPPER CO.****NEVADA.**

Office: 1204-32 Broadway, New York, N. Y. Mine office: Ely, White Pine Co., Nev. J. E. Bamberger, president; D. M. Hyman, vice-president; J. L. Tilton, secretary; Ernest Bamberger, treasurer and general manager; preceding officers and W. W. Armstrong, directors; L. D. Osborne, superintendent. Organized Nov. 22, 1906, under laws of Maine, with capitalization \$5,000,000, shares \$5 par.

Lands, 7 claims, 1 fractional, area 54 acres, patents applied for, said to have been bought for \$275,000, lying in the porphyry zone between the Nevada Consolidated and Cumberland-Ely mines, showing large blowouts of ferruginous porphyry. Development is by a 300' shaft, with levels at 100' intervals, and by tunnels of 1,200', 600' and 1,050', with 3,500' of workings, showing ores, mainly chalcocite and chalcopyrite, assaying up to 25% copper and 2 oz. silver per ton, with traces of gold. Equipment includes a second-motion hoist, good for 500' depth, and 5 small mine buildings. Property has some good ore on the dumpes, and is well located between the Wedge group of the Cumberland-Ely and the Ruth mine of the Nevada Consolidated.

**EMERALD COPPER CO.****MEXICO.**

Mine office: Llano, Magdalena, Sonora, Mex. F. C. Emery, president; W. D. Fredericks, superintendent. Lands, 88 hectares, on which development, begun January, 1907, shows ore assaying 10 to 25% copper, 15 to 20 oz. silver and up to \$6 gold per metric ton, silver values increasing with depth.

**EMERALD MINING CO.****WYOMING.**

Office and mine: Wheatland, Laramie Co., Wyo. H. A. Robinson, manager. Lands, including the Cooney Hill and Emerald mines, on Slate Creek, show a prominent gossan. The Emerald has a 60' shaft in ore, and a 100' shaft bottomed in a gossan showing traces of copper sulphides.

**EMERALD MINING & SMELTING CO.****MEXICO.**

Dead. Succeeded by Esmeralda Copper Mining & Smelting Co. Formerly at Santa Catarina del Norte, Baja California, Mex.

**EMMA COPPER CO.****UTAH.**

Office: care of E. O. Howard, secretary and treasurer, Salt Lake City, Utah. Mine office: Alta, Salt Lake Co., Utah. John A. Kirby, president; Joseph Lippman, vice-president; E. O. Howard, secretary and treasurer; preceding officers, W. M. Wantland, D. H. Peery, Rufus K. Cobb, S. A. Baugh and L. D. Gordon, directors; Jas. E. Beveridge, superintendent. Organized, circa November, 1906, under laws of Utah, with capitalization \$1,000,000, shares \$1 par. Is no relation to the Old Emma Mining Co. Lands, 8 claims, area 160 acres, with bond and lease on 3 adjoining groups, near the Columbus Consolidated. Property is the old Emma mine, which was a considerable producer in early days, and is said to have been the first mine opened in Utah, with claimed production of about \$5,000,000. Development is through the Flagstaff tunnel, showing a 15' vein, carrying a pay streak of 1' to 4' width, giving assays of 2.5% copper, 11.8% lead, 40 oz. silver and 83 cents gold per ton. Property considered promising.

**SOCIEDAD MINERA EMMA LUISA.****CHILE.**

Mine office: Taltal, Antofagasta, Chile. J. S. Marion, superintendent, at last accounts. Has auriferous copper ores, with steam power. Idle.

**EMMA MINE.****BRITISH COLUMBIA.**

Owned three-fourths by the British Columbia Copper Co., Ltd., and one-fourth by the Hall Mining & Smelting Co., Ltd., and is described under title of former.

**EMMA MINE.****MONTANA.**

Held by Butte Copper & Zinc Co. at last accounts. Changes hands so frequently it is difficult to keep track of.

**EMMA MINE.****NEW MEXICO.**

Mine office: Santa Rita, Grant Co., N. M. Property, owned by Phelps, Dodge & Co., is under lease to P. C. Cramer, who was producing 2 to 3 car-loads of ore weekly, at last accounts.

**EMMA MINING & DEVELOPMENT CO.****MONTANA.**

Dead. Formerly at Butte, Silver Bow Co., Mont.

**GEWERKSCHAFT EMMANUEL.****GERMANY.**

Letter returned unclaimed from former mine office, Wülfraeth, Rhein-provinz, Prussia, Germany. Mine, opened by one shaft, has chalcopyrite and sphalerite.

**EMPIRE COPPER CO.****IDAHO.**

Office: 52 William St., New York, N. Y. Mine office: Mackay, Custer Co., Ida. Frank M. Leland, president, treasurer and general manager; John H. Hobbs, vice-president; Robt. Leslie Moffett, secretary; preceding officers, John C. Montgomery and Thos. J. Barbour, directors; Ralph R. Osborn, mine superintendent; Timothy E. Guhin, smelter superintendent; Frank M. Sweeney, master mechanic; A. F. Wuensch, consulting engineer.

Organized May 29, 1907, under laws of Maine, with capitalization \$6,000,000, shares \$5 par, reduced, July 16, 1908, to \$1,200,000, shares \$1 par; issued, \$1,000,000. On Jan. 1, 1908, had quick assets of \$32,997.42, including \$18,060.65 cash, with liabilities of only \$389.58. Annual meeting, third Tuesday in May.

Company bought the Mackay property of the White Knob Copper & Development Co., Ltd., taking over also a 5-year lease on the property from the MacBeth Leasing Co., giving 250,000 shares of stock to the White Knob and 750,000 shares to the owners of the MacBeth lease, and begun business

without any cash in the treasury, but with 200,000 shares of stock. Quick assets now possessed have been secured from earnings, in addition to the installation of new machinery costing \$7,735.69.

Lands, 39 claims, 6 fractional, 6 patented, area 700 acres, also mill and smelter sites of 184 acres, and a railroad right-of-way, in the Alder creek district. Property carries a large number of lenticular contact deposits, between granite-porphyry and limestone, of which 31 are more or less developed, these being erratic in size, strike and dip, carrying all of the ordinary copper oxides, carbonates and sulphides. Former owners claimed a 23' vein carrying 3 to 9% copper and \$1.75 to \$3 combined gold and silver values per ton, but present owners merely claim what they have, and give the average of one year's ore extraction as 3.9% copper, 2.02 oz. silver and 80 cents gold per ton. The property was opened circa 1884, and worked at various times. For some years it was under the control of a succession of White Knob corporations, which succeeded each other with deadly monotony, each making a flat failure of the mine, until the property was leased, circa July 1, 1905, to the MacBeth Leasing Co., which worked the mine on a business basis, at a profit, which the old owners never succeeded in doing.

The mine has a glory-hole of 125' to 200' width, but extraction is mainly by tunnel, the main shaft of 700' depth connecting with the Albert tunnel, of circa 1,500' length, the mine having about 7 miles of workings, estimated to show 60,000 tons of ore, with 30,000 tons blocked out for stoping. The mine is dry.

Equipment includes steam, electric, gasoline, water and air power, with a total of 152 h. p. at the mine and 125 h. p. at the smelter. There are 20-h. p., 10-h. p. and 8-h. p. hoists, and an 8-drill air-compressor. The company has about 20 buildings at the mine, including a sawmill, 20x30' carpenter-shop and 20x30' smithy, with a 40x100' machine-shop at the smelter.

The mine is reached by a 96-mile branch of the Oregon Short Line railway, running from Blackfoot to Houston, and is connected with the smelter by the Empire railroad, owned by the company, 7½ miles in length with 36" gauge, equipped with two 23-ton Shay mountain climbing locomotives, and 38 cars. The line has a maximum gradient of 6%, with a rise of 2,000', and has one 6% grade on a 34° curve.

The smelter has two 125-ton water-jacket blast-furnaces 44x160" at the tuyeres, with Connerville blowers, making matte carrying about 40% copper, 26 oz. silver and 1 oz. gold per ton, sent to the Murray smelter for conversion, and does occasional custom smelting. The mine also has shipped some ore to the Garfield smelter.

Production, 1906, under the old management, was circa 3,200,000 lbs. fine copper, and, for 1907, was 2,750,000 lbs., from 42,800 tons of ore treated. Mining costs are about \$3 per ton, and smelting costs \$4.25, the gold and silver values about offsetting conversion and refining costs, giving copper at an average cost of about 10 cents per pound.

The Empire Copper Co. was promoted just in time to be caught in the 1907 panic, but every share of stock sold to the public was redeemed, at subscription price, for which the promoters deserve great credit. The property is considered valuable, notwithstanding its bad record under the various White Knob companies. The present management is efficient, and probably will resume operations shortly, only a few men being employed, doing assessment work on unpatented claims, in October, 1908.

#### **EMPIRE COPPER CO.**

**NEVADA.**

Dead. Lands now held by Pacific Consolidated Mining Co. Formerly at Reno, Washoe Co., Nev.

**EMPIRE COPPER & GOLD MINING CO.****ARIZONA.**

Office: 217-122 West Third St., Los Angeles, Cal. Mine office: Johnson, Cochise Co., Ariz. J. L. Brooks, president and general manager; M. J. Gress, vice-president; H. H. Morrow, secretary and treasurer; preceding officers, J. O. Pace, H. Hermanson, Angus Graham and M. M. Gustin, directors. Organized Jan. 31, 1905, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par. Annual meeting, second Monday in January. Lands, 24 claims, area 480 acres, in the Little Dragoon Mountains, in 2 groups, including the Empire group of 16 claims, and the Cowboy group of 8 claims, 2 miles from Johnson. Lands show a good gossan carrying carbonate stains. Has 2 shafts, one a 2-compartment 400' shaft, with about 500' of drifts, showing ore of 3.4% copper tenor on the 100' level, with some ore assaying up to 30% copper, 4 oz. silver and \$2.80 gold per ton. Has a hoist good for 1,000' depth, and an air-compressor.

**EMPIRE COPPER MINING & MILLING CO.****NEW MEXICO.**

Mine office: Tusas, Rio Arriba Co., N. M. Property, known as the H. S. P. mine, has a shaft showing copper ore of fair grade.

**EMPIRE-GOLD BUG MINING CO.****COLORADO.**

Dead. Formerly at Empire, Clear Creek Co., Colo.

**EMPIRE GOLD & COPPER CO.****COLORADO.**

Office and mine: care of Harry W. Kane, Central City, Gilpin Co., Colo. Organized 1907, under laws of Colorado, with capitalization \$1,500,000. Lands include the Aduddell group and the Jimtown millsite. Has a 200-ton reduction plant, at Idaho Springs. Production is partly through the Aduddell shaft, and partly through the Newhouse tunnel.

**EMPIRE MINES CO.****NEW MEXICO.**

Dead. Formerly at Hanover, Grant Co., N. M.

**EMPIRE MINING CO.****ARIZONA.**

Office: Utica, N. Y. Mine office: Bisbee, Cochise Co., Ariz. W. L. Scott, president; A. W. Daggett, treasurer; J. G. Pritchard, managing director; preceding officers, R. E. King, F. L. Guillame, L. E. Browne, W. A. Fenn, J. A. Losse and F. M. Penny, directors; Alex. Erickson, superintendent. Organized June 27, 1904, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 10 claims, area 200 acres, near the Modern mine, opened by a 350' tunnel, claimed to show a 5' vein of auriferous and argentiferous copper ore, of circa \$14 per ton gross value. Ore is found in small stringers, typical of this district, and property is not considered well located.

**EMPIRE MINING CO.****ARIZONA.**

Mine office: Pantano, Pima Co., Ariz. E. A. Pike, superintendent. Is supposed to be controlled by Col. Epes Randolph and associates. Mine, formerly known by the Total Wreck, made small ore shipments, 1908, to the smelter at El Paso.

**EMPIRE MINING CO.****MICHIGAN.**

Dead. Lands sold, 1905, to Keweenaw Copper Co. Formerly at Delaware Mine, Keweenaw Co., Mich.

**EMPIRE-NEVADA COPPER MINING & SMELTING CO.****NEVADA.**

Office: 29 Broadway, New York, N. Y. Mine office: Yerington, Lyon Co., Nev. Wm. Gelder, president; L. R. Bittman, secretary. Organized under laws of Arizona, with capitalization \$5,000,000, shares \$5 par. Lands, circa 500 acres, 2 miles west of Yerington, having numerous pits and 4 shafts of about 100' depth each. Considerable drilling has been done. Company claims an outcrop of red copper ore more than 1,000' wide, which seems an unduly

optimistic statement. Is said to have a 200-ton mill and a 100-ton smelter, but statement not verified. Presumably idle.

**EMPIRE SMELTING CO.****ARIZONA.**

Dead. Property sold, under foreclosure, Sept. 15, 1906, to Walter F. Wilie, for \$16,193. Formerly at Benson, Cochise Co., Ariz.

**EMPIRE & STAR MINING, MILLING & SMELTING CO.****WYOMING.**

Dead. Succeeded by Hecla Mining Co. Formerly at Hecla, Laramie Co., Wyo. .

**EMPIRE STATE MINING CO.****ARIZONA.**

Dead. Succeeded by Empire Mining Co. Formerly at Bisbee, Cochise Co., Ariz.

**EMPIRE TUNNEL & GOLD MINING, MILLING & TRANSPORTATION CO.****COLORADO.**

Office: Georgetown, Colo. Mine offices: Empire, Clear Creek Co., Colo., and Leadville, Lake Co., Colo. Frank A. Maxwell, president and manager; Clarence Jarbeau, secretary. Property includes the Empire tunnel and gold mines, at Empire, and the Cloud City mine, at Leadville, carrying auriferous and argentiferous copper and lead sulphides. Has water power at Empire, and steam power at Leadville. Has a 50-ton concentrator, employing circa 30 men.

**EMPEROR MINING CO.****ARIZONA.**

Dead. Merged in Great Belcher of Arizona Co. Formerly at Belcher, Yavapai Co., Ariz.

**ENCAMPMENT BOSS MINING & MILLING CO.****WYOMING.**

Dead. Was organized September, 1906, under laws of Wyoming, property being the Boss group, adjoining the Itmay. Formerly at Encampment, Carbon Co., Wyo.

**ENCAMPMENT MINING CO.****WYOMING.**

Dead. Lost lands, 1903. Formerly at Encampment, Carbon Co., Wyo.

**ENCINITAS COPPER & SMELTING CO.****CALIFORNIA.**

Mine office: Encinitas, San Diego Co., Cal. J. Andrew Wauchope, superintendent. Supposedly has a concentrator. Presumably idle.

**ENCINITO COPPER CO.****CALIFORNIA.**

Dead. Was succeeded, circa 1905, by Encinitas Copper & Smelting Co. Formerly at Encinitas, San Diego Co., Cal.

**ENGELS COPPER MINING CO.****CALIFORNIA.**

Office: 421 Market St., San Francisco, Cal. Mine office: Taylorsville, Plumas Co., Cal. Lands, in Light's Cañon, 3 miles northeast of Taylorsville, adjoining the Superior mine, have a crosscut tunnel running into Iron Cap Mountain, showing sulphide, carbonate and silicate ores, assaying well in copper, gold and silver.

**ENGLISH & AUSTRALIAN COPPER CO., LTD.****AUSTRALIA.**

Office: 17 Gracechurch St., London, E. C., Eng. Works offices: Port Adelaide, South Australia, and Waratah, Newcastle, N. S. W., Australia. John Harvey, chairman; Wm. Owen Robinson, deputy chairman; preceding officers, W. S. Cuff and W. Russell, directors; G. E. C. Clarke, secretary; F. S. Chaney, general manager; Thos. Johnson, smelter superintendent. Organized 1851, and reorganized March 15, 1864, under laws of Great Britain, with capitalization reduced to £150,000, shares 30s. par; issued, £102,988 10s. Debentures, £35,000, at 6%, due January, 1912. Dividends have been as follows: 6d. in 1901; 1s. each in 1902, 1903, 1904, 1905, 1906 and 1907. Net profits were £4,210 in 1906 and £4,055 8s. 6d. in 1907.

Property includes smelting works at Waratah and Port Adelaide, employing circa 100 men, also an interest of 3,904 shares in the Clara St. Dora

Copper Mining Co., principal value of latter being in the way of supplying ore to the smelters.

#### **ENTERPRISE COPPER MINING CO., N. L.**

AUSTRALIA.

Mine office: Barossa, South Australia. Lands, freehold, 2 miles from Williamstown, have a 4' quartz vein, with footwall pay streak of 6" to 8" carrying melaconite, malachite and chalcopyrite, all with good silver values, opened by a 200'-main shaft. Has steam power and a hoist. Property was worked, many years ago, then shipping a little ore of 40 to 50% copper tenor.

#### **ENTERPRISE MILL & MINING CO.**

COLORADO.

Dead. Was succeeded by Enterprise Mining Co., which was merged, circa 1907, in the Swarthmore Consolidated Mining Co. Formerly at Eldorado, Boulder Co., Colo.

#### **ENTERPRISE MINING CO.**

NEVADA.

Letter returned unclaimed from former mine office, Tonopah, Nye Co., Nev. At last accounts was prospecting a property in the Lone Mountain district, circa 16 miles southwest of Tonopah, having an 86' shaft showing a vein of 4' to 8' width, giving average assays of \$12 to \$60 per ton in gold, silver and copper. Presumably idle.

#### **ENTERPRISE MINING & MILLING CO.**

NEW MEXICO.

Office: care of W. B. DeShon, secretary and treasurer, Pittsburg, Pa. Mine office: Cooney, Socorro Co., N. M. Geo. A. Freeman, vice-president and general manager. Lands, 2 claims, known as the Kat and Kittens, also the Enterprise group, having a 130' shaft showing a 4' ore body and a 200' shaft bottomed in a 10' vein carrying values mainly in gold. Has a 150-light electric plant. A 25-ton concentrator and 50-ton cyanide plant were burned June, 1908, at an estimated loss of \$33,000, with \$20,000 insurance.

#### **ENTERPRISE MINING, REDUCTION & IMPROVEMENT CO. ARIZONA.**

Office and mine: Kingman, Mohave Co., Ariz. Maj. W. A. Mensch, president, treasurer and general manager; M. L. Summers, vice-president; S. A. Mensch, secretary; preceding officers, J. N. Turrentine, F. M. Townsend, Arthur Gleason and E. E. Engeart, directors. Organized July 15, 1900, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par; issued, \$1,165,000. Annual meeting, first Tuesday after first Monday in January.

Lands, 15 claims, area 300 acres, in the Maynard district of the Hualapai Mountains, adjoining the Arizona Le Roy Copper Mining Co., circa 30 miles southeast of Kingman and about 13 miles from the Santa Fé railroad, with a good wagon road connecting, lands being well watered, with timber available. Property shows 7 ore bodies, in granite and porphyry, one, under development, known as the American vein, being estimated at 30' average width, opened by a 200' shaft, with 1,410' of workings, estimated to show 70,000 tons of ore, with 40,000 tons blocked out, carrying bornite, chalcopyrite and tetrahedrite, averaging 7% copper, 25% lead and 206 oz. silver, and from \$4 to \$8 gold per ton, which estimates are unduly high. Has a 35-h. p. steam plant, with 8 mine buildings. Company plans continuous development.

#### **EPHIA MINING CO.**

MEXICO.

Office and mine: Douglas, Cochise Co., Ariz. W. F. Nihart, general manager. Organized 1906, under laws of Arizona, with capitalization \$500,000, shares \$1 par. Lands, circa 20 miles from a railroad, are in the Nogal de Carrizo district of Arizpe, Sonora, Mexico. Has an 80' shaft, showing ore assaying up to 27.5% copper and 55 oz. silver per ton. Presumably idle.

#### **EQUATOR MINING & SMELTING CO.**

ARIZONA.

Office: 49 Wall St., New York, N. Y. Mine office: Jerome, Yavapai Co., Ariz. Hon. Wm. A. Clark, president; Jas. A. Macdonald, vice-president; Harry H. St. Clair, secretary and treasurer; preceding officers, Chas. W. Clark and

**Jas. H. Anderson**, directors. Organized March 19, 1900, under laws of West Virginia, with capitalization \$500,000, sharee \$5 par; issued, \$275,000. Annual meeting, third Monday in February.

Property, commonly known as the Iron King mine, is on Equator Hill, in the Agua Fria district, south of Jerome, 4 miles by trail or 6 miles by wagon-road. Property shows a mineralized zone up to 600' in width, with north and south strike, traceable for upwards of 1,000'. It was feared that the ore body was a blanket vein, but diamond drill borings proved it to hold to depth, carrying auriferous and argentiferous copper ores. Mine has a 300' main shaft, and a 5,000' gravity tram-line connecting the portal of the upper tunnel with the roast-yard of the reduction plant.

Property had a 250-ton smelter, and production, 1904, was circa 800,000 lbs. fine copper, but operations were suspended August, 1905, smelter dismantled and machinery removed.

#### **EQUITABLE COPPER CO.**

#### **WYOMING.**

Office: Altoona, Pa. Letter returned unclaimed from former mine office, Encampment, Carbon Co., Wyo. A. Brile, president; Geo. W. McWilliams, Jr., secretary and general manager; A. L. Ritchie, superintendent. Organized 1907. Lands, 9 lode claims, area 180 acres, and 320 acres of placer claims, known as the Mountain View group, between Battle Creek and Roaring Fork, near the Itmay mine, showing a vein in limestone with gossan capping, opened by a 50' shaft. Has a 30-h. p. steam plant and several mine buildings. Presumably idle.

#### **EQUITY COPPER & GOLD MINING CO.**

#### **OREGON.**

Office: care of Rev. W. J. Hughes, president and general manager, Baker City, Ore. Mine office: North Powder, Union Co., Ore. F. M. Saxton, vice-president; Kate Palmer, secretary; G. J. Bowman, treasurer; preceding officers, E. L. Hughes, H. A. Kenyon, R. W. Hughes, J. Hamilton Smith and R. T. Roberts, directors. Capitalization \$150,000. Lands, 8 gold claims, in the Quartzburg district of Grant County, and 10 copper claims, known as the Equity group, circa 6 miles from North Powder, having a 200' crosscut tunnel.

#### **ERIE & COLORADO COPPER CO.**

#### **COLORADO.**

Office: care of Henry Tibbals, secretary and treasurer, Erie, Pa. W. A. Walker, president; Ernst Behrend, vice-president. Lands, 160 acres, patented, somewhere in Boulder County, Colorado, slightly developed and presumably idle.

#### **ERIE CONSOLIDATED MINING & REDUCTION CO.**

#### **MICHIGAN.**

Dead. Name changed from Wahnta Copper Co. Both fraudulent. Formerly at Matchwood, Ontonagon Co., Mich.

#### **ERIE COPPER MINING CO.**

#### **UTAH.**

Dead. Formerly at Milford, Beaver Co., Utah. Fully described Vol. VI.

#### **ERIEGA COPPER & COAL MINING & SMELTING CO.**

#### **MONTANA.**

Dead. Formerly at Bozeman, Gallatin Co., Mont. Fully described Vol. VI.

#### **ERIE-ONTARIO DEVELOPMENT CO.**

#### **MICHIGAN.**

Office: 60 State St., Boston, Mass. Mine office: Winona, Houghton Co., Mich. H. F. Fay, president; Geo. G. Endicott, vice-president; Jas. Chynoweth, superintendent. Organized January, 1905, with capitalization \$50,000, shares \$10 par, fully paid.

Lands, 640 acres, held under option, including the old Erie and Ontario mines, midway between the Champion and Winona mines. The tract shows a copper bed, supposedly a continuation of the Baltic amygdaloid, opened by a 148' shaft, sunk at 68°, running into the hanging wall, which shows a bed of about 25' width, carrying considerable epidote, but little copper. Machinery includes a 500' hoist and 4-drill air-compressor, and some diamond drilling

was done, 1907, from the bottom of the shaft. Operations suspended, 1907, by reason of lack of funds.

#### **COMPÀNIA MINERA ESCUADRA, S. A.**

MEXICO.

Mine office: Ocotlán de Morelos, Oaxaca, Mex. Thos. A. Hamilton, manager. Has good silver and copper ores, latter being practically a by-product only. Employs about 150 men.

#### **ESCURIAL COPPER MINES, LTD.**

SPAIN.

Offices: 4 Union Court, London, E. C., Eng., and Pelayo, 2, Barcelona, Spain. Mine office: Calmenarijos, Madrid, Spain. Jas. Taylor, chairman; Joaquin Lorena, mine manager; Henry N. Gardiner, secretary. Organized Oct. 17, 1901, under laws of Great Britain, with capitalization £125,000, shares £1 par; issued, £109,177. Lands, 342 acres, held under perpetual lease from the Spanish Government, including the Gloria, Ramón, Jaime and Nuestra Señora del Pilar mines. Work is confined to the latter, which shows 8 ore bodies and was worked by the ancients, either Romans or those who preceded them, to a depth of 135', by 3 shafts, with several drifts. Sundry small shipments of selected ore from the Pilar mine have given returns of 7.73 to 20.36% copper. Property considered promising.

#### **NEGOCIACIÓN MINERA ESMERALDA.**

MEXICO.

Mine office: Chalchihuantes, Sombrerete, Zacatecas, Mex. Leopoldo Vialdo, manager. Property includes the Anaconda, Esmeralda and La Luz mines, developed by shafts and tunnels, and producing argentiferous and auriferous lead and copper ores. Employs about 75 men.

#### **COMPÀNIA MINERA ESMERALDA DE COLLAHUASI.**

CHILE.

Office: Iquique, Chile. Mine office: Collahuasi, Tarapacá, Chile. Organized Dec. 21, 1905, under laws of Chile, with capitalization 200,000 pesos, shares 100 pesos par.

#### **ESMERALDA COPPER CO.**

NEVADA.

Dead. Lands were circa 100 acres, vein carrying argentiferous and auriferous copper ore of good average tenor, being proven, at intervals, by trenching, for a distance of circa 4,500', having 4 shafts, deepest 74'. Formerly at Luning, Esmeralda Co., Nev.

#### **ESMERALDA COPPER MINING & SMELTING CO.**

MEXICO.

Mine office: Santa Catarina del Norte, Baja California, Mex. Fred W. Burns, superintendent. Mine, known as La Esmeralda, is opened by shaft, with considerable development, and shipped some ore previous to 1902. Presumably idle.

#### **ESMERALDA COPPER PRECIPITATING CO.**

ARIZONA.

Dead. Formerly at Ryan, Coconino Co., Ariz. Described Vol. VII.

#### **ESMERALDA MINE.**

AUSTRALIA.

Mine office: Rockley, N. S. W., Australia. Has a 100' shaft, with a vein of circa 10' width, carrying ore averaging 8 to 10% copper tenor.

#### **ESPAÑOLA COPPER SYNDICATE, LTD.**

SPAIN.

Office: St. Helen's Place, London, E. C., Eng. Stanlake Lee and T. S. Marshall, joint managers. Organized Jan. 6, 1906, under laws of Great Britain, with capitalization £500, shares 1s. par, fully issued. Property, in province of Huelva, Spain, formerly owned by Spanish Minerals Development, Ltd., is supposed to have been sold to Esperanza Copper & Sulphur Co., Ltd.

#### **SOCIEDAD MINERA ESPAÑOLA DEL NORTE DE ESPAÑA.**

SPAIN.

Mine office: Herrera de Rio Piserga, Palencia, Spain. Don Federico Villanueva, president. Organized 1902. Lands include various concessions carrying coal, iron and copper. Presumably idle.

**COMPAÑIA MINERA ESPERANZA y CONSTANCIA. MEXICO.**

Mine office: Sierra Mojada, Monclova, Coahuila, Mex. Guillermo Hagemann, manager. Operates La Fortuna and San Antonio mines, former opened by a 350' shaft, equipped with steam power. Has argentiferous lead and copper ores. Employs about 75 men.

**ESPERANZA COPPER CO.****ARIZONA.**

Office and mine: Tucson, Pima Co., Ariz. M. G. Samaniego, president; Arturo M. Elias, vice-president; H. C. Young, secretary; Francis M. Hartman, treasurer and manager. Capitalization \$600,000, shares \$1 par. Lands, 6 claims, area 90 acres, known as the Esperanza group, 35 miles from a railroad, in the Cañada del Oro district, Catalina Mountains, developed by about 1,000' of workings, greatest depth 75', showing carbonate and sulphide copper ores.

**ESPERANZA COPPER & SULPHUR CO., LTD.****SPAIN.**

Office: 74 Palmerston House, London, E. C., Eng. Mine office: Almonaster, Huelva, Spain. Robt. J. Price, M. P., chairman; Jos. Pasfield, secretary; Addie & Pringle, consulting engineers. Organized Feb. 14, 1906, under laws of Great Britain, with capitalization £350,000, shares £1 par, as successor of Spanish Minerals Development Co., Ltd. Debentures, £100,000, at 5%, redeemable not later than 1916, at 110, by annual drawings of 20% of profits.

Lands, 476 acres, known as the Esperanza group, carrying cupriferous pyrites, circa 40 miles from Huelva, property including the Esperanza and Angostura mines, which are the most developed, also the Nueva, Mosquitos, Forzosa, Santo Tomás and Palmira mines. Some of these properties have been worked from very ancient times, mainly on a very small scale, showing characteristic narrow Roman shafts, with footholes alternately on either side for ingress and egress of miners.

The Esperanza mine is estimated to show circa 100,000 tons of ore of all grades, averaging 40.5% sulphur. There also is considerable ore developed by the Forzosa and San Esteban tunnels. Ore is divided into three classes, the lower grade carrying mainly sulphur values.

A railroad is building to pass the eastern end of the property, and the company is constructing a narrow-gauge line to connect therewith. Production, 1907, was .circa 50,000 long tons of ore, and, for the first nine months of 1908, was 68,840 tons. Production of fine copper, 1907, is estimated at 1,200,000 lbs. Property is considered promising.

**ESPERANZA MINING CO.****MEXICO.**

Office: care of W. R. Nicholson, president, Land Title Bldg., Philadelphia, Pa. Mine office: Ensenada, Norte, Baja California, Mex. Geo. P. Brown, general manager; Harold Playter, superintendent; D. A. Conolly, smelter superintendent. Lands, 83 pertenencias, also 40 acres miscellaneous lands, on Cedros Island, on the west coast. Country rock is diorite, showing 3 lenticular ore bodies, carrying carbonate and sulphide ores, estimated by company to average 40' width, 300' depth and 1,100' length, and to contain an average of 2.5% copper, 3% zinc, 2 oz. silver and \$3.50 gold per ton. Mine has been extensively developed, having about 8,500' of workings, showing circa 150,000 tons of low-grade ore, with about 100,000 tons blocked out for stoping. Property was opened 1891, closed 1901, reopened 1905. Surface gold ores change to basic copper ores at depth. Property has produced about \$450,000 in values, from shipment of high-grade ores to smelters at Denver, Pueblo, San Francisco and Tacoma. A reduction plant started at the mine is planned to have a 50-ton blast-furnace, to turn out matte carrying about 16% copper, 6 oz. silver and 1.5 oz. gold, to be sent to Tacoma for refining.

Fuel at smelter is coke, costing \$18 per ton. Production, 1905, was circa 275,000 lbs. fine copper. Presumably idle.

**MINAS ESPARANZA y VISITACION.**

**SPAIN.**

Mine office: Albarracín, Teruel, Spain. D. Santiago Maorad, owner. Property is sundry iron mining lands, on which a promising lense of copper ore was discovered, 1903. Presumably idle.

**ESPIE BAY MINES DEVELOPMENT**

**TURKEY IN ASIA.**

**SYNDICATE, LTD.**

Dead. Voluntarily wound up, June, 1904. Formerly at Tereboli, Trebizon, Turkey in Asia.

**JOSÉ RAMÓN ESPINOZA.**

**CHILE.**

Office and works: Petorca, Aconcagua, Chile. Mine office: Las Palmas, Petorca, Aconcagua, Chile. Works office: Pedegua, Petorca, Aconcagua, Chile. Lands include Las Raices mine, 60 meters deep, which in 1903 produced 537 metric tons of ore of 13% copper tenor, and La Louisa mine, 150 meters deep, which, 1903, produced 300 metric tons of 5% copper ore. Cement copper, made by leaching mine waters, also is produced, in small quantities. Mines, slightly developed, show large quantities of low grade ore, unavailable commercially until railroad transportation, now lacking, is secured.

Has 2 smelters, El Cantarito at Petorca, and El Hueso at Pedegua. El Fundicion Cantarito, 13 miles north of Cabildo, has 1 reverberatory and 1 blast-furnace, burning wood, at cost of 6 pesos per metric ton, nearly 3 tons of wood being required to smelt 1 ton of mineral, producing Chile bars of 90% tenor, with slags averaging 1% copper. Works about half time, employing circa 40 men when running, at average wages of 1 peso daily.

El Fundicion Hueso, at Pedegua, 24 kilometers north of the railroad station at Cabildo, has a single reverberatory furnace, burning wood, employing, when working, circa 50 men, at average wages of 1 peso daily. Installation of a blast-furnace is contemplated. Production, 1903, was 264,243 pounds fine copper.

**ALEXANDER ESQUER y CA.**

**MEXICO.**

Mine office: Baroyeca, Alamos, Sonora, Mex. J. J. Esquer, manager. Property is the Mexicana, Esperanza and other mines, developed by shafts and tunnels, carrying auriferous and argentiferous copper ores.

**ESSEX COPPER CO.**

**MICHIGAN.**

Office: care of Marmaduke Richardson, president, 12 John St., New York, N. Y. Alfred Meads, agent. Lands, which included the old Norwich mine, Ontonagon county, Michigan, were sold, circa 1901, and company is being liquidated. Paid \$1 per share, 1906, and a further dividend is to be paid.

**ESTEBROOK MINING CO.**

**WYOMING.**

Office and mine: Douglas, Converse Co., Wyo. Geo. W. Metcalf, president; John Foxton, secretary and treasurer. Organized 1897, under laws of Wyoming, with capitalization \$10,000; reorganized Sept. 9, 1903, with capitalization \$1,000,000. Lands, 120 acres, also 120 acres miscellaneous lands, in Albany county, Wyoming, about 40 miles south of Douglas, showing a 4' fissure vein, in country rocks of diorite, schist and granite, giving assays of 2 to 4% copper, 25 to 30% lead, 2 to 4 oz. silver and \$1 to \$2 gold per ton, from cerussite, galena, cuprite and chalcopyrite. Has 2 short tunnels and 5 shafts, deepest 284'.

**ESTEY MINING & MILLING CO.**

**NEW MEXICO.**

Dead. Succeeded, circa 1902, by Dividend Mining & Milling Co. Formerly at Estey, Socorro Co., N. M.

**NUEVA SOCIEDAD PROPIETARIA LA ESTRELLA.**

**SPAIN.**

Dead. Formerly at Los Martires, Granada, Spain.

**SOCIEDAD GRANADINA LA ESTRELLA.**

SPAIN.

Dead. Lands sold, circa 1907, to La Estrella Copper Mines, Ltd. Formerly at Los Martires, Granada, Spain.

**SOCIÉTÉ ANONYME LA ESTRELLA.**

SPAIN.

Office: 161 Boulevard Haussmann, Paris, France. Mine office: Los Martires, Granada, Spain. Capitalization, 200,000 francs. Lizardo González, vice-president; Louis Verdón, agent; Huberto Meersmans, general manager; Antonio Melián, superintendent. Property includes La Jerezana, El Ensueño and other copper mines, at Los Martires, which were undergoing developments at last accounts; an argentiferous copper group at Alpujara, Granada, and an argentiferous copper group at Trevezel.

**ESTRELLA MINING CO.**

UTAH.

Dead. Formerly at Milford, Beaver Co., Utah. Described Vol. VI.

**ETHEL CONSOLIDATED MINES CO.**

WASHINGTON.

Office and mine: Index, Snohomish Co., Wash. Geo. A. Pounder, president and general manager, at last accounts. Organized 1902, with capitalization \$8,500,000, shares \$1 par, as merger of Ethel Copper Mining Co. and John D. Copper Co. Lands, 87 contiguous claims, carrying 21,000' of the strike of the vein. The Ethel group has a 2,000' tunnel, showing a considerable body of low-grade oxidized ores, bornite and chalcocite, with quartz gangue, claimed to average 4% copper, with small gold and silver values. Has a Pelton water-wheel and 75-ton concentrator, latter, connected with mine by a 4,000' gravity tram, having a crusher, rolls and Huntington mill. Ores slime badly in concentration. Company began the payment of 1% monthly dividends in 1903, and mine was shut down shortly thereafter. Property under option to McAllister-Rowland Copper Mining Co. Idle at last accounts.

**ETHEL COPPER MINING CO.**

WASHINGTON.

Dead. Succeeded, 1902, by Ethel Consolidated Mines Co. Formerly at Index, Snohomish Co., Wash.

**ETHEL GOLD-MINING CO.**

COLORADO.

Dead. Formerly at Turret, Chaffee Co., Colo. Described Vol. VI.

**ETRUSCAN COPPER ESTATES, LTD.**

ITALY.

Office: 139 Queen Victoria St., London, E. C., Eng. Mine office: Campiglia Marittima, Tuscany, Italy. E. J. Vavasour Earle, chairman; Henry Pope, secretary; E. Hibbert, general manager; R. C. Alabaster, superintendent. Organized Dec. 13, 1900, under laws of Great Britain, and reorganized Dec. 7, 1904, under same title, with capitalization £575,000, shares £1 par, fully issued. Debentures, £199,000, at 6%, redeemable at 105, March, 1912, or earlier, at company's option; also £24,000 second-mortgage debentures, at 6%, payable July, 1912. In July, 1907, first-mortgage debenture holders received second-mortgage debentures, in payment of 2 years' accumulated interest, and payment of interest on second-mortgage debentures, due January, 1908, was postponed until July, 1908. Company also is supposed to have a considerable floating indebtedness.

Lands, 2,000 acres freehold, and 600 acres held under perpetual mining rights, including the old Lanzi, Temporing and Bombola mines. These properties show numerous and extensive old workings, certainly as ancient as the Roman era, and probably dating back to Etruscan times. During the Nineteenth Century various Italian, French and English companies attempted, without success, to work these mines, which are honeycombed by ancient inclines, adits, drifts, winzes and stopes. The property was examined by C. Algernon Moring, Edgar P. Redghorn, R. J. Frecheville, Alexander Hill and F. H. Fawcett, all of whom reported unfavorably. For statements made by Mr. Moring, the company sued his firm, but dropped the suit, for good reasons. Mr. Faw-

cett examined the mine, and accepted the management, but resigned shortly after, and recovered damages of £250 from Mr. Earle, for slander. Mr. Earle, the chairman, considers all experts incompetent, relying for mining knowledge upon his own extensive experience as a manufacturer of cement, this, of course, having given him a peculiarly fitting training for acting as the head of a copper mining company, as is shown by the fact that Mr. Earle, his friends and followers, have spent about £500,000 on this property, which probably is worth at least a penny in the pound.

The company claims to have 4 cupriferous veins, of 60' to 120' width, nearly parallel and traceable 1½ miles, but all competent experts agree that the ore bodies, while extensive, are pockety and uncertain, while the principal values unquestionably were removed by the ancients. The present company has sunk on the Cava del Piombo mine the Walter vertical shaft, of 75 meters depth, having a 13-meter headgear and duplex hoist, this shaft showing extensive old workings—more workings than ore. Operations have been suspended on the west vein. The Govett shaft, of 100 meters depth, shows extensive old workings, with little ore. The Earle shaft, formerly the Coquand, 90 meters in depth, appropriately renamed after the chairman of the company, shows extensive workings, and little else. Le Marchant shaft, of 30 meters depth, shows a little chalcopyrite, disseminated in pyrite, with amphibole gangue. While the property is called a copper mine, it seems the practically unanimous opinion of experienced engineers that the principal values, doubtful as these may be, are in lead and zinc, rather than in copper.

The reduction works, at Rombola, are connected by rail with the mines at Lanzi and Temporino. The plant includes a concentrator and smelter, latter having a copper furnace of 100 tons nominal daily capacity.

Despite the claims of the management that the ore returned 2.68% copper, analysis of the figures shows returns of but 1.5% copper for the first 5 years, when only 625 long tons of metal were produced. For July, 1906, the company smelted 2,565 long tons of ore, said to have given returns of 2.19% copper, with average slag losses of 0.2%.

The Etruscan Copper Estates, Ltd., is one of the best examples extant of a perfectly bad management. There is no suspicion of dishonesty, but there is the amplest evidence of utter incapacity, and a density of intellect that scarcely could be looked for in a civilized country. The stone age produced better miners.

#### **HUCLID DEVELOPMENT CO.**

**ARIZONA.**

Dead. Formerly at Benson, Cochise Co., Ariz.

#### **EUREKA CONSOLIDATED COPPER CO.**

**NORTH CAROLINA.**

Mine office: Gold Hill, Rowan Co., N. C. J. E. Manter, president; P. E. Eaton, treasurer; Walter George Newman, manager. Organized Dec. 1, 1906, under laws of Maine, with capitalization \$10,000,000. Lands, circa 3,500 acres, including the Troutman and Stockton mines, near the Gold Hill Copper Co.

#### **EUREKA CONSOLIDATED MINING CO.**

#### **EUREKA CONSOLIDATED MINING CO.**

**NEVADA.**

Dead. Merged, 1905, in Richmond-Eureka Mining Co. Formerly at Eureka, Eureka Co., Nev.

#### **EUREKA COPPER CO.**

**ARIZONA.**

Dead. Formerly at Globe, Gila Co., Ariz.

#### **EUREKA COPPER MINES, LTD.**

**BRITISH COLUMBIA.**

Office and mine: Nelson, Kootenay district, B. C. J. J. Malone, president; A. B. Ritchie, vice-president; L. B. Reynolds, managing director; H. Y.

**Anderson**, secretary and treasurer; preceding officers and R. Bowlby, directors. Organized March 2, 1906, under laws of British Columbia, with capitalization \$250,000, shares 25 cents par; issued, \$197,500.

Lands, 7 claims, 3 fractional, area 250 acres, showing 5 ore bodies, of which one, opened by a 200' shaft, shows carbonate and sulphide ores estimated to average 5.5% copper and 0.21 oz. gold per ton. Has a 40-h. p. steam plant, Lidgerwood hoist and 5 small mine buildings. In 1907 shipped 890 tons of smelting ore, netting \$15,806.11. Company plans continuing development work and building a tramway.

**EUREKA COPPER MINING CO.**

**WYOMING.**

Dead. Formerly at Encampment, Carbon Co., Wyo. Described Vol. VI.

**EUREKA DEVELOPMENT CO.**

**ARIZONA.**

Dead. Formerly at Bisbee, Cochise Co., Ariz. Described Vol. VII.

**EUREKA DEVELOPMENT CO.**

**ARIZONA.**

Dead. Formerly at Tucson, Pima Co., Ariz.

**EUREKA DIAMOND DRILL MINING CO.**

**CALIFORNIA.**

Office: 303 Union Savings Bank Bldg., Oakland, Cal. Letter returned unclaimed from former mine office, Jackson, Amador Co., Cal. Capitalization \$75,000, in \$25,000 preferred and \$50,000 common shares, \$1 par. Lands, 8 claims, area 150 acres, 4 miles west of Jackson, having a 60' shaft showing ore assaying 20% copper, 5 oz. silver and \$20 gold per ton.

**EUREKA EXPLORATION CO.**

**COLORADO.**

Office: Sioux City, Iowa. Mine office: Eureka, San Juan Co., Colo. Theodore Ivens, manager. Property, known as the Ridgeway group, carries auriferous and argentiferous lead and copper ores. Has steam and water power and a 10-stamp mill.

**EUREKA GOLD & COPPER MINING CO.**

**ARIZONA.**

Mine office: Jerome, Yavapai Co., Ariz. C. W. Woods, president; H. M. Gibbs, secretary and treasurer; Thos. Taylor, general manager and lessee. Lands, 8 claims, 7 miles south of Jerome, near the Iron King mine, opened by tunnel showing a 30' vein with an 8' pay streak carrying auriferous bornite and chalcopyrite, with occasional visible gold, but has not developed ore in commercial quantities. Lands were bonded to Thos. Taylor, and mine resumed work June, 1907, after several years' idleness.

**EUREKA HILL MINING CO.**

**UTAH.**

Office: 11 East First South St., Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. Moylan C. Fox, president; Geo. W. Riter, secretary and managing engineer. Organized Nov. 12, 1875, under laws of Utah, with capitalization \$1,000,000, shares \$100 par. Is a close corporation. Has paid considerable dividends, but accounts are not published. Annual meeting, third Tuesday in February. Lands, 5 claims, area 27 acres, patented, also a 25-acre millsite and 100 acres miscellaneous lands, in the Tintic district. Mine, extensively developed, has a 1,500' main working shaft, and about 25 miles of workings. Ore bodies are lenticular deposits, carrying cuprite, malachite and enargite, with average values of about 1.4% copper, 6% lead, 25 oz. silver and \$3 gold per ton. There is a 450-h. p. steam plant at the mine, and a 500-h. p. steam plant at the mill. Main hoist is 16x48', good for 1,600' depth, and equipment includes a 30-drill Norwalk air-compressor. Buildings, 16 in number, include a 30x50' frame machine shop, 30x40' frame carpenter shop, frame smithies of 80x30' and 30x40', and a 30x60' foundry. The reduction plant includes a 25-ton combination mill, with concentrator and pan-amalgamation mill combined, in a 240x250' wooden building, having 100 gravity stamps, 2 Blake crushers, 2 Gates centrifugal crushers and 50 vanners. The amalgamating plant has 32 pans. Company has a sawmill. Production is principally

silver and lead, copper being secured as a by-product. Latest reported copper production was 134,000 lbs., in 1904. Production, 1907, was 200 carloads of ore.

**EUREKA MINE.****ARIZONA.**

Office and mine: care of I. N. Kinsey, lessee, Globe, Gila Co., Ariz. D. D. Sullivan, superintendent. Lands, 8 miles west of Globe, in vicinity of Inspiration and Live Oak mines, carry silicious ores of 5 to 6% copper tenor, and shipments were made, 1906-1907, to Old Dominion and Calumet & Arizona smelters, for fluxing purposes. Production, 1907, was 528,000 lbs. fine copper.

**EUREKA MINE.****CALIFORNIA.**

Office and mine: care of H. F. Dimock, Carrville, Trinity Co., Cal. Lands, 2 claims, in Sections 17 and 18, T. 37 N.; R. 7 W. Ore, silicious and low in grade, is slightly developed by a 50' tunnel. Idle for several years.

**EUREKA MINE.****HONDURAS.**

Mine office: Orica, Tegucigalpa, Honduras. At last accounts was a small producer of gold, silver and copper.

**EUREKA MINING & MILLING CO.****ARIZONA.**

Office: P. O. Box 552, Tombstone, Ariz. Mine office: Ft. Huachuca, Cochise Co., Ariz. O. B. Steen, president; E. P. Drayton, vice-president; F. W. Goodbody, secretary; F. N. Wolcott, treasurer. Lands, 7 claims, in 2 groups. The Copper Glance group, opened by tunnels, is claimed to have shipped more than \$100,000 worth of ore and concentrates averaging 27% copper, 184 oz. silver and \$6 gold per ton. The Eureka group has produced about \$15,000 worth of ore. Property considered valuable, but is idle, and the company is a dead-beat and apparently moribund.

**EUREKA MINING, SMELTING & POWER CO.****OREGON.**

Office: P. O. Box 53, Clarkston, Wash. Mine office: Innaha, Wallowa Co., Ore. W. E. Howard, secretary; G. E. Nehood, superintendent. Lands, 40 claims, patents applied for, but adverse filed, poorly located for transportation. Company claims to have well developed mines, with much ore in sight and on the dump, but apparently this is either a mistake or something worse, sundry shareholders alleging grossly fraudulent misrepresentations by the management while selling stock. Idle since circa 1905 and apparently moribund.

**EUREKA-SWANSEA EXTENSION MINING CO.****UTAH.**

Office: Provo, Utah. Mine office: Eureka, Juab Co., Utah. Jesse Knight, president; Richard B. Shepard, vice-president; W. Lester Mangum, secretary and treasurer; preceding officers, Jacob Evans and Will Knight, directors. Lands, 140 acres, patented, adjoining the Centennial-Eureka.

**EUSTIS MINING CO.****QUEBEC.**

Mine office: Sherbrooke, Sherbrooke Co., Que. F. C. Davis, superintendent. Mine has a 2,000' incline shaft, sunk at 20° to 45°, and a long crosscut tunnel, showing lenses of cupriferous pyrite in schistose rocks, mined primarily for making of sulphuric acid, but carrying appreciable values in copper. Equipment includes an electric hoist with 6' drums, and a hydro-electric power plant with 2 alternators mounted on same shaft, run in parallel, driven by turbine water-wheels, one 150-kw. generator and one 200-kw. generator, using a 3-phase, 25-cycle, 2,200-volt current, with electric efficiency of 90 to 93% for alternators, and efficiency of 60 to 80% for water-wheel, according to load. Has a mill for preparing ore for shipment to the acid plant of the company in New Jersey.

**EVANGELINA COPPER MINING CO.****MEXICO.**

Office: 202½ So. Broadway, Los Angeles, Cal. Mine office: Santa Catalina del Norte, Baja California, Mex. D. R. Wilder, president; J. H. Coleman, vice-president; Josephine H. Wilder, secretary and treasurer; Tomás Vidaurraza, superintendent. Lands, circa 150 acres, carrying a fissure vein of 3" to

6' width. Has steam power. Idle.

**EVANS-TANZER CONSOLIDATED COPPER CO.**

**CALIFORNIA.**

Dead. Formerly at Lavic, San Bernardino Co., Cal.

**EVANSTON MINING CO.**

**MEXICO.**

Mine office: Gabriel, San Juan del Rio, Durango, Mex. J. B. Davis, manager; F. Boland, superintendent. Property, known as La Purisima group, carries auriferous copper and argentiferous lead ore. At last accounts employed a considerable force.

**EVELYN MINING & LEASING CO.**

**COLORADO.**

Mine office: Leadville, Lake Co., Colo. Morris Sterne, manager. Has argentiferous and auriferous lead, copper and zinc sulphides. Has steam power.

**EVENING STAR MINING CO.**

**WYOMING.**

Dead. Formerly at Riverside, Carbon Co., Wyo. Described Vol. VII.

**EVERGREEN BLUFF MINING CO.**

**MICHIGAN.**

Dead. Was succeeded by Evergreen Mining Co. Formerly at Mass, Ontonagon Co., Mich.

**EVERGREEN-EUREKA GOLD & COPPER CO.**

Dead. A fake that peddled stock, accompanied by a personal "guaranty" of 5% dividends, and a 10-year bond against loss. Formerly had an office at 31 Union Square, New York, N. Y.

**EVERGREEN GOLD & COPPER MINES CO.**

**COLORADO.**

Office: Empire Bldg., Denver, Colo. Mine office: Apex, Gilpin Co., Colo. Dr. W. H. Grayson, president and manager; W. C. Hollister, secretary and treasurer. Organized 1904, under laws of Colorado, with capitalization \$500,000, shares \$1 par. Lands, 6 claims, 3 patented, area 33 acres, also a 10-acre placer claim and quarter-acre millsite, in the Pine Creek district, showing 2 fissure veins, one opened by 3 shafts of 40' to 80' depth, and by tunnels of 850' and 400', showing a considerable body of low grade disseminated sulphide ore, with some malachite and tetrahedrite. Carload shipments, 1905, gave returns of 31% copper and 24 oz. silver per ton, from first grade ore, and 15% copper and 12 oz. silver from second grade ore. Has a Leyner air-compressor. A site has been graded for a 50-ton mill of 40x50' size, to have rolls, Richards jigs and Card tables.

**EVERGREEN MINING CO.**

**MICHIGAN.**

Office: 15 William St., New York, N. Y. Mine office. Mass, Ontonagon Co., Mich. Jos. E. Gay, president; John R. Stanton, secretary. Organized September, 1853, under laws of Michigan, with capitalization \$500,000, shares \$25 par, under name of Evergreen Bluff Mining Co., and reorganized, under present title, with capitalization \$1,000,000, shares \$25 par.

Lands, 600 acres, adjoining the Mass Consolidated on the east and the Ridge mine of the Mass Consolidated on the south. Mine was worked at intervals, 1854-1870, producing 1,351,174 lbs. fine copper, at a cost of \$223,582.24.

In 1862 the predecessor of the present company deeded to the Ogima company, succeeded later by the Mass Consolidated, 16 acres of land from the northeast corner of its territory, adjoining the Ridge mine, to enable the Ridge to sink its shafts and work the bed lying north of the Evergreen lode, in exchange for which the Ogima transferred all right and title to the Evergreen bed under the entire Ogima territory to the Evergreen company, hence it follows that the Evergreen Mining Co. owns a portion of the Evergreen lode on the property of the Mass Consolidated. Idle since 1870.

**EVERGREEN MINING & TUNNEL CO.**

**UTAH.**

Office: care of H. G. McMillan, manager, Salt Lake City, Utah. Letter returned unclaimed from former mine office, Altha, Salt Lake Co., Utah. Lands are opened by tunnel with about 1,700' of underground workings, claimed to

show considerable copper ore of low grade. Idle for several years and company apparently moribund.

**EVOLUTION-KEYSTONE MINING CO.**

**IDAHO.**

Letter returned unclaimed from former office, Missoula, Mont. Mine office: Osburn, Shoshone Co., Idaho. Mrs. J. McCormick, president; W. W. Woods, vice-president; A. E. Robinson, secretary; preceding officers, J. H. Nordquist and Edw. Lindsley, directors. Lands, in McFarren Gulch, adjoin the Gray and Verde mines. Surface shows rich stringers of silver-lead ore, opened by trenches. Has 2 tunnels, longest 400'.

**EXCELSIOR COPPER CO.**

**ARIZONA.**

Dead. Was a swindle, perpetrated by the notorious Wm. F. Wernse gang. Formerly at Pima, Graham Co., Ariz. Described Vol. V.

**EXCELSIOR COPPER CO.**

**QUEBEC.**

Mine office: West Broughton, Megantic Co., Quebec. Mine is developed open-cast and by shafts. Idle.

**EXCELSIOR COPPER & GOLD MINING CO.**

**WYOMING.**

Dead. Formerly at Riverside, Carbon Co., Wyo.

**EXCELSIOR GOLD & COPPER MINING CO.**

**ARIZONA.**

Dead. Formerly at Flagstaff, Coconino Co., Ariz.

**EXCELSIOR MINING CO.**

**NEW MEXICO.**

Dead. Formerly at Organ, Donna Ana Co., N. M.

**EXCELSIOR MINING & DEVELOPMENT CO.**

**NEW MEXICO.**

Office: St. Joseph, Mo. Mine office: Orogrande, Otero Co., N. M. A. D. Warnock, general manager. Lands include the Nashville and Three Friends claims, said to carry a 4' vein of 4% silver-copper ore, also lead carbonate up to 50% in tenor.

**EXCELSIOR MINING & SMELTING CO.**

**NEVADA.**

Dead. Formerly at Yerington, Lyon Co., Nev.

**EXCELSIOR MOUNTAIN COPPER CO.**

**NEVADA.**

Mine office: Hawthorne, Esmeralda Co., Nev. F. D. Qualey, president and general manager; J. H. Suits, secretary. Lands, 13 claims, area 260 acres, in process of patenting, 16 miles southeast of Hawthorne and 16 miles from Sodaville, the nearest railroad point, giving promising surface showings of copper for a distance of circa 9,000' along a contact between granite and limestone. Has several shallow shafts and about a dozen short tunnels, with one 500' tunnel showing ore averaging circa \$8 gold per ton. Has a good power plant, with 12-drill air-compressor, and 15 mine buildings.

**EXPECTATIVA MINING CO.**

**MEXICO.**

Office: care of W. R. Ramsdell, Guadalajara, Jal., Mex. Mine office: Ameca, Jalisco, Mex. Lands, 10 miles southwest of Ameca, show auriferous and argentiferous copper and lead ores, assaying up to 27% copper.

**FAEG GRUBE.**

**NORWAY.**

Mine office: Haugsund, Christiania, Norway. Property is several small mines, having ore averaging about 4% copper tenor. Idle at last accounts.

**FAIRVIEW MINING CO.**

**MONTANA.**

Dead. Formerly at Basin, Jefferson Co., Mont.

**FALLS CREEK MINING CO., LTD.**

**BRITISH COLUMBIA.**

Office: care of R. H. Finley, secretary, Spokane, Wash. Mine office: Nelson, Kootenay district, B. C. L. H. Snyder, president and treasurer; J. M. Porter, vice-president; M. C. Monaghan, mine manager; preceding officers and J. P. Swedebery, directors. Organized 1907, under laws of Washington, with capitalization \$1,500,000, shares \$1 par, and registered under laws of British Columbia. Lands, 6 claims, 2 crown-granted, area circa 240 acres, adjoining

the Queen Victoria mine, about 7 miles from Kootenay Lake, having a 30' vein giving average assays of about 5% copper, with small gold values.

**FALUN MINES.**

SWEDEN.

Owned by Stora Kopparberg Berslags Aktiebolag.

**FAMATINA COPPER & GOLD SYNDICATE, LTD.**

ARGENTINA.

Dead. Succeeded, Jan. 21, 1903, by Famatina Development Corporation, Ltd. Formerly at Chilcito, Rioja, Argentina.

**FAMATINA DEVELOPMENT CORPORATION, LTD.**

ARGENTINA.

Office: 56 Cannon St., London, E. C., Eng. Mine office: Chilcito, Rioja, Argentina. Capt. Wm. Bell McTaggart, D. L., J. P., chairman; preceding officer, Harry J. Meyerstein, A. W. Haschkel, Emilio N. Casares and Claude Lowther, directors; A. Dangerfield, secretary; John Taylor & Sons, consulting engineers; Arthur Thomas, superintendent; J. S. Pryor, sub-manager. Organized Jan. 21, 1903, under laws of Great Britain, as a reconstruction of Famatina Copper & Gold Syndicate, Ltd., with capitalization £400,000, shares £1 par; issued, £398,978. Debentures, £100,000 first-mortgage 6% bonds authorized, redeemable at 105; issued, £70,100, reduced, late 1907, to £40,650. Also has an issue of £50,000 income bonds, of £10 each, without interest, but repayable at face, plus 25% out of profits, within 7 years, with a bonus of £25 per bond, making £5 per annum payable. Income bonds are being refunded into debentures. Has been sued for £61,750, with interest and costs, by heirs of C. Buxero.

Lands, circa 700 acres, in 4 groups, that include the 6 principal mines of the Famatina district, including the Upulungos group of 7 acres, the Mellizas group of 75 acres, the Compania group of 15 acres, and the San Pedro group of 45 acres. The lands lie at an elevation of more than 16,000', in the Mexicana district of the Famatina Mountains, being very rugged and difficult of access and transport. The property shows an intricate network of fissure veins traversing metamorphic slate, with 14 auriferous and argentiferous copper veins, of 4' estimated average width, traceable circa 2 miles, the veins being numerous, narrow and rich, with ore occurring in irregular chutes. The Upulungos and San Pedro are the principal veins, these being about 1,000' apart. The Upulungos lode is estimated to show 31,357 long tons of ore, averaging 3.67% copper, 14 oz silver and 14.34 dwts. gold, the San Pedro ore being materially richer. Principal minor veins are the Andueza, Esperanza, Placilla and Verdeona. Ores are estimated to average 7.6% copper, 12.4 oz. silver and 10.5 dwts. gold per long ton.

The mine is developed mainly by the Sacovon Anita, but there are other tunnels, including the Restauradora. New openings, 1906, were 5,770', and for the first 8 months of 1907 were 4,561'. The Pacifica and Forastera tunnels also are developing important ore bodies. Company estimated, September, 1907, that 137,214 tons of ore were developed.

Transportation between the mine and mill is by a Bleichert aerial tram, of circa 35 kilometers length, connecting with the railhead of the state road, with a difference in level, between terminals, of about 10,000'. The tram line has a capacity of circa 40 tons on down freight and 20 tons on up freight, and has reduced the average cost of transport from about 50s. per metric ton to circa 5s., a saving of about 90%. A branch ropeway was built, late 1907.

A hydro-electric installation, near the works, was nearing completion at last accounts, and should effect a material saving in power costs.

The smelter, at Chilcito, apparently known as the Santa Florentina works, is about one mile from the Rio Amarilla, with water rights owned in perpetuity. The smelter has a matting furnace only, blown in March 20, 1908. Production, June, 1908, from 3,000 long tons of ore treated, was 550 tons of matte,

assaying 17.1% copper, 38.1 oz. silver and 2.3 oz. gold, showing an average extraction of 3.13% copper, 6.98 oz. silver and 0.42 oz. gold per long ton.

About 300 men are employed at the mines and works. ~~Nákvář. Lábor~~ is inefficient, but cheap, wages being about 30 cents per day. The company, having reached the end of its resources, is being financed by the International Copper Co., Ltd., up to the amount of £60,000. The property is of considerable promise, though much overestimated in its early stages, and, under the capable management of Mr. Arthur Thomas, who is a thoroughly good man, should be made a success, if success is attainable, provided his suggestions are followed, and the company does not come to grief from lack of funds.

#### **LES MINES DE CUIVRE DE LA FARE, LTD.**

**FRANCE.**

Office: Dashwood House, New Broad St., London, E. C., Eng. Mine office: Vaujan, Isère, France. Chas. Dufaure de la Prade, chairman. Organized Oct. 25, 1904, under laws of Great Britain, as Les Mines Françaises, and name changed to present title November, 1907, with capitalization £47,000, shares £1 par, in £30,000 cumulative 8% preference shares and £17,000 common shares; issued, £19,997.

Lands, 563 hectares, on the left bank of the river Flumet, on the west flank of the Grandes Rousses Alpes, circa 50 kilometers from Grenoble. Property shows slightly auriferous and argentiferous chalcocite and chalcopyrite, with quartz gangue, company claiming average assays of 16.17% copper, which seems excessive. Mine is opened on 6 veins by 21 tunnels and galleries, with about 500 meters of workings, estimated by company to expose 400,000 tons of ore, which is considered an overestimate.

Transportation is by 6 aerial trams, leading from the mine workings to the mill, and company plans an aerial tram from the mill to the public road. The mine and mill have electric power.

The mill, of 5 tons hourly capacity, has a Classeur centrifuge, which effects dry centrifugal concentration, company claiming to produce a 50% concentrate, which also is regarded as improbable.

#### **SOCIEDAD MINERA FARRELLÓN DE TONGOVY.**

**CHILE.**

Office: Valparaiso, Chile. Mine office: Tongoi, Coquimbo, Chile. Organized Jan. 21, 1901, under laws of Chile, with capitalization 150,000 pesos, shares 1,500 pesos par.

#### **FARGO GOLD & COPPER MINING CO.**

**OREGON.**

Dead. Formerly at Imnaha, Wallowa Co., Ore. Described Vol. VII.

#### **FARMINGTON GOLD & COPPER MINING & MILLING CO.**

**UTAH.**

Office: care of J. Stuart Wallingford, secretary and treasurer, Paris, Ky. Letter returned unclaimed from former mine office, Farmington, Davies Co., Utah. H. C. White, president. Capitalization, \$250,000, shares \$1 par. Former manager, Fred. H. Perkins, was arrested, 1906, on charge of embezzling \$2,000 from the company. Idle.

#### **FARRELL COPPER CO.**

**MONTANA.**

Mine office: Butte, Silver Bow Co., Mont. W. C. Lewis, president; Carlton H. Hand, vice-president; J. D. Slemmons, secretary and treasurer; preceding officers, A. T. Morgan, Walter C. Lewis, Donald Campbell, W. H. Hall and Daniel Tewey, directors. Organized July 24, 1906, under laws of Montana, with capitalization \$1,000,000, shares \$2.50 par. Lands, 17 acres, in the south-eastern part of the Butte district, having a 200' shaft, sunk jointly with the Alliance Copper Co., with a crosscut on the 200' level showing a little ore carrying copper, lead, zinc and silver values.

#### **FARRELL COPPER CO.**

**MONTANA.**

Dead. Succeeded, circa 1902, by Pittsburg & Montana Copper Co. Formerly at Butte, Silver Bow Co., Mont. Described Vol. II.

**FARWELL MOUNTAIN COPPER CO.****COLORADO.**

Office: care of Elisha T. Hewitt, Evans Blk., Denver, Colo. Mine office: Steamboat Springs, Routt Co., Colo. Organized 1907, under laws of Colorado, with capitalization \$5,000,000. Lands, 4 lode claims and 560 acres of gold placer claims, in the Farwell Mountains, 3 miles from Hahn's Peak, and circa 25 miles from Steamboat Springs. Plans developing water power by dam.

**FAUQUIER COPPER CO.****VIRGINIA.**

Mine office: Warrenton, Fauquier Co., Va. Idle several years.

**FAVORITE GOLD & COPPER MINING CO.****WASHINGTON.**

Office: Nelsonville, Ohio. Mine office: Nighthawk, Okanogan Co., Wash. J. M. Parker, president; J. F. Baldridge, secretary; H. D. Jamee, general manager; Ed. Williams, mine superintendent. Organized December, 1902, with capitalization \$2,000,000, shares \$1 par. Lands, 14 full and 14 fractional claims, area circa 300 acres, adjoining the Nighthawk mine, on Mt. Ellemeham, in the Wanicent Lake district, 34 miles from the Canadian Pacific railway, showing 5 veins, of which one, ranging 1' to 5' in width, is opened by a 950' upper tunnel and an 850' lower tunnel on the Giant claim, carrying mainly silver-lead values, with some gold and copper.

**FAY-CANANEA COPPER CO.****MEXICO.**

Office: 610 First National Bank Bldg., Duluth, Minn. Mine office: La Cananea, Arizpe, Sonora, Mex. Marcus L. Fay, president and general manager; W. H. Yawkey, vice-president; Geo. M. Fay, secretary; J. A. Daugherty, treasurer and local manager; preceding officers, Peter A. Kemp and Peter Manney, directors; Albert Weir, mine superintendent. Organized Sept. 4, 1904, under laws of Arizona, with capitalization \$3,000,000, shares \$5 par, and is organized under laws of Mexico as Cananea-Eastern Mining Co., S. A.

Lands are very extensive, having been added to at frequent intervals since organization of company. Original lands were 2 tracts of 16 denuncements, a total of 900 pertenencias, area 2,127 acres, in 2 groups about 2 miles apart, circa 20 miles south of La Cananea, formerly held by Fortuna Mining Co. and Sonora Development Co. Bought, 1907, circa 1,100 acres in the Sierra Manzanal, about 6 miles northeast of Cananea, lying north of the lands of the Arizpe Development Co. Bought, circa November, 1907, lands of Dorotea Mining Co., in the Sierra Cananea, about 6 miles northwest of Puertecitos Pass, and, from same company, the Dorotea group of 5 claims, circa 50 miles northwest of La Cananea, in the Magdalena district of Sonora, having about 300' of workings, showing ore giving fair assay values in copper. Bought, circa December, 1907, two groups, area 149 hectares, on the southwestern slope of the Ajo Mountains, from the Cananea-Eastern Mining Co., including La Zona group, area 49 pertenencias, lying 8 miles southeast of Douglas, Ariz., in the northern part of the Moctezuma district of Sonora, and La Princesa and La Costoza groups, area 100 hectares, in the Sierra Ajo, 21 miles east of Cananea, latter opened by a 180' tunnel showing promising sulphides, and a 40' shaft carrying copper oxides and bornite averaging about 10% copper, with small gold and silver values. Lands also include the Forest and Fortuna groups, circa 40 miles south of Cananea, and the Big Duluth, circa 8 miles northeast of Cananea.

Principal workings are on the Sulphide group, having a vein traceable circa kilometers, of which the Fay-Cananea owns nearly 2 miles of the outcrop, this vein being claimed to average about 150' in width, but it is improbable that the full width will be found workable. The Sulphide group includes an antigua having two 100' shafts, from which more or less high grade silver ore was stoped in the past. New work includes 2 permanent shafts, deepest 162' at last accounts, and a tunnel planned to cut 20 or more veins in a length

of circa 6,000'. A 26' shaft on the Azurite claim shows ore giving average assays of 6% copper, 10% lead and 30 oz. silver per ton.

Property is considered promising and officers are men of good local standing, though company was unable to redeem its promise of beginning shipments prior to July, 1907.

**FEDERAL COPPER CO.**

**WYOMING.**

Dead. Formerly at Laramie, Albany Co., Wyo.

**FEDERAL COPPER CO., LTD.**

**WISCONSIN.**

Dead. Succeeded, circa 1902, by Federal Gold & Copper Co. Formerly at Superior, Douglas Co., Wis.

**FEDERAL COPPER MINING.**

**ARIZONA, NEW MEXICO & TEXAS.**

**& SMELTING CO.**

Dead. Wound up by receiver, 1907, and property sold. Formerly at El Paso, El Paso Co., Tex. Described Vol. VI.

**FEDERAL-ELY COPPER CO.**

**NEVADA.**

Office: Salt Lake City, Utah. Mine office: Ely, White Pine Co., Nev. Adrian C. Ellis, Jr., president; W. J. Craig, vice-president and general manager; R. J. Evans, secretary; L. H. Farnsworth, treasurer; preceding officers, John T. Hodson, Wm. K. Bradley and Hon. W. H. Dickson, directors; Geo. W. Kessler, superintendent. Organized 1906, and articles of association amended, circa April, 1908, to render stock assessable, and a 5-cent assessment levied. An issue of treasury stock, 1907, was said to be underwritten by Peter Whitney, et al., of New York.

Lands, 20 claims, 3 fractional, area 383 acres, also the Huesser ranch, of 600 acres, near Lane, bought Dec. 8, 1906. Mining lands include 8 claims north of the Nevada Consolidated, 3 claims between the Cumberland-Ely and Turner Ely, and the Queen of the West group, in Robinson Cañon. Company is said to have paid \$215,000 for its lands.

The property shows a limestone capping, pitching to the east, said to be underlaid by cupriferous monzonite, and to carry 3 parallel fissures, about 600' apart, the fissures also being said apparently to be shear zones, each about 400' in width, showing a little copper and lead ore, both argentiferous and auriferous. The limestone capping on the Savage claim is said to carry argentiferous lead ore. Churn-drill borings are said to have given a satisfactory showing of ore, and there also has been some test-pitting and surface trenching.

Development is by 4 shafts, the main shaft, planned to be sunk 400', being said to be near the contact of the 3 ore zones, which seems peculiar, if they are parallel, as claimed.

The Queen of the West shaft shows, at depth of 110', a sulphide ore body of considerable size, averaging circa 3% copper, 1 to 2 oz. silver and 40 to 50 cents gold per ton.

The Kessler shaft, about 100' deep, near the tunnel, shows lead carbonates of fair tenor.

The main tunnel, planned to be driven 1,500', starts from a cañon, and will connect with the shaft to give a 400' back. It is expected that the tunnel will cut cupriferous porphyry before reaching the shaft.

The property has a steam plant, and a water supply estimated at 875 miner's inches in the dry season, which will be more than sufficient for the company's own use, and constitutes a valuable asset, as water is scarce in the camp.

Transportation is available by a railroad running through the company's lands that passes near the mouth of the tunnel.

Late 1906 the company was said to plan building a 500-ton mill in 1907,

but these plans were premature. Idle at last accounts, but planned resumption.

**FEDERAL GOLD & COPPER CO.**

**NEVADA & WISCONSIN.**

Office: 214 Lumber Exchange, Minneapolis, Minn. Mine office: Eureka, Eureka Co., Nev. C. S. Dudley, president and general manager; M. B. Coburn, vice-president; H. S. Dudley, secretary and treasurer. Organized, 1902, under the laws of Arizona, with capitalization \$2,500,000, shares \$1 par. Lands include 600 acres in the St. Croix valley, Burnett county, Wisconsin, and 520 acres 6 miles southeast of Superior, Douglas county, Wisconsin, these tracts lying on the St. Croix and Minong native copper ranges. Nevada lands are 7 claims, including the Como-Eureka mine, showing 4 parallel veins, estimated by management to carry average values of \$8 to \$20 per ton. Mine has a 350' shaft, with 750' of drifts and crosscuts. Equipment includes an electric light plant and a 100-ton concentrator. Mill was run, 1905, several months, apparently for gold values, and produced about \$16,000. As management estimates average cost of mining and milling at \$3.50 or less per ton, it is evident, either that value of ore has been overestimated, cost of mining and milling underestimated, or that amount of ore in sight is very small. Idle and apparently moribund.

**FEDERAL GOLD & COPPER MINING CO.**

**UTAH.**

Dead. Formerly at Blue Acre, Beaver Co., Utah. Fully described Vol. VII.

**FEDERAL MINES CORPORATION.**

**COLORADO.**

Mine office: Idaho Springs, Clear Creek Co., Colo. Mine has argentiferous and auriferous lead and copper sulphides. Has steam power. Presumably idle.

**FEDERAL MINING CO.**

**ARIZONA.**

Dead. Reorganized, 1905, as Gila Valley Copper Co. Was a bad egg. Formerly at Safford, Graham Co., Ariz. Fully described Vol. V.

**SOCIETA MINIERE DELLA FENICE MASSETANA.**

**ITALY.**

Dead. Lands sold to Societa Anonima delle Miniere di Montecatini. Formerly at Massa Marittima, Grosseto, Tuscany, Italy.

**FENTRESS MINING CO.**

**NORTH CAROLINA.**

Dead. Succeeded by Century Development Co. Formerly at Centre, Guilford Co., N. C.

**FERGUSON MINING & SMELTING CO.**

**NEW ZEALAND.**

Office: Auckland, N. Z. John Strathern, general manager. Capitalization, £30,000. Lands, 565 acres, in the Thames Goldfield, also upwards of 2,000 acres of native land at Whangaroa, on the Coromandel peninsula, circa 125 miles northwest of Auckland, showing outcrops of cupriferous pyrite. Lands show nearly 100 veins and stringers, of various sizes and forms, principal veins ranging 2' to 8' in width, carrying mainly massive cupriferous pyrite, with a little galena, giving average assays of about 4% copper and up to £6 combined gold and silver values per long ton. Development is by about 20 short crosscut tunnels. Has a mill and a smelter, latter, on tidewater, erected at a cost of about £8,000, having a 150-ton Colorado Iron Works hot-blast pyritic matting furnace. Previous to erection of smelter, ore was milled, and concentrates shipped in bulk to Australia, Swansea and the United States, concentrates averaging £33 per ton in value. Wages are \$2 per 8-hour shift.

**MINA FERNANDO.**

**MEXICO.**

Mine office: San Fernando, Tamazula, Durango, Mex. Property includes La Fortuna group, carrying auriferous and argentiferous copper ores. Has water and electric power, with a 100-ton concentrator and 40-ton smelter, and formerly was operated by Fernando Mining Co. Production, 1903, was 554,609 lbs. fine copper. Idle several years.

**FERNANDO MINING CO.****MEXICO.**

Dead. Formerly at San Fernando, Tamazula, Durango, Mex. Described Vol. VI.

**FERRIS-HAGGARTY COPPER MINING CO.****WYOMING.**

Mine office: Rudefeha, Carbon Co., Wyo. Is controlled, through stock ownership, by Penn-Wyoming Copper Co.

**COMPAÑIA DE MINAS FERROCOPRIZAS.****SPAIN.**

Office: San Isidro, 16, Sevilla, Spain. Mine office: El Carpio, Cortegana, Huelva, Spain. Don Salvador Sánchez Castañer, agent. Lands, area 73 hectares, include the Santa María de Gracias group, worked in very ancient days. Property is leased to the Sociedad Française de Etudios. Ore is cupriferous pyrite.

**FIDELITY COPPER CO.****IDAHO.**

Office: care of Commonwealth Trust Co., Portland, Ore. Mine office: Homestead, Washington Co., Idaho. Capt. Herbert L. Davis, superintendent. Lands, 17 claims, area 340 acres, 5 miles from Homestead, in the Seven Devils district, opened by 10 pits and shafts and a 240' tunnel, said to show a contact vein between granite-porphyr and limestone, carrying native copper, azurite, malachite and chalcocite. Prospectus of company gives no particulars regarding capitalization, organization and officers, and company is not regarded favorably.

**FIDELITY MINING CO., LTD.****MICHIGAN.**

Office: care of I. P. Griswold, chairman, Allegan, Mich. Mine office: Victoria, Ontonagon Co., Mich. C. G. Turner, secretary; H. F. Marsh, treasurer. Organized February, 1903, with capitalization \$800,000. Lands are in Section 15, T. 50 N., R. 40 W., 2½ miles northwest of the Victoria mine. Idle since organization.

**FIFTH CREEK CENTRAL SILVER &****AUSTRALIA.****COPPER MINING CO., N. L.**

Mine office: Fifth Creek, South Australia.

**FAUSTO FIGUEROA.****PERÚ.**

Office and mine: Morococha, Junín, Perú. Property is the Santo Toribio mine, from which a little ore was extracted, 1905, in development work.

**FINDLAY COPPER CHIEF MINING CO.****NEVADA.**

Office: Findlay, Ohio. Mine office: Las Vegas, Lincoln Co., N. M. John N. Dotz, president; P. M. Cox, secretary; R. E. Taylor, treasurer. Organized 1907, with capitalization \$1,000,000, shares \$1 par. Lands, 2 claims, in the Yellow Pine district, circa 25 miles southwest of Las Vegas, having a 30' shaft and a 60' tunnel, said to show ore.

**FINLEY GOLD & COPPER MINING & MILLING CO.****UTAH.**

Dead. Formerly at Castleton, Grand Co., Utah.

**FINNISH-AMERICAN MINING CO.****FINLAND.**

Office: Calumet, Mich. Mine offices: Kisko, Abo, Finland, and Joensuu, Kupio, Finland. John Daniell, president; Edw. Ulseth, first vice-president; Henry Ketti, treasurer; Oscar J. Larson, secretary; preceding officers, John Saari, Chas. J. Wickstrom, John Benson and Albert Julin, directors; Capt. Jacob Wilson, general superintendent. Organized December, 1906, under laws of Minnesota, with capitalization \$750,000, shares \$1 par. Lands, 4 groups, bought of the Fiskars company, including the Orijarvi and Hokka mines, former being the more important. Properties have both water and rail transportation, and have been prospected by 8 diamond-drill holes, one of the groups showing gold ore.

The Hokka group, area 240 acres, includes four 40-acre claims, freehold, and two 40-acre claims, leasehold, latter held for 25 years under option of

purchase, 2 miles from Joensuu, in the Maanseka Mountains, circa 200 miles from Viborg, near the boundary between Finland and Russia. This mine, opened 1860, secured a small production of chalcopyrite under the most primitive conditions, ore having been shipped on horseback to the Pitkaranta smelter.

The Orijarvi mine, credited with an output of \$5,000,000 in copper and silver, has surface indications giving little evidence of the large amount of ore lying below, ore bodies being deposits in silicious limestone, near an intrusive quartz-diorite contact, ore being mainly cupriferous pyrite and pyrrhotite, associated with small quantities of galena and large quantities of sphalerite, all slightly auriferous and argentiferous. The Orijarvi tract, of circa 10 square miles, is a parallelogram of approximately 2x5 miles, opened by 9 shafts, deepest 600', showing large ore bodies, with stopes up to 60' in width. Mine, opened A. D. 1757, and worked until 1873, was idle thereafter until taken over by predecessor of present company, circa 1904. The old dumps at the Orijarvi contain large quantities of sphalerite, discarded as worthless, but probably of present value, as a zinc smelter could be built at a reasonable cost, if shipping were found impracticable. Mine has a good machinery plant, from Chicago, and employs circa 75 men. Property considered promising and management good.

#### FIRST CHANCE MINING CO.

#### WASHINGTON.

Mine office: Excelsior, Pierce Co., Wash. F. M. Lewis, president. Ores are refractory. Presumably idle.

#### FIRST NATIONAL COPPER CO.

#### CALIFORNIA.

Office: 25 Broad St., New York, N. Y. Mine office: Kennett, Shasta Co., Cal. Thos. W. Lawson, president; T. M. T. Raborg, treasurer; preceding officers, Edgar L. Newhouse, Geo. N. Towle, Thos. J. Barbour and R. N. Bishop, directors. Organized February, 1908, with capitalization \$3,000,000, shares \$5 par; \$2.50 paid in. Apparently 525,000 shares were issued at \$2.50, providing \$1,312,500, less the expense of organization. Corporation is a securities holding company, planned to finance the Balaklala Consolidated Copper Co., which came to grief, and is practically a reorganization of that company. It was said, July, 1908, that 98% of the Balaklala stock had been deposited for exchange into First National stock, time for exchange having been extended. Company plans loaning the Balaklala Consolidated \$1,312,500, to pay off its floating indebtedness and leave a working capital of \$375,000 to \$500,000 for the latter. Company is said to have circa 4,500 shareholders.

The mine is fully described under name of Balaklala Copper Co., which holds direct title. It was hoped to have the property on a producing basis late in 1908. There was much grumbling by shareholders over the rather drastic method of reorganization, but, while the Balaklala was sadly mismanaged, the plan of reorganization followed seemed to be the only way out of the muddle into which the company had fallen. The standing of the company, none too good at best, was further injured by placing Lawson at the head of the corporation.

#### FIRST NATIONAL MINING CO.

#### NEW MEXICO.

Office: Chickasha, Okla. Mine office: Orogrande, Otero Co., N. M. J. A. Bogart, president; John Wells, vice-president; S. Howard Leech, secretary; M. A. Goff, treasurer; preceding officers, Wilton M. Bartlett, N. H. Ledford, E. C. Wells and Edw. Burson, directors. Property is the Forest Queen mine, said to show a 20' vein, opened by tunnel, with a shaft planned.

#### FIRST TRANSBAIKALIAN MINING CO.

#### SIBERIA.

Office and mine: corner Sofeyska and Soongareyska Sta., Chita, Transbaikalia, Siberia. Company advertises that it possesses great mineral wealth,

including copper, but the principal mining values undoubtedly lie in the pewter ore that the company claims to possess. As pewter ore never has been found before, the company's prospects are bright. Doubtless more careful search of the wonderful lands of this corporation would show brass ore also, and possibly native babbitt metal.

**FISKUM SYNDICATE, LTD.**

**NORWAY.**

Office: 53 New Broad St., London, E. C., Eng. Mine office: Konga-berg, Christiania, Norway. H. V. Anthony, managing director; C. S. Goodwin, secretary. Organized March 2, 1905, with capitalization £2,400, shares £1 par; issued, £2,375. Property is an option on 50 claims, carrying copper, lead and zinc, on which a little work has been done. Presumably idle.

**FITTS COPPER CO.**

**ARIZONA.**

Dead. Formerly at Clifton, Graham Co., Ariz.

**FITZPATRICK & DODD.**

**MEXICO.**

Office and mine: Tecalciche, Ayutla, Jalisco, Mex. Patrick Fitzgerald, manager. Lands include the Chapuza, Falda and Puerta mines, carrying argentiferous lead and auriferous copper ores. Employed circa 25 men at last accounts.

**FITZROY COPPER MINES, LTD.**

**AUSTRALIA.**

Dead. Was succeeded, 1907, by Great Fitzroy Copper Mines, Ltd. Formerly at Mount Chalmers, Queensland, Australia. Described Vol. VII.

**FIVE BEARS MINING CO.**

**CALIFORNIA.**

Office: 301 Gaff Bldg., Chicago, Ills. Mine office: Genesee, Plumas Co., Cal. F. A. Meidinger, president; G. H. Goodhue, vice-president and superintendent; A. Vermaas, secretary; J. D. Meidinger, treasurer; preceding officers and E. C. Goeckel, directors. Organized Apr. 10, 1903, under laws of South Dakota, with capitalization \$2,500,000, shares \$1 par; issued \$2,350,000.

Lands, 10 claims, 9 patented, area 200 acres, showing 6 ore bodies, as fissure veins in talcose schist and as contact deposits between schist and porphyry, of which one, under development, of 4' to 20' width, is traceable circa 9,000', carrying chalcopyrite, associated with pyrite estimated by company to average 2.6% copper, 1.8 oz. silver and \$1.40 gold per ton. Development is by tunnels of 1,296', 380' and 60', on the vein, and a 240' crosscut tunnel, with 3,420' of workings, estimated to show 80,000 tons of ore, with 9,000 tons blocked out for stoping. Property was worked, 1876-1893, for gold values in the gossan.

Company has a 50-h. p. water plant for the mine and a 1,400-h. p. hydroelectric installation for commercial use. Equipment includes 11 mine buildings, a 3-drill air-compressor and a 10-stamp mill. Nearest railroad is 34 miles, but the Western Pacific is to build into the district, upon the completion of which ore will be shipped. Company estimates average cost of mining at only 55 cents per ton. Continuous development is planned. Property, though low in grade, is considered promising.

**FIVE POINTS COPPER MINING CO.**

**ARIZONA.**

Mine office: Globe, Gila Co., Ariz. A. T. Hammons, treasurer; J. C. Britt, superintendent. Is said to be controlled, through stock ownership, by Cananea & Globe Exploration & Development Co.

Lands, 39 claims, including the Peabody group of 5 claims near Bloody Tanks. The Clark, Lockwood and Van Wagener groups, aggregating 34 claims, are near the Gibson mine, at the head of Pinto Creek, circa 14 miles west of Globe. Property shows malachite near surface, with some azurite and chalocite at shallow depth, and company claims assays of 38% copper and 49 oz. silver per ton, with traces of gold. Development is by the Solace 150' incline shaft, and the Crackerjim 350' shaft, circa 1,500' apart, latter showing a vein

of 29' estimated width, giving assays of 4 to 12% copper, a 20" paystreak being claimed to give average assays of 25% copper, 415 oz. silver and 38.5 oz. gold per ton, which is entirely too good to be true, with balance of vein carrying chalcopyrite of circa 4.5% average copper tenor, the paystreak figures being gross exaggerations.

Equipment includes a small steam plant and hoist, and plans were drawn for a 300-ton concentrator, which failed to materialize. Shipped, 1906, a little ore to the Old Dominion smelter. Property considered promising, notwithstanding its ridiculously exaggerated claims.

#### **FLAG GOLD & COPPER MINING CO., LTD.**

#### **AUSTRALIA.**

Office: Morgans St., Ravensthorpe, Western Australia. Mine office: Kundip, Phillips River Goldfield, Western Australia. Ralph Anderson, secretary; Charles Grant, mine manager. Organized March 14, 1907.

Lands, 70 acres held under gold mining lease, and 5 acres held under tailings area lease. Property shows a 6' vein, from which former owners shipped 1,222 long tons of ore, yielding 39 long tons fine copper and 889 oz. gold, and present company shipped 405 tons, to the Ravensthorpe smelter, returning 41.84 long tons copper, 250 oz. silver and 559 oz. gold. Test shipments of 32 tons, circa June, 1908, returned 9.7% copper and 21 dwts. gold per long ton. Apparently ores average about 17 dwts. gold per long ton. Development is by 3 shallow shafts, workings not being well laid out. Property has an old stamp-mill.

#### **FLAGSTAFF COPPER MINING CO.**

#### **UTAH.**

Office: 902 Wells Bldg., Milwaukee, Wis. Operating office: 17 West Second South St., Salt Lake City, Utah. Mine office: Alta, Salt Lake Co., Utah. Thos. J. Pringle, president; Chas. H. Moss, vice-president; Paul D. Durant, secretary; Kenneth W. Jacobs, treasurer; preceding officers, Wm. P. Harlow, Bishop Canfield, F. G. Gaston and W. D. Ladd, directors; Jas. E. Beveridge, superintendent. Organized Apr. 22, 1908, under laws of Arizona, as successor of Consolidated Flagstaff Mines Co., with capitalization \$2,000,000, shares \$5 par. Annual meeting, first Tuesday in October.

Lands, 29 claims, partly patented, area circa 500 acres, and 14 acres miscellaneous lands, in the Little Cottonwood and Big Cottonwood districts, carrying several ore bodies, of which one, ranging up to 300' in claimed width, and traceable 2,000', is developed by the 2,850' Tom Moore tunnel, which also cuts 6 smaller veins, and has a 450 crosscut to the northeast, with about 4,000' of workings. Property also has the 500' Burgess tunnel, 1,200' Burnswood tunnel, 1,200' Flagstaff tunnel and 700' Flagstaff shaft. Company plans extending the Tom Moore tunnel, to cut the Flagstaff ore zone at considerable depth. Present workings show mainly chalcopyrite, with occasional bornite.

The mine, opened circa 1869, was operated extensively, and presumably at a profit, by the Flagstaff Mines, Ltd., and by the Alta Consolidated Mining Co. Former produced circa \$2,000,000 worth of ore from above the 400' level, mainly silver-lead carbonates, being unable to treat the argentiferous galena and copper sulphides profitably in early days. A considerable quantity of ore of payable tenor remains on the old dumps, and some of this has been shipped.

Equipment includes electric power, with 7-drill and 3-drill Ingersoll air-compressors and necessary mine buildings.

Company is said to have a profitable contract with the American Smelting & Refining Co., receiving a premium of 10 cents for each unit of silica, with a base rate of \$2.25 per ton. In the case of some shipments company has received a bonus from the smelter, for excess of iron, with smelting done free. About 30 men are employed, and the company plans advancing the Tom Moore tunnel, drifting on parallel fissure veins, and cutting the Flagstaff

ore bodies, at a depth of circa 960', in the Flagstaff shaft. Property considered promising and management good.

#### **FLATIRON MINE.**

**MONTANA.**

Office: 42 Broadway, New York, N. Y. Mine office: Butte, Silver Bow Co., Mont. Is owned jointly by Adolph Lewisohn and the Leonard Lewisohn Estate. Lands are circa one-half acre, being a triangular fraction just east of the Mountain Chief mine of the Butte Coalition Mining Co. Is developing with a 3-compartment shaft. Property, though small, considered well located and promising.

#### **FLEMING-FGX MINING & SMELTING CO.**

**NEW MEXICO.**

Mine office: Jicarilla, Lincoln Co., N. M. W. G. Fleming, president and general manager. Development is by shaft, with steam power.

#### **FLINT STEEL MINE.**

**MICHIGAN.**

Mine office: Greenland, Ontonagon Co., Mich. Lands, 400 acres, bounded by the Mass and Adventure on the north and east, and by the Michigan on the south and west. Produced 415 tons, 458 lbs. fine copper and was owned by the Flint Steel Mining Co. and the Flint Steel Copper Co. Has the only developed fissure vein in Ontonagon county, with 3 connected shafts. Idle since circa 1875.

#### **FLOREDIA COPPER MINING CO.**

**COLORADO & NEW MEXICO.**

Office: care of Financial Security & Trust Co., Denver, Colo. E. H. Wahl, president; C. A. Hubbard, vice-president; W. E. Kreamer, secretary. Organized 1907, with capitalization \$3,000,000, shares \$1 par. Lands claimed are 3 claims in the Floredia Mountains, Luna Co., N. M., and 3 claims 25 miles west of Canyon City, Frémont Co., Colo., with total holdings of 90 acres. Apparently was promoted by Financial Security & Trust Co., which was responsible for the Lost Bullion Spanish Mines, and other notorious swindles, and company is regarded with much suspicion.

#### **FLORENCE COPPER CO.**

**UTAH.**

Mine office: Newhouse, Beaver Co., Utah. Lands, 4 claims, near the Utah Amalgamated, slightly developed by tunnel.

#### **FLORENCE SMELTING, MINING & MILLING CO.**

**ARIZONA.**

Office: care of J. H. McCabe, president and manager, Phoenix, Ariz. Mine office: Price, Pinal Co., Ariz. Lands include the Mineral Hill group, Grace, Blue Bell, Alice and other properties, having lead and copper ores. Company has a smelter, with a 35-ton lead stack, apparently moved from Phoenix to Price, and was said to plan erection of a copper stack. Apparently idle almost since birth, and moribund.

#### **FLYING DUTCHMAN MINING CO.**

**UTAH.**

Dead. Presumably lands sold to Copper Jack Mining Co. Formerly at Ibapah, Tooele Co., Utah.

#### **P. M. & D. COPPER MINING CO.**

**COLORADO.**

Office: care of Bernard McCaffrey, Denver, Colo. Letter returned unclaimed from former mine office, Morrison, Jefferson Co., Colo. Lands, 560 acres, patented, near Bear Creek, about 8 miles west of Morrison, opened by 600' of tunnels and a 165' main shaft, upper 150' passing through a goosan capping of 15' to 30' width, carrying small gold values, and showing about 5' of ore below, mainly sulphide, with some malachite, said to carry circa 11% copper and \$3.50 gold and silver per ton. Presumably idle.

#### **FOLDAL COPPER & SULPHUR CO., LTD.**

**NORWAY.**

Office: 6 Old Jewry, London, E. C., Eng. Mine office: Foldal, Trondhjem, Norway. Alex Davidson, chairman; preceding officer, Lee Hoskyns, Stanley Clay, Sidney St. J. Steadman, Edw. W. Abrams, Henry A. Barton and E. E. Berthoud, directors; Chas. Forbes, secretary; Pellew, Harvey & Fell, consulting engineers;

W. H. Lund, mine manager. Organized Jan. 27, 1906, under laws of Great Britain, with capitalization £350,000, shares £1 par, in 150,000 shares preferred and 200,000 shares deferred stock. Company has invested circa £100,000 in property, development and equipment. Lands, circa 3,000 acres, on the west bank of the Foldal river, carrying considerable timber, include 4 old mines, known as the Juliana Marie, Knutshovd, Grev Moltke and Grimsdal, worked for about 150 years, and which produced circa 350,000 tons of ore, under former ownership. Mines, opened mainly by tunnel, show a vein of about 10' average width, carrying massive cupriferous pyrite estimated to average 2% copper and 46% sulphur, ore being decidedly arsenical, vein giving every indication of persistence. Ore, as produced, is divided into 3 classes, first averaging 2.1% copper and 48.17% sulphur, other grades carrying less copper and slightly less sulphur. Property also has some ore of high copper tenor that eventually may become of considerable importance. Ore reserves, 1907, estimated at 363,190 long tons. Has a good mining plant, installed at a cost of £7,000, and has expended about £8,000 for substantial mine buildings, including a general store.

Company has developed hydro-electric power from a large waterfall on the Einuna River, held under 25-year lease, subject to renewal, at rental of £25 yearly. Good wagon roads have been built at the mine, and a 22-mile Pohlig aerial tram, which is one of the longest in the world, has been built from the mines to the Lille-Elvedal Railway, at a cost of £38,412, line having a capacity of 40 tons per hour. Miscellaneous improvements include a telephone line and a quay at Trondhjem, for ore shipments. Production, September, 1907, was 5,161 long tons, but was cut to about 1,000 tons monthly for last quarter of year, owing to a miners' strike. Equipment has been provided for an ore-production of circa 100,000 tons yearly. Property is decidedly promising, and management seems vigorous and effective.

#### **SOCIÉTÉ ANONYME DES FONDERIES ET LAMINOIRES. FRANCE.**

Works office: Biache, St. Vaast, France. Property is an electrolytic copper reduction plant with five 6-kw. generators and 100 tanks, in multiple arrangement, with estimated daily capacity of 2 metric tons fine copper.

#### **FORD COPPER CO. CALIFORNIA.**

Mine office: Georgetown, El Dorado Co., Cal. Has highly auriferous copper ores. Idle since circa 1903.

#### **FOREST HILL CONSOLIDATED MINING & MILLING CO. COLORADO.**

Dead. Bondholders foreclosed. Formerly at Tin Cup, Gunnison Co., Colo.

#### **FOREST QUEEN COPPER CO. NEW MEXICO.**

Office: El Paso, Texas. Mine office: Silver City, Grant Co., N. M. H. F. Kettler, president; M. D. Gaylord, superintendent. Lands, 10 claims, area 200 acres, known as the Cleveland group, 8 miles north of Silver City, in the Pinos Altos district, having a 700' tunnel cutting 9 veins of 3' to 70' width, carrying chalcocite, associated with sphalerite disseminated in pyrite, giving average assays of 4.5% copper, 20% zinc and 10 oz. silver per ton. Plans a 3-compartment shaft. Has office and store buildings, and plans a mill at mouth of No. 1 tunnel, to make copper and zinc concentrates. Shipments, 1907, from practically surface ores, gave returns of 11% copper and 8 oz. silver per ton. Is said to plan a concentrator.

#### **FORT BOURKE MINE. AUSTRALIA.**

Mine office: Cobar, Robinson Co., N. S. W., Australia. Has a new plant, which was not giving entirely satisfactory results at last accounts, circa May, 1908.

#### **FORT HALL MINING & MILLING CO. IDAHO.**

Mine office: Pocatello, Bannock Co., Idaho. E. E. Howson, superin-

tendent. Lands, 7 miles from Pocatello, are said to give a good showing of medium grade auriferous copper ore.

#### FORT HENRY MINING CO.

**ARIZONA.**

Office: care of R. G. Hourtienne, president, Pasadena, Cal. Letter returned unclaimed from former mine office, Wickenburg, Maricopa Co., Ariz. Geo. Dobbler, superintendent. Lands, in the Black Rock district, have a 55' shaft in a 2' vein of ore assaying up to 25% copper.

#### FORT PITT COPPER CO.

**NEW MEXICO.**

Office: Curry Bldg., Pittsburg, Pa. Mine office: Clayton, Union Co., N. M. Jared Sater, president; C. L. Mohney, vice-president; W. H. Staley, secretary; Dr. W. W. Wolfe, treasurer. Organized Jan. 22, 1907, under laws of Delaware, with capitalization \$2,500,000, shares \$5 par, being said, in the press, to have been organized "to acquire mines of gold, silver, copper, brass, etc." The Fort Pitt Copper Co. succeeded the Sater Copper Co., which succeeded the Copper Chief Mining Co., which in turn succeeded the Old Hickory Copper Mining Co., all of the dead ones having departed this life accompanied by the curses of deluded shareholders.

Lands, 27 claims, area 540 acres, also a 5-acre millsite, in the Black Mesa district, said to show 7 fissure veins in sandstone, of which 2, slightly developed, are claimed to be of 6' average width, and to carry melaconite, malachite, azurite and chalcopyrite, averaging 14% copper and 15 oz. silver per ton, which is a very serious exaggeration. Development is by shafts of 85' and 225', and by tunnels of 25', 50' and 300', estimated by company to show 60,000 tons of ore, which estimate is excessive.

Equipment includes a 190-h. p. steam plant, with 2 hoists, and the mine has 4 buildings and an 18x70' mill. Company, by reason of its bad antecedents, is viewed with suspicion.

#### COMPAÑIA MINERA LA FORTUNA, S. A.

**MEXICO.**

Office: Aguascalientes, Ags., Mex. Mine office: Tepezalá, Ocampo, Aguascalientes, Mex. Geo. B. Wardman, president and general manager; O. F. Westlund, vice-president; DeWitt Crevelling, secretary and treasurer; Alberto Pez, superintendent. Organized 1902, with capitalization 200,000 pesos, shares 100 pesos par. Lands include La Fortuna and adjoining mines, having 2 tunnels and a 100-meter blind shaft, mines having a vertical depth of 200 meters and greatest horizontal length of 600 meters of workings, showing mainly oxidized argentiferous copper ores of good average tenor in both metals. Has animal power, employing circa 200 men, and shipped, 1905, about 200 tons of ore weekly.

#### FORTUNA COPPER CO.

**CALIFORNIA.**

Office and mine: Fortuna, Humboldt Co., Cal. P. J. Mulley, president and general manager; Frank Legg, vice-president; C. A. Eastman, secretary; Fortuna Merchandising Co., treasurer; A. E. Purdy, superintendent. Organized June 8, 1901, under laws of California, with capitalization \$70,000, shares \$5 par. Lands, 32 claims, area 640 acres, in Trinity county, California, opened by tunnels of 60' and 270', showing ores that have assayed 28% copper and \$3 gold per ton, in veins of 12" to 16" width. Presumably idle.

#### FORTUNA GOLD & COPPER CO.

**ARIZONA.**

Office: J. B. Thompson, secretary and manager, Pittsburg, Pa. Mine office: Cave Creek, Maricopa Co., Ariz. L. E. Huddleston, president; Maj. R. N. Whitney, vice-president; F. E. Miller, treasurer; preceding officers and F. H. Kinney, directors; Clarence E. Dresser, general superintendent. Was practically reorganized, 1907, and old management eliminated. Lands, 12 claims, including the Scarlet mine, circa 28 miles north of Phoenix, said to give a promising ore shewing. Plans a 150-ton cyanide plant.

**FORTUNA GRANDE COPPER CO.**

Dead. Formerly at Ely, White Pine Co., Nev.

**NEVADA.****FORTUNA MINING CO.**

Office: 274 Canal St., New York, N. Y. Mine office: Ahualulco, Jalisco, Mex. Frank E. Lloyd, manager. Property is the Candelaria mine, carrying auriferous and argentiferous copper ore. Has steam power and a 15-ton mill with 3 Wilfley tables, employing about 25 men.

**MEXICO.****FORTUNA MINING CO.**

Letters returned unclaimed from former office, Bisbee, Cochise Co., Ariz., and mine office, La Cananea, Arizpe, Sonora, Mex. Sold, 1907, to Fay-Cananea Copper Co., its holdings at La Cananea, but is said to have held a stockholder's meeting, Oct. 5, 1908, with a view to resumption.

**MEXICO.****FORTUNA MINING CO.****UTAH.**

Office: care of George F. Richards, Jr., secretary and treasurer, Salt Lake City, Utah. Mine office: Lark, Salt Lake Co., Utah. Employs 45 men. Simon Bamberger, president; Sidney M. Bamberger, general manager; W. H. Rossberg, superintendent. Organized March 10, 1904, with capitalization \$300,000. Lands, circa 200 acres, adjoining the Ohio Copper Co., showing considerable development.

A blind shaft, starting from a tunnel, is planned to be deepened, on the vein. Property is said to show a 4' vein averaging 35% lead, 8 oz. silver and 0.08 oz. gold per ton, also a 7' vein averaging about 15% copper, but these estimates are too high. Has a gasoline hoist and an old mill, which it is planned to equip with new concentrating tables. Property considered promising.

**FORTUNA MINING & MILLING CO.****UTAH.**

Mine office: Bingham Canyon, Salt Lake Co., Utah. Property was under lease to the Bingham Consolidated Mining & Smelting Co., and was operated by that corporation, hence presumably will be taken over by its successor, the Bingham Mines Co.

The mine has silver-lead ores in the upper workings, with argentiferous and auriferous copper sulphides at depth, latter giving average assays of about 3.5% copper, 8 to 10 oz. silver and \$1.50 gold per ton. Mine carries a little native copper also.

Equipment includes electric power and a 100-ton concentrator. About 40 men are employed, when working.

**FORTUNE COPPER & FINANCE CO., LTD.**

Dead. Dissolved Feb. 20, 1908. Formerly had an office at 10 Basinghall St., London, E. C., Eng.

**FORTY-FIVE CONSOLIDATED MINING CO.****WASHINGTON.**

Dead. Lands sold to Magus Mining Co. Formerly at Silverton, Snohomish Co., Utah.

**FOSS RIVER CONSOLIDATED COPPER CO.****WASHINGTON.**

Office: 315 American National Bank Bldg., Everett, Wash. Hon. Albert W. McIntire, president and general manager; E. A. Nickerson, vice-president; F. P. Smith, secretary; Leighton Howard-Smith, treasurer; Milnor Roberts, consulting engineer. Organized Dec. 10, 1901, under laws of Washington, with capitalization \$2,000,000, shares \$1 par. Lands, 18 claims, area 328 acres, also a 30-acre millsite and 40 acres timber lands, in the Foss River district of King county, Washington, opened by a 55' shaft and tunnels of 35', 45', 65' and 310', showing several veins, of which the largest, estimated at 180' width, carries bornite and chalcopyrite giving assays of 3 to 54% copper, 2 oz. to 40 oz. silver and 80 cents to \$44 gold per ton. Management plans con-

tinuation of development work and installation of water power and a 4-drill air compressor. Property considered promising and management good.

**FOULD et COMPAGNIE.**

**SPAIN.**

Office: Paris, France. Operating office: care of Don Guillermo Sundheim, agent, Huelva, Spain. Mine office: Cazalla de la Sierra, Sevilla, Spain. Property includes La Cartagenera and other mines, undergoing development at last accounts. Presumably idle.

**FOUR B'S MINING CO.**

**COLORADO.**

Mine office: Turret, Chaffee Co., Colo. Property is the Jasper mine, having auriferous and argentiferous copper ores. Presumably idle.

**FOUR METALS MINING CO.**

**ARIZONA.**

Office: 21 South Center St., Phoenix, Ariz. Mine office: Washington, Santa Cruz Co., Ariz. Lloyd B. Christy, president; Geo. H. N. Lahrs, vice-president; F. L. Blumer, treasurer; A. E. Turner, secretary; preceding officers, W. H. Black and Levi Henry, directors. Organized 1903, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands, 40 claims, area 680 acres, in 2 groups, known as the Gross and Phoenix-Hillside, lying south of the Mowry mines, in the Patagonia district, opened by shaft and tunnel, with circa 3,500' of workings, showing ore giving fair assay values in copper, lead, silver and gold. A test shipment from the Chamberlain tunnel to El Paso smelter gave net returns of \$60 per ton. Management plans building a mill.

**FOUR METALS MINING CO.**

**CALIFORNIA.**

Mine office: Keeler, Inyo Co., Cal. Lands, 35 claims, 8 miles from Keeler, showing silver, lead, copper and zinc ores. At last accounts was developing water power on Lone Pine Creek, and had received part of material for an 8-mile aerial tram from mine to smelter. The Swansea smelter was built, circa 1906, at Keeler, and removed later to Swansea, 3 miles north. Employed about 40 men up to time of business depression in fall of 1907.

**FOUR METALS MINING CO.**

**COLORADO.**

Office: Equitable Bldg., St. Louis, Mo. Mine office: Telluride, San Miguel Co., Colo. Letter returned unclaimed from former mine office, Silverton, San Juan Co., Colo. W. Frank Carter, president; R. M. Scruggs, secretary and treasurer. Organized Jan. 17, 1899, under laws of Colorado, with capitalization \$2,000,000, shares \$1 par. Lands were 47 claims, area 516 acres, at Silverton, San Juan county, and sundry claims, known as the Andrus mine, in Ingraham basin, near Telluride. Had a mill at the Palmyra mine, and a steam plant at the Andrus. Presumably idle.

**FOUR METALS MINING CO.**

**UTAH.**

Office: Salt Lake City, Utah. Mine office: Callao, Juab Co., Utah. H. Hugo Brandeis, president; R. P. Hill, secretary. Lands, in the Dugway district, carry auriferous and argentiferous copper, zinc and lead ores. Mine is opened to depth of 400' and has a small concentrator. Idle several years.

**FOURTH OF JULY MINING & MILLING CO.**

**COLORADO.**

Mine office: Eldora, Boulder Co., Colo. Mine is opened by shafts and has a 220' tunnel, planned to cut the Olympic and Fourth of July veins, from which assays of 25 to 45% copper, some lead, 50 to 125 oz. silver, and \$30 to \$80 gold per ton, have been secured. Idle several years.

**DUNCAN FOX Y CA.**

**CHILE.**

Mine office: Cobija, Tocopilla, Antofagasta, Chile. Firm owns a large number of copper claims, near Cobija and elsewhere, in the Tocopilla district of the province of Antofagasta. Presumably idle.

**FOX COPPER MINING & MILLING CO.**

**MONTANA.**

Office and mine: Mullan, Shoshone Co., Mont. W. J. Hughes, president;

W. E. Wilson, vice-president; W. G. Newberry, secretary and treasurer; preceding officers, J. W. Brown, C. A. Adams, Geo. E. Hughes and W. S. Moreidge, directors. Lands, 9 claims, circa 6 miles east of Saltese, on which it is planned to sink a shaft.

**SOCIÉTÉ FRANÇAISE DE ÉTUDIOS.**

SPAIN.

Office: Paris, France. Mine office: El Carpio, Cortegana, Huelva, Spain. Property is sundry old mines of cupriferous iron pyrites, leased from the Compañía de Minas Ferrocobrizas. Presumably idle.

**COMPAGNIE FRANÇAISE DES MINES DE CUivre  
D'AGUAS TENIDAS.**

SPAIN

Dead. Succeeded by Société Française des Pyrites de Huelva. Formerly at Valdelamusa, Huelva, Spain.

**COMPAGNIE FRANÇAISE DES MINES DE  
CUivre D'AKHTALA.**

RUSSIA.

Office: Rue Tronchet, 27 bis, Paris, France. Mine office: Alverdski, Bortschalo, Tiflis, Russia. Lands, circa 5 miles south of Tiflis, include ancient mines of auriferous and argentiferous copper and lead ores. Production, 1903, was approximately 2,000,000 lbs. fine copper. Presumably idle.

**SOCIÉTÉ FRANÇAISE DES PYRITES DE HUELVA.**

SPAIN.

Offices: Rue de Chateaudun, 39, bis Paris, France. Mine office: Valdelamusa, Huelva, Spain. Don Carlos Marchal, agent; Victor Prevost, superintendent. Organized December, 1899, under laws of France, with capitalization 3,500,000 francs, succeeding Société Française des Mines de Cuivre d'Aguas Tenidas. Lands include the Confesonarios mines at Valdelamusa, Perrunal and others at Cortegana, and El Carpio at Huelva, all carrying cupriferous pyrite low in copper tenor but of good sulphur average. Production, 1904, was 157,821 metric tons raw ore and 13 tons cement copper.

**SOCIÉTÉ FRANÇAISE MINIÈRE ET**

SERVIA.

**MÉTALLURGIQUE EN SERBIE.**

Office: 147 Rue de Courcelles, Paris, France. Lands are sundry copper claims in Servia. Idle.

**SOCIÉTÉ FRANÇAISE POUR L'INDUSTRIE  
ET LES MINES.**

FRENCH CONGO.

Office: 45 Boulevard Haussmann, Paris, France. J. Belmone, manager. Property is concessions covering a cupriferous district circa 200 miles from the coast in the French Congo, presumably in the Kouilou-Niari basin, on which some exploratory work was done, 1906-1907.

**SOCIÉTÉ DES MINES ET FONDERIES DE FRANCARDO.**

CORSICA.

Office: 46 Rue de Londres, Paris, France. Mine office: Francardo Ajaccio, Corsica. L. Bizouarne, manager. Organized Oct. 30, 1905, under laws of France, with capitalization 3,600,000 francs, shares 100 francs par. Lands are extensive, including the Morosaglia, San Lorenzo and other old copper mines, claimed to carry an average of 7% ore, which probably is too high. Paid, 1906, a dividend of 10%.

**ANDRES FRANCHY.**

PERÚ.

Mine office: San Marcelo, Yauli, Junín, Perú. Mine has argentiferous copper ores. Was a small producer at last accounts.

**COMPAÑIA MINERA DE FRANCISCO DEL AZUL.**

MEXICO.

Mine office: Matehuala, Catorce, San Luis Potosí, Mex. Has copper ores, developed by tunnel. Idle.

**FRANK HOUGH MINING CO.**

COLORADO.

Mine office: Lake City, Hinsdale Co., Colo. Organized 1907, under laws

Digitized by Google

of Colorado, by A. E. Reynolds, C. F. McKenna and D. Miller. Property is the Frank Hough mine, on Engineer Mountain, carrying ore giving assays up to 27% copper, 47 oz. silver and \$5 gold per ton. Property shipped several hundred tons of high grade argentiferous copper ore under former ownership.

#### **FRANKLIN JUNIOR MINE.**

**MICHIGAN.**

Owned by Franklin Mining Co.

#### **FRANKLIN MINING CO.**

**MICHIGAN.**

Office: 60 Congress St., Boston, Mass. Mine office: Demmon, Houghton Co., Mich. Mill office: Point Mills, Houghton Co., Mich. Employs 575 men. Stephen R. Dow, president; Alvin R. Bailey, secretary and treasurer; Richard M. Edwards, superintendent; preceding officers, John C. Watson, Henry Tolman and Harry M. Howard, directors; Arno Jaenig, clerk; Edward Warne, mill superintendent; Cyrus Truan and John Doney, mining captains. Organized Apr. 3, 1857, under laws of Michigan, with capitalization \$500,000; reincorporated, 1887, for 30 years, and capitalization increased, later, to \$2,500,000, shares \$25 par. Has paid dividends of \$1,240,000. Federal Trust Co., Boston, registrar. Annual meeting, third Wednesday in April.

Lands, 160 acres at the old Franklin, and 1,359 acres at the Franklin Junior, with surface rights to 160 acres additional, and a millsite at Grosse Pointe, of nearly 200 acres area, with one mile of frontage on Portage Lake. The old mine is the SW.  $\frac{1}{4}$  of Section 2, Town 55 North, Range 33 West.

The old Franklin mine, opened on the Pewabic bed, is surrounded on three sides by the Quincy, which has cut off the Franklin from following the lode beyond the boundary lines. Parallel with the Pewabic lode and lying circa 300' west, is the so-called west lode, which carries copper in variable quantities. Several fair stopes were developed thereon, 1905, and worked to some extent through the old openings. A little native silver is produced by the Pewabic lode, which is picked out by boys at the stampmill. Mining is almost exclusively scrambling old ground and robbing pillars, the lower levels having been gutted. The pillars removed are usually of fair grade, but the ground reworked varies greatly, ranging from very good to rock that is almost barren. The old mine has been on its death-bed for 15 years, but continues to supply about 300 tons of rock daily, and predictions of imminent demise have been proven false so frequently that it is unsafe to set any date for its death. No. 3 shaft is 3,200' and No. 5 is 2,850' deep, both bottomed at the Quincy line. No. 5 shaft, damaged by fire, March, 1908, has been repaired.

The Franklin Junior mine, bought 1895, was opened, 1860, as the Albany & Boston, and was reopened, 1882, as the Peninsula. The Franklin Junior consists of two distinct mines on parallel beds, these being the old Albany & Boston mine, opened on the Allouez conglomerate, and an amygdaloid mine, opened 1896-1899, on the Pewabic lode, the Pewabic lying 475' west of and parallel with the Allouez conglomerate. The first work on the Franklin Junior was done on the Pewabic lode, which returned an average of only about 0.45% or 9 lbs. fine copper per ton of rock stamped, hence the amygdaloid shafts were abandoned, February, 1902, and work was transferred to the old Albany & Boston workings, the reopening of which was begun 1900.

The Allouez conglomerate averages 18' to 22' width, with an extreme width of 30', and 3' to 5' of lode rock of very poor grade is left unmined on hanging wall, very little assortment being attempted. The conglomerate is somewhat more regular in its copper contents than to the northward, where it is very bumpy at the Allouez, but is distressingly low in average grade at all points.

No. 1 shaft of the conglomerate mine, size 7x20' over all, with inside measurement of 6'6"x18'6", has 3 compartments and is 2,300' deep. Water

is forked by a Cornish pump with 10' lift, the largest of its size in the Lake district, which handles water very cheaply. The shaft has a wooden combination shaft-rockhouse, 40x50' on the ground and 96' high. A direct-motion hoist, good for 5,000' depth, raises 6-ton skips.

No. 2 conglomerate shaft, 1,200' south of No. 1, is 7x18' over all, and 1,200' in depth, sunk 3' under the footwall to secure solidity. Equipment includes a double-drum hoist good for 3,000' depth, and a steel circular combination shaft-rockhouse, similar to that at No. 2 Centennial, built, 1906, by the Wisconsin Bridge & Iron Co.

In addition to the two conglomerate shafts opened, there is room for two additional shafts, one to the north and one to the south, on the same bed.

The Pewabic lode was tapped, circa 1906, by crosscuts from the conglomerate workings, on the 21st and 23d levels; and considerable drifting was done on the Pewabic bed, giving a rather encouraging showing. The Pewabic gave very poor results when worked formerly, but improved conditions in No. 7, the Mesnard shaft of the Quincy, and the decision of the Quincy management to sink the new Pontiac shaft, only about one mile south of the Franklin Junior, lends hope to the Franklin of better values at depth, and the Pewabic bed, while a very low grade proposition at the Junior mine, can be worked more economically than ten years ago. The Pewabic workings, reopened 1908, after 6 years idleness, were found in bad order. The amygdaloid shafts are numbered from north to south, and are sunk at an angle of 48°30' on a lode varying from 3' to 15', and averaging about 9' width.

The North amygdaloid shaft, about 900' south of the Rhode Island line, is about 1,000' in depth, and probably will be deepened.

No. 1 amygdaloid shaft, 1,100' south of the north shaft, is 1,600' deep.

No. 3 shaft, 1,500' south of No. 2, is about 1,200' deep.

No. 3 shaft, 1,100' south of No. 2, was circa 400' in depth when reopened July, 1908, and has been equipped with a wooden shafthouse and a temporary hoist. Drifting was begun on the 150' level, August, 1908.

In addition to the Allouez conglomerate and Pewabic amygdaloid beds, the Franklin Junior tract carries the Mesnard epidote, Calumet conglomerate and Oceola and Kearsarge amygdaloids, all supposed to have been opened by a 975' crosscut driven west on the Pewabic lode, many years ago, this crosscut showing several amygdaloid beds and one conglomerate carrying copper in small quantities. The formation was found considerably disturbed, and a crosscut at much greater depth might give better results. The Kearsarge lode is supposed to have been cut, 1906, by diamond drill borings, and also by a crosscut, but was found valueless where opened. Dr. L. L. Hubbard estimates, on data furnished by Reginald C. Pryor, that the Kearsarge amygdaloid should lie 1,808' horizontally east of the Allouez conglomerate, which would indicate that the old 975' crosscut, driven 1894, did not reach the Kearsarge lode. In consequence, the old crosscut was extended eastward, 1906, but the Kearsarge bed, or what is supposed to have been such, was not found to carry workable values, at that point and depth.

Surface equipment includes plants at the old mine and Franklin Junior. The former is adequate, but has not been added to for many years, in view of the ultimate exhaustion of the mine. Surface equipment at the Franklin Junior includes substantial and well equipped machine, carpenter and blacksmith shops, engine-houses, boiler-houses, warehouses, changing-house, office and a considerable number of substantial dwellings. There are air-compressors of, 10, 12 and 36 drill capacities.

The mill, of steel, on stone foundations, 177x194' in size, is reached by the Mineral Range railroad. Equipment includes 5 Allis-Chalmers 2-way heads,

with 20x24" cylinders, each capable of crushing 350 tons of conglomerate or 500 tons of amygdaloid rock daily. Each stamp is fed from a 1,000-ton rock-bin, and equipped with hydraulic separators, which remove considerable heavy copper. The washing plant includes, for each head, 20 roughing jigs, 15 finisher jigs, round tables and 1 Overstrom table. The jigs are of the Hodge eccentric type, with center-shield copper discharges, obviating skimming. Foundations have been rebuilt under 2 old heads.

Power for the mill is furnished by a 16x32" Allis-Chalmers engine, with steam supplied by two 500-h. p. Stirling boilers, the boiler-house having a self-supporting brick-lined smokestack of 7' diameter, 165' high, on a 52' brick foundation. Water is furnished by a 15,000,000-gallon Allis-Chalmers vertical compound pump having 12x42" high pressure cylinders and 42x42" low-pressure cylinders, with 47" stroke and plungers of 37½" diameter. Water is drawn through a 36" pipe line, running 200' under the rock to a crib protected by quarter-inch screens. The mill has a 5x12" duplex fire-pump with fire-hose, and is lighted electrically. There is a 267' wharf at the millsite, with 18' of clear water alongside, equipped with coal hoists and sheds. The millsite has about 20 dwellings for employees.

The old mine works about 10 drills and the new mine 25, the old mine producing about 20% of the rock tonnage and 25% of the copper, showing that the rock from the old mine runs 14 to 15 lbs. fine copper per ton, while the conglomerate workings average under 11 lbs. The amount of mass copper secured is very small, averaging only about 1 pound per ton. Mineral is dressed to an average fineness of about 52% only, in order to save fine copper formerly lost in the tailings. Mining and milling costs, 1907, were \$1.78 per ton, mining costs being \$1.16 and stamping cost only 32.5 cents, notwithstanding the very refractory nature of the rock. These figures compare with similar costs of \$1.76 per ton in 1903, notwithstanding increased wages and higher prices for supplies. Costs for 1907, including circa \$20,000 for construction, were \$740,595.65, being nearly 17 cents per pound, as against 15.4 cents in 1906; 15.8 cents in 1905; 15.4 cents in 1904 and 11.3 cents in 1903. The cost per ton of rock stamped was only 2 cents greater in 1907 than in 1903, while copper costs were nearly 6 cents more, the explanation being found in the steadily declining percentage of copper secured from the conglomerate mine of the Franklin Junior. In 1903 the extraction was 15.25 lbs. per ton from rock stamped, and in 1907 was only 11.48 lbs. fine copper per ton of rock stamped.

Production of fine copper has been as follows: 5,309,080 lbs. in 1903; 4,771,050 lbs. in 1904; 4,206,085 lbs. in 1905; 4,571,570 lbs. in 1906, and 4,401,248 lbs. in 1907. Production for 1908 probably will show a small loss from 1907, owing to transference of mining work from the conglomerate to the amygdaloid mine, at the Franklin Junior.

The matter of selling the old Franklin mine to the Quincy Mining Co. is under consideration, as is a tentative plan for the absorption of the Rhode Island mine and acquisition of 640 acres adjoining. The tentative plans call for an increase of capitalization to \$5,000,000, and the issue of 45,000 shares of new Franklin stock, in payment for the Rhode Island property and one square mile of land from St. Mary's Mineral Land Co. Such a merger would give the Franklin company 2 miles of outerop of the Pewabic and Boston & Albany beds, and nearly 2 miles of the strike of the Kearsarge lode. The management is vigorous, efficient and economical in the highest degree. The Junior mine, as developed, is so low in grade, on both the conglomerate and amygdaloid workings, that the only possibility of rendering it successful lies in production on a very large scale, and upon a most economical basis, but

the new deep workings of the Pewabic bed on the Junior are, without question, much more promising than anything ever found in the upper workings.

**FRASER MOUNTAIN COPPER CO.** NEW MEXICO.

Dead. Formerly at Twining, Taos Co., N. M. Described Vol. VI.  
**FRASER RIVER COPPER MINING CO.** BRITISH COLUMBIA.

Letter returned unclaimed from former office, 27 Market St., Camden, N. J. Mine office: Kamloops, Yale district, B. C. Scott H. Richmond, mine manager. Organized 1906, under laws of New Jersey, with capitalization \$1,200,000, shares \$1 par.

**FRATERNITY COPPER CO.** NEVADA.

Office: 220 Shukert Bldg., Kansas City, Mo. Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. Organized under laws of Arizona, with capitalization \$5,000,000, shares \$1 par. Apparently was promoted by I. W. Dumm. Lands, claimed to be 125 acres, advertised to be located "in the midst of Ely's great successes," which seems doubtful. Apparently no work done, and company viewed with suspicion as a mere stock-jobbing enterprise.

**FREDERICK WARDE GOLD & COPPER MINING CO.** NEVADA.

Letter returned unclaimed from former office, Salt Lake City, Utah. Mine office: Goodsprings, Lincoln Co., Nev. Frederick Warde, president; A. W. Raybould, secretary; Jacob Myers, treasurer. Organized March 1, 1904, with capitalization \$300,000, shares \$1 par. Lands are in the Yellow Pine district. Idle and apparently moribund.

**FREELAND CONSOLIDATED MINES CO.** COLORADO.

Dead. Was succeeded, 1904, by Freeland Development & Transportation Co. Formerly at Freeland, Clear Creek Co., Colo.

**FREELAND DEVELOPMENT & TRANSPORTATION CO.** COLORADO.

Office and mine: Idaho Springs, Clear Creek Co., Colo. J. E. McKinnie, president; Jacob J. Elliott, second vice-president; Geo. E. Armstrong, secretary and treasurer; Geo. E. McClelland, managing director; preceding officers, Anthony W. Smith, Jr., Geo. L. Hibbs, John Trathen and John Riley, directors. Organized May, 1904, under laws of Colorado, with capitalization \$5,000,000, shares \$50 par.

Lands, 105 claims, patented, area circa 500 acres, including the Freeland mine and McClelland tunnel, also 30 acres of mill and smelter sites. The mine, opened 1861, is extensively developed, on fissure veins in granite, and is said to have produced upwards of \$4,000,000 in gold, silver, copper and lead, the copper occurring as chalcopyrite. Ore is divided into 2 classes, smelting ore averaging circa \$25 and milling ore about \$12 per ton in value. The main shaft, 1,040' deep, is filled with water, and property is being reopened by the McClelland tunnel, of 3,600' projected length, planned to drain, ventilate and develop the principal mines of the company, at depths of 1,300' to 3,000'.

**FREELAND EXTENSION MINING & MILLING CO.** COLORADO.

Office: care of Dr. R. C. Warne, Mitchell, S. D. Mine office: Idaho Springs, Clear Creek Co., Colo. N. L. Bras, president; Hon. Warren A. Haggott, resident agent; Jas. A. Wilson, superintendent. Lands, 4 claims, 7 miles from Idaho Springs, having a 400' shaft showing ore carrying values mainly in lead, with considerable gold and some copper and silver. Idle since circa 1902.

**FREELAND MERCANTILE & MINING CO.** COLORADO.

Dead. Formerly at Freeland, Clear Creek Co., Colo.

**FRÉMONT COPPER MINES CO.** COLORADO.

Office: care of Standard Securities Co., St. Paul, Minn. Mine office: Copperfield, Frémont Co., Colo. A. J. Taber, general manager. Lands are near

Cotopaxi. Company said, April, 1908, to have ordered full equipment for a mill.

**FREMONT COPPER MINING CO.**

**WYOMING.**

Dead. Lands sold, circa 1907, to St. Joe Mining & Milling Co. Formerly at Riverside, Carbon Co., Wyo.

**FRENCH-AMERICAN MINING CO.**

**NEVADA.**

Mine office: Lane, White Pine Co., Nev. Louis Symon, general manager. Lands include the Macon City group, 3 claims, near Lane, and the Douzette group, said to have produced circa 400,000 tons of lead ore, under a former management, ore so produced averaging 22% lead, 8 oz silver and \$2 gold per ton, with small and variable copper values. Property shows ore assaying up to 25% copper, 11 oz. silver and \$14 gold per ton.

**FRENCH CREEK COPPER CO.**

**PENNSYLVANIA.**

Dead. Formerly at French Creek, Chester Co., Pa.

**FRENCH CREEK MINING CO.**

**WYOMING.**

Letter returned unclaimed from former mine office, Centennial, Albany Co., Wyo. G. W. Morris, superintendent. Capitalization \$1,000,000, shares \$1 par. Lands, near Centennial, show a 3' to 4' vein, with 12" footwall. paystreak carrying high grade auriferous copper ore.

**FRESNO COPPER CO., LTD.**

**CALIFORNIA.**

Office: 188 St. Vincent St., Glasgow, Scotland. Mine office: Clovis, Fresno Co., Cal. Sir John H. N. Graham, Bart., chairman; J. S. MacArthur, consulting engineer; C. E. Levett, Jr., mine manager. Organized Apr. 2, 1902, under laws of Great Britain, with capitalization £400,000, and reorganized, under same title, Feb. 12, 1907, with capitalization £100,000, shares 4s. par. Lands, 480 acres, freehold and 1,880 acres leasehold, including the Blue Park mine, full of water at last accounts, carrying a vein claimed to be 50' wide, having 4 shallow shafts showing ore that was claimed to average 10% copper and \$2 gold per ton. Honest sampling of the principal ore dumps gave average assays of 1.04% copper and 13 cents combined gold and silver values per ton. Ore is cupriferous pyrite, apparently too low in grade to be rendered payable under any process of extraction now in use.

In 1901 H. B. Vercoe bought, for about \$12,000, a ranch in Fresno county, California, having an old 120' shaft, called a copper mine. This ranch was made the basis of the £30,000 California Copper Syndicate, which, in April, 1902, sold 80 acres to the Fresno Copper Co., Ltd., for £105,000 in fully paid shares, company having £400,000 capitalization in shares of £1 par, which went to a premium of more than 100% on the market, giving a market valuation of nearly £1,000,000 for a property costing originally only about £2,400. On the honest report of Fred Siebert, the shares fell from £2 to 2s. per share. The outcome gives a very sinister appearance to the actions of Vercoe, who was the original owner, promoter, vendor and managing director of this company, and who seems to have been an outright swindler. The moral is plain. "Lock the door before and not after the horse is stolen." Apparently property is of little or no value.

**FRIDAY & LOWDEN.**

**CALIFORNIA.**

Office and mine: Redding, Shasta Co., Cal. Property, on which about \$25,000 has been expended, is opened by tunnels. Idle several years.

**SILBER- UND BLEIERZBERGWERK**

**GERMANY.**

**FRIEDRICHSSSEGEN A. G.**

Mine office: Friedrichssgen an den L., Hessen-Nassau, Germany. Max Rosenthal, president; C. Leuschner, superintendent, at last accounts. Production, 1903, was 380 metric tons of argentiferous lead ore, carrying 62.43% lead and 46.93 grams silver per ton; 5,524 metric tons of zinc ore, averaging

46.31% zinc; 50.25 tons of spathic iron ore, and 8 tons of copper ore averaging 12.1% copper and 11.64 grams silver per ton.

**FRISCO CONTACT MINING CO.**

UTAH.

Office: 209 Dooly Blk., Salt Lake City, Utah. Mine office: Frisco, Beaver Co., Utah. D. P. Rohlfig, president and general manager; Patrick Ryan, vice-president; H. S. Young, secretary and treasurer. Organized circa 1903, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par. One-half of the capital stock is supposed to be pooled.

Lands, 18 claims, area circa 340 acres, adjoining the Horn Silver mine on the northeast, carrying what is supposed to be the extension of the Horn Silver vein, which has been opened to a depth of 600' by a 2-compartment shaft, mine having 3 other shafts and several tunnels, with circa one-half mile of workings. Property also shows 4 contact deposits, between limestone and andesite, one ranging up to 150' in width, carrying values up to 20% copper, 45% lead, 3% zinc, 45 oz. silver and 80 cents gold per ton.

Equipment includes a steam plant, with hoists of 50-h. p. and 80-h. p., and a 4-drill air-compressor, with necessary mine buildings. The Horn Silver mine, adjoining, has been a very large producer, and property is considered promising and development well-planned, though apparently as yet no important ore bodies have been developed.

**FRISCO MINING CO.**

UTAH.

Dead. Title changed, circa 1903, to Frisco Contact Mining Co. Formerly at Frisco, Beaver Co., Utah.

**FRONTENAC COPPER CO.**

MICHIGAN.

Office: 12 Ashburton Place, Boston, Mass. Operating office: Calumet, Mich. Mine office: Eagle River, Keweenaw Co., Mich. Quincy A. Shaw, Jr., president; Rodolphe L. Agassiz, vice-president; James MacNaughton, general manager; Geo. A. Flagg, secretary and treasurer; preceding officers and F. W. Hunnewell, directors. Organized June 26, 1905, under laws of Michigan, with capitalization \$500,000, shares \$25 par. Is controlled, through ownership of entire stock issue, by the Calumet & Hecla Mining Co. At end of fiscal year, Apr. 30, 1908, company had cash and bills receivable, \$5,894, with indebtedness of \$96,986.

Lands, 22,268 acres, in Keweenaw county, Michigan, lying mainly south and west of the Manitou, with the old Central mine as the nucleus. The Central mine, worked 1854-1897, on a fissure vein, was a large producer for many years and paid dividends of more than \$2,000,000. Property also includes the Winthrop mine, area 800 acres, in Town 59, Range 39, adjoining the Central. Lands have been slightly prospected by diamond drill borings, but nothing of especial value found. The tract, however, is very extensive, and, in view of developments elsewhere, it is altogether probable that payable mines will be opened, eventually, on the holdings of the Frontenac.

**COMPÀNIA MINERA LA FRONTERIZA.**

MEXICO.

Mine office: Lampazos de Naranjo, Décimo, Nuevo León, Mex. Property is the Buena Vista mine, carrying argentiferous chalcopyrite and sphalerite.

**MINA FRONTON.**

CHILE

Owned by Société des Mines et Usines de Cuivre de Chañaral.

**FUJITA-KUMI & CO.**

JAPAN.

Office: 180 Dojima-Kitamachi, Osaka, Japan. Mine office: Kosaka-mura, Kazuno-gori, Rikuchu, Japan. Denzaburo Fujita, chairman; Heitaro Fujita, vice-chairman; R. Tanaka, general manager; S. Saito, mine superintendent; K. Takenouchi, smelter superintendent. Organized 1875, under laws of Japan, with capitalization £6,000,000. Profits, 1906, were estimated at circa \$3,000,000.

Mining property includes the Kosaka and Towada mines, located in the

midst of high mountains, difficult of access. The Towada mine, opened A. D. 1670, has a vein of 30' to 100' width, carrying disseminated auriferous chalcopyrite and argentite.

The Kosaka mine, located at the extreme northern end of the main island of Nippon, 10 miles from the government railway, is an old silver mine, once apparently nearly worked out but proven, within the last few years, to carry immense underlying masses of copper ore. Country rock is brecciated porphyry tuff, ranging from a fine conglomerate to a coarse grit, with intrusions of liparite and andesite, ore bodies occurring along the contact zone between the tuff and andesite as impregnations of tuff near a dacite contact, practically as blanket veins, lying at an angle of about 45°, with diorite footwall and hanging of andesitic tuff, the hanging-wall being sharply defined, but the ore shading imperceptibly into the footwall. There are 5 of these ore bodies, of immense size, ranging from 20' to 270' in thickness, and proven to length of one-half mile, while drill borings have proven the formation to continue to a depth of 1,700', with width, as shown by open-cuts, of 20' to 140'. There is a zone of mixed sulphides immediately under the hanging wall, averaging about 2% copper, 10% lead, 10% zinc and 0.02 oz. silver, with a trace of gold, the gangue carrying 40 to 45% barium sulphate. Immediately below the mixed zone is a zone of cupriferous pyrite, associated with more or less sphalerite, carrying 1 to 2% copper only, succeeded by silicious ore of 1 to 1.5% copper tenor.

Ore is produced in 3 grades, the first averaging only about 2.25% copper, 2 oz. silver and 65 cents gold per ton, with 12 to 18% zinc and 20 to 35% barite, causing difficult smelting. The second grade of ore is chalcopyrite, with pyritic gangue, comparatively free from zinc, but averaging only about 1.75 to 2% copper. The third grade is silicious ore, very low in copper tenor, but necessary as a flux, all three varieties of ore being charged as a self-fluxing mixture. Average of all grades of ore smelted is about 2% copper only, with small gold and silver values. The mine has fully \$30,000,000 in gross values in sight.

The mine, discovered 1860, and opened 1864 for silver values, has been under the management of the present owners since 1884. Development is by 9 shafts of 41' to 221' depth, and by 5 tunnels, of 250', 714', 1,084', 1,212' and 2,080' length.

Power is generated by a turbine water-wheel, only about 200 h. p. being used at the mine, owing to extraction being mainly by tunnel, about 200 h. p. used for miscellaneous purposes. There are two 8-drill Leyner air-compressors. Buildings include a foundry, of 1,538 square yards area, carpenter-shop of 1,332 square yards, and boiler-shop of 812 square yards, all of wood and brick.

The smelter, one mile from the mine, of about 1,000 tons daily capacity, is one of the most complete in existence, having the very latest equipment throughout. Ore is brought to the works by an aerial tram. Equipment includes 8 Herreshoff calciners, of which 6 are used on ore, 1 on matte and 1 on slags. There are 6 rectangular water-jacket blast-furnaces, of which 2 are used for matting, 2 for casting anodes, 1 for blister copper and 1 for ingot and eake copper. Semi-pyritic smelting is employed, with fuel charges of only about 2% anthracite. Product is a lead-copper matte containing about 20% copper, which is crushed, roasted and remelted in reverberatory furnaces to blister copper. The slag is essentially an iron and barium silicate.

Blister copper from the reverberatories is refined electrolytically, the capacity of the refinery having been greatly increased in 1906. Product in electrolytic copper of the exceptional purity of 99.95%.

The company owns and operates a private electric railway, of 8 miles

length, equipped with 10 locomotives and 400 three-ton ore cars. The company also owns and operates 2 sawmills, and employs about 3,000 hands.

The Kosaka mine was under option, 1906, to an English syndicate, but, fortunately for the owners, the option was not exercised, and the property now is not for sale.

Production, 1906, of the Kosaka mine, was 14,811,152 lbs. fine copper, 29,594,094 grams silver and 290,772 grams gold, and in 1907 was 15,340,218 lbs. fine copper, 9,040,741 momme silver and 79,403 momme gold, copper production showing an increase of almost 50% in 4 years. The Kosaka, notwithstanding the extremely low average tenor of its ores, is the largest copper producer of Japan, and is owned by the strongest financial and commercial interests of the Empire. Not only is it the greatest copper mine of Japan, but it is one of the greatest copper properties of the world, in potential production, owing to the enormous size of its ore bodies.

#### FUKADA MINE.

JAPAN.

Mine office: Fukada-mura, Kuma-gori, Higo, Japan. Country rocks are alternate strata of sandstone and clay-slate of Paleozoic age, ore body having strike and dip corresponding to country rocks, and ranging 5' to 10' in thickness. Ore is chalcopyrite, associated with iron pyrites, and averages 5 to 6% copper. Production, 1900, was only 18,266 lbs. fine copper. Idle.

#### FUNATSU MINE.

JAPAN.

Mine office: Funatsu, Yoshiki-gori, Hida, Japan. Har argentiferous copper ore and made circa 500,000 lbs. fine copper yearly when working. Idle.

#### FURNACE CREEK CONSOLIDATED COPPER CO.

CALIFORNIA.

Office: 604-20 Broad St., New York, N. Y. Mine office: Greenwater, Inyo Co., Cal. O. A. Montgomery, president; Jos. A. Chanson, vice-president; Col. J. B. Lankershim, treasurer; Maj. J. W. A. Off, secretary; preceding officers, C. A. Burcham and C. T. Silby, directors. Organized 1906, with capitalization \$5,000,000, shares \$5 par. Lands, circa 200 acres. Presumably idle.

#### FURNACE CREEK COPPER CO.

CALIFORNIA.

Office: 506 Traders National Bank Bldg., Spokane, Wash. Mine office: Greenwater, Inyo Co., Cal. Patrick Clark, president; W. B. Matteson, vice-president; J. J. Stewart, secretary and treasurer; Abe S. August, assistant secretary; A. B. Harvey, general manager and mine superintendent; Jas. Hanley, foreman. Organized under laws of Washington, with capitalization \$2,250,000, shares \$1 par. Trust Company of America, New York, transfer agent. Guaranty Trust Co., New York, registrar. Shares are listed on the Butte stock exchange.

Lands, 21 claims, 3 fractional, area 350 acres, 2 miles west of Greenwater, held by location, with no adverse, except in case of the three fractional claims. Mine has about 3,000' of workings, No. 1, or Copper Blue shaft, being 500' deep, with crosscuts on the 40', 250' and 500' levels. Work was begun December, 1906, this being the pioneer mine of the Greenwater district, hauling supplies 125 miles from Las Vegas, then the nearest railroad point, and water from Furnace Creek, 25 miles.

Property shows 4 distinct ledges within a cross section of about 600', with a little copper in the country rock between, main ledge being andesite, with a strike of circa N. 30° E., and dip of 75° E., outcrop not being especially prominent. Formation shows intrusive granite and porphyry, with cross dykes of later porphyries, nearly covered by a later flow of rhyolite, and faulted by northeast and southwest faults. Main ledge is reported to be about 200' wide between walls, but apparently has shrunk to width of 30' to 50' on the 250' and 500' levels, and at those depths is effectually leached of copper values, except for carrying pay streaks, up to 3' width, and occasional bunches of cop

gle

per ore, these frequently carrying good gold values, ores being melaconite, cuprite, azurite, malachite, chalcocite and chrysocolla, 2 latter ores predominating. Reports of large ore bodies opened in crosscuts were exaggerated. The wide dyke is claimed to average about 4% copper throughout, but this seems a very serious overestimate. Three 50-ton shipments to Salt Lake smelter returned 16.5 to 17.3% copper, with small gold and silver values. The Tonopah Tidewater Railroad is now only 12 miles from Greenwater.

Equipment includes a 40-h. p. gasoline hoist and fan. An available smelter site has been selected, but the mine has not shown sufficient ore to warrant the building of even a small smelter. Working conditions are somewhat difficult, and development has proven decidedly disappointing. Predictions, April, 1907, that production would begin immediately, were utterly unwarranted, and the property, though by no means devoid of promise, has yet to prove that it is a mine. Management considered competent.

#### FURNACE CREEK EXTENSION COPPER MINING CO. CALIFORNIA.

Office: care of Hon. John MacGinnis, vice-president, Butte, Mont. Mine office: Greenwater, Inyo Co., Cal. Geo. W. Irwin, president; R. B. Nuckles, treasurer; preceding officers, A. J. Campbell, Fayette Harrington, J. D. Simons, John M. Kirk, W. W. Cheeley, Harry Cunningham, E. H. Wilson and W. E. Credon, directors; W. H. Teague, superintendent. Organized Sept. 20, 1906, under laws of Montana, with capitalization \$5,000,000, shares \$5 par. Lands, 13 claims, known as the Brady-Kempland group, adjoining the Furnace Creek Copper Co., which have shown a little ore assaying up to 9.5% copper. Idle at last accounts.

#### FURNACE CREEK GOLD & COPPER CO. CALIFORNIA.

Mine office: Greenwater, Inyo Co., Cal. Organized 1906, by residents of San Francisco and Goldfield. Lands, 5 claims, known as the Red Dog group, claimed to show a 20' vein of copper ore.

#### FURNACE CREEK OXIDE COPPER CO. CALIFORNIA.

Office: care of W. J. Guthrie, president and treasurer, Butte, Mont. Mine office: Greenwater, Inyo Co., Cal. Harry M. Bradhurst, vice-president; John E. Corette, secretary; preceding officers, Carl H. Hand and A. J. Huneke, directors. Organized circa October, 1906, under laws of Arizona, with capitalization \$5,000,000, shares \$5 par. Lands, 6 claims, lying east of the Furnace Creek Copper Co., showing copper stains and having a shaft of circa 100'. Idle.

#### FURNACE CREEK SOUTH EXTENSION COPPER CO. CALIFORNIA.

Office: care of L. M. Sullivan Trust Co., Goldfield, Nev. Mine office: Greenwater, Inyo Co., Cal. O. K. Kingsbury, vice-president; Larry M. Sullivan, second vice-president; J. L. Lindsay, secretary; J. P. Harvey, consulting engineer and director; A. J. Cleary manager. Capitalization \$1,500,000, shares \$1 par. Lands, 120 acres, including the Anxiety and Copper Shoe groups. On the Copper Shoe pinching, the Anxiety became manifest. Has secured selected samples of ore assaying 5 to 30% copper. Promotion, by Shanghai Larry Sullivan, was marked by peculiar methods, though such methods are by no means peculiar to Sullivan. Is not regarded favorably. Idle and apparently moribund.

#### FURNACE VALLEY COPPER CO. CALIFORNIA.

Office: Spokane, Wash. Mine office: Greenwater, Inyo Co., Cal. Patrick Clark, president; W. C. Meyer, vice-president; J. J. Stewart, secretary and treasurer; preceding officers, W. J. C. Meyer, Fred Birney and H. C. Wakefield, directors; A. August, assistant secretary; W. J. Casey, superintendent.

Organized July, 1906, under laws of Washington, with capitalization \$6,250,000, shares \$5 par. Trust Company of America, New York, transfer agent. Shares are listed on the Spokane, Butte and Los Angeles stock ex-

changes. Company realized \$52,525 from stock sales, 1907, and expended \$30,816, ending the year with 133,750 shares of stock unissued.

Lands, 8 claims, unpatented, circa 2 miles west and south of the Furnace Creek Copper Co., showing 2 fissure veins, carrying carbonates assaying 4 to 15% copper in a gossan of 200' claimed width, partly covered by alluvium. Has 2 shafts, deepest 209'. Idle.

#### FURUKURA MINE.

JAPAN.

Owned by Furukawa Mining Co.

#### FURUKAWA MINING CO.

JAPAN.

Office: 1, Yayeusucho, Kojimachi-ku, Tokio, Japan. Smelter office: Yamamoto-gori, Akita-ken, Shimotsuke, Japan. Work offices: Kamitsuga-gori, Tochigiken, Japan, and Yanagiwaramachi, Honjyoku, Tokio, Japan. Mine offices of the various properties are as follows: Ashio Mine, Kamitsuga-gori, Tochigi-ken, Shimotsuke, Japan; Ani Mine, Kitaskita-gori, Akita-ken, Ugo, Japan; Kusakura Mine, Higashikanbara-gori, Niigata-ken, Echigo, Japan; Furukura Mine, Kazuno-gori, Akita-ken, Rikuchu, Japan; Nagamatsu Mine, Nishimurayama-gori, Yamagata-ken, Uzeh, Japan; Mizusawa Mine, Waka-gori, Iwate-ken, Rikuchu, Japan; Otori Mine, Higashi-Tagawa-gori, Yamagata-ken, Japan; Kune Mine, Iwata-gori, Shizuoka-ken, Totomi, Japan; Innai Mine, Okachigori, Akita-ken, Ugo, Japan.

Junkiche Furukawa, president; R. Kondo, general manager; M. Otagawa, assistant manager; K. Asano, consulting engineer. Organized 1905, as successor of Ichibei Furukawa.

Property includes 8 copper mines, 1 silver mine, a smelter, 2 copper works, several collieries and an extensive coking plant. The various mines are described, in detail, in the following paragraphs:

The Ashio mine, in the province of Shimotsuke, about 100 miles northwest of Tokio, was discovered A. D. 1610, and developed by the Tokugawa government, reaching a productive capacity of 2,000,000 to 3,000,000 lbs. fine copper yearly, during the latter half of the Seventeenth Century, rendering it one of the largest, if not the largest copper mine, of that era, and as the output was in excess of domestic demand, the surplus was exported to Holland. The mine came into the possession of the late Ichibei Furukawa in 1877, in such poor condition that its yield was only about 400,000 lbs. of copper yearly, but, by good management and thorough development, coupled with the introduction of modern methods and machinery, was made the foremost copper mine of Japan.

The Ashio shows country rocks of Paleozoic clay-slate, sandstone and hornblende, with liparite intrusions, carrying literally hundreds of metalliferous veins that traverse the liparite, but thin out in the Paleozoic rocks. About 30 veins are worked, these averaging 5' to 6' in width, with ore chutes of great length, averaging nearly or quite 1,000'. There are 7 main veins, of 6' to 7" average width, all with sharp dips, carrying a little melaconite and bornite, with galena, sphalerite, arsenopyrite and pyrite, having a quartz and alumina gangue, principal ore values being in the sulphides. Deepest workings are 1,250', and ores range up to 10% in copper tenor, though giving average smelter returns of only about 4% copper, with small silver values.

The Ashio mine is 9 miles from Nikko, the nearest railroad station. Supplies are brought in tram-cars, hauled by bullocks, to the foot of the mountains, 5 miles from Nikko, and transported thence to the mine by 2 aerial trams, each about 19,500' in length, having some very long and high spans, these crossing the crest of the mountains and descending on the other side to Ashio. Power for operating the trams is furnished by a plant with Pelton water-wheel, near Ashio. There also is a horse-tram connecting the different mines and smelters. The mine has steam, water and electric power, there being 5 electric plants,

developing about 2,500-h. p., generated mainly from adjacent streams. The mine equipment is modern throughout, the machinery being mainly of American and German manufacture. The mine has electric underground haulage, and ore is broken mainly by power drills.

The reduction works at the Ashio include 3 concentrators, and a mill with 25 gravity stamps. The bulk of the ore mined is concentrated to an average tenor of 15% copper, though a little hand-selected ore of high grade goes direct to the smelters.

The Ashio smelter, of 750 tons daily capacity, completed 1904, has 3 water-jacket blast-furnaces. The converter department has a 40-ton traveling crane, 2 stands, 7 shells and a silica mill. The power plant has blowers for the blast-furnaces and air-compressors for the converters.

The Ashio mine alone employs about 12,000 people, including forces at the copper mines, flux quarries, charcoal kilns, smelters, offices, etc. The force includes men, women and children, the females and children being employed at light labor only. Wages, while low according to western standards, are much higher than the average in Japan, miners earning 40 cents to \$1 per day, and smelter men about 30 cents per day, while engineers, carpenters, smiths and other craftsmen are paid 50 cents to \$1 per day, and boys and girls in the mills earn 10 to 25 cents per day. There were very serious labor troubles in February, 1907, leading to the burning of buildings, and rioting that was put down by troops. Wages were raised in 1907. Production of the Ashio mine has shown little change for the past 5 years, having been 15,267,210 lbs. fine copper in 1903, 14,622,000 lbs. in 1904; 14,820,192 lbs. in 1906 and 13,972,498 lbs. in 1907.

The Ani mine, Shigeo Kasai, mine manager, is a group of ancient properties in the province of Ugo, modernized about the beginning of the century. The Ani carries auriferous and argentiferous copper sulphides, associated with argentiferous galena, considerable silver being secured as a by-product. Equipment includes steam, water and electric power, with a very good modern mining and reduction plant. The works have a 10-stamp mill and a 150-ton smelter, with about 2,500 employees. Production, 1903, was 2,089,279 lbs. fine copper, and 1907 was 2,737,011 lbs.

The Kusakura mine, S. Gamoh, manager, in the province of Echigo, opened in the Eighteenth Century, was bought by the predecessor of the present company in 1870. The property shows 4 nearly parallel main veins, of less than 12" average width, though occasionally widening to several feet, traversing porphyry and andesite, the upper workings showing cuprite and bornite, succeeded by chalcopyrite, associated with pyrite and galena, in the lower levels, principal values being in the sulphide ores. Equipment includes steam and electric power, and a small smelter, making blister copper of 98.5% average tenor. About 1,000 hands are employed. Production, 1903, was 1,244,723 lbs., and in 1907 was 1,012,043 lbs. fine copper.

The Furukura mine, in the province of Rikachu, was discovered A. D. 1762, and operated 1765-1794, remaining idle until 1868, when reopened. This property has numerous veins traversing andesite, carrying chalcopyrite, associated with pyrite, hematite and occasional galena and sphalerite, with a clay gouge. Production was 601,199 lbs. in 1903; 746,605 lbs. in 1906, and 656,893 lbs. fine copper in 1907.

The Nagamatsu mine, in the province of Uzen, shows rocks of Tertiary tuff and shale, traversed by andesite dykes, carrying numerous veins, mainly parallel, with nearly north and south strike and steep dip to the east. The Okubi, which is the main vein, has an average width of 6" to 12" only, with maximum of 24", carrying chalcopyrite associated with pyrite and occasional

sphalerite, with quartz gangue. Production, 1907, was 603,514 lbs. fine copper and 101,020 momme silver.

The Mizusawa mine, in the province of Rikuchu, has two 3' veins, at the junction of granite and liparite, carrying chalcopyrite with quartz gangue. Production, 1907, was 490,047 lbs. fine copper.

The Kune mine, in the province of Totomi, opened A. D. 1726, has 3 beds of ore, the upper of 100' thickness, the middle of 12' and the lowest of about 6' average thickness, latter split into two 2' seams at the bottom. Ore is chalcopyrite, associated with pyrite, the richer portions averaging 6 to 7% in copper tenor. Production, 1898, was 137,686 lbs. fine copper, and for 1906 output was given by company as circa 37,000 tons of copper ore.

The Otori mine made, 1904, circa 187,000 lbs. fine copper, and in 1907 produced 261,902 lbs. fine copper and 68,791 momme silver.

The Innai mine, near the southern boundary of the province of Ugo, was discovered A. D. 1696, and about the beginning of the Nineteenth Century became important, silver production rising to about 100,000 momme monthly, circa 1840. The mine fell into the hands of Ichibei Furukawa in 1882. The property shows augite-andesite and propylite, having numerous veins ranging from 2' to 20' width, carrying chalcopyrite, pyrargyrite, argentite and stephanite, with quartz gangue. A second vein, of 1' to 4' width, carries similar ores in connection with galena, sphalerite and pyrite, while a third vein carries chalcopyrite, galena and sphalerite only. Property, while called a silver mine, is an important producer of copper, with considerable gold values, production, 1907, having been 568,480 lbs. fine copper, 1,206,846 momme silver and 20,193 momme gold.

In addition to its metalliferous mines, the company operates extensive coal mines, known as the Western Collieries, at Kaho-gori, Fukuoka-ken, producing about 350,000 tons of coal yearly, and operates coal mines also at Kazuno-gori, Eishikasho, Echigo. The Fukagawa coke works, at Minimakatsushika-gori, Tekio, are of about 16,000 tons annual capacity.

The Shinonome smelter, at Yamamoto-gori, Akita-ken, has an annual capacity of about 2,000,000 lbs. ingot copper, and 225,000 lbs. pig lead, also turning out small quantities of gold and silver.

The Nikko copper works, at Kamitsuga-gori, Tochigi-ken, is a refinery, making about 8,000,000 lbs. of electrolytic copper yearly.

The Honjyo copper works, at Yanagiwaramachi, Honjyoku, Tokio, has an electrolytic refinery, but is devoted mainly to the manufacture of sheets and wires, having an annual capacity of about 9,000,000 lbs., and turning out about 4,600,000 lbs. yearly of copper wire, 550,000 lbs. of electrolytic copper, and circa 3,300 lbs. fine silver.

The management of the Furukawa Mining Co. is noted for its progressive-ness, and responsible heads of departments are encouraged to travel, at the company's expense, through the principal mining and metallurgical centres of Europe and America, thus keeping the company fully abreast of international progress, in every branch of its business. Production, 1905, was 23,780,573 lbs. fine copper and 1907 was 20,302,378 lbs. fine copper.

#### FUTURITY MINING & MILLING CO.

#### COLORADO.

Dead. Formerly at Newett, Chaffee Co., Colo. Described Vol. VI.

#### COMPAÑIA GADITANA DE MINAS.

#### SPAIN.

Office: Cadiz, Spain. Mine office: Aznalcóllar, Sevilla, Spain. Capitalization, 8,000,000 pesetas, shares 500 pesetas par; debentures, 2,000,000 pesetas authorized. Marquis de Fiel Pérez Calixto, president; Don José Luis Lacave, treasurer; Don Salvador Viniegra, secretary. Property is La Caridad group of mines, carrying large bodies of cupriferous pyrites, with considerable develop-

ment. Company built and owns a 34-kilometer railroad, from Aznalcóllar to the Guadaluquivir river. Management considered good and property promising.

**GAGNON MINE.****MONTANA.**

Owned by Trenton Mining & Development Co.

**GALENA BAY MINING CO.****ALASKA.**

Office: 402 Railway Exchange Bldg., Chicago, Ills. Mine office: Valdez, Prince William Sound, Alaska. Benj. F. Millard, president; C. A. Hay, vice-president; L. J. Rusk, treasurer; Albert Barge, secretary; John S. Jury, assistant secretary. Organized under laws of Washington, with capitalization \$500,000, shares \$1 par. Lands, on Galena Bay, 3 miles from tidewater and about 35 miles from Valdez, include the Vesuvius group of 25 claims, held under bond and lease, having a 1,000' tunnel, the Mullen group of 6 claims, and 12 miscellaneous claims in the Kotsina Valley, the Mullen group being on Copper Creek, also a 1,300-acre townsite. Company plans a hydro-electric power installation, to transmit energy 2 miles to the Vesuvius mine, and is said to have ordered a 1,700' Leschen aerial tram.

**GALENA COPPER MINING CO.****WASHINGTON.**

Office: 115 Marion St., Seattle, Wash. Mine office: Index, Snohomish Co., Wash. L. E. Rader, president; H. M. Williams, vice-president; John M. Snook, secretary; Francis X. Waldron, treasurer; Judson C. Hubbard, manager. Organized Jan. 2, 1906, under laws of Washington, with capitalization \$1,000,000, shares \$1 par.

Lands, 16 claims, in the Silver Creek district, showing mainly chalcopyrite, in veins of 3' to 18' width, said to have given assays of 18.5% copper, 2.9 oz. silver and \$4 gold per ton. Development is said to be by tunnel, and a shipment of ore to the Tacoma smelter is said to have given net returns of \$30 per ton. Management is said to expect a railroad within one-half mile of the mine. Presumably idle.

**GALENA MINE.****BRITISH COLUMBIA.**

Mine office: Howe Sound, New Westminster district, B. C. J. H. Scott, manager, at last accounts. Lands, sundry claims about 6 miles south of the Britannia mine, located one-half mile from tidewater, on Howe Sound, opened by a 100' tunnel on a 5' vein of copper ore. Idle.

**GALENA RIDGE MINING CO.****WYOMING.**

Mine office: Meteteetse, Big Horn Co., Wyo. Lands, circa 1,200 acres, patented, also timber lands and water-rights, showing 5 veins of good width, on one of which the 450' Oregon tunnel shows ores carrying copper, lead, silver and gold values, with quartz gangue. Small sample shipments to Denver are said to have given good returns. Development is by a 1,400' crosscut tunnel, planned to be driven about 5,000'. Has a Pelton water-wheel and 10-drill air-compressor. Idle.

**GALICE CONSOLIDATED MINING CO.****OREGON.**

Dead. Formerly at Galice, Josephine Co., Ore.

**GALIZURSKI WORKS.****RUSSIA.**

Mine office: Galizursk, Elizabethopol, Russia. S. Varavov, owner. Latest recorded production, 1899, was 1,390,095 lbs. fine copper. Presumably idle.

**GALLAHER MINING & MILLING CO.****WASHINGTON.**

Office: 705 First Ave., Seattle, Wash. Mine office: Cle Elum, Kittitas Co., Wash. Edward Peterson, managing agent. Organized under laws of Washington, with capitalization \$2,000,000, shares \$1 par. Lands, 10 claims, area 200 acres, showing copper ledges, also a vein of cinnabar of about 1% tenor in mercury. Development is by a 70' shaft on the Copper King claim, and by tunnels of 380' on the Last Chance, 310' on the Copper Prince, 128' on the Navidad and 120' on the Dolphin. Company claims a 3' vein of bornite in the

Legal Tender, a 4' vein on the Last Chance, and a 3' vein on the Copper King. About \$15,000 has been expended on development. Idle.

**GALLATIN COUNTY BASIN COPPER MINING CO.** MONTANA.

Office and mine: Bozeman, Gallatin Co., Mont. Organized January, 1906, under laws of Montana, with capitalization \$100,000. Presumably idle.

**GALLATIN MINE.** MONTANA.

Owned by Anaconda Copper Mining Co.

**GAMNES COPPER CO., LTD.** NORWAY.

Office: 1 Gresham House, London, E. C., Eng. Mine office: Karlsö, Tromsö, Norway. H. Godber, secretary; Blackmore, Howard and Tazewell, mine managers. Organized Oct. 12, 1901, under laws of Great Britain, with capitalization £25,000, shares £1 par. Property is mining claims and rights on Gamnes Farm.

**GAP MINE.** PENNSYLVANIA.

Mine office: Gap, Lancaster Co., Pa. Has nickeliferous and cupriferous pyrorhotite, somewhat similar to the ore of the Sudbury district of Ontario, and was the principal American nickel producer for two decades. Idle since 1893.

**TIBURCIO GARCÍA.** MEXICO.

Mine office: Galeana, Chihuahua, Mex. Jesús Ontiveros, manager. Property is La Gloria mine, carrying auriferous and argentiferous copper ores. Has water power and a 20-ton mill with 1 Blake crusher. Employed circa 50 men at last accounts.

**GARDINER, WORTHEN & GOSS CO.** ARIZONA.

Office and works: Tucson, Pima Co., Ariz. B. L. Worthen, general manager. Has a smelter with 30-ton experimental water-jacket blast-furnace, burning crude California petroleum, tests of which were said to be satisfactory. Idle.

**GARDNER HILL MINE.** NORTH CAROLINA.

Letter returned unclaimed from former mine office, Jamestown, Guilford Co., N. C. Mine is opened by a 110' shaft, showing cupriferous iron pyrites in 3 veins, ranging from a few inches to 3' in width. Idle for many years.

**COMPAÑIA MINERA GARDUÑO y ANEXAS.** MEXICO.

Office: Puente Alvarado 21, Mexico, D. F. Mine office: Placeres del Oro, Mina, Guerrero, Mex. Lawrence F. Bedford, president; A. H. Stockdale, manager. Mine, opened for gold, has silver-lead and auriferous copper ores. Has water power and employed circa 100 men at last accounts.

**GARFIELD MINING CO.** UTAH.

Dead. Formerly at Brigham, Box Elder Co., Utah.

**GARFIELD-SALVADOR MINING CO.** MONTANA.

Letter returned unclaimed from former office and mine, Butte, Silver Bow Co., Mont. J. S. Baer, president; J. C. Stettheimer, treasurer and general manager. Organized June 5, 1906, under laws of Montana, with capitalization \$1,000,000, shares \$1 par. Lands, 2 claims, near the St. Lawrence mine and adjoining the Raven on the west. Has a 180' two-compartment shaft. Idle and apparently moribund.

**GARLAND COPPER MINING CO.** WYOMING.

Office: 232 West Cedar St., Kalamazoo, Mich. Mine office: Encampment, Carbon Co., Wyo. Dr. C. K. LaHuis, president; T. J. Upjohn, vice-president; Edwin Gillis, secretary and treasurer; preceding officers, E. S. Drury, O. F. Wickham and T. H. Palmer, directors. Organized July 10, 1902, under laws of Wyoming, with capitalization \$1,500,000, shares \$1 par; issued, \$700,000. Lands, 4 claims, area 80 acres, in the Battle Lake district, having a 40' shaft and a 100' tunnel, on a vein of 50' estimated average and 300' maximum width,

carrying a hematite gossan, supposed to be a continuation of the Itmay vein.  
Idle.

**GARNET GOLD MINING CO.**

**MONTANA.**

Mine office: Pony, Madison Co., Mont. E. L. Ballou, manager. Has auriferous and argentiferous lead and copper ores with water power and 20-stamp mill, copper values being secured as a by-product. Employs about 40 men.

**GARRETSON-SAHUARIPA CO.**

**MEXICO.**

Office: Ellicott Square Bldg., Buffalo, N. Y. Mine office: Sahuaripa, Sonora, Mex. Samuel E. Garretson, manager. Mine, opened by shaft, is said to have a fair showing of high grade auriferous and argentiferous copper ore. Has a steam plant, 50-ton mill and 50-ton Garretson pyritic furnace. Presumably idle.

**GARRISON GOLD & COPPER MINING CO.**

**UTAH.**

Dead. Merged, 1907, in Garrison Monster Mining Co. Formerly at Ibapah, Tooele Co., Utah.

**GARRISON-MONSTER MINING CO.**

**UTAH.**

Office: Salt Lake City, Utah. Mine office: Ibapah, Tooele Co., Utah. J. P. Gardner, president; J. S. Garrison, vice-president; S. W. Morrison, treasurer; H. B. Windsor, secretary. Organized under laws of Nevada, with capitalization 1,000,000 shares, presumably \$1 par, as a merger of the Garrison Gold & Copper Mining Co. and Monster Mining Co. Lands, on Dutch Mountain, in the Clifton district, circa 40 miles from Wendover, the nearest railroad station, have about 3,500' of workings, said to show considerable bodies of silver-lead ore.

**GAVANZA MINING & MILLING CO.**

**CALIFORNIA.**

Mine office: Cima, San Bernardino Co., Cal. J. M. Banfield, superintendent. Lands, on the western side of New York Mountain, near Bryant station, on the Salt Lake Railroad, have about a quarter mile of workings, showing considerable auriferous and argentiferous copper and lead ore. Plans a 100-ton mill and reduction plant, with four 10-ton tanks to use the hyposulphite leaching process.

**COMPÀNIA DE MINAS i FUNDICIONES DE GATICO.**

**CHILE.**

Dead. Succeeded, March 10, 1905, by Compañía Minera de Gatico. Formerly at Gatico, Cobija, Antofagasta, Chile.

**COMPÀNIA MINERA DE GATICO.**

**CHILE.**

Office: Casilla 627, Santiago de Chile. Mine and works office: Gatico, Cobija, Antofagasta, Chile. Geo. W. Waters, manager. Organized March 10, 1905, under laws of Chile, with capitalization 6,000,000 pesos, shares 100 pesos par. Property includes El Toldo, Michilla and Gatico mines, latter opened 1891. La Michilla group, 6 kilometers north of Michilla Cove, at an elevation of 3,000 meters above sea-level, has bedded veins with pockets of oxidized ores carrying 5 to 6% copper, though tenor of ore can be brought up to nearly 10% by selection. El Toldo mine, 4 kilometers northeast of the smelter, has a nearly vertical fissure vein of about 1 meter width, opened to depth of 170 meters, carrying 7% chalcopyrite with quartz gangue. Production of El Toldo, 1904, was circa 10,000 metric tons of selected ore averaging 10.5% copper tenor. El Toldo mine is connected with the smelter by a Ropeways Syndicate aerial tram, 3,700 meters long, with drop of 200 meters, permitting operation by gravity, and reducing cost of ore transportation to smelter from former cost of 4.5 pesos to one-half peso per metric ton, effecting a saving of about 75,000 pesos yearly. Also has a 5½-kilometer Bleichert aerial tram from Michilla mines to Michilla Cove, operated by gravity, whence ores are shipped to smelter.

Smelter, at the port of Gatico, 30 miles south of Tocopilla, and 83 miles

north of Antofagasta, has reverberatory furnaces and a 38x144" Allis-Chalmers blast-furnace. Converter department has pneumatic stands and 5 cylindrical shells, with an Allis-Chalmers duplex air-compressor and a 110-h. p. electric motor. Power plant includes two 200-h. p. boilers, Green fuel economizer and dynamo with capacity of 13 arc and 150 incandescent lamps. Water is re-used, works having a reservoir of 50,000 cubic meters capacity. Fuel is imported coke, slags averaging 0.5% copper. Smelter costs at old plant were 21.5 pesos per metric ton, and in the remodeled plant are 12.61 pesos per ton. Company also has an old smelter at Michilla Cove, running intermittently, this having a 36x84" water-jacket blast-furnace, 2 reverberatories and a converter plant. Production, 1903, was 2,565,503 lbs. fine copper, and for 1907 should have been nearly or quite 4,500,000 lbs. fine copper.

**GAVILANES MINING & MILLING CO.****MEXICO.**

Office: 819 Chamber of Commerce, Chicago, Ills. Letter returned unclaimed from former mine office, Gavilanes, Durango, Mex. C. A. Wightman, president; John A. Boland, secretary and treasurer; James E. Boland, manager. Organized Sept. 1, 1904, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands, 500 acres, 30,000 acres of timber and grazing lands, and water-rights to 10 miles of the Piaxtla and Pilar rivers. Lands include the old Gavilanes silver mine, a property said to have produced, according to official records, 80,000,000 oz. silver, also sundry undeveloped copper veins. Idle.

**CHILE.**

**SUCESIÓN FRANCISCO GEISSE.** Office and mines: El Espino, Combarbalá, Coquimbo, Chile. Property includes El Espino mine, opened 1896, which made about 100,000 lbs. fine copper yearly when working, and the Fundición El Pupio, a small smelter. Idle.

**GEISSE HERMANOS.****CHILE.**

Office and works: Illapel, Coquimbo, Chile. Mine office: Mineral de Bella Vista, Illapel, Coquimbo, Chile. Property includes Los Trabos, Bella Vista and Tongo mines. The Bella Vista mine is about 150 meters deep, with workings for about 150 meters in horizontal length. The Tongo mine, at Mineral de Tongo, Illapel, has a vein of 2 to 3 meters width, opened to depth of 160 meters, and, 1903, employing 90 men, produced 900 metric tons of ore averaging 9% copper and 25 grams gold per ton. The Trabos mine in the same year produced 720 metric tons of ore of 20% copper tenor. Has a smelter with blast and reverberatory furnaces, producing ejes of circa 50% copper tenor and bars of 97% tenor. Production, 1903, was 603,919 lbs. fine copper.

**GEM CONSOLIDATED MINES CO.****COLORADO.**

Office: 341 Sixth Ave., Pittsburgh, Pa. Mine office: Idaho Springs, Clear Creek Co., Colo. Col. J. M. Guffey, president; John H. Galey, vice-president; W. S. Watson, secretary; Henry B. Clifford, resident director; W. E. Renshaw, general manager; J. Kaughman, mill superintendent. Organized Jan. 1, 1907, under laws of Colorado, with capitalization \$5,000,000, shares \$1 par. Lands, 10 claims, patented, also a millsite, showing a vein of 20' to 50' width, traceable circa 3 miles, carrying sulphide ores assaying up to 37% copper, 10 oz. silver and \$18 gold per ton. Mine has about 5 miles of workings, estimated to show 1,000,000 tons of ore, with 300,000 tons blocked out for stoping. Has a 550-h. p. hydro-electric plant, using 350 h. p. at the mine and 200 h. p. at the mill. Has 4 hoists, good for 3,000' depth, and an 18-drill Ingersoll-Rand air-compressor. Buildings include a 40x50' machine shop, carpenter shop, smithy, etc., and a 100-ton stamp mill. Production, 1907, estimated by company at circa \$150,000 in value.

**GEMINI-GODIVA CONSOLIDATED MINING CO.****UTAH.**

Office: Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. John Q. Packard, president; Jackson C. McChrystal, general superintendent. Was a

merger of the Gemini and Godiva mining companies, the Gemini having paid about \$300,000 in dividends. Mine, opened to depth of 1,600', has a vein of 15' to 20' width, carrying auriferous and argentiferous lead and copper ores, the silver-lead ores averaging 12% lead and 40 oz. silver per ton, while the bottom level shows argentiferous copper ore of about 3% copper tenor. Production averages circa 1,500 tons of ore monthly, mainly silver-lead ores, sold under a long-term contract to the United States Smelting & Refining Co. Has steam and water power, employing circa 75 men.

**GEMINI MINING CO.****UTAH.**

Dead. Merged, circa 1906, in Gemini-Godiva Consolidated Mining Co. Formerly at Eureka, Juab Co., Utah.

**GEM MINE.****MONTANA.**

Owned by North Butte Mining Co.

**GEM TURQUOISE & COPPER CO.****NEW MEXICO.**

Office: 37 Maiden Lane, New York, N. Y. Mine office: Silver City, Grant Co., N. M. Property is a turquoise mine, in the Burro Mountains. Idle.

**GENERAL COMPANY OF SPANISH MINES, LTD.****SPAIN.**

Office: 70 Queen Victoria St., London, E. C., Eng. Mine office: Cortegana, Huelva, Spain. T. Greenhill, secretary. Organized March 9, 1904, under laws of Great Britain, as Telesforo Copper Co., Ltd., with capitalization £50,000, shares £1 par; issued, £10,750; name changed, June, 1907, to present title. Lands are El Telesforo and La Segura mines. Presumably idle.

**GENERAL DEVELOPMENT CO.****U. S. A.**

Office: 42 Broadway, New York, N. Y. Mine office: Butte, Silver Bow Co., Mont. Adolph Lewisohn, president; J. H. Susmann, secretary and treasurer; J. Parke Channing, engineer; preceding officers, A. Ruhlander, W. H. Nichols, J. Langeloth, Samuel Untermeyer, A. Lehman, Herman Sielcken, D. M. Hyman and H. M. Davis, directors.

Organized 1906, under laws of Delaware, with capitalization \$2,000,000, shares \$100 par. In controlled by the Lewisohn interests and operated as a close corporation. Controls, through stock ownership, the Montana Consolidated Mining Co., Colorado Gold Dredging Co. and Miami Copper Co., with interests in Montana, Colorado, Arizona, Canada and Mexico. Is supposed to hold the Keystone property, at Globe, Arizona, under option. The copper properties are described separately, under their respective titles.

**GENERAL DEVELOPMENT CO. OF ARIZONA.****ARIZONA.**

Office: P. O. Box 1052, Globe, Gila Co., Ariz. H. E. Kelly, president; Jas. A. Bordeaux, vice-president and general manager; J. H. Connell, secretary. Organized June 8, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$10 par, to do a general mining, development and promotion business.

**GENERAL GRANT MINING CO.****COLORADO.**

Dead. Formerly at West Creek, Douglas Co., Colo.

**GENERAL MINES CO.****MONTANA.**

Office: 23 Broad St., New York, N. Y. Letter returned unclaimed from former mine office, Helena, Lewis & Clark Co., Mont. Geo. Hyatt Robinson, president; Walter B. Tipton, vice-president; F. J. Chapman, secretary and treasurer; B. Frank Johnston, manager. Lands, in Avalanche Gulch, across the Missouri river from Helena, have a 28' vein, opened by a 500' crosscut tunnel, showing auriferous and argentiferous copper sulphides.

**GENESEE COPPER CO.****CALIFORNIA.**

Mine office: Genesee, Plumas Co., Cal. Lands, 33 claims. Idle since circa April, 1906.

**GEORGE A. TREADWELL MINING CO.****ARIZONA.**

Office: 27 William St., New York, N. Y. Mine office: Mayer, Yavapai Co., Ariz. F. W. Wood, president and general manager; Miss Myra B. Martin,

secretary; Frank W. Giroux, superintendent. Organized February, 1900, under laws of West Virginia, with capitalization \$3,000,000, increased, Jan. 21, 1905, to \$3,500,000, shares \$10 par. Was organized by "Gen." Walter S. Logan, "Prof." Geo. A. Treadwell and others. First act of company was illegal, being the purchase, from directors, who voted for such purchase, of sundry mining claims. Controls the Brookshire Mining Co., through ownership of 80% of stock. Has upwards of 2,000 shareholders, of whom 1,410, in August, 1907, were holders of 50 shares or less, more than half being women, duped by this gang of thieves. Annual meeting, first Wednesday in February.

Lands, formerly reported as 102 claims, patented, area 1,861 acres, were reported by the company, Apr. 10, 1906, as 60 claims, patented, area 1,200 acres, with 180 acres of mill and smelter sites, in the Jerome, Big Bug, Peck and Agua Fria districts. These lands were reported to include the Brookshire, Hackberry, Boggs, Iron Queen and Cliff mines, and previously included also the Badger, Pastime, Crystal, Wallace and Agua Fria groups. Country rocks are Yavapai schists and slate, with rhyolite intrusions, ore bodies occurring mainly as replacements in slate, following the rhyolitic intrusions. Five ore bodies have been developed, to various extents, these, of about 5' average width, formerly having been claimed by the company to give average assays of 5% copper, 5 oz. silver and \$5 to \$50 gold per ton, from chalcopyrite, but claimed, 1906, by the company, to give average assays, from bornite and chalcopyrite, of 3% copper, 10% zinc, 5 oz. silver and \$2 gold per ton, which ores, by reason of low contents in copper, gold and silver, and excess of zinc, are of small value.

Various mines are developed by shafts of 485', 350', 375' and 100', and by tunnels and drifts of circa 7,700' aggregate length, with numerous shallow shafts and short tunnels.

The Brookshire group, which has the principal development, has upwards of one-half mile of workings, showing considerable concentrating ore of 4 to 5% copper tenor, with fair gold and silver values. Work was abandoned on this property in 1902. The Hackberry mine, opened to 500' depth, has nearly one-half mile of workings, on 2 parallel veins of 7' and 9' claimed width, former claimed to carry ore averaging 10% copper and \$10 gold per ton, which is untrue. The Boggs and Iron Queen mines have considerable development, as also has the Cliff, on which work was abandoned in 1902. Mines, as a whole, are estimated by the company to show 80,000 tons of ore, with 40,000 tons blocked out for stoping, which, although a considerable decrease from former claims, is a gross exaggeration. Practically all of the company's statements regarding rich ores and large ore bodies are fairy tales. The Boggs mine, which is idle, is held subject to a mortgage of \$150,150.40, which never will be paid.

Mine equipment includes a 240-h. p. steam plant, with four 40-h. p. 12x14" hoists and a 2-drill Knowles air-compressor. Buildings include a 40x65' wooden machine-shop, 20x30' smithy, boarding-house, bunk-house and dwellings, with a total of about 40 buildings, including an office building put up on lands not owned, and not even leased, which is a fair sample of the business methods of the company.

A 75x100' wooden concentrator has two 24" Dodge crushers, 3 centrifugal crushers and 2 tables, and is rated by company at 200 tons daily capacity, which, like all its other claims, is untrue.

The company controls, or is supposed to control, a private narrow-gauge railway, known as the Hackberry & Iron Queen railroad, of circa 5 miles length, touching the Hackberry, Boggs and Queen mines and connecting with the Santa Fé line at Arizona City. Equipment includes 2 locomotives and 9 cars, unless the rolling stock has been stolen recently by some of the officers.

An 8-mile pipe-line, of 4" diameter, costing \$32,118.21, was supposed to

bring water from Crystal Springs, under a head of 1,150', but is out of commission.

The company has three smelters, two worthless and one unnecessary. The old Boggs or Commercial smelter, on the narrow-gauge line, having a calciner and two 40-ton water-jacket blast-furnaces, hopelessly antiquated in design and equipment, was inherited from former owners. A hydrocarbon smelter, designed to burn petroleum and turn out blister copper from ore by a single fusion, was built at Arizona City, on the advice of "Prof." Geo. A. Treadwell, a doddering old "scientist" who was used as a stalking-horse by the company, and proved a ridiculous failure, though the company sold considerable stock on the strength of its alleged "revolution" of existing processes. The hydrocarbon "smelter" is fully described in Vol. IV.

The third smelter, at Mayer, seems properly planned and constructed, but apparently is a failure also, as the company's last ore shipments were made to the Humboldt smelter. This smelter is fully described in Vol. VI. The company claims a capacity, between the concentrator and smelter, of 500 to 600 tons of ore daily, which, of course, is an exaggeration. The company's various smelters cost \$158,893.12, according to the company's books, but the accounts were kept so crookedly and by such unmitigated scoundrels that it is impossible to say what is to be believed.

The George A. Treadwell Mining Co. is a deliberate and intentional fraud, conceived in iniquity and born in sin, promoted by the late "Gen." Walter S. Logan, a notorious shyster lawyer of New York, who is said to have left an estate of \$500,000, accumulated by all sorts of rascalities. Everybody connected with the company in an executive capacity in its palmy days of swindling was either a fool or a rascal. The management has not hesitated at any lie that seemed convenient or likely to prove profitable, and its financial statements were deliberately false, while the advertisements, put out over the name of Myra Martin, were colossal lies. A complete exposition of the rottenness of the company would require several pages, which can be devoted to better use, and the property is dismissed with the statement that the company is a swindle of the first magnitude, without a single redeeming feature. Idle and should be wound up, after the principals are imprisoned.

#### **GEORGE THIRD MINING, MILLING & SMELTING CO.**

**COLORADO.**

Dead. Formerly at Carson, Hinsdale Co., Colo.

#### **GEORGETOWN GOLD MINING CO.**

**COLORADO.**

Mine office: Georgetown, Clear Creek Co., Colo. Frank B. Branham, superintendent. Ores carry gold, silver, lead and copper. Presumably idle.

#### **GEORGIA & TENNESSEE COPPER CO.**

**GEORGIA & FLORIDA.**

Office: care of H. G. Brooks, 35 Congress St., Boston, Mass. Letter returned unclaimed from former mine office, Temple, Haralson Co., Ga. Theo. Sutro, president; Otis Kimball, vice-president; Wm. Tudor, treasurer; preceding officers, L. V. Briggs and John T. Coolidge, Jr., directors; H. M. Mansfield, superintendent. Organized Jan. 24, 1905, as successor of Tallapoosa Copper Mines and Georgia Pyrites Co., with capitalization \$1,000,000, shares \$5 par. Lands, 447 acres of copper lands, in Georgia, and 800 acres of phosphate lands, in Marion and Levy counties, Florida, latter estimated to carry 800,000 tons of phosphate. Copper lands show country rocks of Laurentian schists, with 2 contact veins of 4' to 19' width, between slate and sandstone, opened by a 300' shaft. Has 1,250' of workings, estimated to show 85,000 tons of ore, with 45,000 tons blocked out for stoping, giving average assays of 3% copper, 2.7 oz. silver and \$2 gold per ton. Ore is chalcopyrite, disseminated in pyrite, averaging 41% sulphur. Company planned installing an acid plant and manufacturing superphosphate for fertilizer. Idle.

**COMPAGNIE DES MINES DE CUIVRE ET  
DE FLOMB DE GERONA.**

SPAIN.

Dead. Dissolved 1906. Formerly at Susqueda, Gerona, Spain.

**GERONA COPPER CO., LTD.**

SPAIN.

Dead. Voluntarily wound up, February, 1903. Formerly at Hostalrich, Gerona, Spain.

**GERONA COPPER & LEAD MINES, LTD.**

SPAIN.

Dead. Dissolved, Feb. 20, 1906. Formerly at Susqueda, Gerona, Spain. Described Vol. VI.

**GERONIMO COPPER MINING CO.**

NEW MEXICO.

Dead. Former officers were W. A. Sanders, president; Geo. R. Funke, vice-president; W. F. McQuarrie, secretary. Was organized March 22, 1906, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par. Lands were 5 claims, area 100 acres, 8 miles northwest of Silver City. Was a swindle, put out by the notorious Financial Security & Trust Co., of Denver, which promoted the Spanish Lost Bullion and several other downright swindles. Formerly at Silver City, Grant Co., N. M.

**GERTEUDE MINE.**

ONTARIO.

Owned by Lake Superior Power Co.

**GERTEUDE MINING CO.**

WYOMING.

Dead. Succeeded by Eagle Copper Co. Formerly at Battle, Carbon Co., Wyo.

**MINA GERTBRUDIS.**

PERU.

Mine office: San Tadeo, Yauli, Junfn, Perú. Mine, opened 1897, having lenses in limestone carrying chalcopyrite and tetrahedrite, is opened by adit from the level of Lake Morococha, mining through winzes sunk from short crosscuts in the hanging, ore being hand-cubed at the adit entrance. Ore produced, to and including 1903, averaged 15.64% copper and 1,206 grams silver per ton, total production to end of 1903 being 2,189,400 kilograms fine copper and 1,689 kilograms fine silver. Production, 1906, estimated at 750,000 lbs. fine copper.

**GEYMAN MINING CO.**

MONTANA.

Mine office: Butte, Silver Bow Co., Mont. Lands are a small tract northeast of the Parrot smelter, having a shallow shaft. In 1906 Butte & Boston Consolidated Mining Co. secured a verdict giving damages of \$72,541 for trespass and value of ore extracted. Idle some years.

**GIANT CALIFORNIA MINING CO., LTD.**

BRITISH COLUMBIA.

Mine office: Rossland, Trail district, B. C. Jay P. Graves, president; A. L. White, vice-president; Chas. H. Wolf, secretary; Geo. Wooster, treasurer; Wm. Yolen Williams, general manager. Organized circa 1907, with capitalization \$5,000,000, shares \$100 par. Lands, apparently one claim, a short distance west of Le Roi. The Giant mine shipped 4,344 tons of ore, before suspending, 1903. Property considered promising and management good.

**GIANT CHIEF MINING CO.**

UTAH.

Dead. Lands sold, circa April, 1906, to Willard F. Snyder, et al. Formerly at Bingham Canyon, Salt Lake Co., Utah.

**GIANT LEDGE GOLD & COPPER CO.**

CALIFORNIA.

Office: 500 Frost Bldg., Los Angeles, Cal. Mine office: Manvel, San Bernardino Co., Cal. L. M. Gregory, president and general manager; H. G. Stoddard, secretary; R. W. Kenney, treasurer; Edward Brough, mine superintendent. Organized July, 1901, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 30 claims, a 40-acre millsite and miscellaneous lands, giving total area of upwards of 800 acres, in the New York district, showing 4 veins, of which 2 are under development, one being a fissure in granite, the other a

**contact deposit between limestone and granite, with average width of 100', giving average assays of 5% copper, 5% lead, 10 oz. silver and circa \$4.50 gold per ton, from carbonate and oxide ores near surface and sulphides at depth. Has 1 shallow shaft and 2 tunnels, with about 4,000' of underground workings, developing a considerable amount of ore. Presumably idle.**

**GIANT MINING CO., LTD.**

**BRITISH COLUMBIA.**

Dead. Succeeded, circa 1906, by Giant-California Mining Co., Ltd. Formerly at Rossland, Trail district, B. C.

**GIBB COPPER MINES, LTD.**

**AUSTRALIA.**

Mine office: Boolboonda, Queensland, Australia. Lands, circa 10 miles northeast of Mt. Perry, show 2 parallel veins, of about 12" average width, carrying high grade auriferous and argentiferous copper ore. Property has a small concentrator and was producing, in a small way, early 1908.

**COMPANIA MINERA LA GIBOSA y ANEXAS.**

**MEXICO.**

Dead. Lands sold to American Smelters Securities Co. Formerly at Jiménez, Chihuahua, Mex.

**GIBRALTAR COPPER MINING CO.**

**WYOMING.**

Office and mine: Encampment, Carbon Co., Wyo. Wm. L. Sill, president; Chas. E. Winter, secretary. Has a 4' vein, opened by a 75' shaft, showing ore giving assays up to 20% copper, with good gold and silver values. Has steam power. Idle several years and apparently moribund.

**GIBSON COPPER CO.**

**ARIZONA.**

Office and mine: Globe, Gila Co., Ariz. S. L. Gibson, president, treasurer and general manager; Wm. Henderson, vice-president; Delos Copeland, secretary. Organized 1906, under laws of Arizona, with capitalization \$2,500,000, shares \$25 par; issued, \$2,000,000.

Lands, 19 claims, 5 surveyed for patents, area 380 acres, circa 15 miles from Globe, showing Pinal schist, with occasional trachyte, diorite and quartzite, carrying 20 or more veins or lenses, occurring as fissures in schists and as contact deposits between schists and porphyritic rocks. The main vein, of 4' to 7' width, has been traced 2 miles. Ores are exclusively sulphide, mainly massive bornite and chalcopyrite, of extremely high grade, frequently ranging 20 to 40% in copper tenor, ore occurring massive and frequently being coated with chalcocite. Apparently the two main veins unite, or cross, at depth.

The mine has tunnels of 120', 578', 650', 680' and 730', and 3 shafts, including a 3-compartment vertical shaft, begun 1907, and the main incline shaft, sinking below the sixth level. The fifth level tunnel, 1,000' long, is to connect with the present workings at length of 1,100', and the sixth level tunnel is 900' long.

Equipment includes two 280-h. p. boilers, a 60-h. p. engine, air-compressor and 2 hoists, one with double drum, good for 1,000' depth.

The Gibson mine was opened by its former owners, who remain in control of the company, on a capital of \$90 cash and a team of horses, and has paid its way, and earned good profits, from grass roots, which is what very few copper mines have done. Ore is shipped to the Old Dominion smelter, by 10-horse teams, and about 60 men are employed. Production, 1907, was 3,340,777 lbs. fine copper. Mine considered valuable.

**GILA COPPER CO.**

**ARIZONA.**

Office: 1107-408 South Spring St., Los Angeles, Cal. Mine office: Ray, Pinal Co., Ariz. Philip Wiseman, superintendent. Organized 1907, under laws of Maine, with capitalization \$10,000,000. Is a twin of the Ray Consolidated Copper Co., and is controlled by men prominent in the Utah Copper Co. Property has monzonite ore bodies, somewhat similar to those of the Utah Copper Co. Property considered promising and management good.

**GILA COUNTY MINING CO.****ARIZONA.**

Dead. Once owned the Emeline mine. Formerly at Globe, Gila Co., Ariz.  
**GILA MONSTER COPPER CO.**

**ARIZONA.**

Mine office: Kelvin, Pinal Co., Ariz. Lands, known as the Confidence mine, with circa 1,000' of underground openings, show auriferous and argentiferous bornite, chalcocite and sundry oxidized ores. Property considered promising. Idle for several years and apparently moribund.

**GILA VALLEY COPPER CO.****ARIZONA.**

Office: 1930-42 Broadway, New York, N. Y. Mine office: Safford, Graham Co., Ariz. Floyd H. Wilson, president; John F. Webber, manager; C. S. Gilpin, mill superintendent. Organized 1905, as successor of Federal Mining Co., which succeeded the old Gila Valley Copper Co., and name changed back to original title, and former officers put in the penitentiary, to remove the stench of the Qualey management.

Lands, 24 claims, area 470 acres, also a 5-acre millsite, including the San Juan and Great Eastern groups, in the Lone Star district of the Gila Mountains, claimed by old management to have 3 ore bodies of about 9' average width, but present management disclaims this statement. Development is by tunnels of 90', 100' and 300', and by shafts of 180', 325' and 425', with oxidized zone of about 300' depth. Mine is said to show a 28' ore body at depth of 230'.

A 50-ton concentrator, built 1906, shipped, 1907, some concentrates to the Old Dominion smelter, one carload returning 29.95% copper, circa 2 oz. silver and 80 cents gold per ton. Production, 1907, was 110,858 lbs. fine copper, 223 oz. silver and 6 oz. gold.

**GIRILAMBONE COPPER MINING CO., LTD.****AUSTRALIA.**

Dead. Succeeded by Girilambone Mining Co., N. L. Formerly at Girilambone, Canbelego Co., N. S. W.; Australia.

**GIRILAMBONE COPPER MINING CO., LTD.****AUSTRALIA.**

Office: Sydney, Australia. Mine office: Girilambone, Canbelego Co., N. S. W., Australia. G. A. Richards, manager; W. Blakemore, mine manager. Debentures, £12,400.

Mine, opened 1880, carries numerous quartz veins and intrusions, ore occurring mainly as disseminations and replacements, lacking clearly defined walls, in arenaceous slate and sandstone having occasional hard bands of quartzite, ore being mainly sulphide, with quartz gangue, though the mine carries considerable carbonate ore of high grade in the oxidized zone, of about 200' depth. Deepest shaft is 520'. Ores are divided into 3 classes for treatment, the first comprising carbonates and cuprite of about 4.6% average tenor, second class ore being composed of oxides from the transition zone, while sulphides from the lower workings constitute the third class, each being smelted separately. Average of all grades, 1900, was 3.85% copper.

The smelter has 2 reverberatory furnaces and a refining furnace, turning out blister copper of the remarkable purity of 99.95%. Ores are difficult of reduction, owing to their deficiency in sulphur and iron, and excess of silica. Water is very scarce, the property having a dam and filtering and reusing the water repeatedly. The reduction plant includes lixiviation works, where tailings and certain low grade oxidized ores are leached.

The property was reopened, 1906, when 6,035 long tons of ore were smelted, yielding 293,440 lbs. fine copper. Employed about 60 men in 1906, but presumably is idle.

**GIRILAMBONE MINING CO., N. L.****AUSTRALIA.**

Dead. Was succeeded, circa 1907, by Girilambone Copper Mining Co., Ltd. Formerly at Girilambone, Canbelego Co., N. S. W., Australia. Fully described Vol. VI.

**GIROUX CONSOLIDATED MINES CO.****NEVADA AND MEXICO.**

Office: 1606-42 Broadway, New York, N. Y. Mine offices: Kimberly, White Pine Co., Nev., and Carbó, Ures, Sonora, Mex. Jos. L. Giroux, president; Eugene L. Giroux, vice-president; G. E. Giroux, secretary; J. C. Kennedy, treasurer; Jas. Angus Snedaker, consulting engineer; Loren M. Hart, counsel; preceding officers, Isidore Hernsheim, Hoffman Richardson, C. E. McCarty, I. W. Bernheim, G. F. Piper and Ralph Lupton, directors; E. W. Walter, general manager; Gideon L. Giroux, superintendent Mexican mine; Louis Frazer, superintendent Nevada mine.

Organized April, 1903, under laws of Delaware, with capitalization \$5,000,000, shares \$5 par, increased, Feb. 25, 1908, to \$6,500,000, shares \$5 par; issued, \$4,639,975. Authorized, March 1, 1908, a 10-year bond issue of \$1,500,000, in denominations of \$100, \$500 and \$1,000, at 6%, redeemable at option of company in 5 years, at 105, and convertible into common stock at par, March 1, 1910, or at any previous date in the event of sale of property or dissolution of company. Increase in capitalization was provided for conversion of bonds. On Jan. 1, 1908, had cash in bank, \$32,768.64, with bills payable of \$320,233.13. Empire Trust Co., New York, registrar.

The Mexican property, of 96 pertenencias, area 237 acres, includes the Sultana and San José mines, commonly known as the Sultana group, about a mile west of the Copete, in the Sierra de Oro Mountains, circa 25 miles east of Carbó and about 35 miles from Hermosillo. Property shows a contact vein of 50' to 100' width, between limestone and porphyry, opened by 3 shafts. Sultana No. 1 is circa 200' deep, Sultana No. 2, the main working shaft, sunk on an incline, is 1,200' deep, and the San José shaft is circa 500' deep. The San José mine shows in the bottom level a vein of circa 40' width, carrying oxidized ores for shallow depth, succeeded by sulphides. About 15% of the ore hoisted from the San José is of smelting grade, balance, of 6% estimated copper tenor, being stocked. The Mexican property as a whole shows ore of 3 to 4% copper tenor, with variable gold values, latter ranging from very small to very large, with a fair proportion of high grade ore. Shipments of Sultana ore to El Paso smelter have returned combined gold and silver values ranging from 92 cents to \$734.36 per ton.

The Sultana mill, apparently of 100 tons daily capacity, planned as the first unit of a 200-ton concentrator, has Huntington mills, an amalgamation plant and a cyanide plant.

The Nevada property, which is much the more important, is 52 claims, patented, area 1,050 acres, also 1,800 acres of miscellaneous lands carrying valuable water-rights, and the townsite of Kimberly, shortly west of Copper Flat, 7 to 9 miles from Ely. This group is about 2 miles in length, and from 2,000' to 5,000' in width, lying immediately west of the Nevada Consolidated.

The ore bodies of the Giroux are of vast extent and of considerable variety. The first series of ore measures, on the contact between plutonic and sedimentary rocks, shows enormous areas of replacement in the latter, ore having a gangue of quartz, talc and clay. In places these series have been proven to a width of fully 1,000', though not workable throughout, fair ore to the width of 100' or more having been found at points.

The second series of ore measures is in the Giroux shaft, immediately above the water level, where there apparently is a bed of 30' to 40' thickness, carrying oxidized ores said to average 7% or upwards, which probably is a serious overestimate.

A third ore series consists of cupriferous monzonite, which is a highly altered acid quartzose andesite, carrying upwards of 60% silica. The exposed surface has been leached to a considerable extent, but below a depth of 30' to 40' the monzonite carries melaconite and chalcocite, and, at depth, chalcopyrite,

principal values being in chalcocite. The porphyry ores are estimated by the company to average 4% copper, which is much too high. The monzonite ore body of the Giroux was estimated at 1,500' by 2,400' in area, with prospects of further extension of the limits of mineralization, in addition to which another body of cupriferous porphyry, estimated by President Giroux as 600' wide and 1,400' long, extends along Old Glory Hill, from the western end of the property, in a course between the Alpha and Giroux shafts. This has been explored only by shallow workings, but may prove profitable at depth.

The monzonite ore body shows fissure veins of 3' to 20' width, giving little evidence of faulting, and supposed to have been mineralized from solutions coursing along the lines of least resistance. Present developments are mainly on fissure veins, but the quantity of porphyritic ore is so vast that apparently it forms the chief asset of the company. The porphyritic ore is comparatively friable and readily amenable to concentration.

The Ely mines have 11 shafts, with upwards of 3 miles of workings, including 6 main working shafts having heavy gallows-frames and ore-bins. The leached zone at surface is followed by a zone of secondary enrichment to a depth of circa 375', succeeded by unaltered sulphides. The secondary zone shows considerable native copper, in addition to the usual oxidized ores and secondary sulphides. Porphyry ores have been developed in the Alpha, Brooks, Morris and Bunker Hill shafts, and Mr. Walter states that the block of milling ore opened therein is 2,000' long, 150' wide and 160' thick, containing approximately 4,000,000 tons of ore averaging circa 2.25% copper and 20 cents gold per ton, while the Giroux, Taylor and Alpha shafts are estimated to show about 350,000 tons of ore averaging 6.5% copper. The mine, as a whole, is said to have \$30,000,000 worth of ore blocked out, which statement requires explanation. The amount of ore actually blocked out is not phenomenally great, but geological conditions are such that it seems reasonably safe to claim 4,000,000 tons of ore in sight, with prospects of a much larger amount. There is no doubt about the immense resources of the property in porphyritic ore, the principal question being the average percentage of copper contained in these low grade ores.

The 3-compartment 1,200' Alpha shaft, to which operations are confined practically, is said to have cut 5 veins, and is claimed to have a 50' ore body on the 1,200' level, but apparently the ores above the 1,000' level are mainly leached. A winze from the bottom shows high grade ore, with some native copper, and the company claims that, by means of diamond drill borings, the ore bodies have been found to be continuous below the 1,000' level, averaging 12 to 15% copper on that level, and increasing in value with depth, which statement is considered a first-class exaggeration, though, without question, the Alpha shaft has ore bodies of considerable size and of high average tenor, as 210 tons shipped, 1907, to the Garfield smelter, returned 12.2 to 13.66% copper. It is not believed, however, that there is a 50' vein of this sort of ore, especially as the management has been guilty, in the past, of gross exaggerations regarding the size of its ore bodies, and their values.

In December, 1907, the Alpha shaft caved badly, for reasons not readily apparent, but presumably through indifferent timbering. Several miners were caught in the cave, three of whom, A. D. Bailey, Fred McDonald and P. J. Brown, were entombed. The story of their rescue is one of the most romantic in the history of mining, so filled with horrible accidents and hairbreadth escapes. The imprisoned miners succeeded in signaling to surface, by tapping on the air-pipe, and the signals were answered. A letter, well weighted, was lowered by a half-inch rope, from a windlass, through the air-pipe, but could not reach the miners, because of a bend in the pipe column 6 feet from the pump, the miners being imprisoned in a small pump station. They were equal to the

emergency, however, and by means of a hook, made from a piece of wire and a bit of pipe, fished the letter from the pipe-column. Acting under instructions, the miners succeeded in repairing the telephone, after which communication from surface was uninterrupted. Food and water were lowered through the pipe, in trains of 2" nipples, each 6" long, with caps, connected by flexible links, and even reading matter was supplied in the same manner. The three miners were rescued Jan. 19, 1908, after an imprisonment of 46 days.

The work of reopening and retimbering the Alpha shaft was completed May, 1908, requiring nearly 6 months. Equipment at the Alpha includes an electric pumping plant, of 250,000 gallons claimed daily capacity. The surface plant includes three 150-h. p. boilers and a first-motion double-drum hoist, 100' steel gallows-frame, and a 200-h. p. Corliss engine driving a 150-kw. generator that actuates the electric pumps.

The 2-compartment Giroux shaft, 800' deep, is said to show, on the 300' level, a large ore body of 7 to 15% average copper tenor, which is considered a serious overestimate.

The Morris shaft, with 2 compartments and circa 275' in depth, is idle.

The 2-compartment Brooks shaft, 1,200' from the Morris, and 455' deep, also is idle.

The 2-compartment Bunker Hill shaft, east of the Brooks, circa 500' in depth, has a hoist operating 3-ton self-dumping skips.

The 2-compartment Taylor shaft, circa 300' deep, is idle. The 2-compartment Pilot Knob shaft, of about 300' depth, also is idle.

Surface equipment at the mine includes hoists for the principal shafts, air-compressors, timber framing mill, and necessary shops.

Transportation is provided by a 2-mile 36" gauge railway connecting the Bunker Hill, Morris and Brooks shafts with the mill and smelter, grades averaging 1.5%. Equipment includes a Porter engine, of 660 tons tractive power, and ore-cars.

The mill, located at the mine, of wood, stone and concrete, with all machinery mounted on concrete foundations, of about 400 tons daily capacity, was completed September, 1907, at a cost of circa \$160,000. The mill is planned to handle ore automatically throughout, and has 600-ton receiving bins, from which ore goes to a 10x24" crusher, with belt-conveyor and 40" trommel. Equipment includes 6 Frue vanners and 42 Wilfley tables. Power is furnished by 125-h. p. and 200-h. p. Corliss engines, with three 100-h. p. boilers, and the mill is heated by steam and lighted by electricity.

The mill has eight 8,000-gallon storage tanks for water, and two 90,000-gallon reservoirs, of cement and concrete, one at the Alpha shaft and one directly back of the mill, connected by 2,050' of 6" steel pipe. It is estimated that settling tanks will save about 80% of the wash-water for further use. The mill requires about 125,000 gallons of water daily, and the management plans securing water therefor from the Alpha shaft, which would seem a precarious supply, though the flow of the shaft is increasing with depth, and was claimed, September, 1908, to be circa 125,000 gallons daily. The shaft, however, did not furnish enough water to run the mill when the latter was completed, despite promises to that effect, and an alternative and apparently reliable supply is being developed.

Work was begun, circa July, 1908, by digging ditches, for a pipe-line from Steptoe Creek, of about 9 miles length. Water must be pumped through a 12" pipe-line, of 1,125,000 gallons nominal daily capacity, against an actual head of 967', with static and frictional head of 1,105'. Cost of the pipe-line and station-pump is estimated at circa \$250,000. Apparently the mill should have been built near the water, instead of near the ore.

The company also has rights to a portion of the waters of Cleveland

Creek, 27 miles distant, said to be capable of developing 1,200 h. p. electrically, which may be improved later, and power utilized for pumping the water to the mill and operating the mine.

The smelter, between the mine and mill, with rail connections to both, was built under a contract calling for completion July, 1905, but actually was not completed until circa March, 1907. The smelter, variously reported as costing \$50,000 to \$125,000, has a 250-ton Colorado Iron Works 42x180" water-jacket blast-furnace, with 16 tuyeres, and was planned to have a converter with 1 stand and 3 shells, which apparently are not in place. Smelter has a 6' stack of 80' height. Limestone and iron ore of good grade for fluxing are available in the district. Despite repeated promises as to date of blowing in the smelter, it was idle October, 1908, and seems a poor investment.

Production from the Mexican mines was about \$540,000 in values to end of 1907. Production from the Nevada mines has been postponed, from time to time, under various pretexts, but apparently the property is not yet developed to a point where production can be made advantageously on a considerable scale. The first carload of ore from the Ely mines, shipped August, 1907, to the Salt Lake smelter, is said to have returned about 9.2% copper. The mill was claimed, November, 1907, to be saving better than 80% of assay values. The porphyritic ore carries mainly chalocite, with specific gravity more than double that of the monzonite, affording good material for concentration. The gangue is friable, without talc, and the ores do not slime excessively. The company is said to have closed a 5-year contract with the American Metal Co., Ltd., for selling its copper, in consideration of a loan.

The Nevada property of the Giroux Consolidated Mines Co. is considered valuable, but many exaggerated claims have been made in its behalf. Promises as to date of beginning production have failed in keeping, most lamentably, and the caving of the Alpha shaft, miscalculation of water supply for the mill, and building of a smelter before the mine was ready to begin production, lead to the suspicion that the management is not all that it might be.

#### GIROUX-ELY EXTENSION COPPER CO.

NEVADA.

Mine office: Ely, White Pine Co., Nev. Organized circa 1907, with capitalization \$1,000,000, shares \$1 par.

#### GLADHAUGH MINE.

ALASKA.

Owned by Ellamar Mining Co.

#### GLADSTONE DEVELOPMENT CO.

ONTARIO.

Office: care of N. J. Morrisey, superintendent, Pickering, Ont. Mine office: Iron Bridge, Algoma, Ont. Lands, circa 3 miles from Iron Bridge, are opened by several shallow shafts showing copper ore. Presumably idle.

#### GLADSTONE-GREENWATER COPPER

CALIFORNIA.

#### DEVELOPMENT CO.

Office: 45 West Broadway, Butte, Mont. Mine office: Greenwater, Inyo Co., Cal. A. H. Wethey, managing director; R. E. Tally, superintendent. Organized Oct. 1, 1906, under laws of Montana, with capitalization \$1,000,000, shares \$1 par. Has a 300' tunnel. Idle.

#### GLADSTONE MINE.

AUSTRALIA.

Mine office: Wrightville, Robinson Co., N. S. W., Australia. Lands, 2 miles south of the Great Cobar mine, are supposed to carry the extension of the vein of that property. Development is by a 186' shaft, on a 6" vein carrying gray copper ore assaying up to 40% in tenor.

#### GLADYS MINING CO.

BRITISH COLUMBIA.

Mine office: Alberni, Vancouver Isld., B. C. Property, opposite the Monitor mine and across the Alberni Canal therefrom, apparently has the extension of the Monitor vein, showing high grade chalcopyrite. Idle.

**GLASDIR COPPER MINES, LTD.****WALES.**

Dead. Voluntarily liquidated, October, 1903.

**GLASDIE COPPER MINES (1903), LTD.****WALES.**

Offices: 4 Broad Street Place, London, E. C., Eng. Organized Oct. 17, 1903, with capitalization £1,000, shares £1 par, apparently as a tentative reorganization of the Gladair Copper Mines, Ltd. Moribund.

**GLASGOW COPPER SYNDICATE, LTD.****CALIFORNIA.**

Offices: 149 St. Vincent St., Glasgow, Scotland. T. & G. B. McKim & Cook, secretaries. Organized Dec. 14, 1904, with capitalization £8,000, shares £1 par, to deal with copper claims in Fresno county, California. Presumably related to Fresno Copper Co., Ltd.

**GLASGOW & WESTERN EXPLORATION CO., LTD.****NEVADA.**

Offices: 33 Renfield St., Glasgow, Scotland, and 317 McCornick Bldg., Salt Lake City, Utah. Mine office: Golconda, Humboldt Co., Nev. Geo. Macfarlane Reid, chairman; Otto Stallman, general manager; D. Macpherson Boyd, secretary; Jos. Farren, superintendent; George Cuthbert, secretary. Organized Oct. 28, 1896, with capitalization £30,000, shares £1 par, fully issued. Manages and is the principal owner of the Adelaide Star Mines, Ltd.

**GLASSFORD CREEK COPPER MINING CO., LTD.****AUSTRALIA.**

Office: William St., Rockhampton, Queensland, Australia. Mine and works office: Glassford Creek, via Miriam Vale, Queensland, Australia. R. G. Brown, chairman; A. A. Slack, secretary; Thos. Gibb, managing director; T. L. Bailey, general manager; D. W. Findlay, mine superintendent; preceding officers, G. C. Willcocks, Jas. Stewart and Robt. Macfarlane, directors. Increased capitalization, 1906, to £10,000, shares 1s. par, fully paid, with no provision for meeting future needs by assessments. Debentures, £12,500 issued, and an issue of similar size planned, at last accounts.

Lands are in the Dawes Range, 60 miles south of Gladstone, adjoining the Glassford Creek Copper Mines, Ltd., having a slate footwall and granite hanging, with contact veins of 30' to 75' width carrying self-fluxing sulphide ore giving average returns of 4.1% copper, 1.5 oz. silver and 1.95 dwts. gold per long ton. Mine, discovered 1897, was opened, in the Blue Bag open-cut, by underhand stoping, but this was discontinued at depth, and development begun by tunnel and shaft, the change of mining system necessitating closing the smelter.

The mill has a 300-ton Blake-Marsden crusher, and picking tables. The smelter, near the mine, has a 42x72" rectangular water-jacket blast-furnace of about 100 tons daily capacity, installed 1906, and a Connersville blower, making matte of 40 to 45% copper tenor, slags running 0.8% copper. Nearest railroad point is Gladstone, 35 miles. Traction engines were used, but did poorly, on account of bad roads. Production, 1906, was 913,366 lbs. fine copper, 13,699 oz. silver and 94,314 dwts. gold, secured with an average force of 183 men. Suspended operation Sept. 7, 1907, on account of low price of copper.

**GLEN-JENNINGS COPPER MINING CO.****WYOMING.**

Mine office: Encampment, Carbon Co., Wyo. Idle some years.

**GLOBE-AMALGAMATED COPPER CO.****ARIZONA.**

Dead. Was organized June 19, 1907, under laws of Arizona, by Pollard Pearson, J. R. Barnette and G. C. Gleason, with capitalization \$1,000,000, shares \$5 par. Formerly at Globe, Gila Co., Ariz.

**GLOBE-ARIZONA COPPER CO.****ARIZONA.**

Mine office: Globe, Gila Co., Ariz. Samuel L. Gibson, manager. Lands, lying southeast of the Old Dominion and Globe Consolidated, 3 miles east of Globe, are opened by a 115' tunnel and 290' shaft, showing a 5' vein of ore averaging 6 to 7% copper, with small silver values. Began production May, 1907, and shipped about 15 tons of ore daily to Old Dominion smelter, for sev-

eral months, employing circa 30 men. Production, 1907, was 57,231 lbs. fine copper and 430 oz. silver. Property considered promising.

**GLOBE & ARIZONA DEVELOPMENT CO.****ARIZONA.**

Dead. Lands sold, 1906, to Superior & Boston. Formerly at Globe, Gila Co., Ariz. Described Vol. VI.

**GLOBE-BOSTON COPPER MINING CO.****ARIZONA.**

Dead. Lands sold, circa 1906, to Globe Consolidated Copper Co. Formerly at Globe, Gila Co., Ariz.

**GLOBE CONSOLIDATED COPPER CO.****ARIZONA.**

Office: 403 Lonsdale Bldg., Duluth, Minn. Mine office: Globe, Gila Co., Ariz. Henry B. Hovland, president; R. B. Whitesides, vice-president; John Uno Sebenius, secretary; preceding officers, Louis Rouchleau and Hoval A. Smith, directors; T. T. Hudson, treasurer; Michael M. McCarthy, manager. Organized June, 1906, under laws of Arizona, with capitalization \$1,500,000, shares \$10 par; issued, \$1,000,000. Cash on hand, Jan. 1, 1908, was \$173,085. There is supposed to be a balance of \$367,966 due on lands, February, 1910.

Lands, circa 1,100 acres, bought for about \$600,000, lying immediately north of the Old Dominion and west of the Arizona Commercial. Property includes the Globe-Boston group of 21 claims, bought for \$130,000, the Mallory group, and other extensive holdings.

Principal work has been done on the Gem and Future veins, carrying a little chalcopyrite. The Globe-Boston or Mallory shaft, when worked on the 450' level by former owners, showed a 4' vein carrying mainly leached ore, with some low grade chalcopyrite and occasional bunches of bornite, both with fair silver values, but shows better ore in the deeper workings.

The 3-compartment Gem shaft, 1,225' deep, has extensive crosscuts on the 1,100' and 1,200' levels. No. 3 crosscut, on the 1,100' level, in August, 1908, cut the Future vein, showing 16' of ore of 2 to 3% copper tenor. There also is a 3' vein of 3% ore on the west drift of the 1,200' level, and a 6" vein of 8% ore. In addition to the veins previously named, the property carries the Taylor vein.

Equipment includes good hoists and air-compressors at both the Boston and Gem shafts, latter having a 12-drill compressor. Petroleum is used for fuel, and about 75 men are employed.

Results for the first two years of work were rather discouraging, but indications were much improved late in 1908. Property is considered promising, and management good.

**GLOBE COPPER CO.****NEVADA.**

Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. Lands, 6 claims, bought March, 1907.

**GLOBE COPPER MINING CO.****ARIZONA.**

Dead. Property sold to Old Dominion Mining & Smelting Co. Formerly at Globe, Gila Co., Ariz.

**GLOBE COPPER MINING CO.****WYOMING.**

Office: 24 Giddings Blk., Colorado Springs, Colo. Mine office: Hecla, Laramie Co., Wyo. A. C. Widdicombe, president; J. A. Morrison, vice-president and general manager; John H. House, secretary; Stewart Davis, treasurer; Prof. H. C. Beeler, consulting engineer. Organized 1901, under laws of Colorado, with capitalization \$1,500,000, shares \$1 par. Lands, 22 claims, area 438 acres, known as the Fairview group, in the Silver Crown district, showing sundry fissure veins, of which 3, of 7' average width, are opened by 5 shafts, of 100' average depth, and by tunnels of 90' and 160', giving estimated average values of 12% copper, 8 to 10 oz. silver and \$5 gold per ton, from sulphide ore. Has steam power and an air-compressor. Did a little work, 1906. Presumably idle.

**GLOBE & LOST GULCH SILVER-COPPER MINES CO.****ARIZONA.**

Office: 21-1928 Grant Ave., Denver, Colo. Mine office: Black Warrior, Gila Co., Ariz. V. G. Hills, president; John A. Myrberg, vice-president and superintendent; M. E. Brooke, secretary and treasurer. Organized Apr. 1, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 10 claims, area 200 acres, and a millsite, at the head of Lost Gulch, northwest of Globe, showing quartzite, granite and limestone, cut by porphyritic dykes. Mine, but slightly developed, shows auriferous and argentiferous lead and copper ores.

**GLOBE MINE.****MICHIGAN.**

Office: 82 Devonshire St., Boston, Mass. Mine office: Painesdale, Houghton Co., Mich. F. W. Denton, general manager; Capt. John Jolly, superintendent. Property is owned by the estate of John Stanton, and held under an option, twice extended, expiring May, 1909, by the Copper Range Consolidated Co., latter having the privilege of paying therefor in shares. During 1907 expenditures on the property were \$191,580.92, with total expenditures, to Jan. 1, 1908, of circa \$400,000.

Lands, 1,280 acres, being Sections 1 and 2, Town 53 North, Range 35 West, lying next south of the Champion and immediately north of the Challenge mine, carrying about 6,000' of the strike of the Baltic and parallel amygdaloidal beds.

Work was begun by diamond drill borings, which located the Baltic bed and gave some cores carrying excellent copper values. The borings disclosed the existence of a heavy overburden of sand and boulders, hence it was necessary to reach the solid rock by a vertical shaft, which was sunk in the hanging wall. This shaft is located about 700' south of the Champion boundary line, and was put down under most discouraging circumstances, but by persistence and the hardest kind of hard work was bottomed successfully, despite predictions, from many experienced miners, that its sinking was impossible. The shaft is telescopic, inside measurements of timbers at the collar being 13' 3" x 23' 3", with a second section below of 9' x 19' 6", and a third section of still smaller size, this plan permitting new inside timbering and whatever realignment was necessary when the shaft was bottomed. The drop-shaft was started October, 1905, and reached the ledge May 15, 1907, at a depth of 228', after 19 months of extremely difficult and trying work, 3 months additional being required in getting the shaft into the ledge and stopping out the sand, making a total of nearly two years for the work, which was most creditable to all concerned, this being the deepest sand-shaft ever sunk. The shaft was sunk by weight to 150' depth, and for the balance of the distance was forced down by hydraulic jacks, with the aid of 64 steel shoes, each built with a water-jet having an opening of 1 square inch and a pressure of 300 lbs. Weight of the shoes was 37,000 lbs., and these were punched down by 6 hydraulic jacks, each exerting a pressure of 100 tons. The shaft was wet, making 800 gallons of water per minute, and there was much trouble with the quicksand, while the terrific pressure of the hydraulic jacks caused occasional trouble from buckling.

Plats have been cut at intervals of 100' from the first level, which is 356' from surface, leaving a 128' back of solid rock. The mine is to have heavy permanent pumps on the 1,000' level, and will use Kimberley skips for hoisting. The Baltic lode was intercepted at 860' depth, but was reached previously by crosscuts from a level above. The bed shows a little copper, in drifts on the 1,000' level, but, on the whole, is decidedly low in grade. This, however, is no criterion of the future, as the Baltic amygdaloid, in common with all other copper-bearing beds of the Lake Superior district, is banchy, rich ground alternating with lean, and only extensive development can give a correct idea

of the probable average value of the lode on this property. In view of the rich drill-cores secured by borings, and the fine stopes opened in the Champion, a short distance north of the Globe, it would seem reasonable to expect the Globe to make a paying mine, with development. If this should be the case, it is probable that the mine will be opened permanently by incline shafts, driven at upraises, though, in view of the tremendous overburden, vertical shafts may be used throughout, or vertical shafts may be sunk through the bed and deflected, in the footwall, to parallel the dip of the bed.

**GLOBE MINING CO.****ARIZONA.**

Office: 506-171 Washington St., Chicago, Ill. Mine office: Globe, Gila Co., Ariz. J. F. Hechtman, president and general manager; M. A. Patterson, vice-president; Geo. L. Beach, treasurer; Walter M. DeKalb, secretary. Organized Feb. 19, 1903, under laws of Arizona, with capitalization \$2,500,000, shares \$1 par.

Lands, 27 claims, area 540 acres, nearest circa 2½ miles north of Globe. Lands show granite-porphry, syenite, quartzite and diorite, carrying fissure veins in diorite of 2' to 100' width, with gossans giving assays of 2 to 6% copper, 4 to 30 oz. silver and \$2 to \$28 gold per ton. The Mineral Farm group of 21 claims, 3 fractional, includes the Vacey-Constance mine, worked circa 1886 for silver, and said to have produced upwards of \$100,000 worth of ore under former ownership, this group having upwards of 20 old pits and shafts, of 10' to 165' depth. The Mineral Farm group shows altered sedimentary and igneous rocks, with iron dykes, and a complex fissure system. The Mineral Farm vein, of about 4' width, gives assays of 4.8% copper and up to 132 oz. silver and \$7.44 gold per ton, and the group also shows a 20' vein, said to sample 22% copper, 9% zinc, 2 oz. silver and \$4.96 gold per ton, which seems excessive. Property also includes the Eagle Pass group. Development is by a 2-compartment 215' shaft, between two iron outcrops, planned to be sunk to 500'.

Equipment includes a 60-h. p. boiler, 8x10" hoist and an air-compressor. Property is considered promising.

**GLOBE & PINTO MINING CO.****ARIZONA.**

Mine office: Globe, Gila Co., Ariz. T. Trevillian, president; J. M. McPherson, secretary and treasurer. Capitalization \$750,000, shares \$1 par. Lands, 11 claims, 16 miles from Globe, north of and adjoining the Five Points, having a 90' shaft in a 4' vein showing streaks of ore, on footwall and hanging, that have given assays up to 22% copper, 3.4 oz. silver and \$8 gold per ton. Mine does not show several thousand tons of ore of 4 to 12% copper tenor, as has been claimed in the press.

**GLOBE STANDARD MINING CO.****ARIZONA.**

Mine office: Globe, Gila Co., Ariz. Chas. Miller, superintendent. Lands, 4 claims, in Powers Gulch, having a 50' shaft showing a 3' vein of auriferous silver-lead ore, assaying up to 63% lead, 13 oz. silver and \$6 gold per ton; also 15 claims near the Arizona National Mining Co.

**GLOBE SULPHIDE COPPER CO.****ARIZONA.**

Letter returned unclaimed from former mine office, Globe, Gila Co., Ariz. Organized Nov. 26, 1906, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par, by Eugene Barrows and D. G. McDonald.

**GLOBE TRACT.****MICHIGAN.**

Office: care of John Stanton Estate, owner, 15 William St., New York, N. Y. Mine office: Atlantic Mine, Houghton Co., Mich. Lands, 1,920 acres, being Sections 3, 4 and 5, Town 53 North, Range 35 West. Property included two other sections, area 1,280 acres, now under option to the Copper Range Consolidated Co., which are described separately under title of *Globe Mine*.

**GLOBE WESTERN COPPER CO.****ARIZONA.**

Mine office: Globe, Gila Co., Ariz. N. C. Cottier, vice-president; D. James, treasurer; J. Weinberger, secretary; preceding officers and C. Jerome Clark, directors. Capitalization \$2,000,000, shares \$10 par. Lands, 40 claims, area 800 acres, in 3 groups, known as the Cole & Goodwin, Robertson & Westbrook and Clark & Stewart, circa 20 miles southwest of Globe. The Clark & Stewart group has a 250' shaft, bottomed in sulphide ore assaying 10 to 15% copper, and some shipments were made therefrom, 1906, to Old Dominion smelter. The Cole & Goodwin group has a 310' shaft and a 480' crosscut tunnel. The Robertson & Westbrook group has tunnels of 100' and 130' and a 225' crosscut tunnel cutting 2 small streaks of high grade ore. Property, as a whole, has mainly ore of concentrating grade, and deposits are somewhat bumpy. Has gasoline power. Property considered promising.

**GLOBE-WHEATFIELDS MINING CO.****ARIZONA.**

Office and mine: Globe, Gila Co., Ariz. J. Thornton Price, president; M. G. Nehms, secretary; preceding officers, Fred C. Boothe and Claude W. Lightfoot, directors. Organized Oct. 25, 1906, under laws of Arizona, with capitalization \$1,000,000, increased Jan. 2, 1907, to \$1,500,000, shares \$1 par. Lands, near the Arizona National and Globe & Calumet, held under \$30,000 bond and lease, have shown ores assaying 4.32 to 24.38% copper.

**GLORIA COPPER MINES (SPAIN), LTD.****SPAIN.**

Office: 75 Coleman St., London, E. C., Eng. Organized Feb. 27, 1908, under laws of Great Britain, with capitalization £1,700, shares £1 par. Property is a lease on La Gloria mines, in the province of Huelva, Spain.

**COMPAÑIA MINERA GLORIA DEL INCA.****CHILE.**

Office: Iquique, Chile. Mine offices: Chafiaral, Atacama, Chile, and Copiapo, Atacama, Chile.

**GEWERKSCHAFT VEREIN GLÜCKAUF-NEVIGES.****GERMANY.**

Mine office: Neviges, Rheinprovinz, Germany. Has lead and copper ores, developed by 2 shafts, and employed about 100 men, producing circa 12,000 tons of ore yearly, at last accounts, product being mainly lead.

**GEWERKSCHAFT GLÜCKSBRUNN.****GERMANY.**

Dead. Merged, 1903, in the Eisfelder Kupfergewerkschaft. Formerly at Glücksbrunn, Saxe-Meiningen, Germany.

**GOAT CREEK MINING CO.****WASHINGTON.**

Mine office: Methow, Okanogan Co., Wash. Ores carry gold, silver and copper. Idle.

**GODIVA MINING CO.****UTAH.**

Dead. Merged, circa 1906, in Gemini-Godiva Consolidated Mining Co. Formerly at Eureka, Juab Co., Utah.

**GOLCONDA CONSOLIDATED CO., LTD.****NEVADA.**

Office: Suffolk House, London, E. C., Eng. Mine office: Golconda, Humboldt Co., Nev. W. P. Taylor, chairman; E. T. McCarthy, consulting engineer; William Smith, secretary; E. L. Lahadie, superintendent; Hans Loesch, metallurgist. Organized Dec. 27, 1906, under laws of Great Britain, with capitalization £250,000, shares £1 par; issued, £21,967. Lands, in the Kennedy and Battle Mountain districts, show mainly lead ores. Early 1908 planned building a 200-ton smelter, in Golconda Cañon, 3 miles from Golconda.

**GOLCONDA-NEVADA COPPER CO.****NEVADA.**

Mine office: Golconde, Humboldt Co., Nev. J. H. Playter, superintendent. Lands, known as the Honolulu group, are opened by a short tunnel, shallow shaft and several open-cuts.

**GOLD ANCHOR MINING CO.****COLORADO.**

Mine office: Alice, Clear Creek Co., Colo. Thos. L. Slater, manager. Ores carry gold, silver and copper. Has gasoline power. Presumably idle.

**GOLD BELT DEVELOPMENT & REDUCTION CO.****ARIZONA.**

Office and mine: Morenci, Graham Co., Ariz. E. U. Beauchamp, manager; Lee Dunn, superintendent. Capitalization, \$750,000. Lands, 25 claims, circa 4 miles northwest of Morenci, showing free milling gold ore, mainly in quartzite, and copper ore, largely chrysocolla associated with pyrolusite, with occasional malachite and chalcocite, and some sphalerite. Has 8 shafts, 2 deepest 20', each, and a tunnel, showing a 3' vein of carbonate ore assaying 12% copper. Has 3 gasoline hoists. Shipped some ore, 1907, to Shannon smelter, and has circa 15,000 tons of ore on dumps. Employed 20 men at last accounts.

**GOLD BELT MINING CO.****MONTANA.**

Mine office: Empire, Lewis & Clark Co., Mont. Owen Byrnes, superintendent. Property includes the Empire mine, carrying gold, silver, lead and copper ores. Has steam power, 60-stamp mill and cyanide plant. Presumably idle.

**GOLD BUG CONSOLIDATED MINING CO.****WASHINGTON.**

Dead. Formerly at Bossburg, Stevens Co., Wash.

**GOLD & COPPER COMPANY OF BINGHAM.****UTAH.**

Dead. Succeeded, 1901, by Bingham Consolidated Mining & Smelting Co. Formerly at Bingham Canyon, Salt Lake Co., Utah.

**GOLD & COPPER CONSOLIDATED MINING & MILLING CO.****ARIZONA.**

Dead. Succeeded, circa 1907, by Hasayampa Copper Co. Formerly at Groom Creek, Yavapai Co., Ariz. Fully described Vol. VI.

**GOLD & COPPER DEEP TUNNEL MINING & MILLING CO.****NEW MEXICO.**

Office: 780 E. Madison Ave., Cleveland, Ohio. Mine office: Elizabethtown, Colfax Co., N. M. A. T. McIntyre, president; John Pearson, vice-president; A. Dorn, secretary and treasurer; W. P. McIntyre, mine superintendent. Organized October, 1900, under laws of New Mexico, with capitalization \$2,000,000, shares \$1 par.

Lands, 10 claims, area circa 100 acres, also a 2½-acre millsite, on the western slope of Baldy Mountain, in the Moreno district, carrying fissure and contact veins in and between quartzite and slate. Has 2 shallow shafts and a 2,300' crosscut tunnel, planned to penetrate the mountain, with a length of 3,500', opening 2 bodies of low-grade auriferous copper ore. Has gasoline power and electric drills, with a 20-ton stamp-mill of lumber and logs, size 40x80', equipped with a 5' Huntington mill and gravity stamps. Nearest railroad, 3 miles. Company plans continuing development steadily. Property considered promising.

**GOLD & COPPER FIELDS SYNDICATE, LTD.****AUSTRALIA.**

Dead. Voluntarily liquidated, March, 1902. Formerly at Byng, County Bathurst, N. S. W., Australia.

**GOLD-COPPER MINING CO.****ARIZONA.**

Office and mine: Prescott, Yavapai Co., Ariz. Chas. F. Motz, president; Col. Emil Rautman, secretary, treasurer and general manager. Lands, in the Hassayampa district, include the Peacock, Mountain View and Iron Duke claims, opened by a 600' tunnel, cutting a vein carrying auriferous and argentiferous copper ore, yielding assay values up to \$30 per ton.

**GOLD-COPPER MINING CO.****CALIFORNIA.**

Letter returned unclaimed from former office, Rocklin, Cal. Mine office: Lincoln, Placer Co., Cal. Capitalization \$1,000,000, shares \$1 per. Lands, 160 acres, supposedly carrying the extension of the Dairy Farm ore body, slightly developed by shaft. Idle.

**GOLD & COPPER MINING CO.**

NEW MEXICO.

Dead. Formerly at Rociada, San Miguel Co., N. M.

**GOLD-COPPER MINING & DEVELOPMENT CO.**

SOUTH DAKOTA.

Dead. Formerly at Deadwood, Lawrence Co., S. D.

**GOLD CROSS MINING & MILLING CO.**

COLORADO.

Mine office: Pitkin, Gunnison Co., Colo. R. L. McKnight, superintendent. Property is the Camp Bird mine, showing gold and copper ores. Has a 10-stamp mill.

**GOLDEN COVE MINING CO.**

NEW MEXICO.

Mine office: Hachita, Grant Co., N. M. W. H. Hare, president; W. T. Stewart, vice-president; Fred E. Emery, secretary and treasurer. Has several pits and shafts of 10' to 85' depth, showing a vein claimed to give average assays of 18% copper and 20% lead, with gold and silver values. Presumably idle.

**GOLDEN DESERT MINING & MILLING CO.**

ARIZONA.

Dead. Formerly at Quartzsite, Yuma Co., Nev.

**GOLDEN EAGLE GOLD MINING CO.**

CALIFORNIA.

Office: 54 First St., Portland, Ore. Mine office: Copley, Shasta Co., Cal. R. J. Jennings, president and general manager; R. A. Martin, vice-president; Jas. E. Isaacs, secretary; C. C. Bush, Jr., treasurer; preceding officers, A. Newlands and I. Theodore Jennings, directors. Organized under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 8 claims, area 160 acres, held under bond and lease expiring 1910, known as the Keystone group, on the eastern side of the Sacramento river, circa 10 miles northeast of the Iron Mountain mine. Property, developed by tunnel, is said to show 5 gold-bearing quartz veins, of 2' to 20' width, assaying \$5 to \$20 gold per ton, and a copper vein, claimed to be 6' to 50' wide and traceable 2,200', carrying ore of 5 to 22% copper tenor, with \$1.50 to \$7.80 gold per ton.

**GOLDEN EDGE MINING CO.**

WYOMING.

Dead. Formerly at Rambler, Carbon Co., Wyo.

**GOLDEN GATE GROUP.**

COLORADO.

Mine office: Tarryall, Park Co., Colo. Property, near the foot of Badger Mountain, is said to show a vein of 10' to 30' width, giving assays of 12 to 62% copper, and \$10 and upwards gold per ton. Idle.

**GOLDEN GATE MINING & DEVELOPMENT CO.**

WASHINGTON.

Office: care of Gen. C. E. Buel, Seattle, Wash. Mine office: Cle Elum, Kittitas Co., Wash. Lands are 3 claims in Josephine county, Oregon, circa 1,000 acres of coal lands, and 22 claims in vicinity of Cle Elum, showing some galena of good grade, but mainly low grade ore assaying 1 to 4% copper and \$4 to \$7 per ton in combined gold and silver values.

**GOLDEN MARGUERITE SILVER & COPPER MINING CO.**

IDAHO.

Letter returned unclaimed from former mine office, Mullan, Shoshone Co., Idaho. Organized 1908, with capitalization \$1,500,000. Lands, 10 claims, in the Hunter district. Idle.

**GOLDEN MINT MINES, LTD.**

NORWAY.

Dead. Voluntarily liquidated, October, 1903. Formerly at Lyngenfjord, Norway.

**GOLDEN RULE COPPER MINING & SMELTING CO.**

ARIZONA.

Dead. Was a swindle. Formerly at Vail, Pima Co., Ariz. Fully described Vol. VI.

**GOLDEN SHOWER COPPER CO.**

ARIZONA.

Mine office: Tucson, Pima Co., Ariz. Chas. F. Hoff, president and general manager. Capitalization \$3,000,000, shares \$1 par. Lands, 4 claims, area

80 acres, 14 miles northwest of Tucson and 6 miles from Billito Station on the Southern Pacific railway. Has a 20' shaft. Idle.

**GOLDEN STAR MINING CO.****IDAHO.**

Dead. Formerly at Doniphan, Blaine Co., Idaho.

**GOLDEN STATES MINES, LTD.****ARIZONA.**

Office: 20 Lawrence Lane, London, E. C., Eng. Mine office: Dragoon, Cochise Co., Ariz. Chas. F. Branton, chairman; George Thompson, secretary. Organized June 25, 1897, as reconstruction of Geldfontein Estates & Gold Mining Co., Ltd., with capitalization £100,000, shares 5s. par; issued, £61,254. Lands, 120 acres, with questionable title, on Copper Creek, in the Dragoon Mountains. Has a small smelter. Idle some years.

**GOLDFIELD COPPER-GOLD MINING CO.****NEVADA.**

Dead. Was organized March, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Officers were W. W. Talbot, president; T. E. Davis, vice-president; E. A. Jenkins, secretary; D. L. Hopkins, treasurer. Lands were 2 claims and a millsite, circa 5 miles from Hawthorne. Formerly at Hawthorne, Esmeralda Co., Nev.

**GOLDFIELD COPPEROPOLIS MINING CO.****NEVADA.**

Office: 1130-11 Broadway, New York, N. Y. Letter returned unclaimed from former mine office, P. O. Box 198, Goldfield, Esmeralda Co., Nev. J. P. Marshall, president and treasurer; R. Tidwell, vice-president; Robt. Blei, secretary; preceding officers, G. H. Phillips and G. A. Phillips, directors. Organized under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 6 claims, known as the Comstock group, at Copperopolis, just north of Lone Mountain, and 3 claims at Phillipsburg, circa 20 miles northwest of Goldfield, showing an outcrop carrying argentiferous copper ore and auriferous lead ore, opened by a 250' tunnel.

**GOLDFIELD ELY FAIRVIEW WONDER MINING CO.****NEVADA.**

Dead. Was promoted by Arthur Levan, one of the swindlers who put out the Lost Spanish Bullion Mines Co. Was a mere bit of stock-jobbery. Formerly at Ely, White Pine Co., Nev.

**GOLD FLINT MINING CO.****MONTANA.**

Dead. Was succeeded, circa 1907, by Lion Gulch Development Co. Formerly at Homestake, Jefferson Co., Mont.

**GOLD HILL COPPER CO.****NORTH CAROLINA.**

Office: 82 Broadway, New York, N. Y. Mine office: Gold Hill, Rowan Co., N. C. Leonard D. Baldwin, president; Wm. M. Richardson, secretary and treasurer; J. C. Kemp Van Ee, managing director; preceding officers, C. Strader Batt, E. N. Howell and W. E. Murdock, directors; B. B. Miller, receiver. Organized Feb. 21, 1900, under laws of New Jersey, with capitalization \$5,000,000, shares \$100 par.

Lands, 1,050 acres, in Rowan and Stanley counties, well watered and timbered, including the Gold Hill mine, where gold was discovered in 1799. Gold-bearing quartz veins were discovered in 1831, and circa 1845 this mine was the largest gold producer in the United States. Property is served by the Southern railroad, and the Yadkin river has 7,500-h. p. available, 17 miles distant.

Development is by shafts of 105', 150', 615' and 830', estimated to show ore reserves of 60,000 tons, carrying 2.75 to 3% copper, and 60 cents to \$1.60 gold per ton. A carload of ore, shipped early 1908 to the Perth Amboy smelter, returned 1.5% copper and circa \$30 gold per ton, with small silver values.

Equipment includes ten 100-h. p. boilers and a 40-stamp mill. About 75 men were employed, February, 1908.

The company has had a decidedly checkered career. Operations were conducted on a considerable scale, 1901-1903, employing 250 men, but financial

difficulties resulted, 1903, in the appointment of C. M. Miller as receiver. This receivership was ended circa 1906, but in August, 1906, B. B. Miller was appointed receiver on the application of Walter George Newman, formerly president of the company, on claims aggregating circa \$352,000. The property is considered valuable, if adequately financed and well managed.

**GOLD HILL QUARTZ MINING CO.****OREGON.**

Office: 111 Fifth Ave., New York, N. Y. Mine office: Gold Hill, Jackson Co., Ore. C. R. Ray, superintendent, at last accounts. Property includes the Braden, Conger and Elk Creek mines, having argentiferous and auriferous copper and lead ores. Has steam power and a 10-stamp mill.

**GOLD KING CONSOLIDATED MINES CO.****COLORADO.**

Office: 45 Milk St., Boston, Mass. Mine office: Silverton, San Juan Co., Colo. Mark Gallert, president; John R. Judd, general manager; D. M. Haynes, general superintendent. Has auriferous and argentiferous copper ores, carrying mainly gold values. Mine has steam, electric and gasoline power, and an 80-stamp mill.

**GOLD LION MINES CO.****COLORADO.**

Mine office: Red Mountain, Ouray Co., Colo. H. V. Russell, superintendent. Has auriferous and argentiferous ores of lead and copper. Has steam power. Employed circa 20 men at last accounts.

**GOLD MOUNTAIN MINING CO.****WASHINGTON.**

Mine office: Berlin, King Co., Wash. F. Karl, superintendent. Lands, 18 claims, well watered and timbered, on Money Creek, opened by tunnels of 2,200' aggregate length, showing antimonial gold copper ores, carrying values mainly in antimony. Has hydro-electric power and planned, 1907, a reduction plant.

**GOLD QUARTZ MINING CO.****NEVADA.**

Office: care of W. W. McDowell, president, Butte, Mont. Mine office: Bullion, Elko Co., Nev. Has secured ores assaying up to 10.2% copper.

**GOLD ROSE MINING & MILLING CO.****MONTANA.**

Letter returned unclaimed from former mine office, Helena, Lewis & Clark Co., Mont. Lands, in the Fort Harrison district, shortly west of Helena, show copper ore.

**GOLDSMITH COPPER CO., LTD.****BRITISH COLUMBIA.**

Dead. Formerly at Howe Sound, New Westminster district, B. C.

**GOLDSMITH MINING CO.****MONTANA.**

Letter returned unclaimed from former office and mine, Butte, Silver Bow Co., Mont. C. W. Ellingwood, general manager. Organized 1906, with capitalization \$3,000,000, shares \$10 par. Lands, 4 claims, area 80 acres, adjoining the Alice mine on the west. Mine, opened by a 600' shaft, formerly was a considerable producer of silver, but shows, on the 400' level, a 3' vein assaying up to 3.5% copper, and has a little ore assaying up to 235 oz. silver per ton. Leasers shipped, 1906-1907, some argentiferous copper ore. Idle and apparently moribund.

**GOLD STAR MINING CO.****WASHINGTON.**

Office: 2107 E. Madison St., Seattle, Wash. Letter returned unclaimed from former mine office, Index, Snohomish Co., Wash. Aden Fraser, president; John Edmond Praul, secretary, treasurer and general manager. Organized 1903, under laws of Washington, with capitalization \$1,000,000, shares \$1 par. Lands, 6 claims, area 120 acres, well timbered, in the Index district, 4 miles from Great Northern railway, showing a 6' fissure vein in syenite, giving assays of 7% copper and \$1.20 gold per ton, from bornite, and \$25 gold per ton from an oxidized quartz capping. Idle at last accounts.

**GOLD TUNNEL & RAILWAY CO.****COLORADO.**

Mine office: Howardsville, San Juan Co., Colo. Wm. D. Cole, manager.

Ore carries up to \$100 per ton in copper, lead and silver values. Has water power. Employed circa 75 men at last accounts.

**GOLETA CONSOLIDATED MINES.****CALIFORNIA.**

Dead. Formerly at Jordan, Mono Co., Cal. Described Vol. VII.  
**SUCESIÓN P. GONZALEZ.**

**CHILE.**

Office and works: La Brar, Freirina, Atacama, Chile. Property is a smelting furnace, turning out the equivalent of 1,250,000 lbs. fine copper yearly. Presumably idle.

**GOOD HOPE MINING & REDUCTION CO.****COLORADO.**

Office: Del Norte, Colo. Mine office: Vulcan, Saguache Co., Colo. Has auriferous and argentiferous copper ores. Idle several years.

**GOODRICH PROPRIETARY.****AUSTRALIA.**

Mine office: Yeoval, N. S. W., Australia. F. Pearce, manager, at last accounts. An old property, once a considerable producer of gold and copper, reopened, 1902, by a new shaft, planned to be sunk 450', but which apparently got down only 200', sunk to get beneath the former workings, said to have been reached by a crosscut. Ore assaying up to 18% copper and 4 oz. gold per long ton, occurs in a pipe-vein about 300' in diameter. Mine has given much trouble, in the past, from caving. Employed a small force, in development work, during 1907.

**GOODLANDER MINING & MILLING CO.****MEXICO.**

Dead. Succeeded by Sonora Development Co. Formerly at Moctezuma, Sonora, Mex.

**GOODSPRINGS CONSOLIDATED MINING & SMELTING CO.****NEVADA.**

Office: Los Angeles, Cal. Mine office: Goodsprings, Lincoln Co., Nev. Joe. Dedrichs, president; Warren W. Porter, secretary. Organized circa 1907, apparently as successor to Goodsprings Smelting & Development Co. Former company planned laying out a townsite, building water works, an electric railway and a 500-ton smelter, but came to grief. Lands, 6 claims.

**GOODSPRINGS SMELTING & DEVELOPMENT CO.****NEVADA.**

Dead. Formerly at Goodsprings, Lincoln Co., Nev. Described Vol. VI.

**GOOD VENTURE COPPER MINING CO.****NEW HAMPSHIRE.**

Dead. Formerly at Woodsville, Grafton Co., N. H.

**GOODVENTURE MINING & MILLING CO.****WYOMING.**

Dead. Formerly at Hecla, Laramie Co., Wyo.

**GOOSE LAKE COPPER CO.****MONTANA.**

Office: care of Reynolds & McDowell, Butte, Mont. Mine office: Cooke, Park Co., Mont. Organized 1907, with capitalization \$5,000,000. Lands, 15 miles northeast of Cooke and just north of the Yellowstone National Park, at an elevation of about 10,000', show a fissure vein in granite, of 50' estimated width, carrying sulphide ores assaying 5 to 12% copper, with fair gold and silver values and a trace of platinum. District lacks adequate transportation facilities. Company said to plan building an electric line to Columbus, on the Northern Pacific, and erecting a smelter. Property considered promising.

**GOTHIC MILLING, MINING & POWER CO.****COLORADO.**

Dead. Formerly at Crested Butte, Gunnison Co., Colo. Described Vol. VI.

**BERGWERK GOTTLICHE HÜLFE STOLLN.****GERMANY.**

Mine office: Tanneubachstal bei Brunndöbra-Georgenthal, Saxony, Germany. Idle.

**GOULAIS BAY MINING CO.****ONTARIO.**

Office and mine: Sault Ste. Marie, Algoma, Ont. Capitalization \$8,000,000. Lands, 1,300 acres, on Goulais Bay, Lake Superior, 25 miles north of Sault Ste. Marie, on which a little exploratory work was done, circa 1902, but property since idle, and company apparently moribund.

**GOULBURN COPPER DEVELOPMENT CO.****AUSTRALIA.**

Mine office: Breadalbane, N. S. W., Australia. Development is on an iron ore body of some promise.

**GOULD COPPER MINING CO.****ARIZONA.**

Mine office: Tucson, Pima Co., Ariz. S. H. Gould, president and general manager; C. E. Hutchison, vice-president; W. H. Daily, secretary; Dr. W. V. Whitmore, treasurer. Capitalization \$1,000,000, shares \$1 par. Lands, 19 claims, in the Tucson Mountains, 18 miles from Tucson, nearest railroad point. Lands cover nearly 1 mile of the east and west strike of a mineral zone circa 2,000' wide and 5 miles long. Country rocks are limestone, granite and quartzite. Has shafts of 50', 125' and 365', with 2 short tunnels, showing chalcopyrite with quartz gangue, averaging about 3 to 4% copper, 3 oz. silver and \$1.50 gold per ton, with sufficient iron to be self-fluxing. Has about 2,000 tons of ore on the dump. Equipment includes gasoline hoist and air-compressor. Property considered promising.

**GOULD ISLAND MINE.****ALASKA.**

Mine office: Sulzer, Prince of Wales Island, Alaska. H. R. Gould, owner and manager. Lands, 1 claim, area 20 acres, showing a lenticular ore body, between hornblende-schist and limestone, up to 40' in width, giving assays of about 6% copper, 1 to 20% lead, 3% zinc, 1 oz. silver and \$4 gold per ton, from chalcopyrite, galena and sphalerite. Has tunnels of 60' and 70'.

**GOULD MINING CO.****WYOMING.**

Dead. Formerly at Centennial, Albany Co., Wyo. Described Vol. VII.

**GOVERNOR GREENWATER COPPER CO.****CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Is controlled, through ownership of entire stock issue, by Greenwater Copper Mines & Smelters Co. Presumably idle.

**GRAFTER MINE.****YUKON.**

Mine office: White Horse, Yukon, Canada. Robt. Lowe, manager. Shipped, 1905, circa 450 tons of ore, of 19 to 30% copper tenor, to various British Columbia smelters, and, for several months, 1907, shipped 25 to 30 tons daily to Tyee smelter. Was reached, 1907, by White Pass & Yukon railroad. Employs circa 20 men. Production, 1907, estimated at 650,000 lbs. fine copper.

**GRAFTON COPPER MINING CO.****AUSTRALIA.**

Mine office: Grafton, N. S. W., Australia. Samuel Lee, chairman; W. J. Mulligan, mine manager. Net earnings, 1907, were £14,251, and £11,000 dividends were paid. Mine, known as the Cangai, has 2 veins, the south lode of 3' to 10' width carrying up to 6' of massive copper sulphides containing fair gold and silver values. Ore reserves, 1908, estimated at 112,177 long tons, of which 17,000 tons were estimated to carry 10% copper; 23,000 tons to carry 6% copper, and 70,000 tons to carry 3.5% copper. Smelter has 4 reverberatory furnaces, producing matte, and management plans changing production to blister copper, in the form of smoke bars. Trouble is had in securing fuel, and water supply is precarious. Company plans building a concentrator and installing electric power. Production, 1907, was 7,665 long tons of ore, of which 3,535 tons were smelted to matte, containing 790,840 lbs. fine copper, 2,816 oz. silver and 176 oz. gold. Company apparently lacks financial strength, but property is of considerable promise.

**GRAHAM COUNTY MINING CO.****ARIZONA.**

Office: 1509-20 Broad St., New York, N. Y. Mine office: Fort Grant, Graham Co., Ariz. John W. Manning, president; Schuyler S. Moore, secretary and treasurer; "Prof." Geo. A. Treadwell, consulting engineer. Capitalization \$250,000, shares \$10 par. Lands are gold-copper claims in the Clark district,

on which the company claims to have expended upwards of \$100,000 in development work. Idle for several years and apparently moribund.

**GRAHAM COUNTY MINING & SMELTING CO.**

**ARIZONA.**

Mine office: Safford, Graham Co., Ariz. H. N. Charlson, president. Lands, 13 claims, west of the Rex Cobre. Idle.

**GRANADEÑA MINING CO.**

**MEXICO.**

Mine office: Santa Barbara, Hidalgo, Chihuahua, Mex. Lands, 3 miles northeast of Santa Barbara, show argentiferous and auriferous chalcopyrite, galena, sphalerite and pyrite.

**GRANBY CONSOLIDATED MINING,  
SMELTING & POWER CO., LTD.**

**BRITISH COLUMBIA.**

Office: 733-52 Broadway, New York, N. Y. Mine office: Phoenix, Boundary district, B. C. Works office: Grand Forks, Boundary district, B. C. Employs about 900 men, of whom approximately 500 are at the mine, and 400 at the smelter. Jacob Langeloth, president; Jay P. Graves, vice-president and general manager; Geo. Martin Luther, second vice-president; Geo. Crawford Clark, Jr., third vice-president; preceding officers, Geo. Crawford Clark, Henry Lee Higginson, B. Hochschild, Wm. H. Nichols, W. H. Robinson, Sanford H. Steele, Edwin Thorne, A. L. White, Payne Whitney and Wm. A. Nash, directors; Northrup Fowler, secretary; G. W. Wooster, treasurer; A. B. W. Hodges, local manager; Wm. Yolen Williams, consulting engineer; O. B. Smith, Jr., mine superintendent; W. A. Williams, smelter superintendent; J. C. McDonald, master mechanic; C. M. Campbell, engineer.

Organized March 29, 1901, under special act of the Provincial Parliament of British Columbia, with capitalization \$15,000,000, shares \$10 par, changed, 1906, to \$15,000,000, shares \$100 par, 1 share of new stock being issued for 10 of old. Issued, \$13,500,000. Stock is listed on the Boston stock exchange. Fiscal year ends June 30. Boston Safe Deposit & Trust Co., registrar; American Loan & Trust Co., Boston, and Title Guaranty & Trust Co., New York, transfer agents. Annual meeting, first Tuesday in October.

Begular dividend rate is 8%, or \$2 quarterly. First dividend, 1%, was paid Dec 16, 1903, and dividends have been as follows: \$133,630.30 in 1903; none in 1904; \$399,991 in 1905; \$1,620,000 in 1906, and \$1,215,000 in 1907. Dividends were resumed June, 1908, with a declaration of \$2.

Lands, 43 claims, area 1,100 acres, crown-granted, also 500 acres of mill and smelter sites, and 500 acres miscellaneous lands, principal properties being in the Osoyoos mining field, Boundary division, Yale district of British Columbia, very near the United States line. Lands include the Old Ironsides, Knob Hill, Victoria, Grey Eagle, Banner, Tip Top, Triangle, Gold Drop, Curlew, Monarch, Tamarack, Monte, No. 13 and other claims and groups, forming a compact tract of about 8,000' by 9,000', giving nearly 2 miles of the strike of the mineralized zone. Miscellaneous landed holdings include a 61-acre limestone quarry, for flux, several hundred town lots, at Grand Forks and Phoenix, and 500 acres of land at Carson, British Columbia.

The property shows diabase and tuffs carrying two wide ore bodies in quartz-diorite, which apparently are altered volcanic tuffs, main ore body having an approximately north and south strike, with a surface dip of 60° to the eastward, and somewhat flatter dip at depth. The main ore body is estimated by company as of 80' average width, which is an ultra-conservative figure, as actual figures of width are 100' to 400', with an average of nearly or quite 200'. The main ore body has been developed for about 4,000' in length, and opened to depth of 900', while its continuity has been proven, by diamond drill borings, to depth of 1,100'. To May 1, 1908, the company had bored 29,117' of holes. Ore is exclusively chalcopyrite, averaging about 1.7% copper only, with an average of 0.4 oz. silver and \$1.50 gold per ton. The ore

carries 35 to 40% silica, 14 to 17% iron, 18 to 20% calcium carbonate, 3 to 4% sulphur and circa 7% alumina and 7% magnesia, constituting an almost ideal self-fluxing ore.

The mine is opened by shafts of 200', 400', 350', 500' and 100', the Victoria, *Ætna* and Monarch being the more important, and by tunnels of 1,500', 3,000', 3,000', 2,500', 900', 500' and 800', with about 11 miles of underground workings. Principal extraction, however, is from immense open-pits, or glory-holes, the great width of the ore body rendering open-cast extraction advisable. New underground openings, 1907, were 9,701'. The largest pit is 400x1,000' in area, and the plans of the company practically call for the mining off of an entire mountain. Ores stoped on the various tunnel levels are milled, through chutes, to lower levels, with electric haulage on the 200', 300' and 400' levels, which are double-tracked and have 75-h. p. motors drawing 10-ton ore cars. These tunnels are equipped, at their portals, with ore-crushers and bins of 2,000 to 3,000 tons capacity each, there being 3 crushers of 150 tons hourly capacity each. No. 3 tunnel has a 22x55' crusher-house, with a 30x42" Farrel-Bacon crusher driven by a 100-h. p. electric motor, capable of breaking masses of nearly a cubic yard in size to chunks not larger than 7" to 8". The 3 large crushers weigh 113,000 lbs. each, and have frames of semi-steel, with a tensile strength of 32,000 lbs. to the square inch.

No. 1 shaft is being broken into an open pit, and the shafthouse has been demolished.

No. 2 shaft has a 12x16" double cylinder hoist.

The 3-compartment Victoria shaft, 400' deep, is the main working shaft of the mine. Ore is raised by a 250-h. p. electric hoist, operating 7-ton skips in counterbalance, and the shaft has a daily productive capacity of 3,000 tons. Equipment at the Victoria includes a 250-h. p. band double-conical-drum hoist, good for 1,000' depth, driven by a Westinghouse 3-phase variable speed induction motor, and an air-compressor. The Victoria equipment includes a crusher of 150 tons hourly capacity, conveyor and 3,000-ton bins, connected with the Canadian Pacific and Great Northern railways.

The Gold Drop-Curlew group has been developed extensively, showing good ore bodies, and is being equipped very substantially for a large production.

The Independence group, at the head of Bear Creek, in the Similkameen district, held under a \$100,000 bond, has a vein in schist and granite, traced 1,000', carrying mainly low grade ore, with some chutes of ore of higher grade in copper, with fair gold and silver values. The ore of the Independence is much similar to that of the main group of the Granby.

Ore reserves of the Granby were estimated, 1904, by the company, at 20,000,000 tons, but actually were much larger, and since have been added to greatly. Ore is handled automatically, from the time of blasting until the blister copper is ready for shipment at the smelter, without being touched by human hands.

Electric power is used throughout the mine and works, about 2,000 h. p. being required at the mine, and 3,000 h. p. at the smelter. Commercial current is taken from the West Kootenay Power & Light Co., which has a hydro-electric installation at Kettle Falls, on the Columbia river, in Washington.

Equipment at the mine, from the plan of operations, which provides for extraction mainly from open-cast workings and through tunnels, is adequate, but by no means comparable to most large copper mines, which are under the necessity of hoisting practically all of their ore through shafts. Equipment includes two 200-h. p. and two 250-h. p. hoists, good for 1,000' depth each. The compressor-house, 60x121' in size, has 2 electric air-compressors, the larger of 60-drills capacity, both machines being driven electrically, by rope trans-

mission, from two 700-h. p. Westinghouse type C induction motors. The principal compressor is a 60-drill Rand tandem-compound engine, with 16x30" high-pressure cylinders and 28x36" low-pressure cylinders, with piston efficiency of 6,000 cubic feet of free air per minute, at 70 lbs. pressure.

Mine buildings include a 40x80' machine shop, 40x50' smithy and a 40x40' carpenter shop, all of wood. The company owns 20 dwellings and 2 hotels at Phenix, the Granby hotel being a 3-story structure with electric light and steam heat, costing \$25,000.

The mine is connected with the smelter, 24 miles distant, by 2 railways, the Canadian Pacific and the Great Northern. By means of extensive ore-bins at the Victoria shaft and various tunnels, a train of 35 thirty-ton cars can be loaded in 25 minutes, or less.

The smelter is much the largest and best in Canada, and among the reduction plants of the world is second only to the great Washoe works of the Anaconda, being of about the same size as the smelters of the Copper Queen and Boston & Montana. The plant is of 5,000 tons daily capacity, and has been enlarged repeatedly, with every prospect that eventually it will reach a capacity of not less than 10,000 tons daily. The smelter works 8-hour shifts.

The works have steel bins with storage capacity for 8,000 tons of coke and 13,000 tons of ore. Charging is by 4 electric locomotives, each drawing two 2-ton cars, constituting a single charge. The ore is practically self-fluxing, and with the addition of a little limestone and necessary fuel is charged as it comes from the mines, without concentration or assortment.

The steel blast-burnace building, rebuilt 1907, had six 44x160" furnaces, of 300 tons daily capacity each, and two 48x208" furnaces, latter added in 1905. The 6 old furnaces were rebuilt first to size of 44x212", and in 1908 were rebuilt again, with an addition of 4' 4" in length, rendering them 44x264" in length, and the 2 larger furnaces were rebuilt to size of 48x264", giving an average daily capacity of 625 tons for each of the 8 furnaces.

The furnace building has a brick dust-flue, 10x11x800', and a steel dust-chamber was added, 1907. This sets 22' above the feed floor, on foundations of steel columns, masonry and concrete, and is 13' wide, 15' high and 313' long, with a floor of 28 hoppers, having a conveyor underneath for flue-dust. Slags, formerly granulated, are now dumped hot, by 8x14" locomotives traversing a 36" slag-line.

The first fusion product is a 40% matte, which is taken, in ladies, by a 40-ton electric traveling crane, to the converter building, of steel, 68x240' in size, which stands 100' from the cupola building. The old converter department had 3 stands, with shells 70x100", which have been replaced by 4 stands, each operated electrically by a 25-h. p. motor, and ten 96x132" shells. There are 3 mould carriers under each stand, and product is a blister copper of 99% metallic tenor, including an average of 40 oz. silver and 7 oz. gold per ton, which is sent to the Laurel Hill works of the Nichols Copper Co. for electrolytic refining and parting of gold and silver values. The lining department, in the converter building, has a crusher and 2 silica mills.

The power house at the smelter, remodeled 1907, has brick walls and a steel roof. Electric power is used throughout, equipment including 9 small blowers and 2 Connersville Jumbo blowers, with capacity of 100,000 cubic feet of free air per minute, driven by two 300-h. p. motors. Converter blast is furnished by an Allis-Chalmers double-cylinder air-compressor, with capacity to reduce 10,000 cubic feet of free air per minute to pressure of 15 lbs. per square inch, driven by a 500-h. p. direct-connected electric motor. Old blast mains have been replaced by new pipes of much greater capacity.

Miscellaneous buildings at the smelter include a warehouse, roundhouse

and shops, of steel frame. There also is a 100,000-gallon steel storage tank for water.

One of the principal disadvantages under which the Granby has labored, almost from the start, has been an inadequate coke supply. To obviate this trouble the International Coal & Coke Co. was organized, 1903, with a capitalization of \$3,000,000, by practically the same shareholders as those of the Granby, though the corporations are distinct. This company has extensive deposits of high grade coking coal, at Blairmore, Alberta, assuring the Granby a fairly regular supply of coke, barring labor troubles and accidents, though fuel shortages continue a disturbing factor in the operation of the smelter.

For fiscal years, ending June 30, net profits have been as follows: \$712,649 in 1905; \$1,823,617 in 1906; \$1,924,937 in 1907; \$606,522 in 1908. The expenditures for the fiscal year 1908 included \$242,574.50 for construction and equipment, at the mines and smelters, and \$23,742.65 for purchase of lands. The company's net surplus, 1908, was \$2,455,180.77, including \$421,625.01 cash and copper, and \$1,008,012.68 in stocks, bonds and bills receivable.

Production, for fiscal years ending June 30, has been as follows: 14,237,622 lbs. fine copper, 212,180 oz. silver and 42,884 oz. gold in 1905; 19,939,004 lbs. copper, 316,947 oz. silver and 50,020 oz. gold in 1906; 16,410,576 lbs. copper, 257,378 oz. silver and 35,083 oz. gold in 1907; 21,162,926 lbs. copper, 300,593 oz. silver and 40,139 oz. gold in 1908. The production for fiscal year 1908 was secured from 854,432 dry tons of Granby ore, and 24,179 tons of custom ore smelted. Production for calendar year 1907 was 15,514,000 lbs. fine copper, compared with 19,563,949 lbs. fine copper for calendar year 1906. Net cost of copper, after deduction of gold and silver values, was 8.35 cents per pound for fiscal year 1906; 10.14 cents per pound for fiscal year 1907, and 10.24 cents per pound for fiscal year 1908. The Granby has by no means reached its productive limit, and while it may take some years to reach an output of 50,000,000 lbs. fine copper, this figure would seem reasonably safe to predict. The property, while very low in grade, has remarkably cheap costs for mining and smelting, due partly to nature and partly to good management, and the ore reserves are among the greatest in the world. The management is thoroughly efficient and capable in all departments.

#### GRAND ARIZONA COPPER CO.

**ARIZONA.**

Letter returned unclaimed from former mine office, Douglas, Cochise Co., Ariz. Lands, near Douglas, are said to be extensive, and, 1907, were being explored for copper.

#### GRAND CANYON COPPER CO.

**ARIZONA.**

Dead. Formerly at Grand View, Coconino Co., Ariz. Described Vol. VII.

#### GRAND CENTRAL MINING CO.

**ARIZONA.**

Office: 43 Exchange Place, New York, N. Y. Mine office: Tucson, Pima Co., Ariz. Geo. H. Daily, president; Chas. Peck, secretary; Frederick Kopper, Jr., treasurer. Capitalization \$1,000,000, shares \$1 par. Lands, 8 claims, 14 miles northwest of Tucson, in the Tucson Mountains, having a 75' shaft, with about 300' of workings, showing auriferous and argentiferous copper and lead ores.

#### GRAND CENTRAL MINING CO.

**UTAH.**

Provo, Utah. Mine office: Robinson, Juab Co., Utah. Lafayette Holbrook, president; C. E. Loose, manager; Patrick Donnelly, superintendent. Organized under laws of Colorado, with capitalization \$250,000, shares \$1 par, and paid dividends, to end of 1905, of \$986,250. Mine carries mainly silver-lead ore, with appreciable values in copper, and is an old property, extensively developed, and a considerable producer. Output, 1907, was 284 carloads of ore.

**GRAND CONSOLIDATED DEVELOPMENT CO.**

ARIZONA.

Office: care of Col. John T. Finch, secretary, Oakland, Cal. Mine office: Kingman, Mohave Co., Ariz. Geo. W. Brown, president and treasurer; Dr. John T. Davis, vice-president and manager. Mine has veins of 3' to 60' width, carrying gold, silver and copper ores, with quartz gangue, and has secured assays up to 34% copper, 9 oz. silver and \$12 gold per ton. Also has claims near Cerbat, opened by tunnel, giving ore assaying 70% lead, 12 oz. silver and \$11 gold per ton.

**GRAND DEPOSIT COPPER CO.**

NEVADA.

Mine office: Cherry Creek, White Pine Co., Nev. John Stanton, president; J. S. Page, secretary; Pierre de P. Ricketts, treasurer. Organized 1903. Lands, known as the Grand Deposit group, are said to show considerable ore bodies, giving assays of 7 to 12% copper. Idle.

**GRAND GULCH COPPER MINING CO.**

ARIZONA.

Office: care of Messrs. Schirmer, Chapin & Emmons, 79 Milk St., Boston, Mass. Mine office: St. George, Washington Co., Utah. Samuel Newhouse, general manager; Isaac Jennings, superintendent. Property, in Coconino county, in the extreme northern part of Arizona, is more accessible from Utah than from southern or central Arizona. Mine has auriferous and argentiferous copper ores, with a 370' main shaft. Shipment of 1,000 tons of ore to Salt Lake smelters gave average returns of 48% copper, netting \$99,970. Ore was carefully selected, and hauled 140 miles by wagon. Equipment includes gasoline power and a small and antiquated smelter.

**GRAND GULCH MINING CO.**

ARIZONA.

Dead. Succeeded by Grand Gulch Copper Mining Co. Formerly at St. George, Washington Co., Utah.

**GRAND JUNCTION SMELTING CO.**

COLORADO.

Letter returned unclaimed from former office, 79 Milk St., Boston, Mass. Works office: Grand Junction, Mesa Co., Colo. I. N. Patterson, president; J. V. Howard, secretary; Thos. Osborne, superintendent. Property is a 125-ton smelter, incomplete, which it was planned to blow in, 1905. Is closely related to Western Slope Copper Mining & Smelting Co. Management apparently inexperienced and reckless. Property mortgaged, and company's affairs apparently hopelessly involved.

**GRAND LA SAL MINING CO.**

UTAH.

Office: Provo, Utah. Mine office: Castleton, Grand Co., N. M. Jacob Evans, president; J. W. Beasley, vice-president; J. F. Van Wagener, secretary and treasurer. Organized circa December, 1906, with capitalization \$50,000. Lands, in the La Sal Mountains, have circa 250' of workings, showing auriferous and argentiferous lead and copper ores.

**GRAND MARAIS COPPER MINING CO.**

MINNESOTA.

Dead. Formerly at Grand Marais, Cook Co., Minn.

**GRAND MOUNT LYELL COPPER CO., LTD.**

TASMANIA.

Mine office: Mt. Lyell, Montagu Co., Tasmania. Lands, sundry claims, in Sections 682, 789 and 1674, slightly prospected. Idle several years and apparently moribund.

**GRAND NATIONAL SMELTING CO.**

MEXICO.

Mine office: San Juan de Allende, Rio Grande, Coahuila, Mex. The mine, known as La Reforma, carries auriferous copper ore.

**GRAND PRIZE COPPER MINING CO.**

ARIZONA.

Dead. Lost lands, 1902. Formerly at Payson, Gila Co., Ariz.

**GRAND RAPIDS COPPER CO.**

WYOMING.

Dead. Sold lands to Saginaw Valley Copper Mining Co. Formerly at Encampment, Carbon Co., Wyo.

**GRAND REEF COPPER MINING CO.**

ARIZONA.

Office: care of Clarence H. Mackay, 253 Broadway, New York, N. Y.  
 Mine office: Aravaipa, Graham Co., Ariz. Large sums were expended in development and equipment, latter including a 3-stamp mill and 90-ton smelter. Idle for some years.

**GRAND REPUBLIC COPPER MINING CO.**

COLORADO.

Office: 52-240 La Salle St., Chicago, Ills. Letter returned unclaimed from former mine office, Pearl, Larimer Co., Colo. W. A. McGuire, president; E. V. Boisot, secretary and treasurer. Organized 1902, under laws of Wyoming, with capitalization \$1,500,000, shares \$1 par. Is controlled by Standard Development Co. Lands, 7 claims, area 70 acres, in the Big Horn district, 7 miles south of Pearl, showing a 3' pay streak, carrying some native copper, in a schistose vein, cut at depth of 130' by a 200' shaft. Also has a sulphide ore body. Idle several years and is not regarded favorably.

**GRAND TRAVERSE & ARIZONA MINING CO.**

ARIZONA.

Office: 129 East Front St., Traverse City, Mich. Letter returned unclaimed from former mine office, Cave Creek, Maricopa Co., Ariz. Thos. Smurthwaite, president; Geo. R. Ray, vice-president; Herbert Montague, secretary and treasurer; preceding officers, Wm. Newman and Walter E. Grelick, directors; Chas. F. Smurthwaite, general manager; A. Scharingron, mine superintendent. Organized May 6, 1903, under laws of Arizona, with capitalization \$2,000,000, shares \$2 par; issued, \$1,670,000. Annual meeting, second Tuesday in January.

Lands, 33 claims, area circa 660 acres, showing talcose and mica schists, the northern portion carrying a number of stringers and small veins, the southernly portion showing one vein of 12' to 15' width, with a number of parallel stringers, in diorite, carrying oxidized ores and sulphides, with some cuprite on the northern part of the property, and native copper in the New Hope mine. Development is by shafts of 70', 392' and 167', with 105' and 50' tunnels, estimated to show 17,000 tons of ore, with 2,000 tons blocked out, of which the bulk is leached ore, running 1 to 4% copper, with about 2,000 tons estimated by company to average 6 to 30% copper, circa 37.5 oz. silver and \$30 gold per ton. Has a small steam plant, with 2 hoists, and several small mine buildings. Nearest railroad is 35 miles. Company plans continuing development.

**GRAND VIEW MINING CO.**

WASHINGTON.

Dead. Lands sold, early 1907, to Night Hawk Mining Co. Formerly at Loomis, Okanogan Co., Wash.

**GRANDVIEW MINING & MILLING CO.**

UTAH.

Office: care of L. W. Dutro, Memphis, Tenn. Is said to have lands in Utah, near the Colorado line, from which ore giving good assay values in gold, silver and copper has been secured. Idle.

**GRANITE CREEK SMELTING & REDUCTION CO.**

NEVADA.

Dead. Formerly at Golconda, Humboldt Co., Nev.

**GRANITE WELLS MINING CO.**

CALIFORNIA.

Office: 716 Lankershim Bldg., Los Angeles, Cal. Mine office: Daggett, San Bernardino Co., Cal. Lands show a stained quartzite capping, of circa 60' width, standing about 30' above surface for 200', underlaid by what the company terms a pipe vein, of 2" to 2' width, between quartzite and syenite, carrying very rich ores, mainly cuprite, assaying 17 to 30% copper in the upper levels, turning to sulphide ore at depth of 250'. Company claims to have 200 tons of very rich ore on the dump. Presumably idle.

**LA GRAN PROVEEDORA DE COBRE, S. A.**

MEXICO.

Is the Mexican incorporation of the Arizona-Mexican Copper Co.

**GRANT CONSOLIDATED COPPER MINING CO. WASHINGTON.**

Office: care of Geo. A. McLeod, Spokane, Wash. Mine office: Chesaw, Okanogan Co., Wash. A. D. McPhee, superintendent. Organized 1907, under laws of Washington, with capitalization \$1,650,000. Is said to have expended about \$90,000 on the property. Lands, 14 claims, on Copper Mountain, near Chesaw, opened by tunnel planned to be driven 1,500', cutting 2 strong veins of medium grade chalcopyrite, showing considerable ore. Shipped some ore, 1907, to Granby smelter, running about 6% copper and \$4 gold per ton. Property considered promising.

**GRANT COPPER MINING CO. COLORADO.**

Dead. Formerly at Pearl, Larimer Co., Colo. Described Vol. VI.

**GRANITE MINE. NEW MEXICO.**

Office: care of Sherwin-Williams Paint Co., owner, Cleveland, Ohio. Mine office: Magdalena, Socorro Co., N. M. Jos. Brown, superintendent. Mine is opened by tunnel, showing a 65' vein with a 12' pay streak claimed to average 13% copper, which obviously is erroneous, ores being mainly smithsonite and sphalerite, with some cerussite and argentiferous galena, and occasional cuprite and native copper. Ores are mainly low in grade, requiring concentration. Property, worked for zinc, has an ore chute, of about 400' length, on the seventh, eighth and ninth levels, which is fully 100' wide on the ninth level. Shipped, 1907, a considerable tonnage of lead and zinc carbonates, lead ores going to the Luna Lead Co., at Deming, N. M., and zinc to the company's works, at Joplin, Mo.

**GRASLITZER KUFFERBERGBAU. AUSTRIA.**

Mine office: Eilenberg, Bohemia, Austria. Mines, which are very ancient, and were one of the principal sources of European copper supply during the Middle Ages, show a vein of 12' to 15' width, in clay-slate. Mines were reopened on a considerable scale, and a new smelter built, 1901, but have been idle for several years.

**GRATIO MINING CO. MICHIGAN.**

Office: 12 Ashburton Place, Boston, Mass. Operating office: Calumet, Mich. Mine office: Mohawk, Keweenaw Co., Mich. Quincy A. Shaw, Jr., president; Rudolph Agassiz, vice-president; Geo. A. Flagg, secretary and treasurer; Jas. MacNaughton, general manager; preceding officers, Alexander Agassiz, Francis L. Higginson and Francis W. Hunnewell, directors. Organized Feb. 16, 1906, under laws of Maine, with capitalization \$300,000, shares \$3 par, fully paid. Is controlled, through ownership of stock, by Calumet & Hecla Mining Co. Ended fiscal year Apr. 30, 1908, with \$12,213 cash and accounts receivable, with a debit to profit and loss of \$68,654.

Lands, 600 acres, being the NW.  $\frac{1}{4}$  of Section 20, NW.  $\frac{1}{4}$  of Section 27, SW.  $\frac{1}{4}$  of Section 23, and SE.  $\frac{1}{4}$  of Section 22 except the NW.  $\frac{1}{4}$  of the NW.  $\frac{1}{4}$ . Property lies south and east of the Seneca, and north and east of the Mohawk. Extensive diamond drill borings were made before shafts were started, and the property was found to carry the northern extension of the Kearsarge biungydaloid.

Development is by two 3-compartment shafts, exact duplicates, 9x22' inside of timbers, with ladderways in the middle, sunk at an angle of 36° on the Kearsarge bed; two shafts being sufficient to develop the entire tract. Levels are opened at 100' intervals.

No. 1 shaft is circa 620' deep, at the fifth level, and has a half-mile or more of drifts.

No. 2 shaft, 1,475' southwest of No. 1 and circa 2,000' north of the Mohawk boundary, is 720' deep, at the sixth level, with a fair showing of copper on the fifth level.

Shafts have duplicate equipment, including duplex-cylinder Lidgerwood

hoists, with 5' drums, good for one-half mile each, and 15-drill air-compressors. Each shaft has a single-compartment shaft-rockhouse, which can be enlarged later, and stamp rock broken in development is put through crushers and stocked. Buildings include a 30x40' power-house, smithy, boarding-house, etc. Property considered promising, and management excellent.

#### GRAY COPPER MINING CO., LTD.

IDAHO.

Mine office: Osburn, Shoshone Co., Idaho. W. H. Herrick, manager. Lands, on McFarren Gulch, 12 miles south of Osburn, show an ore body up to 12' in width, carrying mainly argentiferous gray copper, and a 12" vein carrying high grade auriferous and argentiferous copper ore. Company plans shipping ore.

#### GREAT AUSTRALIAN MINE.

AUSTRALIA.

Mine and works office: Cloncurry, Beaconsfield Co., Queensland, Australia. Lands, west of Cloncurry, show a vein up to 15' width, carrying a 3' paystreak of silicious sulphides ranging in copper tenor from 3 to 15%. Equipment includes a 6-drill Schram air-compressor.

The smelter, built 1907, has 25-ton reverberatory furnaces, and a blast-furnace, blown in circa July, 1908, has 2 Connersville blowers, product being matte of about 70% copper tenor. Production, 1907, was circa 100,000 lbs. fine copper, and for May, 1908, was about 80,000 lbs. fine copper.

#### GREAT BELCHER OF ARIZONA CO.

ARIZONA.

Office: 519-10 Wall St., New York, N. Y. Mine office: Providence, Yavapai Co., Ariz. Isaac W. Mason, president and treasurer; Henry B. Clifford, vice-president; P. H. Noel, secretary; T. S. Henderson & Co., fiscal agents; Geo. Rehpeter, superintendent. Organized under laws of Arizona, with capitalization \$5,000,000, shares \$1 par, as a merger of the Great Belcher Gold & Copper Co., Bullwhacker Mining Co., Empress Mining Co., Sunlight Mining Co. and Queen of Arizona Copper Co. Lands, 2 claims, in the Big Bug district, including the Great Belcher mine, 1 patented claim, said to have produced \$700,000 worth of ore in the past, having a 700' three-compartment main shaft and a 700' tunnel, with about 4,000' of workings, tunnel, on the 500' level, cross-cutting 9' of low grade auriferous copper ore, claimed to carry an average of \$12 per ton, mainly in gold.

#### GREAT BELCHER-BULLWHACKER GOLD CO.

ARIZONA.

Dead. An abortive merger of properties later merged as the Great Belcher of Arizona Co. Formerly at Providence, Yavapai Co., Ariz.

#### GREAT BELCHER GOLD & COPPER CO.

ARIZONA.

Dead. Merged in Great Belcher of Arizona Co. Formerly at Providence, Yavapai Co., Ariz.

#### GREAT BEN HUR COPPER MINING & DEVELOPMENT CO., N. L.

AUSTRALIA.

Mine office: Condobolin, Cunningham Co., N. S. W., Australia. Organized circa March, 1908, under laws of New South Wales, with capitalization £1,920, shares £15 par. Lands are at Burra Burra, near Condobolin.

#### GREAT CENTRAL MINE.

AUSTRALIA.

Mine office: Mt. Hope, Blaxland Co., N. S. W., Australia. Lands, 939 acres, at South Mt. Hope, showing large bodies of low grade ores, which are oxides and carbonates to about 200' depth, succeeded by chalcopyrite. Oxidized ores have a decomposed porphyry gangue, sulphide ores occurring in brecciated porphyry. Has steam power and a small smelter, but in operation was hampered by a precarious water supply. Production, 1898, was 246,400 lbs. fine copper. Idle since 1903.

#### GREAT CENTRAL FREEHOLD MINES, LTD.

AUSTRALIA.

Dead. Voluntarily liquidated, 1903. Formerly at Mt. Hope, Blaxland Co., N. S. W., Australia.

**GREAT COBAR COPPER MINING SYNDICATE.****AUSTRALIA.**

Dead Property was sold, 1906, to Great Cobar, Ltd. Formerly at Cobar, Robinson Co., N. S. W., Australia. Very fully described Vol. VI.

**GREAT COBAR, LTD.****AUSTRALIA.**

Office: 65 New Broad St., London, E. C., Eng. Mine office: Cobar, Robinson Co., N. S. W., Australia. Works office: Lithgow, N. S. W., Australia. Employes 1,300 men. Andrew Haes, chairman; John D. Kendall, consulting engineer; preceding officers, Wm. Rich, R. H. Henning, W. A. Horn, T. M. Joseph-Watkin, Gerard B. Elkington, J. P., and G. E. Baker, directors; Alexander Johnston, secretary; Geo. H. Blakemore, general manager; V. Farrier, mine superintendent; O. E. Iaeger, smelter superintendent.

Organized May 22, 1906, under laws of Great Britain, with capitalization £750,000, shares £5 par, fully issued. Debentures authorized, £750,000, first mortgage, at 6%, in denominations of £20, £50 and £100, redeemable by drawings at 5% premium, but repurchasable by means of a sinking fund, created 1908, by setting aside £100,000 annually from profits; issued, £550,000. A 15% dividend, amounting to £112,500, was paid Sept. 16, 1907. Net profits for first year were £238,431.

Property was bought May, 1906, of the Great Cobar Copper Mining Syndicate, but not taken over until September, 1906, for £1,006,000, of which £800,000, cash, was paid for the property, the promoters taking £206,000 in cash, shares and debentures.

Lands, 577 acres, freehold, including the Great Cobar mine, 208 acres leasehold, including the Cobar Chesney mine, and a 12-acre smelter site, with total holdings of 1,263 acres. Property includes the Great Cobar, Cobar Chesney and Great Peak mines, latter a gold property at Cobar. The company also owns and operates the Rix's Creek colliery, producing good coking coal, and smelting and refining works at Lithgow. There was some trouble, 1906, over a block of 40 acres of ground, in the main tract, said to have been lost through oversight, though formerly part of the Great Cobar property.

The Great Cobar, which is the most important copper mine of New South Wales, was opened 1869, and closed 1892, after failure to reduce sulphides in a reverberatory furnace. Production, 1869-1892, was 26,611 tons fine copper, made from rich oxides, ores averaging 11.07% in copper tenor, and considerable dividends were paid therefrom. Mine was reopened, 1892, by tributors, on a 10-year lease, and at the close of 1902 had produced, under their management, 730,669 tons of ore giving average returns of 3.27% copper. A long-standing dispute between the tributors and the fee-owners was settled, 1903, through the purchase of the property by the former, who sold to the present corporation.

Country rock, of Silurian clay-shale, shows 3 veins, of nearly vertical dip, known as the East, Middle and West lodes, principal workings being on the latter, which ranges 6' to 100' in width, carrying lenticular ore bodies. One of the principal parallel mineral zones is basic and the other acid, these lying about one-half mile apart. The principal ore bodies are 28', 38' and 52' in extreme width, with lengths of 135', 345' and 485', proven to depth of 1,000'. The oxidized zone extends to an average depth of about 250', below which the ore is mainly chalcopyrite, associated with pyrite and magnetite, with occasional pyrrhotite in the Great Cobar mine, ore being highly silicious and somewhat bismuthiferous, of about 3.5% average copper tenor in the Cobar and 2.81% in the Chesney, carrying an average of 0.5 oz. silver and 1.5 dwts. gold per long ton. The Cobar Chesney, now worked in connection with the Great Cobar, shows a lenticular chute of 36' width and about 105' length, opened to depth of 697', ore being chalcopyrite, with slate and quartz gangue.

Ore is won by overhand stoping, with 10' pillars left beside the shafts,

and timbering is by bulkheads filled with waste, this being known locally as the "pigstye" system. Ore is first broken in immense masses, then reduced to smaller size by block-holes and pop-shots. No. 1 shaft of the Cobar, 15 x 7' 6" in size, is 1,000' deep, and the Barton shaft is of the same depth, these shafts being connected by a drift, on the 1,000' level, which shows a strong vein up to 5% in copper tenor. The mine has about 3 miles of workings.

The Cobar Chesney was opened as a gold mine, the outcrop carrying no copper, but carbonate ore was found at depth of 155', and at 250' there was chalcopyrite, coated with what was termed melaconite, but which probably was chalcocite. Main shaft, 697' in depth, shows ore carrying 2 to 8% copper, and up to 3 dwts. gold per ton, with an estimated average tenor for the entire Cobar Chesney mine of 2.81% copper.

Mr. Kendall estimates reserves of 1,500,000 long tons of ore blocked out in the Cobar, and 500,000 tons in the Cobar Cheaney, besides 200,000 tons of ore near surface in the Great Cobar.

The Peak, or Great Peak, gold mine has a stamp-mill, and as the ore is silicious and free from iron and sulphur, it would seem a highly suitable flux for the basic ores of the Cobar and Cobar Chesney mines.

Buildings at the mines include wooden carpenter and machine shops, smithies, offices and other necessary mine structures.

The company uses about 3,000 h. p. at the mine and smelter, including steam and electric installations, and has a 500-h. p. first-motion hoist, good for 2,000' depth, at the "New" shaft, and two 25-drill air-compressors. The boiler plant has Green fuel economizers, and, the district being arid, causing much trouble in dry seasons from lack of water, a 100,000,000-gallon dam has been built, water costs averaging about 8s. per thousand gallons, and a second dam, of 80,000,000 gallons capacity, was begun, 1908.

The reduction plant, at the mine, begun 1907, is planned to cost circa £100,000, and eventually will include a 250-ton sampling mill, for custom ores.

The dressing plant has 2 centrifugal Heclon crushers, each of 120 tons hourly capacity, delivering ore to electrically driven belt-conveyors, which take it to a 1,500-ton ore-bin, whence it is loaded into 30-ton cars and drawn by electric locomotive to the main storage plant. The Cobar Chesney has a 10-stamp mill and 25-ton concentrator.

The smelter, of 1,000 tons daily capacity, has three 500-ton water-jacket blast-furnaces, one being held in reserve, as a spare. Fuel is coke and coal. The converter department has 2 stands, with 84x126" shells of the Copper Queen type. Blast is supplied by 3 Connerville blowers, and it is planned handling slags with electric locomotives. Product of the smelter is blister copper, sent to the company's refinery at Lithgow.

The Lithgow works have five 100-ton water-jacket blast-furnaces, also reverberatory furnaces. An electrolytic refinery, installed 1902, treats, in addition to the company's blister copper, material from other properties.

From 1876 to 1906, inclusive, the Great Cobar mine produced 1,592,895 long tons of ore, and made therefrom 61,872 long tons fine copper. Production, 1905, was 9,076,480 lbs. fine copper, and for 1906 was 9,027,200 lbs., and 1907 is said to have shown a slight increase. From May 6, 1906, to Dec. 31, 1907, production was 13,695,360 lbs. fine copper, 104,292 oz. silver and 17,168 oz. gold, secured at a net profit of £238,431. For month ending Nov. 20, 1907, the smelter treated 15,380 tons of ore, producing 365 long tons of copper, circa 5,600 oz. silver and circa 100 oz. gold, showing an average copper extraction of 2.37%. The company plans bringing its ultimate production to about 30,000,000 lbs. yearly. With ore secured under modern methods, and with good mining and smelting equipment, the property should earn substantial profits.

**GREAT COBAR NORTH, LTD.****AUSTRALIA.**

Offices: 26 Victoria St., London, S. W., Eng., and Equitable Bldgs., Sydney, N. S. W., Australia. Mine office: Cobar, Robinson Co., N. S. W., Australia. Maj.-Gen. Sir W. H. R. Green, K. C., chairman; D. A. Sutherland, manager; J. Delohery, mine manager; T. Carter, secretary. Organized Nov. 15, 1906, under laws of Great Britain, with capitalization £350,000, shares £1 par. Lands, 286 acres freehold, and 400 acres leasehold, adjoining the Great Cobar, Ltd., opened to depth of 300', with crosscutting in progress at last accounts. Took over machinery of Australian Mining Estates, Ltd., also the 60-stamp mill of the Occidental gold mine, 8 miles from Cobar.

**GREAT CONDURROW TIN & COPPER MINING CO., LTD.** ENGLAND.

Dead. Dissolved, Jan. 13, 1905. Formerly at Camborne, Cornwall, Eng.

**GREAT DIVIDE GOLD CO.****CALIFORNIA.**

Dead. Formerly at Redding, Shasta Co., Cal.

**GREAT DIVIDE MINES CO.****UTAH.**

Office: 14 West First South St., Salt Lake City, Utah. Mine office: Lincoln, Tooele Co., Utah. Henry A. McCornick, president; Walter A. Cooke, vice-president and manager; Joseph H. Hurd, secretary; Rodney T. Badger, treasurer; John B. Taylor, superintendent. Organized Aug. 15, 1903, under laws of Utah, with capitalization \$2,000,000, shares \$5 par. Lands, 40 claims, about half patented, area 560 acres, also a 10-acre millsite, fairly timbered, showing fissures in and contacts between limestone and Cambrian quartzite, of which the main vein is said to range 12' to 60' in width, carrying ores said by company to assay 6 to 20% copper, 2 to 100 oz. silver and from a trace to \$150 gold per ton. Development is by a 1,300' tunnel. Development was begun 1898. Property considered promising.

**GREAT FITZROY GOLD & COPPER MINES, LTD.****AUSTRALIA.**

Mine office: Mt. Chalmers, Queensland, Australia. C. H. James, superintendent. Organized 1907, under laws of Queensland, with capitalization £500,000; issued, £375,000. Mine, formerly known as the Mount Chalmers, has 3-compartment shafts of 225' and 240'. Vein on the 150' level is 120' wide and 330' in known length, mine having estimated reserves of 600,000 long tons of ore averaging about 3 to 4% copper and 3 dwts. gold. Has a steam plant with 20-drill and 8-drill air-compressors.

The smelter has a 100-ton water-jacket blast-furnace, making matte, shipped to Mount Morgan for reduction. In May, 1908, the smelter treated 2,710 long tons of ore, yielding 73 long tons of copper and 378 oz. gold, costs being 8s. 11d. per long ton for mining, 9s. 11d. for smelting, and 11d. general expenses, or total costs, exclusive of development, of 31s. 6d. per ton of ore. Mine and works employ about 100 men. Production, 1907, is estimated at 1,650,000 lbs. fine copper. At last accounts company planned reconstruction, to raise additional capital.

**GREAT HERMIDALE COPPER CO.****AUSTRALIA.**

Dead. Absorbed, circa January, 1908, by Great Hermidale South Copper Co. Formerly at Hermidale, N. S. W., Australia.

**GREAT HERMIDALE SOUTH COPPER CO.****AUSTRALIA.**

Mine office: Hermidale, N. S. W.; Australia. Absorbed, circa January, 1908, the Great Hermidale Copper Co. Has a 370' main shaft.

**GREAT HOPE MINING CO.****CALIFORNIA.**

Office: care of Geo. R. Whitecomb, secretary and manager, Los Angeles, Cal. Letter returned unclaimed from former mine office, Mojave, Kern Co., Cal. Chas. C. Davis, president; J. C. Cribb, vice-president; Z. L. Parmelee, treasurer; preceding officers and E. J. Peabody, directors. Is an unincorporated syndicate, organized circa 1905, with capitalization \$10,000. Is developing by

tunnel, and has secured assays up to 10% copper, 8% lead and 3 oz. silver per ton. Idle.

#### GREAT LAKES COPPER CO.

ONTARIO.

Office: 51 East 44th St., New York, N. Y. Mine office: Sudbury, Algoma, Ont. John McKinley, president; Horace Williston, secretary; Robert Sloane Bickford, treasurer. Organized 1900, under laws of West Virginia, with capitalization \$3,000,000, shares \$5 par. Lands, upwards of 4,000 acres, near Sudbury, carrying nickeliferous chalcopyrite, associated with pyrite. Has several shafts, deepest 150', also an open-cut, with a considerable amount of ore in sight. The Graf smelting process was tried, but proved a failure. Property is mortgaged. Charter was forfeited, 1903, because of non-payment of corporation tax, and company seems hopelessly involved.

#### GREAT LAKES MINING & MILLING CO.

WYOMING.

Dead. Formerly at Encampment, Carbon Co., Wyo.

#### GREAT LAKES MINING & SMELTING CO.

WYOMING.

Dead. Formerly at Encampment, Carbon Co., Wyo. Described Vol. VI.  
GREAT LAXEY, LTD.

ENGLAND.

Offices: 55 Cross St., Manchester, Eng. Mine office: Laxey, Isle of Man, Eng. F. J. Robertshaw, chairman; John Roberts, mine manager; J. Crossley, secretary. Organized March 8, 1903, as a reconstruction of the Great Laxey Mining Co., Ltd<sup>o</sup>, with capitalization £30,000, shares 10s. par, in 45,000 cumulative 10% preferred and 15,000 ordinary shares. Lands, 1,103 acres, held under 31-year leases, expiring October, 1933, with royalty of one-eightieth to October, 1907, and one-fortieth thereafter. Lands carry lead, zinc and copper sulphides. Property had the largest water-wheel in the world, but this survived its usefulness and was displaced by a new power plant.

#### GREAT MAMMOTH COPPER MINING CO.

WASHINGTON.

Dead. Formerly held 10 claims, under bond and lease. Promoters sold their own stock and pocketed the proceeds, company losing its lands. Formerly at Index, Snohomish Co., Wash.

#### GREAT MOUNT LYELL COPPER CO., LTD.

TASMANIA.

Dead. Reorganized, Jan. 28, 1903, as Ballarat & Lyell Mines, Ltd. Formerly at Mt. Lyell, Montagu Co., Tasmania.

#### GREAT NORTHERN COPPER CO.

MINNESOTA.

Office: 204 Globe Bldg., St. Paul, Minn. Mine office: Hinckley, Pine Co., Minn. J. B. Conger, vice-president and general manager; R. V. Peyton, secretary; H. C. Boyeson, treasurer; Wm. Kibbee, superintendent; preceding officers, S. O'Dea, Godfrey Dawe, G. O. Riggs, Dr. C. D. Snow and J. A. Fess-  
ebeck, directors; August Zastrow, mine superintendent. Organized Sept. 16, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par; issued, circa \$700,000.

Lands, 160 acres, freehold, 14 miles east of Hinckley, showing trap flows with 7 amygdaloidal beds carrying native copper, and occasional malachite, from weathering, property being on the western extension of the Keweenawan formation of Lake Superior. Two amygdaloids under development, of about 8' average width, traceable circa 1,500', are opened by shafts of 60', 100' and 60', giving rock assaying up to 4.8% copper, and estimated by company to carry an average of 3% copper and 6 oz. silver per ton.

Has a 90-h. p. steam plant, with an 8x10" double hoist, good for 1,000' depth, and 6 mine buildings, including a 20x30' wooden machine-shop. Company has secured some good-looking copper rock and plans continuing development.

#### GREAT NORTHERN COPPER CO.

NEWFOUNDLAND.

Office: Corey & Braddock Aves., Braddock, Pa. Mine office: Twillingate, Newfoundland. Development is by a short tunnel. Presumably idle.

**GREAT NORTHERN COPPER & GOLD MINING  
COMPANY OF QUEENSLAND.**

AUSTRALIA.

Dead. Reorganized July 31, 1903, as Rosewood Creek Copper & Gold Mining Co., Ltd. Formerly at Rosewood Creek, Queensland, Australia.

**GREAT NORTHERN COPPER MINING CO.**

UTAH.

Office: care of S. H. Browne, secretary and treasurer, Ogden, Utah. A. W. McGee, president; Daniel Coyer, vice-president. Organized 1904, under laws of Utah, with capitalization \$100,000, shares \$1 par. Lands are in the Sierra Madre district of Box Elder county, Utah. Presumably idle.

**GREAT NORTHERN DEVELOPMENT CO.**

ALASKA.

Office: 111 Broadway, New York, N. Y. Mine office: McCarthy Creek, Copper River district, Alaska. Jas. Phillips, Jr., director. Capitalization, said to be \$1,000,000. Property is sundry copper claims, in the vicinity of the Bonanza group, slightly developed. Company is awaiting railroad transportation before doing permanent work.

**GREAT NORTHERN GOLD & COPPER  
MINING & MILLING CO.**

OREGON.

Mine office: Lostine, Wallowa Co., Ore. E. T. Sluer, superintendent. Lands, 13 claims, south of Lostine, said to show high grade copper-silver ores.

**GREAT NORTHERN MINING CO.**

WASHINGTON.

Dead. Formerly at Baring, King Co., Wash.

**GREAT PECK MINE CO.**

ARIZONA.

Office: 519-10 Wall St., New York, N. Y. Mine office: Providence, Yavapai Co., Ariz. Hon. J. A. Beidler, president; Hon. James Tawney, secretary and treasurer; preceding officers, Hon. E. A. Minor, Hon. Herman G. Goebel, Hon. James H. Southard, Hon. Wm. E. Brown, Hon. Lucius N. Littauer, Hon. J. W. Babcock, Wm. E. Bixby and Melville Woodbury, directors; Peter Giroux, general manager. Knickerbocker Trust Co., New York, registrar. Organized 1902, under laws of Arizona, with capitalization \$2,500,000, shares \$5 par. Lands, 2 claims, area 40 acres, patented. Mine, once a considerable silver producer, until closed by litigation, has about 5,000' of workings, carrying gold, silver and copper values. The new Clifford shaft is 375' deep. Past production is reported as about \$3,000,000. Officers are principally representatives in the American Congress.

**GREAT REPUBLIC COPPER & GOLD MINING CO.**

ARIZONA.

Office: New Philadelphia, Ohio. Mine office: Turkey, Yavapai Co., Ariz. Michael Siebold, president; L. E. Stegner, vice-president; Fred Graff, secretary; C. D. Grimes, treasurer; preceding officers, Wm. Rommell and S. S. Ballard, directors; Geo. Oakman, general manager. Organized May 1, 1901, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par; issued, circa \$2,800,000. Annual meeting, first Tuesday in September.

Lands, 33 claims, area 660 acres, and a 20-acre smelter site, in 3 groups, 2 miles from Turkey, in the Black Cañon district. Property shows chloritic schists and diorite, carrying fissure veins showing occasional native copper and malachite, but mainly azurite, chalcopyrite and bornite, estimated by company to average 4% copper, 3.5 oz. silver and from a trace to \$6 gold per ton. Development is by shafts of 726', 200' and 200', with various pits of 10' to 40' depth, and tunnels of 87' and 314'. Has 15-h. p. and 40-h. p. gasoline hoists, with 7 mine buildings. Company plans installing a new hoist and air-compressor, and deepening the Sullivan shaft.

**GREAT STANDARD COPPER MINING CO.**

WYOMING.

Office: care of Colonial Security Co., 161 Summer St., Boston, Mass. Letter returned unclaimed from former mine office, Granite Cañon, Laramie Co., Wyo. Dr. Walter H. Parker, president; John Laughrey, vice-president and general manager; Chas. B. Lamont, secretary. Organized Sept. 30, 1902, under

laws of Arizona, with capitalization \$1,000,000, shares 50 cents par. Lands, 17 claims, also miscellaneous lands giving total holdings of 640 acres, in the Silver Crown district, said to show 6 veins of about 8' average width, opened by 18 shallow shafts and pits, claimed to give average assays of circa 7% copper, from oxides, carbonates, sulphides and chlorides, with occasional native copper. Idle since March, 1904, from lack of funds; has an overplus mortgage and seems not long for this world.

**GREAT SULPHIDE COPPER CO.**

Mine office: Silver Bell, Pima Co., Ariz.

**ARIZONA.**

**GREAT VERDE CONSOLIDATED MINE.**

**CALIFORNIA.**

Office and mine: Sisson, Shasta Co., Cal. Is a copartnership of 4 owners, capitalized at \$20,000. Lands, 12 claims, unpatented, claimed to adjoin the Balaklala, but actually adjoining the Shasta King group of the Trinity Copper Co., claimed to show an ore body of 80' width, claimed to be opened by 5 tunnels, longest 600', claimed to carry chalcopyrite assaying 6% copper, 6 oz. silver and \$7 gold per ton. Is not known ever to have produced any ore, statements to the contrary notwithstanding. Idle.

**GREAT WESTERN COPPER CO.**

**ARIZONA.**

Office: Clinton, Ia. Mine office: Tombstone, Cochise Co., Ariz. Wm. J. Young, Jr., president; Edward Young, secretary. Capitalization \$1,000,000. Lands, 23 claims, in the Dragoon Mountains, carrying argentiferous copper ore. Has steam and gasoline power. Is said to have resumed work, circa April, 1908, after several years' idleness.

**GREAT WESTERN COPPER CO.**

**ARIZONA.**

Letter returned unclaimed from former office and mine, Globe, Gila Co., Ariz. Lands, near the head of Mineral Creek, show copper ore of fair tenor, and a little ore was shipped, 1906, to the Old Dominion smelter. Idle.

**GREAT WESTERN COPPER CO.**

**MONTANA.**

Dead. Formerly at Butte, Silver Bow Co., Mont. Described Vol. VI.

**GREAT WESTERN COPPER CO.**

**NEVADA.**

Dead. Was a stock-jobbing enterprise. Formerly at Reno, Washoe Co., Nev. Described Vol. VI.

**GREAT WESTERN GOLD CO.**

**CALIFORNIA.**

Office: 401 Commercial Bldg., St. Louis, Mo. Mine and works office: Ingot, Shasta Co., Cal. T. S. Henderson, president; T. H. Adams, vice-president; M. E. Dittmar, managing director; C. J. Balmer, secretary and treasurer; S. E. Bretherton, general manager. Organized circa 1901, with capitalization \$10,000,000, increased, circa 1905, to \$12,000,000, shares \$1 par. Management takes vigorous exception to criticisms in past issues of the Copper Handbook to the effect that it evades all inquiries as to capitalization and finances, and continues to evade these points, while professing the utmost willingness to furnish information.

Lands, circa 1,600 acres, patented, including the Afterthought group, area 459 acres, and the Liberty, Last Chance, Section 15, Bull and 10 other groups, and, at last accounts, a bond and lease was held on the Donkey mine. Lease on the Garcia mine, Arizona, was forfeited. Principal properties are the Afterthought, Copper Hill and Copper Grand. Ten of the Afterthought claims are patented, and the River group, 3 claims, is patented. Lands are on the east side belt, which extends from Ingot to DeLamar, and is entirely distinct from the copper belt on the western side of the Sacramento river.

The Afterthought mine, in the Furnaceville district, 20 miles east of Redding, is the principal property. Former developments included a 300' shaft and 7 tunnels, of about 2,000' aggregate length. Present main tunnel is circa 2,500' long. Property shows a considerable body of low grade sulphide ore, with occasional occurrences of medium and high grade sulphides, ore being

chalcopyrite, associated with sphalerite and pyrite. The main working tunnel cuts a 24' ore body, in the Copper Hill mine, with a back of 500'. The Liberty group, near Redding, with title apparently in dispute, carries auriferous copper ore of undetermined value. The company's claims that the ore would average \$30 per ton in value have been disproven by the results of actual smelting. In 1905 the ores smelted assayed 2.81% copper, 14.3% zinc, 11.6% iron, 20.25% sulphur, 5.3% alumina, 7.4% barium sulphate, 5.4% calcium carbonate and 18% silica. The property has considerable zinc ore assaying 25 to 40% in tenor.

The smelter, 1 mile north of Cow Creek and 1½ miles north of the mine, connected therewith by a tram-line of 30" gauge, was blown in March 24, 1905. The works have 40x96" and 42x150" blast-furnaces, latter with Brether-ton hot-blast furnace and 12 tuyeres on a side, blast being furnished by 2 Risdon hot-blast stoves. The larger furnace is rated at 500 tons' daily capacity. The smelter has 2 brick dust-chambers, and matte produced was shipped to Utah for conversion.

Much trouble was had with the first furnace, which worked badly, and it was said that the management planned building a bag-house to recover zinc oxide from the smelter fumes. Under the management of Mr. Bretherton, who took charge later, the blast-furnace was run with a low charge and an exceptionally hot top, on account of the excess of barium sulphate, and is said to have given satisfactory results.

Work was begun, circa August, 1907, on a 14-mile standard-gauge railroad, to be known as the Redding, Afterthought & Northeastern, to connect with the Southern Pacific at Bella Vista, and the smelter was idle, August, 1908, awaiting the completion of this road, which should greatly reduce operating costs.

The company was promoted by T. S. Henderson & Co., a St. Louis brokerage firm of dubious reputation, and the early financing of the Great Western Gold Co. was not of a nature to recommend the property to conservative investors. The company has evaded making any definite statements regarding its organization or finances, but a semi-official statement has been secured to the effect that to Aug. 1, 1908, the company had produced nearly \$1,000,000 in copper, silver and gold. The local management seems good, and Mr. Henderson, notwithstanding the criticisms previously made, is entitled to the credit of sticking to the proposition, which is not devoid of merit, though it seems a question whether the Afterthought should be called a copper mine or a zinc mine.

#### **GREAT WESTERN GOLD & COPPER CO.**

**UTAH.**

Office: Provo, Utah. Mine office: Park City, Summit Co., Utah. Jesse Knight, president; W. Lester Mangum, secretary; Rt. Rev. Robert Brighton, general manager. Lands, at the head of Big Cottonwood Cañon, adjoining the Daly Judge, show a ledge of about 100' width, giving assays of 3 to 5% copper. Development is by tunnel, planned to cut the ledge at about 2,000' depth.

#### **GREAT WESTERN GOLD & COPPER MINING CO.**

**MONTANA.**

Office: care of W. J. Willingham, Equitable Bldg., New York, N. Y. Mine office: Butte, Silver Bow Co., Mont. Chas. G. Eckert, president. Organized under laws of South Dakota, with capitalization \$500,000, shares \$1 par. Lands, 1 claim, area 20 acres, near Butte. Formerly had a bond and lease on a gold claim at Cripple Creek, Colo. Idle and apparently moribund.

#### **GREAT WESTERN GOLD & SILVER CO.**

**ARIZONA.**

Mine office: Dragoon, Cochise Co., Ariz. Organized circa June, 1908, possibly as successor of Great Western Copper Co. Lands, in the Dragoon Mountains, show auriferous and argentiferous lead and copper ores.

**GREAT WESTERN MINING, MILLING & SMELTING CO., LTD. IDAHO.**

Mine office: Pocatello, Bannock Co., Idaho. O. D. Hovey, superintendent. Has copper ores and was developing with a small force at last accounts.

**GREAT WESTERN ORE PURCHASING & REDUCTION CO.**

Works office: Keeler, Inyo Co., Cal. Has a 150-ton smelter, built 1906, and is said to own old mines in the Cerro Gordo district.

**GREENBACK COPPER CO.****CALIFORNIA.**

Mine office: Woody, Kern Co., Cal. Lands, 1,520 acres, 18 miles from Southern Pacific railroad. Country rock is grano-diorite, showing an ore chute carrying lenses of 20' maximum width, with granite walls irregularly impregnated with chalcopyrite. Development is by a 185' incline shaft, with 3 levels opened. Carbonate ores stoped from the upper levels have averaged 19.4% copper and 5.7 oz. silver per ton. Idle 1900-1905, and presumably again idle.

**GREEN COPPER CO.****MONTANA.**

Dead. Was put out of business, 1906, by an injunction, secured by the Amalgamated Copper Co., restraining the Green from mining property claimed by the Amalgamated. Formerly at Butte, Silver Bow Co., Mont.

**GREEN DRAGON COPPER CO.****CALIFORNIA.**

Dead. Was organized, early 1907, by Nevada Counties Brokerage Companies, of San Francisco, and merged, circa September, 1907, in Copper Mines & Smelters Corporation of America. Formerly at Greenwater, Inyo Co., Cal.

**GREEN CANANEA COPPER CO.****MEXICO.**

Office: 511 Lyceum Bldg., Duluth, Minn. Mine and works office: La Cananea, Arizpe, Sonora, Mex. Thos. F. Cole, president; Chas. A. Duncan, vice-president and treasurer; Chas. D. Fraser and Jos. B. Cotton, vice-presidents; preceding officers, Myron M. Parker, Philip L. Foster, Chester A. Congdon, Chas. d'Autremont, Jr., Capt. Jas. Hoatson and John D. Ryan, directors; Frederic R. Kennedy, secretary; Jos. W. Allen and Daniel B. Smith, assistant secretaries; Wm. G. Hegardt, assistant treasurer; Arcadius L. Agatin, general solicitor; Dr. L. D. Ricketts, general manager; David Cole, assistant general manager; Jas. H. Kirk, mine superintendent; E. C. Cole, assistant smelter superintendent; Frank J. Strachan, mill superintendent; Geo. Young, mercantile superintendent; T. Evans, traffic manager; T. R. Lucas, purchasing agent; J. A. Campbell, public service superintendent.

Organized Dec. 26, 1906, under laws of Minnesota, with capitalization \$60,000,000, shares \$20 par; issued, \$50,000,000. New York Trust Co. and City Trust Co., Boston, transfer agents. Bankers Trust Co., New York, and State Street Trust Co., Boston, registrars. Shares are listed on the Boston stock exchange.

The Greene Cananea Copper Co. is a securities holding corporation solely, controlling, through stock ownership, the Greene Consolidated Copper Co. and the Cananea Central Copper Co. The Greene Cananea exchanged its shares for the stock of the two subsidiary corporations on the basis of 1½ shares for each share of Greene Consolidated, and 1¾ shares for each share of Cananea Central, this exchange calling for \$50,000,000 of stock of the Green Cananea to completely absorb the shares of the Greene Consolidated and Cananea Central. On March 17, 1908, the Greene Cananea owned 925,038 shares of the issued capital stock of 1,000,000 shares of the Greene Consolidated, and 522,272 shares of the issued capital stock of 600,000 shares of the Cananea Central. Exchange of stocks is still in progress, and it is expected that eventually the entire capital stock of both the subsidiary corporations will be acquired.

The Greene Cananea Copper Co. was said to have began business with \$8,000,000 cash, part of which was to be used for payment of old debts of the

Greene Consolidated, part for the purchase of supplies and about \$3,000,000 for a new reduction plant and other improvements. Officers of the company were quoted, in the press, as stating that not one cent of promotion profits were taken by men interested in the company, and that the proposed plan provided \$7,000,000 additional cash, and that the cash was safely in the hands of the treasurer. It was stated, in the press, as recently as October, 1907, that the company's treasury contained \$7,000,000 in cash, and the same authority stated that the treasury contained between \$6,000,000 and \$7,000,000 at the time of suspension of operations, November, 1907. It was stated, in the press, Aug. 26, 1907, that the annual report, forthcoming in October, would show \$8,000,000 cash in the treasury, with fuel, supplies and stocks valued at \$3,000,000, with a total of cash and salable assets of \$20,000,000. The company's first annual report, of date March 17, 1908, showed a cash balance on hand, Dec. 31, 1907, of \$11,828.23, with total receipts of \$125,000 borrowed from the Cananea Central Copper Co., and \$12 received from sundry sources. It is quite obvious that the books of the Greene Cananea Copper Co. are so kept that the principal items of receipts and expenditures are distributed between the various subsidiary corporations. Inasmuch as the Greene Cananea is a securities holding corporation only, and its sole revenue is from dividends of subsidiary corporations, none of which are on the dividend list at present, it is evident that this system of bookkeeping is unavoidable, though most confusing to shareholders.

In the various articles descriptive of the Cananea Consolidated Copper Co., S. A., Cananea Central Copper Co. and Greene Consolidated Copper Co., the relations of these interlocking corporations are given in as much detail as possible, though much confusion has arisen through the disingenuous reports and statements of the Greene Consolidated Copper Co., which listed, among its assets, all the property of the Cananea Consolidated Copper Co., S. A. While the financial relations of the various corporations are explained in detail in the articles devoted to each, it has been thought best to consolidate the description of the respective properties under one head, as any other method would give merely fragmentary descriptions of what now, to all actual intents and purposes, constitutes a single property, and, inasmuch as the Greene Cananea Copper Co. is the controlling power, and operates all of the properties in question, and its shares are those that are held mainly by investors, only small minority interests remaining outstanding in the other corporations, it has been deemed advisable to give the description of the Cananea mines and works under this title.

The authentic history of the Cananea mines dates from A. D. 1568, but it is thought that the mines may have been opened by the Aztecs previous to the conquest.

There was much litigation over titles, but the lands were redenounced, 1902, and direct title taken from the Mexican government by the Cananea Consolidated Copper Co., S. A.

The mines are in the municipality of Ronquillo, and the principal administrative buildings are in that municipality, near the smelter. The company owns the townsite of La Cananea, on the mesa to the eastward of Ronquillo, and therein are located the best dwellings, hotels and public buildings. Franchises are held for electric light, water, ice, traction and telephone services.

Lands of the Greene Consolidated were 4,214 pertenencias of one hectare each, equivalent to 10,412 acres, the main mining tract having a boundary line of 32½ miles, and including about 40 old mines and prospects, located in the Cananea Mountains, in the free zone of northern Sonora, about 20 miles south of the Arizona border. The Greene Consolidated had mineral concessions for 184 square miles, in Sonora and Chihuahua, expiring May 7, 1906, only part

of which were renewed. Including the Cananea Central holdings, the Greene Cananea has about 37,000 acres of mineral lands and circa 350,000 acres of surface rights. The Sierra Cananea is about 25 miles in length, and 6 to 10 miles in width, with a northwest and southeast strike, divided into two plainly marked and nearly equal sections by Puertecitos Pass, the properties of the Greene Cananea being in the southern half of the mountains on a mineral belt apparently having a strike practically parallel with that of the range.

The Cananea Mountains show marked evidence of strong volcanic action in the remote past. The Cananea mines are found in a succession of approximately parallel outcrops of altered limestone, alternating with porphyritic dikes, the ore deposits, often of monstrous size, occurring in shear-zones between the limestone and porphyry, and as replacements in the latter. The ore bodies are entirely distinct and vary greatly, affording practically all varieties of oxidized and sulphide ore, with considerable native copper. Many of the ore bodies are silicious, requiring concentration to eliminate the silica, which occurs as quartz and as aluminum silicate. None of the ore carries zinc or other refractory elements. There are large gossan outcrops, but appearances sometimes are deceptive, and much of what appears gossan at a distance proves, upon closer inspection, merely weathered conglomerate, showing reddish-brown stains closely simulating the iron colors.

The mines of the Cananea Consolidated Copper Co., S. A., are divided into 5 zones, known as the Cobre Grande, Veta Grande, Esperanza, Capote and Puertecitos, each zone including a number of different mines, principal development being on the Capote, Veta Grande and Esperanza zones. The Cananea Consolidated has 8 main shafts, with upwards of 40 miles of workings, development, for 17 months ending 1907, having aggregated about 13 miles of workings, with 2,332' of diamond drill borings. Extraction is mainly by 8 working tunnels, double-tracked and electric-lighted, having electric motors pulling 10-ton cars. The mines consume yearly, for timbering, about 40,000,000' of pine and fir, mainly from Oregon, though a limited supply is secured from the Sierra Madre Mountains. Considerable ore is mined by the slicing system, which is a modification of the caving plan. Some stopes have been lost, through poor timbering, but the mine, as a whole, is not in bad shape, notwithstanding reports to the contrary. Ores are decreasing in copper content with depth, but the sulphide ores show increased silver values in the lower workings. The ore bodies lie rather deep, as a rule, hence are unavailable for open-cast workings, except in one instance. The Cananea has considerable reserves of ore of 4% or better in copper tenor, and is said to have blocked out upwards of 3,000,000 tons of ore of about 3.5% average grade.

The Cobre Grande, which was the original mine of the Cananea Consolidated, was worked in a crude way by the Pesqueira family for several generations, but now is a minor property. This group shows ore of concentrating grade only, the mine having upwards of a mile of workings.

The Veta Grande has 2 enormous ore bodies, the Veta Grande proper having a pitch of 36°, with an average width of 216', average length of 726' and known depth of 1,000', containing about 7,000,000 tons of ore of medium tenor, with some high grade ore. The Massey ore body, opened in 1904, has been developed for 750' in width and 1,200' in length, and is of unknown depth, some of the ore assaying up to 7% copper, with combined gold and silver values of about \$2 per ton. There also is a 150' ore body on the hanging wall, of 2 to 6% copper tenor, the silicious portions of which are used for converter linings. The Veta Grande ore is mainly soft chalcocite, carrying considerable quantities of native copper and occasional massive chalcocite, associated with a small amount of pyrite, gangue being talc and occasional quartz. Extraction is mainly through Veta Grande tunnel No. 9, of 6,236' length, which serves

both the Veta Grande and Oversight mines, connecting also with the Capote tunnel. Owing to soft ground about 200' of this tunnel has been concreted. The Veta Grande is timbered with square sets, and depleted stopes are filled with waste. The ore is mined in 100' sections, leaving 100' slices unmined, and as the worked-out stopes are filled in, it will be possible to mine out the untouched portions. The Veta Grande ore bodies are overlaid by a heavy felsite capping, estimated at 830,000 cubic yards, and the former management gave consideration to the advisability of stripping the surface. Veta Grande shaft No. 5, of 3 compartments, has a 115-h. p. double hoist good for 1,000', operating 2 hoists in balance, and a 7-drill air-compressor, smithy, framing shop, etc.

The Oversight mine, which is practically a continuation of the Veta Grande, and is served by the Veta Grande tunnel No. 9, has a limited amount of ore ranging up to 25% copper, and has developed a new ore body of 2.5 to 3% average tenor.

The Capote zone, including a number of mines, is the principal property of the Cananea Consolidated, and has 4 main shafts, known as No. 2, 4, 6 and 8, and planned another 3-compartment shaft, circa 300' west of No. 2, which replaced No. 10, but the ground proved too soft to stand well. Extraction is mainly by tunnel, the main working level having a double-track tunnel connecting with shafts 2, 4, 5 and 7, at an extreme distance of 2,900'. On the 1,050' level the Capote shows a vein of about 75' width, carrying mainly chalcopyrite, with some chalcocite, assaying 4 to 20% copper. The Capote was on fire, 1907-1908, for about 12 months, but the fire was quenched by drowning, after the mine suspended operations. The main ore body of the Capote consists essentially of pyrite, coated with a thin film of chalcocite, occurring in thin crystalline grains, scattered quite uniformly through immense bodies of talc, the ore being highly silicious. No. 2 shaft has a 110-h. p. hoist and No. 4 has a double hoist good for 3,000' depth. The Capote equipment includes an air-compressor and a 50-kw. direct-connected generator furnishing light and power. No. 10 Capote shaft has a Prescott pump of 1,250,000 gallons daily capacity.

The Elisa mine, 1,500' south of No. 2 Capote, shows a vein of about 20' width, for a distance of 500', on the second level, said to average 4 to 6% copper, with somewhat higher grade ore below, ore being silicious chalcopyrite carrying good gold and silver values. The main shaft of the Elisa is 540' deep.

The Esperanza zone, but slightly developed, is known to carry good ore bodies, and probably will be developed through the Capote workings.

The Puertecitos zone, which is the westernmost, is about 4 miles northwest of the Elisa shaft, and has an ore body of immense size, with an outcrop up to 800' in width. The oxidized zone, which is comparatively shallow, shows considerable malachite, azurite and occasional cuprite and native copper, but the main ore bodies are chalcopyrite, with occasional bornite, in a lime-garnet-alumina gangue. The ore was said, formerly, to average about 3.5% copper and 3.5 oz. silver, but these figures probably are too high. The workings of the Puertecitos zone are known as the Ventura on the east, having a 700' shaft, the Juárez, 1,200', next west, and the Elenita, 900' west of the Juárez. Some rich ore has been exposed in grading for surface structures at the Elenita. The Puertecitos has enormous quantities of low grade ore, but is idle.

The Cananea Central properties, with several miles of workings, apparently have ore of somewhat higher average grade than the Cananea Consolidated, and were claimed, 1907, to have in sight 2,000,000 tons of ore of better than 5% average grade. Lands of the Cananea Central are 3,708 acres, com-

prising holdings of various subsidiary companies, including the Duluth or Cananea-Duluth mine, Dos Naciones, American and Bonanza mines.

The Duluth mine has 2 shafts, with extensive openings on the 170', 270' and 370' levels, for circa 1,000' length, showing a vein of 20' to 150' width, carrying ore ranging up to 15% copper and 25 oz. silver, with fair gold values. This mine is said to show, on the third level, ore averaging circa 4.5% copper, 8 to 10 oz. silver and 40 cents to \$2 gold per ton.

The American mine has 6 shafts, all shallow, showing some very rich ore, and 2 additional shafts have been planned.

The Bonanza mine is said to have a proven ore body 1,000' in length and upwards of 100' in width, with first grade ore assaying 15 to 32% copper, and second grade ore said to assay 5 to 7% copper, 5 to 15 oz. silver and \$2 gold per ton, but it is probable that the average of actual extraction will fall much below these figures.

The concentrator department includes a crushing plant, sampling mill, 2 concentrators, machine shop, smithy and 2 warehouses. The crushing plant, in a separate building has 8 ore bins of 20,000 tons storage capacity, to which ore is delivered from Ingoldsby side-dumping cars. From these bins ore is drawn onto a Robbins picking belt, 36" wide and 68' long, from which native copper and chalcocite are hand picked. The ore then goes to a Manhattan conveying belt, 30" wide and 275' long, of 200 tons hourly capacity, which leads to grizzlies, screened fines going to storage bins and ore going to five 10x20" crushers, which reduce the ore to 1½" size, each crusher discharging into a set of 16x36" rolls, which crush to ¼" size and discharge to belt-conveyor, which takes the crushed ore to the storage bins of the mills.

There are two concentrators, No. 1, the old mill, of wood, having 30-ton individual sections, covering 29,650 square feet. Concentrator No. 2, of steel, in four 500-ton sections, terraced throughout, covers 33,240 feet, and cost circa \$250,000. Foundations of new mill are concrete on rock base, independent of wooden floors. A third concentrator seems needed, but the present water supply is insufficient for another mill. The mills put about 3.6 tons into 1, and save about 75% of the assay values, ores being difficult of concentration, owing to the gangue being highly silicious and aluminous.

From the 3,000-ton storage bins in each mill ore is drawn by automatic feed to 8 trommels having ¾" holes. The tailings from the bull jigs are reground in rolls, and elevated to pass through 8 trommels with ¾" holes. Tailings from the fine jigs are reground in ten 5' Bryan mills, and two 6' Chilean mills, sized in classifiers and distributed to 43 Wilfley tables. The overflow from the spitzkasten below the Bryan mills goes to pulp, thickens, and makes feed for 36 Frue vanners, while the bottom discharge from the spitzkasten goes to the classifiers for Wilfley tables. Equipment of the mills include eight ¾" screens, eight ¾" screens, eight 3/16" screens, sixteen 2mm. screens, 16 elevators, 16 hydraulic classifiers, 72 jigs, ten 5' Bryan mills, two 6' Chilean mills, 108 Wilfley tables, 144 Frue vanners, 16 shaking launders and 10 Cole drag belt conveyors.

Concentrates are conveyed by locomotives to bins, and loaded thence into narrow-gauge cars for the ore bedding plant. Tailings go to the coarse sand tanks, where coarse sand is settled out, overflow going to slime tanks, where fine slimes are settled, and the clear water pumped back for further use. There is a big dam for tailings. Owing to scant water supply, water from the coarse jigs is sent to the jig floor and used on middlings, and water from the middlings is used upon the sands, and thence back to the coarse jigs again. From the Wilfleys the water goes to thickeners, and from the tailings the water is recovered in settling tanks, the amount of water recovered by

this ingenious combination of economies being 87.5% so every gallon does duty eight times over.

The power plant at the crushers and mills includes a separate boiler-house with six 250-h. p. Stirling boilers, and an engine-house for each mill, the power plant for No. 1 mill including a 400-h. p. 16x36" Murray tandem compound engine and a 325-h. p. 12x24x30" Minneapolis cross-compound engine. Mill No. 2 has a 400-h. p. Allis-Chalmers 16x32x36" cross-compound engine and two 600-kw. electric generating sets.

The ore bedding plant has 3 beds, each 50x450' and of 9,000 tons capacity, where charges are thoroughly mixed by traveling belts, distributing ore, fluxes, etc. Thoroughly fluxed charges are taken from these beds to the feeding-bins of the smelter.

In 1907 the company gave serious consideration to the building of a new smelting plant, but eventually decided to rebuild the old smelter. The sites under consideration were on the Sonora river, some miles below the present works, and to the eastward of La Mesa, several miles east of the old plant. Tentative plans for the new smelter called for a \$3,000,000 plant, to have three 54' blast-furnaces. These plans, however, were abandoned, in favor of rebuilding the old smelter.

The cupola building is 33x296' in size, of steel frame with iron sides, with 4,200-ton ore-bins and 3,000-ton coke bins. There are 75-ton steel charging bins in front of each furnace, for feeding mixed charges, and material is handled by gravity. The charging bins have automatic gates, and dump charges direct into the furnaces, one man caring for two furnaces. The old plant had 8 furnaces, of 7 different types, all of which were remodeled or scrapped, and replaced by 8 practically uniform furnaces, of sizes 48x210" and 42x228" at the tuyeres, giving an average capacity of 400 tons for each furnace, with an aggregate capacity of 3,200 tons for the smelter. Seven small settlers formerly used have been replaced by 4 large clay-lined settlers, each serving 2 furnaces. Settlers skim continuously into self-dumping slag-cars, drawn by two 25-h. p. and two 40-h. p. electric locomotives, traversing a rebuilt slag-line. Over each furnace is a 20x20x20' steel dust-chamber, planned to collect flue-dust and return same to the smelting zone by gravity, which were installed by the old management, but failed to work according to theory. Leaving these primary individual dust-chambers, furnace gases go to a 10x13x400' dust-flue leading to a 250x250' brick dust-chamber. Smoke and gases are discharged from the main dust-chamber through a self-supporting steel stack 16' 6" in diameter and 190' feet high. The blast-furnace building has 2 McDougal calciners.

The converter building, 60x396', of steel frame with iron sides and roof, has 2 electric cranes with double auxiliary hoists of 40' and 50' span, each with a clear hoist of 40' to the main blocks. Three old stands with 24" cylinders, operated hydraulically under a pressure of 200 lbs. per square inch, have been reconstructed, and there are two new stands, operated electrically. There formerly were 22 shells of 132x156" size, which have been replaced by eight 96x138" shells of barrel type, and other shells of the same size will be added. The converters blow off into moveable hoods leading to primary and secondary dust-chambers. A railroad track runs under each stand, and the casting-cars are fitted with six 300-lb. ingot moulds each, there being 24 cars and 250 moulds. Ingots are carried in cars to the bullion floor, where the pigs are chipped, sampled by electric drills, weighed and loaded. The converter-slags are taken in ladies, by crane, to the forehearts, saving resmelting.

The lining department, at the eastern end of the converter building, has 600-ton silica bins, with material handled by gravity, one 10x20" Blake crusher, two 15x26" Argall rolls, one 8' automatic mixing-pan, conveyors and elevators,

power being supplied by a 125-h. p. electric motor. Tamping is by pneumatic rammers. Low grade silicious ores are used for linings, instead of barren silica.

A 350-ton oil-burning reverberatory furnace was built, 1905, with dimensions of 27x120' and hearth of 20x100', being the second largest in the world. The result was not very satisfactory, and the furnace has been rebuilt to size 19x100' and treats flue-dust, waste gases firing an adjoining boiler.

Much of the ore smelted being pulverulent, an excessive quantity of flue-dust is produced, which is briquetted before remelting. The briquetting plant includes a 225-ton Mould plunger press and a 100-ton White press, briquettes being sent by belt-conveyors to the charging-floor of the smelter. A considerable number of men were employed formerly on hand-briquetting.

The central power plant, near the smelter, has a 65x245' engine-house, of steel, with iron sides and roof. The plant includes a 325-h. p. 14x26x36" Allis-Chalmers tandem compound condensing engine, two 300-kw. McIntosh engines, one 200-kw. Union Iron Works engine and three 100-kw. Union Iron Works engines, furnishing a 250-volt current for various uses around the works, also lighting the mine buildings and the towns of La Cananea and Bonquillo. Blast is furnished by one 750-h. p. Rand air-compressor, two 500-h. p. Allis-Chalmers air-compressors, one 225-h. p. Nordberg air-compressor, one 250-h. p. Murray tandem compound blowing engine, two 250-h. p. Murray blowing engines, one 250-h. p. Allis Corliss tandem blowing engine, one 125-h. p. Murray blowing engine, one 100-h. p. Allis blowing engine, one 100-h. p. Ayers blowing engine, three No. 10 Connerville blowers and three No. 8 Connerville blowers, the blowers having an aggregate capacity of 30,000 cubic feet of free air per minute. The 42" crooked blast-pipes formerly in use have been replaced by two 96" straight blast-pipes.

The boiler-house of the central power plant is 46x216' in size, of steel, with iron sides and roof, and has 3,500-ton coal bunkers. There are 11 boilers, of 3,000-h. p. aggregate capacity, with a 12" steam main from boiler-room to engine-house. Coal is fed by gravity from bins, and pulverizers were installed, 1907, but petroleum has been substituted for coal, as fuel for general purposes, at an estimated saving of about 25%, the Mexican government having consented, as an aid to the company, to remove the duty on petroleum. Fuel is mainly Texas oil, bought under a contract calling for 1,500,000 barrels in 2 years. There are three 100,000-gallon oil storage tanks, with 6" pipe lines for loading from tank-cars, and oil is drawn from the tanks by pipelines leading to the boiler-room.

Shops at the mine and works include a steel machine-shop, well equipped and having a foundry with a 2-ton casting cupola. The carpenter-shop and planing mill have complete equipment for making sashes and doors. The smithies are numerous and fairly equipped. There also are large warehouses for mine, mill and smelter supplies.

Potable water is piped from Sawmill Cañon, and water for the concentrators, boilers and other uses, is secured from a pumping plant at Ojo de Agua, on the headwaters of the Sonora river, 9½ miles from the mine. The pumps have capacity to force 1,750,000 gallons daily through a 10" steel pipeline, against a head of 967', to a reservoir on the hills above Ronquillo, whence water is delivered to the mine, reduction plant and towns, under a substantial working pressure. The water system of the company has about 25 miles of mains, ranging in size from 2" to 10", and owing to the cost of securing water, it is clarified and re-used, wherever possible. The water storage tanks at the smelter have 596,000 gallons capacity, with 9,300' of mains and 4,000' of 2½" fire-hose.

The company's private railroad, of 36" gauge, laid with 35-lb. and 45-lb.

steel rails, has about 30 miles of line, including branches, spurs and side-tracks, and an extension of 4.14 kilometers has been built from the smelter to the American and Duluth-Cananea mines. Equipment includes 12 locomotives and a number of 25-ton cars. The line has been double-tracked between the concentrator spur and the Capote mine. Rail connection with the outside world is over the Ferrocarril Cananea, Rio Yaqui y Pacifico, with which the company has a 25-year freight contract, made circa 1902, assuring favorable freight rates. The property has about 30 miles of wagon road, with maximum grades of 7%, and about 35 miles of trails.

The company's brick-yard has a daily capacity of 35,000 brick. There are 2 sawmills, with a combined daily capacity of 14,000', sawing timber cut from the company's lands.

The mercantile branch of the company does a very large business, having a large brick store, carrying an enormous stock, and a branch store at Chivatera, with warehouses having direct rail connection. The retail mercantile business amounts to nearly 4,000,000 pesos yearly, when full forces are employed.

The Banco de Cananea, organized January, 1902, with a capital of 200,000 pesos, Ignacio Macmanus, cashier, is owned and operated by the Greene Consolidated, and does a large and profitable business.

The company owns 5 office buildings, 11 dwellings for foremen, boarding houses with capacity to care for 900 men, 3 lodging houses of 10 rooms each, 1 of 16 rooms and 1 of 42 rooms, all of brick, a restaurant, bakery, meat-market and about 200 cabins for Mexican miners. A well-appointed club-house is maintained for the American employees.

The company maintains a 40x100' two-story brick hospital, having a detached kitchen and beds for 59 patients, also a 6-ward emergency hospital at Chivatera, with a full force of physicians, surgeons and nurses.

The company maintains a telephone system having about 200 miles of wire with circa 150 'phones, also an independent telephone system used for dispatching on the narrow-gauge railroad. A scavenger service is maintained in the municipality of Bonquillo.

The company owns upwards of 400 horses, mules and burros and has a large corral for their care.

A concession for a power plant on the Yaqui river is held from the Mexican government, and the installation of a large hydro-electric plant was under consideration by the former management.

Normal forces are about 5,000 men, including several hundred American skilled workmen and a few Chinese, but about 85% of the labor is native. All heads of departments and shift-bosses are American, but the miners and laborers are exclusively Mexicans. The suspension of operations, 1907, gave the company a chance to eliminate some very undesirable native labor, which had caused serious rioting in 1906. Only workmen of the better class were re-engaged when operations was resumed. Owing to the proximity of the property to the border, there is an unduly large proportion of undesirables of both nations in the district—Mexicans who stay near the line, in order to get across in a hurry, if necessary, and Americans who already have crossed the line, for good and sufficient reasons.

The new board has ignored the contract of the former management of the Greene Consolidated with the American Metal Co., Ltd., and is marketing its production through the United Metals Selling Co. Had the company continued to sell its copper under the old contract it would not have had to sell, in the last weeks of 1907, about 12,000,000 lbs. of copper at 13 to 14 cents, mainly for export, which could have been sold, in the first half of the year, at about 25 cents per pound.

The dissatisfied shareholders of the Greene Consolidated have appointed a protective committee, and there is some possibility of litigation, though it is difficult to see what action the shareholders of the Greene Consolidated can take against the Greene Cananea, as their only recourse would seem to be against the former officials of the Greene Consolidated.

The mine was closed down, circa November, 1907, the letter of Dr. Ricketts to Gov. Torres, of Sonora, explaining the suspension, stating that the company had been unable to sell any copper for 8 months, and, at that time, owing to the panic, could neither sell nor borrow. If the company was unable to sell for 8 months preceding 1907, it was solely because of its affiliations with the Amalgamated Copper Co., as other producers had no difficulty, previous to June or July, 1907, in selling at nearly twice the price that was current in November. Operations were resumed on a small scale, early in 1908, when repairing and rebuilding was begun, and the smelter was blown in July 11, 1908, with 2 furnaces, 2 additional furnaces being blown in July 23, and the property is gradually getting back to a normal basis of production.

Production of the Cananea has shown steadily decreasing average ore values. Owing to lavish use of the high grade ores, the average extraction declined from 5.73% copper in 1903 to 4.45% in 1904, 3.65% in 1905 and 2.95% in 1906, while the average for 1907 was 2.329%. Production is about 25% smelting ore and 75% concentrating ore. In 1906 more than half of the production came from the Capote and Oversight mines, the Veta Grande being the next largest producer.

For fiscal years ending July 31, production of fine copper has been as follows: 64,211,895 lbs. in 1905; 55,948,478 lbs. in 1906, and circa 43,000,000 lbs. in 1907. For the calendar year 1907 production was circa 34,000,000 lbs. For 17 months ending Dec. 31, 1907, production was 1,347,054 wet tons of ore, yielding 58,180,856 lbs. fine copper, 766,422 oz. silver and 6,100 oz. gold, giving a recovery of 46.58 lbs. fine copper per ton, or 2.329%, with gold and silver values of 1.213 cents per pound of fine copper, or 56.5 cents per ton of ore.

Production July, 1908, was circa 1,000,000 lbs. fine copper, and in September, 1908, production was at the rate of about 3,000,000 lbs. monthly, treating circa 2,200 tons of ore daily. The cost of copper produced under the old management steadily increased, and costs, 1907, under the new management, were abnormally high, owing to a variety of unavoidable factors. The practical rebuilding of the plant and reconstruction of methods throughout have cut costs greatly, and it was stated, late 1908, that the labor cost was only 34 cents per ton for smelting, the smelter having been increased 50% in capacity, with a 50% decrease in forces required. Dr. Ricketts hopes to produce copper at a cost of 10 cents per pound, for all charges, as against former costs of 13 to 15 cents per pound. It was stated, unofficially, August, 1908, that costs were only 7.5 cents per pound, at the mine, or about 9 cents per pound for finished copper at the seaboard, but probably these estimates were unduly low, as 10 cents is about as cheaply as the Cananea mines can be expected to produce the metal. The capacity of the mine and works is about 5,000,000 lbs. monthly, or 60,000,000 lbs. per year, which should be increased, in a comparatively short time, to 75,000,000 lbs., and eventually to 100,000,000 lbs., or even more, as the property is of vast size and tremendous possibilities.

Col. Wm. C. Greene, who developed the Cananea mines from petty old workings to one of the greatest copper producers of the world, was too ambitious, and had too many irons in the fire, his operations, in addition to directing the Cananea mines, including the management of the Greene Gold-Silver Co., Greene Gold Co., a railroad company, some of the largest ranches in Mexico, extensive timber tracts and lumber operations, and a variety of other

work, entirely too much for one man to direct properly, and requiring infinitely more money than Col. Greene could command. Because of his marked loyalty to friends, and many other fine characteristics, there is much sympathy for Col. Greene, but the shareholders of his companies also are deserving of sympathy, for the bog into which they were led. The present company has an exceedingly strong and capable management, those at the head of the corporation, Messrs. Cole and Ryan, being among the best mining executives to be found anywhere, while Dr. Ricketts has no superior as a metallurgist, and the work that he has done at the Cananea mines shows him to be also a manager of exceptional executive ability. Much remains to be done before the Cananea mines can be considered on a thoroughly satisfactory basis, but so much has been accomplished already that there seems no reason to question the ability of the management to perform the balance of the work.

**GREENE CONSOLIDATED COPPER CO.**

MEXICO.

Office: 42 Broadway, New York, N. Y. Mine office: La Cananea, Arizpe, Sonora, Mex. W. D. Thornton, president; C. D. Fraser, vice-president; J. W. Allen, secretary and treasurer; preceding officers, P. L. Foster, Alfred Romer, E. C. Rice and S. E. Searle, directors.

Organized Sept. 16, 1899, under the laws of West Virginia, and capitalization increased, 1904 and 1906, to \$10,000,000, shares \$10 par. Has paid total dividends of \$7,450,580 to end of 1908. Annual meeting, second Tuesday in March.

The bi-monthly dividends of 1906 turned out to run only 5 to the year, and even fewer in 1907, dividend No. 21 declared, February, 1907, having been the only one for the year.

The only asset of the Greene Consolidated Copper Co. is the total stock issue of the Cananea Consolidated Copper Co., S. A., and the mines and smelters formerly described under title of the Greene Consolidated are listed, in this volume, under title of the Greene Cananea Copper Co. The Cananea Consolidated Copper Co. is controlled by the Greene Cananea Copper Co., through the ownership, October, 1907, of 923,698 shares. At the annual meeting, October, 1907, there remained 936 individual shareholders in the Greene Consolidated Copper Co. A shareholders' protective committee was organized, circa June, 1908, with Samuel Untermyer, Louis A. Newkirk and W. A. McDonald as counsel.

The annual meeting that should have been held October, 1907, was postponed until March 10, 1908, at the request of the Greene Cananea Copper Co., the owner of about 98% of the total stock issue. Fiscal year was then changed from former ending of July 31 to the calendar year.

None of the annual reports of the Greene Consolidated to shareholders were fair, as the statements juggled the holdings of the Cananea Consolidated and Greene Consolidated companies in a most bewildering manner. Until October, 1907, the preceding annual reports of the Greene Consolidated had included accounts of both the Greene Consolidated and the Cananea Consolidated, without any explanation of the differences. All inquiries by shareholders were headed off, at the annual meeting, Oct. 12, 1907, as every question of importance at the meeting was ruled to belong properly to the Cananea Consolidated Copper Co., which owns all of the real property of the Greene Consolidated, or else to the Greene Cananea Copper Co., which owns upwards of 93% of the stock of the Greene Consolidated Copper Co., and neither of these corporations being present, the shareholders who wanted to know were left inquiring.

The Greene Consolidated Copper Co. was supposed to own a 51% stock interest in the Sierra Madre Land & Lumber Co., but it transpired that this was a myth, as the stock always was owned by the Cananea Consolidated

Copper Co., S. A.—or at least that is what the shareholders are told now. On June 17, 1907, the company was said to have secured control, some time previously, of 51% of the Sierra Madre stock, for \$1,250,000, and to have disposed of the same, previous to that date, to Col. Wm. C. Greene and associates, for a consideration not then stated, but afterwards said to have been about \$2,000,000, part in cash, with the remainder to be paid at intervals. Apparently practically the entire payment was in the form of notes, and the Greene Consolidated apparently was obliged to pay 3 notes, aggregating \$450,000, in order to protect its interests, these notes having been given by Col. Greene for advances made by the Greene Consolidated, when he was at the head of the latter company, in addition to a cash payment, said to have been \$200,000. The Sierra Madre defaulted the interest on its bonds, Dec. 1, 1907, and is practically bankrupt. Apparently the notes given in payment for the 51% of Sierra Madre stock sold for \$2,000,000, which notes are in default, are secured by 75% of the lumber company's stock, which apparently is owned again by the Greene Consolidated, owing to default in payments, but the relations of the Cananea Consolidated, Greene Consolidated and Greene Cananea are so intricate and obscure that nobody but the principals can say exactly who is who, what is what, or which is which.

The Greene Consolidated issued a circular, July 17, 1906, stating that stockholders of the Cananea Central Copper Co. would take over, and pay for, in cash, to the treasury of the Greene Consolidated Copper Co., the 200,000 shares of Cananea Central stock held by the Greene Consolidated Copper Co., but it transpired later that this circular was untrue, though issued officially, as the Greene Consolidated never owned the 200,000 shares of Cananea Central, this stock, which was fully paid and non-assessable, belonging to the Cananea Consolidated Copper Co., S. A. This is a sample of the "square deal" given its shareholders by the old management of the Greene Consolidated.

The company's annual report, for year ending 1907, gave items of \$2,000,000 received from the sale of 200,000 shares of Cananea Central, and \$1,350,000 received from the sale of 76,500 shares of Sierra Madre Land & Lumber Co. stock. It was asserted, in the press, February, 1907, that on Feb. 15, 1907, the sum of \$4,000,000 was transferred to the treasury of the Greene Consolidated Copper Co., in payment at par for 200,000 shares of the Cananea Central.

The statement given at the company's annual meeting, October, 1906, as of date July 31 preceding, reported a surplus of \$18,678,119, was altogether misleading, as the actual surplus, by the company's own figures, could not be figured as more than \$1,575,222, even by including an indefinite amount of metal on hand, and practically there was no surplus whatever, as the company never, from its birth until its practical reorganization, had enough money to operate to advantage, and was chronically hard up, even when paying dividends.

On July 31, 1907, according to the statement of Treasurer Fraser, the Greene Consolidated had quick assets of about \$7,000,000, but Mr. Fraser evidently forgot himself, as these assets belonged to the Cananea Consolidated. This was another sample of the "square deal" given its shareholders by the old management of the Greene Consolidated Copper Co.

Apparently the actual "profits" of the Greene Consolidated for 17 months, ending Dec. 31, 1907, were \$3,220,247, including income, from various stock and land sales, of \$3,352,500, showing, by an honest accounting, an actual loss of \$132,253, made in 17 months, during the most prosperous period that the copper market has known for many years. These figures show why the Greene Consolidated was reorganized.

On Dec. 31, 1907, the company reported a balance of assets over liabilities of \$5,961,059. It all lies in the bookkeeping, and a clever accountant can "prove" anything desired, by going over the figures of the Greene Consolidated Copper Co. As a matter of fact, the company's accounts were so badly kept, apparently partly through ignorance, and partly through intent to deceive, that all figures given out were highly misleading. The company never produced copper so cheaply as claimed, and it is doubtful whether the old management ever knew just what the copper was costing, or just where the company was drifting.

The Greene Consolidated Copper Co. was practically wiped out, Dec. 23, 1906, by the organization of the Greene Cananea Copper Co. The company was in such shape financially, at the height of a remarkable boom in the metal market, that it was about to collapse. Messrs. Thos. F. Cole and John D. Ryan, strong men in the copper industry, were called in to save the company from bankruptcy. They drove a hard bargain with the Greene Consolidated, as was their right, of course, and in forming the Greene Cananea Copper Co., put in their own holdings, which are of much less value than those of the Greene Consolidated, at a very high price. The reason for this was found in the desperate financial condition of the Greene Consolidated, which was practically bankrupt, although the owner of a magnificent property, while the Cole and Ryan property in the merger, though of much less value physically, was backed by strong interests, able to pull the property through. The shareholders of the Greene Consolidated have good reason for bitter feelings, but their grievances lie against the old management, rather than against Messrs. Cole and Ryan, who were called in as medical experts, when the patient was at his last gasp, and saved his life, but charged a tremendous fee for so doing. That the fee was very large cannot be controverted, but the shareholders of the Greene Consolidated are better off, after paying the fee, not directly in cash, but through dilution of their holdings, than they could have been had the property been allowed to go by the board, when the salvage would have been trifling, and very possibly nil.

The property formerly controlled by the Greene Consolidated Copper Co. was fully described in Vol. VII, and is described, in connection with adjoining property, under title of Greene Cananea Copper Co., in this volume. The present status of the Greene Consolidated is merely that of a footbridge between the Cananea Consolidated, which holds direct title to all the property, and the Greene Cananea Copper Co., which controls the property through ownership of shares. The shareholders who insist on occupying the bridge are apt to be jostled. They had better walk ashore. They have been defrauded, but the people guilty of defrauding them can make no restitution, and those who are financially capable of making restitution are not responsible, legally or morally, for the loss.

#### GREENE GOLD-SILVER CO.

#### MEXICO.

Office: 1210-24 Broad St., New York, N. Y. Mine office: Conchero, Rayón, Chihuahua, Mex. Col. Wm. C. Greene, president; Mark L. Sperry, vice-president; Richard A. Jones, secretary; E. J. Gates, treasurer; Clarence C. Chase, general manager; W. E. Pomeroy, superintendent.

Organized Nov. 10, 1902, under laws of West Virginia, with capitalization \$15,000,000, increased March, 1906, to \$25,000,000, shares \$10 par, in \$3,000,000 preferred cumulative 8% stock and \$22,000,000 common shares. Trust Company of America, New York, transfer agent. New York Trust Co., registrar.

Dividends on the preferred 8% stock were supposed to be payable annually, but the first dividend, of 40 cents per share, declared September, 1906, was not paid until February, 1907, while the third semi-annual dividend, due September, 1907, was passed. The company offered 100,000 shares of new

stock February, 1907, which issue was underwritten and placed, and again offered 100,000 shares April, 1907, of which only about 10,000 shares were taken. Col. Greene gave stock of the par value of nearly \$8,000,000, October, 1907, to relieve the company's treasury, but there being no market for this stock, the gift was of little or no value. The company's balance sheet of July 31, 1907, showed current assets of \$2,858,641, and current liabilities of \$3,035,338, but, as a matter of fact, the assets were practically all suppositions, there being about \$82 cash on hand, with an enormous floating indebtedness.

The company secured an extensive concession, Apr. 6, 1907, for the development of water power, telephone lines, milling plants, etc., in the districts of Bravos, Guerrero, Rayón and Galeana, in the state of Chihuahua, which concessions would be valuable, if the company were in a position to take advantage of them. The company previously secured concessions for utilizing the water power of the Aros and Yaqui rivers, and for various public utilities.

In 1906 the company claimed to own, in fee, 340,000 acres of land, including a large number of mines, with a government concession to locate mines in an area of upwards of 4,000 square miles, in the states of Chihuahua and Sonora, Mexico. The company claimed, 1907, to own 114 mines, but apparently really owned only 4, out of the entire number, balance being held under option and bond. These 114 properties were claimed to have produced upwards of \$120,000,000 in ore values, and had 12 different reduction plants on as many different properties.

The most important mine of the company, and, in fact, the only mine that really can be called such, is the Conchero, area 398 hectares, bought, circa 1907, for \$1,250,000, of Corrigan, McKinney & Co. Unfortunately this property was bought on a margin, like most of the others, and the balance owed the vendors, said to be nearly \$1,000,000, probably will bring about the loss of the property. The plant at Conchero includes a 60-stamp mill, of 175 tons daily capacity, and a 500-ton slime plant was begun, late 1907. Production of the Conchero, September, 1907, was said to have been valued at \$52,000. Holdings in the Jesús María district, Ocampo, Chihuahua, included the Santa Juliana, Balvanera, Guadalupe, Rincón and Bonquillo groups. The Santa Juliana is claimed to have produced, according to government records, upwards of \$100,000,000, from a vein up to 15' in width, opened to 900' depth. This mine was reopened by a double track drainage tunnel, but apparently did not prove a success.

The Balvanera group, area 61 hectares, adjoining the Santa Juliana, has a 40-ton mill and concentrator, and is claimed to have produced upwards of \$3,000,000 worth of ore, and to have numerous buildings and various surface improvements. This group was said to include 44,000 acres of pine and oak timber lands.

The Guaynopita group, area 113 hectares, in Guaynopita Cañon, Chihuahua, near the Sonora line, includes properties said to have been worked by the Aztecs before the conquest of Mexico, the mines showing ores assaying well in gold, silver and copper. It was planned, at one time, to erect a 500-ton smelter on this property.

The Mulatos group at Mulatos, Sahuaripa, Sonora, Mexico, is owned by El Rey del Oro Mining Co., which is controlled, through stock ownership, by the Greene Gold-Silver Co. This group includes 6,400 acres of mineral lands and miscellaneous holdings giving a total of 24,700 acres. The mine was said to have produced upwards of \$18,000,000, mainly in gold, from arastras and an old 60-ton mill on the property. The veins are claimed to range up to 500' in width, which seems doubtful, and the company planned the installation of a 2,500-ton mill, which was a chimerical project.

The Matulera group, at Ocampo, Chihuahua, is said to have a 15' vein, carrying values mainly in gold, and the company was said to have begun a 100-ton cyanide plant.

Miscellaneous properties are many in number, all apparently held on options, or otherwise than by outright ownership, these including the following groups: Santa Brigida, in Chihuahua, area 95 hectares; Cerro Boluda group, in Chihuahua, area 152 hectares; Pinos Altos group, in Chihuahua, area 58 hectares; El Trigo group, in Sonora, area 16 hectares; La Trinidad group, in Sonora, area 130 hectares; El Colón mine, 32 hectares; San Ramón group, in Chihuahua, area 23 hectares; Mina Grande group, in Sonora, area 25 hectares; Cueva Santa mine, area 46 hectares; La Lamosa group, area 44 hectares; Belen group, in Chihuahua, area 70 hectares; El Refugio group, in Chihuahua, area 87 hectares; Santa Eduviges group, in Chihuahua, area 55 hectares.

The lands of the company, or rather the lands once supposed to be held by the company, were estimated, by Col. Greene, to carry 3,500,000,000' of standing timber, valued at \$10 per thousand. The company also claimed to have coal properties at Pilares, and iron mines at Cedros. The coal mines were estimated to carry 200,000,000 tons of coal, and the iron mines were supposed to be comparable to the Mesaba iron range of Minnesota.

The Guaymas smelter, supposed to be owned by the Greene Gold-Silver Co., actually is owned by the Mexican-American Smelting Co.

The Federal smelter, at El Paso, located on a 40-acre tract, is said to have been bought by the Greene Gold-Silver Co. for \$54,500, subject to a vendor's lien of \$42,000, having been bought "on a shoestring," like all the other properties of the company.

In July, 1907, the company employed about 1,600 men at its various mines and works, and in August, 1907, reached a daily productive capacity of nearly 500 tons, but late in that month suspended operations, having reached the end of its resources. President Diaz, of Mexico, who has been a consistent friend of Col. Greene, is said to have loaned \$250,000, personally, to help the company along, but this was merely a drop in the bucket, and complete collapse was inevitable, by reason of the utterly fallacious plan of operations followed. It is difficult to understand how Col. Greene, a man of undoubtedly ability in many fields, should have allowed his mania for buying mines to have mastered him so completely as to have conducted the company's affairs along such insane lines as were followed. Nothing was bought outright, if it could be secured on a part payment, and, in consequence, the company, at the first financial pinch, fell to pieces like a house of cards. In fact, it is doubtful if anyone living, except Col. Greene himself, and possibly not even he, knows exactly what the company owns. It is safe to infer, however, that the company holds direct title to very little.

Shortly before the collapse, a stockholder's committee, including 2 directors, endeavored to raise \$25,000, through voluntary assessments, to make an examination of the company's property and business, but secured only \$10,000, which was refunded. The directors are making enough noise at present, but the time for them to have spoken was before the smash. Had they taken some real part in managing the company's affairs, instead of permitting Col. Greene to be the entire direction, the company might not have found itself in its present lamentable situation.

The Greene Gold-Silver Co. holds title to its properties through a Mexican incorporation, and supposedly controls a number of subsidiary corporations as well. Stock in the Mexican company is said to have been hypothecated, which, if true, leaves the American company without other assets than its office furniture. The property is said to be in danger of being sold at auction, piecemeal, to satisfy loans to Mexican bankers. Gov. Enrique Creel, of

Chihuahua, a thoroughly capable and trustworthy man, is acting as conservator. The Greene Gold-Silver Co. was a one-man enterprise, and the one man broke down. The company bought entirely too many properties, and wasted its funds on further purchases, instead of securing those already held under partial payments. Col. Greene has not profited personally, and is said to have broken down completely, apparently from nervous prostration, but the responsibility for the complete collapse of the company rests solely with him. The only possible chance for salvage lies in the reorganization of the company, in which case the old shareholders will be nearly or quite wiped out, but small as may be the salvage, there will be none without a drastic reorganization, if capital can be induced to go into the enterprise on any terms.

**GREEN HOPE MINING & MILLING CO.**

WYOMING.

Dead. Formerly at Guernsey, Laramie Co., Wyo. Described Vol. VI.

**GREENHORN COPPER MINING CO.**

COLORADO.

Mine office: Cañon City, Frémont Co., Colo. Mrs. Wm. E. Johnson, administratrix, Metropole Hotel, Denver, Colo., principal shareholder, and practically manager. Lands, 12 miles from Cañon City, show low-grade copper ores, slightly developed. Idle and apparently moribund.

**GREENLEAF MINE.**

MONTANA.

Owned by Boston & Montana Consolidated Copper & Silver Mining Co.  
**GREEN MONSTER MINE.**

NEVADA.

Office: care of Mrs. Phoebe Hearst, owner, San Francisco, Cal. Letter returned unclaimed from former mine office, Sandy, Lincoln Co., Nev. Mine is opened by a 325' two-compartment vertical shaft, showing carbonate and sulphide ores, latter including argentiferous galena and chalcopyrite. Mine has been claimed to show about 5,000 tons of \$40 ore. Idle some years.

**GREEN MOUNTAIN COPPER CO.**

CALIFORNIA.

Mine office: Raymond, Madera Co., Cal. John V. Bohn, superintendent. Is controlled, through stock ownership, by American Smelters Securities Co. Has steam power. Presumably idle.

**GREEN MOUNTAIN COPPER CO.**

NEW MEXICO.

Dead. Formerly at Rinconada, Rio Arriba Co., N. M. Fully described Vol. VII.

**GREEN MOUNTAIN COPPER MINING CO.**

WYOMING.

Dead. Property sold, circa 1904, to Saginaw Valley Copper Mining Co. Formerly at Encampment, Carbon Co., Wyo.

**GREEN MOUNTAIN MINE.**

MONTANA.

Owned by Anaconda Copper Mining Co.

**GREEN MOUNTAIN MINING & MILLING CO.**

COLORADO.

Office: 519 Frick Bldg., Pittsburg, Pa. Mine office: Silverton, San Juan Co., Colo. Wm. P. De Armit, president and receiver; S. J. Crawford, secretary; E. W. Walter, general manager. Organized under laws of Colorado, with capitalization \$3,000,000. Lands, 19 claims, area circa 200 acres, in Cunningham Gulch, 7 miles from Silverton, opened by tunnels of 600' and 800', with about 4,000' of workings. Ores are auriferous and argentiferous iron-copper-lead sulphides, with quartz gangue, averaging about \$12 per ton in value. Has steam power and 12-drill Rand air-compressor. Has a 200-ton concentrator, connected with the mine by a 4,000' aerial tram. Went into receiver's hands November, 1907.

**GREENWATER ARCTURUS COPPER MINING CO.**

CALIFORNIA.

Office: care of Hon. T. L. Oddie, Tonopah, Nev. Mine office: Greenwater, Inyo Co., Cal. C. M. Oddie, vice-president; H. H. Cookston, secretary and treasurer; preceding officers, F. A. Keith and W. D. Blackmore, directors.

Organized, 1906, with capitalization \$3,000,000. Lands, 12 claims, 3 fractional, in the Willow Creek section south of the Greenwater district. Idle.

**GREENWATER BIMETALLIC COPPER MINING CO.** **CALIFORNIA.**

Office: care of E. C. Hughes, president, San Francisco, Cal. Mine office: Greenwater, Inyo Co., Cal. Sig. Weil, vice-president; A. K. Durbro, secretary; H. Zadig, treasurer; preceding officers, Marius Duvall, W. D. Tobey and W. E. F. Beal, directors. Organized, 1906, under laws of Arizona, with capitalization \$1,000,000. Lands, 6 claims, adjoining the Furnace Creek Copper Co., showing a gossan up to 40' wide, giving assays of 3.6 to 37.9% copper. Idle.

**GREENWATER BLACK JACK COPPER MINING CO.** **CALIFORNIA.**

Office: care of Dr. T. E. Enloe, secretary, Goldfield, Nev. Mine office: Greenwater, Inyo Co., Cal. H. T. Bragdon, president; N. H. Truett, vice-president; J. R. Dortsch, treasurer; preceding officers and H. F. Bartine, directors. Lands, 4 claims, near the Greenwater-Death Valley Mining & Smelting Co., said to show argentiferous lead ore and copper ore assaying up to 20% copper, 8 oz. silver and \$3.25 gold per ton. Idle.

**GREENWATER BLACK OXIDE COPPER MINING CO.** **CALIFORNIA.**

Office: 75 Sutter St., San Francisco, Cal. Mine office: Greenwater, Inyo Co., Cal. Jas. Gleason, president; J. C. McBride, secretary; preceding officers, T. C. Risch and H. P. Mason, directors; Geo. Jones, superintendent. Lands, 9 claims, near the Furnace Creek Copper Co. Idle.

**GREENWATER & BOSTON COPPER CO.** **CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Apparently merely a stock-jobbing enterprise. Idle.

**GREENWATER CALIFORNIA COPPER CO.** **CALIFORNIA.**

Office: care of Harry W. Woods, Colorado Springs, Colo. Mine office: Greenwater, Inyo Co., Cal. F. M. Woods, president; L. R. Myers, vice-president; C. S. Buck, secretary and treasurer. Idle.

**GREENWATER-CALUMET COPPER CO.** **CALIFORNIA.**

Office: 8 Butler Bldg., Tonopah, Nev. Mine office: Greenwater, Inyo Co., Cal. B. L. Smith, president; R. Chester Turner, vice-president; H. W. Clarke, secretary; R. C. Moore, treasurer; preceding officers, Jas. N. Mayhew, Zeb. Kendall and W. Brown, directors. Organized Aug. 27, 1906, under laws of Nevada, with capitalization \$1,500,000, shares \$1 par. Lands, 21 claims, area circa 360 acres, near the Furnace Creek Extension Copper Co., showing a gossan up to 200' in claimed width, giving surface ores assaying up to 16.7% copper, slightly developed by tunnel. Idle, but plans driving a 500' crosscut tunnel, in 1909.

**GREENWATER CENTRAL COPPER CO.** **CALIFORNIA.**

Office, 905 Calvert Bldg., Baltimore, Md. Mine office: Greenwater, Inyo Co., Cal. Oscar A. Turner, president; Hon. Buchanan Schley, vice-president; Addison E. Milliken, secretary; Henry B. Gilpin, treasurer; Henry G. Merry, general manager. Lands, on Sheep Creek, show a ledge nearly 100' wide, carrying a little carbonate copper ore.

**GREENWATER CONSOLIDATED MINING CO.** **CALIFORNIA.**

Office: 131 East 53d St., Los Angeles, Cal. Mine office: Greenwater, Inyo Co., Cal. Way C. West, president and treasurer; D. D. Bickford, vice-president; B. X. Dawson, secretary. Organized, 1906, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par. Lands, 10 claims, area 200 acres, supposedly located somewhere in the Greenwater district, on which no development has been secured, also 4 claims at Brightwood, San Bernardino county, California, presumably undeveloped also. Formerly held 12 claims at Cima, San Bernardino county, which were transferred to the Arcalvada Mining & Milling Co. Does flamboyant advertising, but apparently no work. Is regarded with suspicion.

**GREENWATER COPPER CO.****CALIFORNIA.**

Office: care of L. G. Newby, secretary and treasurer, Pasadena, Cal. Mine office: Greenwater, Inyo Co., Cal. Z. H. Lowman, president; J. Q. Leslie, vice-president and superintendent; L. G. Newby, secretary and treasurer. Organized circa November, 1906, under laws of Arizona, with capitalization \$1,000,000. Lands, 41 claims, in 7 groups, principal group, known as the Black Bird, showing ores giving assays of 3 to 12% copper. Idle.

**GREENWATER COPPER HELMET CO.****CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Idle.

**GREENWATER COPPER MINES & SMELTER CO.****CALIFORNIA.**

Office: care of Donald B. Gillis, manager, Tonopah, Nev. Mine office: Greenwater, Inyo Co., Cal. Chas. E. Miller, president; M. R. Ward, vice-president; preceding officers, J. W. Brock, Chas. M. Schwab, W. H. Drayton, L. H. Dessar, Malcolm McDonald, J. E. Brown and Frank Keith, directors. Organized Dec. 12, 1906, under laws of Delaware, with capitalization \$25,000,000, shares \$5 par. Is a securities holding corporation only. Early 1908 owned 95% of capital stock of the Greenwater & Death Valley Copper Co., 94% of the capital stock of the United Greenwater Copper Co., and entire stock issues, except founder's shares, of the Governor Greenwater Copper Co., El Capitan Copper Mining Co., Ironclad Greenwater Copper Co. and Eagle Mountain Water Co. Owns the Davis ranch and water rights through the Eagle Mountain Water Co. Development work of subsidiary companies, 1907, was 4,140'.

**GREENWATER COPPER MINING CO.****CALIFORNIA.**

Office and mine: Greenwater, Inyo Co., Cal. Arthur Kunze, president; Malcolm Smith, vice-president; Tom J. Gardner, secretary; H. B. Gee, treasurer; preceding officers, John Salisbury and J. S. Wandell, directors. Organized under laws of South Dakota. Lands, circa 3 miles south of Greenwater, are claimed to give promising surface indications. Idle.

**GREENWATER COPPER MINING CO.****CALIFORNIA.**

Office: care of Isaac T. Stoddard, Phoenix, Ariz. Mine office: Greenwater, Inyo Co., Cal. Organized 1906, under laws of Arizona, with capitalization \$5,000,000. Apparently no work done.

**GREENWATER COPPER MINING SYNDICATE.****CALIFORNIA.**

Office: care of Wm. T. Virgin, treasurer, Goldfield, Nev. Mine office: Greenwater, Inyo Co., Cal. L. S. Finnegan, president; Fred A. Hussman, vice-president; Wells Morton, secretary. Organized 1906, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par. Lands, 5 claims, known as the Hussman group. Idle.

**GREENWATER COPPER QUEEN MINING CO.****CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Idle.

**GREENWATER COPPER RANGE MINING CO.****CALIFORNIA.**

Office: care of Fred H. Begole, Pasadena, Cal. Mine office: Greenwater, Inyo Co., Cal. T. B. Rickey, president; W. H. Wells, vice-president; Frank H. Lathrap, secretary; J. L. Lindsay, treasurer; Capt. Thos. Hooper, superintendent; preceding officers, J. R. Elgin and E. A. Snowman, directors. Capitalization \$2,000,000. Lands, 220 acres, near the Furnace Creek Extension, said to have a good surface showing. Presumably idle.

**GREENWATER & DEATH VALLEY COPPER CO.****CALIFORNIA.**

Office: care of Donald B. Gillis, vice-president, Tonopah, Nev. Mine office: Greenwater, Inyo Co., Cal. Frank Keith, president; W. L. Carden, secretary; Chas. E. Knox, treasurer; preceding officers, M. R. Ward, J. Ross Clark, T. L. Oddie, Malcolm McDonald and C. B. Zabriskie, directors. Organized 1906, under laws of South Dakota, with capitalization \$3,000,000, shares \$1 par. Is controlled, through ownership of 95% of stock, by Greenwater

**Copper Mines & Smelters Co.** Lands, 21 claims, 5 fractional, area 400 acres, including first or second locations in the Greenwater district, having ore bodies claimed to range 8' to 200' in width, giving assays of 10 to 25% copper, but the wider ore bodies evidently are below commercial grade. Has 5 shafts, Copper Glance No. 2, of 125' depth, showing a vein of 6' to 10' width, having stains of malachite and chrysocolla. Main shaft, 700', planned to be sunk to 1,600', has crosscuts on the 400' and 500' levels. Has four 60-h. p. gasoline hoists and a sawmill. Was systematically touted, and vastly overestimated, during the Greenwater boom, but is one of the few properties of promise in the district. Was developing steadily, with circa 40 men, at last accounts.

**GREENWATER DEATH VALLEY COPPER MINING CO.**      **CALIFORNIA.**

Office: care of C. M. Sumner Investment Securities Co., Denver, Colo. Mine office: Greenwater, Inyo Co., Cal. Lands supposed to be 2 claims, 4 miles north of Greenwater. Is regarded with much suspicion, and presumably is a mere stock-jobbing enterprise, the title alone being an obvious attempt to play upon the name of the Greenwater & Death Valley Copper Co.

**GREENWATER & DEATH VALLEY EXTENSION CO.**      **CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Malcolm Smith, superintendent. Idle.

**GREENWATER EL CAPITAN COPPER CO.**      **CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Is controlled, through ownership of entire stock issue, except founder's shares, by Greenwater Copper Mines & Smelters Co.

**GREENWATER ELY CONSOLIDATED COPPER CO.**      **CALIFORNIA & NEVADA.**

Letters returned unclaimed from former office, 312 O. F. Johnson Bldg., Los Angeles, Cal., and from former mine office, Ely, White Pine Co., Nev. S. M. Mingus, president; L. Mingus, vice-president; S. F. Crandall, secretary; A. L. Markwell, treasurer. Organized under laws of Arizona, circa November, 1906, with capitalization \$1,000,000, shares \$1 par. Lands, 3 claims at Greenwater and 4 at Ely, White Pine Co., Nev. No development of importance has been secured at either point. Idle and moribund.

**GREENWATER-ETNA COPPER CO.**      **CALIFORNIA.**

Office: 1215-15 William St., New York, N. Y. Mine office: Greenwater, Inyo Co., Cal. Organized circa November, 1906, under laws of Arizona, with capitalization \$200,000, by John V. Lesher, W. B. Bohrbach and Geo. E. Deppen. Idle.

**GREENWATER FURNACE CREEK COPPER CO.**      **CALIFORNIA.**

Letter returned unclaimed from former office, 219 Citizens National Bank Bldg., Los Angeles, Cal. Mine office: Greenwater, Inyo Co., Cal. A. H. Busch, president; Hon. Jas. Lacklan, vice-president; S. E. Cannell, secretary and treasurer; preceding officers, Hon. Geo. S. Nixon, H. H. Clark, Wm. Bayley and H. J. Woollaeott, directors; Maj. J. W. A. Off, general manager. Organized August, 1906, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par. Lands, 21 claims, 6 fractional, area 375 acres, in the eastern part of the Greenwater district, reported by company to show fissure veins in limestone and contact veins between limestone, ore bodies obviously being remarkable both as to size, shape and occurrence. Company claims 20 ore bodies on its lands, with average width of 200' and average length of 3,500', which would fill the company's entire holding with solid copper veins, with exception of nineteen 30' strips of barren limestone between the 20 veins. Ores are reported by the company as melaconite, azurite, chalocite and occasional chrysocolla, averaging 18 to 36% copper tenor. Taking the lowest percentage of ore reported by the company, and the company's own figures as to size of its ore bodies, the first 100' in depth on this wonderful property would carry upwards

of 20,000,000 tons of refined copper, worth, at 13 cents per pound, the comparatively trifling sum of \$5,200,000,000. Company was promoted by the Off-McGarvin-Brown Co., which advertised, October, 1906, that the firm would not get into a mining proposition where a losing was possible. The fact that a major is manager, and a United States senator is vice-president, will prove a great consolation to the shareholders. It is indeed lamentable to note that this magnificent mine, which carries, according to the company's own statements, more copper than all the developed copper mines of the world, is idle, and present office address a mystery.

**GREENWATER IBEX COPPER & GOLD MINING CO. CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Organized November, 1906, under laws of Arizona, with capitalization \$1,000,000, by W. W. Jones and F. Ainsworth.

**GREENWATER-MOHAWK MINES CO. CALIFORNIA.**

Office: care of Ernest Kennedy & Co., Goldfield, Nev. Mine office: Greenwater, Inyo Co., Cal. Hon. A. E. Spriggs, president. Organized 1906, with capitalization \$1,250,000, shares \$1 par. Lands, 5 claims, considered fairly well located. Idle and apparently promoted mainly for stock-jobbing purposes, notwithstanding the president being a former governor of Montana.

**GREENWATER PAY COPPER CO. CALIFORNIA.**

Office: care of D. C. Aldridge & Co., fiscal agents, Tonopah, Nev. Mine office: Greenwater, Inyo Co., Cal. T. F. Bonneau, president; H. H. Hunter, vice-president and general manager; L. T. Kibler, secretary and treasurer; preceding officers, D. C. Aldridge and T. S. Jacobs, directors. Organized 1906, with capitalization \$1,500,000, shares \$5 par. Lands, 5 claims. Idle.

**GREENWATER POLARIS COPPER CO. CALIFORNIA.**

Office: Salt Lake City, Utah. Mine office: Greenwater, Inyo Co., Cal. Organized circa December, 1906, by A. W. Smith and N. O. Nailor, on lands said to carry a 25' ledge giving assays of 4.5% copper, 0.3 oz. silver and 83 cents gold per ton. Idle.

**GREENWATER PROSPECTORS EXPLORATION CO. CALIFORNIA.**

Dead. Was organized early 1907, under laws of South Dakota, with capitalization \$250,000, shares \$1 par, and was merged, July, 1907, in Copper Mines & Smelters Corporation of America. Company floated the Green Dragon. Officers were E. H. Kramer, president; F. Macpherson, vice-president; E. W. Ewing, secretary and treasurer. Formerly at Greenwater, Inyo Co., Cal.

**GREENWATER RED BOY COPPER CO. CALIFORNIA.**

Office: P. O. Box 227, Goldfield, Nev. Mine office: Greenwater, Inyo Co., Cal. Thos. B. Rickey, president; H. T. Bragdon, vice-president; Robt. B. Todd, secretary; J. L. Lindsey, treasurer; preceding officers and A. D. Myers, directors; J. R. Fletcher, general manager. Organized 1906, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par. Is a twin of the Greenwater-Saratoga Copper Co. Lands, 5 claims, patented, area 100 acres, adjoining the Greenwater & Death Valley Copper Mining Co. on the west, showing 3 ledges, with gossan cappings giving assays up to 28% copper and \$66 gold per ton, opened by a 400' crosscut tunnel and a 600' shaft. Has a 50-h. p. steam plant. Idle.

**GREENWATER-SARATOGA COPPER CO. CALIFORNIA.**

Office: P. O. Box 227, Goldfield, Nev. Mine office: Greenwater, Inyo Co., Cal. Thos. B. Rickey, president; H. T. Bragdon, vice-president; Robt. B. Todd, secretary; J. L. Lindsey, treasurer; preceding officers and M. J. Monnette, directors; J. R. Fletcher, general manager. Organized 1906, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par. Lands, 5 claims, partly patented, area 100 acres, adjoining the Greenwater Red Boy, of which this

company is a twin, opened by a 300' crosscut tunnel and a 550' shaft. Has a 50-h. p. hoist. Idle, but plans sinking and crosscutting, in 1909.

**GREENWATER SUNSET COPPER CO.****CALIFORNIA.**

Office: 1215-15 William St., New York, N. Y. Mine office: Greenwater, Inyo Co., Cal. Organized November, 1906, presumably under laws of Arizona, by P. D. Pike, H. M. Stevens and Wm. M. Mears. Idle and apparently moribund.

**GREENWATER SUPERIOR COPPER MINING CO.****CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Organized under laws of South Dakota, with capitalization \$1,000,000, shares \$1 par. Lands, 4 full and 2 fractional claims, near the Greenwater & Death Valley. Idle.

**GREENWATER VICTOR COPPER CO.****CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Organized under laws of New Jersey, with capitalization \$125,000, by Scott Newcomer and F. L. Rankin. Apparently no work done.

**GREENWATER VINDICATOR COPPER CO.****CALIFORNIA.**

Office and mine: Greenwater, Inyo Co., Cal. Arthur Kunze, president; J. F. A. Strong, vice-president; W. E. Johnson, treasurer; Tom J. Gardner, secretary; preceding officers, Ewald Kunze and Jas. B. Bailey, directors. Organized Jan. 25, 1907, under laws of South Dakota, with capitalization \$500,000, shares \$1 par. Lands, 17 claims, 6 miles east of Greenwater. Idle.

**GREENWATER WILLOW CREEK COPPER CO.****CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Geo. A. Bartlett, president; Richard Sutro, first vice-president; Henry E. Epstein, second vice-president; R. C. Moore, treasurer; G. A. Patteson, Jr., secretary; preceding officers, Alonzo Tripp and W. A. Shockley, directors. Organized November, 1906, under laws of Nevada. Idle.

**GREENWOOD-PHOENIX TUNNEL CO., LTD.****BRITISH COLUMBIA.**

Mine office: Phoenix, Boundary district, B. C. Richard Armstrong, general manager. Organized 1908, with capitalization \$5,000,000. Company plans driving a 3½-mile tunnel from Greenwood to Phoenix, at an estimated cost of \$2,000,000. Plan is considered of doubtful feasibility.

**GREENWOOD SMELTER.****BRITISH COLUMBIA.**

Owned by British Columbia Copper Co.

**FRANCISCO GREVE G.****CHILE.**

Mine office: Combarbalá, Coquimbo, Chile. Property is a smelter, known as El Durazno, 130 kilometers from Los Vilos railroad station, having a small reverberatory furnace, producing Chile bars of about 97% average copper tenor. Production, 1903, was 254,477 lbs. fine copper.

**GREYHOUND MINING & MILLING CO., LTD.****IDAHO.**

Mine office: Ketchum, Blaine Co., Idaho. S. M. Smith, superintendent. Has auriferous copper ore, with steam power, and is said to have a 50-ton smelter.

**GREY ROCK MINES.****MONTANA.**

The East and West Grey Rock mines are owned by the Butte & Boston Consolidated Mining Co.

**GREYTON COPPER MINES CO.****COLORADO.**

Office: care of Thos. Potter, secretary, Denver, Colo. Letter returned unclaimed from former mine office, Pearl, Larimer Co., Colo. Organized January, 1902, with capitalization \$75,000, shares 5 cents par. W. H. Kistler, president. Lands, 12 claims, near the Colorado and Wyoming line, opened by sundry pits and shallow shafts, deepest 70', showing cuprite and copper sulphides. Idle several years and apparently moribund.

**GRIBBELL ISLAND COPPER CO.****BRITISH COLUMBIA.**

Office: Fairhaven, Wash. Mine office: Gribbell Island, Skeena River

Digitized by Google

division, Cassiar district, B. C. Lands, 2 miles northwest of Canadian American Copper Mining Co., have several pits, open-cuts and short tunnels, longest tunnel 354', in a fissure zone in syenite, showing massive bornite with occasional chalcopyrite.

**GRINDALL MINING & SMELTING CO.**

**ALASKA.**

Office: 200 Epler Blk., Seattle, Wash. Letter returned unclaimed from former mine office, Ketchikan, Alaska. T. J. Sweeney, superintendent, at last accounts. Lands, 21 claims, on the Kasaan Peninsula, showing low grade ore. Property said to have been leased, 1905, to Alaska Improvement Co.

**GROWLER COPPER CO.**

**ARIZONA.**

Office: 14 Kilby St., Boston, Mass. Mine office: Gila Bend, Maricopa Co., Ariz. Geo. H. Morrill, Jr., president; Herbert Moseley, secretary and treasurer; M. W. Turner, general superintendent. Organized March 19, 1904, under laws of Maine, with capitalization \$2,000,000, shares \$5 par. Lands, 28 claims, unpatented, area 560 acres, in 2 groups, also a 25-acre millsite, lying circa 60 miles south of Gila Bend, nearest railway station. The Copper Hill group, 18 claims, has a contact ledge up to 300' in width, with gossan traceable about 1 mile, and is opened by a 75' tunnel and by shafts of 85', 200' and 300', with about a quarter-mile of workings, showing oxidized ores, silicates and a little chalcocite, near the contact between limestone with quartz and diabase. Has steam power, and has shipped a little ore to Douglas. Property considered promising, though handicapped by inadequate transportation facilities.

**GUILLERMO GRUNDY.**

**PERÚ.**

Office and mine: Musquituni, Lampa, Puno, Perú. Mine has argentiferous copper ores. Presumably idle.

**FUNDICIÓN METALURGICA DE GUADALAJARA, S. A.**

**MEXICO.**

Office and works: Guadalajara, Jalisco, Mex. Diego Moreno, president; Justo Fernandez del Valle, vice-president; Alberto Zunigo, treasurer; Francisco Gonzalez y Arias, secretary; Luis Altorra, comissario; José S. Diaz, general manager. Capitalization 300,000 pesos. Works include a 100-ton lead stack, and a 100-ton copper matting furnace may be added.

**MINA GUADALUPANA.**

**MEXICO.**

Mine office: Topia, Tamazula, Durango, Mex. Felix Briones, owner. Has copper-silver ores. Presumably idle.

**GUADALUPEÑO MINING CO.**

**MEXICO.**

Dead. Formerly at Torres, Hermosillo, Sonora, Mex.

**COMPAÑIA MINERA DE LA GUADALUPE.**

**MEXICO.**

Mine office: Santa Engracia, Ciudad Victoria, Tamaulipas, Mex. Organized 1907, to open an antigua mine, La Guadalupe, said to have been worked at a profit some years ago. Property, 14 miles from nearest railroad, is said to show ore averaging 30% copper, which is much too high.

**MINA GUADALUPE.**

**MEXICO.**

Office: care of Vicente Visconti, Santa Rosalia, Chihuahua, Mex. Mine office: Maturana, Hidalgo, Chihuahua, Mex. Property is said to show circa 5,000 tons of copper ore. Idle.

**MINA GUADALUPE.**

**MEXICO.**

Mine office: Muleros, Nombre de Dios, Durango, Mex. José B. Nava, owner; R. Romo, manager. Development is by open-cut, on a considerable body of copper ore. Presumably idle.

**MINA GUADALUPE.**

**MEXICO.**

Office and mine: care of John Dee, owner, Autlán, Jalisco, Mex. Lands, 14 pertenencias, 8 miles west of Autlán, show a "manto" or blanket vein, with hematite capping, underlaid by carbonate copper ores, slightly developed. Apparently could be worked open-cast to advantage.

**GUANACEVI TUNNEL CO.****MEXICO.**

Office: care of L. Diamond & Co., Old South Bldg., Boston, Mass. Mine office: Guanacevi, Santiago Papasquiaro, Durango, Mex. Hilario Losoya, president. Lands, said to be circa 8,900 acres, well watered and timbered, and claimed to possess large bodies of gold and copper ore. Advertisements of Diamond in floating this stock contained gross exaggerations, and the company is not regarded favorably.

**GUARDIAN COPPER MINING CO.****MONTANA.**

Dead. Lands sold, 1906, to Butte Coalition Mining Co. Formerly at Butte, Silver Bow Co., Mont.

**FUNDICIÓN GUAYACÁN.****CHILE.**

Owned by Sociedad Chilena de Fundiciones.

**GUAYNOPOA DEVELOPMENT CO.****MEXICO.**

Letter returned unclaimed from former office, Trust Bldg., El Paso, Tex. Mine office: Temósachic, Guerrero, Chihuahua, Mex. John A. Rice, general manager; Howard Viedel, superintendent. Property is an antigua, known as La Guaynopa, said to carry highly argentiferous and slightly auriferous copper ore.

**GUAYNOPOA SMELTING & REDUCTION CO.****MEXICO.**

Dead. Merged, 1904, in International Consolidated Smelting & Mining Co. Formerly at Temósachic, Guerrero, Chihuahua, Mex.

**GUAYNOPIITA COPPER CO.****MEXICO.**

Office: 24 Broad St., New York, N. Y. Mine office: Temósachic, Guerrero, Chihuahua, Mex. Col. Wm. C. Greene, president. Organized under laws of West Virginia, with capitalization \$5,000,000, shares \$10 par. Is controlled, through ownership of entire stock issue, by Greene Gold-Silver Co. Lands, circa 5,700 acres.

**GUERRERO COPPER CO.****MEXICO.**

Office: care of Nathan Bickford, president, Washington, D. C. Herbert Warne, superintendent. Lands are 5 antiguas, circa 8 miles south of the Mexican Central Railroad bridge crossing the Balsas river, in the state of Guerrero, Mexico, showing ore assaying 18% copper and 40 grams gold per metric ton.

**GUERRERO DEVELOPMENT CO.****MEXICO.**

Dead. Formerly at Chilpancingo, Bravos, Guerrero, Mex. Described Vol. VI.

**GUGGENHEIM EXPLORATION CO.****U. S. A. & MEXICO.**

Office: 621-71 Broadway, New York, N. Y. General mine office: Tiburcio 27, Mexico, D. F. Daniel Guggenheim, president; Morris Guggenheim, vice-president; Isaac Guggenheim, treasurer; John Hays Hammond, general manager; preceding officers, S. R. Guggenheim, M. Robert Guggenheim, H. P. Whitney and Geo. S. Field, directors; Chas. K. Lipman, secretary; W. C. Potter, general superintendent.

Organized June, 1899, under laws of New Jersey, with capitalization \$17,000,000, increased, July, 1906, to \$22,000,000, shares \$100 par. Issued, \$20,335,100. Regular dividend rate is 2½% quarterly. The American Smelters Securities Co. supposedly was organized to succeed the Guggenheim Exploration Co., but did not. It is said that about 80% of the stock is owned by the Guggenheim brothers. To all practical intents and purposes the company is controlled by the American Smelting & Refining Co., and it is difficult to differentiate between the holdings of the Guggenheim Exploration Co. and the American Smelters Securities Co. The Guggenheim Exploration Co. holds \$13,860,000 class A stock, \$1,800,000 class C stock and a large amount of common stock in the American Smelters Securities Co.

Assets of the company include \$912,808 stock in the Cumberland-Ely Copper Co.; \$1,671,589 stock in the Nevada Consolidated Copper Co.; \$1,650,000

bonds of Nevada Northern Railroad Co., and \$4,632,283 stock in the Utah Copper Co. Company also controlled the Yukon Gold Co., which, in 1908, was foisted on a credulous public, with the assistance of Thos. W. Lawson, a partnership which has greatly injured the standing of the Guggenheims in the estimation of the investing public. The company also is supposed to have a 40% interest in the Kennicott Mines Co., and to control the Dairy Farm mine in California, the Minas Tepezalanes y Anexas at Tepezalá, Aguascalientes, Mex., and the Minas Gibosa y Anexas, at Jiménez, Chihuahua, Mex., though the latter are described under title of American Smelters Securities Co.

Company's balance sheet, as of date Dec. 31, 1907, showed assets of \$39,879,728, including \$541,390 cash and \$4,449,976 bills and accounts receivable, with \$4,153,510 bills and accounts payable, and a surplus of \$13,744,252. The company is said to have expended about \$27,000,000 in the purchase of properties within the past few years.

**GUGGENHEIM-GREENWATER COPPER CO. CALIFORNIA & NEVADA.**

Mine office: Ely, White Pine Co., Nev. S. M. Mingus, superintendent. Organized 1906, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par. Lands include the Piñon group, circa 5 miles northwest of Ely, having a shallow 1-compartment shaft, also 3 groups at the mouth of Willow Creek, 35 miles southeast of Greenwater, Inyo Co., Cal. Advertising is flamboyant, and apparently company is merely a stock-jobbing enterprise.

**GULF CREEK, LTD.**

**AUSTRALIA.**

Dead. Voluntarily liquidated, November, 1904. Formerly at Barraba, N. S. W., Australia.

**GULF CREEK MINE.**

**AUSTRALIA.**

Mine office: Barraba, N. S. W., Australia. Jefferson Bros., operators. Lands, 250 acres, in the Gulf Creek district of the Barraba division, 350 miles north of Sydney and 72 miles from a railroad. Ore bodies include a 9' vein of 7% sulphide ore, also a 5% lense of sulphide ore 25' wide and 350' long. Ore is very heating, being rich in sulphur. Country rocks are indurated clay-slates, of Carboniferous age, with dikes of serpentine. Has steam power and a 300-ton smelter. Production, 1901, was 560 long tons fine copper, from 9,400 tons of ore smelted, and in 1906 was circa 70 long tons fine copper, made from 2,400 long tons ore smelted. Employs 10 men, and is being managed prudently by practical men, with fair results.

**GUM TREE CONSOLIDATED MINING & MILLING CO.**

**COLORADO.**

Mine office: Idaho Springs, Clear Creek Co., Colo. John Owen, superintendent. Has auriferous and argentiferous copper and lead ores, with steam power, employing about 20 men at last accounts.

**GUM TREE GOLD MINING & MILLING CO.**

**COLORADO.**

Dead. Succeeded by Gum Tree Consolidated Mining & Milling Co. Formerly at Idaho Springs, Clear Creek Co., Colo.

**GUNN'S PEAK COPPER MINING CO.**

**WASHINGTON.**

Office: 217 Columbia St., Seattle, Wash. Mine office: Index, Snohomish Co., Wash. Is said to be controlled by the Index-Bornite Copper Mining Co. Lands, 4 claims, showing 3 veins, widest said to be 25', carrying chalcocite and bornite, said to give average assays of 11% copper and circa 2 oz. silver per ton. Has tunnels of 125' and 800'.

**GWIN MINE DEVELOPMENT CO.**

**CALIFORNIA.**

Office: 1208 Claus Spreckels Bldg., San Francisco, Cal. Mine office: Gwin Mine, Calaveras Co., Cal. F. F. Thomas, general manager; David McClure, superintendent. Organized March 26, 1904, under laws of California, with capitalization \$1,000,000, shares \$10 par. Is said to have paid dividends of \$456,500 to Jan. 1, 1906, and levied a \$20,000 assessment, 1907. Property

is a gold mine, having steam and water power and a 100-stamp mill, but lands carry a large, undeveloped body of low grade copper ore.

**Gwynant Copper Mines Co., Ltd.**

Dead. Dissolved, January, 1905. Apparently held no lands.

**Gympie Copper Mines, Ltd.**

AUSTRALIA.

Dead. Liquidated voluntarily, May, 1904. Formerly at Gallangowan, Fitzroy Co., Queensland, Australia.

**Gypsy Blair Mining Co.**

UTAH.

Dead. Lands sold, 1905, to Kennebec Mining Co. Formerly at Brighton, Salt Lake Co., Utah.

**Hachita Copper Development Co.**

NEW MEXICO.

Office: P. O. Box 933, El Paso, Texas. Mine office: Hachita, Grant Co., N. M. W. R. Thurston, president. Organized circa 1907, under laws of New Mexico, with capitalization \$200,000, shares \$1 par. Lands, 29 claims, 7 fractional, area 550 acres, in the Apache district, 7 miles south of Hachita, carrying 4,000' of the McKinley fault, developed by several shallow shafts, deepest 110', showing copper sulphides of concentrating grade.

**Hackberry Mining, Milling & Developing Co.**

ARIZONA.

Letter returned unclaimed from former office, 112 Clark St., Chicago, Ills. Mine office: Dewey, Yavapai Co., Ariz. Capt. Geo. H. McGee, general manager. Lands, 7 claims, in the Ash Creek district, circa 12 miles east of Dewey, showing ore carrying mainly gold values.

**Hadley Consolidated Copper Co.**

ALASKA.

Office: 1257-25 Broad St., New York, N. Y. Operating office: 609 Mutual Life Bldg., Seattle, Wash. Mine office: Ketchikan, Alaska. Samuel I. Silverman, president; B. E. Barinds, vice-president and treasurer; Nelson W. Parker, secretary; preceding officers, G. S. Grinsfelder, Alex. Reith and Geo. Brown, directors; G. E. Green, superintendent; Robt. Pollock, mine superintendent. Organized circa 1904, as successor of Wales Copper Mining Co., with capitalization \$5,000,000, shares \$1 par, in \$1,500,000 preferred and \$3,500,000 common shares. Is controlled, through stock ownership, by Alaska Mines Securities Co. Paid 1% dividends, Dec. 10, 1905, and January, 1906, and a 4% dividend Oct. 9, 1906. Was placed in the hands of a receiver circa September, 1907.

Lands, 12 claims, partly patented, area circa 200 acres, on Mount Andrew. The principal property, known as the Stevenson mine, has a very large ore body, claimed to be 250' wide and 600' long, developed by 555' of tunnels and 3 glory-holes, and is said to have 58,500 tons of ore blocked out for breaking. Smelter shipments, 1905, gave returns of 3.7% copper, 20 cents silver and \$1 gold per ton. Ore carries 32% iron and is practically self-fluxing. Mine is connected with the smelter of the Alaska Smelting & Refining Co., at Hadley, circa 2 miles distant, by railway and aerial tram. Production 1905, was 9,439 tons of ore, yielding 698,486 lbs fine copper, and for 1906 was circa 35,000 tons of ore yielding circa 2,000,000 lbs. fine copper.

**Hadley Smelter.**

ALASKA.

Owned by Alaska Smelting & Refining Co.

**Haggarty Copper Mining Co.**

WYOMING.

Mine office: Rudefaha, Carbon Co., Wyo. E. M. Cobb, president. Is controlled, through ownership of entire stock issue except founder's shares, by Penn-Wyoming Copper Co.

**Haggarty Copper Mining Co.**

WYOMING.

Office: 731 Monadnock Bldg., Chicago, Ills. Mine office: Rudefaha, Carbon Co., Wyo. Is controlled, through ownership of practically entire stock issue, by Penn-Wyoming Copper Co.

**HAGGARTY-JORDAN COPPER MINING CO.****WYOMING.**

Office: Watertown, N. Y. Mine office: Battle, Carbon Co., Wyo. C. H. Dunbar, president; Delos S. Dunbar, secretary and treasurer. Organized 1901, under laws of Delaware, with capitalization \$150,000, shares 10c. par. Lands, 11 claims, area 220 acres, in the Battle Lake district, showing 4 fissure veins, of which 2, very slightly developed, are claimed, untruthfully, by the management, to carry carbonate and sulphide ores with average values of 35% copper, a trace of silver and \$5 gold per ton. Company suffered a mysterious "burglary," by which all its books and papers were stolen. Is devoid of cash and bankrupt in reputation.

**HAGUE & HULBERT EXPLORATION.****MICHIGAN.**

Office: 18 Wall St., New York. Mine office: Laurium, Houghton Co., Mich. Lands, 240 acres, in Sections 25 and 26, Town 50 North, Range 33 West, bought, 1905. Idle.

**HAHN'S PEAK GOLD MINING CO.****COLORADO.**

Works office: Hahn's Peak, Routt Co., Colo. Is said to have a smelter under construction, to treat gold, silver and copper ores of adjacent mines in Routt county, Colorado, and Carbon county, Wyoming.

**HALE MINING & MILLING CO.****ARIZONA.**

Mine office: Constellation, Yavapai Co., Ariz. Oscar Jennings, superintendent, at last accounts. Has gold and copper ores, with gasoline power.

**HALIFAX COPPER CO.****VIRGINIA.**

Office and mine: Virginina, Halifax Co., Va. Property is the Wall mine, which shipped a little ore, 1900, but since idle.

**HALLIWELL COPPER CO.****MICHIGAN.**

Office: Society for Savings Bldg., Cleveland, Ohio. Mine office: Ontonagon, Ontonagon Co., Mich. A. H. Weed, president; John Beeker, vice-president; Chas. W. Voth, secretary; C. F. Uhl, treasurer. Organized January, 1895, under laws of West Virginia, and reorganized, 1901, under laws of South Dakota, with capitalization \$3,000,000, shares \$1 par; bonds, \$6,500 issued. Lands, 880 acres, owned in fee, in Carp Lake township, carrying sundry copper-bearing amygdaloids, with shafts of 130' and 190', and tunnels of 190' and 200'. Has a 60-h. p. steam plant, with hoist and 3-drill air-compressor. Buildings include a machine shop, shafthouse, rockhouse, smithy and sawmill. Idle since 1901.

**HALL MINING & SMELTING CO., LTD.****BRITISH COLUMBIA.**

Office: 1 Leadenhall St., London, E. C., Eng. Mine office: Nelson, Kootenay district, B. C. Lord Ernest W. Hamilton, chairman; C. Harvey, consulting engineer; A. E. Ashley, secretary; J. J. Campbell, general manager; M. S. Davis, mine superintendent. Organized June 6, 1900, under laws of Great Britain, as a reconstruction of Hall Mines, Ltd., with capitalization £325,000, shares £1 par; issued, £275,000. Debentures, £50,000 authorized; issued, £24,560, first mortgage 6% bonds, redeemable at 105, on 6 months' notice, at option of company.

Lands, 18 claims, area 506 acres, also a 40-acre smelter-site, on Toad Mountain, including the Silver King, Hall and Highland mines, also a quarter interest in the Emma mine, near Summit. Mines produce auriferous and cupriferous silver-lead ores, the Silver King carrying bornite above and argeniferous tetrahedrite below, the lower levels not looking so well as the upper workings. Values are mainly in silver-lead ores.

The reduction plant, near the mine, includes a sampling mill, laboratory and smelter, latter having one large and one small furnace, originally built for copper, but used mainly for lead matting. The smelter has hand and mechanical roasters, and adopted, 1906, the Huntington-Heberlein process for

desulphurizing galena. The reduction works, which were not successful as a custom smelter, are somewhat antiquated, and need remodeling.

Production, for fiscal year ending June 30, 1905, was 26,505 tons of ore, of which 17,257 tons were smelted in the company's own furnace, and balance sent to other smelters. In 1906 production was 39,898 short tons of ore. Last reported figures of copper production were 318,124 lbs. for fiscal year 1904.

Company lost money on operations, both 1906 and 1907, and a receiver was appointed Feb. 7, 1908, when property was taken possession of by debt-holders.

#### CLEMENTE HAM.

#### MEXICO.

Office, mine and works: Promontorios, Alamos, Sonora, Mex. Is a producer of copper ores, which are smelted to matte near the mine. Production, 1902, was 191,200 kgs. matte. Presumably idle.

#### HAMILTON COPPER MINING CO., LTD.

#### MONTANA.

Office: Wallace, Idaho. Mine office, Hamilton, Ravalli Co., Mont. Norman Ebbley, manager. Development is by a shallow shaft.

#### HAMILTON MINING CO.

#### MICHIGAN.

Dead. Lands sold to Copper Crown Mining Co. of Michigan. Formerly at Matchwood, Ontonagon Co., Mich. Described Vol. II.

#### HAMILTON MINING CO.

#### WYOMING.

Office: care A. B. Hamilton, treasurer, Laramie, Wyo. Lands are in Carbon county, Wyoming.

#### HAMILTON MINING, MILLING & TRANSPORTATION CO. COLORADO.

Mine office: Winfield, Chaffee Co., Colo. Mine is opened by shafts and tunnels, showing argentiferous and auriferous copper ores. Presumably idle.

#### HAMLEY MINING CO.

#### AUSTRALIA.

Office: Grenfell St., Adelaide, South Australia. Mine office: Moonta, Daly Co., South Australia. John S. Scott, secretary; Wm. Holland, manager. Lands are in the hundreds of Wallaroo and Taparra. Mine, opened 1861, under name of Karkarilla, has 6 parallel veins, of circa 3' average width, carrying mainly chalcopyrite, with some bornite and occasional chalcocite, with quartz gangue, ore averaging about 3.8% copper, opened by 3 shafts, deepest 720'. Equipment includes a steam plant, 2 hoists, and an air compressor.

The mill has a crusher, 1 set of Cornish rolls, 1 jig and 3 buddles. Property closed down March, 1906, after 25 years' work, and was reopened March, 1907. Production, 1903, was circa 1,060 tons of 17% concentrates, equal to circa 400,000 lbs. fine copper, and for first half of 1905 was 3,169 long tons of ore, yielding 582 long tons of concentrates.

#### HAMMOND COPPER CO.

#### MONTANA.

Dead. Supposedly infested some part of Montana, circa 1902.

#### HAMPDEN CLONCURRY COPPER MINES, LTD.

#### AUSTRALIA.

Offices: 375 Collins St., Melbourne, Australia and Palmerston House, London, E. C., Eng. Mine office: Cloncurry, Beaconsfield Co., Queensland, Australia. Employs circa 50 men. Wm. Knox, M. P., chairman; Hon. Wm. Lawrence Baillieu, vice-chairman; preceding officers, D. W. H. Paterson, Herbert J. Daly, Herman H. Schlapp, Hon. Wm. Orr and H. C. F. Keats, directors; T. Pyke, J. Dowling and W. Douglas Reid, London directors; C. Lonsdale Smith, mine manager; Edw. Herbert Shackell, secretary; Edwin Habben, London secretary; S. W. Donner, agent. Organized March 2, 1906, under laws of Victoria, as successor of Hampden Copper Mines, N. L., with capitalization £200,000, increased, February, 1907, to £300,000, shares £1 par; issued, £200,000. Statement of May, 1907, gave cash on hand, £88,050, with liabilities of £22,304, including bank overdrafts of £17,665, these heavy overdrafts seeming strange, in view of the large cash assets claimed.

Lands, 260 acres, carrying some timber, 47 miles south of Cloncurry. The

district is arid, though having occasional heavy rainfalls. Country rocks are Silurian slate and quartzite, with occasional diorite and trap, ore occurring as bunches and stockwerks in a belt of kaolinized slate and schist, having a nearly vertical dip, with strike of  $15^{\circ}$  West of North. Rich ores are very erratic in occurrence. Trenches show copper carbonates disseminated through kaolinized slate for widths of 2' to 80', estimated to average about 4% copper. Ore has been proven, at intervals, for a distance of about one-half mile.

Ore was discovered 1884, and mining begun 1898. Development is by a number of trenches, 3 open-cuts and 12 shafts, several of the shafts being mere pits of 8' to 15' depth. No. 1 pit is circa 60x80' in size, and about 18' deep. No. 2 pit shows large bunches of chalcocite and oxidized ores. Four new shafts have been sunk to depths of 164' to 240'. No. 2, the main shaft, is 200' deep, with drifts north and south, showing what is called melaconite, but what probably is chalcocite. No. 2 has levels opened at 45' and 72' depth, which is excellently poor practice. Shaft No. 12 shows sulphides on the 80' level, and the deeper workings show considerable ore of 8 to 9% copper tenor, carrying up to 9 dwts. gold per long ton, with an estimated average of 2 dwts. 10 grains. Under former ownership the property was tributed, and gouged. Company estimated May, 1908, that it had ore reserves of the value of £107,003.

The Duchess mine, area 40 acres, bought of the Cloncurry Railway & Development Co., Ltd., for £15,000 cash and £15,000 shares, has 3 shafts, one, sunk 45' on a 6' vein, showing high grade carbonates and chalcocite.

Development has been slow, on account of trouble in landing machinery, mine being difficult of access. The company is said to have joined with the Mount Elliott in guaranteeing half of the cost of a £200,000 railway extension, to be built by the Queensland government, from Cloncurry to Mount Elliott, the share of the Hampden Cloncurry being £60,000. The company has a smelter site, with iron ore and limestone available. Production, under former ownership, to August, 1905, was 9,163 long tons of ore, averaging 12.7% copper, which yielded 1,165 long tons fine copper. Property is considered promising.

#### HANAWA MINE.

JAPAN.

Owned by Mitsu Bishi Goshi Kwaisha.

#### HANCOCK CONSOLIDATED MINING CO.

MICHIGAN.

Mine office: Hancock, Houghton Co., Mich. John D. Cuddihy, president; Capt. Thos. Hoatson, vice-president; preceding officers, Capt. Jas. Hoatson, Capt. Samuel B. Harris and Allen F. Rees, directors; John H. Hicok, secretary and treasurer; John L. Harris, superintendent; John O. Peterson, mining captain; Daniel Fisher, clerk; C. W. McDougall, engineer.

Organized June 11, 1906, under laws of Michigan, with capitalization \$5,000,000, shares \$25 par; issued, \$2,500,000. Paid in, \$13. In 1908 levied a \$3 assessment, payable in \$1 installments, on June 25 and Nov. 25, 1908, and May 20, 1909. Company began business with \$1,000,000, and paid \$552,623 for its property. Disbursements, 1907, were \$264,538.98, of which \$227,681.23 was for construction and development. Receipts, 1907, were \$7,616.77, all from interest. Surplus, Jan. 1, 1908, was \$134,332.25.

Lands, 936 acres, all in Town 55 North, Range 34 West, including the original Hancock mine, area 136 acres, set aside, 1859, by the Quincy Mining Co., which reserved the mineral rights to the Pewabic lode. The Pewabic lode, on lands other than the original Hancock tract of 136 acres, is owned by the Hancock Consolidated. Lands lie adjoining the Quincy, to the southwest, and carry the Pewabic, Quincy West and Hancock or Sumner copper-bearing beds. While the Quincy Mining Co. claims the right to mine the Pewabic bed on the lands of the old Hancock Mining Co., the Hancock Consolidated claims that the Quincy has done unauthorized mining on its lands,

and there is a prospect of litigation over mining rights. Perhaps the best part of the Quincy mine is tributary to No. 7 shaft, which is immediately north of the Hancock boundary.

The old Hancock mine, opened 1861 and closed June 1, 1885, on account of the low price of the metal, produced 5,709,384 lbs. fine copper. The Hancock or Sumner amygdaloid, which was worked by the old Hancock company, averaged about 12' in width, below the fifth level, to a depth of 1,052', where the old mine was bottomed, and returned 21 to 22 lbs. fine copper per ton, after selection, making about 50 tons of mineral monthly, secured from an average daily production of 210 tons of rock, in the latter years of its operation. Modern milling methods should save 2 to 4 lbs. of fine copper per ton formerly lost. The old mine found occasional masses up to 5 tons in weight.

The old Hancock mine had an air-shaft, and an 8x16' working shaft, now known as No. 1, sunk at an angle of 54°, having 2 small skipways, which is being deepened below the old workings with size 8x21', giving room for 3 compartments, and the shaft will be cut down, before beginning production, to full 3-compartment size, from top to bottom. Levels were opened at 100' intervals in the old mine to the tenth level and below are opened at 125' intervals to the depth of circa 1,400', in November, 1908. The old mine was found in bad shape, after many years' idleness. Rapid sinking is impossible, owing to the hanging-wall giving much trouble, and requiring very close timbering. The best ground was found entirely stope out in the upper levels of the Hancock bed, the old workings, about 800' in length, having been stope from the second to the tenth levels inclusive, on the Hancock vein, and the West vein was found stope from the sixth to the ninth levels, inclusive, on the southern drifts. Though No. 1 shaft is sinking on the Hancock bed, drifting is mainly on the West lode, which lies about 70' west of the Hancock amygdaloid, and is 10' to 12' wide, with a maximum of 16', on the thirteenth level, showing some rich stopes, and very fair average ground throughout. No. 1 has a remodeled wooden shaft-rockhouse, with a Lake Shore hoist good for 2,000' depth.

No. 2 shaft, 2,200' northwest of No. 1, is 9x30' in size over all, having 4 hoisting compartments, each 7x5' 2" in the clear, with a 4x7' compartment for ladderway and pipes. This is one of the largest shafts in the Lake Superior district, and is planned for heavy production. The collar is concreted for a depth of 30', into the rock ledge, with a thickness of 24" at the top and 30" at the bottom. This shaft was 1,300' deep in November, 1908, sunk for the first 700' or thereabouts through conglomerate. This vertical shaft should intersect the Hancock lode at a depth of circa 2,500', the West lode at circa 2,800', and the Pewabic lode at circa 3,600', proving considerable territory west of the Pewabic lode, hitherto practically unexplored in the Portage Lake district.

No. 2 shaft has a first-motion Sullivan hoist with 24x48" cylinders and 2 loose drums, 8' in diameter with 9' face, driven by band-friction clutches, calculated to operate 2 pairs of Kimberly skips in balance, at a speed of 3,500' per minute, hoisting with 1 $\frac{1}{4}$ " steel rope. The engine has an automatic stop.

There are 2 air-compressors with aggregate capacity of 3,100 cubic feet of free air per minute, connected by pipe-line. The compressor at No. 1 shaft is a 10-drill Sullivan 2-stage machine, and at No. 2 is a 15-drill air-compressor.

The machinery plant and buildings, mainly at No. 2 shaft, include a 16x44' engine-house, boiler-house and 30x80' combined machine-shop and smithy, of wood, covered with corrugated iron, on concrete foundation. There also is an office, changing-house, and a number of dwellings, bought on property secured

for a railroad right-of-way, which have been remodeled for mine use, where possible, otherwise serving as dwellings for employees.

About 150 men are employed. It was at first planned to begin production within a year, but the management decided to devote its time and energies to extensive opening work, before beginning production, and is to be commended for this wise decision. The management is experienced and financially strong, and is going about the working out of ambitious plans in a very systematic and efficient manner.

#### **HANCOCK COPPER MINES CO. OF IDAHO, LTD.**

**IDAHO.**

Office: 1032 Old South Bldg., Boston, Mass. Mine office: Landore, Washington Co., Idaho. Col. C. F. Drake, president and general manager; W. M. Palmer, vice-president; John Sennett, secretary and treasurer; preceding officers, M. C. Drake and Dr. J. E. Stevens, directors. Organized 1905, with capitalization \$1,000,000. Lands, 10 claims, on Camp Creek, 2 miles from Landore, opened by a tunnel said to show considerable bodies of auriferous copper ore.

#### **HANCOCK COPPER MINING CO.**

**MICHIGAN.**

Dead. Organized, circa 1880, as successor of Hancock Mining Co., and succeeded, 1906, by Hancock Consolidated Mining Co. Formerly at Hancock, Houghton Co., Mich. Described Vol. II.

#### **HANCOCK MINES CO.**

**ALASKA.**

Office: 904 Tacoma Bldg., Chicago, Ills. Mine office: Valdez, Prince William Sound district, Alaska. Julius Singer, president and general manager; H. E. Walrath, secretary; preceding officers, R. H. Dickinson, H. W. Von Maur, R. A. Weir, Guy H. Powell and Nelson C. Davidson, directors. Organized January, 1907, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par. Lands, on Knights Island, include 6 claims on Mummy Bay, opened by a 140' tunnel, and a property on Hoyer Bay, at the northern end of the island, opened by tunnel and said to show ore averaging 8 to 10% copper, which seems rather high. Mouth of tunnel is 300' from wharf, on tide-

water. Has several mine buildings and is well spoken of locally. Employed circa 40 men, 1907, and planned making early ore shipments.

**HAPPY JACK MINING CO.****ARIZONA.**

Office: care of G. & H. Barnett Co., Philadelphia, Pa. Mine office: Patagonia, Santa Cruz Co., Ariz. H. W. Barnett, superintendent. Mine is opened by a shallow shaft and a 950' tunnel, showing auriferous and argentiferous lead and copper ores. Property has shipped considerable ore, of good average tenor, and is considered promising.

**HAPPY JOHN MINE.****BRITISH COLUMBIA.**

Mine office: Alberni, Vancouver Island, B. C. A. J. Envik and Franklin Bros., owners. Lands, 4 claims, area 125 acres, west of the Monitor mine, on the western side of the Alberni canal, near its mouth, having a 175' tunnel showing a vein with paystreak of 30" extreme width assaying circa 12% copper, 1.7 oz. silver and \$1.20 gold per ton.

**HAROUVAR COPPER CO.****ARIZONA.**

Office: 1201 Pennsylvania Bldg., Philadelphia, Pa. Mine office: Wendendale, Yuma Co., Ariz. Hon. John J. Hawkins, president; Dennis A. Burke, vice-president; N. A. Lund, secretary and treasurer; preceding officers, Amos Andrews and L. B. Woolston, directors; R. B. MacDonald, mine superintendent; H. C. Shotwell, engineer. Organized May, 1907, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Annual meeting, first Monday in May.

Lands, 9 claims, area 180 acres, patents applied for, and a water right, adjoining the Oro Cobre, in the Cunningham Pass district, 12 miles west of Wendendale, showing several contact deposits between gneiss and diorite, of which one, of 40' to 60' estimated width, traceable for some distance, shows oxidized ores at surface with chalcopyrite at depth, opened by several prospecting shafts and trenches, and by a 269' tunnel, giving ore assaying up to 24.5% copper and \$20 gold per ton. Has gasoline power and 3 small buildings. Company plans reaching the vein by crosscut tunnel at length of 418', and continuing development.

**HARDSCRABBLE MINING CO.****NEW MEXICO.**

Office and mine: Magdalena, Socorro Co., N. M. W. A. Brown, lessee, at last accounts. Property shows 9 veins, occurring as fissures in granite and as contacts between granite and limestone, these being claimed to average about 25' width, and to carry chalcopyrite, sphalerite and cerussite averaging about 4% copper, 30% lead, 44% zinc, 12 oz. silver and \$1 gold per ton. Mines have a 200' shaft and several tunnels, longest 200' and 300'. Property includes a small smelter.

**HARLEY GOLD MOUNTAIN MINING & SMELTING CO. WASHINGTON.**

Office: 704 New York Blk., Seattle, Wash. Mine office: Darrington, Snohomish Co., Waah. Charles Burns, president and treasurer; Harley E. Burns, vice-president; Henry S. Noon, secretary; K. O. Neste, general manager. Organized Dec. 15, 1900, under laws of Washington, with capitalization \$2,500,000. Lands, 16 claims, area 300 acres, in the White Horse district, showing 12 ore bodies, occurring as fissures in porphyry and as contact veins between granite and porphyry. Four veins under development are said to average 6' width, and to carry 14.5% copper, 8 oz. silver and \$25.65 gold per ton, which claim is excessive. Development is by tunnel, with 346' of openings. Presumably idle.

**OTTO HARNECKER.****CHILE.**

Office and mine: Las Gredas, La Ligua, Aconcagua, Chile. Works office: La Ligua, Aconcagua, Chile. El Carmen mine shows various ore bodies of about 1 meter average width, with dip of 31°, occurring as contact deposits between limestone and porphyry, ores being sulphide below an oxidized zone of

about 20 meters depth. Mine has a 90-meter tunnel with a 60-meter back, and about 140 meters of horizontal workings. Shipped, 1903, circa 1,100 metric tons of ore averaging 5.2% copper, secured with 22 men, and had ore reserves of about 16,000 metric tons. Is considered a promising property.

Los Marquis mine shows 8 parallel veins, traceable about 5 kilometers, occurring in porphyry, with strike of North  $18^{\circ}$  East and dip of  $43^{\circ}$ , with widths of 5' to 9', carrying chalcopyrite with granitic gangue, ore being especially suitable for fluxing the silicate ores so common in the district. Production, 1903, was circa 2,000 metric tons of 4.5% ore, secured with 26 men.

Smelter, known as the Fundicion Peña Blanca, 5 kilometers from the station of Injenio, has a cylindrical water-jacket blast-furnace of about 30 tons daily capacity, using Westphalian coke and producing ejes of about 53% average copper tenor, giving very clean slags, which assay only 0.15 to 0.20% copper, from ore of 4.68% average tenor. Production, 1903, was 310,848 lbs. fine copper. Mines and smelters are well managed and successful, despite low average tenor of ore treated.

#### **HARRINGTON MINING CO.**

**ARIZONA.**

Mine office: Crown King, Yavapai Co., Ariz. Geo. P. Harrington, general manager. Property is the Tiger mine, carrying ores of gold, silver and copper. Has steam power. Idle several years.

#### **HARRIS COPPER CO.**

**MEXICO.**

Mine office: Moctezuma, Sonora, Mex. Organized circa 1908. Lands, 3 miles east of the Pilares mines of the Moctezuma Copper Co., include La Caridad group, supposed to have been bought for \$40,000, which is said to have 6,000 tons of ore blocked out averaging 4 to 6% in copper tenor. There also are 25 hectares of other lands, in the Pilares district.

#### **H. C. HARRISON.**

**MEXICO.**

Office: Apartado 74, Monterey, N. L., Mex. Mine office: Cerralvo, Cuarto, Nuevo León, Mex. Property includes the Buenos Amigos and Esperanza mines, carrying argentiferous copper and lead ores. Has steam power and small smelter, employing circa 100 men at last accounts.

#### **HARTFORD CONSOLIDATED COPPER CO.**

**CALIFORNIA.**

Mine office: Redding, Shasta Co., Cal. Wm. Geary, president; J. B. Giffen, secretary. Lands, 10 claims, 3 miles north of the mouth of Protom Creek, showing an 8' vein carrying oxidized ores at and near surface, with low-grade sulphides at a little depth, opened by circa 400' of tunnels. Idle for several years.

#### **HARTFORD COPPER & GOLD MINING CO.**

**ALASKA & IDAHO.**

Office: 7 Exchange Pl., Boston, Mass. Henry J. Wilkins, president; Chas. M. Thayer, secretary. Capitalization \$2,000,000. West Virginia charter forfeited 1902. Claims to have copper lands on Prince of Wales Island, Alaska. Had an option on a mine at Challis, Custer county, Idaho, but lost it. Management bad, property problematical, stock worthless.

#### **HARTFORD MINING CO.**

**IDAHO.**

Mine office: Wardner, Shoshone Co., Idaho. Wm. F. Goddard, president; Jas. Fumerton, vice-president; W. J. Fumerton, secretary and treasurer; preceding officers, Vido Marich, and William Shaefer, directors; Robt. Sterling, consulting engineer. Organized circa 1901. Lands, 5 claims, having a 530' tunnel on a fissure vein said to show an 18' ore chute carrying auriferous and argentiferous copper and lead carbonates.

#### **HARTWIG MINING CO.**

**IDAHO.**

Office: Tipton, Ia. Mine office: Pollock, Idaho Co., Idaho. Dr. R. A. Nash, president; W. G. N. Geiger, secretary; J. W. Moore, treasurer; preceding officers, Fred Goldsmith, Wm. Hartwig and Ernest Conrad, directors; Geo. Hartwig, mine superintendent. Organized 1905, under laws of Iowa, with

capitalization \$72,000. Lands, 6 claims, patented, area 80 acres, and a 5-acre millsite, in the Rapid River district, showing a contact deposit between limestone and diorite, of 40' estimated average width, traceable circa 700', opened by a 75' shaft and 3 tunnels of 1,000' aggregate length, showing malachite and chalcopyrite, estimated by company to average 12% copper, 3 oz. silver and \$4 gold per ton. The 875' lower tunnel has cut the ore zone, which shows but little ore. Has 3 mine buildings. Idle on account of lack of transportation facilities, but plans resumption when railroad comes nearer.

**HASKINS MINING CO.****ARIZONA.**

Mine office: Tucson, Pima Co., Ariz. Lands are in the Tucson Mountains. Idle.

**HASSAYAMPA COPPER CO.****ARIZONA.**

Office: 281 John St., Portland, Me. Mine office: Groom Creek, Yavapai Co., Ariz. C. H. Altmiller, president; Chas. Sumner Smith, treasurer; R. A. Sweet, general manager; preceding officers, E. P. Ricker and Harold N. Willis, directors; Millard W. Baldwin, clerk. Organized Dec. 24, 1906, under laws of Maine, with capitalization \$2,000,000, shares \$5 par; issued, \$1,855,480. Property consisted, February, 1907, of about 60% of the stock issue of the Gold & Copper Consolidated Mining & Milling Co., and the Hassayampa Copper Co. is supposed to be negotiating for balance of stock issue of the subsidiary corporation.

Lands, 34 claims, 15 patented, area circa 650 acres, fairly watered and timbered, in 4 groups, known as the Little Kid, which is the most important, Rockefeller, Chicago and President, 12 miles southeast of Prescott in the Hassayampa and Big Bug districts. Lands show numerous fissure veins carrying auriferous and argentiferous oxidized and sulphide ores, claimed by old management of Gold & Copper Consolidated Mining & Milling Co. to average 7% copper, 46 oz. silver and \$38 gold per ton, which figures are gross exaggerations. Development is by 34 pits and shafts, of 10' to 815' depth, and by 21 tunnels, of 20' to 800' length, with about 2 miles of workings. The old company claimed to have 150,000 tons of ore blocked out for stoping, which was untrue, and the new company is said to have opened 3 new veins, carrying copper, silver and gold ores assaying \$25 to \$200 per ton in value. have opened 3 new veins, carrying copper, silver and gold ores assaying \$25 to \$200 per ton in value.

Equipment includes steam power and a 50-h. p. hoist, with several shops. The Chicago group has a 10-stamp mill and a 50-ton cyanide plant, and was claimed by old management to have a 50-ton concentrator.

The directorate of the Hassayampa Copper Co. includes several men of excellent standing, and also includes R. A. Sweet, the general manager, who was the former president and treasurer of the Gold & Copper Consolidated Mining & Milling Co., which corporation peddled stock as long as possible, and claimed to be running the mill day and night, which was untrue. It was claimed, March, 1907, in behalf of the new company, that the Hassayampa would become an important producer, with quick dividends from gold alone, but these claims were not made good. Apparently the company expended about \$12,000 on development work, in 1907. Notwithstanding the fact that some of the officers of the Hassayampa Copper Co. are good men, the company is not regarded favorably.

**HASSAYAMPA GOLD & COPPER MINING CO.****ARIZONA.**

Dead. Formerly had an office at 202 North Ninth St., St. Louis, Mo. Formerly in Yavapai county, Arizona.

**HASTINGS (BRITISH COLUMBIA)****BRITISH COLUMBIA.****EXPLORATION SYNDICATE.**

Dead. Property was the Arlington mine, which, in 1906, shipped 1,312

tons of ore to the Hall smelter that gave net returns of \$53,315.80, an average of \$40.64 per ton. Formerly at Greenwood, Boundary district, B. C.

**HATASA MINE.**

JAPAN.

Mine office: Hatasa-mura, Gujo-gori, Mino, Japan. Mine was opened previous to A. D. 1600, and once was highly productive, but declined greatly in output, until latterly. Property has 4 principal veins, of 2" to 2' width, carrying argentiferous chalcopyrite, galena, sphalerite and pyrite. Production was 38,651 lbs. fine copper and 165,416 momme silver in 1906, and 82,123 lbs. fine copper and 189,838 momme silver in 1907, showing a fair growth.

**HATHAWAY MINE.**

MEXICO.

Owned by Chihuahua Copper Mining Co.

**HATTIE BELL COPPER, GOLD & NICKEL MINING CO.**

ONTARIO.

Dead. Lands sold to Consolidated Copper Co., of Parry Sound. Formerly at Parry Sound, Parry Sound district, Ont.

**HATTIE GOLD AND COPPER MINING CO.**

IDAHO.

Dead. Formerly at Doniphan, Blaine Co., Idaho.

**UNION MINIÈRE DU HAUT-KATANGA.**

CONGO FREE STATE.

Office: 7 Montagne du Parc, Brussels, Belgium. Mine office: L'Etoile du Congo, Katanga, Congo Free State. Baron Baeyens, chairman; Robt. Williams, vice-chairman and general manager; H. Buttgenbach, managing director; Geo. Velge, secretary; A. Bertholet, resident director; Allan Gibb, consulting engineer.

Organized Oct. 28, 1906, under laws of Congo Free State, with capitalization £200,000, shares £4 par, divided into £100,000 dividend shares and £100,000 capital shares, 40% paid in. The Tanganyika Concessions, Ltd., and Société Générale de Belgique each own £100,000 in shares. Annual meeting, first Monday in December.

Lands are very extensive, being a concession comprising a copper belt about 200 miles in length, containing over 100 exposures of copper, and a tin belt of nearly 100 miles length, north of the Kafue and Zambezi rivers, in the Katanga district, in a rolling country with a fairly healthy climate, the principal copper properties showing sandstone carrying malachite impregnations estimated by company to average 14% in tenor.

In addition to copper properties the company owns promising tin mines, these including the Busango mine, which has apparently payable stream-tin deposits in alluvium of 3' to 10' thickness, and the Kasonso and Chienzi mines, having lode-tin deposits.

The company also owns the Ruwe gold mine, which has an ore body of 9' to 14' width, opened for a quarter-mile by several shallow shafts, deepest circa 100' only, vein being a sandstone reef carrying gold up to 9 oz. 7 dwts. per long ton, and claimed to average 5 dwts. gold and 9 dwts. platinum, with occasional palladium, gold being quite coarse. The platinum figures seem to lack substantiation. The Ruwe mine also has a placer deposit, estimated to contain 20 oz. gold per long ton, from which considerable production has been secured, at an average cost of only circa 12s. per ton.

In addition to ores of copper, tin, gold, platinum and palladium, the company has an iron ore deposit, apparently of promise, near Shamerenga, on the Lualaba River.

The company reports a force of 1,000 men employed, and smelting was said to be in progress, early 1908, but it is probable that the smelter is of small capacity, and planned mainly for experimental purposes.

**SOCIÉTÉ DES CUIVRES ET PLOMBS ARGENTIFÈRES  
DU HAUT-RHÔNE.**

FRANCE.

Offices: Lausanne, Switzerland, and 28 Blvd. St.-Denis, Paris, France.

Organized Jan. 17, 1905, with capitalization 1,600,000 francs, shares 100 francs par.

**HAWKEYE COPPER MINING CO.**

**WYOMING.**

Dead. Formerly at Encampment, Carbon Co., Wyo. Described Vol. VII.  
**HAWKEYE MINE.**

**OREGON.**

Office and mine: Comer, Grant Co., Ore. Byron Sherbindy, owner. Property carries auriferous and argentiferous copper ores, and is said to have a small smelter. Idle.

**HAWKSWORD COPPER CO.**

**ARIZONA.**

Dead. Formerly at Agua Caliente, Maricopa Co., Ariz.

**HAYFORD MINES, LTD.**

**ENGLAND.**

Dead. Voluntarily liquidated, February, 1905. Formerly at St. Ives, Cornwall, Eng.

**HAYMAN MINING & TUNNEL CO.**

**COLORADO.**

Mine office: Tarryall, Park Co., Colo. Lands, sundry claims, said to show lead and copper ores. Idle and apparently moribund.

**HAYNES COPPER CO.**

**ARIZONA.**

Office: 1112 Union Trust Bldg., Los Angeles, Cal. Mine office: Jerome, Yavapai Co., Ariz. Clarenee L. Bleakley, president; H. Judson Haynes, vice-president; J. R. Kinney, secretary and treasurer; preceding officers, Edwin E. Tate, Robt. Ferguson, and Dr. G. H. Merkley, directors; T. E. Campbell, superintendent. Organized October, 1907, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par, as successor of Jerome Mines Development Co.

Lands, 8 claims, patented, area 160 acres, known as the Harryhausen group, adjoining the United Verde on the north. Property shows lenticular ore bodies occurring as replacements in schist, the two under development, of 3' to 19' width, traceable circa 2,000', carrying a great variety of ores, estimated by company to average 6.2% copper, 3 oz. silver and \$1.60 gold per ton. Property has been explored by about 2,000' of diamond drill borings, and is opened by a 248' tunnel and by shafts of 350', 520', 45' and 40', main shaft having 3 compartments. Mine is proving quite wet.

The mine has a 150-h. p. steam plant, 12x16" double-drum hoist, 10-drill Ingersoll-Rand air-compressor and 12 buildings. Company plans continuing steady development by deepening the shaft to 700', and driving 2 crosscuts to the ore body.

**HAZEL MINING CO.**

**MONTANA.**

Letter returned unclaimed from former office and mine, Butte, Silver Bow Co., Mont. T. J. Nerry, Peter Sanger and Jerry Sullivan, directors. Organized May 26, 1906, under laws of Montana, with capitalization \$1,500,000, shares \$1 par. Apparently no work was done.

**HEADLIGHT COPPER MINING CO.**

**WYOMING.**

Dead. Formerly at Encampment, Carbon Co., Wyo. Described Vol. II.

**HEADLIGHT GOLD & COPPER MINING CO.**

**CALIFORNIA.**

Office: 2115 South Union Ave., Los Angeles, Cal. Mine office: Needles, San Bernardino Co., Cal. C. R. Wisehart, secretary. Organized circa December, 1906, under laws of Arizona, with capitalization \$1,000,000. Lands, about 6 miles west of Needles, are being opened by a shaft, which has proven wet.

**HEADLIGHT GOLD MINING & MILLING CO.**

**COLORADO.**

Mine office: Spencer, Gunnison Co., Colo. L. C. Ekbeding, superintendent, at last accounts. Ores carry gold, silver and copper. Presumably idle.

**HEARNE GOLD & COPPER CO.**

**COLORADO.**

Office: Central City, Gilpin Co., Colo. Henry W. Kane, manager. Organized 1907, under laws of Colorado, with capitalization \$500,000. Property is a 5-year bond and lease on the Anchor mine, in Willis Gulch, idle for some years until drained by the Newhouse tunnel, showing considerable bodies of low

grade copper and lead ores, and medium grade silver ores. Apparently copper values are small. Plans an electric installation.

**HEART OF ARIZONA GOLD & COPPER CO.** ARIZONA.

Dead. Lands sold, 1906. Formerly at Prescott, Yavapai Co., Ariz.

**HEATH MINING CO.** IDAHO.

Dead. Formerly at Heath, Washington Co., Idaho.

**HECKLEY GOLD & COPPER MINING CO.** ARIZONA.

Office: care of Arnold Nydegger, secretary and treasurer, Colorado Springs, Colo. Mine office: Wickenburg, Maricopa Co., Ariz. F. J. Webber, president; L. J. Markert, vice-president. Organized under laws of Arizona, with capitalization \$1,500,000, shares \$1 par. Lands, 13 claims, in 3 groups, on Copper Hill, in the Black Rock district, circa 6 miles east and northeast of Wickenburg, having a 268' tunnel cutting veins of 6', 10' and 25' claimed average width, showing ore assaying up to 28% copper.

**HECLA & ARIZONA DEVELOPMENT CO.** ARIZONA.

Dead. Title changed, 1903, to Red Jacket & Bisbee Development Co. Formerly at Bisbee, Cochise Co., Ariz.

**HECLA & ARIZONA GOLD & COPPER MINING CO.** ARIZONA.

Office: Weatherford, Texas. Letter returned unclaimed from former mine office, Bisbee, Cochise Co., Ariz. J. M. Carroll, manager. Organized 1902, to take over claims near Bisbee. Idle and apparently moribund.

**HECLA CONSOLIDATED MINE.** MONTANA.

Office and mine: Butte, Beaverhead Co., Mont. Henry Knippenberg, owner. Property is the Atlantis, Cleves and other mines, formerly owned by the Hecla Consolidated Mining Co., which for 20 years were large producers of silver and lead, with considerable gold and copper, latter reaching 100,000 lbs. fine copper yearly. Property paid dividends of \$2,250,000 on an original investment of \$40,000, but was bought, 1906, at sheriff's sale, for \$28,000.

**HECLA CONSOLIDATED MINING CO.** MONTANA.

Dead. Was a large producer, for many years, of silver, lead, gold and copper, latter as a by-product, amounting to about 100,000 lbs. yearly, and paid dividends of \$2,250,000, without assessments, on an original investment of \$40,000. Property sold, 1906, for \$28,000, to Henry Knippenberg. Formerly at Dillon, Beaverhead Co., Mont.

**HECLA COPPER & GOLD MINING, MILLING & SMELTING CO.** WYOMING.

Dead. Reorganized, October, 1904, as Hecla Mining Co. Formerly at Hecla, Laramie Co., Wyo.

**HECLA COPPER MINING CO.** WYOMING.

Dead. Formerly at Encampment, Carbon Co., Wyo. Described Vol. II.

**HECLA MINING CO.** WYOMING.

Office: 1624 Curtis St., Denver, Colo. Mine office: Hecla, Laramie Co., Wyo. Henry Schwartz, president and general manager; Geo. C. Norris, vice-president; Louis Williams, secretary; Geo. L. Bettcher, treasurer. Organized October, 1904, under laws of Wyoming, as a reconstruction of the Hecla Copper & Gold Mining, Milling & Smelting Co., with capitalization \$1,000,000, shares \$1 par.

Lands apparently include the Copper Crown group of 8 claims, the Amalgamated group of 11 claims, the Hecla group of 14 claims, 2 patented, a 45-acre millsite and the townsite of Hecla, 5 miles from a railroad, in the Silver Crown district. Property is claimed to show 16 fissure veins, of 8' average width, in schist and granite, of which 3, of 7' average claimed width, are claimed to be under development, carrying oxidized and sulphide ores, claimed to give average assays of 5% copper, 3 oz. silver and \$10 gold per ton, in addition to which they are claimed to carry estimated average values of \$10

to \$12 per ton in nickel, platinum and uranium, which values apparently are something more than doubtful. Development is by a 40' tunnel, and 14 pits and shafts of 10' to 140' depth.

The mill, 80x100' in size, has 15 stamps, a 50-ton concentrating plant and a leaching plant. The Ohly process was installed, in an attempt to save the rare metals, but was not a success. Ore, which is mainly low in grade, is only in part adapted to concentration, and the mill requires overhauling and adaptation to the ore.

The management peddled "guaranteed" stock, claiming that 5% interest was guaranteed, for 3 years, on the stock investment, by United States government bonds, but nobody seems to have seen the bonds. The company apparently is out of cash and hopelessly involved, and its officers should be prosecuted for peddling worthless "guaranteed" stock.

#### **GEWERKSCHAFT HEIDWIGSGLÜCK.**

**GERMANY.**

Dead. Lands sold, 1907, to Rheinbach Copper Mines, Ltd. Formerly at Rheinbach, Rheinprovinz, Germany. Described Vol. VII.

#### **P. H. HEFFRON.**

**MEXICO.**

Office and mine: Misiaca, Guerrero, Chihuahua, Mex. Mine, known as Dos de Abril, carries auriferous and argentiferous copper and lead ores, and has a 30-ton mill, employing circa 50 men.

#### **HELENA-BUTTE MINING CO.**

**MONTANA.**

Mine office: Clancey, Jefferson Co., Mont. Frederic E. J. Lloyd, president; Chas. J. Burgess, secretary. Organized under laws of Montana. Property, known as the Silver Crest mine, opened circa 1890, in Warm Spring Gulch, 6 miles from Clancey, has a 3-compartment 200' shaft, showing mainly silver-lead ore, with fair copper and gold values, and with prospects of increasing copper at depth. Property has a fair power equipment and several small mine buildings.

#### **HELENA COPPER MINING CO.**

**MONTANA.**

Letter returned unclaimed from former office and mine, Helena, Lewis & Clark Co., Mont. F. J. Mason, president; Peter Rattray, vice-president; I. H. Adams, secretary; A. E. Adams, treasurer. Organized January, 1906, under laws of Montana, with capitalization \$80,000, shares 10 cents par. Lands, 5 claims, unpatented, area 80 acres, on Mount Ascension, one mile from Helena, having sundry pits, and shafts of 45', 50' and 220'. Idle and apparently moribund.

#### **HELEN MINING CO.**

**NEW MEXICO.**

Mine office: Graham, Socorro Co., N. M. Thos. Graham, president. Property is the Confidence group, ores of which carry gold, silver and copper. Has a 30-stamp mill, with steam, water and electric power. Presumably idle.

#### **HELGA GOLD & COPPER CO.**

**BRITISH COLUMBIA.**

Office: Sullivan Bldg., Seattle, Wash. Mine office: Clayoquot, Vancouver Island, B. C. B. F. McCurdy, superintendent. Lands, 5 claims, area circa 250 acres, known as the Good Hope group, on Trout river, developed by a tunnel, said to give a fair showing of ore.

#### **HELEN MINING SYNDICATE.**

**WASHINGTON.**

Mine office: Cle Elum, Kittitas Co., Wash. Lands carry copper ore and free milling gold. Development is mainly on the gold ores, a small stamp mill having been built, 1908.

#### **HELSINGBORG'S KOPPARVERK AKTIEBOLAG.**

**SWEDEN.**

Office and works: Helsingborg, Malmöhus län, Sweden. Hon. N. Persson, manager. Property is a smelting and reduction plant, including a small leaching plant, treating mainly the unrefined copper of the Sulitelma Aktiebolag.

#### **HELVETIA COPPER CO.**

**ARIZONA.**

Office: 905 Metropolitan Life Bldg., Minneapolis, Minn. Mine office:

Helvetia, Pima Co., Ariz. Employs circa 75 men. C. C. Prindle, president; Chas. W. Sexton, vice-president and secretary; Wm. A. Paine, treasurer; preceding officers, Russell M. Bennett, Geo. A. McDougall, Jas. H. Seager and Fred. L. Smith, directors; W. C. Steubing, general manager. Organized March 3, 1899, under laws of New Jersey, and reorganized Oct. 4, 1905, under laws of Arizona, with capitalization \$5,000,000, shares \$25 par; issued, \$2,250,000. Paid in, \$13.50. Last assessment was 50 cents, payable July 20, 1908. Cash on hand, Sept. 1, 1908, was circa \$80,000. Annual meeting, in October.

Lands, 48 claims, patented, area 825 acres, and 960 acres miscellaneous lands, giving total holdings of 1,785 acres, on the western slope of the Santa Rita Mountains, 30 miles southeast of Tucson. Formation resembles that at Bisbee, the Carboniferous limestone strata being of the same geological horizon, with similar porphyritic intrusions, but showing much stronger outcrops and gossans.

The mine made an exceptionally fine showing from a depth of 35', but ores turned base on the third level, with average tenor under 5% copper. The property has about 25 old pits and shafts, with about a mile of trenches and open-cuts, and several miles of tunnels and drifts, showing considerable reserves of self-fluxing ore of 2.5 to 8% copper tenor. There are 5 principal ore bodies, known as the Isle Royale, Old Dick, Exchange, Pilot and Heavy Weight, with principal new development on the Copper World mine, which shows a vein of 15' estimated width, traceable 3,000', proven to depth of 400', carrying carbonate and sulphide ore, mainly the latter, estimated by company to average 5% copper, 0.5 oz. silver and 50 cents gold per ton.

The Isle Royale mine has an 800' shaft, and shows lenses of ore in limestone near a porphyritic contact, of 3' to 5' average width, with maximum of 15', carrying ore averaging about 3% copper and \$1 per ton in combined gold and silver values. The lower levels show sulphide ore, and this shaft furnishes sufficient water for mine and smelter use.

The Old Dick mine has an open-cut showing an ore body carrying 3 to 6% copper, with small gold and silver values, and a 127' shaft, with one level, is said to show about 7,000 tons of 7% sulphide ore. There also is a tunnel leading to an open pit, showing a vein of about 7' width, claimed to average better than 5% in copper tenor.

The Heavy Weight vein, of about 7' width, circa 400' from and nearly parallel with the Old Dick vein, carries sulphide ore at shallow depth of 3 to 5% copper tenor. This vein shows a considerable amount of low grade concentrating ore.

The Copper World mine, opened circa 1907, has a 350' incline shaft, in sulphide ore estimated to average about 5% copper, with some 10% ore shown on the 300' level. It is planned to connect this shaft with the Isle Royale mine.

The Leader mine shows considerable sulphide ore of 3.5 to 4% estimated average copper tenor.

The mine has a 250-h. p. steam plant with steam hoists of 25-h. p. and 50-h. p., and one gasoline hoist, also a 9-drill Ingersoll-Sergeant air-compressor and an electric light plant. There are about 30 buildings, a 40x75' carpenter shop and dwellings.

The Helvetia railroad, owned by the company, is 2½ miles in length, of 30" gauge, equipped with one 10-ton Porter saddleback locomotive, one 15-ton Shay locomotive and 5 cars. A railway line has been surveyed from Helvetia to Vail, to connect at latter point with the Southern Pacific.

The first smelter, 1½ miles from the mine, built 1899, and burned in 1900, was rebuilt and blown in, 1901, and property was closed down circa 1902, owing to the exhaustion of the rich oxidized ores. During the first

period of operations, about 27,000 tons of ore were smelted, largest production having been circa 1,000,000 lbs. fine copper in 1901. Property was reopened, 1904, and the smelter was again blown in, early 1906, but was wrecked, circa May, 1906, by the collapse of the ore-bins, which had been built on a poor foundation. The smelter was again rebuilt, and has a 100-ton water-jacket blast-furnace. In 1908 the company experimented with a 30-ton Medberry rotary oil burning furnace, which treated 2-ton charges, at frequent intervals, but this did not prove successful.

The matter of building a 500-ton concentrator has been considered. Considerable trouble has been experienced in the past from lack of fluxing ores, but these seem to have been developed on the property. Daily shipments of 100 tons to custom smelters were begun Nov. 1, 1908.

Production, 1906, was 379,823 lbs. fine copper, 3,888 oz. silver and 28 oz. gold, valued at \$76,446, and for 1907 was 191,666 lbs. fine copper, 1,894 oz. silver and 6 oz. gold, valued at \$39,387.54. The mine has considerable ore of fair tenor developed, and is considered promising, though present transportation facilities are inadequate.

**WM. HENDERSON & CO., LTD.**

**SCOTLAND.**

Works office: Irvine, Ayrshire, Scotland. Property is a plant for the leaching of copper values from cinders remaining from the burning of cupriferous pyrites.

**HENSON CREEK LEAD MINES CO.**

**COLORADO.**

Dead. Lands sold by sheriff, circa 1906. Formerly at Lake City, Hinsdale Co., Colo.

**HERCULES & ARIZONA MINING CO.**

**ARIZONA.**

Mine office: Ray, Pinal Co., Ariz. Was developing with a small force, at last accounts.

**HERCULES BOSHOF SYNDICATE.**

**TRANSVAAL.**

Mine office: Pietersburg, Zoutpansberg, Transvaal. Lands are part of the Farm Tweedale No. 1300, showing a ledge of about 150' width, traceable 2 miles, carrying carbonate stains and small quantities of cuprite, azurite and malachite, with quartzite gangue.

**HERCULES CONSOLIDATED MINING CO.**

**COLORADO.**

Office: Boston, Mass. Mine office: Silverton, San Juan Co., Colo. Edward P. Ricker, president; Chas. S. Smith, treasurer; Thos. H. Kane, managing director. Capitalization \$1,000,000, shares \$10 par. Has authorized an issue of \$300,000 bonds at 6%, convertible into stock at par; outstanding, \$253,000. Lands, 25 claims; area circa 300 acres, known as the Little Dora group, having tunnels of 1,500' and 2,500', showing auriferous and argentiferous lead and copper ores, with values mainly in gold and silver. Has steam and water power and a modern 30-stamp mill, employing circa 75 men at last accounts.

**HERCULES COPPER CO.**

**ARIZONA.**

Mine office: Ray, Pinal Co., Ariz.

**HERCULES GOLD & COPPER CO.**

**NORTH CAROLINA.**

Office: 81 Fulton St., New York, N. Y. Mine office: Cid, Davidson Co., N. C. Wm. A. Anderson, president; H. L. Prentice, vice-president; Robert E. Nuese, secretary; Saml. G. W. Brown, treasurer and general manager; Walter Cockrehan, superintendent. Organized May, 1901, under laws of South Dakota, with capitalization \$1,000,000, shares \$1 par. Lands, circa 1,000 acres, freehold, and 1,300 acres held under contract, including the Emmons mine, opened before the American Civil War. Lands show 3 fissure veins, ranging 18" to 15' wide, said to give average assays of 7% copper, 2 to 17 oz. silver and \$1.50 to \$15 gold per ton, from melaconite, bornite and chalcopyrite, mainly latter. Is opened by shafts of 90', 140', 450' and 600', and by tunnels of 100', 100', 1,500' and 2,500', estimated to show about 65,000 tons of ore blocked out for

stoping. Has a 600-h. p. steam and electric plant, including 4 hoists, good for depth of 1,000' each, a 20-drill Clayton duplex air-compressor and 16 power drills. Buildings include a 30x40' smithy, 16x24' compressor house, shafthouses of 40x64' and 60x80', and 12 dwellings. Has a 10-stamp gold mill, 30x60' concentrator and a smelter with a 150-ton Allis-Chalmers water-jacket furnace. Nearest railway, 14 miles. Has on the dump several thousand tons of ore, extracted in development. Property considered promising. Idle several years.

#### **HERCULES MINING CO.**

#### **MONTANA.**

Office and mine: Butte, Silver Bow Co., Mont. Thos. Stephens, president; D. J. Charles, vice-president; C. M. Parr, secretary; G. E. DeSnell, treasurer. Organized, 1906, with capitalization \$2,000,000, shares \$2 par. Lands, 10 claims, southwest of Butte. Apparently no work done.

#### **HERCULES MINING CO.**

#### **WYOMING.**

Office: 307 Paxton Block, Omaha, Neb. Mine office: Battle, Carbon Co., Wyo. C. M. Jacques, president and general manager; H. H. Quinalan, vice-president; J. E. Thatcher, secretary and treasurer. Capitalization \$1,000,000, shares \$1 par. Lands, 4 claims, area 80 acres, showing fissure veins of 9' average width, giving assay values of 5 to 49% copper, from carbonate and sulphide ores. Has a 90' tunnel and a 280' shaft, with steam and gasoline power. Idle since 1903.

#### **MINAS HERCULES y OTRAS.**

#### **CHILE.**

Mine office: Taltal, Antofagasta, Chile. Henri Hintze, owner and manager. Property includes the Hercules, Silesia and Inesperada mines, producers of gold and copper ore. Equipment includes steam power and 4 Chilean mills.

#### **MEXICO.**

Office: care of J. M. Strickler, secretary, Kansas City, Mo. Letter returned unclaimed from former mine office, Ures, Sonora, Mex. J. D. Forrester, president; H. C. Foster, vice-president; Godfrey Swenson, treasurer. Organized April, 1906, under laws of Oklahoma, with capitalization \$2,000,000, shares \$1 par. Lands, 30 pertenencias, area 74 acres, having a 75' shaft in a 9' fissure vein, showing ore assaying up to 12% copper and 7 oz. silver per ton.

#### **HERKULES FRISCHGLÜCK-STOLLN UND KIESELS**

#### **GERMANY.**

#### **HOFFNUNG ERBSTOLLN.**

Office and mine. Johanngeorgstadt, Saxony, Germany. E. B. Poller, manager. Ores are sphalerite and chalcopyrite. Presumably idle.

#### **HERMINA MINING CO., LTD.**

#### **ONTARIO.**

Office: Calumet, Mich. Mine office: Massey, Algoma, Ont. Employs 60 men. Capt. Jas. Chynoweth, president and general manager; Hon. Wm. H. Greene, vice-president; H. Appleton, secretary; Wm. B. Anderson, treasurer; preceding officers, Jos. Hermann, Alex Dunsmore, T. H. Pollock, Paul P. Roehm and H. E. Lane, directors; Stephen H. Bryant, superintendent; John J. Jacka, engineer. Organized June 27, 1903, under laws of Ontario, with capitalization \$2,500,000, shares \$12.50 par; issued, \$1,425,000, \$9.75 paid in. Last assessment was 25 cents, October, 1907. Merchants & Miners Bank, Calumet, registrar. Annual meeting, third Tuesday in June.

Lands, 1,250 acres, freehold, in Salter township, circa 7 miles from Massey, and a 320-acre millsite, all fairly timbered. Property shows 3 contact veins, between schist and quartzite, of practically vertical dip, and strike of about 10° North of East, having reported average widths of 5', 7' and 21'. Veins Nos. 1 and 2, undergoing development, are about 1½ miles apart. Ore is exclusively chalcopyrite, with quartz gangue, estimated by company to average 4 to 6% copper and \$2.50 per ton in gold. Careful sampling of No. 3 shaft, by Dr. G. Fernekes, gave 4.3% copper and \$2.80 gold per ton, and the ore probably averages about 0.1 to 0.2 oz. silver per ton. Two 35-ton smelter shipments, circa 1907, returned 9.7% and 13.1% copper.

Development has been continuous, since begun in 1903. The mine has a 260' tunnel and 3 shafts, No. 1 being 300' deep, No. 2 being 24' deep and No. 3 being 445' in depth, with total of 2,624' of workings, June, 1908, estimated by company to show 800,000 tons of ore with 400,000 tons blocked out for stoping, which estimate seems high. No. 3 shaft, 445' deep, 7x15' in inside measurement, with 3 compartments, has 4 levels opened. No. 4 shaft is to be sunk on the Duluth claim, circa 1,000' from No. 3. The ground stands well, requiring little timbering.

Equipment includes a 200-h. p. steam plant, with 50-h. p. and 100-h. p. Allis-Chalmers hoists, good for 1,000' each, and a 10-drill Ingersoll-Rand air-compressor.

There are 21 buildings, including a 20x40' frame machine-shop, a frame carpenter-shop, an 18x32' smithy, boiler-house, engine-house, office and dwellings. The Hermina railroad, 5 miles long, of standard gauge, equipped with one locomotive and 10 cars, connecting the mine with the Canadian Pacific railway, is owned by the company.

The smelter, at Thessalon, Algoma, Ontario, is owned by a subsidiary corporation, the Algoma Custom Smelting & Refining Co., and is described under that title. Production was begun circa Nov. 1, 1908, when there were about 8,000 tons of ore on the dump. The company estimates earnings of \$371,000 yearly, on a production of 115 tons of ore daily, which figures are not likely to work out in practice. The property has considerable good ore, though not in the best of shape for extraction, being somewhat bunchy.

#### **HERMIONE COPPER MINES, LTD.**

**GREECE.**

Letter returned unclaimed from former office, 2 City Road, London, E. C., Eng. Edw. Riley & Co., managers; Wm. Taylor, secretary. Organized Apr. 6, 1905, under laws of Great Britain, with capitalization £140,000, shares £1 par; issued, £7. Succeeded Greek Minerals, Ltd., to acquire the Hermione mine, consisting of the Thermissy and Careas concessions, in the districts of Hermione and Spetzia, Greece. Idle and moribund.

#### **HERMIT GOLD & COPPER MINING & SMELTING CO.**

**ARIZONA.**

Dead. Formerly owned the Hermit group in Coconino county, Arizona.

#### **HERMIT LAKE COPPER CO.**

**COLORADO.**

Office: 31 Milk St., Boston, Mass. Mine office: Silver Cliff, Custer Co., Colo. John H. Norton, president; Oliver J. Kimball, secretary; W. S. Elmen-dorf, superintendent. Organized 1899, under laws of Maine, with capitalization \$2,000,000, shares \$20 par. Ores carry gold and copper. Has water power and a 20-stamp mill. Idle and apparently moribund.

#### **HERMOSA COPPER CO.**

**NEW MEXICO.**

Office: 42 Broadway, New York, N. Y. Mine office: Hanover, Grant Co., N. M. Anson W. Burchard, president; M. F. Westover, secretary; D. M. Riordan, treasurer and general manager; Henry N. Darling, assistant treasurer; L. B. Judson, assistant secretary. Organized July 20, 1905, under laws of New Jersey, with capitalization \$100,000, shares \$100 par. Corporation Trust Co., New York, registrar. Annual meeting, first Monday in June.

The mines were discovered circa 1800, and opened 1880, but were worked intermittently, owing to various Indian troubles and lack of funds, until taken over, 1904, by the present owner, which practically is the General Electric Co., one of the strongest corporations of the United States.

Lands, 114 claims, area circa 2,200 acres, held partly in fee and partly under option, all in the Central or Hanover district. Lands include the Ivanhoe and Humboldt mines, which are the more important, also the Copper Queen, Treasure Vault, Wild Cat, Ninety, Tourmaline, and other mines and attempts at mines. Country rocks are porphyry, granite, quartzite, and lime-

stone, showing various contact deposits between granite and limestone, with porphyry intrusions, ores occurring as lenticular bodies, in veins with a generally northeasterly and southwesterly strike, and an average dip of circa 45°. Four different ore bodies are being developed, these ranging 15' to 20' in width, with a known depth of 410' and known length of 2,000'. Development is by shafts, as follows: Ivanhoe, 350'; Ninety, 410'; Treasure Vault, 325'; Wild Cat, 410'; Humboldt, 300'; Copper Queen, 200'; Tourmaline, 300'; Mabel, 200'. All shafts show ore, and the various mines have about 3 miles of workings, estimated to show 100,000 tons of ore, with 25,000 tons blocked out for stoping. The property shows large bodies of low grade concentrating ore, carrying average values of 3% copper, 3 oz silver and slightly under \$1 gold per ton, with small quantities of lead near the surface, and occasional traces of zinc, but not in sufficient quantities to materially hamper reduction.

Equipment includes a 700-h. p. steam plant, with 7 hoists, good for 500' to 1,000' each, and 4 Sullivan air-compressors, of 26 drills aggregate capacity. Buildings include a 20x40' machine-shop and smithy, a 40x100' carpenter-shop and framing-mill, warehouse, sawmill, etc., with a total of 20 buildings, all of wood. The 40x90' concentrator, of 100 tons rated daily capacity, built by a former management, was altered and used for experimental purposes. Equipment includes a No. 14 Blake crusher, 2 sets of rolls, 1 Hartz jig, 5 Overstrom tables, 2 Wilfley tables, 7 screw sifters, 1 hydraulic sizer and 1 Huntington mill.

Considerable systematic development was done, based upon estimates of tonnage by eminent engineers, but results did not come up to expectations. Though some very good ore bodies were found, they were not of sufficient size to make the property profitable. Further work may be done at a later date.

#### **MINA LAS HERRERIAS.**

SPAIN.

Held by Bedo Metal & Chemical Co., Ltd.  
**HERSTELLE-ELY COPPER CO.**

NEVADA.

Office: 20 Broad St., New York, N. Y. Mine office: Ely, White Pine Co., Nev. Seward H. Fields, secretary. Organized circa February, 1907, under laws of Maine, with capitalization \$1,000,000, shares \$1 par.

#### **HESPERUS GOLD & COPPER MINES CO.**

BRITISH COLUMBIA.

Office: care of Samuel P. Brannan, secretary, 709-145 La Salle St., Chicago, Ills. Mine office: Grand Forks, Boundary district, B. C. Chas. J. Magee, president; T. H. Rae, managing director. Organized February, 1903, with capitalization \$1,000,000, shares \$1 par. Property includes the Betts, Hesperus, Lancaster and Chicago claims, on Hardy Mountain, circa 4 miles from Grand Forks, developed by several hundred feet of crosscuts and shafts, showing good bodies of cupriferous pyrrhotite, opened by an 825' tunnel. Has done about 3,000' of diamond drilling.

#### **HETTA MOUNTAIN GROUP.**

ALASKA.

Mine office: Coppermount, Prince of Wales Island, Alaska. Lands, 8 claims, near Copper Harbor, said to show a vein 2' to 20' wide and 3,000' long, averaging 10% copper, 3 oz. silver and \$2 gold per ton, which is an exaggeration. Idle.

#### **HETTIE GREEN MINE.**

BRITISH COLUMBIA.

Office and mine: care of James Thompson, owner, Alberni, Vancouver Island, B. C. Lands, on Tranquil Creek, Bear River district, Clayoquot division, give a fair showing of chalcopyrite, with occasional bornite. Shipped, 1905, circa 200 tons of ore to the Tyee smelter.

#### **HIWATHA GOLD & COPPER MINING CO.**

Office: Coronado Bldg., Denver, Colo. Location of lands, if any, unknown. Apparently a stock-jobbing outfit.

#### **HIBBE GOLD & COPPER MINING CO.**

CALIFORNIA.

Office: Sheridan, Cal. N. H. Kaehner, president; Geo. Grutman, secre-

tary and treasurer. Organized 1903, with capitalization \$75,000, to operate in California. Idle and apparently moribund.

**HIBERNIAN COPPER SYNDICATE, LTD.**

IRELAND.

Dead. Organized May 7, 1907, with capitalization £2,000, shares £1 par; liquidated Oct. 25, 1907. Formerly in Ireland.

**HIBIRA MINE.**

JAPAN.

Mine office: Kitakata-mura, Higashi-Usuki-gori, Hyuga, Japan. Property is located on the eastern bank of the Tsunansegawa, a branch of the Gokasegawa river, giving deep water transportation. The property is an old mine, which was a considerable producer at the close of the Seventeenth Century.

Property carries mainly cupriferous pyrite, with some chalcopyrite, averaging 5 to 6% in copper tenor, in lenses with maximum thickness of 20', occurring in clay-slate and sandstone. Production was 1,769,498 lbs. fine copper in 1900, 2,166,102 lbs. in 1906, and 1,880,839 lbs. in 1907.

**HOCKEY COPPER, LTD.**

TRANSVAAL.

Office: Exploration Bidgs., Johannesburg, Transvaal. Louis L. Playford, Hon. W. A. Martin, A. Keeling and M. C. Inglis, directors; Ball & Stuart, secretaries. Organized August, 1908, under laws of Transvaal, with capitalization £3,000. Lands are 288 base metal claims, on the Motale and Lumbuvi rivers, in the Zoutpansberg district, showing a vein carrying chalcocite assaying up to 40% copper, said to be traceable 4 miles, opened by several prospecting shafts.

**J. P. HICKS & CO.**

TENNESSEE.

Mine office: Bristol, Sullivan Co., Tenn. Lands are slightly developed, showing copper. Idle some years.

**HIDACHI MINE.**

JAPAN.

Mine office: Hidachi-mura, Taga-gori Hitachi, Japan. Production was 577,560 lbs. fine copper in 1906, and 1,775,417 lbs. fine copper in 1907. Is a new property of considerable promise.

**HIDALGO COPPER MINING & SMELTING CO.**

MEXICO.

Mine and works office: Zimapán, Hidalgo, Mex. Capitalization \$2,000,000, shares \$10 par, in half preferred and half common shares. Lands, 13 hectares, including 9 leased mines. The Concordia and Purisima mines produce mainly silver-lead ores, but property also has argentiferous copper ores. Smelter has a 25-ton lead stack and 80-ton copper stack.

**HIDALGO MINING CO.**

MEXICO.

Mine office: Moctezuma, Sonora, Mex. Wm. Adamson, president; Capt. John Birmingham, general manager; E. L. Mahoney, superintendent. Organized under laws of Arizona, with capitalization \$3,500,000, shares \$1 par. Lands, 80 pertenencias, area 198 acres, in 3 groups, known as the Hidalgo group of 11 hectares, Pilares group of 9 hectares and Batamole group of 71 hectares, lying 4 miles from the Naco-Zarri railroad and circa 6 miles west of Moctezuma Copper Co. Property shows an ore body of 40' to 200' estimated width, occurring as a contact deposit between granite and limestone, with a 12' paystreak carrying mainly chalcopyrite and bornite, with occasional cuprite and melaconite, assaying 15 to 30% copper and up to 500 oz. silver per ton, with some lead. Mine has a 135' tunnel and 300' shaft, with about 3,000' of working. A spring on the property carries water assaying up to 6.5 grains copper per gallon. Property considered promising and management good. Presumably idle.

**HIDDEN TREASURE MINES CO.**

NEVADA.

Mine office: Ely, White Pine Co., Nev. Organized circa February, 1907. Presumably idle.

**HIDDEN TREASURE MINING CO.**

MONTANA.

Office and mine: Higgins Blk., Missoula, Missoula Co., Mont. John P.

Graves, agent. Organized circa May, 1908. Lands, 6 claims, patented, in the Wallace district, carrying 3 contact veins between slate and porphyry, main vein being said to show 40' of concentrating ore, and a 30" paystreak of sulphide ore giving smelter returns of 13% copper, 28 oz. silver and \$5.50 gold per ton, average value of ore being estimated, by former owner, as 6% copper, 12 oz. silver and \$3.75 gold per ton, which probably is too high. Mine is opened by shafts of 68' and 149', and by tunnels of 558' and 1,300', with circa 3,000' of workings. Made small shipments, 1905-1906, under former ownership, to the East Helena and Tacoma smelters.

**HIDDEN TREASURE MINING & MILLING CO.****WASHINGTON.**

Office: 428 Pacific Blk., Seattle, Wash. Mine office: Methow, Okanogan Co., Wash. Jas. West, treasurer and general manager. Organized 1896. Has a fissure vein of 2' to 4' average width, with occasional chutes of 8' to 10' width, traversing gneiss and carrying auriferous and argentiferous galena, sphalerite and chalcopyrite, with quartz and calcite gangue. Smelter shipment of 90 tons gave returns of \$67 per ton. Presumably idle.

**HIDDEN TREASURE MINING & TUNNELSITE CO.****WYOMING.**

Office: 1106 O St., Lincoln, Neb. Letter returned unclaimed from former mine office, Encampment, Carbon Co., Wyo. John T. Dorgan, secretary; H. M. Rice, manager. Lands, 9 claims, patented, having about 950' of tunnels, said to give a promising showing of auriferous and argentiferous copper ores. Idle.

**JAPAN.**

Mine office: Higashiyama-mura, Oe-gori, Awa, Japan. Ore is chalcopyrite, associated with iron pyrites, occurring in lenses lying in quartz schist, and averaging 2 to 2.5% copper. Latest recorded production, 1898, was 104,424 lbs. fine copper. Idle.

**HIGGINS DEVELOPMENT CO.****ARIZONA.**

Dead. Formerly at Bisbee, Cochise Co., Ariz. Very fully described Vol. IV and V.

**HIGGINS MINE.****ARIZONA.**

Office: care of Thos. Higgins, owner, Los Angeles, Cal. Mine office: Bisbee, Cochise Co., Ariz. Fully described, under title Higgins Development Co., Vols. IV and V.

**HIGHLAND BOY CONSOLIDATED MINING CO.****UTAH.**

Dead. Wound up, 1906. Formerly at Bingham Canyon, Salt Lake Co., Utah. Described Vol. VI.

**HIGHLAND BOY GOLD & COPPER MINING CO.****UTAH.**

Mine office: Bingham Canyon, Salt Lake Co., Utah. Is controlled, through stock ownership, by Utah Consolidated Mining Co., and property is described under title of latter.

**HIGH ORE GOLD & COPPER MINING CO.****MONTANA.**

Office: care of Mrs. Ella Knowles Haskell, secretary, Butte, Mont. Letter returned unclaimed from former mine office, Basin, Jefferson Co., Mont. Organized under laws of Montana, with capitalization \$150,000, shares \$1 par. Lands are several patented claims and 2 water rights, 5 miles from Basin. Mine has a 1,900' tunnel, showing ore of fair grade. Idle several years.

**HIGH ORE MINE.****MONTANA.**

Owned by Anaconda Copper Mining Co.

**HIGH TOP COPPER MINING CO.****VIRGINIA.**

Office: 1552-150 Nassau St., New York, N. Y. Mine office: Elkton, Rockingham Co., Va. Morris D. Brown, president; Prentice W. Brown, secretary and treasurer; S. D. Brown, general manager. Lands, circa 1,000 acres, in Greene county, Virginia, 7 miles from the Norfolk & Western railroad, said to show 3 wide fissure veins, carrying carbonate and sulphide ores, latter claimed to contain average values of 6% copper, 10 oz. silver and \$15 gold per

ton, which is entirely too high. Apparently development consists of a 140' shaft and some open-cuts. Has steam power. Idle and apparently moribund.  
**HIGLEY MINE.**

**VERMONT.**

Mine office: Corinth, Orange Co., Vt. Suspended, circa November, 1907, on account of low price of copper.

**MINA LA HIGUERA.****CHILE.**

Mine office: Higuera, La Serena, Coquimbo, Chile. Was a small producer at last accounts.

**HIKO NEVADA MINING CO.****NEVADA.**

Mine office: Hiko, Lincoln Co., Nev. Is said to have a 3' vein, traceable some distance, giving average assays of 4.1% copper, 6.3% lead and 46 oz. silver per ton. Presumably idle.

**MINA HILDA.****CHILE.**

Mine office: Higuera, La Serena, Coquimbo, Chile. Richard H. Everitt and Juan Bode, owners and managers. Lands, 2 pertenencias, area 10 hectareas, 12 miles north of Higuera, carrying 3 parallel veins in diorite and granite. Main vein, circa 30' wide, at surface, shows chrysocolla and carbonate ores of good tenor, opened by shafts of 20' and 50'. Ore, as produced, averages about 15% copper, after selection, and is sold to the Sociedad Minera San Juan. Completion of a projected railroad will permit shipment of low grade ores, of which the mine apparently possesses large quantities.

**HILETA GOLD & SILVER MINING CO.****MEXICO.**

Mine office: Velardeña, Cuencamé, Durango, Mex. Carter Barker, general manager. Lands, 79 acres, also 63 acres miscellaneous lands, including the Hileta or Yleta, San Mateo and Santa Rita mines, latter being the principal property, adjoining the Velardeña mines. Country rocks are limestone and porphyry, showing 5 veins, of which one, of 12" to 3' width, opened by a 1,600' tunnel, with about 4,000' of workings, carries ore said to average 2% copper, 7% lead, 5% zinc, 60 oz. silver and \$4.50 gold per ton. Equipment includes a steam plant, with two hoists, good for 1,000' each, and a 4-drill air-compressor.

**ONTARIO.**

Office and mine: Sault Ste. Marie, Algoma, Ont. T. W. Trotter, president; Edw. Ewing, vice-president; Hugh McKinnon, secretary and treasurer. Organized 1907, under laws of Ontario, with capitalization \$60,000, shares \$10 par, as a holding and promotion company, with the plan of floating a larger company later. Lands, 640 acres, in the township of Aweres, near the Root River mine, on the main line of the Algoma Central railway, showing ore assaying up to 10% copper and 8 oz. silver per ton.

**HILLSBORO CONSOLIDATED MINES CO.****NEW MEXICO.**

Dead. Was a swindle. J. N. A. Connor was president and general manager. Succeeded the Philadelphia Mining & Milling Co. Formerly at Hillsboro, Sierra Co., N. M.

**F. C. HILLS & CO.****SPAIN.**

Operators of Compañía del Ferrocarril y Minas del Buitron.

**HILLSIDE COPPER MINING CO.****NEVADA.**

Dead. Merged, June 4, 1906, in Bristol Consolidated Mines & Smelting Co. Formerly at Pioche, Lincoln Co., Nev. Described Vol. VI.

**HIMMELFAHET FUNDGRUBE.****GERMANY.**

Office: care of Kgl. Sächs. Staatsfiskus, Dresden, Germany. Mine office: Freiberg, Saxony, Germany. K. Stephan, manager. Is owned and operated by the Saxon Crown, employing circa 1,000 men, and is a producer of silver-lead ores, with small incidental production of copper.

**HINDS CONSOLIDATED MINING CO.****MEXICO.**

Office: 1 Wall St., New York, N. Y. Mine office: Santa Bárbara, Hidalgo, Chihuahua, Mex. Howell Hinds, president and general manager; R. W.

Cavanaugh, vice-president and secretary; Wm. W. Elmer, mine superintendent. Organized circa 1907, with capitalization \$5,000,000, shares \$1 par. Lands include the Santa Gertrudis, La Reforma, Los Medios and Clarinas mines, circa 3 miles west of Santa Bárbara, showing 3 parallel fissure veins of 4' to 30' width, outcropping for about one mile, carrying sulphide ores. La Reforma mine gives ore assaying up to 20% lead and 2% copper, with silver values. Other mines carry gold ores. Idle at last accounts.

#### **HINSDALE TUNNEL & REDUCTION CO.**

**COLORADO.**

Mine office: Lake City, Hinsdale Co., Colo. H. S. Bushnell, superintendent. Succeeded, circa 1907, the Henson Creek Lead Mines Co. Lands, known as the Bonanza group, carry auriferous and argentiferous lead and copper ores. Has water and electric power and a 50-ton concentrator.

#### **HIRAKANE MINE.**

**JAPAN.**

Mine office: Nibukawa, Rikuchu, Japan. T. Yokoyama, owner; S. Tsu-buchi, superintendent. Has argentiferous copper ores, 1906 production being 960,351 lbs. fine copper and 988,519 grams silver. Largest recorded production, in 1903, was 1,169,637 lbs. fine copper. Property has steam and electric power.

#### **HISAMUNE MINE.**

**JAPAN.**

Mine office: Kawada-mura, Oe-gori, Awa, Japan. Is a comparatively new property. Ore, which is chalcopyrite, slightly argentiferous, and averaging 4% copper, occurs imbedded in clay-amphibolite, beds ranging 2' to 5' in thickness. Production, 1899, was 112,196 lbs. fine copper. Idle.

#### **HISANICHI MINE.**

**JAPAN.**

Mine office: Nakagawa-mura, Senhoku-gori, Ugo, Japan. Main vein has a strike of North 60° East, with steep dip to North of Northwest, and is 1' to 4' in width, carrying chalcopyrite associated with galena, sphalerite and pyrite, all slightly argentiferous, principal values being in copper and silver. Production, 1900, was 566,268 lbs. fine copper and 134,074 momme silver, increased, 1906, to 1,444,464 lbs. fine copper and 1,012,012 grams silver, and again increased, 1907, to 1,574,499 lbs. fine copper and 229,680 momme fine silver. Management is progressive.

#### **H. J. & F. H. COPPER MINING CO.**

**NEW MEXICO.**

Letter returned unclaimed from former mine office, La Luz, Otero Co., N. M. F. W. Hunt, general manager; M. J. Cox, superintendent. Lands, in the Highrolls district, include the old Courtney mine, 8 miles east of La Luz, carrying argentiferous lead and copper sulphides. Made considerable shipments, 1907, to El Paso smelter.

#### **HOFMAN CLAIMS.**

**CALIFORNIA.**

Office and mine: Ukiah, Lake Co., Cal. Lands, 4 claims, showing carbonate and sulphide ores assaying 6% copper, 2 oz. silver and \$5 gold per ton. Idle several years.

#### **HOGASHO MINE.**

**JAPAN.**

Mine office: Hatayama-mura, Aki-gori, Tosa, Japan. Ore is chalcopyrite, associated with pyrite, averaging about 7% copper, and occurs in lenses in country rocks of shale and sandstone, with intercalated red and green schalkstein. Latest recorded production, 1900, was 138,032 lbs. fine copper. Presumably idle.

#### **GEWERKSCHAFT HOHENSTAUFEN.**

**GERMANY.**

Mine office: Essen, Rheinprovinz, Germany. W. Brandenburg, president. Produces yearly about 3,000 metric tons of zinc and copper ores, zinc values predominating.

#### **HOKOISHI MINE.**

**JAPAN.**

Mine office: Kamo-mura, Nii-gori, Iyo, Japan. Ore is chalcopyrite, associated with pyrite, averaging 3.5 to 4% in copper tenor, occurring in narrow

veins of 12" average width, traversing chlorite-amphibolite. Production, 1900, was 52,373 lbs. fine copper. Presumably idle.

**HOLDEN EXTENSION GOLD & COPPER MINING CO.** **WASHINGTON.**

Dead. Formerly at Chelan, Chelan Co., Wash.

**WASHINGTON.**

**HOLDEN GOLD & COPPER CO.**

**WASHINGTON.**

Office: Spokane, Wash. Mine office: Chelan, Chelan Co., Wash. J. H. Holden, vice-president; Chas. H. Wolf, secretary; A. L. White, treasurer; Wm. Yolen Williams, general manager.

Lands, 3 claims, area 60 acres, on Railroad Creek, near Lake Chelan, opened by 3 tunnels, longest 500', with circa 2,000' of workings on 3 levels, and numerous open-cuts, showing a vein of 40' to 185' width, carrying low grade auriferous copper ores. New management is strong and experienced, and the property, though low in grade, has large ore bodies, and is considered promising.

**HOLLAND GOLD & COPPER MINING CO.** **BRITISH COLUMBIA.**

Dead. Formerly at Princeton, Similkameen division, Boundary district, B. C.

**HOLLIS MINING CO.**

**NEVADA.**

Office: 171 Broadway, New York, N. Y. Mine office: Ely, White Pine Co., Nev. W. A. Douglas, president and general manager; Samuel Marshall, vice-president; E. L. Hollis, secretary and treasurer.

**HOLLOWAY MINE.**

**VIRGINIA.**

Mine office: Virgilina, Halifax Co., Va. Property, the old Holloway or Eustis mine, 6 miles north of Virgilina, first worked previous to the American Civil War, shows sulphide ores, mainly chalcopyrite, carrying small gold and silver values. Was a small producer, 1900-1903. Idle.

**HOLMES LIME CO.**

**CALIFORNIA.**

Office: Mutual Savings Bank Bldg., San Francisco, Cal. Mine office: Newcastle, Placer Co., Cal. Lands, 180 acres, known as the Alabaster Cave group, 7 miles east of Newcastle, showing a strong gossan, traceable several miles. Vein, between limestone and slate, is 12' to 20' wide, with a paystreak of 3' to 8', said to carry 4% copper ore. Idle several years.

**HOLMES MINING & MILLING CO.**

**WISCONSIN.**

Office and mine: Mellen, Ashland Co., Wis. C. A. Poundstone, president; John Holmes, vice-president; A. W. Peterson, secretary and general manager. Organized 1902, under laws of Wisconsin, with capitalization \$150,000, shares 25 cents par. Lands, 80 acres, in the Penokee district, showing 3 veins carrying native copper and sulphide copper ore assaying 30 oz. silver and \$3.70 gold per ton, opened by a 140' shaft. Idle several years.

**HOME COPPER CO.**

**ARIZONA.**

Office and mine: Morenci, Graham Co., Ariz. H. J. Degener, president; W. A. Leonard, vice-president; W. P. Gee, secretary and treasurer; N. L. Jenkins, superintendent. Organised April, 1901. Lands, 35 claims, area circa 700 acres, in 2 groups, also a millsite on Eagle River. The Peacock group of 23 copper claims, about one mile southwest of Morenci, is opened by an 85' shaft and by tunnels of 150' and 700', latter giving a 500' back. Ores are carbonates and oxides, with some chalcocite, also a wide ledge of low grade ore too lean for present working. The Buzzard Shadow group of 12 claims, across Gold Gulch, about one mile north of the Peacock group, shows a wide quartz vein carrying gold ore worth up to \$60 per ton, slightly developed by tunnel and shaft. A \$125,000 bond on the property was surrendered, 1906. Idle, but plans diamond drilling.

**HOME COPPER CO.**

**WASHINGTON.**

Mine office: Cle-Elum, Kittitas Co., Wash. Idle and apparently moribund.

**HOME COPPER MINING CO.****MICHIGAN.**

Mine office: Copper Falls, Keweenaw Co., Mich. Lands, 240 acres, adjoining the Humboldt mine, in Town 57 North, Range 32 West. Did a little exploratory work, circa 1864. Never a producer and long idle.

**HOME COPPER MINING CO.****MONTANA.**

Dead. Disincorporated, 1903, with all debts paid. Formerly at Copperopolis, Meagher Co., Mont.

**HOME GOLD & COPPER CO.****NEW MEXICO.**

Dead. Formerly at Cooney, Socorro Co., N. M.

**HOME GOLD & COPPER CO., LTD.****ONTARIO.**

Dead. Formerly infested Ontario. Described Vols. IV and V.

**HOME RUN COPPER MINING CO.****WYOMING.**

Office: 34 Giddings Bldg., Colorado Springs, Colo. Letter returned unclaimed from former mine office, Rudefeha, Carbon Co., Wyo. A. L. Bohrer, president; J. F. Humphrey, vice-president; Adolph Fehringer, treasurer; Wm. C. Robinson, secretary. Capitalization \$1,500,000, shares \$1 par. Lands, 180 acres, partly patented, known as the Copper Bell group, near the Ferris-Hagerty mine of the Penn-Wyoming Copper Co., having a 350' tunnel showing a vein of 30" to 9' width, giving assays up to 12% copper, with gold and silver values. Was developing with a small force at last accounts.

**HOMESTAKE MINES, LTD.****BRITISH COLUMBIA.**

Mine office: Rossland, Trail district, B. C. Ores carry gold, silver and copper. Idle some years and apparently moribund.

**HOMESTAKE MINING CO.****ARIZONA.**

Dead. A petty swindle that advised investors to withdraw their money from savings banks before they "busted," and put it in Homestake, "sure to pay one per cent per month." Formerly at Jerome, Yavapai Co., Ariz.

**HOMESTEAD COPPER, GOLD & SILVER MINING CO.****WISCONSIN.**

Office and mine: Iron Mountain, Dickinson Co., Mich. Eric Hager, president; Andrew Nelson, secretary; E. W. Holm, treasurer. Organized 1906, under laws of Wisconsin, with capitalization \$1,000,000, shares \$1 par. Lands, 8 miles south of Iron Mountain, are in Florence county, Wisconsin. Has 2 shallow shafts, deepest circa 100', showing a vein 2" wide at surface, with extreme width of 18" at depth, giving assays, from selected samples, up to 10% copper and circa \$3 per ton in combined gold and silver values. Idle.

**HOMESTEAD COPPER MINES CO.****OREGON.**

Mine office: Homestead, Baker Co., Ore. L. L. Carter, superintendent. Organized 1906, under laws of Arizona, with capitalization \$1,000,000, shares \$2 par.

**HONERINE EXTENSION MINING CO.****UTAH.**

Mine office: Stockton, Tooele Co., Utah.

**HONERINE MINING & MILLING CO.****UTAH.**

Mine office: Stockton, Tooele Co., Utah. F. A. Baird, president; C. M. Dupont, secretary; Chas. O. Ellingwood, general manager; W. K. Murdock, superintendent. Has a 10,800' drainage and transportation tunnel, on the 1,300 level, costing circa \$1,000,000. Ore is mainly silver-lead, with more or less copper secured as a by-product, smelting ore averaging about 50% lead, 3% copper, 30 oz. silver and \$1.50 gold per ton, and concentrating ore averaging 15% lead, 1% copper, 12 oz. silver and 80 cents gold per ton. Has a 300-ton mill putting about 3½ into 1, which is said not to have been a metallurgical success. Company, in connection with its twin, the Honerine Tunnel & Milling Co., owed, 1908, the sum of \$222,292.66, and was to be sold by the sheriff.

**HONERINE TUNNEL & MILLING CO.****UTAH.**

Mine office: Stockton, Tooele Co., Utah. A twin of the Honerine Mining & Milling Co., and very closely connected with same.

**HONEST ENDEAVOR MINING CO.**

**NEVADA.**

Mine office: Yerington, Lyon Co., Nev. B. W. Wooding, president; Elmer Hoff, vice-president; C. S. Wood, secretary; F. D. Goodale, treasurer and general manager. Organized 1907, under laws of Arizona, with capitalization \$2,500,000, shares \$1 par. Lands, 4 claims, area 80 acres, west of Yerington, having an 80' shaft showing a vein up to 3' in width, giving assays of 19% copper, with small gold and silver values. Has gasoline power.

**HONEYBUGLE COPPER MINES, N. L.**

**AUSTRALIA.**

Office: 93 Pitt St., Sydney, Australia. Mine office: Canonbar, Nyngan, N. S. W., Australia. Colin Y. Caird, chairman. Organized 1907, under laws of New South Wales, with capitalization £3,000, shares £1 par. Lands are isolated and arid, but show an ore body, apparently of considerable size, which is under development.

**COMPAGNIE HONGBOISE DES MINES.**

**HUNGARY.**

Office: Brussels, Belgium. Mine office: Urvölgi, Hungary. Comte C. F. de Ferré de Peroux, chairman. Organized February, 1903, under laws of Belgium, with capitalization 1,500,000 francs. Dividend, for fiscal year 1906, was 7 francs 50 centimes. Controls, through stock ownership, the Société de La Mine de Cuivre Urvölgi, which owns the Urvölgi mines in Hungary.

**HONJYO COPPER WORKS.**

**JAPAN.**

Owned by Furukawa Mining Co.

**HOOSIER COPPER MINING & MILLING CO.**

**WYOMING.**

Office: Shelbyville, Ind. Letter returned unclaimed from former mine office, Encampment, Carbon Co., Wyo. Capitalization \$1,500,000, shares \$1 par. Lands, 9 claims, area 180 acres, developed by a shallow shaft, said to give a fair showing of medium grade ore. Idle and apparently moribund.

**HOP CAÑON MINING & SMELTING CO.**

**NEW MEXICO.**

Office: 85-163 Randolph St., Chicago, Ills. Mine office: Magdalena, Socorro Co., N. M. Alpheus McCallum, president; Elias G. Raffety, secretary and treasurer. Capitalization \$1,000,000, shares \$1 par. Lands, 6 claims, area 120 acres, 3 miles from a railroad, in the Hop Cañon district, showing ores carrying copper, lead, zinc, silver and gold. Idle.

**HORACE GREELEY & SACRED MINING CO.**

**UTAH.**

Dead. Formerly at Bingham Canyon, Salt Lake Co., Utah.

**COMPAÑIA MINERA LAS HORMIGAS.**

**MEXICO.**

Mine office: Charcas, Moctezuma, San Luis Potosí, Mex. J. J. Murphy, superintendent, at last accounts. Has argentiferous copper ores.

**HORN SILVER MINING CO.**

**UTAH.**

Office: 17 Battery Place, New York, N. Y. Mine office: Frisco, Beaver Co., Utah. Allan C. Washington, president; Juan M. Ceballos, vice-president; Ambrose I. Harrison, secretary and treasurer; Philo T. Farnsworth, manager. Organized 1879, under laws of Utah, with capitalization \$10,000,000, shares \$25 par.

The company has paid dividends of \$5,642,000, to end of 1907, dividends for 1907 being \$60,000, though the quarterly dividend due December, 1907, was passed.

Mine is extensively developed, and is a considerable producer of zinc, lead, silver and gold, securing a little copper as a by-product, the 1906 production having been 129 tons copper ore, of about 15% average tenor. The old Bonanza mine carries good values at a depth of 800', showing silver ores on the footwall, with a little copper ore on the hanging-wall. Equipment includes a 30-stamp mill.

Production, 1906, was valued at \$188,000, and for 1907 amounted to \$110,181. Production, 1907, was 3,583,355 lbs. lead, 24,508 lbs. copper, 1,244,182 lbs. zinc, 206,537 oz. silver and 2,841 oz. gold. Largest annual copper output

was 717,353 lbs., in 1902. Mining was suspended, circa 1907, for first time in 20 years, because of temporary inability to market ore.

#### HORSESHOE COPPER CO.

IDAHO.

Mine office: Mackay, Custer Co., Idaho. D. E. McCallum, manager. Lands, 17 claims, adjoining the White Knob mine of the Empire Copper Co., on the north. Presumably idle.

#### HORSE SHOE COPPER MINING CO.

ARIZONA.

Dead. Was a brazen swindle for which directors were jailed. Formerly at Safford, Graham Co., Ariz. Described Vol. V.

#### HORSESHOE GOLD MINING CO.

COLORADO.

Mine office: Central City, Gilpin Co., Colo. Property is the Barnes mine, carrying gold, silver and copper ores. Presumably idle.

#### HORSE SHOE MINING CO.

WASHINGTON.

Office: 231 Epler Blk., Seattle, Wash. Letter returned unclaimed from former mine office, North Bend, King Co., Wash. Swan Hansen, president and general manager; E. G. Moe, vice-president; S. P. Battleson, secretary and treasurer; preceding officers, Thos. Jones, O. E. Olson and O. Battleson, directors. Capitalization \$1,000,000, shares \$1 par. Lands, 11 claims, with 2 mill-sites and several water rights, well watered and timbered, 12 miles east of North Bend, carrying a vein up to 25' in width, opened by 2 tunnels showing chalcopyrite assaying 8 to 32% copper, with gold and silver values. Idle and presumably moribund.

#### HORSFAL MINING CO.

COLORADO.

Dead. Formerly at Gold Hill, Boulder Co., Colo.

#### HOUGHTON ALASKA EXPLORATION CO.

ALASKA.

Office: Houghton, Mich. Mine office: McCarthy Creek, Copper River district, Alaska. Ocha Potter, manager; Prof. Arthur E. Seaman, consulting engineer. Organized circa 1905, under laws of Michigan, with capitalization \$500,000.

Lands, 26 claims, area 380 acres, of which 12 claims, area 180 acres, are in process of patenting, with balance of claims held by location, also a 5-acre millsite and 160 acres placer lands, held for townsite and general purposes. Lands adjoin the Bonanza group of the Kennicott Mines Co., on the northeast, and are on the McCarthy Creek slope of the divide, the Bonanza group being on the Kennicott slope. About 1,000 h. p. is available from McCarthy Creek, for a hydro-electric installation.

The Bonanza fault, traceable circa 7,000', consists of 6" to 12" width of brecciated limestone, with variable mineralization, latter occasionally up to 100' in width, on the fault and along the stratification planes of intersecting veins. The Bonanza fault has a series of fissures cutting the main fault, with mineralization along both, at and near the points of intersection, but where other fissures intersect the cross-fissures, only the Bonanza fault is mineralized. Ore is exclusively chalcocite, except at surface, where sometimes broken down to carbonates, and the ore is pockety. Development consists of only 123' of tunnels, as all work is exceedingly expensive and there is no particular object in developing extensively until transportation facilities are secured. It is hoped to have mixed rail and water shipping facilities, early 1909, by a steamer on the Chitina River, 24 miles to a railroad under construction. Management is good, and property is second only to the Bonanza mine in promise among all the copper properties of the Copper River district.

#### HOUGHTON CONCENTRATING CO.

MICHIGAN.

Office and works: Houghton, Houghton Co., Mich. Livingston Whitney, president; Geo. F. Chauncey, vice-president and treasurer; Alfred Schwarz, agent. Organized under laws of New York, practically as successor of Copper Concentrating Co., described Vol. VII. Property is the entire stock issue of

the Mason Manufacturing Co., which owns a lease of the Quincy sands, and property is described under title of latter-named corporation.

**HOUGHTON DEVELOPMENT CO.****ARIZONA.**

Dead. Formerly at Bisbee, Cochise Co., Ariz. Fully described Vols. IV and V.

**HOULIHAN GOLD & COPPER MINING CO.****ARIZONA.**

Mine office: Jerome, Yavapai Co., Ariz. J. T. Whedon, president; Geo. Houlihan, vice-president; Geo. C. West, secretary and treasurer. Has a 100' shaft, said to cut a 85' vein. Idle several years.

**HOUSTON-ARIZONA COPPER CO.****ARIZONA.**

Mine office: Wickenburg, Maricopa Co., Ariz. Wm. Owens, superintendent. Property is said to have 1,800' of workings.

**HOWARD COPPER CO.****MONTANA.**

Dead. Formerly at Philipsburg, Granite Co., Mont. Described Vol. VI.

**HOWARD COPPER CO.**

Office: 451 Equitable Bldg., Baltimore, Md. Location of lands, if any, unknown.

**HOWARD MINING CO.****VIRGINIA.**

Mine office: Virgilina, Halifax Co., Va. C. N. Howard, general manager. Lands include the Chappel mine, 10 miles from Virgilina, adjoining the High Hill mine of the Virgilina Copper Co. on the northeast, also a gold property, about 4½ miles north of Virgilina. Idle.

**HOWELL MINING CO.****ARIZONA.**

Dead. Lands sold, circa 1901, to American Copper Co. Formerly at Humboldt, Yavapai Co., Ariz.

**HOWE SOUND MINING CO.****BRITISH COLUMBIA.**

Office: care of Moore & Schley, 50 Broadway, New York, N. Y. Mine office: Howe Sound, New Westminster district, B. C. Grant B. Schley, president. Organized under laws of Maine, with capitalization \$2,000,000, shares \$500 par. Was planned as a holding company, to take over control of the Britannia Copper Syndicate, Ltd., and Britannia Smelting Co., Ltd. Apparently out of business.

**HUACHUCA CONSOLIDATED DEVELOPMENT CO.****ARIZONA.**

Dead. Formerly at Palmerlee, Cochise Co., Ariz. Described Vol. VII.

**SOCIEDAD MINERA HUACHUMACHAY.****PERU.**

Mine office: Morococha, Junín, Perú. Organized 1900. Lands, 10 pertenencias, known as the Santo Domingo mine, opened by tunnel. The Crucero and Octavio veins, with practically vertical dip, cross diagonally, giving a long throw on the Veta Crucero, which increased to width of about 30", carrying ore averaging about 12% copper and 2 kilograms silver per metric ton, with quartzose gangue, the Veta Octavio being barren elsewhere. Production, 1904, was 133,152 lbs. fine copper, secured with a force of 71 men.

**SOCIEDAD MINERA HUACRACOCHA.****PERÚ.**

Office: care of Dr. O. Valentine, general manager, Lima, Perú. Works office: Morococha, Junín, Perú. Property is the Fundición Huacracocha, having a concentrator and smelter. The mill has 3 stamps, 2 Blake crushers, 3 Hartz jigs, 2 Evans jigs, 1 classifier, 2 Frue vanners and 2 Wilfley tables. The smelter, 3 miles from Morococha, on the shore of Lake Huacracocha, having rail connections, is of 75 tons daily capacity, with 1 reverberatory furnace and 3 small blast-furnaces, largest 30 tons. Has a 3' Pelton water-wheel and 30-light electric plant. Works run irregularly on custom ores of the Morococha district.

**COMPANIA HUANCHACA DE BOLIVIA.****BOLIVIA.**

Office: 29 Rue de Londres, Paris, France. Mine office: Pulacayo, Potosí, Bolivia. E. Sénéchal de la Grange, president; Marquis J. de Gabriac, chairman French board; G. Rabut, general manager; Baron J. de Cotelin, consulting

engineer; Segundo R. Nava, general secretary; Jorge Lewis, agent. Organized 1873, and reorganized 1891, under laws of Bolivia, with capitalization increased, 1877, and 1891, to 12,800,000 bolivars, shares 40 bolivars par, fully paid. In 1906 company earned a profit of 1,143,263 bolivars, and has paid considerable dividends.

Property is silver and copper mines, principal production being silver, though a little copper is produced from argentiferous tetrahedrite, at the company's smelter, and some copper is shipped. Company operates the Antofagasta & Bolivia railway, under lease, and has 600 miles of private telephone line.

The company has smelters at Pulacayo and Playa Blanca, latter, formerly leased by the American Smelting & Refining Co., apparently now idle. In 1907 the company shipped, to the Tacoma smelter, 1,600 tons of ore averaging 5% copper, 5% zinc and 50 oz. silver per ton, containing 160,000 lbs. fine copper.

**SOCIEDAD DE MINAS I FUNDICIONES DE HUANILLOS. CHILE.**

Office: Santiago de Chile. Works office: Tocopilla, Antofagasta, Chile. Organized Nov. 28, 1905, under laws of Chile, with capitalization £200,000, shares £1 par. Has a smelter with blast and reverberatory furnaces, making ejeas of about 47% average copper tenor. Production, 1903, was 245,085 lbs. fine copper.

**HUBBARD-ELLIOTT COPPER MINES DEVELOPMENT ALASKA.  
CO. OF ALASKA.**

Office: 1115 Stock Exchange, Chicago, Ills. Western office: 411 New York Blk., Seattle, Wash. Mine office: Valdez, Prince William Sound district, Alaska. H. Curtis Elliott, president; H. P. Elliott, first vice-president and general manager; A. J. Elliott, secretary; John T. Evans, treasurer. Organized Jan. 6, 1904, under laws of Washington, with capitalization \$1,500,000, shares \$1 par. Controls, through ownership of 505,484 shares, the Knights Island Consolidated Copper Co.

Lands, 123 claims, area circa 2,500 acres, on Elliott Creek, an affluent of Copper River, interior Alaska, with 39 claims patented, and balance in process of patenting. Lands carry about 300 acres of timber, with an available waterfall, rated as capable of developing 5,000 h. p. Country rock at the Elliott Creek mine, which is near the Bonanza mine, is greenstone, the contact carrying bunches of oxidized ores and chalcocite, with extreme horizontal length of 25', limited to a few yards in depth, and apparently no clearly defined veins have been found in place in this belt of slightly crushed greenstone. Company claims that this property shows 26 fissure veins averaging 20' to 65' width, 300' to 1,000' length and 1,100' depth. Depth claimed must be based on diamond drill borings, which were made circa 1905. Development is by the 190' Ely shaft and 3 tunnels. The Elizabeth tunnel is claimed to show 31' of 20% ore. The Ely tunnel is about 160' long and the mine has about 500' of underground workings, a pitifully small amount of work to show the 600,000 tons of ore claimed by the company to be blocked out for mining, which is claimed to average 28% copper, an excessive estimate. Company claims that ores have been shown to continue unaltered for depth of 200'. Line has been surveyed for a 17-mile tramway, of 1,000 tons daily capacity, to connect mines with the Copper River & Northwestern railway. Buildings include a smithy, carpenter-shop and 4 log cabins.

Apparently the company has devoted its recent efforts mainly to the development of the Knights Island Consolidated Copper Co. Claims of the company for its Elliott Creek property not only are excessive, but are under suspicion of being deliberately untruthful. Is not regarded favorably.

**HUB MINING INVESTMENT CO.****ARIZONA.**

Mine office: Benson, Cochise Co., Ariz. Property is the Valenzuela group, in the Rincon Mountains, circa 25 miles northwest of Benson.

**COMPAGNIE DES MINES DE CUIVRE DE HUELVA.****SPAIN.**

Dead. Formerly at La Granada, Huelva, Spain. Described Vol. VI.

**SOCIEDAD PYRITES DE HUELVA.****SPAIN.**

Mine office: Calahas, Huelva, Spain. At last accounts property was in process of development.

**HUELVA CENTRAL COPPER MINING CO., LTD.****SPAIN.**

Dead. Succeeded, 1903, by Huelva Copper & Sulphur Mines, Ltd. Formerly at Almonaster, Huelva, Spain.

**HUELVA COPPER & SULPHUR MINES, LTD.****SPAIN.**

Offices: 23 Courthope Road, London, N. W., Eng., and 17 Blvd. Haussmann, Paris, France. Mine office: Cueva de la Mora, Almonaster, Huelva, Spain. Jules Roche, chairman; Chas. Blanchot, managing director; preceding officers, Max Duchanoy, Maurice Dutreil, Maurice Gabet and Vicomte de Terron, directors; G. D. Collas, secretary; J. L. Croze, assistant secretary; Baron de Pritzuer, general manager. Organized Oct. 28, 1903, under laws of Great Britain, with capitalization £800,000, shares £1 par; issued, £486,487. Was practically a reconstruction of the Huelva Central Copper Mining Co., Ltd. Shares are listed on the Paris bourse.

Lands, 1,200 hectares, including the Monte Romero and Cueva de la Mora groups. Has leased 27 hectares, to the Tharsis Copper & Sulphur Co., Ltd., on royalty. Lands lie between the Rio Tinto and Tharsis mines, in a favorable location, and are opened by the Monte Romero, Cueva de la Mora and San Alberto shafts.

For year 1907 mining profits were £63,177 10s., from which was paid a 1s. dividend, amounting to £24,324 7s., company ending the year with a balance of £38,853 3s.

**HUELVA INDUSTRIAL CO., LTD.****SPAIN.**

Office: 22 Abchurch Lane, London, E. C., Eng. Wm. Keswick, M. P., chairman; Harold B. Milne, secretary. Organized Dec. 30, 1893, under laws of Great Britain, with capitalization £100,000, shares £10 par, fully issued. Is operated as a close corporation, and apparently has some connection with the Rio Tinto Co., Ltd.

**HUERFANO GOLD & COPPER MINING CO.****COLORADO.**

Mine office: Walsenburg, Huerfano Co., Colo. Organized 1902, under laws of Kentucky, to develop copper claims in the Ojo district. Idle.

**HUESCA COPPER, IRON & LEAD MINES, LTD.****SPAIN.**

Dead. Formerly in province of Huesca, Spain.

**HUGO COPPER MINING CO.****MONTANA.**

Office: Wallace, Idaho. Mine office: Saltese, Missoula Co., Mont. Hermann Seidemann, superintendent. Organized 1907, with capitalization \$1,000,000, shares \$1 par. Lands, 3 claims, lying immediately east of Saltese, showing 2 veins, which should be cut by tunnel at length of circa 850' and 1,000' respectively. Has a 200' tunnel with a 50' winze, showing ore carrying 1 to 32% copper and \$7 gold per ton.

**SOCIEDAD MINERA HUILCA.****PERÚ.**

Mine office: Morococha, Junín, Perú. Organized 1892. Lands, 3 pertenencias, known as La Huilca and La Vieja mines. Production, 1904, was 414 tons of 18% ore, yielding 166,491 lbs. fine copper. Employs circa 50 men.

**HUINAC COPPER MINES, LTD.****PERÚ.**

Office: 101 Leadenhall St., London, E. C., Eng. Mine office: by Huaraz,

Ancachs, Perú. Col. D. Pedro Juárez, chairman; A. Ferguson, managing director; Wm. Warren, mine manager. Organized May 9, 1904, under laws of Great Britain, with capitalization 1400,000, shares £1 par. Debentures, £40,000. Lands, 256 hectares, circa 30 miles from Puerto Culebra, including the Montaña de La Plata mines, carrying argentiferous copper ores. Also has anthracite coal lands 15 miles from copper property. Has been building a smelter, for several years, and expected, at last accounts, to put same in blast during 1908.

#### **COMPAÑIA MINERA DE HUIRIÁCHIC.**

**MEXICO.**

Mine office: Chalchihuites, Sombrerete, Zacatecas, Mex. John Stenner, president; C. A. Phelps, treasurer and general manager, at last accounts. Ores are argentiferous and auriferous chalcopyrite and galena, developed by shaft and tunnel. Presumably idle.

#### **HULBERT MINING CO.**

**MICHIGAN.**

Office: 199 Washington St., Boston, Mass. Mine office: Leopold Bldg., Houghton, Houghton Co., Mich. Albert S. Bigelow, president; W. A. S. Chrimes, secretary; Wm. J. Ladd, treasurer; Norman W. Haire, general manager. Fred W. Nichols, agent. Lands, 1,598 acres, in Town 57 North, Range 37 West; Town 56 North, Range 33 West, and Town 55 North, Range 34 West, Houghton county, Michigan. Lands are mainly undeveloped properties, and a considerable part of the surface rights has been sold, mineral rights having been reserved by the company. Idle many years.

#### **HULL COPPER CO.**

**ARIZONA.**

Office: 1505 Real Estate Trust Bldg., Philadelphia, Pa. Mine office: Jerome, Yavapai Co., Ariz. Hon. Geo. W. Hull, president and general manager; O. B. Stanton, vice-president; W. B. Hazeltine, treasurer; W. B. Wilcox, secretary; Capt. Wm. McDermott, general superintendent; J. W. Hubbard, mine superintendent. Organized 1906, under laws of Arizona, with capitalization \$10,000,000, shares \$1 par. Is said to have clear titles and no incumbrances. Apparently has no treasury stock, but it is understood that Mr. Hull donates 50% of profits of sales of stock to treasury, up to amount of \$150,000. This arrangement cannot be regarded as giving an adequate financial basis for the development of a mine. The O. B. Stanton outfit, as fiscal agents, offered, circa 1907, to newspapers that would carry their advertisements, a 50% commission on all stock sales, showing that commissions were excessive.

Lands, 21 patented claims, area 249 acres, adjoining on northwest and south the United Verde. Development is by the 1888 shaft, of 475', located within 200' of the United Verde smelter, which has produced a small amount of ore. Principal development is by the Dillon tunnel, of about 2,450' length, which would connect with shaft at depth of about 3,850' from portal, providing the tunnel is continued and shaft sunk to the point of intersection. The Dillon tunnel is quoted as showing ore of 19 to 20% copper tenor, with small gold and silver values, but has no body of commercial ore developed, despite the extremely optimistic claims made in advertisements, though the tunnel shows small bunches of ore at various points. Property has a total of about 7,000' of workings, and it is claimed that considerable good ore has been proven by diamond drill cores, taken from the Hull lands by the United Verde, but this statement does not seem fully verified.

Property is considered promising, being perhaps the most promising of the developing mines in the United Verde district, and Mr. Hull is highly regarded personally; but the Stanton crew is viewed with deep suspicion, as utterly lost to all sense of truth, and company's advertisements claim entirely too much on the strength of the United Verde, and hold out roseate prospects to investors that lack substantial foundation.

**HUMBER CONSOLIDATED MINING &  
MANUFACTURING CO.****NEWFOUNDLAND.**

Office: 27 William St., New York, N. Y. Moribund. Formerly at York Harbour, Newfoundland. Fully described Vol. V.

**HUMBOLDT-ARIZONA COPPER CO.****ARIZONA.**

Mine office: Humboldt, Yavapai Co., Ariz. Lands, 5 claims, near Humboldt, having an 80' shaft.

**HUMBOLDT COPPER CO.****MICHIGAN.**

Office: 64-50 State St., Boston, Mass. Mine office: Copper Falls, Keweenaw Co., Mich. C. Howard Weston, president; John Brooks, secretary and treasurer; J. Weasley Clark, superintendent; preceding officers, W. C. Fisk and Ashley Watson, directors. Organized 1863, under laws of Michigan, and capitalization increased, later, to \$1,000,000, shares \$25 par. Amount paid in is \$100,000 in real estate and \$240,986.76 in cash. Annual meeting, fourth Tuesday in March.

Lands are Sections 16 and 21, former fractional, Town 58 North, Range 31 West, all on the mineral belt, about midway between the Arnold and Phoenix mines, lying north of the greenstone, with the Eagle River and Natick mines to the south. The mine was opened 1853, but never was a producer. There is a single shaft, circa 300' deep, on the ashbed, which shows the same characteristics as at the Arnold, carrying occasional bunches of rich ground. Equipment includes an engine-house, compressor building, smithy, warehouse and 4 dwellings.

**HUMBOLDT COPPER CO.****NEVADA.**

Office: 618 Kohl Bldg., San Francisco, Cal. E. J. Milcy, president; C. C. Darling, Jr., vice-president; M. P. Danly, secretary; preceding officers, E. B. Grace and Dr. Geo. E. Ebright, directors. Organized under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Company asserts that it has 8 claims, on Jackson Mountain, Humboldt county, Nevada, connected by a good wagon road, with a railroad 60 miles distant. Property is claimed to have circa 1,400' of workings, showing a vein of 12' width at surface, widening to 74' in the lower tunnel, carrying ores that have assayed 15 to 16% copper, 3 to 5 oz. silver and \$1.65 gold per ton. Company's business methods are devious.

**HUMBOLDT ORE CO.****ARIZONA.**

Mine office: Humboldt, Yavapai Co., Ariz. Capitalization presumably \$100,000. Is controlled, through ownership of practically entire stock issue, by Consolidated Arizona Smelting Co.

**HUMBOLDT SMELTER.****ARIZONA.**

Owned by Arizona Smelting Co.

**HUMBOLDT SMELTING & REDUCTION CO.****NEVADA.**

Dead. Was reorganized May 5, 1904, under laws of District of Columbia, with capitalization \$500,000, shares \$1 par. Property was sold, 1906, to Goldonda Mining Co., Ltd. Officers were E. L. Labadie, president; G. A. Bretonnel, secretary; preceding officers, Geo. Haldorn, C. E. Fish, A. S. Donaldson, E. W. McCormick, E. L. Freeman and P. T. Kretschmann, directors. Former office was 520 Tenth St., N. W., Washington, D. C. Formerly at Goldonda, Humboldt Co., Nev.

**HUMBUG MINING CO.****UTAH.**

Mine office: Eureka, Juab Co., Utah. Ores carry gold, silver and copper. Idle and apparently moribund.

**HUMPHREY-ARIZONA GOLD-COPPER MINES CO.****ARIZONA.**

Letter returned unclaimed from former mine office, Wickenburg, Maricopa Co., Ariz. Lands, near the Rio Tonto Copper Co., east of Wickenburg, in the Picacho district, were being developed, 1907, on a small scale. Idle.

**HUNGARIAN COPPER CO.****MICHIGAN.**

Dead. Wound up circa 1898 and lands sold to Oneco Copper Mining Co. Formerly at Hancock, Houghton Co., Mich.

**HUNT COPPER CO.****NEW MEXICO.**

Office: Alamagordo, N. M. Mine office: Mountain Park, Otero Co., N. M. Organized 1907. Lands, in the Highrolls district, 3 miles from Mountain Park, are said to show considerable sulphide copper ore.

**HUNTERS CREEK MINING & MILLING CO.****WASHINGTON.**

Office: 1515 Masonic Temple, Chicago, Ills. Geo. W. Smith, president; M. L. Brain, secretary; Manson Rexford, treasurer. Lands, 20 claims, in Stevens county, Washington, claimed to show a vein of 18" to 40" width, assaying 17 to 20% copper. Company claims to have a 755' tunnel. Secretary Brain writes that a great injustice was done by the statement in Vol. V. that the company was alleged by shareholders to be a fraud. The annual report of the company is a curiosity, including the most remarkable financial statement ever seen by the Copper Handbook. Is in litigation, and is viewed with suspicion.

**HUNT MINING & MILLING CO.****IDAHO.**

Office: 8 India St., Boston, Mass. Letter returned unclaimed from former mine office, Weiser, Washington Co., Idaho. Idle some years and moribund.

**HURON GOLD CO.****ARIZONA.**

Office and mine: Jerome, Yavapai Co., Ariz. Geo. W. Hull, president, treasurer and general manager; H. E. Wilcox, secretary. Organized under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 5 claims, area 80 acres, known as the Swindler mine, in the Big Bug district, having a 125' shaft and 680' tunnel, with upwards of 1,000' of workings, showing a vein up to 18' width, carrying ore giving assays of 2.5 to 11% copper and \$5 to \$30 gold per ton. Is said to have 800 tons of ore on dump. Idle several years.

**HUBON MINING CO.****WASHINGTON.**

Office: Everett, Wash. Mine office: Darrington, Snohomish Co., Wash. Ores carry copper and gold values. Has water power. Idle several years.

**HUSTON MINE.****ONTARIO.**

Office: care of John J. Case, Morococha, Junín, Peru. Mine office: Thessalon, Algoma, Ont. Lands, 1,400 acres, 15 miles north of Thessalon, showing a 60' vein, standing circa 40' high, traceable circa 3,000', with an 18' pay-streak carrying sulphide ore with quartz gangue, up to 8% in copper tenor. Is but slightly developed. Idle since circa 1902.

**HYATT-VERDE COPPER CO.****COLORADO.**

Office and mine: Steamboat Springs, Routt Co., Colo. B. C. Hazelbacker, manager. Was developing, 1907, on a small scale.

**HYDAH COPPER CO.****ALASKA.**

Office: care of Fred J. Eitel, president, Seattle, Wash. Mine office: Coppermount, Prince of Wales Island, Alaska. J. A. Jackson, vice-president; Victor Vigilius, general manager; F. W. Crary, secretary; J. Albert Johnson, treasurer; C. H. Waters, superintendent. Organized 1906, under laws of Washington, with capitalization \$60,000. Lands, known as the Mammoth group, are on the north side of Karta Bay, circa 2,000' from tidewater, developed by a 40x40' pit showing an ore body of 40' width, low in copper tenor and carrying up to \$2 gold per ton. Has a tunnel connecting with upper bins, which in turn has a 2,100' tramline running to ore bunkers on the wharf, at tidewater. Shipped some ore, 1907. Property considered promising.

**HYPOCKA MINING CO.****MONTANA.**

Dead. Lands sold, 1906, to Butte Coalition Mining Co. Formerly at Butte, Silver Bow Co., Mont.

**HYPOTHEEK MINING & MILLING CO.****IDAHO.**

Office: Wallace, Idaho. Mine office: Kingston, Shoshone Co., Idaho. Octave Guay, president; Walter J. Bracking, vice-president; Norman Ebbiley, general manager; Abraham Wyman, secretary; B. S. Knudson, treasurer; preceding officers, Frank Guay, C. W. Wingate and A. H. Conner, directors.

Lands show 3 veins, two of 10' to 20' estimated width, and one, known as the Great Western, under development, which is opened by a 180' blind shaft from the breast of a 700' tunnel, showing a vein of 8' to 25' width, with a 12" to 18" paystreak carrying native copper and cuprite, said to average 4.5% in tenor, and chalcopyrite assaying up to 16% copper, balance of vein carrying low grade ore estimated at 2% copper, with small gold and silver values. Property also shows galena, apparently undeveloped. Equipment includes a 65-h. p. boiler, 10-h. p. hoist, 5-drill air-compressor and a sawmill.

**SOCIEDAD COLECTIVA IBARRA HERMANOS.****SPAIN.**

Office: Sevilla, Spain. Mine office: Cortegena, Huelva, Spain. José Luis Buiza, manager. Property is the San Telmo group of 29 old mining claims, area 222 hectares, carrying cupriferous iron pyrites.

**IEBX PLOMOSA MINING CO.****ARIZONA.**

Office: Yuma, Ariz. Mine office: Bouse, Yuma Co., Ariz. Thos. L. DeSpain president; H. H. McPhaul, vice-president; Wm. C. DeSpain, secretary and treasurer; preceding officers, J. L. DeSpain and J. D. Marrs, directors. Organized 1907. Lands, circa 30 claims, and 28 claims said to have been added, early 1908, in the Plomosa Mountains, 12 miles south of Bouse, showing oxidized ores of high copper tenor, carrying up to \$4.50 gold per ton.

**ICONOCLAST CONSOLIDATED MINES CO.****WASHINGTON.**

Office: 412 Berlin Bldg., Tacoma, Wash. Mine office: Keller, Ferry Co., Wash. J. R. Turner, president; C. E. Peterson, secretary; Alexander McMasters, superintendent. Organized 1902, under laws of Washington, with capitalization \$2,500,000, shares \$1 par, as a merger of Alliance Copper Mining Co. and Iconoclast Gold & Copper Mining Co.

Lands, 7 claims, area 115 acres, circa 2 miles north of Keller, showing 3 contact deposits, one claimed by company to be 150' wide and to carry chalcopyrite assaying 5% copper, 2 oz. silver and \$5 gold per ton, which is a serious overestimate all around, property apparently having an ore body up to 30' in width, giving average assays of 3.6% copper and 2 oz. silver per ton, with some gold. Development is by a 325' main shaft, and 3 tunnels with claimed aggregate length of 514', longest tunnel apparently being 120' only. Has gasoline power. Resumed work, early 1907, after a period of idleness. Apparently idle again.

**ICONOCLAST GOLD & COPPER MINING CO.****WASHINGTON.**

Dead. Absorbed, 1902, by Iconoclast Consolidated Mines Co. Formerly at Keller, Ferry Co., Wash.

**IDAHO CONSOLIDATED COPPER CO.****IDAHO.**

Office: Newcastle, Pa. Mine office: Grangeville, Idaho Co., Idaho. J. P. H. Cunningham, president; Irvin E. Rockwell, manager. Lands, on the Salmon River, have a 700' tunnel, showing ore assaying up to 15% copper, 41 oz. silver and \$2 gold per ton. Equipment includes an 800-h. p. hydro-electric installation and a 200-ton mill, in 2 units, one dry and one wet, the dry section having Sutton & Steele dry tables, while the wet section is equipped with Wilfley tables, Calow screens and tanks.

**IDAHO CONSOLIDATED COPPER MINES CO.****IDAHO.**

Dead. Was a bit of stock-jobbery. Formerly at Decorah, Washington Co., Idaho.

**IDAHO CONTINENTAL MINE.****IDAHO.**

Mine office: Priest River, Bonner Co., Idaho. Lands, north of the Priest

Lake Mining Co., are opened by tunnel, showing ores carrying values mainly in silver-lead, with some copper.

**IDAHO COPPER CO.**

**IDAHO.**

Office: care of John H. Nordquist, Wallace, Idaho. Mine office: Coeur d'Alene, Kootenai Co., Idaho. Lands adjoin the Reindeer mine, extension of vein of which is being sought by tunnel.

**IDAHO COPPER MINES CORPORATION, LTD.**

**IDAHO.**

Office: 1906-74 Broadway, New York, N. Y. Thos. Greenwood, manager; N. S. Edwards, consulting engineer. Location of lands in Idaho, if any, unknown.

**IDAHO COPPER MINING CO., LTD.**

**IDAHO.**

Mine office: Wallace, Shoshone Co., Idaho.

**IDAHO COPPER MINING & SMELTING CO.**

**IDAHO.**

Dead. Formerly in Idaho county, Idaho. Described Vol. VII.

**IDAHO MILLING CO.**

**IDAHO.**

Dead. Formerly at Doniphan, Blaine Co., Idaho.

**IDAHO REDUCTION CO., LTD.**

**IDAHO.**

Office: Corcoran Bldg., Washington, D. C. Letter returned unclaimed from former mine office, Weiser, Washington Co., Idaho. Works office: Clarks-ton, Asotin Co., Wash. Geo. A. Rahm, president; C. F. Drake, vice-president; F. S. Bright, secretary; John Sennett, treasurer; preceding officers and S. Fairfield, directors. Organized 1903, with capitalization \$1,000,000, shares \$1 par. Said to plan removal of smelter, on account of high price of fuel. Presumably idle.

**IDAHO SMELTING & REFINING CO.**

**IDAHO.**

Office: Rookery Bldg., Spokane, Wash. Mine office: Sand Point, Bonner Co., Idaho. J. Herbert Anderson, president; C. C. Titus, general manager. Organized circa 1907, with capitalization \$2,000,000, as a reconstruction of the Panhandle Smelting Co. Has authorized a \$500,000 issue of 6% bonds. Indebtedness of old company, amounting to circa \$217,000, was assumed by the new corporation.

Land include the Venezuela group of claims, slightly developed, on the southeastern shore of Lake Pend d'Oreille, carrying silver-lead ores.

The 200-ton reduction plant, known as the Panhandle or Ponderay smelter, on Lake Pend d'Oreille, is primarily a lead plant, though capable of handling copper ores also. Equipment includes four 60-ton roasters. There is a wharf, and the company owns a small steamboat.

The smelter was blown in circa June, 1907, and blown out shortly thereafter, ostensibly owing to lack of sulphide ores for fluxing. The smelter was again blown in Oct. 20, 1908, with a force of circa 75 men, and is planned to do a general custom smelting business, more especially on silver-lead ores, and is being managed under the advice of the Montana Mineowners' Association, which furnishes moral support and has promised to furnish ore. There has been talk of increasing the capacity of the plant, but this is premature, as the works should first demonstrate their ability to operate profitably.

**IDAHO & SPRING GULCH MINING & MILLING CO., LTD.** **MONTANA.**

Office and mine: Mullan, Shoshone Co., Idaho. F. Carson, president and general manager; Andrew Swanson, vice-president; E. A. M. Vitty, secretary; Wm. Coumerlh, treasurer. Organized Oct. 30, 1906, under laws of Idaho, with capitalization \$1,000,000, shares \$1 par; issued, circa \$850,000.

Lands, 7 claims, 1 fractional, area circa 110 acres, well timbered, between the Little Pittsburg and King and Queen mines, in an unorganized district near Carter, Missoula Co., Mont. Property shows porphyry, slate and limestone, carrying 2 ore bodies, of which one, under development of 6' estimated average width, traceable 2,000', is estimated to average 6% copper and

32 oz. silver per ton, mainly from gray copper ore. There also is a parallel vein, carrying silver-lead ore. Development on the copper vein is by shafts of 50' and 300', and tunnels of 60' and 700', longer being planned to be driven 1,700', to cut both copper and lead veins. The upper tunnel shows malachite and azurite, assaying circa 7% copper, 1.4 oz. silver and 1 to 6 oz. gold per ton. Mine has 3 small buildings and is circa 3 miles from the Montana and Northern Pacific railroads.

**IDA MONTANA DEVELOPMENT CO.****MONTANA.**

**Dead.** Was organized June 6, 1906, under laws of Arizona, with capitalization \$800,000, shares \$10 par, and reorganized circa August, 1907, as Ida Montana Mining Co. Formerly at Butte, Silver Bow Co., Mont.

**IDA MONTANA MINING CO.****MONTANA.**

**Office:** Calumet, Mich. **Mine office:** Butte, Silver Bow Co., Mont. P. D. MacNaughton, president; Capt. Jas. W. Milligan, vice-president and mining director; Wm. J. McDonald, secretary; Jos. W. Selden, treasurer; M. J. McEvans, superintendent; preceding officers, Wm. H. Thielman, F. P. Rugee, Victor Nordberg, Edward Ulseth, Angus McDonald and Jeremiah E. O'Neil, directors. Organized 1907, under laws of Arizona, with capitalization \$3,000,000, as a reconstruction of the Ida Montana Development Co.

Lands, 3 claims, known as the Ida, A and B, near the Amazon-Butte, across the valley and about 1½ miles southeast of Butte, just south of Columbia Gardens, said to have been bought for \$175,000, and to be fully paid for.

The property had 2 old shafts, of 115' and 118', one of which, known as No. 3, has been cut down to 3-compartment size, and sunk to 480' depth, and is planned to be sunk 1,000'. This shaft shows, on the 250' level, copper sulphides carrying silver and gold values of commercial grade, and a little ore was shipped, 1908, by leasers.

Equipment includes a hoist good for 1,500', from the Baltic mine, and a 20-drill air-compressor, with several small mine buildings. Property employed circa 50 men, late 1907, but was attached December, 1907, in 3 actions, for supplies furnished. Apparently the indebtedness has been liquidated, and, late 1908, company planned early resumption. Management includes some strong and experienced mining men, but property lies outside the proven ore zone of Butte.

**IDEAL MINING CO.****UTAH.**

**Office:** care of Newton A. Dunyon, president, Salt Lake City, Utah. **Mine office:** Milford, Beaver Co., Utah. Wm. M. Bradley, vice-president; W. T. Atkin, secretary and treasurer; preceding officers, C. M. Strevell and J. H. Paterson, directors. Property adjoins the Burning Moscow mine. Presumably idle.

**IDEAL MINING & DEVELOPMENT CO.****ARIZONA.**

**Office:** 38 Wall St., New York, N. Y. **Mine office:** McCabe, Yavapai Co., Ariz. Cecil G. Fennell, general manager; M. J. Enright, superintendent Gladstone mine; Jas. O'Brien, superintendent Model mine.

The Gladstone mine has a 1,000' shaft, with auriferous and argentiferous copper and lead ores, values being mainly in gold. Equipment includes an electric pump, on the 800' level, handling 20,000 gallons daily, a 120-h. p. Hendrie & Bolthoff hoist, capable of raising 3-ton loads from 1,500', and a 4-drill Ingersoll-Sergeant air-compressor, all electrically operated by a Crocker-Wheeler motor. The Gladstone ships high grade ore, and runs concentrating ore through the McCabe mill.

The Model mine, 6 claims, formerly known as the McCabe, bought, circa 1906, for \$81,521, has a 750' incline shaft, with about 12,000' of workings, showing several ore bodies carrying 8" to 10" of smelting ore, and 12" to 24" of milling ore, former with combined gold, silver and copper values of \$35

to \$85 per ton, and latter carrying about 2% copper, with small gold and silver values. Country rock is granite, with numerous intrusive porphyry dikes, granite being much shattered. Oxidized zone is only about 40' deep, followed by auriferous and argentiferous copper, lead and zinc sulphides.

The McCabe, or Model mill, has 10 stamps, a 50-ton Elspass mill, 1 Wilfley and 3 Standard tables. Production, 1906, was 518,895 lbs. fine copper, 139,766 oz. silver and 14,696 oz. gold, of the total value of \$497,152. Production, 1907, was 361,257 lbs. fine copper, 117,582 oz. silver and 12,004 oz. gold.

#### **IKONOMOFF CESSION.**

Office: care of M. Dimitri Ikonomoff, owner, Hotel Boulevard, Sofia, Bulgaria. Mine office: Kara-Bair, Bourgos, Bulgaria. Lands, slightly developed, are held as a cession from the principality. Idle.

#### **IKUNO MINE.**

**JAPAN.**

Owned by Mitsu Bishi Goshi-Kwaisha.

#### **ILLION MINING CO.**

**UTAH.**

Mine office: Bingham Canyon, Salt Lake Co., Utah. Lands, 2 claims, known as Grand Cross and Rough & Ready. Idle some years.

#### **ILLINOIS COPPER MINING CO.**

**WYOMING.**

Office: 862 Monadnock Blk., Chicago, Ills. Mine office: Encampment, Carbon Co., Wyo. Geo. H. Miller, president and general manager; N. V. S. Mallory, secretary and treasurer; A. H. Oldman, superintendent. Organized 1899, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par. Lands, 9 claims, area 185 acres, in the Upper Platte district, near the Colorado line, showing 3 contact veins, principal said to be 18' wide, 50' deep and 4,500' long, carrying chalcocite, with quartz gangue, assaying 14 to 27% copper, 20 oz. silver and \$4 gold per ton, which is excessive. Has 3 shafts, deepest 70'. Was working a small force early in 1907.

#### **ILLINOIS COPPER MINING & MILLING CO.**

**WASHINGTON.**

Letter returned unclaimed from former mine office, Republic, Ferry Co., Wash. Is said to have 40' vein, opened by a tunnel showing copper ore of commercial grade.

#### **ILLINOIS GOLD & COPPER MINING CO.**

**MEXICO.**

Dead. Formerly at Pánuco de Monclova, Coahuila, Mex.

#### **ILLINOIS-JALISCO MINING CO.**

**MEXICO.**

Office: 213 South Sixth St., Springfield, Ills. Mine office: Ayutla, Autilán, Jalisco, Mex. E. A. Perry, president; Homer Vandevender, vice-president; Thos. Montgomery, secretary; J. T. Ash, treasurer; preceding officers and Geo. D. Gibbons, directors; John Breckenridge, general manager. Capitalization \$1,000,000, shares \$1 par; issued, \$750,000.

Lands, 45 hectares, including El Crudo and El Bajío mines, latter an antigua. Property is said to show 15 veins, with 6 under development, main vein being 8' to 17' in width, traceable 2 miles. El Crudo shaft, of 225' depth, shows ore of 5 to 20% copper tenor, estimated to average 5% copper, 15 oz. silver and \$5 gold per ton. Mine has about 3,000' of workings, estimated to show circa 50,000 tons of ore.

Company plans a 500-h. p. hydro-electric installation, mining equipment and building a concentrator. Employs circa 75 men.

#### **ILLINOIS & JEROME COPPER CO.**

**ARIZONA.**

Mine office: Jerome, Yavapai Co., Ariz. A. D. Zallanack, president; Fred H. Gorham, vice-president; Annie E. Zallanack, secretary and treasurer; preceding officers are the directors. Organized circa August, 1908, with capitalization \$1,000,000, shares \$1 par. Lands are near the Copper Chief.

#### **ILLINOIS MEXICAN COPPER CO.**

**MEXICO.**

Office: 15 Broad St., New York, N. Y. Mine office: Ayutla, Autilán,

Digitized by Google

Jalisco, Mex. L. C. Frey, manager. Organized 1906, with capitalization \$800,000. Presumably idle.

**MINA ILLUSION.****CHILE.**

Mine office: Talcuna, La Serena, Coquimbo, Chile. Victor Illanes, owner and manager. Property, 16 kilometers from Marquesa railway station, shows a vein of about 12' average width, and, in 1903, with a force of 16 men, produced about 400 metric tons of ore of about 9% average copper tenor.

**IMA CONSOLIDATED MINING & MILLING CO.****IDAHO.**

Dead. Formerly at Patterson, Lemhi Co., Idaho. Described Vol. VI.

**IMLAY COPPER MINING CO.****NEVADA.**

Office: Salt Lake City, Utah. Mine office: Humboldt House, Humboldt Co., Nev. Geo. W. Morgan, president; R. E. Siddoway, secretary; preceding officers, Jos. Lippman, Sidney M. Bamberger, F. M. Smith and O. W. Powers, directors; J. R. Turner, superintendent. Changed name, early 1907, from Morrison Mining Co. to present title, and increased capitalization to \$5,000,000.

Lands, 26 claims, unpatented, 2 millsites and a townsite, circa 5 miles from Humboldt House. Mine has 250' incline shaft, with circa 1,500' of workings, showing ore assaying up to 8.8% copper, 7.6% lead and 0.18 to 66.5 oz. gold per ton. Equipment includes two 60-h. p. boilers, a hoist and several small buildings. A concentrator is planned. Begun shipments circa April, 1908, to the Selby smelter, shipping one carload weekly, of ore running \$50 to \$100 per ton in values. A mill is planned. Property considered promising.

**IMPERIAL COPPER CO.****ARIZONA.**

Dead. Formerly at Wickenburg, Maricopa Co., Ariz. Described Vol. III.

**IMPERIAL COPPER CO.****ARIZONA.**

Office: 1408-11 Pine St., New York, N. Y. Operating office: Tombstone, Ariz. Mine office: Silver Bell, Pima Co., Ariz. E. B. Gage, president; W. F. Staunton, vice-president and general manager; A. N. Gage, secretary and treasurer; preceding officers, Selwyn Eddy, V. L. Mason and H. M. Robinson, directors; David Morgan, mine superintendent; C. C. Klingerman, railroad superintendent; S. F. Shaw, engineer; J. C. Woodworth, mine foreman.

Organized May 15, 1903, under laws of Arizona, with capitalization \$5,000,000, shares \$10 par. Bonds, \$2,000,000 authorized, at 6%. Is controlled, through ownership of practically entire stock issue, by Development Co. of America. Apparently controls, through ownership of practically entire stock issue, the Southern Arizona Smelting Co., though latter-named corporation may be controlled by the Development Co. of America. Paid 2% dividends, April, 1906, and January and April, 1907, but suspended dividends on account of the depression in the copper market. Net earnings, for fiscal year ending March 31, 1908, were \$220,129. Fiscal year has been changed to end September 30. Annual meeting, second Tuesday in November.

Lands, 60 claims, mostly patented, area circa 1,000 acres, also a 640 acre millsite at Red Rock, with total holdings of about 3,000 acres, in the Silver Bell Mountains, a small independent range having a granitic base, with limestone and quartzite capping, latter much eroded and entirely gone at many points. There has been much faulting and shearing, ore bodies occurring as irregular contact lenses, having a northwesterly strike, with axes parallel to fault and fissure planes. The granite-porphry in the vicinity of the lenses is strongly mineralized with copper sulphides. The eruptive dioritic dykes are highly altered, and the ore bodies carry strong gossans. The oxidized zone is comparatively shallow, being not deeper than 150' in the principal workings, with a sharp change from the oxidized to the base zone. The oxidized ores are mainly cuprite, malachite and azurite, with furnished the bulk of past production, while the sulphide ore is mainly chalcopyrite, with occasional bornite. The mines also show some cupriferous silver-lead ore,

much of which is an intimate mixture of galena, sphalerite and chalcopyrite, decidedly difficult of satisfactory reduction. Ores mined, 1905, were reported to average 9.08% copper, 1.2 oz. silver and 12 cents gold per ton.

Property includes the Old Boot mine, now known as the Mammoth, opened circa 1865, which was a small producer, at irregular intervals, of high grade copper and silver-lead ores, under former ownership. This mine is opened by the 2,000' Page crosscut tunnel, and by the Mammoth and Union shafts, to depth of circa 800', with upwards of 6 miles of workings. The old Mammoth incline shaft, of 400' depth, was replaced by a new 2-compartment vertical shaft, the old shaft now being used solely for ventilation and pump-columns.

Equipment includes a power plant with six 70-h. p. boilers, burning petroleum, with oil storage tanks, and 5 hoists, of 12-h. p. to 200-h. p. each, larger, having 14x18" cylinders, being good for 2,000' depth. There are 10-drill and 15-drill 2-stage Norwalk straight-line air-compressors, and a Nordberg cross-compound condensing air-compressor, with piston efficiency of 3,000 cu. ft. of free air per minute.

Buildings include 20x30' and 30x80' machine shops, of wood, sheathed with corrugated iron, a 36x40' carpenter shop, a framing-mill, an 18x50' smithy, bunk-houses, boarding-houses, changing-houses and about 20 dwellings, with a 3-story mine store, carrying a large stock. There also is an electric light plant.

The 300-ton concentrator, completed September, 1908, is said to have cost circa \$165,000. There also is a 20x40' experimental mill, of 10 tons daily capacity.

The Arizona Southern railway, 21 miles long, from Silver Bell to Red Rock, where connection is made with the Southern Pacific, is of standard gauge, and was built by the company. Equipment includes 2 locomotives and 5 cars.

The smelter, at Sasco, 8 miles south of Red Rock, is described separately under title of its owner, the Southern Arizona Smelting Co.

About 300 men are employed, mainly Mexicans, at average wages of \$2 per day.

Production has been as follows: 3,030,630 lbs. fine copper in 1904; 5,687,152 lbs. in 1905; 4,385,246 lbs. in 1906; 5,267,401 lbs. fine copper and 63,170 oz. silver in 1907. For fiscal year ending March 31, 1907, production was 38,072 tons of ore, yielding 4,275,090 lbs. fine copper and 48,252 oz. silver, and for fiscal year 1908 output was 49,205 tons of ore, yielding 5,740,975 lbs. fine copper and 67,701 oz. silver. For first half of 1908 copper is said to have been produced for 10.68 cents per pound. Until Feb. 1, 1908, when the Sasco smelter was blown in, all ore was shipped to outside smelters. Copper is sold by the American Metal Co., Ltd., under a 3-year contract. Production, 1909, should show a very large increase, owing to increased productive capacity of the mill and smelter, and the company plans making 12,000,000 to 15,000,000 lbs. fine copper yearly. The property is well managed and is considered exceptionally promising.

#### **IMPERIAL COPPER CO.**

Dead. Formerly at Parry Sound, Parry Sound district, Ont.

#### **IMPERIAL COPPER & GOLD MINING CO.**

#### **ONTARIO.**

#### **WYOMING.**

Office: 219 Germania Bldg., Milwaukee, Wis. Letter returned unclaimed from former mine office, Encampment, Carbon Co., Wyo. Lands, 160 acres, near the Portland mine, on Upper Cow Creek, 12 miles west of Encampment, claimed to show 2 veins, 1 with width of 26' to 32' being a schist dike, having about 400' of workings, showing ore assaying 6 to 14% copper. Idle several years, except for selling stock.

**IMPERIAL COPPER MINING CO.****CALIFORNIA.**

Dead. Formerly at Pollasky, Fresno Co., Cal. Described Vol. VI.

**IMPERIAL COPPER MINING CO.****UTAH.**

Dead. Formerly at Frisco, Beaver Co., Utah.

**IMPERIAL CORONA GOLD MINING CO.****IDAHO.**

Office: 67 Wall St., New York, N. Y. Lost lands, 1908. Stock of El Progreso Copper Mining Co. was exchanged, December, 1905, for stock in this concern. Apparently merely a bit of stock-jobbery. Formerly at Elk City, Idaho Co., Idaho.

**IMPERIAL GOLD & COPPER MINING CO.****UTAH.**

Dead. Lands sold June 10, 1907, to Nevada-Utah Mines & Smelters Corporation. Formerly at Frisco, Beaver Co., Utah.

**IMPERIAL MINING CO.****IDAHO.**

Mine office: Burke, Shoshone Co., Idaho. Henry Billberg, president; Homer G. Brown, secretary; John H. Nordquist, general manager. Organized 1906, with capitalization \$1,000,000, shares \$1 par. Lands, near the Copper King, have about a quarter-mile of tunnels. Plans a new 3,000' tunnel.

**IMPERIAL MINING CO.****WASHINGTON.**

Office: Marysville, Wash. Mine office: Silverton, Snohomish Co., Wash. Jas. E. Dupree, president. Lands, 11 claims, showing a contact vein between diorite and conglomerate, carrying gold, silver, copper and lead ores. Idle several years.

**IMPERIAL MONTANA COPPER MINING,****MONTANA.****SMEILING & WATER POWER CO.**

Dead. Reorganized, 1904, as Bornite Copper Co. Formerly at Blackfoot, Teton Co., Mont. Described Vol. V.

**IMPERIAL PAINT & COPPER CO.****CALIFORNIA.**

Mine office: Spenceville, Nevada Co., Cal. Mine is developed open-cast, and has steam power. Idle.

**IMPERIAL STATE MINING & MILLING CO.****NEVADA.**

Office: care of A. C. Rector, secretary, Los Angeles, Cal. Letter returned unclaimed from former mine office, Searchlight, Lincoln Co., Nev. U. S. G. Todd, president. Organized under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 6 claims, also a 5-acre millsite and a water right, having tunnels of 35' and 265' showing ore said to give average assays of above 10% copper and about \$90 gold per ton, which figures seem excessive. Idle and apparently moribund.

**IMPERIO COPPER CO.****MEXICO.**

Office: Tucson, Ariz. Lands were said to be near Imperio, Sonora, Mexico, which is not a postoffice, and seems non-existent.

**COMPANIA MINERA INCA DE ORO I COBRE DE COPIAPO.****CHILE.**

Office: Iquique, Chile. Mine office: Copiapó, Atacama, Chile. Organized Dec. 14, 1906, under laws of Chile, with capitalization £30,000, shares £1 par.

**INCA MINING & MILLING CO.****IDAHO.**

Office: Celfax, Idaho. Mine office: Cuprum, Washington Co., Idaho. Property is the Mineral World mine, carrying auriferous and cupriferous silver-lead ores. Idle.

**INDEPENDENCE COPPER & GOLD MINING CO.****UTAH.**

Office: care of E. O. Leatherwood, secretary-treasurer, Salt Lake City, Utah. Mine office: Alta, Salt Lake Co., Utah. Chas. Park, president; E. R. Morgan, general manager. Organized 1904, with capitalization \$50,000, shares 10 cents par. Lands, 7 claims, in the Little Cottonwood district. Idle several years.

**INDEPENDENCE COPPER MINING & SMELTING CO. IDAHO.**

Dead. Merged, November, 1905, in Bonanza Mining Co. Formerly at Montpelier, Bear Lake Co., Idaho.

**INDEPENDENCE DEVELOPMENT CO. ARIZONA.**

Office: 1525 Western Ave., Los Angeles, Cal. Letter returned unclaimed from former mine office, Globe, Gila Co., Ariz. Col. Thos. E. Farrish, president; Chas. J. Hall, secretary and treasurer; Chas. Kumke, superintendent; Wm. Sultan, receiver. Organized Oct. 22, 1906, under laws of Arizona, with capitalization \$1,500,000, shares \$10 par.

Lands, on Lyons Fork of Mineral Creek, 4 miles from the Gibson mine, show Pinal schist, with fissure veins of copper ore, mainly sulphide, carrying considerable silver and gold values. Lands show 3 practically parallel fissures, and considerable ore of 5 to 25% copper tenor has been blocked out. Has steam power. Shipped circa 400 tons, February, 1908, to the Old Dominion smelter, securing good average returns in copper, gold and silver. Property considered promising, but finances in a bad way.

**INDEPENDENCE GOLD, COPPER & IRON MINING CO. CALIFORNIA.**

Dead. Formerly at Lavic, San Bernardino Co., Cal.

**INDEPENDENCE MINE. MONTANA.**

Mine office: Kalispell, Flathead Co., Mont. Property, on the Tobacco plain, is claimed to show a 25' vein giving average assays of 8% copper and \$4 to \$10 gold per ton, which is obviously a serious overestimate. Idle for several years.

**INDEPENDENCE MINING CO. COLORADO.**

Mine office: Turret, Chaffee Co., Colo. Has auriferous copper ores, with steam power. Presumably idle.

**INDEPENDENCE MINING CO. IDAHO.**

Mine office: Mullan, Shoshone Co., Idaho. Lands adjoin the Copper King mine, on the east, and give a promising surface showing. Idle, but ground is being developed by a tunnel driven by the Missoula Copper Co.

**INDEPENDENCE MINING CO. WYOMING.**

Office: 55 High St., Oshkosh, Wis. Mine office: Dillon, Carbon Co., Wyo. Employs 16 men. E. E. Meilins, president; Henry L. Larsen, vice-president; H. O. Granberg, secretary, treasurer and general manager; E. M. Sanders, superintendent. Organized June 28, 1904, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par, as successor of Leighton-Gentry Mining Co.

Lands, 6 claims, patented, area 120 acres, in the Battle Lake district, showing eruptive metamorphic country rocks, carrying an 11' contact vein between quartzite and diorite, opened by a 200' shaft and 250' tunnel, showing occasional stringers of 3" to 12" width, carrying a little chalcopyrite assaying 12% copper, with small quantities of nickel and cobalt and traces of silver and gold. Has steam power, hoist and several small mine buildings. Company reports having a smelter with a 60-ton MacDonald blast-furnace.

**INDEPENDENCE MINING & SMELTING CO. MEXICO.**

Letter returned unclaimed from former office, St. Paul, Minn. Mine office: Guachinango, Mascota, Jalisco, Mex. Chris. D. O'Brien, Jr., manager. Mine has a 300' shaft and a 370' tunnel, showing argentiferous copper ore. Has a 50-ton smelter.

**INDEPENDENT COPPER MINING & MILLING CO. IDAHO.**

Office: Wallace, Idaho. Mine office: Mullan, Shoshone Co., Idaho. Jos. Bean, president; John H. Nordquist, vice-president and manager; C. D. Miller, treasurer; preceding officers, Henry Billberg, D. F. Clark, R. E. McCormick, August Matt, and H. Leithead, directors. Capitalization increased, 1907, to

\$1,250,000. Lands, near the Snow Storm, have a 786' tunnel, showing seams of copper carbonates and impregnations of chalcopyrite.

**INDEPENDENT MINING CO.****WASHINGTON.**

Office: 705 First Ave., Seattle, Wash. Mine office: Baring, King Co., Wash. Edward Peterson, agent. Lands, sundry claims, on the north fork of Fortune Creek, Kittitas county, Washington, claimed by company to show 14 veins of galena, 2 gold veins, 1 cobalt vein, and an asbestos deposit, one gold vein being asserted to be 30' to 70' wide. The company claims too much and has performed too little. Apparently moribund.

**INDÉ REDUCTION CO.****MEXICO.**

Works office: Indé, Durango, Mex. Is said to have a smelter, known as La Roca. Presumably idle.

**INDEX-BORNITE COPPER MINING CO.****WASHINGTON.**

Office: 36 Dexter Horton Bldg., Seattle, Wash. Mine office: Index, Snohomish Co., Wash. A. M. Watt, secretary, treasurer and general manager. Lands, 2 claims, area 40 acres, 3 miles east of Index, having a 50' shaft and tunnels of 70' and 300', lower tunnel showing a 2' to 4' vein with paystreak carrying argentiferous bornite assaying 16 to 50% copper and 6 to 8 oz. silver per ton. Was developing at last accounts.

**INDEX INDEPENDENT MINING CO.****WASHINGTON.**

Dead. Lost lands, Jan. 1, 1905. Formerly at Index, Snohomish Co., Wash.

**INDEX MINING CO.****WASHINGTON.**

Office: Snohomish, Wash. Mine office: Index, Snohomish Co., Wash. Lot Wilbur, president and general manager. Lands, 5 claims, known as the Miller group, opened by tunnels of 300' and 800', showing chalcocite, bornite and chalcopyrite, in a 12' vein of concentrating ore carrying a 2' paystreak of smelting ore, on the footwall. Idle.

**INDIANA-ARIZONA MINING CO.****ARIZONA.**

Dead. Succeeded circa 1906, by Indiana-Arizona Development Co. Formerly at Silver Bell, Pima Co., Ariz.

**INDIANA COPPER CO.****MICHIGAN.**

Office: Houghton, Mich. Mine office: Rockland, Ontonagon Co., Mich. R. M. Edwards, R. C. Pryor, J. H. Rice, Dean Robinson and Frank McM. Stanton, directors. Organized 1862, under laws of Michigan, with capitalization \$500,000, shares \$25 par. Control was bought, circa 1907, from John R. Stanton and others, by present management. Lands, 1,280 acres, in Sections 21, 27 and 28, Town 50 North, Range 37 West. Assessments paid, \$178,708. Mill was burned, 1864, and property since idle. Lands presumably carry the extension of the amygdaloid bed now being opened by the Lake Copper Co., and probably will be explored therefor.

**INDIANA COPPER CO.****WYOMING.**

Mine office: Holmes, Almany Co., Wyo. Lands, 6 claims, near the Rambler mine. Idle some years and apparently moribund.

**INDIANA-DARRINGTON MINING CO.****WASHINGTON.**

Office: care of Jas. G. Givens & Co., 405 Bailey Bldg., Seattle, Wash. Mine office: Darrington, Snohomish Co., Wash. G. A. Rochester, president; Geo. M. Crawford, secretary. Capitalization \$1,000,000, shares \$1 par. Presumably idle.

**INDIANA DEVELOPMENT CO.****ARIZONA.**

Dead. Reorganized, circa 1906, as Indiana-Arizona Development Co. Formerly at Silver Bell, Pima Co., Ariz.

**INDIANA MINING CO.****OREGON.**

Office: 25 Becker Bldg., Anderson, Ind. Operating office: Baker City, Ore. Mine office: Medical Springs, Baker Co., Ore. John W. Messner, president and general manager; J. W. McAlpine, vice-president; Dr. W. H. Staphis,

treasurer; Dr. A. A. Cleaver, auditor; W. L. Myers, superintendent; preceding officers, E. E. Cleaver, G. F. Aldrich, Henry Schies and Wm. Godejohann, directors; W. G. Drowley, secretary. Organized June 18, 1903, under laws of Oregon, with capitalization \$1,500,000, shares \$1 par.

Lands, 14 claims, also a 280-acre townsite, on Big Creek, circa 25 miles east of Baker City, in the foothills of Powder Mountains. Property shows strong outcrops, and has a contact deposit between porphyry and greenstone carrying auriferous and argentiferous copper sulphides with quartz gangue, averaging 2 to 3% copper, with occasional ore of higher grade. Development is by a tunnel, which has not reached the ledge, and a 2-compartment 330' shaft, with 3 levels opened, and about 2,000' of workings, said to show 2 ore bodies, one of 55' and one of 10' width, carrying 3.5 to 5% copper, and circa \$3 gold per ton.

Equipment includes a Leyner hoist, good for 1,000' depth, a 4-drill Leyner air-compressor, 8 power drills and a small electric light plant. There are about 10 buildings, including a 40x70' shafthouse, 40' high, a 16x30' office and a boarding-house. A precipitation plant has 7 tanks, each 4x4x3'. Mine was said, September, 1907, to have circa 20,000 tons of ore on the dump, mainly broken in development, which probably is an excessive estimate. Property is considered promising. Idle.

#### INDIANAPOLIS COPPER MINING CO.

#### WYOMING.

Dead. Formerly at Riverside, Carbon Co., Wyo.

#### INDIANA-SONORA COPPER & MINING CO.

#### MEXICO.

Office: 99 John St., New York, N. Y. Mine office: La Cananea, Arizpe, Sonora, Mex. Prof. Jas. Douglas, president; Geo. Notman, secretary and treasurer; preceding officers, Cleveland H. Dodge, Arthur C. James, S. W. Esterbrook, N. J. McGowan and Dr. Henry Jameson, directors; Walter Douglas, general manager; G. W. McBride, superintendent; T. H. Wiggins, engineer.

Organized November, 1900, under laws of West Virginia, with capitalization \$5,000,000, shares \$10 par; issued, \$3,700,000. For 1906 expenditures were \$40,901 and receipts from ore sales were \$102,610.

Lands, 164 pertenencias, area 405 acres, in the heart of the Cananea Mountains, surrounded by holdings of the Cananea Consolidated. Property shows rhyolite, quartzite and limestone, carrying at least 4 large ore bodies, of very irregular outline, with nearly horizontal dip, main ore body showing a width of 300', with proven length of 600', carrying chalcocite and chalcopyrite of 3 to 4% average copper tenor. Shipments of May, 1907, averaged 3.3% copper and 2 oz. silver per ton, with a trace of gold. Development is by the 1,800' Llave tunnel, developing the main ore body, on ground adjoining the Capote mine of the Greene Cananea, the 1,200' Eureka tunnel, and a third or lower tunnel, known as the Limestone, and by shafts of 400', 300', 300', 200', 100' and 100'. The mine has about 3 miles of workings, and has been estimated to show 400,000 tons of concentrating ore.

Machinery equipment includes 7 hoists, of 25-h. p. to 150-h. p. each, an air-compressor and power drills.

There are about 25 buildings, including a 20x20' carpenter shop, 25x50' machine shop, 20x40' smithy, laboratory, general store and dwellings.

The mine has shipping bins at the mouth of the Llave tunnel, and a short narrow-gauge railway, connecting with the line of the Cananea Consolidated. Some ore has been shipped to the Douglas smelter, and the property employed circa 75 men, before closing down, March, 1907. While the ore is low in average grade, the ore bodies are large, and the management is excellent.

**INDIAN CHIEF MINING CO.****BRITISH COLUMBIA.**

Dead. Was succeeded by Spitzee Gold Mines, Ltd. Formerly at Phoenix, Boundary district, B. C.

**INDIAN FALLS DEVELOPMENT CO.****CALIFORNIA.**

Office: 1111 C St., Tacoma, Wash. Mine office: Quincy, Plumas Co., Cal. C. A. Darmer, president; J. H. Spencer, vice-president; Horace W. Tyler, secretary; O. B. Roeder, treasurer; preceding officers, Anton Huth, Fred H. Murray and John Arthur, directors; G. H. Goodhue, general manager; Capt. C. Henry Thompson, consulting engineer. Organized May, 1908, under laws of Washington, with capitalization \$2,000,000, shares \$1 par; issued, \$1,600,000.

Lands, 21 claims, area circa 420 acres, also the townsite of Indian Falls, in the Shoefly district, showing talcose schists and slate, with 8 lenticular ore bodies, said to be traceable 12,000', opened by tunnels of 80', 84', 220' and 40', showing chalcopyrite assaying 2% copper, 1.4 oz. silver and \$1.10 gold per ton. Has 2 small mine buildings. Company plans development by tunnels, installing a 300-h. p. hydro-electric plant and building a concentrator.

**INDIAN GROUP COPPER CO.**

Dead. Formerly had an office at 1016-25 Broad St., New York, N. Y.

**INDIAN QUEEN CONSOLIDATED MINING CO.****UTAH.**

Office: Provo, Utah. Mine office: Newhouse, Beaver Co., Wash. Jesse Knight, president; L. N. Morrison, vice-president; R. E. Allen, secretary and treasurer; David Evans, manager; Jas. Quinn, superintendent. Organized 1907, under laws of Utah, with capitalization \$150,000. July 1, 1908, had a cash balance of \$6,619.95.

Lands, circa 60 claims, principal properties being about 2 miles east of Newhouse, taken over from the Indian Queen and Leland companies. Has a 600' tunnel, planned to be driven circa 2,500', giving a 1,600' back. Has electric power and an air-compressor. Property considered promising and management good.

**INDIAN QUEEN MINING CO.****UTAH.**

Dead. Merged, 1907, in Indian Queen Consolidated Mining Co. Formerly at Newhouse, Beaver Co., Utah.

**INDIAN SPRINGS COPPER MINING CO.****NEVADA.**

Office: care of T. R. L. Harris, secretary and treasurer, Spokane, Wash. Letter returned unclaimed from former mine office, Goldfield, Esmeralda Co., Nev. E. F. Burns, president; Millard T. Harsten, vice-president; Ross S. Craddock, superintendent. Organized, late 1906, under laws of Washington, with capitalization \$1,500,000, shares \$1 par. Lands are between Goldfield and Greenwater. Idle and presumably moribund.

**INDUSTRIAL COPPER MINING CO.****ARIZONA.**

Dead. Lands were about 2 miles from the Valenzuela mine of the Hub Mining & Investment Co. Formerly at Benson, Cochise Co., Ariz.

**INDUSTRIAL MINING CO.****MEXICO.**

Office: Apartado 2, Hermosillo, Sonora, Mex. Letter returned unclaimed from former mine office, Carbó, Ures, Sonora, Mex. W. D. Schellinger, agent. Lands, 20 hectares, known as the Mina Mixto, circa 30 miles west of Carbó.

**INDUSTRIAL MINING CO.****MONTANA.**

Office and mine: 114 East Main St., Bozeman, Gallatin Co., Mont. J. W. Wilcox, president; S. J. V. B. Henderson, vice-president, treasurer and general manager; J. M. Morris, secretary. Organized Oct. 2, 1902, under laws of Montana, with capitalization \$600,000, shares \$100 par. Lands, 12 claims, area 240 acres, well timbered, in an unorganized mining district near Bozeman, showing gneiss, quartzite and shale, said to carry fissure and contact veins, opened by tunnels of 380', 450', 180' and 1,481', showing sulphide ores, reported by company to average 16 to 40% copper and 6 oz. silver per ton.

**COMPAGNIE d'INGUARÁN.****MEXICO.**

Office: 56 Rue de Provencé, Paris, France. Mine office: Inguarán, Ario, Michoacán, Mex. Ch. Laforgue, general manager; J. L. Philips, superintendent. Organized Jan. 15, 1898, under laws of France, with capitalization 12,000,000 francs, shares 500 francs par. Supposedly is controlled by the French house of Rothschild, and a considerable portion of the company's stock is owned by the Compagnie du Boleo. Property was bought for 1,500,000 pesos, and company is said to have expended about \$8,000,000 thereon, which undoubtedly is an overestimate.

Lands, 185 hectares, also mineral concessions covering 5,000 additional hectares, in the Tacambara district, lying on the plateau of the volcano Jurullo, circa 1,500' above the plains. The mountains form a succession of rugged, almost inaccessible peaks, with ore outcrops near their crests, these, of 90' to 200' width, having a generally east and west trend. Country rock is granite, in several stages of alteration, capped by a siliceous limestone of 200' to 300' thickness. Ore bodies, of immense size, carry almost exclusively copper sulphides, mainly disseminated chalcocite and chalcopyrite, with a little bornite, having a granite-porphyry gangue, assays giving 1.5 to 65% copper, 2 to 100 oz. silver and from a trace to 1 oz. gold per ton. As a rule the silver values are considerable, with slight gold values. Proven depth of the ore is about 300 meters, at which depth it apparently cuts off. Development is by a 2,500' tunnel and 2 main shafts, deepest circa 350', with levels opened at 80' intervals. Both ore and country rock are exceedingly firm, little timbering being required. Estimates of size and value of the ore bodies vary greatly, but the best authorities estimate an average of circa 3.25% copper, with 2,000,000 to 3,000,000 metric tons of ore blocked out. The ore is well adapted to concentration, and apparently could be put about 8 or 10 tons into one, before smelting.

Steam and electric power are used, latter secured from a 200-h. p. hydroelectric installation at Mata de Plantano, 7 miles from the mine, where there is a stream flowing about 80 litres per second, with an available head of 930', fed by springs that burst forth from the foot of Mt. Jurullo, about 150 years ago, after the last eruption of that volcano.

In 1905 a survey was made for a railway from Patzcuaro, the present shipping point, to Ingúarán, a distance of 32 leagues. A complete survey has been made, and plans drawn for a railway from the mines to Zihuatenejo, south of Acapulco, on the Pacific, the route of the proposed line traversing a rugged country, and requiring several years for construction.

Owing to the fact that this property is controlled by the Rothschilds, and is but rarely visited by mining men, many exaggerated and misleading stories have been printed regarding it. The mine has a large body of low grade ore, but the ore is not equal, in quantity or quality, so that of several other Mexican copper mines. Production, 1904, was only 598,439 lbs. of ore, valued at 21,870 pesos, this doubtless having been shipped for test purposes. Property is idle, and is not likely to become a producer until rail connections are secured, and apparently the company is in no hurry about building a railway, as 10 years have been required to get the property to its present very modest stage of development.

**INLAND MINING CO.****MONTANA.**

Mine office: Saltese, Missoula Co., Mont. Bonney Swanson, president. Lands, 10 claims, on Dominion Creek, circa 5 miles from Saltese, having tunnels of 100', 250' and 550', upper tunnel showing a 5' vein carrying ore up to 25% in copper tenor, claimed to average circa 5.5% copper, 11 oz silver and \$6 gold per ton. Property considered promising.

**INNAI MINE.****JAPAN.**

Owned by Furukawa Mining Co.

**INSIZWA NICKEL & COPPER DEVELOPING CO., LTD. CAPE COLONY.**

Office: Mount Ayliff, Cape Colony. Mine office: Kokstad, Griqualand East, Cape Colony. Wilfred Vernon Parsons, secretary. Organized circa March, 1908, under laws of Cape Colony, with capitalization £200,000, shares £1 par. Lands are 2 mining areas, formerly held by South Namaqua Syndicate, showing ore disseminated through norite, occasionally occurring as lenticular masses of considerable size in norite, with shale contact. Average assays give 2.05 to 3.37% copper and 3.29 to 4.75% nickel.

**INSPIRATION MINING CO.****ARIZONA.**

Office: Kansas City, Mo. Mine office: Globe, Gila Co., Ariz. E. A. Hosier, president; W. A. Neiswanger, vice-president; E. P. Wilder, secretary and treasurer; John D. Coplen, general manager. Has authorized a \$200,000 bond issue. Property was under option to General Development Co., but was not sold. Lands, 12 claims, area 240 acres, circa 9 miles west of Globe, near the Live Oak mine. Company also said to have bought, 1906, lands of the Rockwood Copper Co. Mine, having about 1 mile of workings, is opened by the Mercer, Woodson and 2 shorter tunnels. Upper workings show oxidized ores of 4 to 7% copper tenor, succeeded by chalcocite and disseminated chalcopyrite in a ledge of very great width, not all of which is workable, carrying much ore that is below commercial grade at present, though possibly adapted to leaching, and which, in any case, may become valuable in time. Has a 50-ton mill, planned to be doubled in capacity and size to 36x200', terraced in 9 floors. Shipped some ore, 1906. Property considered promising.

**INTERCOLONIAL COPPER CO.****NEW BRUNSWICK.**

Office: 702 Banigan Bldg., Providence, R. I. Mine office: Dorchester, Westmoreland Co., N. B. Darius L. Goff, president; T. J. Edwards, secretary. Organized 1899, under laws of Arizona, and capitalization decreased, 1906, to \$2,000,000, shares \$5 par, in preferred and common shares, latter with restricted voting privileges. Lands, 250 acres freehold and 1,100 acres leasehold from the crown, showing a blanket vein carrying carbonate and sulphide ores, said to give returns of 3 to 4% copper. Has shafts of 40', 75' and 150', also a 1,500' drainage tunnel, with about 8,000' of underground workings.

Works include a 200-ton concentrator, leaching plant and electrolytic refinery, having 2 boilers, 4 engines, crusher, rolls, 15 tubular roasting furnaces, six 300-ton leaching vats and two 50-kw. dynamos. The electrolytic plant has 550 lead cathodes, and 550 lead anodes, 22x33" each, giving a plating surface of 5,000 square feet, for the deposition of electrolytic copper. Plant also includes tanks for precipitation of metal on scrap iron. The reduction plant did not prove satisfactory, machinery going wrong after making about 50 tons fine copper. Idle since 1904 and apparently moribund.

**INTERIOR MINING & TRUST CO.****ARIZONA.**

Mine office: Wickenburg, Maricopa Co., Ariz. Frank L. Baldwin, president; D. L. Murray, vice-president; R. W. Baxter, second vice-president; W. J. Casey, manager. Organized December, 1902, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par. Lands, in the Black Rock district, circa 16 miles northwest of Wickenburg, show ores carrying values mainly in gold. Is said to have a 40-stamp mill. Production, 1907, was 1,616 oz. gold.

**INTERMOUNTAIN EXPLORATION CO.****UTAH.**

Office: 26 Mesaba Bldg., Duluth, Minn. Operating office: 208 Atlas Bldg., Salt Lake City, Utah. Mine office: Stockton, Tooele Co., Utah. H. E. Smith, president; Peter Porter, vice-president; Theophilus F. Smith, treasurer; W. H. Brownrigg, secretary; R. D. Raddatz, manager. Organized Sept. 6, 1906, under laws of Utah, with capitalization \$500,000, in half preferred and

half common shares, of \$10 par. Is developing the property of the Duluth & Utah Development Co., at Stockton, and also holds auriferous and argentiferous copper claims in the Silver Rock district of San Bernardino county, California, and has small holdings of silver claims in Cobalt, Ontario.

**INTERMOUNTAIN GOLD & COPPER MINING CO. IDAHO.**

Mine office: Pocatello, Bannock Co., Idaho. G. B. Rogers, president; Frank Ball, treasurer; G. A. Clark, secretary. Lands are the Lost Horse group, on the Ft. Hall Indian reservation, opened by a 50' shaft, said to be bottomed in good ore. Idle several years.

**INTERMOUNTAIN MINING & INDUSTRIAL ASSOCIATION. UTAH.**

Dead. Lands sold August, 1906. Formerly at Bingham Canyon, Salt Lake Co., Utah. Fully described Vol. VI.

**SOCIEDAD INTERNACIONAL MINERA I BENEFICIADORA CHILE. DE HUANTAJAYA.**

Office: Iquique, Chile. Mine office: Huantajaya, Tarapacá, Chile. Organized June 27, 1900, under laws of Chile, with capitalization 300,000 pesos, shares 50 pesos par.

**INTERNATIONAL CONSOLIDATED SMELTING & MINING CO. MEXICO.**

Office: 12 West 38th St., New York, N. Y. Mine office: Guaynopa, Guerrero, Chihuahua, Mex. Dr. J. M. Bishop, president; Wm. L. Saunders, secretary. Organized Jan. 1, 1904, as a merger of Guaynopa Smelting & Reduction Co. and Mexican Lead Co. The Guaynopa lands, variously reported as 254 hectares and as 133 acres, in Guaynopa Cañon, are claimed to show ores carrying 5 to 8% copper, with good silver values. Company was promoted by Daugherty & Albers, with the assistance of C. B. James, hence is regarded unfavorably. Idle and moribund.

**INTERNATIONAL COPPER CO. ARIZONA.**

Dead. West Virginia charter forfeited, 1902.

**INTERNATIONAL COPPER CO. COLOMBIA.**

Dead. Was a swindle. Formerly at Natagaima, Tolima, Colombia. Described Vol. VI.

**INTERNATIONAL COPPER CO. MONTANA.**

Dead. Was organized June 13, 1906, under laws of Maine, and title changed, July 19, 1906, to Montana Consolidated Copper Co. Formerly at Basin, Jefferson Co., Mont.

**INTERNATIONAL COPPER CO. UTAH.**

Dead. Merged, 1903, in Dirigo-La Sal Gold & Copper Mining Co. Formerly at Castleton, Grand Co., Utah.

**INTERNATIONAL COPPER CO., LTD. ARGENTINA.**

Office: 56 Cannon St., London, E. C., Eng. Capt. W. B. McTaggart, D. L., J. P., chairman; A. Dangerfield, secretary. Organized July 7, 1905, under laws of Great Britain, with capitalization £100,000, shares £1 par; issued, £75,000. Was formed to finance the Famatina Development Corporation, Ltd., having bought £20,000 debentures and £20,000 income bonds of that company, and having agreed to advance £60,000 additional, at 6%, for the erection of a smelter, if required, securing in return the right to act as exclusive agent for sale of Famatina company's copper at 2% commission.

**INTERNATIONAL COPPER CORPORATION, LTD. NEW CALEDONIA.**

Dead. Lands sold, 1900, to Caledonian Mining Corporation. Formerly at Noumea, Diohot, New Caledonia.

**INTERNATIONAL COPPER & GOLD CO. COLORADO, MONTANA & MEXICO.**

Office: 1122-135 Adams St., Chicago, Ills. A. P. Ballow, secretary and treasurer; W. C. Hermbuecher, general manager. Organized 1899, under laws

of Arizona, with capitalization \$3,000,000, shares \$1 par. Apparently is a holding company only, controlling, through stock ownership, the Montana Copper & Gold Mining Co. and the Santa Fé Gold & Copper Mining Co. Supposedly controlled by Sonora Central Mines Co. Apparently all properties idle, and company not regarded favorably.

**INTERNATIONAL COPPER MINING CO.****ARIZONA.**

Office: P. O. Box 530, Hancock, Mich. Letter returned unclaimed from former mine office, Bisbee, Cochise Co., Ariz. Fred J. Bawden, president; R. Mount Beattie, secretary; Geo. H. Nichols, treasurer; Carl Clausen, general manager. Organized May 18, 1903, under laws of Arizona, with capitalization \$3,000,000, shares \$10 par. Lands, 14 claims, patented, near Solomon Springs, 6 miles southeast of Bisbee. Idle since birth and apparently moribund.

**INTERNATIONAL COPPER MINING CO.****MEXICO.**

Letter returned unclaimed from former mine office, Carbó, Ures, Sonora, Mex. Property, in the Carnero Mountains, circa 30 miles west of Carbó, is said to show 4 veins.

**INTERNATIONAL COPPER MINING CO.****UTAH.**

Dead. Merged, circa 1906, in Boston & Utah Copper Co. Formerly at Castleton, Grand Co., Utah.

**INTERNATIONAL COPPER MINING CO. OF****MICHIGAN.****LAKE SUPERIOR.**

Dead. Was wound up, 1901, and lands sold to Wetterhorn Land Co. Formerly at Matchwood, Ontonagon Co., Mich.

**INTERNATIONAL COPPER MINING & MILLING CO.****WYOMING.**

Office: care of F. M. Dunn, Minneapolis, Minn. Letter returned unclaimed from former mine office, Encampment, Carbon Co., Wyo. Capitalization \$600,000, shares \$1 par. Lands, one claim, the Arlington, patented. Has a 90' shaft. Idle since 1905 and out of cash, with poor prospects.

**INTERNATIONAL EXPLORATION & INVESTMENT CO.****ARIZONA.**

Dead. Succeeded, circa 1902, by Lady Helen Copper Mining Co. Formerly at Pima, Graham Co., Ariz.

**INTERNATIONAL GOLD & COPPER CO., LTD.****ONTARIO.**

Office: Mooney-Brisbane Bldg., Buffalo, N. Y. M. M. Wall, president; G. W. Stanley, treasurer; E. F. Goff, secretary; R. E. Erdmann, superintendent. Organized under laws of Arizona, with capitalization \$3,000,000, shares \$1 par. Lands, in the Hastings district of Frontenac county, Ontario, have a 100' shaft. Idle and apparently moribund.

**INTERNATIONAL GOLD & COPPER MINING CO.**

Office: 62 Commercial Blk., Salt Lake City, Utah. Somebody gets the mail still at that address. Location of lands, if any, unknown.

**INTERNATIONAL GOLD-COPPER MINING CO.** **BRITISH COLUMBIA.**

Dead. Lost lands, circa 1899. Formerly at Rossland, Trail district, B. C.

**INTERNATIONAL INDUSTRIAL CO.****ALASKA & WASHINGTON.**

Office: Bellingham, Wash. O. B. Brown, president; J. W. Romaine, vice-president; C. T. Canfield, secretary; W. S. Bacon, treasurer. Capitalization \$1,000,000. Property includes coal mines on Lake Whatcom, near Bellingham, from which coal has been shipped. Has gold claims in the Nome district of Alaska, and in Okanogan county, Washington, and copper claims near Valdez, Alaska, latter apparently idle.

**INTERNATIONAL MINE & INVESTMENT CO.****MEXICO.**

Office: care of E. F. Fisher, secretary, Douglas, Ariz. Dr. W. E. Lindley, president; J. M. French, treasurer; S. C. Morrison, superintendent. Lands, 108 pertenencias, adjoining lands of the Santa Rosa Development Co., about 15 miles south of Douglas, and 4 miles from the Nacoza railroad, in the Arizpe district of Sonora, Mexico, showing a 2' to 6' quartz vein carrying oxide and

carbonate ores assaying 3 to 30% copper, and up to 6 oz. silver, with traces of gold, opened by shafts of 20' to 50'. Also owns sundry mineral lands near Mulatos, Sahuaripa, Sonora, Mex. Idle several years.

#### **INTERNATIONAL MINING CO.**

#### **ARIZONA.**

Letter returned unclaimed from former office, Los Angeles, Cal. Mine office: Chloride, Mohave Co., Ariz. John Lopizich, president. Property, known as the Elkhart mine, is a silver-lead mine, with strong copper indications on the 500' level, at the bottom of the mine, where there is a wide vein of low-grade silver-lead ore, carrying small copper and gold values. Has about 50,000 tons of low-grade silver-lead ore on the dump, and has a 100-ton mill. Idle.

#### **INTERNATIONAL MINING CO.**

#### **COLORADO.**

Dead. Formerly at Black Hawk, Gilpin Co., Colo.

#### **INTERNATIONAL MINING CO., LTD.**

#### **ONTARIO.**

Office: Sault Ste. Marie, Mich. Mine office: Dean Lake, Algoma, Ont. C. S. Beadle, general manager; V. E. Metzger, secretary and treasurer. Lands, 1,400 acres, known as the Brady location, lying in Patton and Thompson townships, east of the Mississagua river, 5 miles from Dean Lake and circa 30 miles east of Sault Ste. Marie, opened by 12 test pits, deepest 24', showing a 3' vein carrying chalcopyrite assaying 5 to 28% copper, with small gold and silver values. Idle for several years.

#### **INTERNATIONAL MINING & REFINING CO.**

#### **CHILE.**

Mine office: Chañaral, Atacama, Chile. Property is an old group of mines near Chañaral, also sundry claims in the Huantajaya district of Tarapacá, Chile. Idle.

#### **INTERNATIONAL SMELTING CO.**

#### **MEXICO.**

Office: 502 Hall Bldg., Kansas City, Mo. Mine office: Suaqui de Batuc, Ures, Sonora, Mex. J. V. Hammer, president; H. W. Tracey, secretary; C. T. Finley, treasurer. Organized 1905, with capitalization \$1,000,000, shares \$1 par. Planned building a smelter, but did not do so. Promised dividends, but apparently found the hostilities of the Yaqui Indians a convenient pretext for failing to carry out its promises. Is regarded with much suspicion.

#### **INTERSTATE EXPLORATION CO. ARIZONA, ILLINOIS & WISCONSIN.**

Office: Endicott Bldg., St. Paul, Minn. Maj. E. L. DeLestry, general manager. Claims to have copper claims at Globe, Gila Co., Ariz., and zinc and lead claims at Benton and Platteville, Wis., and at Galena, Ills.

#### **INTER STATE MINING CO.**

#### **MONTANA.**

Office and mine: Helena, Lewis & Clark Co., Mont. Organized 1894. Lands, 19 claims, in the Amazon district, circa 30 miles from Helena, showing a 4' vein, and silver, lead and argentiferous copper ore, in a vein of 4' to 12' width, traceable nearly one mile. Company formerly operated near Marysville, Montana, but abandoned the original properties and secured, 1908, the Amazon group, from A. L. Palmer.

#### **INTERSTATE MINING & MILLING CO.**

#### **IDAHO.**

Mine office: Mullan, Shoshone Co., Idaho. M. J. Rodermill, president; C. M. Crago, vice-president; R. M. Fox, secretary; O. D. Wallace, manager; preceding officers, C. L. Stacy, W. P. Russell and M. H. McCall, directors. Lands, 24 claims, well timbered, adjoining the Hercules mine on the west and the Callahan on the east, said to show an 18" vein of massive ore averaging 10% copper and 20% lead, with good silver values. Development is by a tunnel, planned to be driven 2,800', cutting 3 veins to give backs of 600', 800' and 1,000'.

#### **INVESTORS MINING & PROSPECTING CO.**

#### **WYOMING.**

Office: P. O. Box 132, Encampment, Wyo. Mine office: Rambler, Carbon Co., Wyo. Aaron Slothower, president and general manager; C. E. Winter,

vice-president; C. B. Bergquist, secretary and treasurer. Organized July 19, 1904, under laws of Wyoming, with capitalization \$1,000,000. Lands, 8 claims, partly patented, area 84 acres, in the Battle Lake district, showing a contact vein between schist and quartzite, up to 22' in width, with a gossan showing some oxidized ores, changing to chalcopyrite at slight depth. Has a 110' shaft. Idle several years.

**INYO COPPER CO.****CALIFORNIA.**

Mine office: Darwin, Inyo Co., Cal. Chas. Wing, manager. Presumably idle.

**INYO COPPER MINES & SMELTERS CO.****CALIFORNIA.**

Office: 353 Kearny St., San Francisco, Cal. Mine office: Keeler, Inyo Co., Cal. Employs 10 men. R. G. Paddock, president and general manager. T. J. Fitzsimmons, vice-president; Philip S. Montague, secretary; H. L. Wrinkle, engineer. Organized July 3, 1905, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 21 claims, area 415 acres, showing limestone, granite and grano-diorite country rocks, with porphyritic intrusions, carrying 8 contact veins, between limestone and porphyry or grano-diorite, showing a little native copper, malachite, azurite, chalcopyrite and chrysocolla, in veins of 2' to 40' width, said to give average assays of 12% copper, 6 oz. silver and \$7.50 gold per ton. Development is by several shallow shafts, one planned to be sunk to 800', and by several tunnels.

**INYO COUNTY CONSOLIDATED COPPER CO.****CALIFORNIA.**

Office: 254 Wilcox Bldg., Los Angeles, Cal. Mine office: Citrus, Inyo Co., Cal. Formerly held 5 gold claims and 12 copper claims; sold 5 copper claims to New York & Inyo Copper Co. Idle and apparently moribund.

**IOWA & NEW MEXICO MINING CO.****NEW MEXICO.**

Dead. Formerly at Carrizozo, Lincoln Co., N. M.

**IRIGOYEN HERMANOS y CA.****MEXICO.**

Mine office: Huetamo, Michoacán, Mex. Production, 1902, was 107,804 lbs. fine copper. Presumably idle.

**IRISH COPPER MINES, LTD.****IRELAND.**

Office: Great Winchester St., London, E. C., Eng. Lt.-Col. E. B. Burnaby, chairman; R. L. Spicer, secretary. Organized July 10, 1906, under laws of Great Britain, with capitalization £60,000, in 50,000 ordinary shares, par £1, and 100,000 deferred shares, par 2s.; issued, £10,512. Was organized to acquire and work copper mines near Waterford, Ireland. Cannot be learned that property has been secured.

**IRISH MAG MINE.****ARIZONA.**

Owned by Calumet & Arizona Mining Co.

**IRISH MINES.****ARIZONA.**

Mine office: Clifton, Graham Co., Ariz. B. A. Boyles, president; N. L. Lewis, vice-president; Otto Rosenthal, secretary; C. P. Dunn, treasurer. Lands, 7 claims, said to show a vein of 10' to 15' width, carrying oxides and altered sulphide ores, with values up to 15% copper, opened by a 100' tunnel. Idle some years.

**IRISH MINES PROPRIETARY CO., LTD.****IRELAND.**

Office: 4 Dawson St., Dublin, Ire. Mine office: Bonmahon, Co. Waterford, Ire. Organized Aug. 2, 1906, under laws of Ireland, with capitalization £20,000, in 10,000 ordinary shares, £1 par, and 100,000 deferred shares, 2s. par. Idle.

**IRON CAP MINE.****ARIZONA.**

Owned by National Mining Exploration Co.

**IRON CAP MINING CO.****ARIZONA.**

Office: Globe, Ariz. Mine office: Florence, Pinal Co., Ariz. Original lands, near Globe, were sold to National Mining Exploration Co. Present

property, 5 claims, held under bond and lease, is in the Picacho district, 16 miles south of Florence. Presumably idle.

**IRONCLAD COPPER MINING CO.**

**WASHINGTON.**

Office: Portland, Ore. Mine office: Spirit Lake, Skamania Co., Wash. Dr. P. L. McKenzie, manager; W. H. Warren, secretary. Lands, 10 claims, in the St. Helens district, show 2 veins, slightly developed, giving average assay values of about \$25 per ton, in copper, silver and gold. Idle several years.

**IRON CROWN MINING & MILLING CO.**

**IDAHO.**

Dead. Succeeded Jan. 6, 1908, by Copper Crown Mining Co. Formerly at Mullan, Shoshone Co., Idaho.

**IRON DYKE COPPER CO.**

**OREGON.**

Office: care of Erie Trust Co., Erie, Pa. Mine office: Homestead, Baker Co., Ore. C. N. Conrad, president; H. G. Fink, vice-president; A. A. Clauss, secretary; F. F. Curtze, treasurer; preceding officers, Geo. R. Metcalf and Davenport Galbraith, directors. Frank E. Pearce, superintendent. Organized under laws of Pennsylvania, with capitalization \$500,000, shares \$100 par. Property shows considerable ore, on the dumps and blocked out for stoping, having several thousand feet of workings. Erie Trust Co. holds title by trust deed and bond. Presumably idle.

**IRON FALLS GOLD & COPPER MINING CO.**

**WASHINGTON.**

Dead. Formerly had an office at 713 New York Blk, Seattle, Wash.

**IRON HAT COPPER-GOLD MINING CO.**

**COLORADO.**

Dead. Formerly at Silverton, San Juan Co., Colo.

**IRON HAT MINING CO.**

**UTAH.**

Mine office: Eureka, Juab Co., Utah. Wm. Hoffman, superintendent. Lands are in the East Tintic district. Presumably idle.

**IRON HORSE MINING & MILLING CO.**

**ARIZONA.**

Mine office: Globe, Gila Co., Ariz. Organized 1904, with capitalization \$500,000. Idle.

**IRON KING EXTENSION MINING CO.**

**ARIZONA.**

Dead. Was a Douglas, Lacey & Co. swindle. Formerly at Humboldt, Yavapai Co., Ariz.

**IRON KING MINE.**

**ARIZONA.**

The Iron King mine at Humboldt, Yavapai county, Arizona, is owned by the American Gold & Copper Consolidated Mining Co.

**IRON KING MINE.**

**ARIZONA.**

The Iron King mine at Jerome, Yavapai county, Arizona, is owned by the Equator Mining & Smelting Co.

**IRON MASK GOLD MINING CO.**

**BRITISH COLUMBIA.**

Dead. Formerly owned the Iron Mask mine, which was sold, by foreclosure, circa 1901, to B. C. Corbin, who sold to the Consolidated Mining & Smelting Co. of Canada, Ltd. Office of company was at Spokane, Wash. Formerly at Rossland, Trail district, B. C.

**IRON MASK MINE.**

**BRITISH COLUMBIA.**

Owned by Kamloops Mines, Ltd.

**IRON MOUNTAIN COPPER CO.**

**UTAH.**

Mine office: Lund, Iron Co., Utah. Has argentiferous lead ore and auriferous copper ore. Idle since circa 1903.

**IRON MOUNTAIN MINE.**

**CALIFORNIA.**

Owned by Mountain Copper Co., Ltd.

**IRON SILVER MINING CO.**

**COLORADO.**

Offices: 1408-27 William St., New York, N. Y., and 615 Stevens Bldg., Detroit, Mich. Mine office: Leadville, Lake Co., Colo. DeForest Paine, president; W. R. Cobb, vice-president; Homer A. Hoit, secretary; Frémont Woodruff, treasurer; preceding officers, Hon. Thos. W. Palmer, Gen. Anson G. McCook,

John Greenough, Winfield Scott, Henry G. Stevens and Samuel R. Reinhardt, directors; Waldemar Arens, general manager; Wm. Carson, superintendent; Geo. O. Argall, engineer. Organized March, 1880, under laws of New York, with capitalization \$10,000,000, shares \$20 par. Dividends, 1906, were \$400,000, and 1907 were \$300,000, with total dividends, to end of 1907, of \$4,100,000. Net earnings have been as follows: \$267,035.64 in 1904; \$515,127 in 1906; \$65,366.14 in 1907. Company begun 1908 with a surplus of \$189,259.60. Farmers Loan & Trust Co., New York, registrar. Annual meeting, second Wednesday in March.

In addition to other properties, company controls, through stock ownership, the Nisi Prius Consolidated Mining Co., mine being leased to 3 different parties. Operating mines of the Iron Silver are the Moyer, Tucson and Dome, the Moyer being much the most important, having circa 2 miles of workings. The Tucson shaft is 925' deep. Ores are mainly sulphide, the Dome mine furnishing zinc and lead carbonates, the Tucson mine supplying argentiferous zinc and lead ores, and the Moyer mine yielding argentiferous and auriferous zinc, lead and copper ores, and iron ore. Production has been as follows: 45,805,699 lbs. zinc, 3,608,351 lbs. lead, 948,902 lbs. copper, 950,067 oz. silver and 3,049 oz. gold in 1904; 61,738,134 lbs. zinc, 4,542,938 lbs. lead, 69,477 lbs. copper, 425,050 oz. silver and 2,043 oz. gold in 1906; 34,239,954 lbs. zinc, 5,489,047 lbs. lead, 21,321 lbs. copper, 298,598 oz. silver and 1,360 oz. gold in 1907. Property is well equipped and well managed, but inclined to show decreased production.

#### **IRON SPAR COPPER MINING CO.**

#### **MONTANA.**

Letter returned unclaimed from former mine office, Mullan, Shoshone Co., Idaho. John J. Curran, manager. Lands, on the Montana side of the divide, in Leslie Gulch, are opened by a 375' tunnel, showing chalcopyrite and galena assaying up to 22.5% copper, 52% lead, 8 oz. silver and \$2.80 gold per ton.

#### **IRONWOOD & ARIZONA DEVELOPMENT CO.**

#### **ARIZONA.**

Office: Ironwood, Mich. Letter returned unclaimed from former mine office, Salome, Yuma Co., Ariz. Lands, 28 claims, in the Harcuvar Mountains, 7 miles northwest of Salome, opened by a shaft of circa 150', said to show high grade sulphide ore. Idle and likely to be liquidated.

#### **IROQUOIS COPPER CO.**

#### **MICHIGAN.**

Dead. Was liquidated, circa 1899, and lands sold to Osceola Consolidated Mining Co. Formerly at Kearsarge, Houghton Co., Mich.

#### **IRVINEBANK MINING CO.**

#### **QUEENSLAND.**

Office: Irvinebank, Queensland, Australia. Mine office: Klondyke, via Mungana, Queensland, Australia. Geo. C. Young, secretary; Dan Mackey, mine manager. Company employs circa 700 men, and incidentally is engaged in copper mining, on a small scale. Property includes the Linedale West Chillagoe and the Lamington mines, latter having a 160' shaft showing a 12" vein averaging circa 20% copper and 5 to 6 dwts. gold per long ton.

Smelter has a water-jacket blast-furnace, planned for treatment of both copper and silver-lead ores, and also for the accumulation of tin slag, which seems a rather ambitious program for one small furnace. Produced, 1906, from the Lamington mine, circa 400 tons of 17% ore, carrying circa 150,000 lbs. fine copper, which was sold to the Chillagoe.

#### **IRVINGTON SMELTING & REFINING CO.**

#### **NEW JERSEY.**

Works office: Irvington, Essex Co., N. J. Property is a small electrolytic refinery.

#### **ISABEL COPPER MINING CO.**

#### **WYOMING.**

Dead. Lands sold, October, 1902, to Rambler Mining & Smelting Co. Formerly at Riverside, Carbon Co., Wyo.

**ISABELLA MINING CO.****NEW MEXICO.**

Mine office: Tres Piedras, Taos Co., N. M. Property is the Whale mine, said to show ore of good copper tenor.

**ISLAND CITY COPPER MINING CO.****WYOMING.**

Office: Eaton Rapids, Mich. Letter returned unclaimed from former mine office, Saratoga, Carbon Co., Wyo. Has a copper ore body occurring as a contact between a norite dike and schist. Idle since circa 1904.

**ISLAND MINING CO.****MICHIGAN.**

Office: 1000-32 Broadway, New York, N. Y. W. R. Todd, president; W. A. O. Paul, secretary and treasurer. Organized under laws of Michigan, with capitalization \$1,000,000, shares \$25 par; \$13.75 paid in. Michigan charter expired 1904, but company has been unable to secure sufficient representation of stock to obtain an extension of its corporate existence. Last meeting of stockholders, held June 5, 1900, authorized a dividend of 80 cents per share. Property is circa 4,000 acres of mineral land on Isle Royale, Michigan.

**ISLAND MOUNTAIN CONSOLIDATED COPPER CO.****CALIFORNIA.**

Dead. Formerly in Trinity county, California.

**ISLANDS COPPER CO.****BRITISH COLUMBIA.**

Office: 234 Eppler Blk., Seattle, Wash. Lands include the True Blue group, on Valdez and Gowlland Islands, in the Nanaimo district of British Columbia, having a 50' shaft on a vein in diorite. Trial shipment, 22 tons, to the Tyee smelter, assayed 2.84% on low grade ore and 6.2% on high grade ore, with small gold and silver contents.

**ISLE ROYALE CONSOLIDATED MINING CO.****MICHIGAN.**

Dead. Succeeded, March, 1899, by Isle Royale Copper Co. Formerly at Houghton, Houghton Co., Mich.

**ISLE ROYALE COPPER CO.****MICHIGAN.**

Office: 303-199 Washington St., Boston, Mass. Mine office: Houghton, Houghton Co., Mich. Employs circa 400 men. Albert S. Bigelow, president; Hon. Norman W. Haire, vice-president and general manager; Wm. J. Ladd, secretary and treasurer; preceding officers, Clarence H. Bissell and Chas. N. King, directors; Wm. J. Uren, general superintendent; James E. Richards, mine superintendent; James G. Glanville, mill superintendent; Chas. D. Hohl, chief engineer; John T. Reeder, chief clerk and purchasing agent; Harry E. Lukey, clerk; Edward Colenso, chief mining captain.

Organized March, 1899, under laws of New Jersey, with capitalization \$3,750,000, shares \$25 par, as a merger of the Isle Royale Consolidated Mining Co. and Miners' Copper Co. Owns \$50,000 stock in the Lake Superior Smelting Co. Annual meeting, first Wednesday in April, at Jersey City.

Lands, 3,520 acres and an 80-acre millsite. Mining lands include the old Isle Royale, Grand Portage and Huron mines, the Dodge and Frue prospects, and sundry undeveloped lands. The Hussey-Howe tract of 280 acres, lying northeast of the Superior and carrying the extension of the Baltic bed, was bought, 1907, for \$220,000. An option on the mineral rights of the Montezuma tract, of circa 240 acres, lying next west, has expired. Lands include all of Sections 1, 2 and 11, and parts of Sections 3, 9, 10 and 15, T. 54 N., R. 34 W., also 160 acres in Section 6, T. 54 N., R. 33 W., 40 acres in Section 31, T. 55 N., R. 33 W., and 160 acres in Section 36, T. 55 N., R. 34 W., giving a compact tract carrying about 2½ miles of the strike of the system of copper-bearing beds.

The three old mines included in the present Isle Royale tract, made 48,452,590 lbs. fine copper, of which the Huron furnished 35,766,225 lbs., the Isle Royale 9,204,071 lbs., and the Grand Portage 3,482,294 lbs. These products were secured under primitive conditions, at a net aggregate loss of about \$2,500,000. The old Isle Royale and Grand Portage mines were opened in

1853, and the Huron in 1855. The history of all three is given in detail in Vol. II.

The Isle Royale has 3 parallel amygdaloidal beds, with strike of N. 32° E. and average dip of 56°, of which two have been extensively opened, these being the Isle Royale and Portage, the latter lying approximately 200' west of the former. The shafts are on the Isle Royale lode, but the Portage bed is opened on many levels by crossecuts. East of the amygdaloids is the "Mabbs vein," lying near the Eastern Sandstone, 4' to 7' wide and rich in mass and barrel copper, but deficient in stamp rock. It was opened to a depth of about 250', by John and Austin Mabbs, circa 1875, and has been tested, to some extent, by the present owner. There also are unidentified and unexplored copper bearing amygdaloids, lying west of the Portage bed, and occasional narrow fissure veins, carrying arsenical copper ores. Considerable diamond drilling has been done, and new openings were 8,251' in 1906 and 8,728' in 1907. The mine works 27 power drills, which number is to be considerably increased.

In addition to the new shafts, there are 28 old shafts in the three old mines, and masonry dams have been built underground, at various points, to hold back the water in the old openings. There are about 5 miles of old workings in the Huron, and 3 miles in the old Isle Royale and Grand Portage mines.

No. 1 shaft, near the northern boundary, was completely gutted by fire, December, 1903. This shaft had 3 compartments, and was 1,335' deep, opened on the Isle Royale bed, with crossecuts driven on the eleventh to fifteenth levels, inclusive, to the Portage bed, lying 150' to 220' westward, with about 2 miles of drifts opened thereon, stoping having been about equally divided between the two beds, which were found markedly similar in characteristics and copper values. The surface plant at No. 1 was dismantled, 1908, machinery being taken mainly to No. 4 shaft. Concrete dams have been built across the south drifts of No. 1 at the thirteenth and fourteenth levels, holding back the mine water. Surface water is collected on the eighth level, and sent to No. 2 shaft for forking out.

No. 2 shaft, with 3 compartments, 2,400' deep, is located 2,280' southwest of No. 1, and in 1908 supplied two-thirds of the rock tonnage of the mine, its production running about 13 lbs. fine copper only, as against circa 17 lbs. fine copper per ton from the rock of the 3 new shafts. Stoping is in progress from the thirteenth to the twenty-second levels, inclusive. Less mass copper is being produced than formerly, and the north drifts are not looking especially well.

No. 3 is merely a site for a shaft, to reopen the old Huron mine, which has workings nearly 1,900' in depth. In 1908 the nineteenth level south drift of No. 2 was sent under the old Huron workings, which remain filled with water.

The new shafts, Nos. 4, 5 and 6, all on the Isle Royale bed, at the southern end of the property, have about 2 miles of workings. These shafts show considerable heavy copper, the amount of mass copper raised May, 1908, having been nearly 50 tons. The new shafts have been connected with the railroad line, and given permanent equipments.

No. 4 shaft, circa 3,100' south of No. 2, was 425' deep October, 1908, developing good stamp-rock. Equipment includes a 32x72" Nordberg duplex-cylinder hoist, good for one mile depth, and a 35-drill air-compressor, both taken from No. 1 shaft. There is a cylindrical steel shaft-rockhouse, built by the Wisconsin Bridge & Iron Co., having cylindrical rock-bins 42' in diameter and 32' high. The power plant has a 140' steel brick-lined self-supporting stack.

No. 5 shaft, circa 5,100' south of No. 2, on Section 2, was begun October,

1906, and was circa 425' deep October, 1908. The shaft is sunk in the foot-wall, and will be given a new shaft-rockhouse similar to that at No. 4, in 1909.

No. 6 shaft, formerly known as the Section 11 exploratory shaft, is circa 7,300' southwest of No. 2, near the centre of Section 11, and was cut down, 1908, to 3-compartment size. The shaft was 550' deep October, 1908, developing very good average ground, the bed showing much epidote. Levels are opened at 120' intervals. The permanent equipment, added 1908, includes a brick engine-house, steel boiler-house with a 140' brick-lined self-supporting steel stack, and a circular steel shaft-rockhouse, similar to that at No. 4.

A shaft was started, 1904, on Section 10, but was discontinued because of the heavy overburden, and a diamond drill substituted, the drill cores showing an amygdaloidal bed, of which about 5' in width carried stamp-copper in fine grains.

The Section 12 shaft was begun October, 1905, and was discontinued January, 1908, at depth of 812', after drifts and crosscuts had been driven four ways to locate the Baltic bed. The shaft was sunk in a badly disturbed bed, practically barren of copper, and was abandoned because later developments showed the Baltic bed to be located elsewhere on Isle Royale lands.

The new Baltic shaft, on the Hussey-Howe tract, was circa 35' deep October, 1908, with temporary equipment, and a promising showing of copper was found therein, on the Baltic bed, Nov. 1, 1908.

Shafts Nos. 1 and 2 formerly had duplicate equipments. No. 2 shaft has a combination shaft-rockhouse, 44x60' in size and 90' high, with 18x24" and 13x20" Portage Lake crushers. The engine-house is 50x90', of steel on stone foundations, with a hoist having 18' 6" drums with lathe-turned grooves for 6,000' of 1½" cable, capable of raising 6-ton skips from a depth of 6,000'. The compressor-house has a 35-drill Nordberg 2-stage air-compressor. The boiler-house is 44x72', with a 16x72' coal-storage addition, and a 3,000-ton coal trestle, with three 150-h. p. 84" Burt Horizontal boilers, taking water from a dam 300x500x6'. The machine shop is 40x60', of steel, on stone foundations. There are about 100 dwellings on the company's lands.

The Isle Royale railroad, owned by the company, connects the mine and mill with about 5 miles of main line, having easy grades, and was reballasted and bridges and trestles strengthened, 1908, for heavier rolling stock. Equipment includes 35-ton, 55-ton and 60-ton locomotives, and 40 forty-ton steel rock cars equipped with air-brakes.

The millsit, at the mouth of Pilgrim River, has nearly one mile of frontage on Portage Lake. The mill, 134x210', of steel frame, on stone foundations, has three 2,000-ton rock-bins and 3 Nordberg stamps having circular mortars and  $\frac{5}{8}$ " screen openings. As built, each stamp had 32-ton mortars, resting on anvil-blocks bedded on 20x20' platform 3' thick, of 14x24"x20' oak timbers. Underneath each platform is a caisson, reaching to bedrock, made of 5/16" boiler steel, 74' long and 12' in diameter, until near the top, where there is a bell-shaped flare, 20' in diameter, to support the oak platforms underneath the anvil-blocks. The caisson and spaces between are filled with concrete. The first head was rebuilt, 1908, and given solid concrete foundations to bedrock. The first head was changed over, March, 1905, to the steeple-compound system, and a second was altered similarly, during the latter half of 1908, the third remaining a simple head, of circa 500 tons daily capacity, while the compound heads are of about 750 tons daily capacity each. The dressing floor has 72 rough jigs and 30 finishing jigs, of the Parnall-Krause type, circular slime tables, and Bartlett and Wilfley tables to treat slimes from the round tables. There are rolls with fixed bearings to regrind coarse gravel from the mortars.

The mill has a complete machine-shop, on the second floor, and power is

furnished by a 750-h. p. engine, taking steam from four 250-h. p. boilers in a 46x72' boiler-house at the rear of the mill.

There is a 32x600' wharf, with deep water alongside, at the millsit, with appliances for unloading coal and general freight, and for the dispatch of mineral, in scows, to the smelter at Dollay Bay, 2 miles across Portage Lake.

Water is furnished the mill by a 16,000,000-gallon Nordberg Corliss pump, especially designed to handle muddy water, having a triple discharge into a 30" riveted steel water-main running 2,200' from pump-house to mill, the pump being located some distance from the mill to obviate stamp-sand clogging the intake. Three 100-h. p. boilers furnish power for the pumps, fuel being taken from a large coal-trestle at the rear of the pump-house boiler-rooms. A dam near the mill furnishes feed-water for boilers.

Production of fine copper has been as follows: 3,569,748 lbs. in 1902; 3,134,601 lbs. in 1903; 2,442,905 lbs. in 1904; 2,973,761 lbs. in 1905; 2,937,098 lbs. in 1906; 2,354,198 lbs. in 1907. Yield of fine copper, per ton of rock stamped, has been remarkably uniform, showing less variation than almost any other mine in the Lake Superior district, returns for 5 years, 1903 to 1907, inclusive, ranging from a minimum of 15.2 lbs. per ton in 1905 and 1907 to a maximum of 15.8 lbs. in 1904. Production, September, 1908, was about 18,000 tons of rock stamped, yielding circa 175 tons of mineral, or about 265,000 lbs. fine copper. The new shafts should be capable of more than doubling the former production, and 1909 should show a considerable increase in output.

Costs per ton of rock stamped have been as follows: \$1.86 in 1903; \$1.86 in 1904; \$1.71 in 1905; \$2.25 in 1906; \$2.92 in 1907. Costs per pound of fine copper have been as follows: 11.83 cents in 1903; 13.3 cents in 1904; 12.76 cents in 1905; 12.22 cents in 1906; 17.09 cents in 1907. In addition to the preceding figures, costs per pound, for exploration, railway extensions, etc., brought the total cost of copper, in 1906, to 14.69 cents per pound, and in 1907 to 20.26 cents per pound.

The company began 1907 with a balance of assets of \$772,592.99, and ended with a balance of \$501,157.64. Based on figures of shrinkage of assets alone, 1907 was the worst year that the company has experienced, but, taking into consideration the progress made in opening three new shafts on the Isle Royale bed, the year was one of the most satisfactory in the company's history, but an even better mining showing was made in 1908, with continued developments of a satisfactory nature in the new Isle Royale shafts, and the location of the northern extension of the Baltic bed, on the Hussey-Howe tract. The company has ample resources, including a very large cash surplus and magnificent equipment, and has a courageous management, which is entitled to great credit for its persistent search for mineral values, and the prospects of the company seem brighter than at any time in the past.

#### ISLE ROYALE LAND CORPORATION, LTD.

MICHIGAN.

Office: 24 North John St., Liverpool, Eng. Local office: care of Fred W. Nichols, agent, Houghton, Houghton Co., Mich. W. J. Thompson, J. P., chairman; John Tibbs, secretary. Organized June 21, 1890, as Wendigo Copper Co., Ltd., and name changed to present title July, 1901. Capitalization £225,000, shares £5 par, in 2,000 first preference, 1,089 second preference and 41,911 ordinary shares. Preference shares, all issued and fully paid; 34,501 ordinary shares issued, £4 paid in. Last published accounts, of date Dec. 31, 1905, showed a debit balance of £7,348. Lands, 83,720 acres, mainly copper-bearing, upon the northern fold of the Keweenawan syncline, on Isle Royale, Lake Superior, Michigan, comprising the major portion of the area of this, the largest fresh-water island of the globe. Considerable mining, of a rather desultory nature, has been done upon these lands, at various periods in the past, and some copper secured. Idle since 1892.

**SOCIETÀ METALLURGICA ITALIANA.****ITALY.**

Works office: Leghorn, Tuscany, Italy. Organized 1887, and capitalization since increased to 10,000,000 lire. Net profits, 1904, were 641,067 lire, and a dividend of 7.5% was paid for that year. Property includes 3 plants, the largest, at Leghorn, occupying about 25 acres, with a smaller plant at Limestre.

Smelter, in connection with the works, has 4 blast-furnaces, of about 70 tons aggregate daily capacity, and 4 reverberatory furnaces casting refined copper as anodes, plates, ingots, etc. The smelter treats about 20,000 tons of ore yearly, partly native but largely imported from Spain, America and elsewhere. In connection with the smelter there is an electrolytic refinery, built 1900, which turns out copper of very great purity.

The power plant of the works has 16 engines, with about 1,800 aggregate h. p., and a very complete electric plant, furnishing power, light and energy for the electrolytic refinery. The shops are extensive, including rolling mills, tube mills, wire-drawing shops, wire-rope shops and miscellaneous shops for the manufacture of copper into a great variety of forms. There is a special alloy foundry having 28 crucible furnaces, for fusion of the principal copper alloys, the products of these works enjoying an excellent reputation. There also is an extensive acid plant for the manufacture of sulphuric acid. The company turns out nearly 10,000 metric tons of manufactured copper yearly, in almost an infinite variety of forms, and employs about 1,300 men.

**ITMAY MINE.****WYOMING.**

Office: care of I. C. Miller, Rawlins, Wyo. Mine office: Rambler, Carbon Co., Wyo. Albert Bryle, superintendent. Is not an incorporated company. Lands, circa 4 miles south of Rambler, have a drainage tunnel and a 350' shaft, showing a vein up to 8' in width, carrying occasional native copper and sulphide ore, formerly claimed to average 30% copper and 4 to 5% lead, but actually averaging about 8% copper only. Lands are said also to have a 20' vein carrying a 3' paystreak of high grade ore. It was claimed, June, 1906, that a 200-ton reduction plant had been bought, and was to be installed, but this apparently was a pipe-dream.

**IT MINING CO.****ALASKA.**

Mine office: Ketchikan, Alaska. Lands, on Kasaan Bay, showing auriferous copper ore, are opened by a crosscut tunnel. Plans a one-mile tram, with a 1,200' gravity section leading to a 1,200' wharf, on tidewater.

**ITSUKI MINE.****JAPAN.**

Mine office: Itsuki-mura, Kuma-gori, Higo, Japan. Ore is chalcopyrite, associated with iron pyrites, averaging 5 to 6% copper, in veins interbedded in clay-slates. Production, 1900, was 1,080,163 lbs., falling to 441,407 lbs. in 1906 and to 330,262 lbs. in 1907.

**IVANHOE MINING CO.****ARIZONA.**

Mine office: Patagonia, Santa Cruz Co., Ariz. A. P. Abell, president; Jas. Johnson, vice-president and general manager. Capitalization \$750,000, shares \$50 par. Lands, 12 claims, 4 miles southwest of Patagonia, opened by tunnel, with about 500' of workings, showing highly argentiferous lead and copper ores. Presumably idle.

**IVANHOE MINING CO.****UTAH.**

Letter returned unclaimed from former mine office, Bingham Canyon, Salt Lake Co., Utah. Is in litigation with the United States Smelting & Refining Co., but otherwise idle.

**IVANPAH CONSOLIDATED SMCLETTING CO.****CALIFORNIA.**

Dead. Property passed to Cocopah Copper Co. Formerly at Manvel, San Bernardino Co., Cal.

**IVANPAH MAMMOTH GOLD & COPPER MINING CO.****CALIFORNIA.**

Office: San Diego, Cal. Letter returned unclaimed from former mine

office, Ivanpah, San Bernardino Co., Cal. Capitalization \$2,000,000, shares \$1 par. Lands, 22 claims, 11 freehold and 10 held under option, area 435 acres, 12 miles west of Ivanpah, formerly claimed to show a ledge 300' wide and 6,000' long, which, at last accounts, had shrunk, most unaccountably, to 8' width, of which 6' is said to carry argentiferous and auriferous copper and lead sulphides, formerly claimed to give surface assays of \$9 to \$105 per ton. Idle and apparently moribund.

**JACK POT MINING & MILLING CO.****WYOMING.**

Office: 365 Tenth St., Oshkosh, Wis. Mine office: Coppertown, Carbon Co., Wyo. Employs 4 men. Ole Granberg, president and general manager; H. Thorsgaard, vice-president; H. O. Granberg, secretary and treasurer; J. M. Riggs, superintendent. Organized Dec. 23, 1903, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par. Lands, 9 patented claims, area 180 acres, in the Battle Lake district, showing fissure veins in diorite and chloritic schist, and 2 contact veins, between diorite and porphyry, carrying carbonate and sulphide ores. Two veins under development are said to average 14' and 60' width. The smaller vein has given average assays of 8% copper and \$3 to \$12 gold per ton, the larger vein showing very low grade copper ore, apparently not of commercial tenor. Development is by a 75' tunnel, 100' shaft and 8 pits of 20' to 36' depth, with 411' of workings. Idle.

**JACK TAR COPPER CO.****ARIZONA.**

Dead. Was a swindle, perpetrated by the Wm. F. Werner gang, of St. Louis. Formerly at Pima, Graham Co., Ariz.

**JACQUA COPPER MINING CO., N. L.****AUSTRALIA.**

Office: 113 Pitt St., Sidney, N. S. W., Australia. Mine office: Jacqua Creek, Argyle Co., N. S. W., Australia. Organized, early 1907, under laws of New South Wales, with capitalization £2,000, shares £1 par. Presumably idle.

**JALISCO COPPER MINING CO.****ARIZONA.**

Dead. Was a stock-jobbing enterprise. Formerly at Oro Blanco, Pima Co., Ariz. Described Vol. III.

**JALISCO COPPER MINING & SMELTING CO.****MEXICO.**

Dead. Delaware charter repealed, 1903. Formerly in state of Jalisco, Mexico.

**JALISCO MINING & DEVELOPMENT CO.****MEXICO.**

Office: care of Dennis Ryan, St. Paul, Minn. Mine office: Ahualulco, Jalisco, Mex. Organized, circa 1906, to take over property of Altamira Mining Co. Idle.

**JALISCO (MEXICAN) MINING SYNDICATE, LTD.****MEXICO.**

Office: 54 New Broad St., London, E. C., Eng. A. Firth, Chairman; M. P. Gosset, agent in Mexico; G. V. Mitchell, mine superintendent; Alfred Hays, secretary. Organized Jan. 18, 1906, under laws of Great Britain, with capitalization £25,000, shares £1 par; issued, £16,000. Company claims to possess 80 pertenencias, area 198 acres, carrying ores of gold, silver and copper, at Malpillas, Jalisco, Mexico, but there is no postoffice by the name of Malpillas, Melpillas or Milpillas in Jalisco, or elsewhere in Mexico. Regarded with suspicion.

**JAMAICA CONSOLIDATED COPPER CO.****JAMAICA.**

Office: 262 Washington St., Boston, Mass. Mine office: May Pen, Clarendon, Jamaica. T. I. Hogan, president; E. F. Gowell, Clerk; R. W. Goss, treasurer; W. S. Baker, general manager; Cyril Abraham, superintendent. Organized circa September, 1907, under laws of Maine, with capitalization \$6,000,000, shares \$1 par.

Lands, 2,276 acres, held on 99-year lease, 15 miles from the coast, in the Clarendon Hills. Property includes the Congo Hill mine, having a 455' tunnel showing a small vein carrying chalcopyrite and bornite; the Copper Wood

mine, having a 270' tunnel, showing a small stringer of bornite; the Sylvia mine, having a 75' tunnel showing bornite and chalocite, said to assay 7% copper; the Elma mine, having a 240' tunnel, and the Iva mine, having a 90' tunnel. Wages for labor are 18d. per day.

Small shipments of ore were made from this property, 1854-1857, and company estimates that it can place copper in New York for 6.5 cents per pound, and that it will be mining 200 tons of ore daily by middle of 1909, neither of which estimates seem warranted. Is regarded with suspicion.

#### **JAMAICA COPPER CO.**

**JAMAICA.**

Dead. A stock-jobbing enterprise. Formerly in Jamaica. Described Vol. V.

#### **JANIE MINING CO.**

**MEXICO.**

Dead. Lands sold, 1907, to Mexican Mines Corporation. Formerly at Baca, Hidalgo, Chihuahua, Mex.

#### **JANOS MINING CO.**

**MEXICO.**

Dead. A swindle. Formerly at Casas Grandes, Galeana, Chihuahua, Mex. Described Vol. VI.

#### **JAPAN-FLORA MINES & TUNNEL CO.**

**COLORADO.**

Office: 310 Colorado Bldg., Denver, Colo. Mine office: Telluride, San Miguel Co., Colo. J. J. Fisher, president; Col. A. G. Brownlee, vice-president and general manager; J. H. Cunningham, treasurer; Wm. E. Humphrey, secretary. Organized Aug. 22, 1903, under laws of Colorado, with capitalization \$2,000,000, shares \$1 par.

Lands, 35 patented claims, area 317 acres, in the upper San Miguel district, showing 8 fissure veins, in brecciated andesite, carrying auriferous and argentiferous galena and iron pyrites, with quartz gangue, averaging about 0.5% copper, 10% lead, 8% zinc, 23.5 oz. silver and \$10 gold per ton, opened by a 685' shaft and 8 crosscut tunnels, two longest 1,600' and and 2,752', with 19,665' of underground openings, estimated to give 150,000 tons of ore blocked out for stoping. Has steam and electric power, with a 45-h. p. hoist, 2 Leyner air-compressors, power drills and shops. Property has produced considerable ore. Closed down, October, 1905, but shipped a little ore, 1907. Presumably idle.

#### **JARILLA COPPER CO.**

**NEW MEXICO.**

Dead. Reorganized, 1903, as Three Bears Copper Co. Formerly at Jarilla, Otero Co., N. M.

#### **JARILLA MINING & SMELTING CO.**

**NEW MEXICO.**

Mine office: Jarilla, Otero Co., N. M. Lands, 20 claims, held under 5-year bond and lease, expiring 1909. Idle and apparently moribund.

#### **JASPER COPPER CO.**

**ONTARIO.**

Office: 716 Torrey Bldg., Duluth, Minn. Letter returned unclaimed from former mine office, Port Arthur, Thunder Bay district, Ont. Geo. W. Clayton, president; E. K. Corbett, vice-president; Edwin C. Jordan, secretary and treasurer; preceding officers, S. Enborg, David Dickie, Robt. Ferguson, Geo. Bell and St. John Schulte, directors. Organized under laws of Arizona, with capitalization \$5,000,000, shares \$5 par. Lands, circa 400 acres, about 40 miles east of Port Arthur, on the Black Bay peninsula, having lake frontage. Property is said by company to show a jasper-conglomerate, carrying values in copper, silver and gold, and an amygdaloid of 900' to 1,000' width carrying an average of 2.5% copper and \$3.50 per ton in combined silver and gold values, which is absolutely untrue, and shows the company to be managed either by people who do not know the truth, or who will not tell it. Property is said to have a 40' shaft and a 75' tunnel. Company formerly was promoted from 22 Lewis Blk., Buffalo, N. Y., from which address letters were returned unclaimed. Is regarded with suspicion.

**JASPER MOUNTAIN COPPER CO.**

WYOMING.

Mine office: Douglas, Converse Co., Wyo. Idle since circa 1904.

**J. BENNETT SMITH MINING CO.**

MINNESOTA.

Office: 280 Chestnut St., Kingston, Pa. J. Bennett Smith, president; Herbert Conyngham, secretary; Edw. Hilles, treasurer; Henry Hoefer, general manager. Lands, on the Lower Snake River, in Pine County, Minnesota, carry the extension of the Keweenawan copper beds of Lake Superior. Mine has pits and shafts of 20', 40', 110', 150' and 560', on amygdaloidal and conglomerate strata carrying native copper. Company reports having expended about \$50,000 on development, since 1879.

**J. D. VORIS COPPER MINING CO.**

COLORADO.

Mine office: Hillside, Frémont Co., Colo. Idle several years and apparently moribund.

**JEDWAY COPPER CO.**

BRITISH COLUMBIA.

Mine office: Heriot Bay, Queen Charlotte Island, B. C. Property, sundry claims held under \$125,000 bond and lease, produced some ore of fair grade in 1907. Presumably idle.

**JEFFERSON-CALHOUN MINING CO.**

COLORADO.

Office: Chicago, Ills. Mine office: Russell Gulch, Gilpin Co., Colo. Louis D. McCall, president; Alfred M. Stearns, vice-president; W. S. Calder, secretary. Organized under laws of Colorado, with capitalization, \$3,000,000, shares \$1 par, apparently as a reorganization of the Wabash Consolidated company. Lands, 7 patented claims, reached by the Newhouse tunnel. Plans sinking a 1,800' shaft.

**JEFFERSON COPPER CO.**

Dead. Was a swindle, promoted by the notorious Wm. F. Wernse gang, of St. Louis. Had a name, but never enjoyed a local habitation, property being purely imaginary.

**JEFFERSON COPPER-GOLD MINING CO.**

COLORADO.

Office: 1419 Schofield Bldg., Cleveland, Ohio. R. A. Gurley, president and general manager; S. Bender, vice-president; F. E. Carr, secretary; E. A. Kemen, treasurer; preceding officers, Francis L. Judd, W. E. Hayes, C. S. Carr, E. Grove and E. E. Carr, directors. Organized under laws of Colorado, with capitalization \$1,000,000, shares \$1 par. Lands, 180 acres, in the Bear Creek district of Jefferson County, Colorado, showing 6 veins, reported as fissures in labradorite, of 21' average width, carrying chalcopyrite with 1.5 oz. silver and \$2 to \$14 gold per ton, opened by a 78' shaft. Company states that veins carry about 2% copper down to the 125' level, followed by average values of about 7% to the 350' level, there reaching the base zone, carrying 3 to 4% copper.

**JEFFERSON COPPER MINING CO.**

COLORADO.

Dead. Was a swindle, perpetrated 1900, by the notorious W. C. Calhoun, of Denver. Merged into the Zanesville company, circa 1901, latter merged, circa 1902, in the Wabash Consolidated. Formerly at Golden, Jefferson Co., Colo.

**JEFFERSON COUNTY MINING CO.**

MONTANA.

Letter returned unclaimed from former mine office, Basin, Jefferson Co., Mont. Was organized for the purpose of leasing the mine of the Basin & Bay State Mining Co. Seems complicated, somehow, with La France Copper Co. Idle and apparently moribund.

**JEFFERSON-MONTANA COPPER MINES CO.**

MONTANA.

Office: care of Clarence K. McCornick, vice-president and general manager, Salt Lake City, Utah. Letter returned unclaimed from former mine office, Corbin, Jefferson Co., Mont. Arthur H. S. Bird, president and superintendent; C. H. Post, secretary and treasurer; preceding officers, H. A. Mc-

Cornick and B. T. King, directors. Organized, 1904, under laws of Utah. Is a twin of the Corbin-Montana Mines Co. Lands, circa 20 claims, showing 2 veins and having a 310' shaft. Did some diamond drilling, 1905. Company said to have given a 3-year bond and lease, circa June, 1908, to Chas. Hughes, Alfred Cribben and L. C. Cribben, of Denver.

**JEFFS LAND CO.****MICHIGAN.**

Office and mine: Rockland, Ontonagon Co., Mich. Lands, 800 acres, north and west of Rockland, on which some exploring was done, 1899-1900. Fully described Vol. I.

**JELDNESS COPPER CO.****NEVADA.**

Dead. Organized circa 1906, with capitalization \$1,000,000, shares \$5 par. Formerly at Ely, White Pine Co., Nev.

**JELM TOWNSITE & MINING CO.****WYOMING.**

Dead. Formerly at Jelm, Albany Co., Wyo. Described Vol. VII.

**SOCIEDAD MINERA JENERAL LAS HERAS****CHILE.****DE CABEZA DE VACA.**

Office: Santiago de Chile. Mine office: Copiapó, Copiapó, Chile. Organized Jan. 14, 1907, under laws of Chile, with capitalization 240,000 pesos, shares 100 pesos par.

**JENNIE DELL MINING CO.****MONTANA.**

Dead. Succeeded, 1905, by Columbus-Butte Mining Co. Formerly at Butte, Silver Bow Co., Mont.

**JEROME-ARIZONA COPPER CO.****ARIZONA.**

Office: care of Hon. Reese M. Ling, Prescott, Ariz. Mine office: Jerome, Yavapai Co., Ariz. Organized June, 1907, under laws of Arizona, with capitalization \$5,000,000, shares \$5 par. Lands are 4 miles northeast of Jerome.

**JEROME CAÑON COPPER CO.****ARIZONA.**

Office: 106½ South Broadway, Los Angeles, Cal. Mine office: Jerome, Yavapai Co., Ariz. J. W. Tibot, president; G. B. Tibot, secretary; Jos. S. Smith, superintendent. Organized 1901, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 16 claims, including the Copper Glance group, 14 miles northwest of Jerome, showing a vein ranging from 2' to 7' width, with circa 1,500' of openings, with ore assaying up to 28% copper, 60 oz. silver and \$110 gold per ton. Had steam power, air-compressor, power drills, hoist and pumps. Information refused and company apparently moribund.

**JEROME COPPER CO.****ARIZONA.**

Dead. Succeeded, 1902, by Cleopatra Copper Co. Formerly at Jerome, Yavapai Co., Ariz.

**JEROME MINES DEVELOPMENT CO.****ARIZONA.**

Dead. Succeeded the Verde Chief Copper Co., and was succeeded, 1907, by Haynes Copper Co. Formerly at Jerome, Yavapai Co., Ariz. Described Vol. VI.

**JEROME SILVER-COPPER MINES CORPORATION.****ARIZONA.**

Dead. Formerly at Jerome, Yavapai Co., Ariz.

**JEROME VERDE COPPER CO.****ARIZONA.**

Office: 804 Flatiron Bldg., New York, N. Y. Mine office: Jerome, Yavapai Co., Ariz. Wm. Welles Bosworth, president; Thos. E. Campbell, vice-president; Leland S. Stillman, secretary; I. Mabbet Sutton, treasurer; preceding officers and Thos. E. Campbell, directors; Dr. Ernest A. Haggott, consulting engineer; Eli Barrett, superintendent. Organized circa January, 1907, under laws of Arizona, with capitalization \$5,000,000, shares \$1 par, as successor of the Verde Queen Copper Co., giving old shareholders of the Verde Queen \$2,501,000 escrowed stock of the new company, this amount being a control. Lands, 28 claims, patented, area 486 acres, said to be encumbered by a

small mortgage, lying northeast of the United Verde and adjoining the United Verde Extension, showing an iron gossan with outcrops of copper ore on the Verde and Columbia claims. The Columbia has a 47' two-compartment shaft, with about 2,000' of workings, showing mainly copper carbonates, with small quantities of oxide and silicate ores, average assays from which are reported at 8.5% copper, but a mine, if found, will be at greater depth. Has a number of buildings and a 35-ton smelter, out of commission since 1904, which produced 3 carloads of matte, when operated by the Verde Queen. Property was idle for several years, until taken over by present company. Company was promoted by the General Securities Co., Los Angeles, Cal., and Wm. V. Holley & Co., New York, former offering the stock as absolutely guaranteed, which necessarily causes it to be looked upon with suspicion. Company has been criticised severely in Jerome because of the extravagant nature of its advertising. Company claimed, July, 1907, to have about \$35,000 in its treasury, in cash and securities. The questions naturally arise as to what proportion may have been in cash, and the value of the securities. Company is not regarded favorably.

**JESSIE BELLE MINING, MILLING & SMELTING CO. CALIFORNIA.**

Office: 302 Lankershim Bldg., Los Angeles, Cal. Mine office: Daulton, Madera Co., Cal. W. H. Sallada, president; W. T. Carter, secretary; D. J. Carpenter, lessee. Organized 1902, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par. Lands, 3 patented claims, area 40 acres, with a 200' main shaft showing 4 fissure veins, carrying oxide, carbonate and sulphide ores, assaying 15 to 20% copper, 8 oz. to 10 oz. silver and \$8 to \$15 gold per ton. Has steam power, air-compressor and a 30-ton concentrator. Has shipped concentrates of about \$40 per ton average gross value.

**JESSIE COPPER MINING CO.**

**UTAH.**

Office: care of Clark L. Whitney, secretary, Salt Lake City, Utah. Mine office: Dixie, Washington Co., Utah. Wm. Scowcroft, president; Andrew Sorensen, vice-president; John Q. Critchlow, treasurer; preceding officers, Robt. G. McQuarrie, J. H. Garrett and Albert Scowcroft, directors. Organized 1907, under laws of Utah, with capitalization \$60,000, shares 10 cents par. Lands, 5 claims, in the Tutsagubet district, having a few feet of openings showing ore up to 68% in copper tenor.

**JESSIE MINES CO.**

**ARIZONA.**

Mine office: Poland, Yavapai Co., Ariz. John S. Jones, president and general manager; Harry Brisley, vice-president; Allan Hill, secretary; E. J. F. Horne, treasurer; preceding officers, Jesse T. Jones, J. J. Shaw, L. W. Smith, Smiley Caldwell and Nelson Dresbach, directors. Organized under laws of Arizona, with capitalization \$2,500,000, shares \$1 par. Mine has a 667' shaft, and is claimed to have produced upwards of \$750,000 in gold, under former ownership. Receiver was appointed October, 1905, and discharged June, 1906. Company claimed to have 150,000 tons of ore blocked out for mining, worth at a conservative estimate, \$2,000,000, which, of course, was untrue, and paid quarterly dividends of 3% while peddling shares. President Jones and F. D. Fuller, agent for the company, were indicted for using the mails to defraud, but cases were nolle prossed, and the management considers this a vindication. Management is said to plan building a 50-ton reduction plant. Is viewed with deep suspicion as a mere bit of stock-jobbery, notwithstanding the success of its promoters in escaping jail.

**JESSIE WEIMER MINING CO.**

**UTAH.**

Mine office: Callao, Juab Co., Utah. Presumably idle.

**MINA JESÚS MARÍA DE BAQUERÁCHIC.**

**MEXICO.**

Mine office: Lluvia de Oro, Batopilas, Chihuahua, Mex. Is an old property,

once important, having copper sulphides carrying circa 5 oz. silver and \$2 gold per ton. Presumably idle.

#### JICARILLA MINING & REDUCTION CO.

NEW MEXICO.

Letter returned unclaimed from former office, 108 La Salle St., Chicago, Ills. Mine office: Jicarilla, Lincoln Co., N. M. Geo. E. Emery, president; H. G. W. Reinhardt, secretary; Wm. A. Franklin, manager; J. L. Walsh, mill superintendent. Lands are developed by a shaft showing gold-silver-copper ores. Has steam power and a 15-stamp mill. Idle and apparently moribund.

#### J. I. C. MINING CO.

UTAH.

Office: Salt Lake City, Utah. Mine office: Park City, Summit Co., Utah. G. D. B. Turner, general manager; N. A. McLean, superintendent. Is controlled, through stock ownership, by the West Quincy Mining Co. Lands, near Daly-West and Daly-Judge, have a 625' shaft.

#### JIMULCO MINING CO.

MEXICO.

Office: care of City Brewery, San Antonio, Tex. Mine office: Otto, Viesca, Coahuila, Mex. Otto Wahrmund, president; O. S. Newell, vice-president; S. G. Newton, secretary; John J. Stevens, treasurer; S. D. Bridge, general manager; Arthur L. Tuttle, general superintendent; John B. Moore, superintendent; Sidney P. Tyler, mine superintendent.

Organized 1901, under laws of Texas, with capitalization \$500,000, shares \$50 par, increased March, 1906, and reduced, 1908, to \$1,000,000. Is said to have declared 6 dividends, aggregating 27% on capitalization, in 1906, and is said to have paid 6 dividends in 1907.

Lands, 111 hectares, including the Guadalupe, Casita, Reforma and Alfaris mines, opened by a 300' shaft and 5 tunnels of circa one mile aggregate length, mine having an extreme depth of 500', with about 6 miles of workings. Ores, mainly oxidized, are shipped to the Aguascalientes smelter for reduction, and are said to give average returns of 15% copper, 9 oz. silver and \$2 gold per ton, which figures seem unduly high.

Mine has gasoline power, and is connected, by a 5-mile narrow gauge railway, costing \$40,000, with the Mexican Central railway, at Jimulco. Production was 1,693,957 lbs. fine copper in 1904, and 3,413,735 lbs. fine copper in 1905. Was mining circa 75 tons daily, of high grade copper ore, until closed down October, 1907, but resumed June 1, 1908, with a force of about 150 men, again shipping ores to the Aguascalientes smelter. Property considered valuable.

#### JOAQUINA GOLD MINING CO.

MEXICO.

Office: 327 Douglas Bldg., Los Angeles, Cal. Mine office: Real del Castillo, Norte, Baja California, Mex. L. H. Mitchell, superintendent. Has auriferous copper ores and steam plant, employing circa 25 men at last accounts.

#### JOHN D. COPPER MINING CO.

WASHINGTON.

Dead. Merged, 1902, in Ethel Consolidated Mines Co. Formerly at Index, Snohomish Co., Wash.

#### JOHN DIAS MINE.

CALIFORNIA.

Owned by Owl Copper Mining Co.

#### JOHNNIE BULL COPPER MINING CO.

NEW MEXICO.

Dead. West Virginia charter forfeited 1902. Formerly at Steins, Grant Co., N. M.

#### JOHNNIE COPPER CO.

NEVADA.

Mine office: Johnnie, Nye Co., Nev. Presumably idle.

#### JOHNNIE-GREENWATER CONSOLIDATED COPPER CO.

CALIFORNIA & NEVADA.  
Organized under laws of Ari-

Mine offices: Greenwater, Inyo Co., Cal., and Johnnie, Nye Co., Nev. B. T. Hickman, president and general manager; M. H. Smith, vice-president; B. H. Cook, secretary; E. H. Meuschke, treasurer.

zona, with capitalization \$3,000,000, shares \$1 par. Lands, 23 claims, area 460 acres, in 5 groups. The Greenwater group, 4 claims, is undeveloped. The Elko group, 4 claims, circa 3 miles south of Manhattan, Nye County, Nevada, has 33' of surface trenching, said to show ore giving good assays. The Blackhawk group, 8 claims, near Johnnie, has 60' of openings, claimed to show ore assaying well in copper and gold. Is not favorably regarded.

**JOHN OWEN MINING & MILLING CO.****COLORADO.**

Mine office: Idaho Springs, Clear Creek Co., Colo. Has auriferous and argentiferous silver-lead ores, with steam power.

**JOHNSON COPPER DEVELOPMENT CO.****ARIZONA.**

Dead. First company of this name was promoted, 1906, by the Wallace H. Hopkins Co., of Chicago, with capitalization \$3,000,000, shares \$3 par. Formerly at Johnson, Cochise Co., Ariz.

**JOHNSON COPPER DEVELOPMENT CO.****ARIZONA.**

Mine office: Johnson, Cochise Co., Ariz. Organized circa December, 1907, with capitalization \$2,000,000, by Ralph R. Wilson and E. K. Elliott, as successor of company of same name promoted by the Wallace H. Hopkins Co., which came to grief. Lands, 6 claims, known as the Climax group, held under bond and lease, on which it is planned sinking a shaft.

**JOHNSON MINES.****WASHINGTON.**

Mine office: Cle Elum, Kittitas Co., Wash. Property, in the Teanaway district, shipped a little high grade gold-copper ore, 1903, to Puget Sound smelters. Presumably idle.

**JOHNSTOWN MINE.****MONTANA.**

Owned by Butte Coalition Mining Co.

**JOHNSTOWN MINING CO.****MONTANA.**

Dead. Property sold, 1906, to Butte Coalition Mining Co. Formerly at Butte, Silver Bow Co., Mont.

**JOSEPHINE COPPER MINING CO.****MONTANA.**

Letter returned unclaimed from former office and mine, Saltese, Missoula Co., Mont. Robt. H. Fraser, president; John R. Lattimer, vice-president; Chas. Schroge, secretary and treasurer; Richard Daxton, manager. Organized 1907, under laws of Montana, with capitalization \$1,000,000, shares \$1 par. Lands, sundry patented claims, circa 14 miles from Houston railway station, having an old 65' shaft showing ore said to give average assays of 21% copper, 3 oz silver and \$2 gold per ton.

**JOSEPHINE COPPER MINING & SMELTING CO.****MONTANA.**

Mine office: Chouteau, Teton Co., Mont. Organized 1903, to develop claims in the Blackfoot ceded strip. Idle and apparently moribund.

**JOSEPHINE GOLD & COPPER MINING CO.****ARIZONA & UTAH.**

Office: 203 Mining Exchange, Denver, Colo. Mine office: Basin, Grand Co., Utah. O. B. Price, president; Herbert S. Shaw, secretary. Capitalization \$15,000, shares 1 cent par, and company has an indebtedness of \$17,000, exceeding its capitalization. Lands, 7 claims, area 140 acres, on Contact Mountain, in the La Sal district, claimed to show surface croppings carrying 4 to 10% copper and \$6 and upwards in gold per ton, with very slight development. Had lands in Yavapai county, Arizona, described in Vol. V, but apparently has abandoned same. Was prolific of stock-selling literature but barren of results. Moribund.

**JOSIE GOLD & COPPER MINING CO.****WASHINGTON.**

Dead. Formerly at Houghton, King Co., Wash. Described Vol. VI.

**MINA LE JOYA.****SPAIN.**

Office: care of D. Manuel Vázquez López, owner, Huelva, Spain. Mine office: El Cerro, Huelva, Spain. Lands, 53 hectares, showing large quantities

of cupriferous pyrite, averaging 48% sulphur. Has a 10-kilometre tram, and was developing and producing on a small scale in 1906. Presumably idle.

**JUANITA MINING & MILLING CO.** ARIZONA

Office: care of Joseph Swan, secretary, Phoenix, Ariz. Dana A. Seaman, president; Curtis Miller, vice-president; Rufus W. Seaman, treasurer; C. E. Warren, superintendent. Organized March 29, 1905, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par. Lands, 11 claims, in the Crook Cañon district, circa 17 miles south of Prescott, opened by a 100' shaft, said to show a 14' vein of ore averaging 6% copper and \$4 gold per ton. Presumably idle.

**JUKES PROPRIETARY MINES.**

TASMANIA.

Mine office: Mt. Jukes, Montagu Co., Tasmania. H. S. Muir, mine manager. Sent block samples, 1906, to the Mt. Lyell smelter. Presumably idle.

**JULIA DEANE MINING CO.**

UTAH.

Mine office: Bingham Canyon, Salt Lake Co., Utah. David Clay, manager, at last accounts. Has a tunnel showing gold-copper ore. Has steam power. Idle some years.

**COMPAÑIA MINERA JULIA DE COLLAHUASI.**

CHILE.

Office: Iquique, Chile. Mine office: Collahuasi, Tarapacá, Chile. Organized Feb. 14, 1907, under laws of Chile, with capitalization 400,000 pesos, shares 100 pesos par.

**JOSÉ BRUNO GONZALEZ JULIO.**

CHILE.

Mine office: Cajon de Maipó, Santiago, Chile. Property is La Poderosa group, carrying a vein paralleling veins of the Compañía Minera de Maipó, situated a short distance therefrom, and of the same general character. Copper ores carry cobalt in connection, and are refractory, production being small, at last accounts.

**JULIUS CAESAR COPPER MINING CO.**

MEXICO.

Mine office: Santa Catarina, Norte, Baja California, Mex. W. Wright, manager. Has electric power and employed circa 30 men early in 1907.

**JUMBO GOLD MINING CO.**

BRITISH COLUMBIA.

Mine office: Rossland, Trail district, B. C. Mine shows a vein ranging up to 30' or more in width, developed both underground and open-cast, with ores carrying from \$7 to \$20 per ton in gross values. Has steam and electric power, air-compressor, etc. Shipped circa 12,000 tons of ore to the Granby smelter, 1904, but since idle.

**JUNCTION DEVELOPMENT CO.**

ARIZONA.

Dead. Succeeded, October, 1905, by Junction Mining Co. Formerly at Bisbee, Cochise Co., Ariz.

**JUNCTION MINE.**

ARIZONA.

Owned by Superior & Pittsburg Mining Co.

**JUNCTION MINING CO.**

ARIZONA.

Dead. Merged, circa 1907, in Superior & Pittsburg Mining Co. Formerly at Bisbee, Cochise Co., Ariz. Very fully described Vol. VI.

**JUNIATA GOLD & COPPER CO.**

ARIZONA.

Office: 225 Laughlin Bldg., Los Angeles, Cal. Mine office: Quartz King, Yuma Co., Ariz. Employs 5 men. P. W. Powers, president; E. S. Field, vice-president; Dalton S. Patterson, secretary; T. W. Phelps, treasurer; H. B. Allman, superintendent. Organized Oct. 29, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par; issued, \$679,000. Lands, 10 claims, area 200 acres, in the Seneca district, opened by shafts of 20', 50' and 150', showing ore said to give average assays of 14.47% copper and 26.81 oz. silver per ton. Company plans deepening main shaft to 300'.

**JUPITER MINING CO.**

WYOMING.

Office: Tomah, Wis. Mine office: Holmes, Albany Co., Wyo. Dr. C.

E. Quigg, president; J. A. McKay, vice-president; J. W. Hancock, secretary and treasurer. Lands, sundry claims, adjoining the New Rambler, on the southwest. Idle.

**JURA-TRIAS COPPER CO.****NEW MEXICO.**

Dead. Became bankrupt, and property was sold, 1907, to J. T. McLaughlin, proceeds being insufficient to pay the company's debts. Formerly at Señorito, Sandoval Co., N. M. Described Vol. VII.

**JURY COPPER MINES, LTD.****ONTARIO.**

Office: Sault Ste. Marie, Ont. Mine office: Dean Lake, Algoma, Ont. Organized Dec. 5, 1906, under laws of Ontario, with capitalization \$1,000,000. Lands, in vicinity of Dean Lake, have a 46' shaft, showing chalcopyrite. Presumably idle.

**JUSTICE MINING CO.****COLORADO.**

Dead. Formerly at Central City, Gilpin Co., Colo.

**KAFUE COPPER DEVELOPMENT CO., LTD.****RHODESIA.**

Office: Salisbury House, London, E. C., Eng. Mine office: Bulawayo, Rhodesia. Herbert L. Stokes, chairman; Lord Gifford, vice-chairman; Tom Donald, secretary. Organized May 31, 1905, with capitalization £350,000, shares £1 par; issued, £200,007. Is affiliated with the Rhodesia Copper Co., Ltd., and the Northern Copper (B. S. A.) Co., Ltd., all three having the same officers and being part owners directly, or through share interests, in the Hippo mine. Lands include the Hippo mine, area 160 claims, 2 farms, area 3,000 acres, and 3 areas of 10 square miles each, all on the Kafue river, in northern Rhodesia.

**KAFUE COPPER SYNDICATE, LTD.****RHODESIA.**

Dead. Absorbed, 1904, by Rhodesia Copper Co., Ltd. Formerly at Bulawayo, Rhodesia.

**KALAMAZOO COPPER MINING CO.****COLORADO.**

Office: 232 West Cedar St., Kalamazoo, Mich. Letter returned unclaimed from former mine office, Encampment, Wyo. H. E. Brown, president; E. S. Drury, vice-president; Edwin Gillis, secretary and general manager; W. C. Carson, treasurer. Organized Apr. 11, 1902, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par. Lands, 10 patented claims, area 95 acres, in the Pearl district of Larimer county, Colorado, carrying 2 fissure veins, opened by 28' and 40' shafts, showing oxide and sulphide ores assaying 2 to 50% copper, with variable values in gold, silver, nickel and zinc. Is under same management as Coldwater mine, adjoining, and is permitting later to develop to boundary line. Idle since circa 1904, and apparently moribund.

**KAMIOKA MINE.****JAPAN.**

Owned by Mitsu Bishi Goshi Kwaisha.

**KAMLOOPS MINES, LTD.****BRITISH COLUMBIA.**

Office: 18 Leadenhall St., London, E. C., Eng. Mine office: Kamloops, Yale district, B. C. F. V. Marment, chairman; W. J. Webb, secretary; Jos. Argall, general manager. Organized Feb. 22, 1905, as successor of British Columbia Exploration, Ltd., with capitalization £135,000, shares £1 par. Debentures, £30,000 at 6%; debenture interest in arrears. Lands, 7 claims, in the Kamloops district, and 5 claims in the Frederick Arms district. Property is the Iron Mask mine, having a 600' main shaft, with circa 1 mile of workings, showing a considerable body of chalcopyrite, associated with magnetite, mainly of concentrating grade, carrying fair values in copper, silver and gold. Equipment includes a 250-h. p. tandem-compound condensing engine.

Reduction plant includes a 160-ton mill and a smelter, mill receiving ore by aerial tram. Ore is screened on grizzlies, and coarse stuff passed through a 10x16". Jenckes-Farrel crusher, going thence to ore-bins, whence crushed ore is fed to coarse rolls by 2 automatic feeders, going thence through interme-

diate rolls and being elevated to 2 series of trommels. Sized material from the trommels is concentrated on Hartz jigs. Tailings from finer sizes are run to waste, while tailings from coarse jigs and oversize from trommels are re-crushed by fine rolls and returned to the elevators. Fines from trommels pass through 3 magnetic separators, for removal of the magnetite gangue. Sands are concentrated on 3 Buss tables, and middlings from these go to Overstrom tables. Slimes run to a series of settling tanks, products of which are concentrated on 6 Luhrig vanners, arranged in pairs. The 50-ton smelter was planned as first unit of a large plant. Employs circa 75 men.

**KANE COPPER CO.****CALIFORNIA.**

Mine office: Needles, San Bernardino Co., Cal. F. P. Pingree, manager. Organized, 1907, under laws of Arizona, with capitalization \$1,000,000. Lands, 6 miles west of Needles, are said to show good ore.

**KANGAROO HILLS MINING & SMELTING CO.****AUSTRALIA.**

Dead. Lands forfeited, 1907. Formerly at Kangaroo Hills, Queensland, Australia.

**KAN-HSIEN MINE.****CHINA.**

Mine office: Kan-Hsien, Kiang-Hsi, China. Tuan Faang, viceroy of the Liang-Kiang provinces, general manager. Was under development, 1907-1908, a fund of 400,000 taels having been furnished for the purpose in equal amounts by the provinces of Kiang-Hsi and Kiang-Su.

**KANSAS-BURREOUGHS CONSOLIDATED MINING CO.****COLORADO.**

Dead. Became bankrupt 1904. Formerly at Central City, Gilpin Co., Colo.

**KANSAS-CANANEA COPPER CO.****MEXICO.**

Office: Chicago, Ills. Mine office: La Cananea, Arizpe, Sonora, Mex. David Miller, president; A. B. Wadleigh, general manager. Organized circa August, 1908, with capitalization \$1,000,000, as a merger of the Ortega Mining Co., Southwestern Mining Co., Red Cloud Copper Co., Consolidated Gold-Copper Co., and Miller Mining Co.

The Southwestern lands were 842 hectares, known as the Huerfano group, 6 miles southeast of La Cananea, said to carry an 800' ore zone, opened by a 150' shaft showing ores giving good assay values in copper, lead and silver.

Lands taken from the Consolidated Gold & Copper Co. were 1,729 acres, including the Chapultepec mine, area 879 acres, and the Corregidor, area 741 acres, adjoining properties, circa 6 miles southwest of Cananea, said to show a formation similar to the Capote mines of the Greene-Cananea.

**KANSAS CITY COPPER MINING & SMELTING CO.****COLORADO.**

Office: Eighth St. & Broadway, Kansas City, Mo. Mine office: Oneco, Routt Co., Colo. Oliver W. Kroll, superintendent. Has steam and electric power, and is said to have a 40-ton smelter. Presumably idle.

**KANSAS CITY DEVELOPMENT CO.****MEXICO.**

Office and mine: care of Geo. Woodward, secretary, Moctezuma, Sonora, Mex. Tobias Crane, general manager. Lands, 20 pertenencias, known as the Credo Liberal, having an 80' shaft showing ore assaying up to 20% lead, 2% copper, 200 oz. silver and \$7 gold. Presumably idle.

**KANSAS CITY FIREMEN'S COPPER MINING & SMELTING CO.**

Office: 310 Kemper Bidg., Kansas City, Mo. Location of lands, if any, unknown. Presumably moribund.

**KANSAS CITY GOLD & COPPER MINING & MILLING CO.****COLORADO.**

Dead. Formerly at Crestone, Saguache Co., Colo.

**KANSAS CITY & SONORA MINING & MILLING CO.****MEXICO.**

Dead. Property sold, 1903, to Ures Consolidated Mining Co. Formerly at Ures, Sonora, Mex.

**KAP-SAN MINE.****KOREA.**

Mine office: Ko-chin-don, Kap-San, Hamgyeng, Korea. Mine was dis-

covered and opened more than 1,000 years ago, by a Chinaman, ownership passing eventually to the Korean throne. Formerly was of great importance, and is said to have employed several thousand workmen, as recently as 1883. Ore occurs as large irregular masses of sulphides, mainly chalcopyrite, with a mixture of arsenopyrite and pyrrhotite, but without other gangue or contact minerals, in limestone. The district shows alternations of limestone and marl, with interbedded clay-slate and sandstone, frequently metamorphosed by intrusive granite, and overlaid by basalt flows or intruded by basaltic dykes. Deposit now worked is the third that has been found, having an extreme thickness of 20' and known length of about 80', with fairly defined walls. Ore as mined is assorted into two grades, rich ore averaging about 20% copper and poor ore being of 5 to 6% copper tenor, the average of both classes being 12.07% copper, 45.44% iron, 37.40% sulphur and only 0.66% silica. Production, 1906, is estimated at 625,000 lbs. fine copper.

**KAPUNDA COPPER MINE, LTD.****AUSTRALIA.**

Dead. Was abortive. Formerly at Kapunda, Light Co., South Australia.

**KAPUNDA COPPER MINES, N. L.****SOUTH AUSTRALIA.**

Office: Melbourne, Australia. Mine office: Kapunda, Light Co., South Australia. Troubles over title to mine apparently have been straightened out. Mine, 50 miles north of Adelaide, opened 1842, and worked circa 1879-1901, by tributors, has 8 shafts, 2 deepest being about 450' each. Both country rock and vein matter are very soft, requiring heavy timbering, and the oxidized zone is only about 50' in depth. Ores are oxides, carbonates and occasional native copper in the shallow oxidized zone, succeeded by high-grade sulphides. Selected ore has returned 12 to 26% copper, and second grade ore 8 to 12% copper, but some shipments, 1906, ranged above 40% in copper tenor. Mine is said to have produced upwards of \$1,000,000 in the past. Suspended operations late 1907.

**KARANKULSKI MINE.****TURKESTAN.**

Office, mine and works: Tashkent, Turkestan. Is a small property, worked on very primitive lines, and was a small producer at last accounts.

**KARGALINSKI WORKS.****RUSSIA.**

Office and works: Orenburg, Russia. B. A. Pashkoff, owner; E. O. Terner, manager. Mine, 24 miles from Orenburg, is a very ancient property, having been worked in prehistoric times, and ores now produced are said to average circa 3% only in copper tenor. Latest reported production, 1899, was 680,674 lbs. fine copper. Smelter closed down, 1906, and mine and works presumably idle.

**KARTA BAY MINING CO.****ALASKA.**

Office: care of Hon. H. W. Mellen, Coppermount, Alaska. Organized, 1907, under laws of Washington, with capitalization \$12,000.

**COMPAGNIE DU KATANGA.****CONGO FREE STATE.**

Office: 13 Rue Brederode, Brussels, Belgium. Edouard Despret, chairman; Col. A. Thys, managing director; Major A. Cambier, manager; Victor van Achter, secretary. Organized Apr. 15, 1901, under laws of Belgium, as a subsidiary corporation of the Belgium Congo Company, with capitalization 3,000,000 francs. Lands, 50,000,000 acres, freehold, with sundry preferential mining and railway rights. Mining property is 3 groups, known as the Katanga, Kazemba and Pala, located on the left bank of the upper Lualaba River, showing auriferous copper ores. Development, in charge of Grey & Holland, African managers of the Tanganyika Concessions, Ltd., has not advanced beyond an exploratory stage, but the showing is said to be promising.

**KATARSKI MINE.****RUSSIA.**

Office and mine: care of H. Lorenz, Elizabethopol, Russia. Production,

1899, was officially reported by the Russian Government as approximately 4,765,000 lbs. fine copper.

**KATHARINE ELIZABETH CONSOLIDATED MINING CO. ARIZONA.**

Mine office: Jerome, Yavapai Co., Ariz. Geo. O. Ford, president and general manager; L. O. Ford, secretary and treasurer. Organized 1904, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 4 claims, in 2 groups, near Jerome Junction, in the Mineral Point district, opened by a 175' tunnel and several shafts of 25' to 125' depth. Out of funds and idle several years.

**KAWADAYAMA MINE. JAPAN.**

Mine office: Sanyama-mura, Oe-gori, Awa, Japan. Ore is chalcopyrite, associated with pyrite, averaging 4% copper, in a 2' to 4' vein in amphibolite. Production, 1900, was only 14,834 lbs. fine copper. Presumably idle.

**KAY MINE SMELTING CO. VIRGINIA.**

Letter returned refused from former office, 1102-79 Fifth Ave., New York, N. Y. Mine office: Omega, Halifax Co., Va. Z. L. Kay, president and general manager. J. R. Wilbourne, vice-president; W. R. Wilbourne, secretary and treasurer. Organized Aug. 8, 1905, under laws of South Dakota, with capitalization \$1,000,000. Lands, 261 acres, freehold, 9 miles from South Boston, Virginia. Company's prospectus states that mine is in a slate formation similar to Butte, which will be news in Butte, as the people there imagine the formation to be granite. Company reports 7 veins, up to 42' in width, with aggregate width of 82', veins being reported as 3 quarts and 4 copper glance. Any mine with 3 quarts in its overalls seems in line for a glance from the copper. Company claims an average of 8% copper in its prospectus, and claims 6% in a direct report to the Copper Handbook, and claims to have secured assays up to 50% copper. Has 2 shallow shafts, depth not reported, and, by figuring value of ore to depth of 2,500', the management gravely estimates values "in sight" at \$20,403,575, which either is sheer ignorance or intentional deception, presumably a little of each. Is not regarded favorably.

**KEARENS CONSOLIDATED COPPER MINES CO. WYOMING.**

Dead. Succeeded Apr. 18, 1904, by Keystone Mining & Development Co. Formerly at Downington, Carbon Co., Wyo. Described Vol. V.

**KEARSARGE MINING CO. MICHIGAN.**

Dead. Absorbed, 1897, by Osceola Consolidated Mining Co. Formerly at Kearsarge, Houghton Co., Mich.

**BERG UND HÜTTENWERKE KEDABEG. RUSSIA.**

Office: care of Gebrüder Siemens, owners, Berlin, Germany. Mine office: Kedabeg, Elizabethopol, Russia. Works office: Kalakent, Elizabethopol, Russia.

Property is an old mine, reopened 1864, by present owners, and is variously termed the Kedabeg, Kiadebek and Kedabenski mine. Lands are on the flank of Miodagh or Copper Mountain, 26 miles from and 450' above Dalliar, the nearest railway station on the Baku line. Ore bodies are lenticular, flanked by diorite on the east and diabase on the west, latter occurring as dykes cutting quartz and diabase porphyrite, with considerable tufa. There are 16 known ore bodies, ranging in size from 6' to 165' in width, and from 33' to 820' in length. Lenses do not outcrop, apexing at depths of 120' to 400' below surface. The lenses shade gradually into the walls, with very indistinct partings, richest ore favoring the hanging-wall, as a rule. The ore is mainly chalcopyrite, associated with covellite, sphalerite, pyrite and pyrrhotite, with occasional galena, chalcocite and magnetite, slightly auriferous and argentiferous, with gangue of quartz-porphyry, carrying considerable barium sulphate. The ore ranges 3 to 5% in average copper tenor.

Development is almost exclusively by tunnels, and the caving system is employed to some extent. The ore, broken by Siemans & Halske electric drills,

is assorted on surface into 3 grades, first being smelting ore of 7% tenor, all ores of 5% or upwards being smelted; second grade ore, of 2 to 5% copper tenor, is leached, and third grade ore, carrying less than 2% copper, is sold to the petroleum refineries at Baku, for making sulphuric acid, which is used extensively in the refining of illuminating oils. Wages are low, ranging from 36 to 62 cents daily for miners, and only 26 to 32 per diem for trammers.

There are two smelters, the larger being at the mines and the smaller at Kalakent, 8 miles from Kedabeg and circa 40 miles from Elizabethopol. The works have no roofs, which seems a doubtful economy, as there are occasional explosions in times of rain. Ore reaches the works about 40% in lumps and 60% in fines. Lumps are kiln-roasted, and raggings, of  $\frac{1}{4}$ " to  $\frac{1}{2}$ " size, are roasted in reverberatory furnaces, while ores under  $\frac{1}{4}$ " size are roasted in Gerstenhöfer kilns. Smelting is done exclusively in reverberatory furnaces, of which there are 6, circular in form, instead of oval, as formerly, 7 metres in diameter, with a depth of charge of 1 to 1.2 metres. Hearths are laid of quartz, in layers, or crushed quartz worked into a paste with water. The first-fusion product is a matte of 25 to 30% copper tenor, an average matte carrying 28.6% copper, 36.7% iron, 19.7% sulphur, 4.06% zinc, 0.85% nickel and cobalt combined, 0.10% lead, 0.05% arsenic, 0.025% silver and 0.0014% gold, with small quantities of silica, aluminum sesquioxide and barium sulphate. The first-fusion matte is broken into lumps, roasted, and blown up to blister copper of low grade, averaging 88 to 90% copper, 25 oz. silver and 1.2 oz. gold per ton, which is refined at Kalakent, product being a homogeneous copper, largely used for sheets, but less desirable for brass.

Fuel is mainly petroleum, of which circa 20,000 tons are burned annually. This is piped 29 miles, from Dalliar, on the Trans-Caucasian railway, to Kalakent and Kedabeg. Petroleum is used for general steaming purposes, for burning bricks, and for roasting, smelting and refining copper, 2,700 lbs. of crude oil being required to produce 3,600 lbs. fine copper from ore, while weight for weight of petroleum is required to refine precipitate to blister copper. The oil burned has a specific gravity of 0.882, and contains 87.4% carbon, 12.5% hydrogen and 0.1% oxygen, with a heating value of 11,700 calories. In practice it is assumed that 54 parts of petroleum, by weight, are equivalent in heating value to 100 parts of bituminous coal, or 250 parts of wood. Petroleum is sprayed into the reverberatories under high pressure.

The electrolytic refinery, at the Kalakent works, is of about 3,000 lbs. daily capacity, having two 24-kw. generators and 102 tanks, with multiple arrangement of electrodes.

The mine has not held its own as a producer during the new century, old ore bodies having been exhausted more rapidly than new lenses were opened. Production, 1900, was circa 4,500,000 lbs. fine copper, and for 1904 was only 2,966,720 lbs., while the 1907 output is estimated at 2,750,000 lbs.

#### KUPFERKIESBERGBAU KELCHALPE.

AUSTRIA.

Mine office: Kelchalpe, Tyrol, Austria. Was a very small producer at last accounts. Presumably idle.

#### KELLER & INDIANA CONSOLIDATED SMELTING CO. WASHINGTON.

Office: Greensburg, Ind. Mine and works office: Keller, Ferry Co., Wash. Robt. L. Boyle, president and general manager; J. S. Badger, vice-president; Ira J. Hollensbe, secretary and treasurer; M C Smith, superintendent; W. J. Elmendorf, consulting engineer.

Organized Aug. 7, 1903, under laws of Washington, with capitalization \$1,500,000, shares \$5 par; issued, \$1,100,000. Is closely allied, through stock ownership, with the Silver Creek Mining & Milling Co. Annual meeting, first Saturday of February.

Lands include the Manila mine, 4 claims, 26 miles from a railroad, appar-

ently held under a \$60,000 bond and lease, on a \$500 payment; also a 20-acre reservoir and millsite, all well timbered, with a 20,000' sawmill at the reservoir. Lands are in the San Poil district, 7 miles above the Columbia River and 23 miles from Wilbur, the nearest railroad station, but surveys have been made for 2 railroads, through Keller. The Manila mine is said to have a vein of 70' to 100' width, traceable circa 1,000', opened by 2 crosscut tunnels showing ore averaging about 4.5% copper and 4 oz. silver per ton.

Power is furnished by a hydro-electric installation, claimed to be capable of developing 1,480 h. p., having a 150-kw. Bullock generator.

The smelter, 5 miles from the mine and connected therewith by wagon road, was built by R. L. Boyle & Co., under contract, Mr. Boyle being both the president of the company and the head of the firm contracting therewith, which seems a peculiar arrangement. The reduction plant has a small sampling mill and two 100-ton Allis-Chalmers blast-furnaces, one for lead and one for copper. Various dates for blowing in were given, followed by postponements, last date given for blowing in being Nov. 1, 1908, for which purpose ore was being accumulated in October.

The company's prospectus states that Mr. Boyle's estimate, "which seems to be ultra-conservative, provides for \$270,000 yearly profit on the present smelter," and that provision has been made for another 350-ton furnace, to treble the present capacity. These figures indicate that the company is inclined to be reckless in its estimates, but the property is considered not devoid of merit.

#### **KELLY SMELTING & REFINING CO. MONTANA & NEW MEXICO.**

Mine offices: Corbin, Jefferson Co., Mont., and Kelly, Socorro Co., N. M. Samuel W. Traylor, president; Louis O. Hedden, vice-president; Edgar Williams, secretary; John W. Dundee, treasurer; preceding officers, Warren Curtis, Sr., Marcus L. Hewett and Samuel T. Houser, directors. Organized 1908, under laws of Arizona, with capitalization \$5,000,000, shares \$5 par. Lands include the Kelly group in Socorro county, New Mexico, and the Alta group, 8 claims, near Corbin, latter carrying ore with fair copper values. Company is said to plan two 1,000' shafts, old workings being comparatively shallow, and is said to plan a 400-ton concentrator for the Alta group.

#### **KELVIN-ARIZONA COPPER CO. ARIZONA.**

Office and mine: Kelvin, Pinal Co., Ariz. Organized circa 1907, by R. B. Dickinson, et al.

#### **KELVIN-CALUMET COPPER MINING CO. ARIZONA.**

Office: 985 Drexel Bldg., Philadelphia, Pa. Mine office: Ray, Pinal Co., Ariz. W. E. Sharpe, president and general manager; Edwin L. Taylor, vice-president; Chas. W. Gouert, secretary and treasurer; O. A. Turner, general manager; Wm. B. Twitchell, superintendent. Organized circa July, 1907, under laws of Delaware, as a merger of the Calumet Copper Mining Co. and Big Lead Mining Co., and also absorbed the Kelvin-Reduction Co.

Lands include a group near the Christmas, and holdings near the Ray mine, on Mineral Creek, 6 miles from Kelvin, showing limestone and porphyry contacts with conglomerate capping, carrying carbonates at surface and sulphides at depth, former apparently amenable to leaching. The mine has shafts of 80' and 300', latter, the Madeline, showing high grade ores and native copper, oxidized ores being said to average circa 3.5% copper, with small gold and silver values. Shaft is bottomed in sulphide ore.

A 4-stamp mill, on the Big Lead property, is idle. There is a 60-ton concentrator, planned to be increased to 125 tons capacity, which includes a 35-ton leaching plant, built and operated on a secret process invented by H. P. McIntosh. It was claimed that this process would do in minutes what other processes require hours to accomplish, but the process seems to have

taken years to do what mills planned on regular lines do daily. Only carbonate ores have been treated, but sulphides are said to be amenable to the McIntosh process, after roasting. The mill is terraced, all material being handled by gravity, and equipment includes a 125-h. p. engine and air-compressor.

Production by the new process was begun September, 1906, and recovery October, 1907, from 1,118 tons of ore treated, was 41,521 lbs. fine copper, or 37.14 lbs. per ton, from ore assaying 68.6 lbs. per ton, which does not speak highly for the McIntosh process. The company claimed to have made copper for less than 7 cents per pound, which is considered poor figuring. Notwithstanding the great claims of the company for the new process, production, 1907, was only 178,516 lbs. fine copper.

**KELVIN COPPER MINING CO.****ARIZONA.**

Office: 43-89 State St., Boston, Mass. Mine office: Kelvin, Pinal Co., Ariz. Idle and apparently moribund.

**KELVIN REDUCTION CO.****ARIZONA.**

Dead. Lease was sold, circa 1907, to Ray Consolidated Copper Co., and mill sold, 1907, to Kelvin-Calumet Copper Mining Co. Formerly at Kelvin, Pinal Co., Ariz. Fully described Vol. VII.

**KELYNAACK TIN MINE, LTD.****ENGLAND.**

Office: 7 Great Winchester St., London, E. C., Eng. Mine office: Redruth, Cornwall, Eng. E. W. Gundry, chairman; A. J. Kingston, secretary. Organized Nov. 21, 1906, under laws of Great Britain, with capitalization £50,000, shares £1 par, as Western Tin & Copper Syndicate, Ltd.; name changed July, 1907, to present title. Lands include 7 sets of tin and copper lands, area 923 acres, near Redruth, and the Kelynack tin mine near St. Just, Cornwall. Copper property considered promising.

**KEMP-KOMAR COPPER MINING CO.****WASHINGTON.**

Mine office: Loon Lake, Stevens Co., Wash. A. W. Kemp, manager. Has a 200' shaft, showing oxidized ores above and sulphides in lower workings, carrying small gold and silver values, in a 12' vein with paystreak of 6" to 5'. Carload shipments have returned 16 to 20% copper. Idle several years.

**KEMPLAND COPPER CO.****CALIFORNIA.**

Office: care of H. L. Percy, secretary, Los Angeles, Cal. Mine office: Greenwater, Inyo Co., Cal. J. P. Harvey, general manager. Organized under laws of Arizona, with capitalization \$1,250,000, shares \$5 par. Lands, 22 claims, area 440 acres, including 13 claims known as the Brady-Kempland group, about 1 mile west of the Furnace Valley Copper Co. Lands show a prominent gossan, one of the best in the district, and have a tunnel of circa 250' length. Presumably idle.

**KEMPTON MINE.****UTAH.**

Office: care of Col. Enos A. Wall, owner, Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Fred Bemis, superintendent. Lands, in the West Mountain district, carry argentiferous and auriferous lead and copper sulphides, values being mainly in lead. Has a 125-ton mill, rebuilt 1905, which is unique, inasmuch as practically all the machinery was designed by the owner. The equipment includes a set of Wall corrugated rolls, a set of steel rolls for middlings, also invented by Col. Wall, 3 sets of Wall jigs, 2 Wall tables for concentrates, and 2 Wilfley tables.

**KENDRICK & GELDER SMELTING CO.****COLORADO.**

Dead. Succeeded, 1903, by San Juan Smelting & Refining Co. Formerly at Silverton, San Juan Co., Colo.

**KENNEBEC MINING CO.****UTAH.**

Office: care of W. J. Craig, Salt Lake City, Utah. Mine office: Brighton,

Salt Lake Co., Utah. S. M. Levy, general manager. Lands, circa 400 acres, in the Big Cottonwood district, slightly developed by tunnel, and considered well located. Presumably idle.

**KENNETH MINING CO.**

**MONTANA.**

Mine office: Virginia City, Madison Co., Mont. Ores carry gold and copper. Has steam power and a 60-ton stampmill. Idle.

**KENNICOTT MINES CO.**

**ALASKA.**

Office: 146-45 Broadway, New York, N. Y. Mine office: Valdez, Alaska. Norman Schultz, president; Stephen Birch, general manager; Geo. E. Baldwin, superintendent. Organized circa 1907, apparently as successor of Alaska Copper & Coal Co., or as a holding company. It is understood that this company was formed in order to give the Guggenheim interests a 40% holding in the property of the Alaska Copper & Coal Co., on account of the construction of a railroad. Property is described under title of Alaska Copper & Coal Co.

**KENTUCKY-ARIZONA CONSOLIDATED MINING,**

**ARIZONA.**

**SMELTING & DEVELOPMENT CO.**

Dead. Reorganized, 1906, as Kentucky-Arizona Copper Co. Formerly at Cave Creek, Maricopa Co., Ariz. Fully described Vol. VI.

**KENTUCKY-ARIZONA COPPER CO.**

**ARIZONA.**

Office: 504 Kentucky Title Bldg., Louisville, Ky. Mine office: Cave Creek, Maricopa Co., Ariz. Wm. Vottler, vice-president; Shirley M. Crawford, secretary; Coleman R. Robinson, treasurer; Jas. D. Marlar, managing director; Wm. A. Burr, superintendent. Organized Feb. 28, 1905, under laws of Arizona, with capitalization \$2,500,000, shares \$1 par, as successor of Kentucky-Arizona Consolidated Mining, Smelting & Development Co. Lands, circa 1,200 acres, include the Copper Top mine, opened by several shafts and tunnels, with about 1,000' of workings, showing numerous small veins of ore of rather low grade. Has shipped some ore averaging 17% copper and \$3 combined gold and silver values per ton, latter values being mainly in gold.

**KENTUCKY GULCH MINING CO.**

**COLORADO.**

Mine office: Tin Cup, Gunnison Co., Colo. Ores carry gold, silver and copper. Has steam power. Idle.

**KEREMOS COPPER MINES, LTD.**

**BRITISH COLUMBIA.**

Dead. Reorganized, August, 1903, as Keremos-Pontiac Mines, Ltd. Formerly at Olalla, East Yale district, B. C. Described Vol. IV.

**KEREMOS-PONTIAC MINES, LTD.**

**BRITISH COLUMBIA.**

Office: 32 Broadway, New York, N. Y. Mine office: Olalla, East Yale district, B. C. Dr. A. C. Sinclair, president; G. H. Wheeler, vice-president; W. H. Danby, secretary; R. W. Northey, treasurer and superintendent; preceding officers and Phil. Allen, Jr., directors. Organized August, 1903, under laws of British Columbia, with capitalization \$2,500,000, shares \$1 par. Lands, 16 claims, area 800 acres, in 2 groups, 1 having a ledge of 300' claimed width, which probably is an overestimate. Another authority states that property has a 6' vein with an 18" paystreak of mispickel carrying 5 to 13% copper. Has a 185' shaft and several short tunnels, with about 1,000' of workings, giving ore assaying 2 to 4% copper, 2 to 4 oz. silver and \$2 to \$5 gold per ton. Was promoted by Wheeler & Co., of New York, who have foisted on the public a number of unsuccessful and dubious promotions. Property considered promising, but company not regarded favorably.

**KEREMOS SMELTING & REFINING CO.**

**BRITISH COLUMBIA.**

Dead. Formerly at Olalla, East Yale district, B. C.

**KESWICK SMELTER.**

**CALIFORNIA.**

Owned by Mountain Copper Co., Ltd.

**KETCHIKAN CONSOLIDATED MINES CO.****ALASKA.**

Office and mine: Ketchikan, Alaska. Jas. A. Davis, president. Organized 1907, under laws of Maine, with capitalization \$5,000,000. Lands, 36 claims, on Revillagigedo Island.

**KETCHIKAN COPPER CO.****ALASKA.**

Dead. Formerly at Ketchikan, Alaska. Described Vol. VII.

**KEWEENAW ASSOCIATION.****MICHIGAN.**

Office: 33-37 Milk St., Boston, Mass. Local office: Marquette, Mich. John M. Longyear, agent. Is a land corporation, owning large tracts of lands, in the Upper Peninsula of Michigan, that are partly on the Keweenawan copper belt.

**KEWEENAW COPPER CO.****MICHIGAN.**

Dead. Had no connection with present day Keweenaw Copper Co. Organized 1863; allowed charter to expire 1893; wound up, 1899, and lands sold to W. K. Prudden, Lansing, Mich., and by him transferred, 1905, to present Keweenaw Copper Co. Old company owned Section 13 and East  $\frac{1}{2}$  Section 24, Town 58 North, Range 28 West. Raised and expended circa \$100,000. Formerly at Delaware Mine, Keweenaw Co., Mich.

**KEWEENAW COPPER CO.****MICHIGAN.**

Office: 42 Broadway, New York, N. Y. Operating office: Hancock, Mich. Mine office: Mandan, Keeweenaw Co., Mich. Chas. A. Wright, president and treasurer; Spencer R. Hill, vice-president; Capt. Thos. Hoatson, second vice-president and mining director; preceding officers, Thos. F. Cole and Capt. Jas. Hoatson, directors; Chas. A. Wright, Jr., secretary; Arthur H. Sawyer, mine superintendent; Howard G. Wright, mill superintendent; John C. Shields, railway superintendent; Jas. T. Bryant, mining captain; W. W. Stockley, engineer.

Organized March 13, 1906, under laws of Michigan, with capitalization \$10,000,000, shares \$25 par; issued, \$5,000,000, paid in, \$13. Controls, through stock ownership, the Keweenaw Central R. R. Co., Phoenix Consolidated Copper Co. and Washington Copper Mining Co. Adams Trust Co., Boston, registrar; City Trust Co., Boston, transfer agent. Has circa 2,300 shareholders. Annual meeting, second Tuesday in February.

Company's capitalization was purposely made much larger than immediate requirements, to provide for future growth, the plans of the corporation providing for the absorption of large tracts of mineral lands, railroad construction, erection of mills and smelters, and other work. A very considerable part of the purchase price of lands acquired was paid in shares. In 1907 the company purchased a majority of the outstanding stock of the Washington Copper Mining Co., and is supposed to have an option, from Dr. Léon Estivant, on the Clark mine, which is separately described. Company ended 1907 with \$87,945 cash and \$30,671 accounts receivable, with accounts payable of \$13,851.

Lands originally were 12,855 acres, including 11,550 acres of mining lands to which various other tracts have been added, 1,021 acres having been acquired in 1907, giving total holdings, at end of 1908, of circa 17,000 acres, mainly mineral lands, carrying considerable timber. The tracts are in 3 main groups, carrying the strike of the Keweenawan mineral belt for about 14 miles, including practically all of the amygdaloidal and conglomerate cupriferous beds of the district, as well as numerous copper-bearing cross-fissures. Lands are in Town 58 North of Ranges 27, 28 and 29 West, and include the tracts formerly owned by the Etna, Copper Harbor, Empire, Girard, Hanover, Keweenaw, Mandan, Medora, Pennsylvania & Boston, Resolute and Vulcan companies, in addition to lands controlled through stock ownership in subsidiary corporations. In addition to strictly mineral lands, the company has secured sundry tracts of value carrying extensive water-frontages on

available harbors, and undeveloped water-powers of great prospective value.

The company's lands include nearly 2 miles of water frontage on either side of the Montreal river, including Fish Cove, one mile east of the river's mouth, which might be made a fair harbor at comparatively small expense. This frontage will be available for mills, and as the site of a power plant and railroad terminal. Lands also include 5 miles of the course of the river, on both banks, and, with other holdings, give the company the entire water-frontage of Mosquito Lake, which the company has rechristened Lake Medora. It would be possible to use Mosquito Lake for a storage reservoir, by throwing a dam across its outlet, and developing a great water power, with a power installation at the mouth of the river.

The company also owns the Lac La Belle, or Mendota, ship canal, one mile in length, connecting Lac La Belle with Lake Superior. This canal has a 14' channel, which should be deepened by the federal government, as it leads to a splendid haven, which should be made a harbor of refuge.

The company owns a diamond drill outfit, and has made extensive borings, including about 20 drill-holes giving a cross section of the Resolute, Mandan, Medora and Empire tracts.

Most of the old properties secured by the company were prospects only, but the Aetna has a recorded production of 140,881 lbs. fine copper, secured 1863-1873, and the Resolute mine has a 379' shaft, with circa 2,000' of workings.

The Medora mine, opened about 1860, has 3 old shafts, about 100' apart, deepest 140', and has been reopened on an extensive scale. The Medora bed traverses the Keweenaw lands for about 4 miles, outcropping several hundred feet north of the Montreal River lode. The Medora bed, averaging about 12' in width, is a soft chocolate-colored amygdaloid, carrying considerable prehnite, calcite and quartz, in connection with fine stamp-copper and occasional heavy copper, a 30" streak along the footwall carrying some barrel work. The lode, as a whole, is bumpy.

No. 1 shaft is 7x18', inside measurement, with 2 hoisting compartments, each 7x6'4", and a 7x2'8" compartment for ladderway and pipes. The shaft is sunk partly in the bed, and partly in the trap footwall, at an angle of 23°, and the skipway is laid with 40-lb rails. Levels are opened at 150' intervals, with sub-levels, these being required to facilitate the moving of rock, owing to the flat pitch. The shaft was 1,160' deep, September, 1908, with 13 levels, and about 2 miles of workings. It is planned to sink the shaft 1,000' deeper.

A site for No. 2 Medora shaft was selected, 1907, at a point 1,900' west of No. 1, which location was changed to a point circa 1,200' west of No. 1, when No. 2 shaft was started, July, 1908.

In addition to the Medora amygdaloid the property carries other cupriferous beds, among these being the Medora fissure vein, which outcrops circa 225' east of No. 1 shaft, but makes into the shaft with depth. About 100' south of the Medora is another amygdaloidal bed, carrying copper in small quantities, and to the northward is the Wolverine amygdaloid and Allouez conglomerate. The latter was reached, 1908, by a 230' north crosscut from No. 1 shaft, the conglomerate lying about 280' north of the Medora, with drifting in progress, September, 1908, on an amygdaloid, presumably the Wolverine bed, of about 15' width, from which it is expected to make a mill-test.

Equipment at No. 1 shaft includes a shaft-rockhouse with Blake crusher and Lake Shore engine. There is a 24x30' engine-house, with a 14x18" Lidgerwood reversible link-motion hoist, good for 1,000' depth, also 10-drill and 18-drill Ingersoll-Sergeant straight-line compound air-compressors, and a 24x48' boiler-house.

Buildings at the Medora include a 22x28' machine-shop, 20x30' smithy, 24x30' office, 26x42' changing-house and about 20 dwellings. Water is supplied

through a 4" pipe-line, leading from Mosquito Lake to a tank at the mine. The mine and location have a telephone system.

The Empire mine also carries the Medora bed, circa 3 miles east of No. 1 shaft, and some trenching and test-pitting, done 1906-1907, on the Empire tract, showed a bed of about 15' width, carrying some copper at surface. The Empire also carries the Montreal River lode, on which the Manitou has done considerable work.

The Keweenaw Copper Co. secured control of the old Lac La Belle & Calumet railroad, which was reorganized as the Keweenaw Central R. R. Co. The entire stock issue of the Keweenaw Central, \$350,000, is owned by the Keweenaw Copper Co. The old Lac La Belle line, only 8 miles in length, was rebuilt, and the road was extended southwest to Calumet. The line has about 33 miles of spurs and branches, and cost about \$800,000. The line ends just south of Centennial, a suburb of Calumet, where connection is had with the Copper Range railroad. Equipment includes 4 locomotives, 7 passenger cars and 82 freight cars, rock-cars being of 25 tons capacity each. Railroad revenue, 1907, was \$31,806, with net earnings of \$3,326.

Rock is stamped at the mill of the Phoenix Consolidated Copper Co., which is separately described, under the title of the owner. A branch of the Keweenaw Central has been built to the mill.

Production was begun July 28, 1908, on the basis of 225 tons daily, about half of the rock being sent from the stockpile, and half from the underground workings, apparently little or no selection being attempted. The company has made no official statement as to returns secured, and estimates vary from 10 lbs. to 16 lbs. of mineral per ton. Apparently a fair estimate of returns would be 11 lbs. fine copper per ton, as the mineral is dressed to an unusually high metallic percentage. In September, 1908, production was cut to about 125 tons daily, working the mill on day-shift only. The Medora operates 12 power drills, and the company employs about 100 men.

Apparently the Keweenaw Copper Co. has not yet obtained an assured mine in the Medora, though the prospects of the property seem fair, given further development. The management is strong and experienced, and the company owns an immense acreage of mineral lands, on which it scarcely can be questioned that paying mines will be developed, in time.

#### **KEY CITY COPPER CO.**

#### **BRITISH COLUMBIA.**

Office: care of Capt. Andrew Wasson, president and general manager, Sacramento, Cal. Mine office: Mt. Sicker, Vancouver Island, B. C. F. W. McCrady, superintendent. Property adjoins the Tyee and Lenora, and is opened by tunnel. Has steam power. Idle.

#### **KEystone COPPER CO.**

#### **ARIZONA.**

Office: Bank of Commerce Bldg., St. Louis, Mo. Mine office: Globe, Gila Co., Ariz. G. S. Maddox, president; A. A. Aal, vice-president; Geo. A. Biddle, secretary; J. R. Finletter, general manager; preceding officers, L. B. Wightman, J. N. Porter, J. J. Keehan, F. S. Sullenberger, L. L. Henry, H. P. Wightman, H. H. Harvey and S. A. Arkills, directors.

Lands, 12 claims, 8 miles west of Globe, lying next east of the Live Oak and near the Inspiration and Miami mines. Property shows granite and quartz-porphyry, with occasional schists. East of the main workings there are surface deposits of chrysocolla, said to assay 8 to 7% copper, and a conglomerate bed of 4' to 12' thickness, said to be impregnated with copper to the extent of 3 to 6%, from which values apparently could be recovered by leaching. Ore, as developed, is mainly chrysocolla, with disseminated carbonates and occasional sulphides, latter including chalcocite of 40 to 60% copper tenor. Principal ore body is a 12' vein carrying a 15" paystreak said to average circa

22% copper and 2 to 5 oz. silver per ton, balance of vein carrying ore of 3 to 5% copper tenor, which has been left standing, for extraction later.

Development is by 3 tunnels, with about one-half mile of workings, and it is planned to sink a 3-compartment 500' shaft, for large production. No. 2 tunnel, of 570' length, shows chrysocolla and carbonate ores of 4 to 24% tenor, and No. 3 tunnel, circa 600' long, also shows good ore.

A 25-ton experimental plant was built in 1905. The system used is a modification of the Hoepfner sulphide process, and is designed for leaching chrysocolla, as well as carbonate ores, and can include sulphide ores after roasting. Ore is reduced to fines, pulped, and leached for three hours in a slowly revolving chlorination barrel. The leaching solution is cupric chloride, which is changed to cuprous chloride by the absorption of one atom of copper. The enriched solution goes to precipitation tanks, where the extra molecule of copper is precipitated upon large copper sheets, and the solution, thus regenerated to cupric chloride, is returned to the storage tank, for further use.

Some grading was done, 1906, for a 100-ton roasting furnace, to enable the mine to treat sulphide ore, but the furnace was not built.

The Keystone has been a shipper for 10 years, and production, 1899-1904, was 1,067 tons of ore, netting \$37,276.98. Ores smelted gave returns of 22 to 27% copper, in addition to lower grade silicious ores of 3 to 5% copper tenor, sent to the Old Dominion smelter for converter linings.

The company came to grief in 1907, and control of the property has been shifted several times. The Old Dominion Mining & Smelting Co. planned taking over the property, 1908, under foreclosure proceedings based on a \$65,000 mortgage, but the stockholders voted, May, 1908, to accept the offer of Nathan L. Amster to pay the \$65,000 mortgage and expend \$50,000 on development and afterwards reorganize the company. Although this agreement was ratified it was not carried out, and the Amster option was transferred, apparently without Amster's sanction, to J. B. Newman, who paid the \$65,000 judgment and agreed to expend \$4,000 monthly on development, with the proviso that he may acquire title by paying \$400,000 to the company.

Production, 1907, was 208,801 lbs. fine copper. Property is considered decidedly promising.

#### **KEYSTONE COPPER & GOLD MINING CO.**

**ARIZONA.**

Office: 502 Park Bldg., Pittsburgh, Pa. Letter returned unclaimed from former mine office, Wickenburg, Maricopa Co., Ariz. C. B. McLean, president; W. J. Strassburger, secretary and general manager; W. W. Wilson, treasurer. Organized 1900, under laws of Arizona, with capitalization \$1,250,000, shares \$10 par. Lands, 24 claims, in the Blue Tank and Black Rock districts, showing sulphide ore bodies. Idle for several years and apparently moribund.

#### **KEYSTONE COPPER MINING CO.**

**NEW MEXICO.**

Office: Bloomsburg, Pa. Mine office: Tres Piedras, Taos Co., N. M. Lands, 18 claims, known as the Payroll mine, in the Bromide district, opened to depth of about 250' and showing a vein of sulphide ore said to be 20' wide and to assay 6 to 12% copper, with fair gold values. Has steam power and a 50-ton concentrator. Idle several years and apparently moribund.

#### **KEYSTONE COPPER SMELTER CO.**

**MEXICO.**

Office: 330 Drexel Bldg., Philadelphia, Pa. General Mexican office: Apartado 22, Guadalajara, Mexico. Mine office: Tapalpa, Sayula, Jalisco, Mex. Robert P. Molton, president; Edward E. Cattel, vice-president and chairman of executive committee; Aubrey F. Lee, secretary; Daniel Lamont, Jr., treasurer; Theo. Breidenbach, general manager. Organized under laws of New Jersey, with capitalization \$300,000, increased, July 6, 1905, to \$500,000.

shares \$1 par. Has authorized an issue of \$100,000 certificates of indebtedness, at 6% interest, redeemable Dec. 10, 1908.

Lands, circa 100 hectares, in 5 groups including the Mexicana, America and Palma groups, also timber rights to circa 50,000 acres of adjoining lands. Principal development is on La Mexicana group, area 82 hectares, 15 miles west of Tapalpa, mine being developed by a 200-metre crosscut tunnel, cutting 4 veins, with about one mile of workings. Veins are fissures in porphyry, averaging 5' width, and carrying auriferous and argentiferous chalcopyrite, sphalerite and pyrite.

Equipment includes steam and electric power. There is a 30-ton mill, having 2 crushers, 2 rolls and 3 concentrating tables. A small smelter, built circa 1902, had a 75-ton reverberatory furnace, making matte of 30 to 48% copper tenor, when operated, which was for a short time only, and the smelter was abandoned several years ago. It was planned to add a cyanide plant for treatment of gold ores, but apparently this was not done. Early 1908 company bought the Etzatlán smelter, of 30 tons daily capacity, and is said to plan removing same to Talpalpa. The reduction plant was remodeled and put in operation early 1908. The company is said to employ about 100 men.

#### KEYSTONE-MERRITT COPPER CO. ARIZONA.

Letter returned unclaimed from former mine office, Clifton, Graham Co., Ariz. Was to have been absorbed, 1907, by Copper Co. of Arizona, since succeeded by Coppermines Co. of Arizona. Idle and apparently moribund.

#### KEYSTONE MINING & DEVELOPMENT CO. COLORADO & WYOMING.

Office: 839 Equitable Bldg., Denver, Colo. Mine offices: Downington, Carbon Co., Wyo., and Boulder, Boulder Co., Colo. Dr. E. T. Ettinger, president and general manager; Wm. R. Klein, secretary; G. C. Aschbach, treasurer. Organized Apr. 18, 1904, under laws of Wyoming, with capitalization \$2,000,000, shares \$1 par, as successor of Kearns Consolidated Copper Mines Co. Has lands in Colorado and Wyoming. Former, carrying gold only, include the Smoky Hill mine, area 20 acres; Dirigo mine, area 60 acres, patented, and the Norumbega mine, area 40 acres, all in Boulder county. Principal development seems to be on the Colorado gold properties. The Wyoming lands, area 206 acres, are on Beaver Creek, circa 12 miles south of Encampment, including the Kearns mine, opened by a 600' tunnel, and the 160-acre Downington townsite. Idle.

#### KEY TO SUCCESS COPPER MINING, SMELTING & EXPLORATION CO., LTD.

#### UTAH.

Office: 213 Providence Bldg., Duluth, Minn. Letter returned unclaimed from former mine office, Frisco, Beaver Co., Utah. A. R. Merritt, president; C. E. Mylen, vice-president; Geo. F. Davis, secretary; J. S. Lane, treasurer; preceding officers, H. Brown and John L. McGilvery, directors. Organized 1902, under laws of South Dakota, with capitalization \$1,500,000, shares \$1 par. Lands, 12 claims, area 240 acres, also a 40-acre millsite, in the Beaver Lake district, opened by shafts of 25', 75' and 105', showing ore carrying 3 to 6% copper, with gold and silver values. Idle, and August, 1908, planned reorganization.

#### KEY WEST MINING CO.

#### NEVADA.

Mine office: Bunkerville, Lincoln Co., Nev. Ores said to carry copper, nickel and platinum. Idle.

#### KHAYYAM COPPER CO.

#### ALASKA.

Dead. Merged, circa 1904, in Omar Mining Co. Formerly at Kiam, Alaska.

#### KIADEBEK MINE.

#### RUSSIA.

Owned by Berg- und Hüttenwerke Kedabeg.

**KILLINGDAL KOBBERVAERK.****NORWAY.**

Owned by Bede Metal &amp; Chemical Co.

**KIMBALL CREEK MINING CO.****WASHINGTON.**

Dead. Formerly at Berlin, King Co., Wash.

**KIMBERLEY SYNDICATE.****WESTERN AUSTRALIA.**

Office: Adelaide, South Australia. Mine office: Derby, Western Australia. Lands adjoin the Derby Copper Syndicate, of which the Kimberley is a twin. Has surface ore of high grade with country rocks of slate and schist. Made a small shipment of 20% ore to smelter at Moonta, South Australia, late 1906.

**KIN-E-CHY MINING & MILLING CO.****ARIZONA.**

Office: 1112 Majestic Bldg., Detroit, Mich. Mine office: Wilcox, Cochise Co., Ariz. J. Geo. Zink, president; Dr. W. E. Burtless, vice-president; Fred P. Obenauer, secretary and treasurer; Gust. Becker, manager; preceding officers and Herman Knorr, directors. Organized 1908, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 33 claims, area 660 acres, in 5 groups, in the Aravaipa district, showing several fair sized veins carrying variable values in copper, lead, silver and gold. The copper group, of 14 claims, has a 72' shaft and a 150' tunnel. The gold group, of 6 claims, is said to show a considerable body of low grade gold ore. Equipment includes steam power and a small stamp-mill, built 1903. Idle, unable to pay its bills and apparently moribund.

**KING COPPER MINING CO. OF NEVADA.****NEVADA.**

Office: 431-53 State St., Boston, Mass. Letter returned unclaimed from former mine office, Lovelock, Humboldt Co., Nev. Property was the Anderson mine, carrying auriferous and argentiferous copper ores, slightly developed. Long idle and apparently moribund.

**KING DAVID MINING CO.****UTAH.**

Office: Salt Lake City, Utah. Mine office: Frisco, Beaver Co., Utah. David Evans, manager. Organized circa August, 1908, and said to have begun business with \$50,000 in the treasury. Lands are circa 70 claims, near the Horn Silver mine. Company plans a 2-compartment 1,000' shaft, on the supposed extension of the Horn Silver vein, and is said to have ordered a hoist good for 1,500' depth. Has a 5-mile pipe-line for water, and begun work vigorously, with a force of about 60 men.

**KING DEVELOPMENT CO.****ARIZONA.**

Dead. Merged, circa 1904, in Consolidated King Development & Columbia Copper Mining Co. Formerly at Jerome, Yavapai Co., Ariz.

**KING EDWARD MINES, LTD.****BRITISH COLUMBIA.**

Office and mine: Fairview, Boundary district, B. C. R. H. Parkinson, president; H. Jones, vice-president; D. Braithwaite, secretary and treasurer; preceding officers, D. A. Carmichael and W. A. Hainig, directors. Organized January, 1904, under laws of British Columbia, with capitalization \$500,000, shares \$1 par. Lands, 10 claims, area 500 acres, in the Similkameen division of the Osoyoos district, opened by 350' of workings, show a sulphide ore body of 6' to 10' width, estimated to average 5% copper and about \$1.50 per ton in combined gold and silver values.

**KING EDWARD MINING CO.****ONTARIO.**

Dead. Lost lands. Formerly at Thessalon, Algoma Ont. Fully described Vol. VII.

**KING GOLD & COPPER MINING CO.****WASHINGTON.**

Office: Davenport, Wash. Mine office: Springdale, Stevens Co., Wash. J. B. Tuttle, Sr., president and general manager; J. T. McAviney, vice-president; J. B. Tuttle, Jr., secretary and treasurer; preceding officers, A. M. Camp-

bell and G. B. M. Seager, directors. Organized June, 1900, under laws of Washington, with capitalization \$2,000,000, shares \$1 par.

Lands, 9 miles west of Springdale, known as the Edna-Gladiator group, carry a contact vein between diorite and quartz, opened by a 370' shaft, showing low-grade melaconite and chalcocite, with silicious gangue. Equipment includes a 350-h. p. boiler, 10x11" friction hoist, 8-drill air-compressor, power drills, steam pumps, electric light plant and various engine-houses, shaft-houses, bunk-houses and ore-bins.

Suit brought by dissatisfied shareholders, alleging mismanagement, was dismissed September, 1905, the court holding that allegations were not proven. Not regarded favorably. Presumably idle.

**KING GOLD & COPPER MINING & MILLING CO.** **CALIFORNIA.**

Dead. Was a swindle. Formerly at Victor, San Bernardino Co., Cal. Fully described Vol. V.

**KING KENDALL MINING CO.** **NEW MEXICO.**

Dead. Formerly at Steins, Grant Co., N. M.

**KINGMAN SMELTING & REFINING CO.** **ARIZONA.**

Dead. Was succeeded by Union Smelting Co. Formerly at Kingman, Mohave Co., Ariz.

**KING MINING CO.** **WYOMING.**

Dead. Was a twin of the Isabel Copper Mining Co. Lands were sold, 1902, to Bambler Mining & Smelting Co. Formerly at Riverside, Carbon Co., Wyo. Described Vol. VI.

**KING MINING CO., LTD.** **BRITISH COLUMBIA.**

Dead. Reorganized, circa 1903, as Denoro Mines, Ltd. Formerly at Eholt, Yale district, B. C.

**KING PHILIP COPPER CO.** **MICHIGAN.**

Office: 701-199 Washington St., Boston, Mass. Operating office. Houghton, Mich. Mine office: Winona, Houghton Co., Mich. Chas. J. Paine, Jr., president; Geo. P. Gardner, vice-president; preceding officers, Walter Hunnewell, Rufus R. Goodell, Nathaniel H. Stone and Nathaniel Thayer, directors; Edward B. O'Connor, secretary and treasurer; Dr. L. L. Hubbard, manager; Rex R. Seeber, superintendent; Frank G. Lukey, clerk.

Organized Nov. 13, 1905, under laws of Michigan, with capitalization \$2,500,000, fully issued; \$7 paid in. Is controlled, through ownership of 83,767 shares, by St. Mary's Mineral Land Co. City Trust Co., Boston, registrar. A \$1 assessment was levied circa August, 1908. Company ended 1907 with \$20,167 cash and accounts receivable, and \$16,545 accounts payable.

Lands, 1,040 acres, in Houghton and Ontonagon counties, Michigan, main tract lying about one mile south of the Winona mine. Company exchanged parcels of 5 acres with the Winona Copper Co. to rectify boundary lines, permitting each to work to better advantage in shafts nearest the boundary. The lands have been quite thoroughly probed by diamond drill borings.

The Winona lode averages about 20' in width, as opened on King Philip lands, and shafts are sunk in the footwall, which is a wise precaution. The mine is to be connected, eventually, with the Winona, levels being opened on the same planes. Ten power drills are worked. Rock filling is used underground. Frames for drifts are built of heavy transverse horizontal stulls, covered with light lagging, after which waste-rock is dumped on either side and above the lagging, leaving drifts with timber walls 8' wide and 7' high.

The first shaft was started 1,500' from the northwest corner of the tract, but struck quicksand at 32' depth, hence was changed to a drainage shaft, and a new shaft started 75' distant, latter being known as No. 1. This shaft was started vertically, of size 14x25', and was bottomed in rock at a depth of 50', after which the shaft is deflected to an angle of 70° to correspond with

the dip of the bed, though about 85' in the footwall. No. 1 was bottomed August, 1908, at the tenth level, and crosscuts have been driven to the Winona bed on the fifth to ninth levels, inclusive, showing fair ground.

No. 2 shaft, circa 2,800' southwest of No. 1, is on the south side of Sleeping River, and was 360' deep August, 1908, with a crosscut on the fourth level to the Winona bed, which gave about the same showing as in No. 1.

Equipment includes a 12x20" hoist with 5' drum, good for 1,200' depth, and a powerful electric hoist. The King Philip will take electric power from the Winona, and in return will furnish compressed air. The 28x40' powerhouse contains a battery of two 200-h. p. Parker tubular boilers, 6-drill and 15-drill air-compressors and a powerful Nordberg triple expansion 3-stage air-compressor. Coal is drawn to the boiler-house through a concrete tunnel under a coal-trestle surmounted by a railroad track.

Buildings include a 34x40' power-house, 15x24' smithy, 26x36' warehouse, 24x62' bunk-house, 20x50' cook-house, 16x30' change-house, 24x36' office and about a dozen other structures.

Little attention has been paid to the character of copper-bearing bed, efforts being centered on sinking and equipping the shafts, hence little can be said as to the company's prospects, but it is to be presumed that the company, which has an excellent and experienced management, possesses accurate data upon which to predicate its extensive development.

#### KING & QUEEN COPPER CO.

#### NEW MEXICO.

Mine office: Steins, Grant Co., N. M. Lands, sundry claims near the King Kendall and Johnny Bull mines. At last accounts contemplated development.

#### KING & QUEEN MINING CO.

#### MONTANA.

Office: 1007 Bessemer Bldg., Pittsburg, Pa. Mine office: Superior, Missoula Co., Mont. Nelson Weddle, Jr., president; Chas. J. Rieger, vice-president; J. F. Hinckley, secretary; H. A. Spangler, treasurer; preceding officers, B. H. Howard, J. L. Armstrong, R. W. Judkins and Dr. G. T. McCullough, directors; T. E. Wood, superintendent. Organized Feb. 22, 1905, under laws of Montana, with capitalization \$1,000,000, shares \$1 par, practically as a reconstruction of the Montana Mining & Development Co.

Lands, 15 claims, partly patented, area 188 acres, and a 20-acre millsite, well timbered, 3½ miles from the Northern Pacific railway, in the Spring Gulch district, showing limestone, quartzite and shale, with 5 contact deposits between quartzite and limestone, of which one, under development, of 8' estimated average width, formerly was reported as giving average assays of 6.5% copper, 16% lead, and 16 oz. silver per ton, from malachite, chalcocite and chalcopyrite, and is now said to average about 4.5% copper and 12 oz. silver per ton, with gold values ranging up to 8 oz. per ton. Development is by a 1,200' tunnel and a 600' shaft, mine having about 3,000' of workings, showing considerable ore.

Equipment includes an 80-h. p. boiler, 25-h. p. hoist, 6-drill duplex air-compressor, a sawmill of 6,000 feet daily capacity, and several small buildings. Property was a small producer, for about 10 years, before bought by present owners. Was idle September, 1908, but planned early resumption.

#### KING SOLOMON MINES.

#### BRITISH COLUMBIA.

Office: care of J. S. H. Matson, Victoria, B. C. Mine office: Cowichan, Vancouver Island, B. C. Wm. Lewis, superintendent. Organized 1904, with capitalization \$15,000, shares \$1,500 par. Lands, 4 miles from the Esquimalt & Nanaimo Railroad, on Copper Mountain, in the Helmken district, include the King Solomon and Queen of Sheba claims. Has made several 40 and 50-ton shipments to Tyee smelter that returned 8 to 9% copper.

**KING SOLOMON MINING CO.****BRITISH COLUMBIA.**

Office: care of D. C. Corbin, owner, Spokane, Wash. Letter returned unclaimed from former mine office, Greenwood, Boundary district, B. C. Lands, near the Montreal & Boston claims of the Dominion Copper Co., Ltd., produced, 1902, circa 700 tons of ore. Idle some years.

**KING SOLOMON'S COPPER MINES.****TRANSVAAL.**

Mine office: Zecrust, Transvaal.

**KING SOLOMON TUNNEL & DEVELOPMENT CO.****COLORADO.**

Office: care of Samuel H. Alexander, secretary, Madison, Wis. Mine office: Frisco, Summit Co., Colo. F. C. Dinsmore, president; W. W. Theobald, treasurer. Jas. H. Myers, superintendent. Organized under laws of South Dakota, with capitalization \$2,500,000, shares \$1 par, as successor of King Solomon Tunnel Mining Co. Lands, 50 lode claims and sundry placer claims. Has an air-compressor.

**KING SOLOMON TUNNEL MINING CO.****COLORADO.**

Dead. Reorganized as King Solomon Tunnel & Development Co. Formerly at Frisco, Summit Co., Colo.

**KINGSTON GOLD & COPPER MINING CO.****BRITISH COLUMBIA.**

Mine office: Hedley, Boundary district, B. C. Lands, 4 claims, 1 fractional, showing slightly auriferous and argentiferous chalcopyrite and galena, partially developed by open-cuts and several short tunnels.

**KING WILLIAM MINING CO.****UTAH.**

Office: Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. Chas. H. Blanchard, president; J. H. Rouse, vice-president; A. C. Ellis, Jr., secretary; L. H. Farnsworth, treasurer. Organized under laws of Nevada, with capitalization \$1,250,000, shares \$1.25 par. Lands are near the Eagle & Blue Bell, and it is planned developing the King William from the workings of that property.

**KIRK LEASING CO.****UTAH.**

Mine office: Bingham Canyon, Salt Lake Co., Utah. Morris P. Kirk, general manager. Organized circa October, 1908, to operate property leased from the Boston Consolidated Mining Co.

**KISHORN MINE.****SCOTLAND.**

Office and mine: care Mrs. M. M. H. Stewart, Kishorn, Loch Carron, Rossshire, Scotland. Mine was worked about the close of the Eighteenth or opening of the Nineteenth Century, but since idle, except for development work, with circa 80 men, for a short time in 1904.

**KITTANNING COPPER MINING CO.****WASHINGTON.**

Dead. Formerly at Index, Snohomish Co., Wash.

**KITTICOOLA GOLD-COPPER MINE, LTD.****SOUTH AUSTRALIA.**

Dead. Lands sold, 1906, to Port Lincoln Copper Co., Ltd. Formerly at Reedy Creek, Robe Co., South Australia. Described Vol. VI.

**KITTICOOLA MINE.****AUSTRALIA.**

Owned by Port Lincoln Copper Co., Ltd.

**KJOLI MINES, LTD.****NORWAY.**

Dead. Formerly at Reitan, Aalen, Guldalen, Trondhjem, Norway. Described Vol. VI.

**BEEGVERWALTUNG KLAUSEN.****AUSTRIA.**

Mine office: Klausen Pfunderberg, Tyrol, Austria. Presumably idle.

**KLEIN LETABA COPPER MINES, LTD.****TRANSVAAL.**

Office: 70 Queen Victoria St., London, E. C., Eng. Robt. S. Simpson, chairman; Victor Thomasset, secretary. Organized March 4, 1907, under laws of Great Britain, with capitalization £60,000, shares £1 par; issued, £45,157. Lands, 444 copper claims, in the Klein Letaba district, bought for £500 cash and £40,000 in shares.

**GEWERKSCHAFT KLINGENTHAL-GRASLITZER****GERMANY.****KUPFERBERGBAU.**

Mine office: Klingenthal, Saxony, Germany. Erhart August Schiedt, manager. Has a 100-metre main shaft, developing chalcopyrite, employing about 100 men.

**KLIPKOP (NAMAQUALAND) COPPER****CAPE COLONY.****SYNDICATE, LTD.**

Dead. Voluntarily liquidated, 1904. Formerly at O'okiep, Little Namaqualand, Cape Colony.

**KNAPP MINING CO.****COLORADO.**

Mine office: Pearl, Larimer Co., Colo. Is controlled, through stock ownership, by National Mining & Milling Co. Lands, 9 claims, area 80 acres, known as the Big Horn group, carrying 2 fissure veins in gneiss and diorite, opened by shafts of 65' and 85', showing chalcopyrite and occasional bornite. Has a 25-h. p. steam hoist. Idle.

**KNICKERBOCKER DEVELOPMENT CO.****MONTANA.**

Dead. Formerly at Helena, Lewis & Clark Co., Mont. Described Vol. VII.

**KNICKERBOCKER MINING CO.****MONTANA.**

Mine office: Butte, Silver Bow Co., Mont. Organized 1906, with capitalization \$5,000,000, shares \$5 par, to take over the Jennie Dell and adjoining claims.

**KNIGHT COPPER CO.****ARIZONA.**

Mine office: Humboldt, Yavapai Co., Ariz. W. H. Knight, president and general manager; W. F. Whitney, vice-president; J. E. Russell, secretary; F. C. Moore, treasurer. Organized 1907, under laws of Arizona, with capitalization \$1,500,000. Lands, 5 claims, area 100 acre, about a mile south of the Humboldt smelter, having a 25' shaft and a 175' tunnel, said to show 2 ledges, of 15' to 75' width, carrying ore average about 4% copper, with high grade pay streaks.

**KNIGHT INVESTMENT CO.****UTAH.**

Office: Knight Blk., Provo, Utah. Jesse Knight, president; Amanda M. Knight, vice-president; R. Eugene Allen, secretary and treasurer; preceding officers, Raymond Knight, W. Lester Mangum, J. William Knight and Iona Knight, directors. This company controls a large number of properties, of considerable promise, in the Tintic district of Juab county, Utah.

**KNIGHT'S ISLAND-ALASKA COPPER CO.****ALASKA.**

Office: 902 Lowman St., Seattle, Wash. Mine office: Valdez, Prince William Sound, Alaska. Jas. J. Godfrey, secretary; William Egan, superintendent. Lands, 17 claims, on Dryer Bay, Knight's Island, in the Prince William Sound district, having a 280' tunnel showing a vein up to 25' in width.

**KNIGHT'S ISLAND CONSOLIDATED COPPER CO.****ALASKA.**

Office: 1115 Stock Exchange, Chicago, Ills. Mine office: Valdez, Alaska. H. Curtis Elliott, president; H. P. Elliott, first vice-president; Chas. G. Hubbard, second vice-president and general manager; A. J. Elliott, secretary; J. E. Slocum, treasurer. Organized Sept. 12, 1906, under laws of Washington, with capitalization \$1,000,000, shares \$1 par. Is controlled, through ownership of \$505,480 in stock, by Hubbard-Elliott Copper Mines Development Co. Lands, 60 claims, area 1,200 acres, in 5 groups, having a 128' tunnel showing chalcopyrite, associated with pyrite and pyrrhotite, giving assays of 6 to 19% copper. Has electric power, wharf, ore-bunkers and a sawmill with daily capacity of 20,000', board measure. Mine and wharf are connected by a 3,400' Riblet aerial tram, of 600 tons daily capacity.

**KNIGHT'S ISLAND COPPER CO.****ALASKA.**

Mine office: Valdez, Alaska. J. C. Dieringer, secretary; Wm. Page, super-

intendent. Capitalization, presumably \$1,500,000. Lands, on Dryer Bay, Knight's Island, near tidewater, show a promising gossan carrying copper stains. Mine has 8 tunnels, showing ore estimated to average 21.32% copper, which is too high. Made a trial shipment, July, 1907, but a tram-line is necessary for regular production.

**KNIGHT'S ISLAND MINING & DEVELOPMENT CO.** **ALASKA.**

Office: 1267 Lexington Ave., New York, N. Y. Mine office: Valdez, Alaska. W. C. Rothkranz, president and general manager; Jesse Miller, vice-president and secretary; Robert Kutschinski, superintendent. Lands, 28 claims, on Louis Bay, said to show several veins of 12' average width, carrying 12% chalcopyrite, which probably is an overestimate. Has a small power plant and sawmill.

**KNOCKMAHON MINES.**

**IRELAND.**

Owned by Bonmahon Copper Mines Development Syndicate, Ltd.

**KNOWLTON MINING CO.**

**MICHIGAN.**

Dead. Organized 1853, with capitalization \$500,000. Levied circa \$160,000 in assessments, to 1872. Merged, circa 1898, in Adventure Consolidated Copper Co. Formerly at Greenland, Ontonagon Co., Mich.

**KOEI MINE.**

**JAPAN.**

Mine office: Tsunekanemaru-mura, Ashina-gori, Bingo, Japan. Is an old property, reopened 1893. Ore is chalcopyrite, associated with sphalerite, pyrite and micaceous hematite, all argentiferous, in a fissure vein 4' to 8' wide, with gangue of talc and hornblende. Country rock is hornblende-granite. Concentrated ore averages 13.4% copper and 4% silver. Production, 1900, was 88,495 lbs. fine copper. No production of copper reported recently, and presumably idle.

**KOKOMO-PIONEER MINING & MILLING CO.**

**COLORADO.**

Dead. Formerly at Dumont, Clear Creek Co., Colo.

**KOKUSEI MINE.**

**JAPAN.**

Mine office: Kawabe-mura, Shonan-gori, Mimasaka, Japan. Mine, opened 1882, carries chalcopyrite, associated with pyrite and small quantities of sphalerite, ore occurring in lenses, largest 60' in diameter, with clay gouge, in sandstone and clay-slate. Production, 1903, was 232,882 lbs. fine copper, a decline from 348,497 lbs. in 1899. No later official returns received, and probably idle.

**KOMAKI MINE.**

**JAPAN.**

Mine office: Hanawa, Kazuno, Eikuchi, Japan. Mine, which is very ancient, lies partly in the province of Ugo, and once produced circa 1,000,000 lbs. fine copper year, with considerable gold as a by-product, but in 1903 made only 167,833 lbs. fine copper, and presumably is idle.

**KOOTENAI-COPPER MINING & SMELTING CO.**

**IDAHO.**

Dead. Formerly at Port Hill, Bonner Co., Idaho.

**KOOTENAI-COUNTY MINING CO.**

**IDAHO.**

Office: Detroit, Mich. Mine office: Priest River, Bonner Co., Idaho. Capitalization \$2,000,000, shares \$1 par. Lands are at the eastern end of Priest Lake. Idle.

**KOOTENAI MINING & MILLING CO., NO. 2.**

**IDAHO.**

Mine office: Priest River, Bonner Co., Idaho. Lands, 7 claims, at the head of Priest Lake, opened by tunnels of 30' and 40', showing ore giving good average assays in copper and silver.

**KOOTENAY COPPER-GOLD MINING CO.**

Office: 15 Exchange Pl., Jersey City, N. J. Incorporated November, 1902, under laws of New Jersey, with capitalization \$500,000, by Horace B. Gould, John R. Turner and Louis B. Dailey. Location of lands, if any, unknown. Apparently abortive.

**KOOTENAY COPPER MINING CO., LTD.****BRITISH COLUMBIA.**

Letter returned unclaimed from former office, Spokane, Wash. Mine office: Creston, West Kootenay, British Columbia. O. J. Wiggins, agent. Organized circa 1906, with capitalization \$50,000, shares 5 cents par.

**KOPERMYN (TRANSVAAL), LTD.****TRANSVAAL.**

Office: 237 Finsbury Pavement House, London, E. C., Eng. Mine office: Pietersburg, Zoutpansberg, Transvaal. E. C. C. Smith, secretary. Organized Oct. 19, 1905, under laws of Great Britain, with capitalization £120,000, in 100,000 shares of £1 par and 2,000 shares of £10 par; issued, £110,383. Lands, 860 acres, 19 miles southeast of Pietersburg. Estimated reserves are 45,000 long tons of ore averaging 6% copper and 2 dwts. gold, which seems excessive, in view of the extremely limited development secured.

**KOPPER KROWN MINING CO.****WYOMING.**

Letter returned unclaimed from former office, 56 Fifth Ave., Chicago, Ills. Mine office: Hecla, Laramie Co., Wyo. Henry Schwartz, Sr., president; Ed. E. Hartwell, vice-president; J. May, treasurer; Alonzo Hastings, secretary; preceding officers and Henry Schwartz, Jr., directors. Organized under laws of Wyoming, with capitalization \$1,500,000, shares 50 cents par. Lands, 154 acres, having 413' of workings, claimed to show 10,000 tons of sulphide ore blocked out for stoping. Company advertised that it planned building a smelter, and was ready to ship on a moment's notice, but seems to have failed to receive the notice. Presumably idle.

**KOSAKA MINE.****JAPAN.**

Owned by Fujita-Kumi & Co.

**KOTSINA COPPER CO.****ALASKA.**

Office: 1007-160 Washington St., Chicago, Ills. Mine office: Valdez, Alaska. Chas. A. McKenzie, president. Organized 1906, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands, 110 claims, area 2,200 acres, in 6 groups, including the Crawford & Ammon group, in the Kotsina River Valley, circa 85 miles northeast of Valdez.

**KREMLIN MINING CO.****UTAH.**

Mine office: Bingham Canyon, Salt Lake Co., Utah. Has a 300' shaft, and is drained through the main tunnel of the Bingham Consolidated. Is said to show a large body of concentrating ore, on the 300' level. Idle.

**KRUG GOLD & COPPER MINING CO.****WASHINGTON.**

Mine office: Chewelah, Stevens Co., Wash. Lands, known as the Hartford group, 7 miles northwest of Chewelah, have a 108' tunnel, said to show ore giving good assays in copper, silver and gold.

**KRUGEE COPPER & SILVER MINING CO.****MEXICO.**

Dead. Formerly at Cusihuiriáchic, Iturbide, Chihuahua. Fully described Vol. VII.

**KUNE MINE.****JAPAN.**

Owned by Furukawa Mining Co.

**GEWERKSCHAFT KUPFERBERG.****GERMANY.**

Dead. Formerly at Kupferberg, Bavaria, Germany.

**KUPFERKIESBERGBAU KUPFERPLATTE.****AUSTRIA.**

Mine office: Kitzbühel, Tyrol, Austria. Ore is chalcopyrite, with quartz gangue, occurring as horizontal beds in Silurian slates. Is an old mine and was a small producer at last accounts.

**KURILLA MINE.****AUSTRALIA.**

Owned by Wallaroo & Moonta Mining & Smelting Co., Ltd.

**KUBOTAKI MINE.****JAPAN.**

Mine office: Motokawa-mura, Tosa-gori, Tosa, Japan. Is a short distance only from the famous Besshi mine. Ore is chalcopyrite, first quality averaging 10% and second grade 2 to 4% copper. Beds are much contorted, principal

widths and values being found in the saddles and troughs, which average about 10' thickness. Production, 1900, was 151,890 lbs. fine copper. Presumably idle.

**KURTZ-CHATTERTON COPPER MINING CO.****WYOMING.**

Dead. Succeeded by Chatterton Mining Co. Formerly at Encampment, Carbon Co., Wyo.

**KUSAKURA MINE.****JAPAN.**

Owned by Furukawa Mining Co.

**KUYKENDAL MINING CO.****NEW MEXICO.**

Mine office: Carlsbad, Eddy Co., N. M. Dr. J. Odd, manager. Lands are 13 miles from Carlsbad. Presumably idle.

**KVANANGENS KOBBERGRUEBER.****NORWAY.**

Owned by Altens Kobbergruber.

**KWAGGAFONTEIN SYNDICATE, LTD.****TRANSVAAL.**

Mine office: Waterberg, Transvaal. Organized 1907, under laws of Transvaal, with capitalization £12,000, shares £1 par. Property is an option on the Farm Kwaggafontein No. 996.

**KYLOE COPPER MINING CO.****AUSTRALIA.**

Office: Sydney, Australia. Mine office: Adaminaby, N. S. W., Australia. J. W. Ashcroft, chairman; preceding officer, Dr. Taylor Young, A. G. de Lauret and J. T. Toohey, directors. Mine, opened by a 175' shaft, shows ore in a main vein said to range 14 to 20% copper, with a footwall vein of 4' to 6' width giving 7% copper assays. Reduction works include a concentrator with Crook ball mill and jigs, and a smelter having a small reverberatory furnace, producing 45% matte.

**LA BUFA MINING & SMELTING CO.****MEXICO.**

Office: 709 Lankershim Bldg., Los Angeles, Cal. Letter returned unclaimed from former mine office, La Bufo Sahuaripa, Sonora, Mex. Organized 1906, with capitalization \$6,000,000, apparently as a holding company for La Bufo Mining, Milling & Smelting Co. and La Dura Mill & Mining Co.

**LABORERS' COOPERATIVE GOLD, SILVER & COPPER MINING CO.****BRITISH COLUMBIA.**

Office: 99 Washington St., Chicago, Ills. Mine office: Golden, Kootenay district, B. C. Gust. L. Yount, president; N. N. Strandberg, vice-president; Chas. E. Sweiberg, secretary; John W. Turnquist, treasurer; "Rev." C. E. Nylin, general agent and liar-in-chief. Organized under laws of British Columbia, with capitalization \$150,000, shares 10 cents par; capitalization apparently increased to \$500,000, shares 10 cents par. Lands include the Shining Beauty group, having tunnels of circa 200' and 400'. Built a smelter, which was not a success, having no mine to feed it. Present officers apparently are a new lot, hence it is uncertain whether they are victims or victimizers, but Parson Nylin, a renegade Baptist preacher, who is a disgrace to the cloth, remains as boss graftor.

**LA CANANEAS COPPER CO.****MEXICO.**

Letter returned unclaimed from former office, 10 Wall St., New York, N. Y. Mine office: La Cananea, Arizpe, Sonora, Mex. Fred A. Trittle, president; Ehud N. Darling, secretary. Organized, circa 1901, under laws of Arizona, with capitalization \$5,000,000, shares \$5 par. Was promoted by Henry B. Clifford & Co., but management said later to be in hands of P. Sandoval & Co., substantial bankers of Nogales, Arizona, and Nogales, Sonora, Mexico. Lands, 230 acres, including La Libertad and El Ultimatum groups, near the Greene Consolidated, having a 150' shaft, with circa 300' of workings, said to show a 15' vein of ore similar to the Puertecitos ores of the Greene Consolidated. Property considered promising, but long idle and company apparently moribund.

**MINA LA CARIDAD.**

Mine office: Pilares de Teras, Moctezuma, Sonora, Mex. Lands, slightly developed, show ore assaying 8 to 55% copper.

**LAO LA BELLE MINING CO.****MEXICO.**

Dead. Sold lands, 1905, for \$250,000, to Manitou Mining Co. Formerly at Delaware Mine, Keweenaw Co., Mich.

**LA CLEDE GOLD & COPPER MINING CO.****MICHIGAN.**

Dead. Formerly at Dumont, Clear Creek Co., Colo. Fully described Vol. VI.

**LA CORRIZA MINING CO.****COLORADO.**

Mine office: Noria, Altar, Sonora, Mex. Employs 50 men. Fred C. Emery, president and general manager; W. T. Stewart, vice-president; E. B. Sharpe, secretary and treasurer; preceding officers and Geo. Miller, directors; C. W. Tonkin, superintendent. Organized June 5, 1905, under laws of Arizona, with capitalization \$250,000, shares \$1 par, and is protoeolized in Mexico.

Lands, 61 pertenencias, reported as of 230 acres area, with miscellaneous holdings in the Altar and Magdalena districts, showing contact deposits between limestone, quartzite and granite, of nearly vertical dip, one ore body under development, reported as 80' wide and traceable 1,500', carrying carbonates to depth of about 100', succeeded by chalcopyrite estimated to average 6 to 8% copper, 4 to 6 oz. silver and \$1.50 to \$3 gold per ton. Mine is opened by shafts of 150' to 500', with circa 2,500' of workings. Has a 100-h. p. steam plant, with an 8x10" hoist and 6-drill Sullivan air-compressor. Has several small mine buildings, store, office and about 15 dwellings.

One carload of ore, shipped to El Paso smelter, returned 13% copper, 3 oz silver and \$1.50 gold per ton. Company plans installing a 100-ton MacDonald sulphide smelting furnace.

**LA CORONA COPPER MINING CO., LTD.****SPAIN.**

Office: Clock House, Arundel St., Strand, London, W. C., Eng. Mine office: Fuencaliente, Cuidad Real, Spain. Edw. E. Fernandez, chairman; Harold Cossins, secretary; John W. Richmond Lee, consulting engineer; John E. Marshall Hall, engineer; G. T. Vivian, mine manager. Organized Oct. 31, 1905, under laws of Great Britain, with capitalization £20,000, shares £1 par, in 4,000 ordinary and 16,000 deferred shares; issued, £16,500. Lands, 20 hectares, including 3 mines, known as Corona I, Corona II and Los Azores. Presumably idle.

**LAADD METALS CO.****IDAHO.**

Office: Canterbury Bldg., Portland, Ore. Mine offices: Mineral, Washington Co., Idaho, and Landore, Washington Co., Idaho. Chas. E. Ladd, president; Samuel Peacock, vice-president and general manager; John Snow, secretary and treasurer; Geo. D. Rich, general superintendent.

Lands, 2 groups, both in the Seven Devils district. First group, 4 claims, at Mineral, bought of Consolidated Copper Co., has shipped some ore, averaging 5% copper and up to 350 oz. silver per ton. The property at Landore has shipped a little ore averaging 35% copper, and ore of much lower grade has been smelted on the ground.

Company has smelters at both Mineral and Landore. The Mineral smelter has a small water-jacket blast-furnace, burning coke. The smelter at Landore, of 60 tons daily capacity, has a 50-ton combination reverberatory and water-jacket blast-furnace, former burning wood and latter burning coke. This anomalous furnace was devised on a novel and absolutely unsuccessful plan, combining in a double stack blast and reverberatory furnaces, with a downward blast and a moist updraft, charging being in both furnaces, and between the two. Fuel was to have been furnished by a gas-producer consuming wet, rotten white fir wood. The theory and practice did not correlate, hence the plant was remodeled along more common lines.

Smelters were closed down November, 1905, on account of poor transportation facilities, rendering it difficult to secure flux and fuel. Property, while poorly located as to facilities for transport, is considered promising. Idle.

**LA DEMOCRATA MINING CO.****MEXICO.**

Office: 17 East 4th St., Cincinnati, Ohio. Mine office: La Cananea, Arizpe, Sonora, Mex. Organized 1905, under laws of Arizona, with capitalization \$50,000, shares \$10 par. Apparently is related to the Democrata Cananea Sonora Copper Co.

**LA DICHA MINING & SMELTING CO., S. A.****MEXICO.**

Is the Mexican incorporation of the Mitchell Mining Co.

**LA DURA MILL & MINING CO.****MEKICO.**

Office: 709 Lankershim Bldg., Los Angeles, Cal. Mine office: La Bufa, Sahuaripa, Sonora, Mex. Is under the same management as the Bufo Mining, Milling & Smelting Co., with lands adjoining, on the Yaqui River, and is said to have considerable development.

**LA DURA MINING CO.****MEXICO.**

Mine office: care of Hartmann & Groff, managers, Torres, Hermosillo, Sonora, Mex. Ores carry gold, silver, copper and lead. Has steam power and turns out product as silver-lead-copper concentrates, when working. Idle.

**LADY CHELAN COPPER CO.****WASHINGTON.**

Dead. Formerly at Chelan, Chelan Co., Wash.

**LADY ELGIN COPPER MINING CO.****MAINE.**

Dead. Operated briefly, circa 1880. Formerly at Blue Hill, Hancock Co., Maine.

**LADY HELEN COPPER MINING CO.****ARIZONA.**

Dead. Formerly at Pima, Graham Co., Ariz. Described Vol. II.

**LADY POND COPPER CO.****NEWFOUNDLAND.**

Dead. Lands sold to Carmen Copper Mines, Ltd. Formerly at Lady Pond, Newfoundland.

**LADYSMITH COPPER MINING CO.****MONTANA.**

Office: 259 La Salle St., Chicago, Ills. Mine office: Elliston, Powell Co., Mont. Arthur J. Bamford, president; V. W. Hemala, secretary; G. F. Neuberg, treasurer. Organized 1905, under laws of South Dakota, with capitalization \$400,000. Lands, 4 claims, 12 miles from Elliston, well timbered and watered. Development is by two 110' shafts, said to show ore averaging 22.5% copper. Company alleged, in its prospectus, that dividends should be paid during 1906, which is ample evidence that the company was rotten before it was ripe. Idle and presumably moribund.

**LA ESTRELLA COPPER MINES, LTD.****SPAIN.**

Office: 31 Budge Row, London, E. C., Eng. Mine office: Los Martires, Granada, Spain. G. B. Elkington, J. P., chairman; F. A. Bagnall, secretary. Organized July 18, 1906, under laws of Great Britain, with capitalization £160,000, shares £1 par; issued, £150,000. Lands, 3 groups, area 1,222 acres, including La Jerezana, El Elsueño and others. Equipment includes a small smelter. Erection of a concentrator and 25-stamp mill is under consideration. Property considered promising, but development has been hampered by lack of adequate facilities and by high freight rates on the Ferrocarriles del Sur de España.

**LAFAYETTE MINING CO.****MICHIGAN.**

Dead. Wound up 1906. Formerly at Matchwood, Ontonagon Co., Mich.

**LA FLEUR MINING & SMELTING CO.****WASHINGTON.**

Office and mine: Danville, Ferry Co., Wash. Gust Peterson, president and general manager; A. E. Fennel, vice-president; J. C. Stutz, secretary; John Bell, treasurer; preceding officers, H. M. Genin and Chas. T.

Bennett, directors. Organized March 18, 1908, under laws of Washington, with capitalization \$1,500,000, shares \$1 par. Annual meeting, first Monday in June.

Lands, 8 claims, area 150 acres, in 2 groups, in the Curlew district, on the northeastern slope of La Fleur Mountain, in the northern part of Ferry county, showing diorite, andesite and quartzite, carrying a fissure vein in diabase and a contact deposit between diabase and andesite, of which one ore body, on the Cuba group, of 8' estimated average width, traceable 800', shows chalcopyrite estimated to average 1% copper, 2 oz. silver and \$3.50 gold per ton, and has given assays of 2.5 to 5% copper, 2 to 3 oz. silver and \$4 to \$5 gold per ton. Development is by a 90' shaft and a 600' tunnel. Property is served by two railroads within a mile. Company plans lengthening the tunnel.

**LA FLORENCIA GOLD & COPPER CO.**

MEXICO.

Office: 30 South Ninth St., Richmond, Va. Mine office: Cos, Moctezuma, Sonora, Mex. D. A. Ainslie, president; R. F. Hudson, secretary; Tom L. West, general manager. Organized 1902, under laws of West Virginia, with capitalization \$1,000,000, shares \$1 par. Lands, 134 pertenencias, area circa 330 acres, 25 miles from nearest railroad, showing a wide mineralized belt with heavy iron capping, traceable 2 miles. Main shaft, 250', with a 50' crosscut in ore assaying 5 to 9% copper, with fair gold and silver values. Property considered promising, but idle several years and company apparently moribund.

**LA FLORIDA MINING, MILLING & DEVELOPING CO.**

MEXICO.

Dead. A twin of La Florencia Gold & Copper Co., Formerly at Cos, Moctezuma, Sonora, Mex.

**LA FORTUNA MINING CO.**

MEXICO.

Office: 416-27 William St., New York, N. Y. Mine office: Ahualulco, Jalisco, Mex. W. B. Stewart, president; Frank E. Lloyd, manager. Lands, 40 pertenencias, 5 miles northwest of Ahualulco, showing a 5' to 20' vein, carrying auriferous and argentiferous copper and lead ores, with quartz gangue. Mine is opened by tunnels, with about one-half mile of workings, showing circa 10,000 tons of ore. Has a small mill. Presumably idle.

**LA FORTUNA MINING CO., S. A.**

MEXICO.

Is the Mexican incorporation of the Fortuna Mining Co.

**LA FRANCE COPPER CO.**

MONTANA.

Office: 42 Broadway, New York, N. Y. Mine office: Butte, Silver Bow Co., Mont. Works office: Basin, Jefferson Co., Mont. Robt. S. Walker, president; preceding officer, F. Augustus Heinze, Frederick Eckstein, Russell Hopkins and Stanley Gifford, directors; Wm. A. Kidney, general manager. Organized April, 1905, under laws of New York, with capitalization \$7,000,000, shares \$25 par, in \$1,000,000 preferred 6% stock and \$6,000,000 common shares. Authorized, Nov. 2, 1906, an issue of \$2,000,000 first-mortgage 25-year 6% convertible bonds, to be issued in exchange for a like amount of debentures outstanding. Defaulted interest on coupon bonds due January and July, 1908. Is controlled, through stock ownership and otherwise, by United Copper Co., or some of its subsidiary corporations, and \$2,000,000 worth of common stock is said to be owned by Copper Securities Co. Reported net earnings of circa \$491,000, for year ending June 1, 1907, with a small loss on operations for year ending June 1, 1908.

Lands, 8 fractional claims, area 32 acres, known as the Lexington mine, held from the French owners under a \$250,000 bond and lease, running in the name of Louis Girard, assigned to La France Copper Co. Dispute over lands with Butte & Boston was settled during 1907. Mine is at Walkerville, in the northern part of the Butte camp.

The Lexington mine has a 3-compartment, 1,450' main shaft, connected

on the 600' level with the Alice mine, and has several miles of workings. The mine was worked many years ago, for gold and silver, but below the 1,400' level has a 30' vein, with granitic gangue, carrying stringers of sulphide ore assaying 3 to 4% copper, and is claimed also to have a vein of 14' average width carrying chalcopyrite associated with considerable sphalerite and a little galena, giving average returns of 2.75% copper, 6 to 7 oz. silver and \$5 gold per ton, which figures are considered exaggerated. It is also claimed that the zinc had disappeared on the 800' level, but neither statement is credited. The mine was unwatered, 1907, to depth of about 1,000'.

Equipment includes a 15x30" Ottumwa hoist raising a single-deck cage, 2 electric mine pumps and a 50-drill air-compressor.

The mine has an old mill, idle since circa 1903, with about 100,000 tons of auriferous zinc tailings, which perhaps could be cyanided at a profit.

A 200-ton mill was built, 1907, near the mine, between Walkerville and Centerville. This mill uses the magnetic separation process of Sutton, Steele & Steele, and to May 1, 1908, was claimed, by the company, to have cost \$301,501. In actual operation the mill, which uses no water, apparently treated about 125 tons of ore daily, and made such an insufferable quantity of dust that it was closed down by the courts, an injunction having been sued out by the city of Walkerville. No great efforts were made by the company to prevent the issuance of this injunction, and it is probable that it came at a convenient time, as it is doubtful if the plant was profitable.

The reduction plant, at Basin, is the old Basin & Bay State concentrator, supposedly held under a \$600,000 bond and lease. The plant is rated at 1,500 tons nominal daily capacity, equipment including 2 crushers, 8 sets of rolls, 4 Huntington mills, 90 Hartz jigs, 60 Wilfley tables and 80 Calow slime settling tanks.

Production, for year ending June 1, 1907, was 34,336 tons of ore, giving a gross yield of \$14.18 per ton, and costing \$6.35 per ton to mine. Maximum production in 1907 was circa 150 tons daily. The company is understood to be trying to sell the reduction plant. Company collected poll taxes from its employes, for the city of Butte, but at last accounts had not turned the taxes over to the city authorities. Property was sold for taxes, amounting to about \$5,000, circa August, 1908, but is redeemable within one year, under a lump penalty of \$500, plus 1% monthly on the amount delinquent.

#### LA GLORIA MINING CO.

MEXICO.

Dead. Formerly at La Bufa, Sahuaripa, Sonora, Mex.

#### LAKE CITY MINING & SMELTING CO.

COLORADO.

Mine and works office: Lake City, Hinsdale Co., Colo. Mine is developed by tunnels. Plant is a 50-ton smelter.

#### LAKE COPPER CO.

MICHIGAN.

Office: Houghton, Mich. Mine office: Belt, Ontonagon Co., Mich. Reginald C. Pryor, president; Wm. D. Calverley, secretary; preceding officers, John H. Rice, Richard M. Edwards, Benj. F. Chynoweth, Linus Stannard and Allen F. Rees, directors; Wm. Wearne, superintendent.

Organized Nov. 28, 1905, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par; issued, \$2,000,000. Shares are listed on the Boston stock exchange. Federal Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agent.

Company began business with \$45,000 cash, of which corporation fees, legal expenses and other expenditures preliminary to actual work took \$7,000, leaving \$38,000, of which \$14,000 was spent for drilling and \$5,000 for preliminary surface work. For \$14,000 that was expended on actual mining, to March 1, 1908, the company sunk a 300' shaft on the Knuowlton bed, did 600' of drifting, with 3 months' stoping at various points, to determine the average

contents, and sunk a 100' shaft on the Lake bed, which constitutes a most creditable record of work done at minimum cost. Cash on hand, May 15, 1908, was \$58,571.31.

Lands, 740 acres, being the SE.  $\frac{1}{4}$  of Section 29, SE.  $\frac{1}{4}$  of Section 30, NW.  $\frac{1}{4}$  of Section 32, and E.  $\frac{1}{2}$  of Section 31, T. 51 N., R. 37 W. All but 40 acres carries the underlay of the Lake bed. This property formerly was a part of the Belt mine, opened 1848, and taken over, 1882, by the Belt Mines Co., Ltd., which corporation, by utter incompetence and the worst of bad management, sunk about £250,000, in 3 years, without securing as much as a half-mile of underground openings. The Belt Mines Co., Ltd., secured about 2,500' of workings for \$1,250,000, which was at the rate of \$500 per foot, while the Lake Copper Co. secured 1,000' of openings for \$14,000, or at the rate of \$14 per foot. It is obvious that the managements of these two corporations differed in some essential respects. Some exploratory work was done on the Belt, 1901, by Nathan F. Leopold, with Capt. Wm. A. Dunn in charge.

The first work of the present company was done on the Knowlton and Butler beds, with a little work on a lode formerly supposed to be the Evergreen, principal work being on the Knowlton amygdaloid, on which there were old shafts of 170' and 300', latter being deepened to 600' by the present company. Considerable copper was taken from the Knowlton bed, sold for \$3,800, but it was thought wise to transfer work to virgin territory, at the southern end of the property, and the wisdom of this move was demonstrated by the outcome. There also is a 90' shaft on the Tresidder lode, 1,000' east of the Knowlton bed, which was sunk circa 1863, and is said to have paid for sinking from the copper extracted.

Considerable diamond drilling has been done, and it is probable that further holes will be bored, in search of the copper-bearing beds from which the Adventure secured rich drill cores in 1908. The borings of the Adventure, on adjoining lands, indicate that the Lake should have several other rich amygdaloids, in the same general horizon as the Lake bed.

Work was begun, late 1908, on an amygdaloidal bed hitherto untouched in the district, but which possibly is a southerly continuation of the Baltic amygdaleid. About 500' of trenching was done before starting the shaft, this exposing the Lake bed for a width of fully 60' on surface. The Lake shaft has 3 compartments, and was 300' deep, October, 1908, with north and south drifts showing heavy copper and stamp-rock of excellent grade throughout. Enough copper was taken from the first 100' of the shaft to pay for sinking. The Lake bed carries an exceptionally rich pay streak along the hanging-wall, but is above average grade throughout, and the showing of the shaft can be compared only to that of the Wolverine, and the best stope of the Champion and Baltic, among the amygdaloid mines of the Lake Superior district. First level is opened at 160', and levels will be opened at 150' intervals, with sub-levels if necessary.

The Lake bed possibly is a continuation of the Baltic lode, as it occupies about the same geological horizon, though about 20 miles distant from the Baltic mine. The strike of the Lake amygdaloid and parallel beds is most unusual, being, so far as determined, about North 6° East, whereas the general strike of the Keweenawan series, in Ontonagon county, is more nearly east and west than north and south. That the Lake bed is not a fissure is proven conclusively by parallel strata, including a conglomerate lying about 400' under the Lake bed, all of which have a similar strike. Some confusion was caused, at first, by the unusual strike of the Lake lode, but it is evident that this is due to one of the flexures in the Keweenawan series, of which instances are noted at the Section 16 mine of the Atlantic, and in the vicinity of the Mass

mine. In the case of the Lake, the flexure is more marked than at any other point yet noted in the district.

The north drift of the Lake is cut off, at a short distance from the shaft, by the boundary line of St. Mary's Mineral Land Co., which owns a tract carrying about 15 acres of the underlay of the Lake bed, jutting into the southeastern corner of the Lake tract, but the Lake has the entire underlay, and a continuation of the outcrop for about one-fourth mile northeast of the boundary of the canal lands, in addition to an extensive tract to the westward, which can be reached from the present shaft, or by additional shafts sunk to the west.

Equipment includes a 12x15" duplex hoist, good for 500' depth, which will be replaced by a hoist good for one-half mile depth, bought of the Champion mine, and air-compressors of 6-drill and 15-drill capacities, taken from the equipment of the old Belt mine. Buildings include a number of old structures at the Belt location, and at the new shaft there is a 3-acre clearing having a wooden shafthouse and combined engine and boiler house, with machinery installed on concrete foundations.

The property is served by the main line of the Copper Range railway, which passes through the old Belt location, and the new shaft is reached by a 1½-mile spur.

The copper showing of the Lake has excited more interest in the district than any mining development since the discovery of the great Baltic lode, in 1897, which led to the opening of the Baltic, Trimountain, Champion and Superior mines, with other properties developing on the same bed. The showing of the Lake is materially the best ever made on any amygdaloidal bed in Ontonagon county, for a similar amount of work, and in view of the great width of the bed, and its remarkable mineralization, so far as opened, it is reasonably safe to predict the making, in time, of one of the great amygdaloidal mines of the district. The management is excellent, both technically and financially.

#### LAKE COPPER MINING CO., LTD.

#### NOVA SCOTIA.

Office: Eastern Harbour, N. S. Mine office: Polson's Brook, Antigonish Co., N. S. H. G. Dunbar, secretary and treasurer; A. G. Baillie, general agent. Organized circa January, 1908, with capitalization \$2,500,000, shares \$1 par. Lands, circa 6,400 acres, on Polson Lake, showing auriferous and argentiferous copper ore, opened by a 103' shaft, with about 550' of workings.

#### LAKE COPPER PROPRIETARY CO., LTD.

#### SWEDEN.

Office: 40 Queen Victoria St., London, E. C., Eng. Col. A. H. C. Lynch, chairman; M. Schreiter, mine manager; C. Maurice Champness, secretary. Organized March 10, 1906, under laws of Great Britain, with capitalization £300,000, in 298,000 ordinary shares of £1 par, and 40,000 deferred shares of 1s. par. Holds lands through Lake Copper Syndicate Aktiebolag, organized under laws of Sweden. Lands, on Lakes Animmen and Arr, circa 90 miles north of Gothenberg, Sweden, include the Stora Strand and Vingnäs mines, said to show outcrops traceable circa 10 miles. These mines have 13 shafts, mostly shallow, deepest circa 800', showing ores giving assays of slightly better than 2% copper, with small gold and silver values. Ore reserves of Stora Strand mine estimated, Jan. 1, 1908, at 100,000 tons. Is said to plan erecting a smelter.

#### LAKE GEORGE MINE.

#### AUSTRALIA.

Mine office: Bungendore, Murray Co., N. S. W., Australia. W. J. Channon and J. Plun, owners. Lands, 172 acres, freehold, at Captain's Flat, Lake George. The mine, circa 600' deep, was opened 1882, on a main vein of 22' to 30' width, having a meridional strike and vertical dip, in Silurian slates, ore occurring as replacements along fault-lines, as a compact, fine-grained mixture

of chalcopyrite, sphalerite, galena and pyrite, with aluminous quartzose gangue, carrying an average of only about 1.5% copper, with small gold and silver values. Ore, from its nature, is very refractory in smelting, and average returns, 1898, were only 1.45% copper.

The smelter has four 60-ton water-jacket blast-furnaces, and the ore requires heavy fluxing and fuel charges. Pyritic smelting was tried, but proved unsuccessful.

Maximum production of the mine was circa 500 tons fine copper yearly, sold as matte carrying 30 to 35% copper, 65 oz. silver and 1 oz. 12 dwts. gold per ton. Several successive companies have been wrecked in attempting to operate the mine. Production, 1907, was only 40 tons of ore, which remained untreated.

#### **LAKE GEORGE MINES, LTD.**

AUSTRALIA.

Dead. Reorganized, 1904, as Lake George Successors, Ltd. Formerly at Bungendore, Murray Co., N. S. W., Australia.

#### **LAKE GEORGE SUCCESSORS, LTD.**

AUSTRALIA.

Dead. Formerly at Bungendore, Murray Co., N. S. W., Australia. Fully described Vol. VI.

#### **LAKE HURON COPPER SYNDICATE, LTD.**

ONTARIO.

Dead. Voluntarily wound up, February, 1901.

#### **LAKE JUKES COPPER CO., N. L.**

TASMANIA.

Offices: 103 Gresham House, London, E. C., Eng., and Prells Bldgs., Melbourne, Australia. Mine office: Crofty, Tasmania. J. P. Madden, chairman; H. S. Muir, mine manager; N. Madden, Melbourne secretary; W. W. Futcher, London secretary. Organized Oct. 8, 1900, under laws of Victoria, with capitalization £150,000, shares £1 par. Lands, 2 leases, area 120 acres, on Mount Jukes, on the west coast of Tasmania. Has a 5-stamp mill.

#### **LAKE MILLING, SMELTING & REFINING CO.**

MICHIGAN.

Office: 60 State St., Boston, Mass. Works office: Point Mills, Houghton Co., Mich. H. F. Fay, president. Organized under laws of Michigan, with capitalization \$400,000. Receipts, 1907, were \$100,000 raised by assessment and \$126,383 received from stamping 414,760 tons of rock. Stamping costs, 1907, were 20.839 cents per ton. Balance on hand, Jan. 1, 1908, was \$61,619.

The millsite, 406 acres, carrying more than 1½ miles frontage on Portage Lake, adjoins the Franklin millsite. The mill was built by the Arcadian, and was bought, circa 1904, by the Centennial, and was transferred to the present corporation, stock of which is owned jointly by the Centennial and Allouez.

The mill is 132x104', of steel frame, having 3 Nordberg stamps, with foundations built for 3 additional heads. Foundations under the old heads were in bad shape, hence a new 12' concrete foundation was built under one head, which was compounded, giving it a daily capacity of about 700 tons, and a second simple head has been overhauled. The mill has crushing rolls, to treat oversize material.

The mill has a 15,000,000-gallon Nordberg pump, and a wharf running 675' into deep water, fitted with a modern coal-hoist and coal-shed. Miscellaneous buildings include a machine-shop, smithy, cooper-shop and a number of dwellings for employees.

#### **LAKE SHORE MINING CO.**

MICHIGAN

Office: 990 West Kensington Road, Los Angeles, Cal. Mine office: Green, Ontonagon Co., Mich. W. H. Garlick, president. Organized under laws of Michigan, with capitalization \$500,000, shares \$25 par. Lands, 773 acres, patented, on the shore of Lake Superior, in Town 51 North, Range 44 West, reported to carry bedded deposits, between slate walls, of 5' and 12' width, showing copper oxides and chalcocite giving average assays of 1.5% copper, 0.5 oz.

silver and 40 to 80 cents gold per ton. Has been but slightly prospected, and is idle.

**LAKESIDE COPPER CO.**

UTAH.

Office: care of Howard S. Stowe, vice-president, Salt Lake City, Utah. Mine office: Promontory, Box Elder Co., Utah. H. E. Baker, president. Lands, 27 claims, near the Lucin cut-off, showing what apparently is a blanket vein of 15' to 50' width, traceable circa 300', proven by shallow trenches showing ore assaying up to 40% copper.

**LAKESIDE GOLD-COPPER MINING CO.**

WASHINGTON.

Dead. Formerly at Index, Snohomish Co., Wash. Described Vol. VII.

**LAKE SUPERIOR & ARIZONA MINING CO.**

ARIZONA.

Dead. Title changed, 1904, to Lake Superior & Arizona Mining & Smelting Co. Formerly at Florence, Pinal Co., Ariz.

**LAKE SUPERIOR & ARIZONA MINING & SMELTING CO.**

ARIZONA.

Office: Calumet, Mich. Mine office: Superior, Pinal Co., Ariz. Employs circa 60 men. John D. Cuddihy, president; Dr. W. A. Holt, vice-president; A. E. Petermann, secretary; Wm. B. Anderson, treasurer; preceding officers, J. T. Reeder, Wm. Thielman, Angus W. Kerr, Edward Ulseth, Henry L. Baer and Capt. Thos. Maslin, directors; Fred W. Hoar, superintendent; Geo. N. Bell, mine superintendent; Dugald Stewart, clerk.

Organized Sept. 30, 1902, under laws of Arizona, as the Lake Superior & Arizona Mining Co., with capitalization \$200,000, shares \$1 par, and reorganized, 1904, under present title, with capitalization \$2,500,000, shares \$20 par; \$19 paid in, to end of 1908. Levied \$1 assessments, payable in installments, in 1906, 1907 and 1908. Under old territorial laws of Arizona the corporation was unable to sell stock delinquent on the 1907 assessment, but a change in the laws made it possible to do this, to the great relief of the company, which was badly hampered by neglect of many of the shareholders to pay the 1907 assessment, until compulsion was employed.

Lands, 11 claims, area 110 acres, freehold, in the Pioneer district, 3 miles south of the Silver King mine, 30 miles west of Globe and 28 miles east of Florence. Litigation over 2 claims, instituted by F. Pheby, was decided in the company's favor, in all courts. The property, formerly known as the Gold Eagle mine, was worked for gold, by the Gem Gold Mining Co., which went out of business, 1895, after paying considerable dividends. The old workings include many shallow shafts and short tunnels, opened at random, from which the former owners extracted rich surface ores.

The property shows limestone, quartzite and diabase, with 3 ore bodies, of which 2, under development, occur as contact deposits between quartzite and limestone, and in limestone, these having a quartzite footwall and limestone hanging, with average width of circa 6'. The main ore body, of 6' to 7' width, has a north and south strike, with dip of 26° 30', and shows a prominent outcrop. Ores are silicious oxides and carbonates, associated with iron and manganese, and should be valuable for fluxing the base ores likely to be opened at greater depth. Shipments of 13 carloads, 1905, from the Anderson tunnel, gave average returns of 31.6% copper, 2.2 oz. silver and \$2.67 gold per ton, netting \$24,649.81.

Development is by 2 shafts and 4 tunnels. The ground is not especially heavy, and little timber is required, except for openings in occasional soft places. The mine has circa 7,000' of workings, not including the old openings made by former owners.

The 375' Vivian shaft is sunk vertically, in low ground, to depth of 279', and cut diagonally through about 30' of ore.

The Holt tunnel, of circa 500' length, cuts a 16' ore body, at approximately right angles, with a back of 216'.

The Holt shaft is a 2-compartment blind shaft, starting from the breast of the Holt tunnel, at 216' depth from surface, and was sunk, 1908, to depth of 850' from surface, and is planned to be sunk to 1,000'. This shaft has a hoist good for 1,000', and is said to show, on the 850' level crosscut, ore assaying up to 50% copper and \$28 gold per ton, with a quartz footwall carrying up to \$28 gold per ton, but the gold figures are considered excessive.

The Carlton tunnel, circa 100' below the Holt tunnel, is connected with the latter by a 165' winze on the dip of the ore body, and is driven, in the ore, for circa 3,000' length, showing ore assaying up to 30% copper.

Equipment includes a steam plant with a 175-h. p. water-tube boiler, and a 16-drill Rand 2-stage air-compressor. Petroleum is used for fuel, and there are 5 storage tanks at the mine and 2 at Florence, each holding 2 carloads of oil.

Buildings include a power-house, smithy and bunk-house at the mine, and an office and dwelling at Florence, 28 miles distant.

The Arizona Midland R. R. Co. has been organized, by shareholders of the Lake Superior & Arizona Mining & Smelting Co., with capitalization \$500,000, shares \$1 par, for the purpose of building a railroad from the mine to Florence, to connect with the Gila Valley, Globe & Northern railway. This line would traverse 19 miles of easy rolling country, and 9 miles of hills, and would cost from \$300,000 to \$500,000 for construction and equipment.

Operations were suspended circa November, 1907, and resumed July, 1908, with a force of about 60 men. Production, 1907, was 92,120 lbs. fine copper, 1,040 oz. silver and 188 oz. gold. The property is considered promising, and the management has shown persistence in its work, but the mine cannot be placed on a profitable productive basis until rail connections are secured.

#### **LAKE SUPERIOR & BISBEE DEVELOPMENT CO.**

**ARIZONA.**

Dead. Formerly at Bisbee, Cochise Co., Ariz.

#### **LAKE SUPERIOR CONCENTRATING CO.**

**MICHIGAN.**

Dead. Liquidated 1905, and practically succeeded by Copper Concentrating Co. Formerly at Hancock, Houghton Co., Mich.

#### **LAKE SUPERIOR COPPER CO.**

**MICHIGAN.**

Mine office: Rockland, Ontonagon Co., Mich. Organized July, 1853, under laws of Michigan, with capitalization \$500,000, shares \$25 par. Was set off by Minnesota Mining Co. Lands, 640 acres, in Sections 13 and 14, Town 50 N., Range 39 W., carrying the northeasterly extension of the parallel cupriferous beds of the Evergreen Belt, opened in the Mass and Adventure mines. Expended about \$40,000 in assessments and made 14,821 lbs. fine copper. Idle since 1874.

#### **LAKE SUPERIOR COPPER CO.**

**ONTARIO.**

Office: care of Lewis Brittan, president, 45 Milk St., Boston, Mass. Mine office: Port Arthur, Thunder Bay, Ont. Gustave E. Wolters, vice-president; Jas. A. Tirrell, secretary and treasurer; Capt. Walpole Roland, consulting engineer. Organized January, 1907, under laws of Maine, with capitalization \$3,000,000, shares \$25 par, and is registered under laws of Ontario. Lands, 480 acres, known as the Cloud Lake mines, in the township of Crooks, 3 miles from mouth of Cloud River, opposite Isle Royale, and 25 miles south of Port Arthur. Property shows amygdaloidal and conglomerate strata carrying native copper, principal bed being an amygdaloid of about 20' average width.

#### **LAKE SUPERIOR COPPER & ZINC CO.**

**ONTARIO.**

Dead. Charter forfeited, 1902. Formerly at Wolf River, Thunder Bay district, Ontario.

#### **LAKE SUPERIOR COSO DEVELOPMENT CO.**

**CALIFORNIA.**

Office: care of John Kiiskila, president, Hancock, Mich. Mine office: Darwin, Inyo Co., Cal. Nels Majhannu, vice-president; Jacob Jarvis, secre-

tary; Peter Strolberg, treasurer. Organized 1907, with capitalization \$50,000, shares \$25 par. Lands, 1,200 acres, stretching along a distance of about 13 miles, showing ore giving good assay values in lead, copper, silver and gold.

#### LAKE SUPERIOR GOLD MINING & MILLING CO.

MEXICO.

Office: Marquette, Mich. Letter returned unclaimed from former mine office, La Cananea, Arizpe, Sonora, Mex. F. H. Begole, treasurer. Capitalization \$3,500,000, shares \$5 par. Lands first held, 1,200 acres, near Magdalena, were abandoned, and operations transferred to a group of copper claims, area 900 acres, lying in the Cananea Mountains. Idle several years and apparently moribund.

#### LAKE SUPERIOR & PITTSBURG DEVELOPMENT CO.

ARIZONA.

Dead. Wound up and merged, circa 1907, in Superior & Pittsburg Copper Co. Formerly at Bisbee, Cochise Co., Ariz. Very fully described Vol. VI.

#### LAKE SUPERIOR POWER CO.

ONTARIO.

Office: Sault Ste. Marie, Ont. Mine office: Gertrude Mine, Algoma, Ontario. C. D. Warren, president; A. B. Willmott, superintendent. Lands, 7 claims, area circa 2,000 acres, including the Gertrude and Elsie nickel-copper mines, in Creighton township, showing 4 contact veins, of which 2, slightly developed, carry cupriferous and nickeliferous pyrrhotite, returning an average of 0.5% copper and 3% nickel. Has shafts of 60' and 120', with circa 1,000' of underground openings, estimated by previous management to show 500,000 tons of ore, with 50,000 tons blocked out, obviously an overestimate. Has a steam plant with tubular boilers, 2 hoists and a 12-drill air-compressor.

Smelter, one-half mile from mine, and connected therewith by the Manitoulin & North Shore railway, has a 100-ton Herreshoff water-jacket blast-furnace, making, when in operation, matte with a combined copper and nickel tenor of 25%. Idle since circa 1904.

#### LAKE SUPERIOR SMELTING CO.

MICHIGAN.

Office: 308-199 Washington St., Boston, Mass. Operating office: Post-office Block, Houghton, Mich. Works office: Dollar Bay, Houghton Co., Mich. Norman W. Haire, manager; Harry B. Conant, superintendent; Joseph Thebo, assistant superintendent; Hon. J. C. Dunstan and James McRae, clerks; E. Kneeland, chemist; H. M. Germberger, assistant chemist. Capitalization \$1,200,000, shares \$25 par. Stock is owned jointly by the Detroit & Lake Superior Copper Co., of Waterbury, Conn., and the Tamarack-Osceola Copper Mfg. Co.

Plant is a smelter at Dollar Bay, closely connected with the works of the Tamarack-Osceola Copper Mfg. Co. Works have 11 reverberatory furnaces, four of 17x30' size and seven of 11x16' size each, having mechanical ladling and casting devices. The mechanical ladling and casting device has a 1,100-lb. ladle and a casting machine with molds linked into an endless belt, dumping over sprockets into cooling tanks, whence the ingots are removed mechanically by cleat elevators, which deliver the ingots to inspection and loading platforms. On the return of the molds, while inverted, they pass over a rosin fire, which coats them with lampblack, to prevent sticking. In a test run a single machine cast 34,700 pounds of ingots in 58 minutes. Company also owns a dismantled smelting plant at Hancock. Employs circa 300 men.

#### COMPANIA MINERA LA LAGUNA, S. A.

MEXICO.

Office: care of Juan Castillon, president, Torreón, Chihuahua, Mex. Miguel Torres, vice-president; Mauro da La Pena, treasurer; José Marie Garza-Aldave, secretary and mine superintendent; Jesus A. Fernandez, attorney. Property is 4 groups of antiguas, in the state of Durango, carrying mainly silver and lead values, idle for about a century.

**MINA LA LAPILLA.**

SPAIN.

Mine office: Alosno, Huelva, Spain. Wm. Guthrie Bowie, manager. Is a group of government concessions, adjoining the Tharsis mine, showing a very wide lens of cupriferous pyrite assaying 2.5 to 8% copper and 47 to 50% sulphur. Was operated formerly by pillar-and-stall, leaving large quantities of ore in floors and pillars. Has about 1,200,000 tons of ore available underground, and much more if worked open-cast. Has poor ventilation. Property shows enormous quantities of scoria, left from smelting operations of the Romans. Is well equipped with machinery. Presumably idle.

**LA MANGIARDE, LTD.**

FRANCE.

Office: 5 Clements Inn, Strand, London, W. C., Eng. Letter returned unclaimed from former mine office, La Tour-sur-Tinée, Alpes Maritimes, France. T. Cowperthwaite, chairman. Organized Oct. 30, 1903, with capitalization £4,000, shares £1 par; issued, £3,000. Lands, sundry coal mines and undeveloped mineral lands carrying indications of copper, in the neighborhood of Nice. Idle and apparently moribund.

**SUCESIÓN C. J. LAMBERT.**

CHILE.

Office, mine and works: La Compañia, La Serena, Coquimbo, Chile. Property includes El Brillador and San Antonio mines, area 93 hectares, which, in 1903, with a force of 38 men, produced 4,500 metric tons of 8% ore. Country rock is porphyry, carrying veins of about 90' extreme width, with dip of 60°, sulphides appearing at depth of circa 100 meters. The Fortuna and Placeres mines employ circa 150 men. Los Bronges mine, formerly owned, has been sold to Sociedad Minera de Los Bronges.

Reduction plant, 16 miles from Coquimbo, with rail connection, includes a 100-ton concentrator and a smelter that was the first modern plant in Chile, using the Welsh system. Smelter has four 21' reverberatory furnaces and 2 calciners. Machinery equipment includes two 100-h. p. boilers, two 80-h. p. engines and a small hydraulic turbine, fuel being Australian coke, costing 20 pesos per ton, laid down. Production formerly was copper sulphate, consumed mainly by smelting plants using the Kröhnke process, but latterly this business has been lost, and smelter now produces Chile bars of about 95% copper tenor, with slags averaging 0.7% copper, employing an average force of 100 men, at wages of 1.3 pesos daily. Production, 1903, was 8,600 tons of ore, of 9.5% average copper tenor, with fuel consumption of about 6,000 metric tons of coke, making 1,481,491 lbs. fine copper.

**CHAS. LAMBERT & CO.**

WALES.

Works office: Swansea, Glamorganshire, Wales. Property is extensive copper reduction works, including smelters and an electrolytic plant.

**LA MINA COBRE CO.**

ARIZONA.

Office and mine: Tucson, Pima Co., Ariz. M. T. Brown, president; O. Z. Kane, secretary and treasurer. Capitalization \$2,000,000, shares \$1 par. Lands, 12 claims, circa 35 miles southwest of Tucson and 8 miles from Sasco, having about 300' of workings. Has a gasoline hoist.

**ERZBERGWERK LAMPERTUS.**

GERMANY.

Mine office: Hohenstein-Ernstthal, Saxony, Germany. Friederich Wilhelm Feltzner, president. Property carries auriferous and argentiferous arsenical ores of copper. Presumably idle.

**LA NATIVIDAD MINING CO.**

MEXICO.

Dead. Was a swindle. Formerly at Coapa, Morelia Michoacán, Mex. Described Vol. V.

**LANCASTER GOLD & COPPER MINING CO.**

ARIZONA.

Mine office: Prescott, Yavapai Co., Ariz. Apparently is successor of

Pyramid Gold & Copper Mining Co., of doubtful reputation, which formerly owned the property.

Lands, 12 claims, area circa 200 acres, 5 miles from Skull Valley station, showing a gossan opened by several shafts of 50' to 100' depth, carrying somewhat auriferous oxidized and sulphide ores. The Anna Bell claim was asserted by former owners to show a vein 150' wide, which is something more than doubtful, giving average assays of 14.5% copper and \$4.74 gold per ton from surface ores, which figures are their own refutation. Equipment includes a 10-stamp mill and the beginning of a 100-ton concentrator. Idle, except for annual assessment work.

**LANCELOT FREEHOLD TIN & COPPER MINES, LTD.** **AUSTRALIA.**

Office: 1 Bucklersbury, London, E. C., Eng. Mine office: Herberton, Cardwell Co., Queensland, Australia. F. E. Clotten, chairman and managing director; G. A. Waller, mine manager; F. J. Duck, secretary. Organized May 27, 1903, under laws of Great Britain, as a reconstruction of the Lancelot Tin Mining Co., Ltd., with capitalization £120,000, shares £1 par; issued, £97,641. Debentures, £20,000 authorized, £19,250 issued, at 10%. Lands, 60 acres freehold and 160 acres leasehold, carrying ores of copper, tin, bismuth and wolfram, opened by a 327' main shaft and a 150' tunnel. Has a concentrating mill, and is a small producer of tin and bismuth only, copper property being idle.

**LANDLOCK BAY MINING CO.** **ALASKA.**

Mine office: Landlock, Alaska. W. A. Dolan, manager. Lands, on a small peninsula, with tidewater on both sides, have 2 tunnels on the western side, showing copper ore of good tenor.

**LA PALOMA MINING CO.** **MEXICO.**

Letter returned unclaimed from former office, Springfield, Ills. Mine office: Ayutla, Autlán, Jalisco, Mex. J. Breckenridge, superintendent. Property shows auriferous and argentiferous copper ores, and is said to have a 25-ton concentrator.

**COMPAÑIA MINERA LA PAZ.** **MEXICO.**

Mine office: Cuatro Ciénelgas, Monclova, Coahuila, Mex. Mine, known as La Paz, has argentiferous copper ores. Employed circa 40 men, at last accounts.

**LA PLATA CONSOLIDATED MINING CO.** **UTAH.**

Dead. Was a bad egg. Formerly at Ogden, Weber Co., Utah.

**LARDEAU-DUNCAN MINES, LTD.** **BRITISH COLUMBIA.**

Dead. Formerly at Duncans, Vancouver Island, B. C. Described Vol. VII.

**LA RECOMPENSA MINING CO.** **MEXICO.**

Mine office: Santa María del Oro, El Oro, Durango, Mex. P. J. Opperman, superintendent. Has auriferous and argentiferous copper and zinc ores, with steam and water power, and a 10-stamp mill.

**LAREDO MINING CO.** **MEXICO.**

Letter returned unclaimed from former mine office, Concepcion del Oro, Mazapil, Zacatecas, Mex. W. H. Banks, general manager. Organized 1907, with capitalization \$600,000. Property is the General Escobedo mine. Idle.

**LA RITA DEVELOPMENT CO.** **ARIZONA.**

Office: Tombstone, Ariz. Letter returned unclaimed from former mine office, Fairbank, Cochise Co., Ariz. James Herren, president; preceding officer, Frank Hare and D. L. Cunningham, directors. Lands, 20 claims, near Mescal Springs, circa 16 miles west of Fairbank, having 6 pits and trenches, showing silver bromides and copper carbonates, giving average assays of 12% copper and 100 oz. silver per ton. Idle.

**LA BOCA-NEGRITA MINING CO.** **MEXICO.**

Dead. Lands sold, circa 1903, to American-Mexico Mining & Development Co. Formerly at San Lorenzo, Durango, Mex.

**JOSÉ LARRAGUIBEL.****CHILE.**

Mine office: Algarrobito, La Serena, Coquimbo, Chile. Property is the Pajalones mine, having a vein of one meter average width, opened to depth of 130 meters, with horizontal workings for 400 meters length. Production, 1903, was 400 metric tons of ore averaging 14% copper tenor, equal to 123,457 lbs. fine copper.

**LAS ADARGAS MINING CO.****MEXICO.**

Office: 15 John St., New York, N. Y. Mine office: Jiménez, Chihuahua, Mex. E. G. Seiler, president; Geo. E. Crawford, secretary; W. A. Seamon, general manager, El Paso, Texas. Claims to be organized under laws of New York, with capitalization \$1,000,000, shares \$10 par. Declared a dividend of 25 cents per share, April, 1902. Property said to be held under a bond of \$300,000, on which \$15,000 was paid. Claimed to have a 300' shaft. Regarded with much suspicion, and apparently moribund.

**LA SAL COPPER MINING CO.****COLORADO.**

Dead. Succeeded, 1904, by Consolidated La Sal Mining & Smelting Co. Formerly at La Sal, Grand Co., Colo.

**LA SAL COPPER-SILVER MINING CO.****COLORADO.**

Office: 1317-25 Broad St., New York, N. Y. Mine office: Cashin, Montrose Co., Colo. J. Ensign Fuller, president; Arthur C. Danielsen, vice-president; Frank R. Allen, treasurer; John B. Overton, secretary. Apparently is a reorganization of Consolidated La Sal Mining & Smelting Co., which was a reorganization of La Sal Copper Mining Co. Lands, 7 patented claims and 3 millsites, area 150 acres, known as the Cashin mine, having a 1,540' tunnel showing ore assaying up to 35% copper and 18 oz. silver per ton.

**LA SALLE COPPER CO.****MICHIGAN.**

Office: 12 Ashburton Place, Boston, Mass. Mine office: Calumet, Houghton Co., Mich. Quincy A. Shaw, Jr., president; Rodolphe L. Agassiz, vice-president; Geo. A. Flagg, secretary and treasurer; Jas. MacNaughton, general manager; preceding officers, Col. Thos. L. Livermore, Courtney C. Douglass and Francis W. Hunnewell, directors; Wm. Skewes and Josiah Bartell, mining captains.

Organized, circa December, 1906, under laws of Michigan, with capitalization \$10,000,000, shares \$25 par. Absorbed the Caldwell Copper Co., and controls, through ownership of practically entire stock issue, the Tecumseh Copper Co., holding, at last accounts, 54,249 shares, out of a total issue of 54,959 shares. Is controlled, through stock ownership, by the Calumet & Hecla Mining Co. Tecumseh shareholders received 1½ shares of La Salle for 1 of Tecumseh.

Of the capitalization of 400,000 shares, 302,977 were issued for various purposes, leaving 97,023 shares in the treasury. The Calumet & Hecla Mining Co. contributed \$1,000,000 cash to the treasury, taking pay in shares, and has agreed to loan \$750,000 cash, in addition, as needed. Annual report, as of date April 30, 1907, showed total cash resources of \$942,272, with liabilities of \$21,699, and a financial statement, as of date Aug. 19, 1908, gave \$870,975 cash and accounts receivable, with accounts payable of \$4,496.

Lands, 2,360 acres, also the Gregory millsite on Torch Lake, nearly opposite the Calumet & Hecla mills. The Tecumseh and Caldwell contributed 560 acres each, and 1,240 acres were furnished by the Calumet & Hecla, St. Mary's Mineral Land Co., Shelden & Douglass estate and other interests. These lands were put into the new company on a novel basis of valuation, figured upon zones of 2,500', on the dip of the Kearsarge lode, allowance being made for decreased land values on tracts carrying the underlay at depth. The property has 4 shafts, 2 on the Tecumseh and 2 on the Caldwell, with room for 3 addi-

tional shafts, giving 7 shafts at intervals of about 1,700'. The property carries the strike of the mineral formation for circa 2½ miles.

Considerable diamond drilling has been done on the tract, and development is exclusively on the Kearsarge amygdaloidal bed. In July, 1908, six power drills were running in the Tecumseh branch, and two in the Caldwell branch.

The Tecumseh property is a very irregular tract, lying next south of the Osceola mine proper, carrying circa 400 acres of the underlay of the Kearsarge lode. The first work on the Tecumseh was done on the Calumet conglomerate, where a shaft was sunk circa 1,000', but found no payable copper. During the second era of activity, 1899-1902, a shaft was sunk 2,300' on the Osceola amygdaloid, but this bed was found practically barren of copper, and work was abandoned, November, 1902. The old Osceola shaft may be reopened, however, for the reason that the southern drifts from No. 6 shaft of the Osceola, below the 4,000' level, are among the best in the mine, and these are near the Tecumseh boundary.

Tecumseh shaft No. 1, sunk on the Kearsarge bed, is 6x18', with 3 compartments, 1,400' deep, with drifts on the twelfth, thirteenth and fourteenth levels, showing considerable good ground. The workings of No. 1 show typical Kearsarge amygdaloid, of about 15' average width, with variable mineralization, though decidedly promising. The stockpile at No. 1 shaft contains circa 80,000 tons of stamp-rock, including some rock of very good grade, carrying considerable heavy copper.

No. 2 Tecumseh is about 1,000' south of No. 1, old No. 2 shaft, which was too close to No. 1, having been abandoned. No. 2 is planned as a duplicate of No. 1, in size and equipment.

The Caldwell has 2 shafts, known as Nos. 1 and 2, which also are called the La Salle shafts. These probably will be renumbered eventually. No. 1 Caldwell shaft, sunk one mile south of Tecumseh No. 1, has a shaft-rockhouse, and was 500' deep, October, 1908. No. 2 Caldwell is circa 1,500' southwest of No. 1, and is of the same depth, shafts being duplicate, with hoists good for one-half mile each. The Caldwell shafts can be sunk to 9,000' depth before reaching the boundary line. The Kearsarge bed, on the Caldwell tract, has been found considerably disturbed to the depth reached, and the showing is poor, but the shafts are not deep enough to give permanent results.

Equipment includes steam plants and compressors at each mine, the Caldwell having a 15-drill air-compressor at No. 1 shaft, with a 30x70' boarding-house, barn and several dwellings.

Results at the La Salle have been somewhat disappointing, though a fair showing has been secured in Tecumseh No. 1, but it is obvious that the real value of the property can be determined only by further extensive development. This will be secured, as the company is exceedingly strong financially, with an excellent management.

#### LA SALLE COPPER MINING & MILLING CO.

NEW MEXICO.

Mine office: Carrizozo, Lincoln Co., N. M. Geo. C. Hopkins, vice-president. Organized under laws of Arizona, with capitalization \$1,000,000, shares \$100 par. Lands, 3 claims, area 60 acres, 6 miles from Carrizozo, said to show a 12' to 15' vein of low-grade copper ore. Company is said to plan building a 50-ton concentrator.

#### LAS ANIMAS COPPER MINING & SMELTING CO., LTD.

CHILE.

Office: 2 Rumford Place, Liverpool, Eng. Mine office: Chafiaral, Atacama, Chile. Edwin Woodgate, chairman; Pedro Nicholas Schjölb erg, managing director in Chile; F. E. Owens, secretary; Guillermo Sheriff, mine manager. Organized Jan. 3, 1902, under laws of Great Britain, with capitalization £20,000, shares £1 par, as successor of Copper Corporation of Chile, Ltd. Debentures, £54,500, at 6%. Lands, circa 125 acres, including La Fortunata

mine, 430' deep, opened 1855, and La Alena and El Progreso mines at Las Animas, in the Sierra Aspera.

Smelter, rebuilt 1895, has two 54" circular blast-furnaces, with Connersville and Bocker blowers, employing circa 100 men, at average daily wages of 3 pesos. Fuel is coke and Australian coal, coke costing 32 pesos per ton, delivered, 1 ton of coke smelting 8 tons of ore, giving slags averaging 0.7% copper. Production, 1903, was 3,701,976 lbs. fine copper.

#### **LAS ANIMAS GOLD-COPPER MINING CO.**

**NEW MEXICO.**

Dead. Formerly at Hillsboro, Sierra Co., N. M. Fully described Vol. VII.  
**LAS ANIMAS MINING & SMELTING CO.** **MEXICO.**

Mine office: Llano, Magdalena, Sonora, Mex. F. A. Huntington, mine manager. Property includes Las Animas, El Purgatorio and other mines, carrying auriferous and argentiferous copper and lead ores. Has a 40-ton mill and a 40-ton smelter, employing about 25 men, at last accounts.

#### **LAS COCHES MINING CO.**

**MEXICO.**

Office: 1085 West 21st St., Chicago, Ills. Mine office: Ures, Sonora, Mex. Idle.

#### **LAS CRUCES COPPER CO.**

**NEW MEXICO.**

Mine office: Organ, Donna Ana Co., N. M. J. F. Statley, president; Nicholas Gallus, vice-president; Fay Sperry, treasurer; D. F. Baker, secretary. Lands, 9 claims, known as the Green mine, in the Black Mountain district, 8 miles north of Organ. Said, 1908, to plan a small smelter.

#### **LAS GORITAS MINING CO.**

**MEXICO.**

Letter returned unclaimed from former office, San Francisco, Cal. Mine office: La Bufa, Sahuaripa, Sonora, Mex. Idle.

#### **LASKAWANDA GOLD & COPPER CO.**

Office: 40 State St., Boston, Mass. Location of lands, if any, unknown.

#### **COMPÀNIA MINERA DE COBRE "LAS MORAS," S. A.**

**MEXICO.**

Is the Mexican incorporation of Las Moras Copper Mining Co.

#### **LAS MORAS COPPER CO.**

**MEXICO.**

Dead. Succeeded by Las Moras Copper Mining Co. Formerly at Ameca, Jalisco, Mex. Described Vol. VI.

#### **LAS MORAS COPPER MINING CO.**

**MEXICO.**

Office: 2030 Land Title Bldg., Philadelphia, Pa. Mine office: Ameca, Jalisco, Mex. Employs circa 50 men. Paul W. Meyers, president; Albert St. Paul, vice-president; A. S. Robert, secretary; L. H. Taylor, Jr., treasurer; Geo. E. McCormick, comisario; preceding officers constitute the board of directors; Jas. P. Harvey, general manager; Jas. M. Campbell, superintendent.

Organized July 7, 1902, under laws of Mexico, with capitalization 5,000 pesos, and capitalization increased, July 17, 1906, to 10,000 pesos, shares 100 pesos par. Property is operated, under lease, by the American corporation, which is reported as having less than a half dozen shareholders, which, naturally, would include the five directors only. Annual meeting, third Monday in July.

Lands, 187 pertenencias, area 462 acres, circa 6 miles southwest of Ameca, on the Hacienda San Miguel.

The Magistral mine, 8 miles from the Mexican Central railway, has an ore body of 20' to 30' width, developed for circa 500' in length by tunnels, with about 1,500' of drifts and crosscuts, and a 112' shaft. Ore is slightly auriferous and argentiferous chalcopyrite. The Magistral was worked many years ago, for production of bluestone, used by neighboring mines in the patio process of treating silver-lead ores.

La Fé, or Las Moras, mine, a newly opened property, has an ore body consisting of a breccia of altered limestone, with fragments cemented by chalcocite

and chalcopyrite, in a crushed and mineralized contact zone of about 300' width, traced for circa 2,000', ore averaging 2 to 2.5% copper, with small silver and gold values. Development is by a 140' shaft and circa 1,500' of tunnels.

There is a steam plant with a 500' hoist at the Magistral shaft, with a number of buildings, and roads have been built.

Management plans deepening both shafts. The property is held, under bond and lease, dated July 25, 1907, by Patrick Clark, H. L. Percy and Joe P. Harvey.

**LAS TABLAS COPPER CO.****MEXICO.**

Office: 84 Adams St., Chicago, Ills. Mine offices: Aguascalientes de Baca, Fuerte, Sinaloa, Mex., and Alamos, Sonora, Mex. Harry Austin Clapp, manager; Daniel H. Livingston, superintendent. Property at Aguascalientes de Baca has auriferous and argentiferous copper ores.

**LAST CHANCE COPPER MINING CO.****MONTANA.**

Office: 202 North Main St., Butte, Mont. Mine office: Saltese, Missoula Co., Mont. W. H. Nichols, president; Geo. Champagne, vice-president; Dr. T. C. Witherspoon, treasurer; S. M. Burns, secretary. Capitalization \$1,250,000, shares \$1 par. Lands, 2 claims, known as the Last Chance group, 4 miles north of Saltese, said to show a 30' vein, slightly developed by shafts and tunnels showing auriferous and argentiferous copper ore assaying up to 42% copper, 450 oz. silver and \$8 gold, with a claimed average of 17% copper, 60 oz. silver and \$4 gold per ton, which unquestionably is an overestimate. Mine is claimed to have produced about \$150,000 worth of ore.

**LAST CHANCE COPPER MINING CO.****WASHINGTON.**

Mine office: Keller, Ferry Co., Wash. Idle some years and apparently moribund.

**LAST CHANCE MINING CO.****ARIZONA.**

Dead. Succeeded, 1902, by Canyon Copper Co. Formerly at Williams, Coconino Co., Ariz.

**LAS TUSAS MINING & MILLING CO.****NEW MEXICO.**

Mine office: Tres Piedras, Rio Arriba Co., N. M. Lon. L. Trout, general manager. Had steam power, electric light and sawmill, and planned building a small concentrator, at last accounts.

**LAS VEGAS COPPER CO.****NEW MEXICO.**

Office: East Las Vegas, N. M. Mine office: Tecolote, San Miguel Co., N. M. F. A. Manzanares, president; J. M. Thompson, secretary; J. M. Allen, treasurer and general manager; Frank J. Buck, consulting engineer. Capitalization, \$100,000, shares \$1 par. Property is the Tecolote mine, showing auriferous and argentiferous copper ore, also a vein of bluestone or natural copper sulphate. Has steam and electric power, and a concentrator. Company claims to have developed about 5,000,000 tons of carbonate ore, but apparently has sunk under the excessive burden and is idle.

**LAS VIGAS MINING CO.****MEXICO.**

Office: care of Geo. E. Voorhees, Jr., Santa Barbara, Cal. Mine office: San Sostenes, Coyame, Itarbide, Chihuahua, Mex. Property, leased to Compañía Minera Cuatro Señores, S. A., is described under title of that company.

**LAS YAQUIS MINING CO.****MEXICO,**

Dead. Formerly at El Tiro, Ures, Sonora, Mex.

**LATAH COPPER MINING CO.****IDAHO.**

Office: Latah, Wash. Property is one of the numerous Copper King mines, in Idaho.

**LATHAM MINING & SMELTING CO.****NEVADA.**

Dead. Succeeded, circa 1905, by Ohio Lead Mining & Smelting Co. Formerly at Sprucemount, Elko Co., Nev.

**LATIMER COPPER MINING CO.****GEORGIA.**

Mine office: Pierceville, Fannin Co., Ga. Idle some years.

**LATOUCHE CONSOLIDATED COPPER CO.****ALASKA.**

Office: Seattle, Wash. Mine office: Latouche, Latouche Island, Prince William Sound, Alaska. Organized 1907, under laws of Washington, with capitalization \$1,000,000, shares \$1 par, by Jas. Denny, W. B. Madison and others. Lands, 5 claims, on the southern end of Latouche Island, adjoining the Reynolds-Alaska, said to show a vein traceable 1½ miles, with a shallow shaft about one-half mile from tidewater.

**LATOUCHE EXTENSION MINING CO.****ALASKA.**

Mine office: Latouche, Latouche Island, Alaska.

**LATOUCHE ISLAND COPPER MINING CO., LTD.****ALASKA.**

Office: 49 Sullivan Bldg., Seattle, Wash. Mine office: Latouche, Latouche Island, Alaska. Jas. A. Murphy, president; Tenning Carlson, first vice-president; Winfield S. Jamison, second vice-president; C. E. Bogardus, treasurer; Gordon Everett, secretary; preceding officers, Dudley A. Tyng and Robt. Fay, directors; Philip C. Stoess, consulting engineer. Organized under laws of Washington, with capitalization \$5,000,000, shares \$5 par. Lands, 29 claims, well timbered, and a millsitite carrying approximately 4 miles of tidewater frontage, on the northeastern shore of Latouche Island, Prince William Sound, Alaska, circa 60 miles south of Valdez. Property shows 3 practically parallel veins, of 8' to 20' width, proven by trenches at intervals for 3 miles. Has a shallow shaft and tunnels of 74', 103', 160' and 180', and claims to have in sight approximately 200,000 tons of ore of 5% average copper tenor. Has steam power. Company claims 3 first shipments, 1907, returned 4 to 6% copper, from surface ores without assortment. Is said to have expended circa \$60,000 on development. Property considered promising.

**LATOUCHE MINING CO.****ALASKA.**

Letter returned unclaimed from former office, 10 Wall St., New York, N. Y. Mine office: Latouche, Latouche Island, Alaska. Andrew K. Beatson, general manager, in whose name all operations are conducted. Organized 1902, under laws of New Jersey, with capitalization \$100,000. Is operated as a close corporation.

Lands, 17 claims, patented, area 340 acres, known as the Bonanza mine, on the eastern side and circa 3 miles from the northern end of Latouche Island, within one-half mile of tidewater, where there is a good natural harbor. Country rock is slate, carrying chalcopyrite ranging in tenor up to 30% copper, and which averages about 10% copper, 2 oz. silver and 20 cents gold per ton. Ore occurs in the brecciated portions of the country rock, in irregular veins, and occasionally as impregnations or replacements of the country rock, along a shear zone, considerably brecciated.

The mine is developed by a big quarry, and by tunnels of 320' and circa 900', with about 1,800' of underground workings. There are 5 upraises to surface, of 33' to 43' height, fitted with ore bins having steel gates, through which ore is milled down, giving cheap mining costs. Without power equipment the mine has extracted and loaded ore at a cost of only \$2.25 per ton.

The property has a 300' wharf, on a natural harbor, connected with the mine by a half-mile tramline of 24" gauge, laid with 12-lb. steel rails. The freight rate to Tacoma, by water, is \$2.75 per ton, and ore, being desirable for flux, is smelted at an average cost of \$1.65 per ton. The company has a general store and employs about 30 men. Production, 1907, was 1,020,000 lbs. fine copper and 9,000 oz. silver. The property is one of unusual promise, and is developed and managed on sound lines.

**LA UNION CONSOLIDATED COPPER CO.****MEXICO.**

Dead. Succeeded, 1907, by Central Consolidated Copper Co. Formerly at

Fronteras, Arizpe, Sonora, Mex. Described Vol. VI.

**LA UNION COPPER MINING CO.**

**ARGENTINA.**

Mine and works office: Humahuaca, Jujui, Argentina. Has steam power and a small smelter. Employed, 1905, circa 100 men. Presumably idle.

**COMPAÑIA MINERA LAURA DE HUANTAJAYA.**

**CHILE.**

Office: Iquique, Chile. Mine office: Huantajaya, Tarapacá, Chile. Organized Sept. 26, 1902, under laws of Chile, with capitalization 60,000 pesos, shares 300 pesos par.

**LAURA-PEARL MINING & MILLING CO.**

**COLORADO.**

Dead. Formerly at Newett, Chaffee Co., Colo.

**SOCIÉTÉ DES MINES DE CUIVRE DE LAURIOLLE.**

**FRANCE.**

Mine office: Lauriolle, Basses-Pyrénées, France. Georges Caton, manager. Organized April, 1908, under laws of France, with capitalization 5,000,000 francs, shares 100 francs par.

**LAURIUM MINING CO.**

**MICHIGAN.**

Office: 301-199 Washington St., Boston, Mass. Mine office: Houghton, Houghton Co., Mich. Albert S. Bigelow, president; Norman W. Haire, vice-president and general manager; Wm. J. Ladd, secretary and treasurer; preceding officers, Edward S. Grew and Walter A. S. Chrimcs, directors; Wm. J. Uren, general superintendent. Organized under laws of Michigan, with capitalization \$1,000,000, shares \$25 par. Cash on hand, Jan. 1, 1908, was \$88,652. Annual meeting, second Tuesday in June.

Lands originally were 640 acres, lying next east of the Calumet & Hecla, but a triangular tract of about 65 acres, carrying both surface and mineral rights, was sold, many years ago, to the Calumet & Hecla Mining Co., and circa 250 acres of surface rights have been disposed of since, as building lots, in the village of Larium, mineral rights being reserved, giving the company present holdings of approximately 325 acres of surface rights, with mineral rights to 575 acres. Was prospected slightly, 1904, by diamond drill borings, but since idle.

**SOCIEDAD MINERA LAVINIA DE HUANTAJAYA.**

**CHILE.**

Office: Iquique, Chile. Mine office: Huantajaya, Tarapacá, Chile. Organized Oct. 29, 1906, under laws of Chile, with capitalization 100,000 pesos, shares 100 pesos par.

**LEACOLEDE CONSOLIDATED GOLD & COPPER MINING CO.**

**OREGON.**

Office: 518 Broadway, Albany, N. Y. Mine office: North Powder, Union Co., Ore. H. Earle Furman, president; Geo. Oliver, vice-president; W. J. Curtis, secretary; D. Keefer, treasurer; W. N. Gardner, mine manager. Organized June 10, 1900, under laws of Oregon, with capitalization \$1,500,000, shares \$1 par. Lands, 160 acres, well timbered, 3 miles from a railroad, in the foothills of the Blue Mountains. Development is by several hundred feet of shafts, tunnels and crosscuts, showing sundry parallel veins of 10" to 4' width, carrying ores assaying up to 10% copper, with good gold and silver values, and having an iron gangue. Idle since circa 1905.

**LEADVILLE MINING CO.**

**ARIZONA.**

Mine office: Pearce, Cochise Co., Ariz. Wm. Holmes, general manager. Capitalization \$600,000. Was under bond to Calumet & Arizona, 1906-1907, but bond was surrendered. Lands, 18 claims, known as the Leadville group, near the Copper Bell, in the Turquoise district, having a 280' shaft showing 24" to 30" of 4% sulphide ore below a depth of 175', with some copper carbonates above.

**LEADVILLE MINING & SMELTING CO.**

**MONTANA.**

Office: care of J. F. Upson, secretary and treasurer, Larned, Kans. Mine office: Basin, Jefferson Co., Mont. Chas. A. Cottrell, president; John Lindas, vice-president; preceding officers, F. J. Brule and F. D. Lowrey, directors. Or-

ganized under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 12 claims, area 240 acres, 14 miles from a railroad, having circa 800' of workings, showing mainly argentiferous galena.

**LEALTAD COPPER MINE CO.**

Office: care of Dr. René Le Fournier, 5 Blvd. Magenta, Paris, France. Organized July, 1907, under laws of New Jersey, with capitalization \$500,000.

**CALIFORNIA.**

Office: care of L. M. Gregory, general manager, Los Angeles, Cal. Andrew Glassell, president; E. H. R. Stone, secretary. Organized 1905, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 12 claims, on the northern side of New York Mountain, San Bernardino county, California, having about 500' of workings, showing some ore assaying up to 9% copper.

**LEEDS COPPER CO., LTD.**

**QUEBEC.**

Dead. Formerly at Broughton Station, Beauce Co., Quebec.

**LEEDS COPPER WORKS.**

**ENGLAND.**

Works office: Hunslet, Leeds, Yorkshire, Eng. Works include an electrolytic refinery of 10 to 12 long tons daily capacity, having four 170-kw. generators, with 216 tanks, using the Elmore arrangement of electrodes, and treating mainly Chile bars averaging about 96% in copper tenor.

**LEHIGH & ARIZONA MINING CO.**

**ARIZONA.**

Office: 43 Wall St., New York, N. Y. Mine office: Chloride, Mohave Co., Ariz. Franklin H. Griffith, general manager. Lands, in the Hualapai district, include the Minnesota-Connor, Merrimac and Manzanita mines, having fissure veins of about 6' average width, carrying sulphide ores assaying 1 to 20% copper, 15 oz. silver and \$6 gold per ton, with a little lead. Mine has about 20 pits and shafts of 20' to 600' depth, and a 3,500' tunnel. Has steam and electric power, 10-stamp mill and a 150-ton concentrator. Property considered valuable.

**LEICHHARDT-CLONCURRY DEVELOPMENT CO., LTD.** **AUSTRALIA.**

Office: 398 Collins St., Melbourne, Australia. Mine office: Cloncurry, Beaconsfield Co., Queensland, Australia. V. J. Saddler, chairman; F. C. Hughes, secretary; J. R. Peberdy, mine manager. Lands include several groups, principal being the Dugald mine, having a number of shallow shafts, showing ore averaging circa 15% copper. In 1906 shipped 53 tons of ore, of about 30% average copper tenor. Employed 30 men at last accounts.

**LEICHHARDT COPPER CO.**

**AUSTRALIA.**

Office: Queen St., Brisbane, Queensland, Australia. Capitalization £62,500.

**LEIGHTON GENTRY COPPER CO.**

**WYOMING.**

Dead. Succeeded, 1904, by Independence Mining Co. Formerly at Rawlins, Carbon Co., Wyo.

**LEIGHTON-WYOMING COPPER CO.**

**WYOMING.**

Office: Milwaukee, Wis. Mine office: Dillon, Carbon Co., Wyo. A. H. Welles, president; C. W. Hendrick, vice-president; Edgar L. Fowler, secretary; E. J. Henning, treasurer. Organized 1906, with capitalization \$1,000,000, shares \$1 par. Lands, 8 claims, in the Battle Lake district, about one mile north of Dillon, having about 200' of openings, said to show 10% copper ore.

**LELAN GOLD & COPPER CO.**

**ARIZONA.**

Mine office: McCabe, Yavapai Co., Ariz. Elmer W. Wells, manager. Has gasoline power and a 10-stamp mill.

**LENA MINING CO.**

**NEW MEXICO.**

Dead. Formerly at Londsburg, Grant Co., N. M.

**LENAWEE MINING, MILLING, TUNNEL &**

**COLORADO.**

**TRANSPORTATION CO.**

Mine office: Dillon, Summit Co., Colo. Jas. H. Meyers, superintendent.

Has auriferous and argentiferous copper ores, with steam plant and 20-stamp mill.

**LENORA MINING & MILLING CO.**

**UTAH.**

Office: care of P. C. Evans, secretary, Salt Lake City, Utah. Letter returned unclaimed from former mine office, Milford, Beaver Co., Utah. Miles L. Burns, president; J. D. Carpenter, general manager. Organized Dec. 19, 1903. Lands, 9 claims, known as the Lenora group, in Beaver county, Utah. Idle several years.

**LENORA-MOUNT SICKER COPPER  
MINING CO., LTD.**

**BRITISH COLUMBIA.**

Dead. Sold, 1907, to Vancouver Copper Co., Ltd. Formerly at Duncans, Vancouver Island, B. C. Fully described Vol. VI.

**LENOX COPPER MINING CO.**

Dead. Formerly had an office 412 Tremont Bldg., Boston, Mass.

**LENTZ EXTENSION MINES CO.**

**MONTANA.**

Office and mine: Sheridan, Madison Co., Mont. C. E. Lentz, manager.

**LENTZ GOLD-COPPER MINING & REDUCTION CO.**

**MONTANA.**

Office: 964 Penn Ave., Pittsburg, Pa. Mine office: Sheridan, Madison Co., Mont. C. E. Lentz, president and general manager; F. J. Mangus, vice-president; R. P. McChesney, secretary and treasurer; S. E. Brimm, superintendent. Organized under laws of Arizona, with capitalization \$3,000,000, shares \$2 par. Annual meeting, third Friday in February.

Lands, 11 claims, area 220 acres, and a 20-acre millsite, in the Tidal Wave district, 7 miles from the Northern Pacific railway, showing granite-porphyry, gneiss and quartzite, said to carry 10 ore bodies, occurring as fissures in porphyry and as contacts between limestone, gneiss and granite, of which 3, under development, are claimed, by the company, to have average widths of 16' to 30', with strong gossans, and are claimed to carry all varieties of copper ore, presumably mainly oxidized, of estimated average values of 2% copper, 12 to 50% lead, 12 to 1,400 oz. silver and \$8 to \$600 gold per ton. Property is opened by shafts of 30', 130', 60' and 110', and by tunnels of 80', 100', 120' and 1,600', with a total of circa 4,800' of workings, estimated by company to show 8,000 tons of high-grade ore, and 160,000 tons of low-grade ore, which figures are considered excessive, as are the estimated average values.

Company claimed, 1906, to have an air-compressor and two 60-h. p. hoists, with 8 small mine buildings, but neither hoist nor compressor were erected. The Northern Star mine of the company is in litigation. Property has been idle for some time, and company apparently is moribund.

**MINAS LEONORA y HUERTA.**

**MEXICO.**

Office: care of James M. Daniel, owner and general manager, Apartado 16, Aguascalientes, Mex. Mine office: Villanueva, Zacatecas, Mex. Jas. M. Daniel, Jr., superintendent and engineer; Manuel Varila, mine superintendent. Lands, 100 acres, also 500 acres miscellaneous lands, in the Jalpa district, showing a fissure vein in porphyry, of 10' average width, carrying argentiferous galena, argentite, melaconite and azurite, with clay gangue, said to give average returns of about 5% copper, 10% lead, 200 oz. silver and 29 milligrams gold per ton. Mine, opened circa 1820 and reopened 1883, has shafts of 300' and 1,000', with about one mile of underground workings. Has a steam plant and a concentrator with one crusher and 12 planillas, for treating low-grade ores. Concentrates and smelting ores are shipped, 75 miles, by burros, to the Aguascalientes smelter.

**LEONARD MINE.**

**MONTANA.**

Owned by Boston & Montana Consolidated Copper & Silver Mining Co.

**LEONTINE CONSOLIDATED MINING CO.**

**ARIZONA.**

Office: care of Meredith E. Lawson, president, Parkersburg, W. Va. Mine

Digitized by Google

office: Poland, Yavapai Co., Ariz. Lands, 8 claims, in the Big Bug district, bought Jan. 1, 1908, of Alto Mines Co., having a shaft, planned to be sunk 600', showing ore assaying up to 4.9% copper and \$200 gold per ton.

**LEOPOLD-TYRONE COPPER CO.**

NEW MEXICO.

Office: Kreider Bldg., San Francisco, Cal. Mine office: Tyrone, Grant Co., N. M. Frank L. Kreider, general manager; G. A. Eastman, superintendent. Organized 1907. Lands were 6 claims, near the Copper Gulch, having a 2-compartment shaft showing sulphide ore of fair copper tenor. Is said to have sold its lands to the Copper Gulch, and presumably is out of business.

**LE ROI MINING CO., LTD.**

BRITISH COLUMBIA.

Office: 541 Salisbury House, London, E. C., Eng. Mine office: Rossland, Trail district, B. C. Employs 250 men. T. D. Grimke-Drayton, J. P., chairman; Anthony J. McMillan, managing director; preceding officers, G. W. Wilson and Chas. Dunderdale, directors; Andrew Larson, superintendent; Thos. Kiddie, smelter superintendent; Harold A. Wesson, secretary; W. A. Carlyle, consulting engineer. Organized June 7, 1898, under laws of Great Britain, with capitalization £1,000,000, shares £5 par, fully issued and fully paid. Has paid dividends as follows: 5s., Nov. 7, 1899; 1s. 6d., March 3, 1906; 2s., November, 1906. For fiscal year ending June 30, 1907, profit was £3,582 4s. 5d., with surplus of liquid assets of £74,259 19s. 4d. Controls, through stock ownership, the Northport Smelting & Refining Co., Ltd. Fiscal year changed, 1908, to end Sept. 30, instead of June 30.

Lands, 71.45 acres, freehold, and the I. X. L. mine, held under lease, also a limestone quarry for fluxing, and the Spitzee and Townsite claims are held under option. In 1907 did 3,740' of diamond drilling, and made nearly one mile of new mine openings, expending \$164,468.99 on exploratory and development work. The ore body is narrow at the top and wider at the bottom, but carries decreased values at depth, the bottom of the mine showing 3' to 5' of good smelting ore, with a continuance of the vein to considerably greater depth proven by diamond drill borings made from the bottom of the shaft. Ore averages about 1.2% copper, 0.5 oz. silver and 0.4 to 0.5 oz. gold per ton.

The 5-compartment main shaft is 1,650' deep, and, in 1907, produced ore from levels down to and including the 1,350'.

Equipment includes a good mining plant, with hoists, air-compressors and a steam shovel, and the property is supplied with necessary shop and mine structures.

The reduction plant, at Northport, Washington, 17 miles from the mine, is held through the Northport Smelting & Refining Co., Ltd. The works, of 1,200 tons daily capacity, are modern in design and equipment. Limestone for fluxing is secured from the company's quarry, 4 miles distant, and water is supplied from Deep Creek, through a 4x5' flume of 3 miles length, leading to two 125,000-gallon storage tanks, whence water is brought to the works in pipes, under a head of 145', with an effective pressure of 60 lbs. per square inch, actuating 18" and 24" Pelton water-wheels.

The Northport works include a sampling mill, 70x98' in size, equipped with Vezin samplers, some custom ores being smelted, in addition to treatment of Le Roi production.

The bulk of the ores treated are roasted before charging. Ore is received by rail and dumped into ore-bins of 1,600 tons capacity, elevated 17' above the roast-yard, which is 500x500'. Ore is trammed to the roast-yard on temporary trestles, and roast-heaps are built about 125x350', and approximately 15' high, each heap containing about 24,000 tons, and requiring 6 weeks for burning. The roasting reduces the sulphur content from 10% to about 3.5%, and wood consumption averages one cord for 50 tons of ore. After burning the ore is loaded into self-dumping cars by a steam-shovel capable of handling 600 tons of ore daily, and cars are hauled up an incline track by a small steam locomotive and dumped into the roasted-ore bunkers, immediately behind the blast-furnace building.

The roaster building, 72x350', has two 35-ton 10x100' single-deck Holthoff-Wethey furnaces, and one double-deck furnace of the same design and dimensions, latter treating matte and concentrates.

The blast-furnace building is 89x240', with a southern annex of 55x69', for the silica-mill, and a northern annex 69x100', for the power plant. There are 6 water-jacket blast-furnaces, with mechanical feed, two being 38x120" in size, one 40x160" and three 42x160", latter with daily capacity of circa 350 tons each. The furnace charges are mixtures of raw and roasted ore, with limestone and coke, charged from side-dumping cars. Steel downtakes of 60" diameter connect the blast-furnaces with the dust-chamber, which is 10x11x428', with hopper-bottom and side-discharge gates, leading to a brick smokestack 10' square and 182' high. There are also two smaller stacks. Flue-dust is briquetted, with lime for a binder, in two White mineral presses, and remelted slags are granulated, and washed into the Columbia River. The first fusion product is a 25% matte, which is roasted, granulated, briquetted and blown up to 50% matte carrying small silver values and good gold values, which is shipped to New York for conversion and refining.

The power plant at the smelter includes a 400-h. p. Allis-Chalmers engine, two smaller engines, 6 Connerville blowers, a 500-light Westinghouse dynamo and five 250-h. p. Heine boilers.

The Le Roi suffered for several years from a bitter internecine dispute, culminating, circa 1905, in the summary removal of Mr. McMillan from the directorate, by his associate directors, but this action was repudiated by the shareholders, at the annual meeting of 1906, when McMillan was again placed in power, and signalized his victory by declaring a dividend. The fight began over a disagreement between the Canadian Pacific and Great Northern railways, relative to ore tonnage, the former desiring the abandonment of smelting at Northport, which is in the United States. After Mr. McMillan's ouster, the Northport smelter was closed, and a 3-year smelting contract was made with the Trail smelter, but this was not recognized by Mr. McMillan, on his return to power, and smelting was resumed, at the Northport works, Dec. 6, 1906, but the plant was operated only 154 days in 1907.

Production, 1907, was 110,410 tons of ore, carrying about 2,500,000 lbs. fine copper. Gross values and costs, per ton of ore, have been as follows: \$10.94 value and \$10.57 costs in 1904; \$12.41 value and \$10.08 costs in 1905; \$12.37 value and \$10.50 costs in 1906; \$10.49 value and \$10.02 costs in 1907.

The Le Roi has suffered in the past from various changes of plans, but seems to have reached a fixed policy and an assured financial footing, and should do better for the future.

**LE ROI NO. 2, LTD.**

Office: 541 Salisbury House, London, E. C., Eng. Mine office: Rossland, British Columbia.  
Digitized by Google

Trail district, B. C. Employs circa 100 men. Lord Ernest Hamilton, chairman; preceding officer, A. B. Deltry, F. C. D. Haggart and W. T. Morrison, directors; Paul E. Couldrey, mine manager; R. B. Cormack, assistant manager; F. A. Labouchere, secretary; Alex. Hill & Stewart, consulting engineers.

Organized June 1, 1900, under laws of Great Britain, with capitalization £600,000, shares £5 par, fully issued and fully paid. Has paid dividends as follows: 5s. in 1901; 5s. in 1902; 2s. in 1904; 3s. in 1905; 8s. in 1906; 3s. in 1907; 4s. to August, 1908. For year ending Sept. 30, 1907, net profit was £13,806 5s. 1d., after writing off £11,944 12s. 8d. for depreciation. From organization to Sept. 1, 1908, company paid dividends of £180,000. The company holds a share interest in the Cloncurry Syndicate, Ltd.

Lands, 72 acres, including the Josie No. 1 and Annie mines, also 8 claims near the old mine, 2 claims near the Velvet mine and 5 claims in the Ymir district. Upwards of one mile of diamond drill borings were made in 1907, and 3,286' of new mine openings were made in the same year. Ores carry values in gold, copper and silver, in the order named, and are graded into two classes, for smelting and concentrating, latter grade ranging 0.4 to 0.5% in copper tenor, with only about 20% of the copper saved, extraction of assay values in gold being 56 to 60%.

Development is by a 900' main shaft, on the Josie, and by 2 tunnels on the Josie and one on the Poorman claim. The mine has ore reserves estimated at 300,000 tons, which seems high, and has some ore chutes of considerably better than the average grade of the Rossland camp.

The mill, of 50 tons rated daily capacity, has Blake and Gates crushers, 2 Chilean mills, 3 Jenckes sizers and 6 Wilfley tables. An Elmore oil concentrator, fully described Vol. IV, was installed 1908, proving a technical but not a commercial success, and was superseded by Wilfley tables. Concentrates carry circa 1.8% copper, 1.5 oz. silver and 1.75 oz. gold per ton.

Production has been as follows: 980,000 lbs. copper, 27,968 oz. silver and 11,050 oz. gold in 1904; 885,992 lbs. copper, 28,369 oz. silver and 14,493 oz. gold in 1905; 803,409 lbs. copper, 22,054 oz. silver and 19,615 oz. gold in 1906. In 1907 production was 22,198 tons of ore shipped, and 12,963 tons of ore concentrated. Largest copper production was 3,001,027 lbs., for fiscal year 1902. Smelting ore, 1905, returned 3.62% copper, 2.32 oz. silver and 1,184 oz. gold per ton. Management is good and property is valuable.

#### **LE BOY MINING CO.**

**MEXICO.**

Mine office: Pilares de Teras, Moctezuma, Sonora, Mex. Has auriferous and argentiferous copper ores. Idle.

#### **LESLIE COPPER MINING CO.**

**IDAHO.**

Office: Wallace, Idaho. Mine office: Mullan, Shoshone Co., Idaho. Wesley Everett, manager. Organized February, 1899, under laws of Idaho, with capitalization 100,000, shares 10 cents par. Lands, 11 claims, area 220 acres, also a millsite and 2 water rights, lying east of Mullan, showing 4 veins traversing porphyry, main vein averaging circa 12' width at surface, opened by tunnel, with about one mile of workings, carrying silver-lead ore of concentrating grade, with a narrow copper paystreak. Has water power, a 5-drill air-compressor and several mine buildings.

#### **L'ETETE GOLD & COPPER MINING CO.**

**NEW BRUNSWICK & NOVA SCOTIA.**

Mine office: L'Etete, Charlotte Co., N. B. Property is the old Johnson mine, opened circa 1860, reopened 1902, having two short tunnels and a 145' main shaft, showing ore of good assay value. Has a steam plant, and shipping facilities at tidewater. Company also owns mineral lands in Nova Scotia. Idle several years.

**LEVANT LINING CO., LTD.****ENGLAND.**

Office and mines: St. Just, Cornwall, Eng. T. R. Bolitho, chairman; Capt. M. Trembach, manager; Maj. Richard White, purser. Organized 1872, as a cost-book company, with 2,500 shares, 2,385 issued, £12 4s. 6d. paid in. Dividends, £25 6s. per share, last, 5s., paid January, 1904. Mine produces tin and copper, mainly the former, and has been continuously worked since 1820, paying £170,000 in dividends during its first 20 years of operation. Is now a small producer only, in 1906 mining 2,140 long tons of copper ore of 12% average tenor, producing circa 575,000 lbs. fine copper, rendering the Levant the largest copper producing mine of England.

**LEWIS & CLARK MINING CO.****IDAHO.**

Office and mine: Mullan, Shoshone Co., Idaho. Organized 1907, under laws of Idaho, with capitalization \$1,250,000, shares \$1 par, by J. N. Thennes and others. Lands, 12 claims, northeast of the Snowstorm.

**LEWISOHN EXPLORATION & MINING CO.**

Office: 334-11 Broadway, New York, N. Y. J. Parké Channing, general manager; Martin H. Vogel, counsel. Organized Jan. 6, 1906, under laws of New Jersey, with capitalization \$5,000. Is said to plan increasing capitalization to \$15,000,000, by easy stages, as properties are acquired. Plans of promotion and finance are understood to be somewhat similar to those of the American Smelters Securities Co., and it is supposed that this corporation will become a holding company for the various Lewisohn interests, including the Tennessee Copper Co., Miami Copper Co. and General Development Co., with considerable share interests in the Nevada Consolidated and other properties.

**LEXINGTON MINE.****MONTANA.**

Owned by La France Copper Co.

**COMPANIA MINERA LIBERTAD DE SANTA ROSA.****CHILE.**

Office: Iquique, Chile. Mine office: Huantajaya, Tarapacá, Chile. Organized Nov. 13, 1904, under laws of Chile, with capitalization 100,000 pesos, shares 100 pesos par.

**LIBERTY COPPER MINING CO.****WASHINGTON.**

Mine office: Chewelah, Stevens Co., Wash. T. F. Wilson, president; L. C. Dougherty, vice-president; L. Bryant, secretary and manager; preceding officers, S. G. Neff and W. W. Morris, directors. Lands, on Blue Creek, have a 225' tunnel, said to show a 7' vein of auriferous and argentiferous copper-lead ore.

**LIBERTY COPPER MINING & MILLING CO.****MARYLAND.**

Dead. Property sold to Virginia Consolidated Copper Co. Formerly at Libertytown, Frederick Co., Md.

**LIBERTY GOLD & COPPER CO.****ARIZONA.**

Office: Prescott, Ariz. Mine office: Clara, Yuma Co., Ariz. Frank Burns, manager. Property, near the Clara, slightly developed, by shaft, is said to give a promising showing of gold-copper ores.

**LIBERTY MINES CO.****ARIZONA.**

Letter returned unclaimed from former office, Prescott, Ariz. Mine office: Turkey, Yavapai Co., Ariz. Organized circa 1907. Property is the Mountain View group. Idle and presumably moribund.

**LIBERTY MINING & SMELTING CO.****ARIZONA.**

Mine office: Arivaca, Pima Co., Ariz. D. L. Noyes, president and treasurer; T. D. Pease, secretary. Capitalization \$500,000, shares \$100 par. Lands, 19 claims, unpatented, slightly developed, showing mainly argentiferous lead ore, with small gold and copper values. Has gasoline hoist and several mine buildings. Said to have produced ore worth more than \$50,000.

**SOCIETÀ ANONIMA PER L'ESERCIZIO DELLA MINIERE  
DI LIBIOLA.**

ITALY.

Mine office: Sestri Levante, Liguria, Italy. Property is leased to Libiola Copper Mining Co., Ltd.

**LIBIOLA COPPER MINING CO., LTD.**

ITALY.

Office: 138 Leadenhall St., London, E. C., Eng. Mine office: Sestri Levante, Liguria, Italy. Kenneth Haweis James, chairman; preceding officer, Thomas V. Anthony and Albert Straube, directors; W. S. Bartlett, secretary; Robert H. Craven, mine manager. Organized January, 1867, under laws of Great Britain, and reconstructed, 1888, with capitalization £250,000, shares £5 par. Paid dividends of 2s. 6d. in 1903; 3s. 6d. in 1904, and 3s. 6d. in 1905, with total dividends, to end of 1905, of £4 10s. Net earnings, 1907, were £7,111, with dividends of £7,560. Company has a heavy share interest in the Crucifix silver-lead mine, Sardinia, now idle.

Lands, 2 claims, area circa 700 hectares, freehold, including the Libiola copper mines, in Liguria, northern Italy. Ores are chalcopyrite and iron pyrites, occurring as veins in serpentine and diabase, ore bodies being of good size. The property was discovered and worked by the Romans, and was reopened, 1867, by predecessor of present company. Ores produced average 5.76% copper in the cupiferous ore and 46.75% sulphur in the pyrites.

Equipment includes a 60-h. p. steam plant, 30-h. p. water plant and 50-h. p. electric plant.

The crushing mill, covering 550 square meters, built of reinforced concrete and stone, has a daily capacity of 180 tons. Production, 1905, was 28,388 tons of copper and iron pyrites, of which about 20% was copper ore. Company is well managed, and, by careful handling, the property is made to return satisfactory profits.

**SOCIÉTÉ DES MINES DE LA LIENNE.**

ITALY.

Mine office: Alagna, Circondario di Varallo, Novarra, Italy. Also has property at Riva, near Alagna. Ore is disseminated chalcopyrite of low to medium copper tenor, and mines were worked on a small scale only, at last accounts.

**SOCIETÀ LIGURE RAMIFERA.**

ITALY.

Mine office: Cassarza, Liguria, Italy. Property includes the Fontanelle, Rio Albareta, Rio Monticello and Rio dei Fichi mines, carrying chalcopyrite in a quartzose gangue. Was a small producer, at last accounts.

**LILBURN MINING CO.**

UTAH.

Dead. Lands sold, 1908, to Alta-Hecla Mining Co. Formerly at Alta, Salt Lake Co., Utah.

**LILLY MINING & MILLING CO.**

COLORADO.

Mine office: Idaho Springs, Clear Creek Co., Colo. Ores carry gold, silver, lead and copper. Has steam power. Presumably idle.

**LILYAMA MINE.**

CALIFORNIA.

Office: care of Robt. Crocker & Co., Placerville, Cal. Mine office: Auburn, El Dorado Co., Cal. Lands, 240 acres, unpatented, 11 miles from Auburn. Ores, mainly sulphides, occur as lenses in limestone and between granite and quartz-porphry. Has 4 tunnels and a prospecting shaft. Idle some years.

**LIMA COPPER MINING SYNDICATE, LTD.**

PEU.

Dead. Voluntarily wound up, February, 1903. Formerly in Peru.

**LIME CREEK CONSOLIDATED GOLD & COPPER CO.**

ARIZONA.

Dead. Property sold to Kentucky-Arizona Consolidated Mining, Smelting & Development Co. Formerly at Cave Creek, Maricopa Co., Ariz.

**LIME MOUNTAIN COPPER CO.**

ARIZONA.

Mine office: Johnson, Cochise Co., Ariz. Organized 1906, under laws of

Arizona, with capitalization \$1,000,000, by Davis S. McGahan and I. N. Kattensbroth. Lands, 21 claims, known as the George Washington group, near the Empire mine, in the Dragoon Mountains, developing by tunnel.

**LIMMEN COPPER SYNDICATE, LTD.**

Office: 2 Broad Street Place, London, E. C., Eng. R. A. Paris, secretary. Organized Apr. 29, 1907, under laws of Great Britain, with capitalization £3,000, shares £1 par; issued, 711 shares, fully paid. Location of lands, if any, unknown.

**LIMON MINING CO.**

**MEXICO.**

Mine office: Alamos, Sonora, Mex. Geo. W. Avery, superintendent. Has auriferous and argentiferous copper ore, with 10-stamp mill.

**LINALES MINING SYNDICATE, LTD.**

**SPAIN.**

Mine office: Linares, Jaen, Spain. S. Moos, manager. Organized 1903, to exploit lead, copper, zinc, iron and coal properties in vicinity of Linares, and to construct a warehouse and shipping pier at Almeria, Spain. Idle.

**LINCOLN CONSOLIDATED COPPER CO.**

**NEW MEXICO.**

Office: care of Daniel D. Hunt, St. Joseph, Mo. Mine office: Jarilla, Otero Co., N. M. M. E. Riggs, president; T. D. Hosmer, vice-president; Geo. Roche, secretary and treasurer; Wm. Wade, general manager; preceding officers, Dr. J. F. Standley, Thos. Winn, Chas. P. Faul and Reinhold Meiershoffer, directors. Organized Apr. 13, 1906, under laws of New Mexico, with capitalization \$50,000. Lands, 2 claims, said to be held under bond and lease from Southwest Smelting & Refining Co., showing a 5' vein carrying ore of 4 to 6% copper tenor, with fair silver values, opened by a shallow 2-compartment shaft. Shipped ore, 1907, to El Paso smelter, first shipment returning circa 11% copper and 3 oz. silver per ton. Shipments, 1907, were said to have been sufficient to pay for development work.

**LINCOLN CONSOLIDATED MINING CO.**

**ARIZONA.**

Office: 1563 Sherman Ave., Evanston, Ills. Mine office: Tucson, Pima Co., Ariz. Employs 30 men. Chas. A. Wightman, president; Hon. Fred W. Fickett, vice-president and general manager; Geo. E. Fernald, secretary and treasurer; D. B. Bisbee, superintendent. Organized June, 1904, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands, 35 claims, area 700 acres, including the Garcia group of 31 claims, also a 100-acre millsite, with total holdings of circa 1,000 acres, in the Papago district, 12 miles from Twin Buttes railroad, showing country rocks of limestone, granite-porphyr and diorite, carrying various ore bodies, of which 5, slightly developed, range 4' to 25' in width, being opened by 6 shafts, of 50' to 120' depth, and by a 150' tunnel. Smelter shipments are said to have given average returns of circa 30% copper, with fair gold and silver values, and property is claimed to have produced about \$80,000 worth of ore. Equipment includes two 15-h. p. gasoline hoists, good for 400' depth, and a 15-drill Rand air-compressor. There are 5 buildings, including an 18x20' machine-shop, 14x60' smithy, store and several dwellings. Idle.

**LINCOLN COPPER CO.**

**ARIZONA.**

Dead. Succeeded, circa 1904, by Lincoln Consolidated Mining Co. Formerly at Tucson, Pima Co., Ariz.

**LINCOLN COPPER DEVELOPMENT CO.**

**CALIFORNIA.**

Dead. Was promoted by "Baron" W. E. von Johannsen, a notorious mining swindler who formerly had an office at 326 Post St., San Francisco, Cal.

**LINCOLN COPPER MINING CO.**

**ARIZONA.**

Dead. Formerly at Tucson, Pima Co., Ariz. Described Vol. III.

**LINCOLN COPPER MINING CO.**

**MONTANA.**

Office: care of Jas. A. Talbot, Butte, Mont. Mine office: Helena, Lewis & Clark Co., Mont. Organized July, 1903, under laws of Montana, with cap-

italization \$1,500,000, shares \$1 par. Among the incorporators given was Thos. H. Carter, but Senator Carter states that his name was used without his knowledge or consent. Lands are said to be 10 claims, in the Little Boulder district, about 30 miles from Helena. Idle and apparently moribund.

#### LINCOLN GOLD & COPPER MINING CO.

GEORGIA.

Office: 33-42 New St., New York, N. Y. Mine office: Metaville, Wilkes Co., Ga. Edgar L. Pierson, president; G. S. Macdonald, vice-president; Louis Enricht, secretary; Wm. M. Orr, treasurer; preceding officers and Wilson R. Mendall, directors; A. B. Hopkins, general manager; Carl Henrich, engineer. Organized June 11, 1906, under laws of Oklahoma, with capitalization \$2,000,000, shares \$1 par; issued, \$1,700,000. Paid one dividend, of one-half of 1%. Was practically the successor of the Seminole Mining Co., which was a bad failure. Annual meeting, first Tuesday in August.

Lands, 901 acres, freehold, known as the Magruder or Seminole mine, just over the Wilkes county line, 12 miles from the Georgia Central railroad, and circa 70 miles from Ducktown, Tennessee, though advertised by the company to be in the same mineral zone. Property shows Huronian or Laurentian schists, intruded by eruptive dykes of two different ages, carrying 4 approximately parallel ore bodies, in schists and between schists and eruptive rocks, these having an average strike of N. 30° E. to N. 40° E. and dip of 50° to vertical, veins averaging 3' to 14' in width, and traceable circa 1,200', showing mainly chalcopyrite, with some bornite, cuprite and melaconite, estimated by company to average 4.5% copper, 3% lead, 1.5% zinc, 4 to 5 oz. silver and \$6 to \$14 gold per ton, which figures are considered unduly high.

The mine, opened 1852, and closed 1862, on account of the American Civil War, was reopened 1878, 1899 and 1905. Development is by a 225' main shaft, a 150' air-shaft and shafts of 40', 45' and 80', with about 1,800' of workings, estimated to show 15,000 tons of ore, with 2,500 tons blocked out for stoping.

Equipment includes a 175-h. p. boiler, 12-h. p. and 15-h. p. hoists and a 4-drill Rand air-compressor. There are 10 buildings, including a machine-shop, smithy, assay-office and boarding-house.

The mill, 30x70', of wood, on stone foundations, has a Gates crusher, centrifugal crusher, set of rolls, Twentieth Century jig, 2 Bartlett tables, elevators and revolving screens.

The smelter, immediately adjoining the concentrator and very close to the mine, has a 16-ton rectangular water-jacket blast-furnace, and a 10-ton reverberatory furnace, making, when in operation, a matte of 15 to 20% copper tenor, carrying circa 20 oz. silver and 1.5 to 3 oz. gold per ton, shipped to the Maurer works of the American Smelting & Refining Co. for reduction, first-class ore and concentrates also being shipped to Maurer.

The advertisements of J. M. Percy & Co., fiscal agents of the company, were most misleading. Dividends were promised for 1907, and a small dividend was paid, May 1, 1907, but it is extremely doubtful if it was earned. Company reports difficulty in securing satisfactory labor, and plans colonizing white labor. Property considered promising.

#### LINCOLN MINING CO.

AUSTRALIA.

Mine office: Lincoln, Canbelego Co., N. S. W., Australia. Organized 1907, under laws of New South Wales, with capitalization £4,500, shares £10 par.

#### LINCOLN MINING & MILLING CO.

COLORADO.

Mine office: Idaho Springs, Clear Creek Co., Colo. Ores carry gold, silver, copper and lead. Has steam power and a 15-stamp mill. Presumably idle.

#### LINCOLN-NEVADA MINING & MILLING CO.

NEVADA.

Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. W. M. MacSherry, president and general manager. Capitalization \$1,000,000, shares \$1 par. Idle and apparently moribund.

**LINDSEY CANANEA COPPER CO.****MEXICO.**

Office: care of C. O. Barrow, clerk, Portland, Me. Letter returned unclaimed from former mine office, La Cananea, Arizpe, Sonora, Mex. Organized 1907, under laws of Maine, with capitalization \$5,000,000. Supposedly out of business.

**LINEDALE WEST CHILLAGOE, LTD.****AUSTRALIA.**

Dead. Lands sold to Irvinebank Mining Co. Formerly at Arbovin, Chilagoe, Queensland, Australia.

**LINGANORE COPPER CO.****MARYLAND.**

Office and mine: Frederick, Frederick Co., Md. T. A. Dunshee, president and general manager; W. F. Wilson, secretary; C. C. Ausherman, treasurer. Organized under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 306 acres, including the New London and Dolly Hyde mines.

The New London mine, area 64 acres, with 14 acres of timber land, was worked, 1835-1855, apparently at a profit, but was idle since 1881, excepting for unwatering and retimbering the shaft, 1903-1904, when no ore was extracted, until reopened by present company. Mine has a 210' shaft and 4 short tunnels, longest 104', with circa 500' of workings, and the new management has opened a 350' tunnel. Ores are bornite and chalcocite, in a vein of 3' to 4' width, in dolomite and phyllite, ores assaying 3.5 to 7% copper.

The Dolly Hyde was the principal copper mine of the state, though never a large producer, and, in early days, shipped, without selection, considerable ore of good average tenor. The mine has contact deposits in limestone, carrying malachite, bornite and chalcopyrite, and was idle for many years. Property considered promising and management good.

**LINWOOD GOLD & COPPER CO.**

Dead. Was promoted by Henry T. Rodman & Co. "Big Mitt" Bill Henig, not altogether unknown to the metropolitan police, was secretary. Apparently company had no lands, and was a swindle, pure and simple. Formerly had an office at 303-334 Fifth Ave., New York, N. Y.

**LION COPPER CO.****WASHINGTON.**

Dead. Was organized 1906, with capitalization \$1,000,000, shares \$1 par. Lands were in the Hoodoo district. Office was at Wallace, Idaho. Formerly at Palouse, Whitman Co., Wash.

**LION COPPER MINING CO.****ARIZONA.**

Office: 313 West Second St., Los Angeles, Cal. Mine office: Stoddard, Yavapai Co., Ariz. Chas. Matthews, president; O. A. Cox, secretary and treasurer; Henry Reifsnyder, general manager. Organized February, 1903, under laws of Arizona, with capitalization \$2,500,000, shares \$1 par, succeeding Rambler Copper Mining Co. Lands, 13 claims, area 260 acres, in the Agua Fria district, 6 miles from a railroad. Country rocks are limestone, quartzite and porphyry, showing numerous veins carrying oxide, carbonate and sulphide ores, claimed to give average assays of 24% copper, opened by shafts of 50', 100' and 300', with 515' of underground workings. Has gasoline power. Idle and apparently moribund.

**LION GULCH DEVELOPMENT CO.****MONTANA.**

Office: 807 Lonsdale Bldg., Duluth, Minn. Mine office: Homestake, Jefferson Co., Mont. Chester A. Congdon, manager; John Hewett, superintendent. Lands, 5 claims, 3 miles north of Homestake and only a few miles south of Butte. Property, formerly held by Gold Flint Mining Co., produced considerable gold and silver in the past, but shows increasing copper values at depth. New development is by a 3-compartment shaft, planned to be sunk 300'. Equipment includes a double-drum hoist and an Ingersoll air-compressor. Employs circa 25 men. Property considered promising.

**LISBON VALLEY COPPER CO.**

UTAH.

Office and mine: care of H. E. Blake, manager, Moab, Grand Co., Utah. Was said, 1907, to plan a 100-ton concentrator, but mill apparently not built.  
**LITHGOW SMELTER.**

AUSTRALIA.

Owned by Great Cobar, Ltd.

**LITTLE BEAVER MINING & REDUCTION CO.**

UTAH.

Office: Salt Lake City, Utah. Mine office: Milford, Beaver Co., Utah. W. W. Little, president; Samuel A. Tarbet, vice-president; Victor B. Wells, secretary and treasurer. Organized 1908, with capitalization \$250,000, shares \$1 par. Lands, known as the Kittie Clough group, are in the northern part of the Star district.

**LITTLE BILLY OPERATING CO.**

BRITISH COLUMBIA.

Mine office: Van Anda, Texada Island, B. C. Property is the Little Billy mine. Idle.

**LITTLE BOPPY COPPER MINING CO., LTD.**

AUSTRALIA.

Mine office: Cobar, Robinson Co., N. S. W., Australia. Organized 1907. Property is a lease of copper lands about 20 miles from Cobar, on the railroad to Nyngan.

**LITTLE BULLY HILL MINING & SMELTING CO.**

CALIFORNIA.

Letter returned unclaimed from former office, San Francisco, Cal. Mine office: Winthrop, Shasta Co., Cal. Capitalization \$1,000,000, shares \$1 par. Lands, 5 claims, said to adjoin the Bully Hill mine, said to be opened by a 130' tunnel and several trenches, said to show sulphide ore. Prospectus was filled with bungo-talk, and apparently company is moribund.

**LITTLE CHIEF MINING CO.**

UTAH.

Office: care of John R. Van Evera, president, Marquette, Mich. Mine office: Eureka, Juab Co., Utah. F. D. Kimball, vice-president; Jas. P. Driscoll, secretary and treasurer; preceding officers and H. T. Moritz, directors; John Driscoll, superintendent. Has a 1,400' shaft. Hoisting plant, valued at \$15,000, was burned September, 1908. Reorganization planned. Property considered promising.

**LITTLE EDDIE GOLD & COPPER MINING CO.**

UTAH.

Office: Bingham Canyon, Salt Lake Co., Utah. Edw. McCarrick, general manager. Development is by tunnel, said to show a fair ore body.

**LITTLE GIANT MINING, MILLING & SMELTING CO.**

WASHINGTON.

Dead. Formerly at Marcus, Stevens Co., Wash.

**LITTLE MATTIE MINING, MILLING & POWER CO.**

COLORADO.

Mine office: Idaho Springs, Clear Creek Co., Colo. F. V. S. Leebrick, superintendent. Has auriferous and argentiferous lead and copper ores. Equipment includes steam and water power and a 20-stamp mill.

**LITTLE MINAH MINE.**

MONTANA.

Owned by Parrot Silver & Copper Co.

**LITTLE NORTH FORK COPPER MINING & MILLING CO., LTD.**

IDAHO.

Office and mine: Wardner, Shoshone Co., Idaho. F. P. Matchette, president; J. W. Slayter, vice-president; W. J. Locke, secretary; T. R. Mason, treasurer and general manager. Organized September, 1903, under laws of Idaho, with capitalization \$1,500,000, shares \$1 par. Development is by tunnel. Employs 3 men.

**LITTLE YERINGTON COPPER-GOLD MINES CO.**

NEVADA.

Office: P. O. Box 633, Goldfield, Nev. Mine office: Yerington, Lyon Co., Nev. Lands, 4 claims, area 80 acres, on the Walker Lake Indian reservation. At last accounts company was peddling stock on the weekly installment plan. Is not regarded favorably.

**LIVE OAK COPPER MINING & SMELTING CO.**

ARIZONA.

Office: 438 Broome St., New York, N. Y. Mine office: Globe, Gila Co., Ariz. Forest J. Kaldenberg, Sr., president; Forest J. Kaldenberg, Jr., secre-

tary. Organized under laws of Arizona, with capitalization \$1,250,000, shares \$1 par.

Lands, 16 claims, area 320 acres, 8 miles from a railroad, showing schists and quartz-porphyry carrying 8 lenticular contact deposits, of which 3, under development, average circa 10' width by 700' proven length and 300' estimated average depth. Ores are chalcocite, chalcopyrite, chrysocolla and diopside, said to give average returns of 10% copper. Mine, opened 1897, has shafts of 85' and 250', and tunnels of 900', 125', 175', 185', 725' and 60', with a total of about one mile of workings, estimated by former manager to show 120,000 tons of ore, with 65,000 tons blocked out for stoping, which latter figure is considered excessive. Ore shipped was graded into first class, carrying circa 24% copper, and second class, averaging about 12% copper.

Equipment includes a 200-h. p. hoist, good for 1,500' depth, and an 8-drill Sullivan air-compressor. Fuel is crude petroleum. The mine has ore-bins and 12 buildings.

There was a serious dispute, with extensive litigation, 1906, between the company and Joe C. Erman, then the company's agent and superintendent. On Aug. 10, 1905, the company accepted Mr. Erman's offer to ship enough ore to erect a leaching plant, without calling on the company for funds. The company states that Mr. Erman made contracts for the shipment of about 30,000 tons of ore to the El Paso smelter, without the knowledge of the company, and to the company's detriment, and at the end of 30 days began to make leases without the knowledge of other officers, despite the fact that Mr. Erman was not authorized to make any leases, and specifically instructed to make no debts. The company charges that Mr. Erman did not send correct copies of leases to the New York office. Boone & Strang, the principal lessees, are said to have taken out about \$100,000 worth of ore, after which the workings caved in, necessitating the sinking of a new shaft. The father of Mr. Erman is said to have found a purchaser for the property, whereupon the lessees demanded \$150,000 for the cancellation of their leases, and the company claims that Mr. Erman and his father were to have received a portion of the \$150,000. The company charges that fraudulent leases were made, by Mr. Erman, to his friends, his wife, and others, in which leases he himself was interested, and Mrs. Erman, who was the bookkeeper of her husband, is said to have destroyed the books. Mr. Erman is also charged with having given a lease shortly before his discharge, predating same 4 months.

Production has been as follows: 587,961 lbs. fine copper in 1905; 1,714,074 lbs. in 1906; 588,347 lbs. in 1907. Property considered valuable.

#### LIVERMORE GOLD & COPPER MINING CO.

WYOMING.

Dead. Formerly at Laramie, Albany Co., Wyo.

#### LIVERPOOL SILVER & COPPER CO., LTD.

ENGLAND.

Works office: Widnes, Lancashire, Eng. Property is a reduction plant with an electrolytic refinery.

#### LIVINGSTONE MINING CO.

MEXICO.

Office: 1a, Independencia 22, Mexico, D. F. Mine office: Temascaltepec, Mexico, Mex. Has auriferous and argentiferous copper and lead ores.

#### LLANO COPPER CO.

MEXICO.

Office: 407 American Bank Bldg., Kansas City, Mo. Mine office: Llano, Magdalena, Sonora, Mex. Employs 40 men. Dr. C. L. V. Hedrick, president and general manager; Dr. F. A. Patterson, vice-president; M. Y. Loaiza, first vice-president; preceding officers, W. R. Braden, R. L. Davidson and W. W. McEntire, directors; Harry Haldeman, secretary and treasurer; I. E. Bowers, mine superintendent. Organized Apr. 11, 1905, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par; issued, \$1,400,000. Was registered

and protocolized, May 30, 1908, under laws of Mexico. Annual meeting, first Monday in June.

Lands, 10 groups, area 526 hectares, also 5,000 hectares miscellaneous ranch and timber lands, including mineral lands on Curacahui Mountain, circa 10 miles southeast of Llano. Lands show porphyry and limestone, carrying ore bodies, one, of 3' to 50' estimated width, traceable circa 3 miles, opened by sundry pits and prospect shafts of 8' to 50' depth and by shafts of 105', 150' and 500', and tunnels of 50', 200' and 577', estimated to show circa 100,000 tons of ore, including chalcocite, bornite and chalcopyrite assaying 5 to 11% copper, 6 to 10 oz. silver and \$2 to \$5 gold per ton.

Equipment includes a 105-h. p. steam plant, with 7x8" and 8x10" hoists. There are 24 mine buildings, including a store and dwellings, also a sawmill. Property is served by Sonora branch of the Southern Pacific railway, 4 miles distant.

Company plans continuous development and blocking out ore for stoping. Test shipments from upper levels indicate the possibility of making substantial shipments of ore of good average tenor, after reasonable selection. Property considered promising.

#### **MINAS LLANOS BLANCOOS y LOS PATOS.**

CHILE.

Mine office: Tamaya, Ovalle, Coquimbo, Chile. Mine, opened 1893, has a 250' shaft. Idle several years.

#### **"LLOYD" COPPER CO., LTD.**

AUSTRALIA.

Offices: 107 Pitt St., Sydney, N. S. W., Australia, and 195A Winchester House, London, E. C., Eng. Mine office: Burraga, Bathurst Co., N. S. W., Australia. Alex. Creighton Arthur, chairman; W. Soutar, colonial director; W. H. Corbould, general manager; H. A. McMahon, secretary; J. Sarran, colonial secretary.

Organized May 9, 1899, with capitalization £250,000, increased November, 1908, to £300,000, shares £1 par; issued, £280,000. Capitalization was increased £50,000 to extinguish an equal amount of 10% debentures. Company had a share interest in the Murrin Copper Co., Ltd., which proved a failure. Profits, 1907, were £32,419, from which a dividend of 1s., amounting to £14,000, was paid, March 2, 1907.

Lands, 380 acres freehold, and 385 acres leasehold, one mile from Burraga, in the Bathurst district, which is arid, and operations are suspended at uncomfortably frequent intervals, from lack of water, though the mine has an 85,000,000-gallon storage tank, holding 9 months' water supply.

The mine, opened 1877, is bottomed in badly disturbed ground. Ore is slightly argentiferous chalcopyrite, with quartz gangue, occurring in fissures traversing acid diorite. The main vein has an ore chute of about 700' length, worked to depth of circa 750'. The vein ranges 3' to 8' width, with an average of about 5'. The ore is highly silicious, and gave average returns, 1907, of 2.36% copper. To the eastward is a fault, cutting off the eastern extension of the vein from the first to the fourteenth levels, but protracted search has shown a continuation of the vein, to the eastward of the fault, which has given a 300' horizontal downthrow, the discovery of the eastern extension of the vein greatly improving the prospects of the property.

Equipment includes steam and electric power, with hoisting machinery and shops. Fuel is hardwood, about 75 choppers being worked when the property is in operation, as fuel requirements are about 60,000 cords yearly. Much trouble is experienced from shortage of fuel, and a 9-mile tram-line has been surveyed, for a wood line, but has not been built. Apparently the lack of this line, which would cost about £20,000, is responsible for a considerable part of the company's troubles.

The reduction plant, built 1901, at a cost of £32,000, was overhauled and

enlarged, 1906, and includes a concentrator and smelter. The works formerly had 2 blast-furnaces, one of which was sold to the Murrin Copper Co., Ltd., which was wound up at a heavy loss, so the furnace was practically lost, and the other blast-furnace was sold to the Great Cobar mine. Present equipment includes a 40-ton calcining furnace, 19x48' over all, treating 40-ton charges of matte, and a reverberatory furnace, 23x65' over all, hearth having inside width of 20', with grate area of 6x8', and 5 charging hoppers. The smelter is said to have a converter plant.

From the beginning of mining, 1880, to the end of 1906, the company smelted 323,071 long tons of ore, making therefrom 14,122 long tons of fine copper, largest production being 4,088,000 lbs., in 1902. Production, 1905, was 2,058,560 lbs., and in 1906 was 2,739,520 lbs. fine copper. About 500 men are employed normally.

**LLUVIA DE COBRE MINING CO.**

**MEXICO.**

Office: 711 Kansas City Life Bldg., Kansas City, Mo. Mine office: Carb6, Ures, Sonora, Mex. A. H. Glasner, president; Edgar Hubbard, first vice-president; W. M. Rynerson, second vice-president; Bruce Dodson, secretary; Wm. E. Jones, assistant secretary; E. J. White, treasurer; J. C. Worthington, general manager; Frank Smith, superintendent. Organized November, 1904, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par, increased, 1907, to \$5,000,000. Lands, 283 acres, on San Juan Mountain, in the Papago district, circa 30 miles west of Carb6, opened by the 410' Josephine shaft, showing auriferous and argentiferous copper sulphides assaying up to 33% copper, 560 oz. silver and \$7 gold per ton. Has a 10-drill air-compressor and is said to plan building a small matting furnace. Advertising is decidedly lurid and the company is not regarded favorably.

**LOBBS HOLE CENTRAL COPPER MINE.**

**AUSTRALIA.**

Mine office: Kiandra, N. S. W., Australia. Property shows 3 veins, of 3" to 14" width, opened by shaft to depth of circa 100', giving ore assaying about 30% in copper tenor.

**LOBBS HOLE COPPER MINE, N. L.**

**AUSTRALIA.**

Office: care of Alexander Jobson, manager, Equitable Bldgs., Sydney, N. S. W., Australia. Mine office: Kiandra, N. S. W., Australia. P. W. Horton, chairman. Capitalization £60,000, shares £1 par. Lands, 120 acres, 45 miles from Tumut. Mine, to end of 1906, had produced about 2,000 tons of ore averaging 28% copper, with 2,000 tons of second-grade ore stocked at the mine, part of which since has been washed away by floods. Planned reopening mine and building a small smelter, during 1908.

**LODI GOLD & COPPER CO.**

**NEVADA.**

Letter returned unclaimed from former mine office, Rhyolite, Nye Co., Nev. Lands are near Skull Valley, in the River Basin district, and a shaft was being sunk thereon, July, 1907. Idle and apparently moribund.

**LOGAN & CO., LTD.**

**ENGLAND.**

Office and works: Birkenhead, Cheshire, Eng. Property is a copper smelter and refinery.

**LOGAN COPPER CO.**

**ARIZONA.**

Mine office: Jerome, Yavapai Co., Ariz. W. J. Casey, superintendent. Lands, 11 claims, in the Copper Basin district, having a 115' two-compartment shaft, showing ore carrying about 3% copper and \$1 gold per ton.

**LOG CABIN GOLD & COPPER CO., LTD.**

**UTAH & ONTARIO.**

Dead. Formerly at Marysville, Piute Co., Utah, and Mine Centre, Rainy River district, Ont. Merged, 1906, in Utah Gold Mountain Mining Co. Very fully described Vol. VI.

**LOGOS MINES CO.**

**ARIZONA.**

Mine office: Mayer, Yavapai Co., Ariz. W. H. Ferguson, general man-

ager. Lands, in the Big Bug district, have a 60' shaft, equipped with a 40-h. p. hoist and 5-drill air-compressor.

**NEGOCIACIÓN MINERA LOMA DEL TORO.**

MEXICO.

Mine office: Zimapán, Hidalgo, Mex. Property includes La Luz and Loma del Toro mines, carrying silver-lead and copper ores. Employed circa 75 men at last accounts.

**LOMAGUNDA DEVELOPMENT CO., LTD.**

RHODESIA.

Office: 404 Salisbury House, London, E. C., Eng. John Seear, chairman; H. Ewer Jones, consulting engineer; Geo. T. Frost, secretary; Rhodesia Exploration & Development Co., Ltd., agent in Rhodesia. Organized June 18, 1894, capitalization increased December, 1901, to £250,000, shares £1 par; issued, £227,850. Paid a 10% dividend, January, 1906. Lands, 316 claims, in the Lomagunda district of Mashonaland, including the United Kingdom claim, on which development, now under way, has shown a promising body of auriferous copper ore. Company also has extensive shareholdings in the Consolidated African Copper Trust, Ltd., Ayrshire Gold Mine & Lomagunda Railway Co., Ltd., and Rhodesian Basket Co., Ltd.

**LOMA VERDE COPPER CO.**

ARIZONA.

Dead. Was a stock-jobbing swindle. Formerly at Tucson, Pima Co., Ariz. Fully described Vol. V.

**LOMBARD COPPER CO.**

OREGON.

Dead. Formerly at Baker City, Baker Co., Ore.

**LOMBARD GOLD & COPPER MINING CO.**

Dead. Formerly had an office at 316 McCornick Bldg., Salt Lake City, Utah.

**LONDON-ARIZONA COPPER CO.**

ARIZONA.

Office: 526 Security Bldg., Los Angeles, Cal. Mine office: Winkelman, Pinal Co., Ariz. Chas. E. Finney, president; Frank L. Wright, vice-president; John Mason Ross, secretary; E. W. Brooks, treasurer; preceding officers, Chas. S. Gleed, B. L. Winchell and Hon. R. E. Sloan, directors; Edw. W. Brooks, consulting engineer.

Organized Apr. 12, 1907, under laws of Arizona, with capitalization \$10,000,000, shares \$10 par. Debentures, \$152,000, at 6%. Commercial Trust Co., Los Angeles, registrar and transfer agent. Annual meeting, third Monday in January.

Lands, 1,257 acres, known as the Dripping Springs or O'Carroll group, on London Mountain, in the Banner district, 7 miles north of Winkelman, the nearest railroad station, about 10 miles from Kelvin and 20 miles from Globe.

Property shows limestone of the upper Carboniferous series, superimposed on quartzite, with frequent intrusions of porphyritic dykes, the limestone series having the same petrographical members as the Bisbee district, with deposits occurring similarly as replacements in limestone. The basal quartzite caps a great monzonite laccolith, which presumably is the primary source of the ore, and is said to carry copper values of about 2.5%, in disseminated chalcopyrite and chalcocite. The limestone shows an ore-bearing ledge about 30' wide, traceable circa 4,000', to be developed by tunnel, carrying mainly carbonate ore, estimated to average circa 5% in copper tenor. The property has about 2,000' of workings, showing considerable carbonate ore of excellent grade, but estimates, in the press, of 3,000,000 tons of ore in sight, are considered excessive.

The company plans a 1,000-ton smelter, as the first unit of 3,000-ton works, at a site on the Gila River, 2 miles north of Winkelman and about 5 miles from the mine. The company advertised extensively, using many page advertisements in the newspapers, but these were singularly free from exag-

gerations and false statements, it being the usual rule that the larger the advertisement, the further it is from the truth. Property considered promising.

**LONDON-COLORADO PROPERTIES, LTD.** COLORADO.

Mine office: Central City, Gilpin Co., Colo. Property was a bond and lease on the Pierce mine, said to give a good showing of copper ore. Presumably idle.

**LONDON & GILA COPPER CO.**

ARIZONA.

Mine office: Kelvin, Pinal Co., Ariz. Louis Melczer, vice-president; W. B. Twitchell, superintendent. Organized circa May, 1908, with capitalization \$3,000,000. Lands, adjoining the London & Arizona, show low grade ores, apparently in considerable quantities. Company is said to plan a concentrator.

**LONDON & MEXICAN SMELTER & MINING CO.** MEXICO.

Mine office: Pánuco de Monclova, Coahuila, Mex. Company planned, 1907, erecting a modern smelter at Adjuntas station, about 15 miles from Monclova.

**LONDON MOUNTAIN COPPER CO.**

ARIZONA.

Office: Phoenix, Ariz. Mine office: Winkelman, Pinal Co., Ariz. Louis Melczer, vice-president. Organized May, 1908, with capitalization \$3,000,000. Lands are near the London-Arizona Copper Co.

**LONDON RANGE COPPER CO.**

ARIZONA.

Office: 526 Security Bldg., Los Angeles, Cal. Mine office: Winkelman, Gila Co., Ariz. Chas. E. Finney, president; Paul Burks, vice-president; E. J. Mitchell, secretary; Edw. W. Brooks, treasurer; preceding officers and John M. Ross, directors. Organized Dec. 28, 1907, under laws of Arizona, with capitalization \$6,000,000, shares \$10 par; issued, \$2,000,000. Is controlled, through ownership of \$1,940,250 of issued stock, by London Arizona Copper Co. Bonds, \$68,500 issued.

**LONDON & RICHELIEU MINING &  
DEVELOPMENT CO.**

BRITISH COLUMBIA.

Mine office: Rossland, Trail district, B. C. Capitalization, \$1,200,000. Company advertised stock for sale, circa 1905, on the strength of its location near the Granby, but apparently has no property in that neighborhood. Idle.

**LONE PINE COPPER MINING & REDUCTION CO.** COLORADO.

Mine office: Gray Rocks, Laramie Co., Wyo. Organized circa 1902, under laws of Colorado, with capitalization \$1,200,000. Is said to have 250' shaft. Presumably idle.

**LONE PINE MINING CO.**

ARIZONA.

Dead. Was a swindle. Was absorbed by Pan-American Mining & Smelting Co. Formerly at Prescott, Yavapai Co., Ariz.

**LONE STAR CONSOLIDATED COPPER CO.**

ARIZONA.

Office: Rogers Bldg., Boston, Mass. Mine office: Safford, Graham Co., Ariz. Hon. Wm. H. Powers, president; Duncan McViehie, vice-president; Henry H. Folsom, secretary; A. G. Smith, treasurer; S. S. Campbell, general manager; C. B. Spalding, superintendent. Organized Aug. 6, 1906, under laws of Maine, with capitalization \$5,000,000, shares \$10 par, practically as successor of Maravilla Copper Co.

Company controls the Mineral Mountain Copper Co., through ownership of a two-thirds share interest, and controls, through majority stock ownership, the Chase Creek Copper Co.

Lands, 32 claims, including the Lone Star mine, in the Gila Mountains, circa 10 miles north of Solomonville. The Lone Star mine has a 360' main shaft, showing a 5' vein of auriferous and argentiferous sulphide copper ore, claimed to be of 8 to 10% copper tenor, with fair silver values and carrying a little gold. The shaft also shows stringers of ore assaying 10 to 50% copper.

**LONE STAR COPPER CO.**

TEXAS.

Dead. Formerly at Henrietta, Clay Co., Texas. Described Vol. III.  
**LONE STAR MINING CO.** ARIZONA.

Dead. Was succeeded by Maravilla Copper Co., also dead, which was succeeded by Lone Star Consolidated Copper Co. Formerly at Safford, Graham Co., Ariz.

**LONG BEACH & ARIZONA MINING CO.**

ARIZONA.

Dead. Was succeeded, 1907, by Swastika Copper Co. Formerly at Jerome, Yavapai Co., Ariz. Described Vol. VI.

**LOOKOUT COPPER CO.**

ARIZONA.

Mine office: Poland, Yavapai Co., Ariz. Lands are in the Slate Creek district. Has steam power. Presumably idle.

**LOOKOUT MINING CO.**

ALASKA.

Office: Cleveland, Ohio. Mine office: Niblack, Prince of Wales Island, Alaska. Arthur A. Wakefield, general manager. Property shows a medium sized body of auriferous copper ore, and is equipped with steam power, employing 12 to 15 men.

**LOON CREEK MINING & INVESTMENT CO.**

IDAHO.

Office: Blackfoot, Idaho. Mine office: Ivers, Custer Co., Idaho. E. H. Watson, president; J. M. Stevens, secretary. Lands, about 2 miles from the Lost Packer, have a tunnel showing auriferous copper ore.

**LORDSBURG MINING & REDUCTION CO.**

NEW MEXICO.

Mine office: Lordsburg, Grant Co., N. M. Thomas A. Lister, manager. Organized April, 1908, with capitalization \$600,000. Idle.

**COMPANIA MINERA LORETA y PROVENCIA.**

MEXICO.

Mine office: Jesus Maria, Ocampo, Rayón, Chihuahua, Mex. Owned by Jesus Poyval, Rascon Bros. and E. R. Bones, latter manager. Ores carry silver, copper and lead. Has a 500' main shaft and a 900' tunnel, with water power, 5-stamp mill with 12 tons daily capacity and a one-ton smelter employing circa 75 men.

**LORNITA MINING CO.**

MEXICO.

Mine office: La Cananea, Arizpe, Sonora, Mex. Property is near the Puertecitos mines of the Greene-Cananea. Made a small ore shipment, September, 1908, to El Paso smelter.

**LORRAINE COPPER MINING CO.**

WASHINGTON.

Office: Hoquiam, Wash. Mine office: Keller, Ferry Co., Wash. Owen Jones, president; A. G. Rockwell, secretary; Fred J. Chamberlain, general manager. Organized Apr. 13, 1900, under laws of Washington, with capitalization \$1,500,000, shares \$1 par.

Lands, 22 claims, area 422 acres, in 2 groups, and a 20-acre millsite, in Ferry and Pierce counties, Washington.

The Wilmot group, in the Sans Poil district, Ferry county, shows contact deposits between porphyry and schist, of 4' to 6' width, said to give average assays of 6.5% copper, 40 oz. silver and \$4 gold per ton, from malachite and azurite near surface, and from chalcocite, bornite and chalcopyrite at depth. These figures are considered overestimates.

The Lorraine group, in the Carbon River district, shows 7 fissure veins in granite, giving assays up to 20% copper, 5 oz. silver and \$1 gold per ton, from bornite and chalcopyrite. The Lorraine group is opened by 4 shafts, deepest 100', and by 8 tunnels, 3 longest being 221', 472' and 630'. Properties as a whole have 2,016' of workings. Idle several years, and apparently moribund.

**LOS ALAMOS MINING & MILLING CO.**

MEXICO.

Office: 823 H. W. Hellman Bldg., Los Angeles, Cal. Letter returned unclaimed from former mine office, Alamos, Sonora, Mex. Dr. Finis E. Yea-

kum, president. Claimed to have a good showing of gold-copper ore. Not favorably regarded and apparently a dead cock in the pit.

**LOS ANGELES & JALISCO MINES CO.**

**MEXICO.**

Office: 709 Lankershim Bldg., Los Angeles, Cal. Letter returned unclaimed from former mine office, Etzatlán, Ahualulco, Jalisco, Mex. M. N. Graves, general manager. Property is the Magistral mine, which formerly made copper sulphate from auriferous and argentiferous copper ores. Mine shipped a little ore in 1907. Presumably idle.

**LOS ANGELES METAL REDUCTION CO.**

**ARIZONA.**

Letter returned unclaimed from former office, Los Angeles, Cal. Mine office: Phoenix, Maricopa Co., Ariz. Was said, 1907, to have leased, for 5 years, the property of the Copper Butte Mines, in the Walnut Grove district of Pinal county, Arizona. Idle and apparently moribund.

**LOS ANGELES MINES CO.**

**MEXICO.**

Mine office: Moctezuma, Sonora, Mex. Lands show auriferous copper ores, slightly developed. Suspended operations circa October, 1907.

**LOS CERROS COPPER CO.**

**CUBA.**

Office: Blackstone Bldg., Cleveland, Ohio. Mine office: Fomento, Santa Clara, Cuba. S. S. Safford, president; W. C. Watkins, vice-president; Sherman C. Dalbey, secretary; W. L. Rees, treasurer; Col. D. H. Pond, general manager. Organized Aug. 12, 1905, under laws of Arizona, with capitalization \$500,000, shares \$100 par.

Lands, 2 claims, area 100 acres, also 1,500 acres miscellaneous lands, opened by shafts of 25', 35', and 50', and by tunnels of 80', 80', 200', 205' and 250', showing ore assaying 10% copper, 20 to 25% zinc, 20% sulphur and 30% silica, with gold and silver values. Zinc apparently is decreasing at depth. Vein has a 12' to 15' gossan outcrop along its strike. Property is an antigua, operated in the Eighteenth Century, and idle since circa A. D. 1750. Presumably idle.

**LOS MARCHES MINING CO.**

**MEXICO.**

Mine office: Indé, Durango, Mex. Said to have a small concentrator and smelter. Presumably idle.

**LOS MUERTOS MINING CO.**

**MEXICO.**

Mine office: Velardeña, Cuencamé, Durango, Mex. Carter Barker, superintendent. Has argentiferous lead and copper ores, with steam power, employing about 150 men.

**LOS OSOS MINE.**

**CALIFORNIA.**

Letter returned unclaimed from former mine office, San Luis Obispo, San Luis Obispo Co., Cal. Mine, 8 miles from San Luis Obispo, has a short tunnel and shallow shaft, from which several hundred tons of high grade ore were shipped to Swansea, circa 1863. Has a fissure vein traversing sandstone and shale, showing oxidized ores with porphyritic gangue. Idle since circa 1865.

**LOS PLATANOS DEVELOPMENT CO.**

**MEXICO.**

Office: 516 Grant Bldg., Los Angeles, Cal. Mine office: Choix, Fuerte, Sinaloa, Mex. A. M. McDermott, president. Organized September, 1907, under laws of Arizona, with capitalization \$3,000,000, shares \$10 par. Lands, circa 4 miles from Choix, bought of Choix Consolidated Mining Co., Ltd. Said to have shipped about \$125,000 worth of copper ore by cart, to the coast, and to have, on the dumps, several thousand tons of ore of 6% copper tenor.

**LOST BULLION SPANISH MINES CO.**

**NEW MEXICO.**

Dead. A deliberate swindle, promoted by Arthur Levan, Wm. E. Wilson, W. B. Cameron, E. A. Keables, C. L. Blackman, David H. Lawrence, E. W. Sebben, Dr. B. C. Hunt, Danton B. Pinkus, Geo. S. DuBois and Lee DuBois, who were convicted of using the mails to defraud. These conspirators were given very light punishments, the heaviest penalty being thirty days in jail

and a \$1,000 fine, while Arthur Levan, apparently at the head of the gang, was fined \$100 and costs. Apparently it is very cheap to promote deliberate swindles through the United States mails. Formerly at Silver City, Grant Co., N. M.

**LOST GARNET GOLD & COPPER MINING &  
MILLING CO.**

**WASHINGTON.**

Dead. Formerly had offices at Seattle and Everett, Wash.

**LOST GULCH COPPER CO.**

**ARIZONA.**

Letter returned unclaimed from former office, Los Angeles, Cal. Mine office: Globe, Gila Co., Ariz. E. F. Kellner, manager. Has auriferous copper ores and a 10-stamp mill. Presumably idle.

**LOST PACKER EXTENSION MINING CO.**

**IDAHO.**

Office: care of Col. O. P. Chisholm, secretary and treasurer, Bozeman, Mont. Mine office: Ivers, Custer Co., Idaho. W. W. Chisholm, president. Idle.

**LOST PACKER MINING CO.**

**IDAHO.**

Mine and works office: Ivers, Custer Co., Idaho. Jas. Ivers, president; J. T. Finlen, vice-president; Henry Welsh, secretary and treasurer; preceding officers, J. Czizek and E. G. Rowe, directors; Patrick Sheehan, manager; Harry Charles, superintendent. Capitalization is 150,000 shares.

Lands, 9 claims, in the Loon Creek district, circa 120 miles west of Mackay. Mine is developed mainly by tunnel, No. 1 having a back of 450', and No. 7 a back of 700', while No. 9, now driving, will have a back of circa 2,000'. Tunnels are run on a vein of 2' to 7' average width, with maximum width of 12' to 15', carrying ore averaging 2 to 3% copper and \$5 to \$7 gold per ton, with a paystreak of 6" to 5' width, proven to average about 2' for a distance of 500' and depth of 400', which carries sulphide ore returning 10 to 25% copper, 10 to 12 oz. silver and \$40 to \$75 gold per ton. Property is handicapped by inadequate transportation facilities, being 120 miles from a railroad, and deep snows preclude winter work.

The smelter has a 100-ton water-jacket blast-furnace, making matte averaging 52% copper, 36 oz. silver and 13 oz. gold per ton, with slags running only 0.2% copper. A converter is planned.

About 50 men are employed, when working, but the smelter is operated only a few months yearly. Production, 1907, secured from smelting operations July 26 to Oct. 31, is estimated at 425,000 lbs. fine copper, with large gold and silver values, and presumably was greater in 1908. The property is one of exceptional promise.

**LOST RIVER COPPER CO.**

**IDAHO.**

Letter returned unclaimed from former office, Anaconda, Mont. Property, in Lemhi county, Idaho, is said to show a 7' vein of sulphide copper ore, between quartzite and limestone. Idle and apparently moribund.

**NUEVA SOCIEDAD COMPAÑIA DE LOTA I CORONEL.**

**CHILE.**

Office: Valparaíso, Chile. Mine office: Carrizalillo, Chañaral, Atacama, Chile. Works offices: Lota, Concepción, Atacama, Chile, and Los Condes, Santiago, Chile. Santiago Collins, manager. Organized under laws of Chile, with capitalization 18,000,000 pesos.

Lands include the Mina Descubridora, at Carrizalillo, opened 1850, which is about 650' in depth; the Lota mine, opened 1856, and the Maitenes mine, opened 1844, these carrying large bodies of ore, low in average copper tenor and high in silica, which renders them difficult of reduction. Company also owns coal mines, principal copper and coal mines having railroad connections, with steam and electric power.

The Maitenes smelter, at Los Condes, is 45 kilometers from Santiago, the nearest railroad point, with a freight rate of 7 pesos per metric ton in, and 6 pesos out. Works include a crusher plant and 3 reverberatory furnaces,

with converter department having 4 shells, each 1.41x1.83 meters, and an air-compressor. In 1903, employing circa 50 men, at average wages of 1.6 pesos daily, the Maitenes works smelted circa 2,400 metric tons of ore, of 23% average copper tenor, producing therefrom 532,325 kilograms fine copper. This was the first Chilean plant to have converters, which were installed 1885, but in 1903 the converter plant was practically abandoned, because of inability to operate at a profit. The Lota works have 16 small reverberatories for calcining, 6 small casting furnaces for ejes, 6 small casting furnaces for bars, 1 casting furnace for ingots, and 3 water-jacket blast-furnaces, equipment including 2 blowing engines, 5 small engines of 43-h. p. each, hydraulic turbines aggregating 204 h. p., and a mill with crushers and 3 sets of rolls. Fuel is domestic coal, of poor quality, costing 10 pesos per ton, and domestic coke, 5 tons of coke being required to reduce 1 ton of ore. Product is Chile bars averaging 99.5% copper, with slags averaging 0.5% copper. In 1903 the Lota works smelter 33,969 metric tons of ore, averaging 15.89% copper, and converted 4,725 tons of ejes averaging 47.77% copper, obtaining therefrom 5,642 metric tons of bars and 1,095 metric tons of ingots, employing 450 men, at average wages of 2 pesos daily. Production of company, 1903, was 15,653,906 lbs. fine copper.

**LOVEDEN MINING CO. (1903), LTD.****WALES.**

Office: 52 Queen Victoria St., London, E. C., Eng. Wm. E. Martin, director. Organized Dec. 9, 1903, under laws of Great Britain, with capitalization £30,000, shares 5s. par. Debentures, £3,500 authorized; £2,700 outstanding. Property is the lease of a lead and copper mine of 150 acres, on the Farm Penrhyngeirwyn, Cardiganshire, Wales. Idle several years and company apparently moribund.

**MINA DO LOUZAL.****PORTUGAL.**

Office: 4 Praça dos Remolares, Lisbon, Portugal. Mine office: Louzal, Grandola, Alemtejo, Portugal. Senhor Waldemar d'Orey, general manager; Joaquin Chaves, mine superintendent. Is the property of a syndicate of 6 owners, with capitalization circa £5,000.

Lands, 1 square kilometer, showing schists carrying 8 ore bodies, largest with maximum width of 24 meters and supposed length of circa 500 meters, carrying cupriferous pyrite averaging circa 3% copper and 1.2 oz. silver per metric ton, with traces of lead, zinc and gold. Property carries occasional oxidized ores, and a little native copper.

Development is by a 400-meter tunnel, one shaft of 18 meters and 3 shafts of 24 meters each, estimated by owners to show circa 2,000,000 tons of ore. Property was operated by the Romans, and was reopened, 1901, by present owners. Mine considered valuable, but is hampered by lack of rail transportation.

**LOW CREEK COPPER CO.****WASHINGTON.**

Mine office: Baring, King Co., Wash. Lands are south of the Skykomish River, opposite Baring. Was developing with 5 men at last accounts.

**LOW DIVIDE COPPER MINING CO.****CALIFORNIA.**

Office and mine: care of John Murray, president, Crescent City, Del Norte Co., Cal. Lands are the Alta, Occidental and Copper Hill groups, on which several different veins have been opened slightly, these showing oxide, carbonate and sulphide ores of good grade. Idle.

**LOWER MAMMOTH MINING CO.****UTAH.**

Office: Salt Lake City, Utah. Mine office: Mammoth, Juab Co., Utah. A. C. Ellis, president; John Dern, vice-president and general manager; W. S. McCornick, treasurer; A. Reeves, secretary; William Ball, superintendent. Organized July 3, 1896, with capitalization \$190,000; authorized, February, 1908, to be increased to \$250,000, shares \$1 par. Has authorized a bond issue

of \$60,000, at 6%, apparently not issued. Has been in financial straits for about 2 years, and levied a 5-cent assessment September, 1907. Lands, 6 claims, patented, with extensive development, showing large bodies of low grade ore, decreasing in values in lower workings. Main shaft, 1,200', is planned to be deepened to 2,000'. Ores treated, 1902, average 3% copper, 52 oz. silver and 18 cents gold per ton. Production, 1907, was 235 carloads of ore. Suspended operations March, 1907.

#### **LOYAL LEASE CO., LTD.**

#### **BRITISH COLUMBIA.**

Mine office: Van Anda, Texada Island, B. C. C. H. Jacobs, manager. Lands, 7 claims, area circa 350 acres, held under bond and lease from H. W. Treat, owner, near Blubber Bay, 3 miles from Van Anda, showing outcrops similar to those of the Marble Bay mine. Development is by a 300' shaft showing chalcopyrite and occasional bornite, of good average tenor. Has steam power and a 2-drill air-compressor.

#### **GUSTAVO LOZANO.**

#### **SALVADOR.**

Mine office: Chalatenango, Salvador. Mines carry auriferous and argentiferous copper ore, and have steam power. Employed circa 100 men, at last accounts.

#### **LUCERO COPPER MINING CO.**

#### **NEW MEXICO.**

Dead. Formerly at Mora, Mora Co., N. M.

#### **LUCILE DREYFUS MINING CO.**

#### **WASHINGTON.**

Mine office: Danville, Ferry Co., Wash. Theodore Peterson, superintendent. Mine has 3 tunnels, showing a ledge of 100' estimated width, with pay-streak of circa 25', carrying argentiferous and cupriferous pyrite. Company fell into financial straits, circa 1903, through fraudulent stock issued by Eugene Cressley, the former secretary, who served a penitentiary term therefor. Resumed work, 1907, after several years' idleness.

#### **LUCILE GOLD & COPPER MINING CO.**

#### **CALIFORNIA.**

Office: 226 San Bernardino Bldg., Los Angeles, Cal. Mine office: Kelso, San Bernardino Co., Cal. Geo. R. Barker, president; F. R. Pitney, vice-president; F. H. Gleason, secretary and treasurer; preceding officers, F. S. Russell and Dr. E. L. Pillsbury, directors. Organized Nov. 21, 1906, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 3 claims, area 60 acres. Development is by tunnels of 150' and 350'.

#### **LUCIN COPPER MINES CO.**

#### **UTAH.**

Mine office: Tecoma, Elko Co., Nev. Organized 1907, with capitalization \$1,500,000, shares \$1 par. Lands, 28 claims, area 500 acres, 7 miles east of Tecoma, in the Lucin district of Box Elder county, Utah.

#### **LUCKY BUTTE MINING CO.**

#### **MONTANA.**

Office and mine: care of S. W. Billings, Butte, Silver Bow Co., Mont. Organized 1907, under laws of Montana, with capitalization, \$100,000.

#### **LUCKY CALUMET COPPER MINING CO.**

#### **IDAHO.**

Office: care of John H. Nordquist, vice-president and general manager. Wallace, Idaho. Mine office: Mullan, Shoshone Co., Idaho. A. A. Booth, president; H. P. Knight, secretary; Chas. Solberg, treasurer; preceding officers, J. H. Hewand and O. O. Larsen, directors. Organized October, 1906, under laws of Idaho, with capitalization \$1,500,000, shares \$1 par.

Lands, 10 claims, patented, on Snow Storm Hill, between the Independent and Snow Storm mines and about 1,500' from latter, supposedly carrying the extension of the Snow Storm vein. Property shows 2 fissure veins, of 10' to 50' width, in quartzite, opened by ten 10' pits and by 3 tunnels, longest circa 1,100', latter cutting a vein of 30' to 40' width at a distance of 1,055' from portal, with back of 575', showing a vein of 30' to 40' width, carrying cuprite, malachite, chalcopyrite and tetrahedrite, giving assays of 2.5 to 5% copper, with slight silver values. Plans driving a new crosscut tunnel, from head of

Gentle Ann Gulch, to cut vein at circa 2,000'. Has electric power, air-compressor and 4 mine buildings.

**LUCKY DAY MINING CO.**

**WASHINGTON.**

Dead. Formerly at Silverton, Snohomish Co., Wash.

**LUCKY DUTCHMAN MINING & DEVELOPMENT CO.**

**NEVADA.**

Office: Salt Lake City, Utah. Mine office: Crescent, Lincoln Co., Nev. W. J. Snyder, president; John R. Royer, vice-president; preceding officers, B. O. Atkins, C. L. Anderson and B. S. Weimer, directors; H. B. Cole, secretary and treasurer. Organized 1905, with capitalization \$125,000, shares 25 cents par. Lands, 4 claims. Idle.

**LUCKY FRIDAY GOLD & COPPER MINING CO.**

**NEVADA.**

Office: care of J. T. Davis, secretary-treasurer, Carson, Nev. O. H. Gallup, president; S. L. Lee, vice-president. Organized Sept. 26, 1906, under laws of Nevada, with capitalization \$1,000,000, shares \$1 par. Lands, 5 claims, on Copper Mountain, in the Walker River district, Esmeralda county, Nevada. Has a 90' shaft, claimed to show ore averaging 28% copper.

**LUCKY FRIDAY MINING CO.**

**IDAHO.**

Letter returned unclaimed from former mine office, Mullan, Shoshone Co., Idaho. Lands, 4 claims, adjoining the Hunter mine on the south, having a 625' crosscut tunnel cutting a 10' vein with a 4' paystreak giving assays up to 3.5% copper, 29% lead and 89 oz. silver per ton.

**LUCKY GOLD & COPPER MINING CO.**

**ARIZONA.**

Office: 201-253 South Broadway, Los Angeles, Cal. Letter returned unclaimed from former mine office, Kelvin, Pinal Co., Ariz. J. D. Ferree, president. Lands, 16 claims, in the Riverside district, undeveloped but showing surface ores giving small assay values in copper, and about \$7 gold per ton.

**LUCKY STRIKE COPPER MINING CO.**

**WYOMING.**

Dead. Was succeeded by Lucky Strike Mining & Milling Co. Formerly at Lusk, Laramie Co., Wyo.

**LUCKY STRIKE MINING & MILLING CO.**

**WYOMING.**

Office: Rawlins, Carbon Co., Wyo. Mine office: Lusk, Laramie Co., Wyo. Said to have been organized 1904, but company never filed articles of incorporation with the secretary of state of Wyoming. Is controlled, through stock ownership, by Copper Belt Mines Co. Lands, 6 claims, in the unorganized Buffalo Forks mining district, having a 251' crosscut tunnel, said to cut ore, with a surface showing of auriferous and argentiferous copper ore.

**LUCKY VERDE COPPER CO.**

**ARIZONA.**

Dead. Lost lands, 1904. Formerly at Jerome, Yavapai Co., Ariz. Described Vol. III.

**LUCY L. MINING & MILLING CO.**

**UTAH.**

Office: 208-69 East Third South St., Salt Lake City, Utah. Mine office: Callao, Juab Co., Utah. Frank L. Wilson, secretary and treasurer. Property, in the Deep Creek district, shows ores carrying gold, silver, copper, lead, tin, nickel and bismuth, and company claims to have developed bismuth ores carrying \$160 gold per ton.

**LUDWIG COPPER MINING CO.**

**NEVADA.**

Dead. Lands sold, 1907, to Nevada-Douglas Copper Co. Formerly at Yerington, Lyon Co., Nev. Described Vol. VI.

**KUPFERBERGWERK LUDWIGSDORF.**

**GERMANY.**

Mine office: Ludwigsdorf, Schlesien, Germany. Presumably idle.

**LUKE CREEK GOLD-COPPER MINING CO.**

**BRITISH COLUMBIA.**

Office: 435 Temple Court, Minneapolis, Minn. Letter returned unclaimed from former mine office, Marysville, Fort Steele division, East Kootenai, B. C. S. D. Pumpelly, president and general manager; E. D. Barcalow, secretary.

Organized under laws of South Dakota with capitalization \$1,000,000, shares \$1 par. Lands, 2 claims. Idle several years and apparently moribund.

**BALDOMERO LUNA.**

**CHILE.**

Office and mine: Chafiaral, Atacama, Chile. M. Rojas, superintendent. Property is the Mina Filomena, having steam power and employing circa 60 men, at last accounts.

**LUNA LEAD CO.**

**NEW MEXICO.**

Office: 63 Centre St., New York, N. Y. Works office: Deming, Luna Co., N. M. Robt. E. Powell, president and general manager. Has a 50-ton smelter, treating mainly argentiferous lead ores, but also purchases copper and gold ores.

**LUNING CONSOLIDATED COPPER MINING CO.**

**NEVADA.**

Dead. Formerly at Luning, Esmeralda Co., Nev.

**LUNING COPPER CO.**

**NEVADA.**

Letter returned unclaimed from former mine office, Luning, Esmeralda Co., Nev. Lands, 9 claims, said to carry a large body of low grade ore ranging 10 to 20% in copper tenor, which seems a self-evident contradiction. Ores carry mainly copper, with considerable lead, both more or less auriferous and argentiferous. Idle and apparently moribund.

**LUNING COPPER MINING CO.**

**NEVADA.**

Dead. Property was near the Nevada Champion and Luning Copper Co. Formerly at Luning, Esmeralda Co., Nevada.

**LUNING GOLD MINES SYNDICATE.**

**NEVADA.**

Letter returned unclaimed from former mine office, Luning, Esmeralda Co., Nev. A. L. Moore, superintendent. Lands, 5 claims one fractional, circa 6 miles from Luning. Idle.

**LUSTRE MINING CO.**

**MEXICO.**

Dead. Succeeded January, 1906, by Lustre Mining & Smelting Co. Formerly at Santa Maria del Oro, El Oro, Durango, Mex.

**LUSTRE MINING & SMELTING CO.**

**MEXICO.**

Office: 1514 Park Bldg., Pittsburg, Pa. Mine office: Santa Maria del Oro, El Oro, Durango, Mex. H. D. Gamble, president; J. H. Mueller, vice-president; C. H. Tebbetts, secretary; Wm. A. Pomeroy, general manager; Simon Lambert, mine superintendent; Frank B. Hine, smelter superintendent. Organized January, 1906, under laws of Arizona, with capitalization \$5,000,000, as successor of Lustre Mining Co.

Lands, 400 hectares, with 372 hectares in mill and smelter sites, and 19,300 hectares miscellaneous lands, including 6,000 acres of leasehold wood land. Property is the Magistral mine, opened by 3 tunnels and 9 shafts, showing a large body of auriferous, argentiferous and slightly cupriferous pyrite, with quartz and limestone gangue, carrying 0.5 to 5% copper, with an average probably under 1% copper, circa 1 oz. silver and 15 to 20 grams gold per metric ton.

Equipment is very complete, including a central power plant with two 360-h. p. Koerting gas engines and one 190-h. p. gas engine, with a 60-kw. 2,300-volt 3-phase generator, electric hoists, pumps and blowers. There are one 200-h. p. and three 400-h. p. gas producers. Mining machinery includes 10 hoists, of 100-h. p. to 300-h. p., and two 6-drill Ingersoll-Rand air-compressors.

The company owns 110 buildings, including a considerable number of dwellings, with a 60x110' adobe carpenter shop and a 30x60' smithy.

The stamp mill, which is idle, is 70x100' in size, of wood, covered with galvanized iron, and has 40 Colorado Iron Works gravity stamps.

The concentrator, also idle, is 60x100' in size, of wood, covered with gal-

vanized iron. Equipment includes 2 Huntington mills, chlorination works and a cyanide plant.

The smelter, operating on the semi-pyritic system, has 6 blast furnaces, including two 150-ton McDonald hot-blast furnaces and three 200-ton blast-furnaces, 42x126" at the tuyeres. Air for blast is heated by waste gases in a specially designed McDonald hot-blast heater. Fuel is West Virginia coke. The smelter is said to be putting about 15 tons of ore into one ton of matte, which is sold to the Aguascalientes smelter.

This company and its predecessors have operated for about 25 years, and through former poor management and trouble with refractory ores, accumulated an enormous debt. Experiments with chlorination and cyanide plants failed, but better results are being secured from semi-pyritic smelting. The company has displayed great persistence, and apparently has good prospects of reaching an assured footing.

#### LUTZ MINES CO.

Office: care of Anton Lutz, Pittsburg, Pa. Mine office: Ft. Huachuca, Cochise Co., Ariz. C. B. Brinton, consulting engineer; A. L. Schultz, superintendent. Organized June 15, 1907, under laws of Arizona, with capitalization \$100,000, shares \$100 par. Lands, 7 claims, known as the Independence group, on the north fork of Ash Cañon, in the Hartford district of the Huachuca Mountains. Development is by tunnel, planned to be driven 1,200'. Has a 17-h. p. gasoline engine and 6-drill Ingersoll air-compressor.

#### LYELL BLOCKS CONSOLS MINING CO., N. L.

#### ARIZONA.

Dead. Formerly at Mt. Lyell, Montagu Co., Tasmania.

#### LYELL-COMSTOCK CONSOLIDATED COPPER CO., LTD.

#### TASMANIA.

Dead. Succeeded June 1, 1907, by Mount Lyell Comstock Copper Co., Ltd. Formerly at Mount Lyell, Montagu Co., Tasmania.

#### LYELL PIONEER CONSOLIDATED MINING CO., N. L.

#### TASMANIA.

Office: 30 Queen St., Melbourne, Australia. Mine office: Mount Lyell, Montagu Co., Tasmania. C. E. Packer, manager. Capitalization £72,000, shares £1 par. Lands, 56 acres, leasehold, slightly prospected. Idle.

#### LYELL THARSIS MINING CO., N. L.

#### TASMANIA.

Dead. Wound up circa 1906, and lease sold to Mt. Lyell Mining & Railway Co., Ltd. Formerly at Mt. Lyell, Montagu Co., Tasmania. Described Vol. V.

#### LYMNI COPPER MINING SYNDICATE, LTD.

#### CYPRUS.

Office: 32 Great St. Helens, London, E. C., Eng. Mine office: Limassol, Cyprus. J. E. Lomas, chairman; A. C. Gibbons, secretary; Chas. Christian, mine manager; J. M. Ashworth, works manager. Organized March 12, 1897, under laws of Great Britain, with capitalization £23,500, shares £1 par, in 20,000 ordinary and 3,500 preferred shares; issued, £17,342.

Lands, 30 square miles, in the Bellathousa district of Colis, Chrysokhow, Cyprus. Ore occurs as lenses, largest claimed to be 400' wide and 1,400' long, which is something more than doubtful, claimed to carry bornite and chalcopyrite averaging 9 to 10% copper and 3 dwts. silver per long ton, which figures are ridiculous exaggerations. Ore formation apparently is continuous for 3 miles. Development is by 7 shafts, of 150' to 300' depth, and by a 2,100' tunnel. At last accounts mine was not permanently equipped, and development work was in progress, on a small scale.

#### LYNDHURST (SOUTH AUSTRALIA)

#### SOUTH AUSTRALIA.

#### COPPER CO., LTD.

Offices. 8 Broad Street Ave., London, E. C., Eng., and 75 King William St., Adelaide, South Australia. Mine office: Umberatana, Lyndhurst, South Australia. G. B. Elkington, J. P., chairman; Arthur Hebdon, secretary. Organized Jan. 22, 1907, with capitalization £200,000, shares £1 par; issued, £180,000.

Is controlled, through stock ownership, by Union Consolidated Copper Mines, N. L. Lands, 180 acres, known as the Daly mine, at Umbratana, circa 75 miles from Lyndhurst, the nearest railway point.

**LYNDON MINES CO.**

NEVADA.

Office: Los Angeles, Cal. Mine office: Pioche, Lincoln Co., Nev. E. F. Freudenthal, manager; C. M. Sampson, superintendent. Lands, 9 claims, in the Comet district, 9 miles west of Pioche, showing ore assaying up to 8% copper, 15% lead, 70 oz. silver and \$5 to \$50 gold per ton, with occasional sphalerite running up to 200 oz. silver and 1 oz. gold per ton.

**LYNGENFJORD KOBBERVAERK.**

NORWAY.

Owned by Norwegian-American Copper Mining & Smelting Co.

**LYNN CREEK COPPER-GOLD CO., LTD.**

BRITISH COLUMBIA.

Office: 419 Hastings St., Vancouver, B. C. Mine office: Lynn Creek, Vancouver Island, B. C. G. L. Allan, president and treasurer; W. H. Pegram, secretary; W. Thos. Newman, general manager. Organized 1901, under laws of British Columbia, with capitalization \$300,000, shares \$5 par.

Lands, 6 claims, area 200 acres, 8 miles from Vancouver, in the New Westminster district, showing 6 veins, of which 3, said to range from 5' to 40' in width, give assays up to 8.9% copper, 3 oz. silver and \$1 gold per ton. Also has a 4' to 6' vein of zinc ore, opened by 2 tunnels, giving a back of 800' to 1,000'. Mine is claimed to have a large amount of ore in sight, and could ship ore by water to various smelters. Idle some years.

**LYONS KYLE GOLD MINING & MILLING CO.**

COLORADO.

Mine office: Central City, Gilpin Co., Colo. Property is the Tucker mine, having auriferous and argentiferous lead and copper ores. Has steam power, 5-stamp mill and a 50-ton concentrator.

**MAADEN-KENI MINES.**

TURKEY IN ASIA.

Mine office: Baibourt, Trebizond, Turkey in Asia. Were operated, in a small way, by a Greek syndicate, circa 1904. Presumably idle.

**MACBETH LEASING CO.**

IDAHO.

Dead. Property, a lease on the White Knob mine, was sold, 1907, to the Empire Copper Co. Formerly at Mackay, Custer Co., Idaho.

**MACGREGOR CLONCURRY COPPER MINES, LTD.**

AUSTRALIA.

Offices: Palmerston House, London, E. C., Eng., and 395 Collins St., Melbourne, Australia. Mine office: Cloncurry, Beaconsfield Co., Queensland, Australia. Harvey Patterson, chairman; F. G. Hughes, Melbourne, secretary; E. Hebden, London secretary. Organized Dec. 19, 1906, under laws of Victoria, with capitalization £150,000, shares 10s. par; issued, £137,500. Lands include the Wee Macgregor group, area 55 acres, bought of the Leichhardt Cloncurry Co., Ltd., and the Wallaroo mine, having shafts, 240' apart, said to show a 28' vein assaying 9% copper in No. 1 shaft, and a 40' vein assaying 15% copper in No. 2 shaft.

**MACK COPPER MINING CO.**

WYOMING.

Mine office: Thermopolis, Fremont Co., Wyo. Organized 1908, with capitalization \$1,000,000. Lands are at the head of Mud Creek, 18 miles from Thermopolis. A smelter shipment of one carload of gold and silver ores, made 1908, was said to have returned \$43 per ton.

**MACKEY-BURROUGHS MINING CO.**

COLORADO.

Mine office: Central City, Gilpin Co., Colo. Has auriferous and argentiferous copper ore. Has steam power. Presumably idle.

**MACKINAW COPPER CO.**

IDAHO.

Mine office: care of E. Daft, manager, Hailey, Custer Co., Idaho. Lands, 3 claims, well timbered and watered, 25 miles east of Hailey and connected herewith by a good wagon-road, at the head of Lost River, in the Lost River Mountains. Mine has a 100' shaft in a 3' to 5' vein between limestone and

porphyry showing chalcopyrite with quartz gangue assaying up to 15% copper. Idle.

**MACKINAW MINING & MILLING CO.** WASHINGTON.

Mine office: Monte Cristo, Snohomish Co., Wash. Has ore giving fair assay values in copper and nickel. Idle several years.

**MACKPAN SYNDICATE, LTD.** AUSTRALIA.

Offices: 8 Regent St., London, S. W., Eng. Mine office: Moonmera, Queensland, Australia. T. D. C. Parker and E. W. McKay, permanent directors. Organized Jan. 13, 1906, under laws of Great Britain, with capitalization £3,600, shares £1 par, to take over the Mount Morgan copper mines, area 200 acres. Presumably abortive.

**MADERA-MEXICO MINING CO.** MEXICO.

Office: Madera, Cal. Mine office: Hostotipaquito, Ahualulco, Jalisco, Mex. W. H. Hunt, general manager. Organized circa 1904. Lands, 16 pertenencias, showing auriferous copper ore.

**MADERA MINING CO.** ARIZONA.

Office: 612 Grant Bldg., Los Angeles, Cal. Mine office: Tucson, Pima Co., Ariz. J. Hoffman, president; A. Erickson, vice-president; H. E. Brandt, secretary and treasurer; preceding officers, W. F. Ascott, F. Gildeben, L. Lemieux and T. E. Magee, directors. Organized November, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 16 claims, area circa 200 acres, south of Tucson, near Old Baldy Peak, in the Santa Rita Mountains, showing a 5' vein carrying auriferous and argentiferous bornite and chalcopyrite, developed by a 100' tunnel.

**MADERO HERMANOS.** MEXICO.

Office: Parras, Coahuila, Mex. Mine office: Santo Domingo, Iturbide, Chihuahua, Mex. Own the Francisco Diaz mine, adjoining the Hathaway. The Madero Brothers are the principal owners and managers of the Compañía Metalúrgica de Torreón, and are noted as among the most enterprising, capable and financially solid mine and smelter operators of the Republic.

**MADISONIAN MINE.** MONTANA.

Office: care of Estate of Levi Z. Leiter, owner, Chicago, Ills. Mine office: Norris, Madison Co., Mont. E. J. Trerise, superintendent. Ores carry gold, silver and copper. Has steam power, concentrator and 60-ton cyanide plant. Presumably idle.

**SOCIEDAD ESPLATADORA DE MINAS DE MAGALLANES.** CHILE.

Office and mine: Punta Arenas, Magallanes, Chile. Organized Oct. 20, 1904, under laws of Chile, with capitalization £15,000, shares £1 par.

**MAGAZINE MINING CO.** ARIZONA

Mine office: Johnson, Cochise Co., Ariz. Has 3 shafts and shipped, 1907, a number of carloads of 8% copper ore.

**GRUBE MAGDALENA.** GERMANY.

Mine office: Morsbach, Rheinprovinz, Germany. Has sulphide lead and copper ores and at last accounts was a trivial producer.

**MAGDALENA COPPER CO.** NEW MEXICO.

Office: 34 First National Bank Blk., Colorado Springs, Colo. Mine office: Magdalena, Socorro Co., N. M. Jos. C. Colligan, president; Edwin Arkell, vice-president; F. H. Dunnington, secretary and treasurer; E. S. Timmons, general manager; P. E. Johnson, mine superintendent. Organized March 7, 1906, under laws of Arizona, with capitalization \$2,500,000, shares \$5 par. Lands, 17 claims, area 340 acres, showing granite, porphyry and limestone, carrying an 8' fissure vein, opened by 4 shafts, of circa 80' average depth, giving sulphide ore ranging 3 to 10% copper, 5 oz. silver and \$2 gold per ton, with quartz gangue. Also has zinc and lead sulphides.

**MAGDALENA SMELTING & MINING CO.**

MEXICO.

Office: 208 Fifth Ave., New York, N. Y. Mine office: Magdalena, Tuxtepec, Oaxaca, Mex. Henry W. Catlin, president; Leyd R. Hamer, vice-president and manager; Marion DeKalb Smith, treasurer; Jas. L. Leeds, secretary; John H. Williams, general manager. Organized August, 1907, under laws of New York, with capitalization \$5,000,000. Lands, 160 hectarea, showing mainly silver-lead carbonates. Reduction plant, known as the Magdalena, was the first modern smelter in the state of Oaxaca, blown in July, 1906, with daily capacity of 50 tons, which company planned increasing to 150 tons. In hands of a receiver, August, 1908.

**MAGDALENE MINE.**

NATAL.

Mine office: Undweni, Zululand, Natal. Lands, near the Vryheid border, show carbonate, silicate and sulphide ores, latter zinciferous, of high average copper tenor, occurring irregularly, mainly as impregnations. Was under development at last accounts.

**MAGENTA GOLD MINING CO.**

COLORADO.

Mine office: Granite, Chaffee Co., Colo. Has gold, silver and copper ore, and steam power. Presumably idle.

**MAGGIE MURPHY COPPER CO.**

WYOMING.

Office: 16 State St., Boston, Mass. Mine office: Douglas, Converse Co., Wyo. Hon. Chas. S. Ashley, president; John O'Neil, vice-president; A. D. Lee, secretary; Dr. F. M. Kennedy, treasurer; preceding officers, Geo. H. Hedge and Capt. Robt. A. Hammond, directors. Organized August, 1904, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par.

Lands, 12 claims, area 180 acres, also a 60-acre millsite, all fairly timbered, on the northwestern side of Horseshoe Cañon, in the Laramie Peak district, showing country rock of granite, fissured with diorite, gneiss and schists, carrying 7 contact veins between gneiss and mica-schist, of which one, under development, with a 114' shaft, ranges 30' to 60' in width, carrying covellite, bornite and chalcopyrite, associated with pyrrhotite, assaying 1 to 6% copper, 2 to 9 oz. silver and 40 cents to \$4.50 gold per ton.

**COMPANIA MINERA DEL MAGISTRAL.**

MEXICO.

Dead. Formerly at Santa Bárbara, Hidalgo, Chihuahua, Mex. Fully described Vol. VII.

**NEGOCIACION MINERA DEL MAGISTRAL, S. A.**

MEXICO.

Office and mine: Apartado 22, Zacatecas, Mex. Dudley H. Norris, president; Chas. O. Gilbert, manager. Mine has a small branch line, connecting with Magistral Siding, on the Mexican Central Railway, near the city of Zacatecas. Mine formerly turned out copper in the form of bluestone, or magistral, for use in reducing the silver ores of Zacatecas. Has steam power. Smelter site is at Magistral Siding, and a concession was secured therefor, 1907. Plant is planned to be of about 250 tons daily capacity, to treat custom ores, as well as ores from the Mina Magistral. Development and equipment are said to have been paid for out of earnings of the mine, which, 1906, shipped about 100 tons of copper ore weekly. Employs circa 150 men. Production, 1907, estimated at 500,000 lbs. fine copper.

**MINAS MAGISTRAL y ANEXAS.**

MEXICO.

Owned by Las Moras Copper Mining Co.

**MAGISTRAL COPPER MINES CO.**

MEXICO.

Dead. Formerly at Magistral, Chihuahua, Mex.

**MAGISTRAL MINING CO.**

MEXICO.

Dead. Formerly at Ameca, Jalisco, Mex.

**MAGISTRAL MINING SYNDICATE.**

MEXICO.

Dead. Was succeeded, 1907, by Los Angeles & Jalisco Mines Co. Formerly at Eztatlan, Ahualulco, Jalisco, Mex.

**MAGISTRAL SMELTING CO.**

MEXICO.

Mine and works office: Santa Barbara, Hidalgo, Chihuahua, Mex. John C. Shepherd, general manager; H. L. Snyder, smelter superintendent. Lands are leased from the Compañía Minera del Magistral, controlled by Governor Enrique C. Creel. Mine, 15 miles from Chihuahua y Pacifico railroad, having a 300' shaft, carries extensive contact deposits between limestone and porphyry of low grade copper ore. Has steam and gasoline power. Is said to have a 150-ton smelter. Mine must be worked on a large scale to be profitable, as ore is low in tenor, though existing in large quantities.

**MAGNETAWAN MINING CO.**

ONTARIO.

Dead. Formerly at Burks Falls, Parry Sound district, Ont.

**MAGNOLIA GOLD & COPPER MINING CO.**

Dead. Formerly had an office at Seattle, Wash.

**MAGPIE GOLD & COPPER CO.**

WYOMING.

Office and mine: Encampment, Carbon Co., Wyo. J. F. Murry, president; S. E. Ferree, secretary; Chas. D. Terwilliger, treasurer. Organized Oct. 4, 1902, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par; issued, \$636,820. Lands, 3 claims, unpatented, area 60 acres, on the south fork of the Encampment river, 5 miles from Encampment, opened by a 200' tunnel showing medium grade chalcopyrite.

**MAGUS MINING CO.**

WASHINGTON.

Office: 712-1341 G St., N. W., Washington, D. C. Letter returned, unclaimed from former mine office, Silverton, Snohomish Co., Wash. Alphonso Young, president; Henry M. Kingsley, secretary. Organized under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, circa 24 claims, formerly owned by Forty-Five Consolidated Mining Co., in the Stillaguamish district, showing auriferous and argentiferous copper ores, with values mainly in the precious metals. Has a hydro-electric power plant and air-compressor, Idle for 3 years, until taken over June 1, 1905, by present company. Apparently idle since 1907.

**MAHARAHABA COPPER CO.**

NEW ZEALAND.

Mine office: Woodville, N. Z. Has a large ore body, under development, and made small shipments, 1907, to Melbourne, for smelting.

**MAINE & MONTANA COPPER CO.**

MONTANA.

Office: Ft. Fairfield, Me. Mine office: Basin, Jefferson Co., Mont. Idle.

**COMPÀNIA MINERA DE MAIPÓ.**

CHILE.

Mine office: Cajon de Maipó, Victoria, Santiago, Chile. Works office: El Volcán, Victoria, Santiago, Chile. Gregorio Conoso, general manager.

Property includes El Volcán, San Simon, Juanita and other mines, carrying circa 2,500 meters of the strike of a strong vein, in sedimentary rocks, in conjunction with syenite. The vein has a minimum of one and maximum of 5 meters width, with an average of circa 2 meters, with strike of N. 45° E., and nearly vertical dip. The upper portion of the vein is strongly segregate and massive, with a little limestone and quartz, carrying oxidized ores, followed, at little depth, by chalcopyrite. The general average tenor of the ore is estimated at 4 to 5%. The ore is selected, with the object of eliminating iron, which is in excess for smelting purposes. Greatest depth of mine is about 170 meters, and workings extend along a distance of 1,800 meters.

The power plant at the smelter has 100-h. p. and 200-h. p. turbines, direct-connected to Siemens & Halske dynamos, furnishing power to pumps, hoists and blowers. The mine has 4 Siemens & Halske electric drills, employing a 305-volt current at 3 amperes, and these have given excellent results, despite trouble with similar drills at other Chilean properties.

The reduction plant includes a small concentrator having a Blake crusher. The smelter, 52 kilometers east of Puente Alto, with a freight charge of

\$9 per metric ton to the railroad, burns imported coke, costing 47 pesos per ton, with a little local wood. Equipment includes four 54" circular water-jacket blast-furnaces and two 36x72" quadrangular blast-furnaces, with 6 blowers. The converter department has 6 stands and a Vulcan air-compressor, shells being 1.68x1.82 meters in size. Product is Chile bars, averaging 98.5% in copper tenor. In 1903 the smelter employed 150 men, at average wages of 2 pesos daily.

Production, 1903, when this was the second largest copper producer of Chile, was 17,997 metric tons of ore, averaging circa 7.9% copper, and making 2,822,900 lbs. fine copper. Mining and smelting costs are low, and finished copper is said to cost only £30 per long ton, laid down in London; which figure seems unduly low. The company employs circa 600 men, and is enterprising and vigorously managed.

#### **JOAQUIN MAIZ y CA.**

**MEXICO.**

Office and mine: Villa Aldama, Décimo, Nuevo León, Mex. C. Robles, manager. Property is the Blanca y Anexas mines, developed by tunnel, producing copper ore with a force of about 50 men, at last accounts.

#### **SOCIÉTÉ ANONYME DES MINES DE CUIVRE DE MAJDANPEK.**

**SEERIA.**

Office: Brussels, Belgium. Mine office: Majdanpek, Servia. Employs 500 men. Emile Thorez, chairman; Emile Fromont, manager; Chas. Brunard, secretary; Leo Zenses, manager; Alfred Müller, smelter superintendent; Hugo Hermann, engineer. Organized 1903, under laws of Belgium and Servia, with capitalization 5,000,000 francs, shares 500 francs par.

Lands include mineral concessions covering 18,800 hectares, 10 miles from the Danube and circa 75 miles southeast of Belgrade, showing trachyte and limestone carrying native copper, malachite, azurite and chalcopyrite, commercial ores being almost exclusively sulphide, and mainly chalcopyrite, with some chalcocite, bornite and covellite, associated with pyrite and occasional magnetite, in a quartzose gangue, ores averaging about 3% copper, 0.4 oz. silver and 75 cents gold per ton. The property was worked on a limited scale, under former ownership, and was estimated, 1906, by the company, to show 600,000 tons of ore, with 250,000 tons blocked out for stoping, which figures seem high.

Transportation is furnished by a 10-mile Bleichert aerial tram from the mine to the Danube, and there is a half-mile Bleichert aerial tram between the mine and smelter.

The smelter formerly had three 40-ton Hereshoff water-jacket blast-furnaces, and a 200-ton blast furnace was installed, 1907, to employ the Knudsen pyritic process of smelting. Product is blister copper, averaging circa 98% copper, 14 oz. silver and 1.5 oz. gold per ton. The company is said to plan a 250-ton leaching plant, for treating of low grade pyritic ores.

#### **MAJESTIC COPPER CO.**

**UTAH.**

Office: 1102-79 Milk St., Boston, Mass. Mine office: Milford, Beaver Co., Utah. E. E. Abercrombie, president. Organized June 18, 1904, under laws of Maine, with capitalization \$450,000, shares \$10 par. In November, 1907, capitalization was reduced to \$400,000, shares \$1 par, and increased to \$800,000, shares \$1 par. Bonds, \$1,000,000 authorized, \$514,000 outstanding. Company was organized as successor of Majestic Copper Mining & Smelting Co., but the old corporation continues in existence, and the Majestic Copper Co. practically has been succeeded by the Majestic Mines Co. Fully described Vol. VI.

#### **MAJESTIC COPPER MINING & SMELTING CO.**

**UTAH.**

Office: 1102-79 Milk St., Boston, Mass. Mine office: Milford, Beaver Co., Utah. To all practical intents and purposes was succeeded, 1904, by Majestic Copper Co., which was succeeded, 1908, by Majestic Mines Co., but

the Majestic Copper Mining & Smelting Co. remains in existence. The company became bankrupt, circa 1904, but eventually paid 100 cents on the dollar. Very fully described Vol. IV.

#### MAJESTIC MINES CO.

UTAH.

Office: 1102-79 Milk St., Boston, Mass. Mine office: Milford, Beaver Co., Utah. W. D. Elwell, president; John M. Dick, vice-president; D. J. Flan- ders, secretary and treasurer; Alex J. Moffatt, manager. Organized May, 1908, with capitalization \$5,000,000, shares \$5 par, practically as successor of Majestic Copper Co. and Majestic Copper Mining & Smelting Co. On Oct. 1, 1908, owned circa 80% of the outstanding bond issue, \$514,000, of the Majestic Copper Co. Stock of the new company was exchanged for bonds of the old company, on the basis of 900 shares of stock for each \$1,000 bond, and holders of stock in the old company were given new stock, pari passu, on payment of an assessment of 15 cents per share. The floating indebtedness of the old company is said to have been paid off, and, by retiring the bonds, the present company is placed in better shape, financially, than any of its predecessors, which suffered from heavy loads of debt.

Lands, 120 claims, area 2,450 acres, also an 80-acre smelter site and 1,100 acres miscellaneous lands, in 8 groups, located in 5 districts of Beaver county, showing about 100 ore bodies, carrying copper, gold, silver, platinum, lead, cobalt, bismuth, vanadium and uranium. Copper ores include all of the principal oxides, carbonates and sulphides, also occasional native copper, and many of the rarer copper minerals, ores ranging from 2 to 85% in copper tenor, with estimated average values of 12% copper, 12 oz. silver and \$3 gold per ton, with large percentages of lead, but these figures, made by the former management, are much too high. There are 18 shafts, of 100' to 400' depth, also many tunnels and innumerable test pits, with circa 6 miles of workings. Former management estimated 1,000,000 tons of ore in sight, with 500,000 tons blocked out for stoping, but these estimates were greatly exaggerated, and must have been known to be such when put forth, while stock was being fed the public. Some of the properties were worked formerly for silver, but the silver-copper ores at and near surface gave way to copper-silver ores at depth, all ores being more or less auriferous.

The company has platted the townsite of Lewisville, where the smelter is located. The mines and smelter are served by the Oregon Short Line railroad.

The O. K. mine, 7 claims, is the principal property of the company, and is opened by a 3-compartment 400' shaft, in a vein up to 20' in width, with considerable development on the 300' and 400' levels. A smelter shipment, 1901, of 258 tons of ore, returned 40% copper, 7.5 oz. silver and \$2.80 gold per ton. This mine has more or less ore blocked out, apparently in a stockwerk of circa 250' width, carrying stringers of high grade ore.

The Harrington-Hickory group, 25 claims, partly fractional, has two 400' shafts, the main shaft having 3 compartments, with circa 40 pits and shallow shafts showing ore. The property shows numerous fissure veins, intersected by cross-veins, both approximately vertical, and in addition has a series of bedded veins, dipping at 30° to 85°, giving three separate intersecting systems of ore bodies. Values are mainly in lead, ores assaying 2 to 3% copper, 25 to 50% lead, up to 50 oz. silver and circa \$1 gold per ton.

The Old Hickory group, 9 claims, has a gossan of 250' estimated width, above a vein of 40' to 200' width, opened by circa 50 pits and shafts, deepest 212', showing ores assaying 4 to 5% copper, with combined gold and silver values of \$2 to \$4 per ton.

The Vicksburg group, 4 claims, formerly worked for gold, has 3 practically vertical fissures, of 2' to 20' width, with mineralized cross-veins, opened

by numerous shallow pits and shafts, and a 2-compartment working shaft.

The Hoosier Boy group, 10 claims, has a 250' vertical shaft in limestone carrying auriferous and argentiferous copper and lead ores.

The Larkspur group, 8 claims, has a 60' contact deposit between granite and limestone, carrying irregular bunches of high-grade ore.

The Copperfield group, 17 claims, lies between the O. K. and Old Hickory mines, and is undeveloped.

The Apex group, 4 claims, adjoins the Old Hickory mine, and is practically without development.

The Ben Harrison group is undeveloped.

Equipment includes steam, gasoline and electric power, with a 34-h. p. Fairbanks & Morse hoist, Ingersoll-Sergeant air-compressor and Rand drills. There is an undeveloped water power on Beaver River, 35 miles distant, said to be capable of generating circa 2,000 h. p. and transmitting same electrically to the mine and smelter, at a cost of circa \$100,000 for a hydro-electric installation and transmission line.

The reduction works, at Lewisville, 8 to 8 miles from the various mines, include a sampling mill and smelter. The smelter building, of steel frame, on stone foundations, has room for four 250-ton blast-furnaces, with necessary machinery, and has a 250-ton blast-furnace for copper and a 100-ton lead stack, with Nesmith hot-blast stoves, heating the air to 800° F. before entering the tuyeres. The smelter is small and already antiquated, though scarcely warmed, having run only 40 days, giving half the claimed duty, and smelting only about 5,000 tons of ore.

On a test-run, 1903, returns were 5.1% copper, 3.8 oz. silver and \$1.20 gold per ton. Apparently the copper ore as a whole averages only about 2% in tenor, and is silicious. There are numerous bodies of high grade ore, but the property, as a whole, suffers from diffusion of wealth, there being numerous points at which small quantities of high grade ore are available, with a considerable tonnage of low grade ore partially developed. The company has been reconstructed repeatedly, and the mine has redeemed none of the exaggerated promises made for it. The present company, however, seems built more solidly than its predecessors, all of which were saddled with debts beyond their power to carry.

#### **MAJOR EVANS CONSOLIDATED MINING & MILLING CO. UTAH.**

Office and mine: American Fork, Utah Co., Utah. John J. Jones, president; Jos. J. Jackson, vice-president; F. A. Jackson, secretary and treasurer; preceding officers, F. J. Adams and Jas. H. Clark, directors. Organized circa January, 1908. Lands are in American Fork Cañon.

#### **MAKU (NORTH CHARTERLAND) COPPER SYNDICATE, LTD. RHODESIA.**

Office: 2 London Wall Bldgs., London, E. C., Eng. North Charterland Exploration Co., managers. Organized Jan. 13, 1906, with capitalization £5,000, shares £1 par, to acquire copper properties from the North Charterland Exploration Co., Ltd. Apparently moribund.

#### **MALACHITE COPPER CO. ARIZONA.**

Dead. Formerly at Williams, Coconino Co., Ariz.

#### **MALACHITE COPPER CO. NEVADA.**

Office: care of Willard F. Snyder, Salt Lake City, Utah. Mine office: Yerington, Lyon Co., Nev. Has a shaft, said to show a considerable body of sulphide ore of fair copper tenor.

#### **MALACHITE COPPER-GOLD CO. CALIFORNIA.**

Dead. Formerly at Daggett, San Bernardino Co., Cal. Described Vol. VII.

#### **MALDEN MINING, MILLING & MANUFACTURING CO. WASHINGTON.**

Office: Rosalia, Wash. Mine office: Metaline, Stevens Co., Wash. D. D.

Birks, manager. Mine, opened by tunnel, is the only copper property in the camp, other mines carrying lead ores. Equipment includes an air-compressor. **SOCIEDAD MALDINI DE COLLAHUASI.** CHILE.

Office: Iquique, Chile. Mine office: Collahuasi, Tarapacá, Chile. Organized Aug. 8, 1905, under laws of Chile, with capitalization 160,000 pesos, shares 100 pesos par.

**MALLARD MINING CO.**

ALASKA.

Letter returned unclaimed from former mine office, Ketchikan, Alaska. Lands, on McLean's Arm, on the eastern side of Prince of Wales Island, are said to show a 20' vein carrying chalcopyrite assaying 10% copper, 5 oz. silver and 0.14 oz. gold per ton, probably an overestimate all around.

**MALONEY-BLUE LEAD COPPER MINING.**

SOUTH DAKOTA.

& SMELTING CO.

Mine office: Sheridan, Pennington Co., S. D. John Harnan, president and general manager; Philip Harnan, vice-president and superintendent; J. G. Thomas, secretary and treasurer. Organized 1899, with capitalization, variously reported, of \$750,000 or \$3,000,000, shares \$1 par. Lands, 380 acres, showing a vein of 118' claimed width, surmounted by a heavy gossan, carrying occasional rich oxidized ores containing good copper and gold values. Development is by a 260' shaft, showing occasional stringers of ore, and a 1,610' tunnel, showing some arsenopyrite. Developments to date have not shown copper in paying quantities, but payable ore is believed to exist below the water-level. Equipment includes a steam power plant and air-compressor. Idle.

**MAMIE MINE.**

ALASKA.

Owned by Brown-Alaska Copper Co.

**MAMISSON COPPER SYNDICATE, LTD.**

RUSSIA.

Office: 74 Coleman St., London, E. C., Eng. Earl of Essex, chairman; F. D. Leslie, secretary. Organized May 10, 1907, under laws of Great Britain, with capitalization £10,500, in 10,000 ordinary shares of £1 par and 10,000 preferred shares of 1a. par. Was organized to acquire copper properties in Russia. Apparently moribund.

**MAMMOTH COPPER CO.**

Dead. A swindle, perpetrated by the Wm. F. Wernse gang, of St. Louis.

**MAMMOTH COPPER MINE, LTD.**

AUSTRALIA.

Office: Hope St., Glasgow, Scotland. Mine office: Mungana, Chillagoe, Queensland, Australia. R. K. Bell, John Millar, D. Gardner and J. S. Allan, directors. Organized March 20, 1907, under laws of Great Britain, with capitalization £10,000, shares £1 par.

**MAMMOTH COPPER MINING CO.**

WYOMING.

Dead. Formerly at Saratoga, Carbon Co., Wyo.

**MAMMOTH COPPER MINING CO. OF MAINE.**

CALIFORNIA.

Office: 50 Congress St., Boston, Mass. Mine and works office: Kennett, Shasta Co., Cal. Employs 1,000 men. Wm. C. Sharp, president; F. W. Bachelder, secretary and treasurer; A. S. Haskell, manager; Robt. E. Hahley, mine superintendent; Jas. H. Kerwin, smelter superintendent; A. P. Anderson, engineer. Organized Aug. 2, 1904, under laws of Maine, and is controlled, through ownership of entire stock issue, by the United States Smelting, Refining & Mining Co.

Lands, 14 claims, area 280 acres, also an 80-acre smelter-site, and miscellaneous lands giving total holdings of 1,400 acres, 3½ miles from Kennett, on Little Backbone Creek, in the Big Backbone district. Lands are well timbered, with numerous mountain streams available for water supply, and the topography is very rugged, mines being opened near the tops of the mountains. Lands have been probed extensively by diamond drill borings. A

\$90,000 bond on the Friday-Lowden group was relinquished, 1907. The Rattlesnake mine is supposed to be held under bond. Property includes a bond and lease on the Wood & Shelden claims, at Rainbow, on the headwaters of the Sacramento River, where development by tunnel is under way. Lands include a considerable limestone deposit, used for fluxing.

The Quartz Hill mine, in the Old Diggings district, is held under a 5-year bond and lease, dated 1906, with privilege of extension for 5 years further, subject to minimum extraction of 15,000 tons of ore yearly. Product of the Quartz Hill is silicious fluxing ore exclusively, said to carry \$6 to \$8 gold per ton, which probably is a considerable overestimate.

The Mammoth group is on the western side of the Sacramento River. Country rock is mainly rhyolite, somewhat altered in places, with some slate and considerable porphyry, carrying long flat-lying lenses of ore that is mainly slightly zinciferous chalcopyrite, disseminated in pyrite, both being auriferous and argentiferous, with an average of circa 3% copper, 2 oz. silver and 60 cents gold per ton, with about 40% iron and up to 40% sulphur. Mine was said, August, 1908, to be yielding about 75 lbs. fine copper per ton. There are several ore bodies, the largest being 228' wide and circa 500' long, and the mine has upwards of 2,000,000 tons of ore in sight, being opened considerably ahead of immediate requirements. Development is exclusively by tunnels, of which there are 4, having ore bins at the portals. In August, 1907, the fourth tunnel was started, this being 18' wide, with double tracks, having electric haulage.

Equipment includes a 40-drill air-compressor and two 15-drill Rand air compressors, with a 5-drill compressor at the Quartz Hill mines.

Baildings at the mine include a smithy, boarding-house and a hospital with accommodations for 20 patients. Water is piped to the mine and smelter from the Mayflower claim.

Both mine and smelter are operated by electric power, secured from the Northern California Power Co., at a very reasonable rate, delivered to the power-house at a voltage of 2,000, the company requiring about 3,000 h. p. for the operation of its mine and works.

An aerial tram of 13,200' length, between the mines and smelter, is in two sections, the upper having a grade of 22% from the mine to the midway station, the upper section being operated by gravity, in counterbalance, and power generated by a retarding engine, which situates an air-compressor. The lower section has sufficient grade for the loaded buckets to bring back empties. The tram line has a nominal capacity of 1,600 tons in 24 hours, carrying 1,100-lb. buckets at intervals of 150', with wooden supporting towers at intervals of 100'. In actual practice, the aerial tram proved to have about 800 tons daily capacity only.

Owing to the inadequacy of the aerial tram, a 3,500-ton combination ground-tram has been built, on somewhat novel lines, to meet peculiar local requirements. The ground tram includes 3 miles of standard-gauge railway, from the smelter to the foot of the gravity road, the latter, 3,000' long, connecting at the upper end with a 2-mile electric line leading to the mine. There also is a 3-mile narrow-gauge railroad to the Quartz Hill mine, with 2 locomotives.

The smelter, one-half mile, from Kenett, 2½ miles southeast of the mine and 2,200' lower, occupies a site of 80 acres, and is the largest in California, being of 1,800 tons daily capacity. The works, as built originally, at a cost of \$500,000, were of 1,000 tons capacity, but were greatly enlarged, 1907. All buildings are of steel, all material is handled by gravity, and the plant is operated on three 8-hour shifts. The works include a sampling mill.

The bin-house, of steel frame, for storage of ore, coke and limestone, is 214' long, with capacity for 2,500 tons of custom ore and 100 tons of fluxing

ore, in addition to coke and limestone, and has 27 scales for individual weighing of cars in train-loads. In addition to the bin-house, there are 4,500-ton bins at the lower branch of the aerial tram, and a set of custom ore bins, of 20,000 tons capacity. Charge trains are run underneath the 3 sets of ore-bins. The works no longer treat Nevada or Utah ores, but require circa 200 tons of fluxing ore daily.

The blast furnace building, 72x222' in size, including an extension, built 1907, has three 42x180" furnaces, with two new furnaces, designed by Carl F. Moore, each 56x180", with water-jackets and steel tops. Some trouble has been experienced at times from freezing, because of the considerable percentage of zinc contained in the ore, but, on the whole, the zinc ores have been handled very skillfully, with a minimum of trouble. Smelting is practically semi-pyritic, requiring only 3 to 4% coke charges. Charge-trains consist of four 5,000-lb. self-dumping charge-cars, drawn by 4-ton Baldwin-Westinghouse locomotives, with tracks on either side of each furnace, charging alternately. The 3 old furnaces have 6' 9" settlers, and the 2 new furnaces have 16' settlers, each with a water-jacketed top, of continuous flow siphon type. The furnaces use a 42-oz. cold blast. Slag goes into 6-ton cars, drawn by 6-ton Baldwin-Westinghouse electric locomotives. Fumes go through individual goosenecks to a horizontal dust-chamber, 30' wide, 18' high and 500' long, through a brick dust-flue 200' long and of 126 square feet section, with hopper-bottom, leading to a 200' steel stack, 18' in diameter, standing on a 35' base. Matte is discharged from the spouts of the settlers into a traveling matte-casting machine, 40' long, from which chilled matte is dropped into 700-lb. barrows, first-fusion matte being remelted. An electric tram-line running under the dust-chamber brings flue-dust to the briquetting plant, in the furnace building, which has a 6-ton Chisholm, Boyd & White press, briquettes being made from a mixture of flue-dust and sulphide fines.

The converter building, 92x204' in size, has 2 hydraulic stands, with room for a third, and eight 96x150" shells. Ore being a massive iron sulphide, low-grade matte is remelted, second-fusion matte going to the converters, which blow off into hoods leading to the old stack of the blast-furnace building, which is 135' high and 12' in diameter. The converter building has a 50-ton electric traveling crane.

The relining department, occupying a portion of the converter building, has two 7' Carlin grinding pans, with 400-ton bins for quartz and clay, and 2 pneumatic Ingersoll-Rand tamping machines, on a hydraulic jib crane. There also is a slag-casting apparatus.

The power-house, formerly 80' long, was rebuilt, 1907, to length of 250', and has seven 15,000' blowers, driven by three 200-h. p. motors and four 250-h. p. motors.

The boiler-house, 43x176' in size, is out of commission, owing to the use of electric power, but boilers are held in reserve for emergencies.

The shops are in a single building, 41x432' in size, having a traveling crane with full span and crane-run for the entire distance, also 3 broad-gauge tracks running through the entire building, this being one of the best-planned shops in existence. The shop building is divided into sections as follows: Machine-shop, 76'; smithy, 45'; shed, 40'; warehouse, 106'; shed, 40'; boiler-shop, 61'; roundhouse, 55'.

Miscellaneous buildings at the works include an office and laboratory.

Water, formerly raised from Backbone Creek by two 500-gallon centrifugal pumps, is now taken by gravity from the Butters' ditch, passing above the smelter, and the pumps are held in reserve for emergencies.

Previous to the installation of the converter plant the Mammoth shipped, to the Utah smelter of the parent company, low-grade matte, of 20 to 40%

copper tenor, this carrying considerable iron, which was valuable for fluxing purposes, but production is now blister copper, sent to the Atlantic seaboard for refining. The first furnace was blown in Oct. 6, 1905, and production, October, 1908, was circa 1,100 tons of smelting ore daily, which will be increased eventually to at least 1,500 tons daily. The property is valuable, and the equipment is adequate and efficient, while the management is thoroughly competent and is securing excellent results.

**MAMMOTH COPPER & SMELTING CO.**

Dead. Lands taken over by Imperial Copper Co. Formerly at Red Rock, Pinal Co., Ariz. Described Vol. IV.

**MAMMOTH GOLD MINING CO.**

**COLORADO.**

Office: 1104 Marquette Bldg., Chicago, Ills. Mine office: Central City, Gilpin Co., Colo. Ores carry gold, silver and copper. Has steam power. Presumably idle.

**MAMMOTH LODES MINING CO.**

**BRITISH COLUMBIA.**

Office: care of H. O. Proebstel, Portland, Ore. Organized under laws of Oregon. Lands, known as the Colorado group, in the Cascade Mountains, Yale district, British Columbia, are claimed to show veins of 40' to 250' width, traceable for more than two miles, and it is claimed that smelting tests have given 15 to 20% copper and \$12 gold per ton, these figures being, in themselves, ample evidence of their own untruthfulness, or of the unfair nature of the "test." Idle and apparently moribund.

**MAMMOTH MINE.**

**ARIZONA.**

Owned by Calumet & Arizona Mining Co.

**UTAH.**

Office: 41 Hooper Blk., Salt Lake City, Utah. Mine office: Mammoth, Juab Co., Utah. Samuel McIntire, president and general manager; Samuel McIntire, Jr., vice-president and superintendent; R. M. Wilkinson, secretary. Organized under laws of Utah, with capitalization \$400,000, shares \$1 par. Regular monthly dividend rate is 5 cents per share, or \$20,000. Annual meeting, first Tuesday in February.

The mine, opened circa 1870, is extensively developed and has a 2,300' main shaft, with good copper ore on the 2,200' level. Mine carries auriferous and argentiferous lead and copper ores, principal values being in silver and lead.

The mill has 60 stamps. Production, 1907, was 477 carloads of ore. Litigation with Grand Central Mining Co. resulted in an adverse verdict for \$149,812. Property is valuable and seems prudently managed.

**MAMMOTH MINING & POWER CO.**

**MONTANA.**

Mine office: Mammoth, Madison Co., Mont. Allan C. Sanders, superintendent. Has auriferous copper ores. Equipment includes a 50-ton concentrator. Employed circa 20 men, at last accounts.

**MAMMOTH TUNNEL & MINING CO.**

**COLORADO.**

Office: 403-331 Fourth Ave., Pittsburgh, Pa. Mine office: Silverton, San Juan Co., Colo. A tunnel scheme, regarded with suspicion.

**MANNASSAS-GAP COPPER-MINE, INC.**

**VIRGINIA.**

Dead. Succeeded, circa 1907, by Moqui Copper Co. Formerly at Reager, Rappahannock Co., Va. Fully described Vol. VII.

**MANCAYAN COPPER SYNDICATE, LTD.**

**PHILIPPINES.**

Dead. Voluntarily wound up, August, 1902. Formerly in the Mancayan district, Island of Luzon, Philippines.

**MANCHEGAN MINES, LTD.**

**SPAIN.**

Office: Clock House, Arundel St., Strand, London, W. C., Eng. Mine office: Fuencaliente, Ciudad Real, Spain. H. Cossins, secretary. Organized Nov. 15,

1905, under laws of Great Britain, with capitalization £5,000, shares £1 par; issued, £4,480. Property is the San Bartolomé III mine and sundry share interests.  
**MANCHESTER ZINC & COPPER CO., LTD.**

Dead. Voluntarily liquidated, April 15, 1901.

**"MAN" GROUP.**

Office and mine: care of Otto W. H. Schley, owner, Vail, Pima Co., Ariz. Lands, 4 claims, area 80 acres, in the Helvetia district, 9 miles southeast of Vail, formerly held by Bradford Development Co., showing Carboniferous limestone, intruded by porphyry dikes, latter considerably altered, with extensive outcrop of oxide and carbonate ores, succeeded at shallow depth by sulphides. Property shows several veins of 6" to 5' width, and has a 2-compartment shaft of 105', in porphyry, showing stringers of quartz carrying copper sulphides. Shipments of 100 tons, to El Paso smelter, gave returns of 9.5 to 17% copper, 8 to 16 oz. silver and \$8.50 gold per ton. The ore carries an excess of iron, and smelts readily. Idle several years.

**MANHATTAN CONSOLIDATED MINING &**

**ARIZONA.**

**SMELTING CO.**

Office: La Crosse, Wis. Letter returned unclaimed from former mine office, Encampment, Carbon Co., Wyo. Wm. Doerflinger, president; Chas. H. Freeman, vice-president; P. J. Bott, secretary; Herman Tillman, treasurer; F. R. Smith, superintendent. Organized Feb. 3, 1902, under laws of Wyoming, with capitalization \$800,000, shares 10 cents par. Property has sundry pits and trenches, showing a vein of 4' to 12' width, giving ore assaying 3 to 30% copper.

**MANHATTAN COPPER MINING CO.**

**ARIZONA.**

Dead. Merged, 1902, in Troy Manhattan Copper Co. Formerly at Troy, Pinal Co., Ariz.

**MANHATTAN COPPER MINING & MILLING CO.**

**NEVADA.**

Office: care of Hon. A. B. Lewis, president, 100 Broadway, New York, N. Y. Mine office: Pioche, Lincoln Co., Nev. E. F. Freudenthal, manager. Is controlled, through stock ownership, by the Nevada-Utah Mines & Smelters Corporation, and apparently succeeded the Manhattan Gold & Copper Mining Co. Lands, 2 groups, one east of Pioche and one in the Stampede Gap section. The Pioche group includes the Revenue, Telephone and Alps mines, with 100' and 140' shafts, showing ore assaying well in gold and silver. Stampede Gap property has auriferous and argentiferous copper and lead sulphides, opened by a shallow shaft and 2 tunnels, with circa 2,000' of underground workings.

**MANHATTAN DEVELOPMENT CO.**

**ARIZONA.**

Office: Postoffice Blk., Houghton, Mich. Mine office: Paradise, Cochise Co., Ariz. J. H. Rice, president; W. G. Rice, secretary and treasurer; preceding officers, Thomas F. Cole, Nathan M. Kaufman, Samuel R. Kaufman, Allen F. Rees and Norman W. Haire, directors; Fred. W. Hoar, superintendent. Organized March, 1905, under laws of Arizona, with capitalization \$200,000, shares \$10 par; \$5.50 paid in.

Lands, 37 claims, area 600 acres, fully paid for, in the California district, carrying upwards of 2 miles of the outcrop of a mineralized zone lying west and north of the holdings of the Chiracahua Development Co. Development is by several shallow shafts, deepest 80', and a 450' crosscut tunnel, latter showing leached ore and a little high-grade ore, with indications of permanent values at greater depth. Management is good, and property is considered promising. Idle, but resumption planned for 1909.

**MANHATTAN ELY COPPER CO.**

**NEVADA.**

Office: 25 Broad St., New York, N. Y. Mine office: Ely, White Pine Co., Nev. Col. Luther Martin, president; Jos. H. Everett, vice-president; Willard B. Moore, secretary and treasurer; preceding officers, Jos. P. McQuaide,

**Mortimer C. Mack, F. S. Pheby and J. Arthur Keagy, directors.** Organized 1907, under laws of Arizona, with capitalization \$5,000,000, shares \$5 par. Lands, 10 claims, area 200 acres, in the western portion of the camp, not far from claims of the Giroux Consolidated.

**MANHATTAN GOLD & COPPER MINING CO.**

**NEVADA.**

**Dead.** Lands sold, June 10, 1907, to Nevada-Utah Mines & Smelters Corporation. Formerly at Pioche, Lincoln Co., Nev.

**MANHATTAN MINE.**

**MAINE.**

Letters returned unclaimed from former office, care of J. S. Moore & Co., owners, Portland, Me., and from former mine office, West Brookville, Hancock Co., Me. Property included the Manhattan and Tapley mines, showing ore assaying about 5% copper, which were reopened, 1907, after many years of idleness.

**MANHATTAN MINING CO.**

**IDAHO.**

Letter returned unclaimed from former office, Oakesdale, Wash. Mine office: Saltese, Missoula Co., Mont. J. E. Bailey, president; O. H. Linn, superintendent. Lands, 10 claims, shortly northwest of the Monitor mine, on the Idaho side of the divide of the Bitter Root Mountains, opened by a 350' tunnel, showing a 7' vein assaying up to 12% copper and \$8 gold per ton.

**MANICA COPPER DEVELOPMENT CO., LTD.** **PORTUGUESE EAST AFRICA.**

**Office:** Finsbury Pavement House, London, E. C., Eng. **Mine office:** Sierra Isataca, Macequece, Mozambique, Portuguese East Africa. W. E. Lane, secretary; W. M. Cairncross, mine manager. Organized May 26, 1902, under laws of Great Britain, with capitalization £150,000, shares £1 par; issued, £115,110. Debentures, £10,000, at 6%.

Lands, 411 claims, area circa 900 acres, in the Sierra Isataca, midway between Macequece and Umtali, Rhodesia, lying 8 miles northeast of Umtali, near the Edmundian mine, but in Portuguese territory. Three copper outcrops have been located, one of which is a vein of about 4' width, opened by a shaft, which, on the 300' level, shows 3 distinct veins of copper ore with calcite gangue. Ore reserves are estimated at 12,000 long tons, of 7% average copper tenor. Lower levels also carry galena and gold ore, there being a narrow pay-streak of latter assaying up to 891 oz. gold per long ton. Planned, early 1908, installing a complete machinery plant, including a 20-ton mill and a hydroelectric power installation on the Zambezi River, 3 miles from mine.

**MANICA COPPER EXTENSION, LTD.** **PORTUGUESE EAST AFRICA.**

**Dead.** Registered, 1903, with capitalization £1,000. Formerly at Sierra Isataca, Macequece, Mozambique, Portuguese East Africa.

**MANICA EXPLORERS, LTD.**

**PORTUGUESE EAST AFRICA.**

**Offices:** 615 Salisbury House, London, E. C., Eng. C. Hartridge, chairman; J. W. Youd, secretary. Organized Jan. 23, 1896, as reconstruction of Western Explorers, Ltd., and reorganized Dec. 3, 1904, under laws of Guernsey, with capitalization £100,000, shares £1 par; issued, £55,893. Lands include 200 copper claims, 770 gold claims, 16 acres of townsite lands and circa 25,000 acres of miscellaneous lands, said to be rubber-bearing. Idle.

**MANILLA MINING CO.**

**ARIZONA.**

**Office:** care of N. L. Houston, manager, Peoria, Ills. **Mine office:** Ft. Huachuca, Cochise Co., Ariz. Lands are sundry claims in the Huachuca Mountains, opened by a 220' shaft, showing argentiferous copper and lead sulphides. Has a steam plant, with hoist, pump and air-compressor. Idle.

**MANITOU MINING CO.**

**MICHIGAN.**

**Office:** 12 Ashburton Place, Boston, Mass. **Operating office:** Calumet, Mich. **Mine office:** Delaware Mine, Keweenaw Co., Mich. Quincy A. Shaw, Jr., president; Rodolphe Agassiz, vice-president; preceding officers, Alexander

Agassiz and Francis L. Higginson, directors; Jas. MacNaughton, general manager; Geo. A. Flagg, secretary and treasurer. Organized June 26, 1905, under laws of Michigan, with capitalization \$500,000, shares \$25 par. Fiscal year ending April 30, 1908, showed a debit balance of \$194,971.

Lands, 38,698 acres, including the Delaware, Eagle River, Eagle Harbor, Montreal and New Jersey mines, all early-day mines of Keweenaw county.

The old Delaware mine, now known as the Manitou, and formerly known as the Conglomerate and Lac La Belle, has circa 3,700 acres of mineral lands and upwards of 17,000 acres of miscellaneous lands, with a water frontage of 10 miles on Lake Superior, and the entire frontage on Lac La Belle. This property sunk, under various ownerships, circa \$3,700,000, before passing to the present company, and the old mine is exhaustively described in Vol. II. The old Delaware mine, opened on the Allouez conglomerate, has 4 shafts, of 300' to 900' depth, the Allouez bed underlying the greenstone, and dipping northward at an angle of 25° 30'. The old Delaware workings were unwatered, and found to give a fair showing of copper, and copper was found in the Meadow amygdaloid, underlying the conglomerate.

The Delaware tract was tested by diamond drill borings, and on an amygdaloidal bed, identified as the Kearsarge lode, 3 pits, deepest 65', were sunk, giving a fair showing of copper. The Kearsarge bed is 7,800' southward from the base of the greenstone.

Principal development of the Manitou is on an amygdaloidal bed, known as the Montreal River lode, lying 770' south of the base of the greenstone bluff. The Montreal River bed dips at about 28° and is 12' to 14' in width, showing considerable copper, but work was suspended, 1907, as results were not satisfactory.

#### MANITOU MINING & MILLING CO.

COLORADO.

Dead. Formerly at Bonanza, Saguache Co., Colo.

#### MANSFELD'SCHE KUPPERSCHIEFERBAUENDE GEWERKSCHAFT.

GERMANY.

Mine office: Eisleben, Prussian Saxony, Germany. Dr. Ferdinand Zirkel, Dr. Dittrich and Dr. Paul Wachler, executive committee; Bergrat Dr. Vogelsang, chief mine and smelter manager; Herman Schrader, smelter superintendent. Organized 1852, as a consolidation of numerous independent operators, and reorganized, April 10, 1876, with 69,120 shares. Employs circa 23,000 men, of whom 10% are at the smelter and 90% at the mines.

The Mansfeld mine was opened A. D. 1199, and under the Counts of Mansfeld attained a high state of development, and was immensely profitable, during the Fourteenth and Fifteenth Centuries, but the industry nearly suffered extinction during the Thirty Years' War. Activity was resumed in 1671, when the right of working the mines was declared free, this resulting in the building up of a great number of small independent operators. The present company was first formed, in 1852, as a consolidation of the various small mine operators and smelters, and the merging of many small interests has resulted in a nearly tenfold increase of production, from 2,660 metric tons in 1867.

The principal ore is slightly argentiferous chalcopyrite, associated with limited quantities of nickel and cobalt ores, occurring as speiss, disseminated in very fine grains through the kupferschiefer, a fine-grained bituminous shale. The kupferschiefer lies nearly horizontally, with a dip of 5° only, and is from 2' to 8' only in thickness, but covers nearly 200 square miles. Lying just below the kupferschiefer is an arenaceous shale, carrying chalcopyrite, and a limited quantity of copper carbonates. Owing to the thinness of the bed, and the great age and extent of the workings, it is necessary for miners to work on their sides, bellies or backs, as in coal mines, wearing boards upon their trunks and thighs, in order protect themselves from the rock floors. Owing to the

great age and extent of the workings, the headings usually are 2 to 4 kilometers from the shafts, hence the actual mining is done under considerable disadvantages. The workings are of vast extent, and there are scores of old and abandoned shafts. Present mining operations are through 9 hoisting shafts, with a large number of shafts for water and ventilation. Among the new shafts are the Johannes, at Hohenthal, and the Hermann, at Helbra.

Equipment is very complete, including hoists and general mining machinery, and 8 duplex Weisse & Monski pumps. The company maintains independent machine shops, capable of repairing or building any mining or pumping machinery in use.

The Mansfeld has numerous reduction works, including 4 smelters for raw ores, 2 roasting smelters with acid plants, 2 matte smelting works, 2 refining furnaces, and one electrolytic refinery with desilverizing plant. The various works have a total of 20 reverberatory furnaces. The principal smelters are the Krughütte, at Eisleben, with 4 furnaces; the Kochhütte, at Helbra, with 4 furnaces; the Eckardthütte, at Leimbach, with 4 furnaces, and the Kupferkammerhütte, at Hettstedt, with 3 furnaces. All of these furnaces are of circular shaft type, with forehearts, and use cold blasts, except the Kupferkammerhütte, where hot blast is employed to some extent. The Saigerhütte is a refining plant, and the Gottesbelohnungshütte has 10 reverberatory furnaces. The Eckardthütte has one lead stack, producing a silver-lead matte, and making a little nickel speiss from remelted flux-dust. The Eckardthütte has 72 kilns and 5 lead acid chambers, and the Kupferkammerhütte has 82 kilns and 6 lead acid chambers, these works making 2,212 metric tons of 50° Beaumé sulphuric acid, in 1908, from the fumes of the ore and matte treated.

The method of reduction is by heap-roasting and calcining in shaft-furnaces. Roast-heaps are built about 60 meters long, 5.5 meters broad at the bottom and 3 meters broad at the top, and only about 1.50 to 1.75 meters high. The only fuel used is a little brushwood, at the edges and bottoms of heaps, and each heap is roasted 4 to 6 weeks. If the ore, as produced, carries any fines, these are screened, briquetted and added to the roast-heaps. The roasting reduces the ore 8 to 20% in weight, and the roasting is more for the elimination of carbon dioxide and bituminous matter than to throw off sulphur, the latter running only 2 to 5% in the raw ore, while the bituminous matter ranges 10 to 17%, and carbon dioxide 7 to 13%. There are 4 roast-stalls near the shafts, and at the furnaces the first-fusion product is a matte carrying circa 40% copper and 0.25% silver. This matte is broken up and roasted in 2 calcining kilns, and the roasted matte, with the addition of 5 to 10% raw matte, is smelted, in reverberatory furnaces, to white metal carrying 74 to 75% copper and 0.45 to 0.50% silver. The slags from the white metal carry 9 to 15% copper, and are returned to the shaft-furnaces. Slag is utilized extensively, in the manufacture of slag-brick and paving blocks.

The Krughütte, near the mine, is equipped with Steinbeck circular multiple-hearth automatic pyritic calciners, which use no carbonaceous fuel, except for preliminary charges. The Krughütte utilizes waste gases from the copper furnaces, for direct consumption in gas engines, the volume of gas amounting to about 21,000 cubic meters per hour, giving an available maximum efficiency of circa 4,400 h. p., with a mean of 2,700 h. p. The furnaces are connected with two gas mains, of 40" and 62" diameter, and gas is freed from dust by passing through counter-current washers, having spiral blades rotating at a peripheral velocity of about 165' per second, gas being brought into intimate contact with the water, which is separated by the action of the blades and turned in the opposite direction to the flow of gas. After washing, the gas contains only 0.003 grams of dust per cubic meter, against 17 grams in its original condition, and is led to a gasometer storing 18,000 cubic feet, whence

it passes to the engines, of which there are two, of 1,300 h. p. each, with a third of similar capacity under erection.

The desilverizing plant, at the Saigerhütte, operates on the Ziervogel method, roasting the matte and retaining the silver as a sulphate, which is dissolved in water and the solution run over metallic copper, which precipitates the silver, the cement silver so secured being pressed and remelted to metal .999 fine. The final furnace product, after the extraction of the silver, is a blister copper of 99.7 to 99.8% copper tenebr. In 1903 the Mansfeld smelters treated 686,354 metric tons of ore, making therefrom 49,179 tons of low-grade matte, the average tenebr of the ore being 28.19 kgs. copper and 0.156 kgs. silver per ton.

The electrolytic refinery has about 5 metric tons daily capacity, with electrodes arranged on the multiple plan.

In addition to its mines and smelters, the Mansfeld company has extensive industrial undertakings of a collateral and subsidiary nature, the more important being extensive coal mines and coke works at Hamm, Westphalia, also alkali deposits and works.

Production, which was only 5,865,898 lbs. in 1867; increased to 15,236,287 lbs. in 1877, 29,176,000 lbs. in 1887, and 40,230,400 lbs. in 1897. Production for the past few years has been as follows: 42,580,279 lbs. in 1903; 41,629,349 lbs. in 1904, 43,824,141 lbs. in 1905, 40,108,000 lbs. in 1906, and 38,822,000 lbs. in 1907. The property is handled with great technical skill, and its ore bodies, by reason of their vast area, are among the largest known to man.

#### MANSFIELD MINING & SMELTING CO.

#### ARIZONA.

Office: 812 Grand Ave., Kansas City, Mo. Mine office: Patagonia, Santa Cruz Co., Ariz. Employs 15 men. Roland E. Bruner, president; Hon. M. A. Fyke, vice-president; Arthur C. Sweet, secretary and treasurer; A. B. Richmond, general manager; preceding officers and Prof. Jean Robert Moechel, directors. Organized May 29, 1906, under laws of Arizona, with capitalization \$8,000,000, shares \$1 par; issued, \$4,578,110, on Aug. 16, 1908. On same date company had, cash on hand, \$1,800, with \$44,000 due on deferred stock payments, and was without accrued liabilities. Annual meeting, second Monday in January. Company is said to have authorized a \$100,000 bond issue, at 6%, with circa \$20,000 issued, but reported, Aug. 15, 1908, no bonds outstanding.

Lands, 17 claims, unpatented, area 340 acres, also a 10-acre millsite, in the Wrightson district, 8 miles from the Sonora branch of the Southern Pacific railway, showing syenite, porphyry, dacite and rhyolite, carrying veins of 4' to 80' claimed width, said to be increasing in width and richness with depth. Ore is auriferous and argentiferous copper sulphides, and company claims that the average of numerous samples is 15% copper and 40 oz. silver, which would indicate that the property either lacks considerable ore bodies developed, or that the samples were taken more with a view to geod assays than to exact averages.

Development is by the Fraction tunnel, on a vein claimed by the company to be 200' wide, and by the Sweet shaft, 360' deep, said to have ore opened on 2 levels, and the Black Cap shaft, showing some high-grade gold and copper ore, which apparently is limited in quantity. The mine was reported, May, 1907, to have 1,840' of workings, and was claimed, October, 1908; to have nearly one mile of workings.

Equipment includes various mine buildings and a store, with hoists at the two shafts.

The smelter, planned to have blown in June 15, 1908, was completed circa September, 1908, and is said to have cost \$21,900. The smelter has a 80-ton melting furnace, and is considered thoroughly impracticable, by reason of its small size, and is a rather ridiculous installation to be made by a company with

\$8,000,000 capitalization. A little ore was shipped, 1907, to El Paso smelter, and is said to have given good returns. The Black Cap shaft is claimed to have enough ore to feed the present smelter, which would not be hard. One day's tonnage at the Anaconda works would run the Manafield smelter for more than a year.

The company's advertisements and prospectus were very misleading. The prospectus states that 50% of those engaged in the copper industry succeed, which is absolutely untrue. Maps and drawings in page advertisements of the company showed shafts and ore that were purely imaginary, when the company had nothing but prospect holes, and the company promised dividends in its advertisements, which promise was absolutely indefensible. The press, or that portion of it that is available, has been filled with trivial news items regarding the company and its property. The management complains that former officials unloaded stock, to the detriment of the company. Mr. Richmond apparently has wasted no money in development, and is considered personally honest and competent, but the capitalization is excessive, development inadequate, and the company is regarded most unfavorably.

#### **MINA MANTO VERDE.**

CHILE.

Mine office: Tierra Amarilla, Copiapó, Atacama, Chile.

#### **MAORILAND COPPER CO., LTD.**

NEW ZEALAND.

Office: Christchurch, New Zealand. Mine office: Nelson, New Zealand. W. J. McMurtrie, manager; Edwin Bray, mine manager; Harley E. Cooper, smelter superintendent. Lands, 2,000 acres, including several different mines, carrying considerable native copper and rich secondary ores, connecting by good wagon road with the port of Nelson. Principal properties are the United Champion, which has 2 separate mines, carrying mainly chalcopyrite, opened by a 250' shaft and various tunnels, showing a vein up to 14' in width, early 1908 having 14,603' of workings. The Monster mine, developed open-cast, shows auriferous chalcopyrite, giving average assays of 17% copper and 4 dwts. 17 grains gold per long ton. The Mount Claude mine, opened by tunnels, shows a vein of about 4' width, carrying oxidized ores with a gossan up to 250' width, said to give average assays of 5% copper and 3.8 dwts. gold per long ton. The Doctor mine shows considerable chalcocite, and some native copper, in a vein up to 11' in width. Sample ore shipments, 1907, to Australia, from the United Champion mine, gave returns of 13% copper. A smelter, built 1908, is connected with the mines by a tramway.

#### **MINA DE MARACÁS.**

BRAZIL.

Office and mine: care of Col. Pedro Goncalves, owner, Maracás, Bahia, Brazil.

#### **TOMÁS MARAMBIO.**

CHILE.

Office: Peña Blanca, Freirina, Atacama, Chile. Works office: Labran, Freirina, Atacama, Chile. Property includes a number of mines and a reduction plant. The Santa Rosa mine, at Fragüita, 8 leagues from Peña Blanca, is 220 meters deep, with a vertical extension of 500 meters, opening a vein of 6' to 7' average width, having north and south strike, with dip of 45°, and produced, 1903, circa 400 metric tons of 20% copper ore. The Mina Verde, near the Santa Rosa, opened to depth of 130 meters, in 1903 produced 150 metric tons of 18% copper ore. The Mina Pequeña, 4 leagues from Peña Blanca, is opened to depth of 50 meters, with an oxidized zone of 30 meters, and in 1903 produced 200 metric tons of ore of 20% copper tenor. La Mina Serena, opened to depth of 70 meters, with horizontal length of 160 meters, in 1903 produced 200 metric tons of 20% copper ore. El Manto mine, opened to depth of 120 meters, with an outcrop traceable 500 meters, in 1903 produced 20 metric tons of 20% ore. La Mina María Luisa, 140 meters deep, in 1903 produced 125 metric tons of 20% ore.

A smelter, 4 leagues from Peña Blanca and 18 kilometers from a railroad,

has reverberatory furnaces turning out Chile bars of 50% average copper tenor. Fuel is Australian coal, costing 80 pesos per metric ton, delivered. One ton of coal is required to smelt 1½ tons of ore, slag running 0.7 to 0.8% copper. Smelter employs circa 60 men, at average wages of 2 pesos daily. Production, 1903, was 4,450 metric tons of ore smelted, averaging 14.6% copper, making 1,335,326 lbs. fine copper.

**MARAVILLA COPPER CO.**

ARIZONA.

Dead. Formerly at Safford, Graham Co., Ariz. Described Vol. VI.

**MARIE MINING CO.**

IDAHO.

Letter returned unclaimed from former office, care of R. B. Howard, president, Wallace, Idaho. Mine office: Osburn, Shoshone Co., Idaho. Walter Buell, superintendent. Lands, in McFarren Gulch, about one mile south of Auburn, adjoining the Gray, show 2 veins, one carrying outcrops of high-grade argentiferous galena, the other showing outcrops of argentiferous copper ore. Is developing by tunnel, and September, 1907, planned driving a lower tunnel, circa 1,400', starting same on property of the Black Traveler Mining Co.

**MARIETTA GOLD MINING CO.**

IDAHO & WASHINGTON.

Office: care of Lawson Investment Co., 60 State St., Boston, Mass. Mine office: Mullan, Shoshone Co., Idaho. M. E. Lawson, president and general manager; H. C. Lawson, secretary. Organized under laws of Washington, with capitalization \$1,000,000, shares \$1 par. Lands include gold claims in Ferry county, Washington, and the Atlas group of 5 claims, area 100 acres, in the Stevens Peak district of the Cœur d'Alenes, Idaho. Development is by a 250' tunnel, claimed to show a 20' ore body, averaging \$50 per ton in copper, gold and silver values, which is a self-evident falsification of facts. Promised, 1903, dividends "within two years," which of course did not materialize. Apparently merely a bit of stock-jobbery, and moribund.

**MARINOVITCH y LINGUARDO.**

PERÚ.

Office and mine: Morocoeha, Junín, Perú. Lands, one pertenencia, known as the Manuelita mine, which produced, 1904, with 10 men, ore of 17% average tenor, making 118,956 lbs. fine copper.

**MARIION MINING & MILLING CO.**

COLORADO.

Mine office: Beulah, Pueblo Co., Colo. Lands, on Marion Creek, circa 12

miles southwest of Beulah, show a vein of 22' reported width, carrying copper, zinc and lead ores. Has a concentrator, said to have cost \$75,000, and October, 1907, was said to employ 45 men.

#### **MARITIME COPPER & REDUCTION CO.**

**NEW BRUNSWICK**

Mine office: Goose Creek, St. John Co., N. B. Property is an old mine showing a considerable body of low-grade copper ore. Idle since 1902.

#### **MARSHMEN COPPER CO.**

**ARIZONA**

Dead. Lost charter, 1903, and lands, 1903. Formerly at Clifton, Graham Co., Ariz. Described Vol. IV.

#### **MARSHAM GULCH MINING CO.**

**UTAH**

Letter returned unclaimed from former office, 53 Tremont St., Boston, Mass. Mine office: Bingham Canyon, Salt Lake Co., Utah. Walter J. Oren, general manager. Organized Sept. 29, 1906, under laws of Maine. Is controlled, through ownership of one-half of stock issue, by New Red Wing Mining Co., and is under same general management as the Utah-Apex and Utah Development companies.

Property is a 200-ton concentrator, on the site of the old Red Wing mill, which was running on ore from the New Red Wing mine, at last accounts.

#### **MARQUETTE & ARIZONA MINING CO.**

**ARIZONA**

Office: Marquette, Mich. Mine office: Bisbee, Cochise Co., Ariz. Emil Marks, president and general manager; Jos. J. Wirtz, secretary. Organized Dec. 1, 1902, under laws of Arizona, with capitalization \$500,000, shares \$5 par. Lands, 37 claims, area 740 acres, having a heavy conglomerate capping, similar to that of the Copper Glance, next west. Has a 560' two-compartment shaft, substantially timbered, passing through limestone showing considerable areas of it assaying about \$2 gold per ton. The shaft has short north and south drifts, on the 400' level, and one short drift on the 145' level. Has a 45-lb. p. hoist. Idle since 1903.

#### **MARQUETTE COPPER MINING CO.**

**MICHIGAN & WYOMING**

Office: care of Ney Mikkels, secretary, Niles, Mich. R. M. Kenney, vice-president. Organized March, 1905, under laws of Oklahoma, with capitalization \$500,000, shares \$1 par. Lands, 120 acres, freehold, in Delta county, and 20 acres, leasehold, in Marquette county, Michigan, and 160 acres, government claims, in Uintah county, Wyoming.

#### **ANGEL MARQUIEQUIL.**

**BOLIVIA**

Mine office: Coro Coro, La Paz, Bolivia. Mines, known as the San Miguel and Toldo, carry native copper in conglomerate strata. Has steam power and has been a small producer of barillas de cobre for some years.

#### **MARSEILLERS MINING CO.**

**MEXICO.**

Office: 210 Bacon Bldg., Oakland, Cal. Mine office: Ejutla, Oaxaca, Mex. Roy Mauvais, president; W. H. MacMeekin, managing director. Lands, sundry claims near Los Ocotes mine, undergoing development.

#### **MARSHALL & RUSSELL GOLD MINING, MILLING**

**COLORADO.**

#### **& TUNNEL CO.**

Mine office: Empire, Clear Creek Co., Colo. W. C. Marshall, manager. Organized 1901, under laws of Colorado, with capitalization \$5,000,000, shares \$1 par. Lands, 62 claims, developed by a 1,100' tunnel showing auriferous and argentiferous copper ores. Has water power.

#### **GRUBE MARTINI.**

**GERMANY.**

Mine office: care of W. Von Vloten, Hoerde an W., Rheinpruvinz, Germany. Has spathic iron and chalcopyrite, output being mainly iron ore, of which the production averages about 7,000 tons yearly. Has steam power and employs about 50 men.

#### **MARYLAND COPPER CO.**

**MONTANA**

Letter returned unclaimed from former office and mine, Mulan, Shoshone

Co., Idaho. Organized 1907, under laws of Idaho, with capitalization \$1,000,000, shares \$1 par. Lands are in the Burns district of Missoula county, Montana. Idle.

#### MARY MINING CO.

MEXICO.

Office: care of John E. Carnahan, Canton, Ohio. Mine office: Jesta Maria, Bayón, Chihuahua, Mex. Wm. M. Bicker, first vice-president; Mrs. Elizabeth Seaman, second vice-president; J. Worth Carnahan, secretary; W. O. Evans, general manager; Dr. Leandro Routh, superintendent. Lands, 2 groups, presumably 9 hectares, opened by tunnel, showing auriferous and argentiferous copper and lead ores, said to give average assays of circa 9.5% copper, with small lead, silver and gold values. Has planned a smelter with 50-ton and 15-ton blast-furnaces, and a 100-ton concentrator, but apparently has built neither mill nor smelter.

#### MARY SCHULTZ COPPER KING MINING & SMELTING CO.: COLORADO.

Office: care of Dr. Carl I. Schultz, president, Cripple Creek, Colo. Mine office: Salida, Chaffee Co., Colo. E. J. Vanatta, secretary; D. Mary Schultz, treasurer. Organized under laws of Colorado, with capitalization \$1,000,000, shares \$1 par. Lands, 18 claims, on Red Mountain, Fremont county, Colorado, 11 miles northeast of Salida, opened by a 150 shaft and a 180' tunnel, showing considerable low-grade ore, with assays of 9 to 28% copper.

#### NEGOCIACIÓN MINERA MASCOTA, S. A.

MEXICO.

Office: Ap. 840, Mexico, D. F. Mine office: Tequisistlah, Tehuantepec, Oaxaca, Mex. Emilio Maevers, president; Max von Duering, vice-president; Francisco Ponce de León, secretary and treasurer; R. W. Batelt, general manager. Organized Nov. 5, 1908, under laws of Mexico, with capitalization 300,000 pesos, shares 50 pesos par, divided into 2,000 free and 4,000 assessable shares. Assessments levied, \$40,000. Lands, 262 pertenencias, in the Valdés district of San Carlos Yantepic, including antigua showing chalcopyrite and tetrahedrite giving average assays of 9.5% copper, 30 oz. silver and \$5 gold per ton. Has steam power, with a 4-drill air-compressor. Fuel is wood. Nearest railroad, the National Tehuantepec, is 50 kilometers from the mine.

#### MASCOTA COPPER CO.

MEXICO.

Office: 513 Germania Life Bldg., St. Paul, Minn. Mine office: Ameca, Jalisco, Mex. Employs 32 men. Chris. D. O'Brien, Sr., president; J. M. Bowler, vice-president; B. J. Mosier, secretary and treasurer; Chris D. O'Brien, Jr., general manager; preceding officers and Patrick Conley, directors; D. E. Baldwin, superintendent. Organized June, 1908, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par; issued, circa \$100,000.

Lands, 46 hectares, in the Guachinango division of the Mascota district, 24 miles from Mexican Central railway, showing an 8' fissure vein in porphyry, traceable circa 2,000' and proven to depth of 480', giving average assays of circa 5% copper, 7 oz. silver and 6 grams gold per ton from oxide, carbamate and sulphide ores. Mine has a 300' shaft and a 375' tunnel, with 4,925' of workings, estimated to show 40,000 tons of ore, with 28,000 tons blocked out for stoping.

Equipment includes a 50-h. p. steam plant, with 3-drill Sullivan air-compressor, and there are 17 mine buildings, including a store.

A wooden stamp mill, of 25 tons daily capacity, has 10 Allis-Chalmers gravity stamps.

A small concentrator is equipped with 2 Overstrom tables, vanner, 4 slime tables and sizer.

The company plans continuing the tunnel to length of 2,000', and sinking 3 shafts, and possibly may build a small smelter.

#### MASCOTA MINING CO.

MEXICO.

Office: Chicago, Ills. Mine office: Talpa de Allende, Mascota, Jalisco,

**Mex.** Harry S. Church, vice-president and general manager. Lands, 32 per tenencias, known as the Ocotlán mine, 9 miles west of Talpa, in the cañon of the Ocotlán River, heavily timbered, furnishing fuel for ordinary mine operations. Mine shows a vein of 20' to 60' width, with a pay streak of 4' to 20', carrying auriferous and argentiferous copper and zinc sulphides. Development is by tunnels and shafts, showing a considerable quantity of ore. Property has been worked previously, by German and Mexican companies.

Power is furnished from the Ocotlán river. An experimental leaching plant was built in 1905. Smelter has roasting furnaces and a water-jacket blast-furnace. Heretofore the zinc values have been lost, but an effort is planned to save them. Property is considered promising. Presumably idle.

#### **MASCOT COPPER CO.**

**ARIZONA.**

Offices: American Trust Bldg., Chicago, Ills., and Atlas Elk, Salt Lake City, Utah. Mine office: "Dos Cabezos, Cochise Co., Ariz. Hon. H. H. Evans, president; David S. Stevenson, vice-president; J. C. Knapp, secretary; Geo. L. Ramsey, treasurer; L. G. Hardy, superintendent; E. A. Ely, assistant superintendent; Capt. B. W. Tibby, consulting engineer. Organized circa June, 1907, under laws of Arizona, with capitalization \$10,000,000, shares \$10 par, in \$1,000,000 preferred and \$9,000,000 common shares. Company has no connection with the Mascot Mining Co., operating in the same county.

Lands, circa 43 claims, including property formerly held by Dos Cabezos Consolidated Mines Co., said to be held under bonds aggregating circa \$500,000. Lands show 5 parallel fissures, of about 70' aggregate width, in addition to which the Skylight vein is claimed to be 200' wide. Development is by the Consolidated tunnel, showing ore assaying 3 to 14% copper, with fair gold and silver values.

#### **MASCOT MINING CO.**

**ARIZONA.**

Office: 1009 Majestic Bldg., Detroit, Mich. Mine office: Wilcox, Cochise Co., Ariz. Christian Kern, president; Geo. F. Scheffer, vice-president; W. C. Rohus, secretary; J. A. Zahn, treasurer; Delos D. Jayne, general manager; C. W. Courtney, superintendent. Organized March, 1905, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par; issued, circa \$800,000. Company has no connection with the Mascot Copper Co., operating in the same county.

Lands, 35 claims, unpatented, area circa 700 acres, lying about 40 miles northeast of Wilcox, in the Clark and Montezuma districts, on the western slope of the Graham Mountains, in the western part of Graham county. Principal holdings are partially owned outright, and balance paid for, except a \$19,000 final payment on bond, payable by royalties from ore, and 5 additional claims are held under bond and lease, subject to a cash payment of \$3,750. Lands, in 4 groups, within 4 miles of each other, show mainly granite, with some Carboniferous limestone, with frequent intrusive dykes of porphyry and rhyolite, carrying veins of 6" to 20' width, with copper and lead ores, occasionally with high silver and gold values, principal ores being malachite, azurite, chalcocite, chalcopyrite and galena, usually with gangue of quartz, but occasionally of decomposed limonite or hematite.

The Gold Cord group, 11 claims, shows a vein of 6" to 22' width, traceable 2,000', opened to depth of 107', with circa 1,300' of workings. Ores are highly auriferous copper sulphides, assaying 1 to 3% copper only, with gold values up to circa \$90 per ton, former shipments of circa 250 tons having given average returns of \$58 per ton. Equipment at the Gold Cord includes a 30-h. p. boiler, pumps and a hoist.

The Iron Bell group, 9 claims, 3½ miles from the Gold Cord, carries a 3' vein, opened by a 100' shaft, showing ore assaying 1 to 15% copper and circa 1 oz. gold per ton.

The President group, 3 claims, about 1½ miles from the Gold Cord, shows

porphyry and metamorphic granite, carrying a fissure vein of 8' to 4' width, having auriferous silver-lead ore, with quartz gangue, picked samples assay-ing up to 18 oz. gold per ton. Development is by a 130' shaft. The President ore is said to concentrate 10 into 1.

The Republic group, 5 claims, 2 miles from the Gold Cord, shows a vein of 4' to 22' width, carrying low grade ore giving assays in silver, lead and gold.

Buildings include an engine-house, smithy, boarding-house, and bank-house. The company plans deepening the Gold Cord and President shafts.

#### MASCOT TUNNEL CO.

Mine office: Turret, Chaffee Co., Colo. Has gold, silver and copper ores. Presumably idle.

#### MASHELL COPPER MINING & REDUCTION CO. WASHINGTON.

Office: 437 Banigan Bldg., Providence, R. I. Mine office: Etonville, Pierce Co., Wash. C. J. McCormick, president; J. M. Mansfield, secretary and treasurer. Limited development work has shown several small veins, giving good assay values in gold and copper. Idle since circa 1903.

#### MASON & BARRY, LTD.

Office: 87 Cannon St., London, E. C., Eng. Mine office: Pomarão, Alemtejo, Portugal. Jas. Francis Mason, J. P., M. P., chairman; W. H. Barry, deputy chairman and joint managing director; Edw. O. Barry, joint managing director, and secretary; Wm. Neville, resident administrator; F. O. Harvey, consulting engineer.

Organized June, 1878, under laws of Great Britain and reorganized June 2, 1892, under laws of Great Britain, with capitalization £210,000, shares £1 par; issued, £187,172. Capitalization has been reduced, from £1,050,000, by returning to shareholders £1 per share, on 4 different occasions. Net profits, 1906, were £68,325, and dividends were £64,820; mining profits, 1907, were £61,216, and dividends were £55,551. Has paid dividends regularly since organization, these ranging from 15 to 65%. Recent dividends have been as follows: 13s. in 1901; 11s. in 1902; 7s. in 1903; 7s. in 1904; 7s. in 1905; 7s. in 1906; 6s. in 1907. The company has a staff pension fund.

Lands, near the Spanish boundary, are leasehold, lease having been renewed, 1908, for a 50-year term ending October, 1958.

The property, known as the San Domingos mine, originally was opened and extensively worked by the Romans, and has been operated by the present company, and its predecessors, since 1858. Development is by 3 shafts, of 340 meters depth each, sinking for the 370-meter level. Ore body is a mineral zone of about 200' width and proven length of circa 2,000', carrying lenses of cupperiferous pyrite, averaging slightly under 1% copper and about 50% sulphur, principal values being in sulphur rather than in copper. With depth the copper values of the ore decrease, slowly but steadily. The mine has had trouble from a fire on the 150-meter level, and the burning portion of the mine has been walled off.

The mine has about 700,000 tons of ore in teleras and tereros, containing circa 4,000 long tons fine copper. Ore reserves, at end of 1904, were 5,250,000 long tons, down to the 180 meter level, and are now materially larger.

There was a miners' strike, 1907, necessitating the calling out of troops, but this was ended in a week, with no serious damage done, some concessions being made to the workmen.

The company owns a railway to tidewater, with a shipping pier and tugs. Ore is sent to Great Britain, and, after burning for sulphur, the remaining cinder is leached for copper values.

Production was 6,088,320 lbs. fine copper in 1905 and 5,421,600 lbs. in 1906. Ore production, 1906, was 353,272 long tons, and in 1907 was 363,465

long tons. The property is carefully managed, and has a long and honorable record as a producer.

#### MASON MANUFACTURING CO.

MICHIGAN.

Works office: Houghton, Houghton Co., Mich. Livingston Whitney, president; Geo. F. Chauncey, vice-president and treasurer; Alfred Schwarz, manager. Organized circa August, 1907. Property is a 10-year lease of the Quincy sands, transferred August, 1907, from the Copper Concentrating Co. to the Mason Manufacturing Co. Is controlled, through ownership of entire stock issue, by the Houghton Concentrating Co., successor of the Copper Concentrating Co.

The mill is 72x122', with a wing of 38x58' containing the power plant, and stands upon sands wasted from the Quincy mill. Sands for reworking are taken from the lake by a 16x28' scow carrying a 12x24' pumphouse having a centrifugal sucker pump, connected by a 10" spiral pipe with the mill, the pipe having swing joints and being carried on bents. At the mill the sand is discharged into a launder, connecting with the boots of 6 endless-belt bucket-elevators, in 3 frames, each frame having 2 elevators, with 20" belts and buckets. Formerly the discharge from the elevating belts led to 6 roughing jigs, each with 5x15' sieves, which rejected about 80 to 85% of the material, leaving 15 to 20% for concentration. The sand retained was classified as coarse, fines and slimes, coarse sands being sent to crushing rolls and a Chilean mill, thence joining the fines and going to the finishing jigs. There were settling tanks for the slimes, the flow of diluted pulp through the tanks being very slow, settlers discharging through siphon tubes at the bottom, and slimes again going over oscillating tables. The company is using sundry inventions of the manager, who installed one section of 20 tables having Schwarz corrugated tops, and Schwarz classifiers. The Schwarz process is said to have been technically successful, but the general opinion of practical mill men is not especially favorable.

Power is furnished by a 250-h. p. gas engine, using producer gas, made from peat-coal. Equipment includes a 50-kw. generator for lighting and operating the sand-pump. Machinery is belt-driven throughout.

These works were designed for the largest tailings plant in the world, being of 2,000 tons nominal daily capacity, and Mr. Schwarz estimates that there are available 12,000,000 tons of tailings, assaying 0.42% copper, of which 70% is recoverable. There has been trouble with the gas producer, which has proven unreliable, and steam power may be substituted. The enterprise must be considered an experiment.

#### MASON VALLEY COPPER CO.

NEVADA.

Dead. Was succeeded, January, 1907, by Mason Valley Mines Co. Formerly at Yerington, Lyon Co., Nev.

#### MASON VALLEY MINES CO.

NEVADA.

Office: care of Geo. E. Gunn, general manager, Salt Lake City, Utah. Mine office: Yerington, Lyon Co., Nev. W. Mont Ferry, president; Jos. L. Lippman, vice-president; Frank Judge, secretary; Llewellyn Humphreys, consulting engineer; O. E. Cole, superintendent. Organized circa December, 1906, under laws of Maine, with capitalization \$1,000,000, shares \$1 par, as successor of Mason Valley Copper Co. Lands, 8 claims, 1 fractional, area 150 acres, including the Spragg mine, lying south of the Bluestone, showing a strong gossan, apparently opened on a contact deposit between porphyry and limestone, said to be of 70' average width, carrying a good showing of copper carbonates from surface, changing to sulphide ore, with excess of iron, at depth of about 100'. Has secured assays up to 55% in copper tenor, but principal values are in chalcopyrite apparently averaging about 4% copper and \$1 per ton in combined gold and silver values. Development is by a 1,000'

tunnel. Has electric power and adequate mining equipment, employing circa 40 men. Property considered promising.

**MASSASOIT GOLD & COPPER CO.**

Office: 7 Water St., Boston, Mass. Location of lands, if any, unknown.

**MASSASOIT MINING CO. UTAH.**

Office: care of E. V. McGarrick, president, Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Name changed, 1905, from Red Wing Extension Mining Co., to present title. Lands, 120 acres, adjoining the Red Wing, showing a 4' vein, giving average assays of circa 0.5% copper, 7% lead and 8.5 oz. silver per ton. Mine is said to show about 60,000 tons of ore. Idle several years.

**MASS CONSOLIDATED MINING CO.**

**MICHIGAN.**

Office: 1105 No. 6 Beacon St., Boston, Mass. Mine office: Mass, Ontonagon Co., Mich. Mill office: Keweenaw Bay, Houghton Co., Mich. Employs circa 150 men. G. A. W. Dodge, vice-president; Wilfred A. Bancroft, secretary and treasurer; Jas. M. Wilcox, superintendent; preceding officers, Theo. O. Nicholson, John W. Linnell, Jr., Fred W. Hunton and Jerome P. Smith, directors; Jos. Satterley, mill superintendent; W. A. Brown, clerk; E. Fenner Douglass, engineer; Thos. Hall, mining captain; Samuel V. Rawlins, master mechanic at mine; Jas. Richards, master mechanic at mill.

Organized 1899, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par; issued, \$2,435,925. Paid in, \$19. American Lead & Trust Co., Boston, registrar; Old Colony Trust Co., Boston, transfer agent. Annual meeting, second Thursday in March. On Jan. 1, 1908, company had cash, accounts receivable and copper on hand, amounting to \$128,454.04, with liabilities of \$34,286.06, and on Oct. 1, 1908, had circa \$80,000 cash on hand. In 1906 company lost, on operations, \$103,696, and in 1907 loss was \$59,373.

Present holdings of the Mass Consolidated include lands formerly held by various owners as five different mines. Considerable of the real estate stands in the name of the Ridge Mining Co., which, at last accounts, had not been wound up, though the Mass Consolidated is supposed to own practically all of the outstanding stock, and plans winding up the Ridge and transferring its property to the Mass Consolidated. The lands were secured largely through tax-titles, the principal property being the old Ridge mine, but the name Mass was taken in preference to Ridge, from one of the old mines, because the title to the Mass was clear, by purchase. The old Ogima Mining Co. was not wound up until after the Mass was organized, and the Ogima lands were held originally by tax title, but a better title was secured later. Circa 1863, the Ogima Mining Co. transferred, to the Evergreen Mining Co., all right and title to the Evergreen bed under the entire Ogima territory, in exchange for which the Evergreen deeded to the Ogima 16 acres of land from its northeast corner, adjoining the Ridge mine, to enable the Ogima to sink its shafts and work the cupriferous beds lying north of the Evergreen lode. The existence of this old agreement, between the Evergreen and Ogima, was unknown to the present management, at the time of taking charge, but notice was given by the Evergreen, in 1903, that mining on the Evergreen bed must be discontinued, when operations were transferred to the Knowlton and Butler lodes, the management keeping quiet about this trouble, in the hope of coming to an agreement with the Evergreen Mining Co., but such an agreement was not reached, and the entire matter became public March, 1908.

Mineral lands, area circa 2,400 acres, are in a very irregular but fairly compact tract, in Sections 33, 34 and 35, T. 51 N., R. 88 W., and in Section 1, T. 50 N., R. 39 W., bounded on the north by the Union, Adventure and farm lands, on the east by the Adventure, Toltec and Evergreen, on the south by

the Flint Steel and the Knowlton mine of the Adventure, and on the west by the Flint Steel, Adventure and St. Mary's Mineral Land Co. Lands include three old mines, the Ridge, Mass and Ogima; also two old prospects, the Merrimac and Hazard, joint production of which, under previous managements, was 11,131,023 lbs. fine copper. The Ridge mine, operated 1850-1874, made 5,184,449 lbs. copper, and paid dividends of \$100,000. The old Mass mine, opened 1856 and worked intermittently until 1886, secured a total output of 5,014,266 lbs. copper, and the Ogima, opened 1860 and closed 1868, made 982,308 lbs. copper. The Merrimac and Hazard were early-day explorations, without recorded production. These five properties are described, in detail, in Vol. II.

The Mass tract carries six of the seven cupriferous amygdaloïdes of the Evergreen belt, these varying greatly from point to point, but averaging about 10' width, with a sharp bend in their strike, this varying from N. 32° E., on the north, to N. 37° E. at the southern boundary. The dip of the lodes varies from 38° at the Ridge to 47° at the old Mass mine. The copper-bearing beds of the Evergreen belt on the lands of the Mass Consolidated are as follows, from north to south:

1. Knowlton. Carries heavy copper and stamp rock.
2. Mass. Lies 140' south of the Knowlton and carries a little heavy copper and stamp rock.
3. North Butler. Lies about 75' south of the Mass bed, and is wide and fairly mineralized in places.
4. Butler. Lies about 200' south of the North Butler, is 12' to 35' wide, and very bunchy, carrying mainly stamp copper, with occasional masses.
5. Ogima. Lies about 100' south of the Butler. Is mainly a stamp lode, with some barrel-work and occasional masses. Is 10' to 25' wide but shows little good ground.
6. Evergreen or Ridge. Lies about 250' south of the Ogima and is the best lode of the property, ranging 4' to 40' in width, and usually being richest where widest. Is very bunchy, but shows some excellent stopes, yielding heavy copper and stamp rock.

The Mass has openings on all of its copper-bearing beds, and rock is hoisted through the nearest shaft, lodes being connected by crosscuts on various levels. The Mass carries the outer edge of the lodes of the Evergreen belt for about 1½ miles. Shafts A and B are connected, on the Butler lode, down to and including the eighth level. The mine, as a whole, is notably rich in mass copper, and carries considerable silver values, but the ground is exceedingly bunched, and ranges from very rich to absolutely barren. Considerable rock selection is made underground, and culs are used for filling.

Mining and tramping are done on company account, but, by a competitive system, introduced by Capt. Wilcox, exceedingly good results are secured. Daily, weekly and monthly reports of drilling and tramping are made, and laid before the workmen. As a result, the trammers are now averaging 18 tons daily, per man, as against 9 tons in 1906, while the drill-runners are doing practically double the work of two years ago, the lead in drilling being held by Wm. Hocking, aged 63, with an average of 50' to 60' of holes per shift, which is a phenomenal record, in such hard rock. The mine has an exceptionally good crew of men, and, in January, 1908, produced, with 148 men, including surface employees, 109 tons of stamp-rock per man, or about double the average production of the district as a whole.

A shaft, 1,757' deep, formerly known as the Ridge, has 3 compartments, sunk on the Evergreen bed and connected with the Butler lode by crosscuts on several levels. The Evergreen bed in this shaft runs 8' to 10' in width, showing considerable rock of good grade. The old shafthouse was burned,

1905, and was replaced by a head-frame. Rock from this shaft goes by gravity, over an 875' tram, to the rockhouse at B shaft.

B shaft, 875' southwest of A, is old No. 3 Ridge shaft, cut down to 2-compartment size, and is bottomed at a depth of 1,857'. The levels are of varying depths, owing to the old workings having 60' levels, while some of the newer levels at the bottom are 135' apart. Deep levels permit a considerable saving in drifting through poor ground, and sub-drifts can be run wherever needed. B shaft is on the Evergreen lode, upon which the major portion of the openings have been secured, but the Butler has been reached by crosscuts on numerous levels, and shows some good stopes, and the North Butler supplies some fair stamp and barrel copper. The Knowlton bed has been opened also, by a crosscut on the 7th level, and shows good stamp-rock and considerable heavy copper. The main reliance, however, is upon the Evergreen, which is a strong amygdaloid, with plainly defined walls and a dip of 43°, showing some good stopes, of 20' to 25' width. The Evergreen, while exceedingly bumpy, and carrying heart-breaking stretches of almost barren ground, shows beautiful stopes occasionally.

C shaft, 2,148' southwest of B, with collar 100' higher, is 1,000' deep. This is the old Ogima shaft, cut down, retimbered and deepened, and is sunk on the Butler bed, which makes a fair copper showing, with crosscuts to the Evergreen. It is planned eventually to connect the workings of C with A and B shafts.

D shaft, circa 800' southwest of C, is only 150' deep, and is idle.

There are a number of old shafts, the 450' main shaft of the old Mass mine proper having 7 levels, opened on the Knowlton lode. This was pumped out, 1901, and the showing pronounced satisfactory. The Ogima lode has been opened at several points, by crosscuts from A and B shafts, and was found bumpy, though showing occasional good stopes.

The shaft-rockhouse at B is of wood, iron-sheathed, 48x65' in size, and 80' high, equipped with a steam hammer, 2 Blake crushers and a 12x24" Nordberg engine. C shaft has a 40x55' shaft-rockhouse. Rockhouses have been equipped with ingenious devices permitting automatic handling of rock, which clears itself by gravity, 4 men now doing the work formerly, done by 14 men.

The central power-house, 48x150', of wood, iron sheathed, between A and B shafts, has a 24x48" Allis-Chalmers duplex hoist with 10' drums having 11' faces, grooved for 1½" cable, good for one-half mile depth, operating two 6-ton skips, one in each shaft, in counterbalance. The power plant includes a 50-drill Rand 2-stage cross-compound air-compressor, a 75-kw. dynamo for electric light, and two 250-h. p. Stirling boilers.

In addition to the usual mine buildings, there are about 60 good dwellings. The company also has a townsite, Mass City, which is the terminus of the Mineral Range railroad, and a station on the C., M. & St. P. railway, having a number of business houses.

Some diamond drilling was done, during 1905, on the belt of mineral beds paralleling the Evergreen belt and lying circa 2,000' north of the Knowlton lode. This belt includes the Minnesota conglomerate, Calico amygdaloid, and the branch veins associated with these two beds, as opened at the Michigan mine. A shaft has been sunk 130' on the Minnesota conglomerate, which gave a somewhat encouraging copper showing.

Considerable drilling was done, 1907-1908, in search of the amygdaloid opened by the Lake Copper Co., and the other copper-bearing amygdaloids from which the Adventure secured drill-cores. A drill-hole, bored from the fifth level of A shaft, cut a 12' bed carrying considerable copper, and other promising cores have been secured. Apparently there is some question as to

whether the company can or cannot work the beds found by the Adventure drill borings, on 320 acres of the Mass lands.

The Mass mill is at Keweenaw Bay, on an arm of Lake Superior, at the junction on the Mineral Range and Duluth, South Shore & Atlantic railways, 16 miles south of Houghton and 34 miles northeast of the mine, with ample sand-room, deep water and immunity from heavy seas. The 90x232' mill, built by the Wisconsin Bridge & Iron Co., is of steel frame on stone foundations. Equipment includes 2 Nordberg stamps, having vertical mortar-grates supplied with automatic hydraulic cleaning devices. Each head has a nominal stamping capacity of about 525 tons daily, with actual daily average duty of 480 to 500 tons. A Parnall-Krause atmospheric stamp of small size reduces oversize material from the stamp-mortars. The Mass did stamping for the Michigan, with one head, until Sept. 1, 1906.

The 30x60' boiler-house, at the mill, is of wood, with iron sheathing and truss roof, housing two 225-h. p. Stirling boilers. Ashes and cinders are washed into the lake, through a launder.

The 40x70' pump-house has a 16,000,000-gallon Nordberg vertical pump, fed from a 12x30' well, with bottom 6' 6" below mean water-level, connected with a tunnel running 300' under the bed of the bay to the intake.

A 1,000' wharf, also serving as a breakwater, has 18' of clear water at its end, equipped with three towers and derricks, capable of unloading coal vessels at the rate of 900 tons daily. Coal is taken from the wharf, in 3-ton cars, by a 14x20" hoist, to a 1,500' trestle of 20,000 tons storage capacity.

The mill also has a 30x40' warehouse, with office in front, a smithy, machine shop and about a dozen dwellings, on a townsite platted by the company, this also having several business buildings.

Production has been as follows: 2,576,447 lbs. in 1903; 2,182,931 lbs. in 1904; 2,007,950 lbs. in 1905; 2,106,739 lbs. in 1906; 2,078,677 lbs. in 1907. During the latter half of 1908 the mine was making circa 110 tons of mineral monthly, which will give a decreased output for the year. For 1906, rock hoisted was 240,550 tons, of which 185,789 tons were stamped, yielding 3,055,175 lbs. of mineral, returning 2,106,739 lbs. fine copper. For 1907 rock hoisted was 231,018 tons, of which 204,599 tons were stamped, yielding 571,500 lbs. of mass copper and 2,334,820 lbs. of mineral, with a net production of 2,078,677 lbs. fine copper, the proportion of mass copper per ton stamped being 0.14%, percentage of mineral per ton of rock stamped, 0.57%, and percentage of fine copper secured, per ton of rock stamped, being 0.508, or 10.16 lbs. fine copper per ton. The Evergreen bed formerly was producing 75 to 80 tons of mineral monthly, but this has been reduced to about 25 tons per month, by reason of loss of the lode on the Ogima lands.

Costs of the Mass are very high on copper, owing to the low grade of rock stamped, but probably are the lowest in the Lake Superior district on the basis of rock tonnage. For January, 1908, costs were 83 cents per ton for mining, 17 cents for rail transportation and 35 cents per ton for milling, a total of \$1.35 per ton. If the rock averaged three-fourths of 1% fine copper, the mine could be made to pay handsomely, but, unfortunately, outside of the Evergreen lode, only about one-third of the rock opened averages as high as 0.75% copper, balance of openings being in shafts, crosscuts and barren drifts. The local management of the Mass is exceptionally efficient, but it is obvious that the future hope of the property rests either in securing the right to mine the Evergreen lode, where now cut off, or in developing new beds carrying payable copper at the southern end of the property, in line with the important and highly promising discoveries of the Lake and Adventure mines.

**MASSEY STATION MINING CO., LTD.** ONTARIO.  
Office: 2501-43 Exchange Place, New York, N. Y. Mine office: Massey

Station, Algoma, Ont. John W. Thompson, president; Robt. McKay, secretary; Jos. Errington, general manager. Organized 1900, under laws of Ontario, with capitalization \$1,000,000, shares \$100 par. Is closely connected with the Orford Copper Co., which is controlled by the International Nickel Co., and is said to have expended circa \$800,000 on development and equipment. Lands, 640 acres, also 160 acres miscellaneous lands, in Salter township, showing 5 ore bodies, of which 2 developed average 10' width. One vein has been traced for 4,000', and opened to a depth of circa 600', by a shaft having 7 levels, opened 80' apart, with considerable drifting on each level. This shaft develops a vein 9' wide at surface, and 12' at the bottom of shaft, carrying ore of 3 to 5% copper tenor, with traces of gold and silver, and occasional ore of much higher grade. Vein dips at 85°, and the mine is said to have upwards of 50,000 tons of ore blocked out for stoping.

The ore is a finely disseminated, silicious chalcocite above, succeeded by bornite and in turn by chalcopyrite with similar gangue, not adapted to wet concentration, owing to excessive sliming, hence a 50-ton experimental oil concentrator, using the Elmore process, was installed. Mining plant includes 6½x8" and 10x12" Lidgerwood hoists, and a 6-drill Ingersoll-Sergeant air-compressor. Property considered promising and management good. Presumably idle.

#### **MASTODON GOLD & COPPER CO.**

Dead. Had an office in Spokane, Wash., circa 1899.

#### **GEWERKSCHAFT KUPFERBERGWERK MAXIMILIAN. GERMANY.**

Mine office: Nieder-Ludwigsdorf, Schlesien, Germany. Has 2 shafts, the Amalia of 75 metres, and the August of 25 metres. Employs 40 to 50 men and makes about 175,000 lbs. fine copper yearly.

#### **MAY DAY MINING CO.**

UTAH.

Dead. Succeeded by May Day Mining & Milling Co. Formerly at Eureka, Juab Co., Utah.

#### **MAY DAY MINING & MILLING CO.**

UTAH.

Mine office: Eureka, Juab Co., Utah. John Dern, president; preceding officer, W. S. McCormick, Jas. Chipman, M. P. Braffet and N. S. Neilson, directors; C. C. Griggs, superintendent. Capitalization was increased, June, 1907, to \$800,000, shares \$1 par. Is controlled, through ownership of one-half of stock issue, by Uncle Sam Consolidated Mining Co. Former dividend ratio was 1% monthly, and dividend July, 1908, was 1½ cents per share, amounting to \$12,000. Paid \$64,000 in dividends in year ending Apr. 1, 1908, leaving a balance of \$9,084.11, which is an extremely small working balance for a dividend-paying mine.

The mine is operated in connection with the Uncle Sam, and ore is extracted through the Uncle Sam shaft. The property is said to have a 15' ore body, between the 100' and 200' levels. Principal values are in gold and silver, ore carrying a little copper, secured as a by-product.

The mill, rated at 50 tons daily capacity, was treating about 80 tons daily, July, 1908, on two 8-hour shifts. A tram-line has been built from the mill to the old dumps, which are to be concentrated.

Production, 1907, was 153 carloads of ore and 15 carloads of concentrates, valued at \$151,337.33. Property is considered valuable and well managed.

#### **MAYFLOWER MINING CO.**

MICHIGAN.

Office: 825-60 State St., Boston, Mass. Mine office: Calumet, Houghton Co., Mich. H. F. Fay, president; Geo. C. Endicott, secretary and treasurer; preceding officers, John C. Watson, Manning Emery and Stephen R. Dow, directors. Organized 1899, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par, \$8 paid in. Annual meeting, third Wednesday in March.

## THE COPPER HANDBOOK.

Lands, 840 acres, in Sections 7 and 8, T. 56 N., R. 32 W., also a millsite on Torch Lake. The Kearsarge mine lies to the north, Old Colony to the south and the South Kearsarge and Wolverine mines to the west. Exploratory work was begun in 1899 and ended March, 1906. No. 1, or Faul shaft, 400' deep, has considerable drifting on the first and second levels; and a crosscut opens two parallel cupriferous amygdaloids, showing occasional patches of copper, but nothing of promise. No. 2, or Isle Royale shaft, 180' deep, has several hundred feet of drifting and shows a bunchy amygdaloid, 10' to 12' wide, carrying more or less copper in a 2' streak next to the hanging wall. No. 3, or Sandstone shaft, is 60' deep, in a soft and badly broken amygdaloid, all of the strata near the Eastern Sandstone being much disturbed. No. 4 shaft, 580' deep, starts from surface on an unnamed amygdaloid lying approximately 2,000' east of the Kearsarge bed, and at a depth of 425' runs into a parallel amygdaloid lying 90° to the eastward of the first bed. The copper showing is poor. A fairly complete geological cross-section has been obtained by drill-borings.

Surface improvements include a hoist good for 600', boilers and air-compressor, with necessary buildings.

Cash balance, Jan. 1, 1908, was \$43,650.85, company having received, during 1907, \$35,000 from sale of land, with total expenses for year of \$1,492.86. Idle.

**MAY MINING CO.**

ARIZONA.

Office: care of M. L. Heffelman, manager, Sidney, Ohio. Mine office: Mayer, Yavapai Co., Ariz. Lands, 4 claims, 3 miles south of Mayer, in the Big Bug district, adjoining the Arizona Exploration Co. Has a 237' shaft, with hoist good for 600'.

**MAYO MINING CO.**

MEXICO.

Office: care of John E. Carnahan, Canton, Ohio. Mine office: Jesús María, Rayón, Chihuahua, Mex. Carlos Smythe, manager. Capitalization \$1,000,000. Is a twin of the Mary Mining Co. Lands, said to be 3 mines, presumably 3 pertenencias, carrying argentiferous and auriferous copper ore. Presumably idle.

**MAZAPIL COPPER CO., LTD.**

MEXICO.

Office: 47 Peter St., Manchester, Eng. Mine office: Concepción del Oro, Mazapil, Zacatecas, Mex. Works office: Apartado 17, Saltillo, Coahuila, Mex. Employs circa 3,000 men. Wm. Purcell, managing director; P. E. O. Carr, general manager; John Cooper, general mine superintendent; T. S. Abbott, engineer. Organized February, 1891, under laws of Great Britain; reorganized Apr. 21, 1896, and capitalization increased, 1903, to £300,000, shares £10 par; issued, £240,000.

Lands, 530 hectares, in 8 groups, comprising about half copper and half silver-lead claims. Principal properties are the Aranzazu and Cabrestante, producing copper ores, the San Elijo, Naranja, Cajon, San Francisco and Protrero, which are silver-lead mines, and the Promontorio group, producing fluxing ores. Copper ores occur in irregular masses, in limestone, near granite-porphyrity contacts. In 1907 a 1,500-meter tunnel was started, from Concepción del Oro, to tap the Aranzazu mines at 500 meters depth, 200 meters below the present workings. It is expected that this tunnel, in addition to developing large ore bodies, will give sufficient water for the concentrator. The various mines of the company have 83 different shafts and tunnels.

The concentrator, at the mine, is of 150 tons rated daily capacity, but the district is arid, and operations are hampered frequently by shortage of water.

The property has 3 Roe aerial tram-lines; one, of 7 kilometers length,

built by Ropeways, Ltd., of London, having 28 tons hourly capacity, connecting the Aranzazu mine with the smelter at Concepción del Oro.

The company has two reduction plants, one at Concepción del Oro and one at Saltillo, former being somewhat antiquated. The Concepción del Oro works include a 150-ton concentrator and a 500-ton smelter having 3 copper furnaces. It was stated, August, 1907, that the company planned remodeling and enlarging this plant to 1,000 tons daily capacity, at a cost of circa \$250,000.

The Saltillo smelter, completed 1906, does a general custom business, in addition to treating ores of the company. Equipment includes electric power, with alternating current generators direct-connected to 2 Harrison-Fleming Corliss tandem-compound condensing air-compressors. The Saltillo plant has 4 blast furnaces and one reverberatory, and a converter department with 4 stands.

The company maintains 3 hospitals, with a staff of physicians, and owns extensive general stores for supplying the needs of its workmen.

The company controls the Ferrocarril Coahuila y Zacatecas, with 78 miles of main line, running from Concepción del Oro to Saltillo, and the company is said to plan building an aerial tram, to connect the mines with a railroad at San Pedro Ocampo.

Production has been as follows: 6,108,123 lbs. fine copper in 1903; 6,496,000 lbs. in 1905, and circa 7,250,000 lbs. fine copper; 7,000 tons pig lead; 1,200,000 oz. silver and 3,000 oz. gold in 1906, secured from 132,060 metric tons of ore, averaging circa 3.5% copper, 13 oz. silver and 0.02 oz. gold per ton.

#### MAZATZAL COPPER CO.

Office: Jerome, Ariz. Mine office: Payson, Gila Co., Ariz. Jos. J. Shaw, president and general manager; J. N. Boardman, vice-president; E. A. Macpherson, secretary and treasurer; preceding officers, H. Crain, A. J. Murietta, C. H. Hooker, John Henry, D. W. Scott and A. H. W. Eckstein; directors; A. Stegman, superintendent.

Organized Jan. 6, 1907, under laws of Arizona, with capitalization \$1,500,000, shares \$5 par; issued, circa \$1,065,000. Annual meeting, in January.

Lands, 33 claims, in process of patenting; area circa 650 acres, also a 5-acre millsite and sundry other lands, giving total holdings of 700 acres, circa 9 miles from Payson, in the Tonto basin, Mazatzal district, very difficult of access, about midway between Jerome and Roosevelt, and circa 80 miles northwest of Globe, from which point the property is best reached, at present.

Property shows various ore bodies, of which one, under development, apparently is a series of lenses, of about 35' average width, traceable circa 1,000' and proven to depth of 180', with slate hanging and porphyry foot, carrying cuprite, azurite, malachite and copper sulphides, estimated to average 5.5% copper, 3% lead, 2 oz. silver and 40 cents gold per ton. Development is by a 40' shaft and by tunnels of 470', 485' and 400'.

Equipment includes a 50-h. p. steam plant, with double-drum hoist and a 2-drill Ingersoll air-compressor, with 5 buildings.

Company plans sinking the shaft 200', and extending No. 3 tunnel, known as the Bull Frog, and driving a tunnel to a second ore body. Property considered promising and management good.

#### MAZE MINE.

#### JAPAN.

Mine office: Terado-mura, Nishi-Kambara-goru, Echigo, Japan. Mine, opened A. D. 1688, has several small veins, averaging 12" width, carrying chalcopyrite and pyrite, frequently associated with sphalerite and galena, lying usually in propylite. Ore yields 17 to 23% copper, after careful selection. Production, which decreased for some years, was 110,582 lbs. fine copper in 1900. No later returns of output and mine probably idle.

**MAZEPPA CONSOLIDATED MINING CO.**

MEXICO.

Dead. Was succeeded by AgUILA Amalgamated Mining Co. Formerly at Hostotipaquelle, Ahualulco, Jalisco, Mex.

**McALLISTER-BOWLAND COPPER MINING CO.**

WASHINGTON.

Dead. Property was an option on property of Ethel Consolidated Mines Co. Formerly at Index, Snohomish Co., Wash.

**McCABE EXTENSION MINING & MILLING CO.**

ARIZONA.

Office: Prescott, Ariz. Mine office: McCabe, Yavapai Co., Ariz. Reed M. Ling, president; E. B. McDowell, secretary. Organized July 14, 1900, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par. Lands, adjoining the McCabe mine, have a 300' shaft. Company suffered internal dissensions, during which the original promoters stepped from under. Idle some years and apparently moribund.

**McCONNELL COPPER MINING CO.**

NEVADA.

Mine office: Yerington, Lyon Co., Nev. Lands, 10 claims, from which a little ore ranging as high as 50% copper has been produced in the past. Presumably idle.

**McDONALD-ELY COPPER CO.**

NEVADA.

Office: Salt Lake City, Utah. Mine office: Ely, White Pine Co., Nev. David Keith, president; Col. Enos A. Wall, vice-president; Frank Knox, treasurer; Geo. W. Parks, secretary; preceding officers, Hon. Thos. Kearns, Frank K. Wescott and W. G. Lamb, directors; D. C. McDonald, manager. Organized November, 1906, with capitalization \$5,000,000. Lands, 27 claims, area 425 acres, in the eastern part of the Ely district, 7 owned outright and 19 held under bond and lease, showing a prominent blowout. Mine is opened by tunnel and several shafts, including the Mill shaft of 40' and the Golden Gate shaft of 225', showing auriferous copper ore. Has steam power and a 6-drill air-compressor, with a 100-ton mill and cyanide plant remaining from former mining operations for gold. Management is composed of experienced and successful mining men.

**McGREGOR COPPER CO.**

AUSTRALIA.

Office: Queen St., Brisbane, Queensland, Australia. Organized under laws of Queensland with capitalization £150,000, shares 10s. par. Idle.

**McGREW & SCHWARTZ LEAD & COPPER CO.**

ARIZONA.

Mine office: Florence, Pinal Co., Ariz. Has shafts of 80' and 100', showing good ore, and was developing at last accounts.

**McKECHNIE BROS.**

ENGLAND.

Works office: Widnes, Lancashire, Eng. Works include an electrolytic refinery, of about 10 short tons daily capacity, having three 75-kw. generators and 234 tanks, with multiple arrangement of electrodes.

**MCKINLEY CONSOLIDATED MINES CO.**

NEVADA.

Dead. Succeeded the McKinley Mining & Smelting Co., of unfortunate memory, and was succeeded by the Willard-Ely Copper Co. Formerly at Ely, White Pine Co., Nev.

**MCKINLEY MINES, LTD.**

BRITISH COLUMBIA.

Office: care of A. M. McKenzie, secretary, Rossland, B. C. Mine office: Franklin, Boundary district, B. C. E. Lequime, president; H. W. Warrington, vice-president; C. L. Hammond, managing director; A. D. McPhee, superintendent. Lands, 4 claims, on the north fork of Kettle River, about 40 miles above Grand Forks, having an 80' tunnel, said to show a vein of 112' extreme width, carrying low to medium grade auriferous and argentiferous copper ore. Property considered promising. Idle.

**MCKINLEY MINING & DEVELOPMENT CO.**

ARIZONA.

Office: Prescott, Ariz. Mine office: Iron Springs, Yavapai Co., Ariz. Chas. E. McKinley, president and general manager; Geo. P. Ireland, vice-

president; Dr. H. T. Southworth, secretary; W. H. MacKay, treasurer; preceding officers and LeRoy Anderson, directors. Organized 1906, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 38 claims, area 760 acres, including the Dixie group, 6 claims, showing veins of 5' to 15' width, carrying auriferous and argentiferous copper ore, and the Peacock group, 11 miles south of Prescott, in the Copper River district, carrying a vein of 60' estimated width, said to give average assays from surface ore, of 3.7% copper, with good gold values, and assays up to 15% copper, 5 oz. silver and \$6 gold per ton, from sulphide ores in a 200' shaft.

Company reports that it has steam, electric, water, gasoline and air power, with 2 hoists and a \$60,000 order placed for a complete mining equipment, including air-compressors. Has 12 buildings. Management plans installing a 30-stamp mill and continuing development work on a considerable scale. Employs about 20 men, and plans increasing forces materially.

#### MCKINLEY MINING & SMELTING CO.

#### NEVADA.

Dead. Succeeded, circa 1906, by McKinley Consolidated Mines Co., also dead. Formerly at Edy, White Pine Co., Nev. Described Vol. VI.

#### McMILLEN-STONEWALL MINING CO.

#### ARIZONA.

Office and mine: Globe, Gila Co., Ariz. V. Y. Smith, president and general manager; H. L. Coombs, treasurer. Organized March 27, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 32 claims, circa 20 miles east of Globe, carrying 3 miles of the strike of the Stonewall Jackson vein, of 40' to 100' width. The Stonewall Jackson mine, worked prior to 1883, is said to have produced about \$500,000 worth of ore, carrying mainly silver values. Development is by the 3-compartment 200' McMillen shaft, and the old 800' Stonewall Jackson shaft, latter showing no stoping done below 230'. Equipment includes a 5-stamp mill and cyanide plant.

#### MEADOW MINING CO.

#### MICHIGAN.

Office: 50 State St., Boston, Mass. Mine office: Copper Falls, Keweenaw Co., Mich. Wm. F. Fitzgerald, president; John Brooks, secretary and treasurer; Wesley Clark, agent. Organized 1898, under laws of Michigan, with capitalization \$1,500,000, shares \$25 par, as a reorganization of corporation of same name organized 1863, under special Michigan charter. Lands, 364 acres, adjoining the Humboldt and Phoenix mines, carrying the Ashbed lode, which was first opened 1851, with a little mining previous to 1860. The Ashbed is crossed by several transverse fissures, showing pits of prehistoric miners, and a little copper has been obtained therefrom. Fully described Vol. II.

#### MEADOW MOUNTAIN MINING CO.

#### COLORADO.

Offices: Aspen, Colo., and Bangor, Me. Mine office: Crystal, Gunnison Co., Colo. F. O. Beal, president; J. T. Stewart, vice-president and general manager; Victor Brett, secretary; J. T. Bowler, treasurer; W. Porter Nelson, assistant secretary and treasurer; preceding officers and C. W. Coffin, directors; John Detera, mine superintendent. Organized under laws of Colorado, with capitalization \$100,000, shares \$1 par.

Lands, 8 claims, area 70 acres, also a 5-acre millsite, in the Rock Creek district, carrying 5 fissure and contact veins, latter between limestone and shale, of which 2, under development, average 5' width and carry chalcopyrite giving average assays of 3.5% copper, 4% lead, 23% zinc, 6 oz. silver and \$1 gold per ton. Has shafts of 100' and 300'; and an 800' tunnel, with about 2,750' of underground openings, estimated to show 1,000 tons of ore blocked out for stoping. Has gasoline power.

#### MEDICINE BOW'S MINES CO.

#### WYOMING.

Office and mine: Centennial, Albany Co., Wyo. Employs 3 men. Jas. Christensen, president; G. S. Simmons, vice-president and superintendent;

Wm. Benton, secretary, treasurer and general manager; preceding officers, Corlett Downey and Ralph W. Morse, directors. Organized Sept. 19, 1903, under laws of Wyoming, with capitalization \$100,000, shares \$10 par.

Lands, 10 claims, unpatented, area 200 acres, also a 5-acre millsite, in the Holmes district, showing syenite, granite, diorite and limestone, ore bodies occurring as fissures in syenite and granite, and as contact deposits between limestone and serpentine. There are 3 ore bodies, of which one, known as the Cuprite vein, under development, is of 15' average width, traceable circa one mile, carrying chalcocite, bornite and chalcopyrite, with some oxidized ore, estimated by company to average 5% copper, 3 oz. silver and \$4 gold per ton. Test shipments have returned 7 to 15% copper, 2 to 12 oz. silver and \$3 to \$18 gold per ton. Development is by 10 pits and shafts of 10' to 80' depth, and a 960' tunnel. The company estimates 40,000 tons of ore in sight, with 16,000 tons blocked out for stoping. Property was idle, 1905-1907, but was reopened, 1908, on a small scale.

#### **MEDINA COPPER CO.**

ONTARIO.

Office: 520 University Blk., Syracuse, N. Y. Mine office: El Dorado, Hastings Co., Ont. Organized under laws of Washington, with capitalization \$750,000, shares \$1 par, practically as successor of the Medina Gold Mining Co., which went out of business suddenly, after paying several dividends, presumably unearned. Apparently has disposed somehow of its lands at El Dorado, to the Ontario Copper Co., which is practically under the same management. Is not regarded favorably.

#### **MEDINA GOLD MINING CO.**

ONTARIO.

Dead. Succeeded, circa 1907, by Medina Copper Co. Formerly at El Dorado, Hastings Co., Ont. Described Vol. VI.

#### **MEDORA MINE.**

MICHIGAN.

Owned by Keweenaw Copper Co.

#### **MEGOHRIS COPPER CO.**

ARIZONA.

Mine office: Silver Bell, Pima Co., Ariz. Mervin Rice, president; W. H. Coe, secretary. Capitalization, \$600,000. Lands, sundry claims, in the Old Hat district, said to show good ore. Not favorably regarded, idle some years and apparently moribund.

#### **MEGUNTICOOK GOLD & COPPER MINING CO.**

COLORADO.

Office and mine: Lake City, Hinsdale Co., Colo. P. G. Dawson, local director, at last accounts. Capitalization \$400,000, shares \$5 par. Idle and apparently hopelessly insolvent.

#### **GRUBE MEHLBACH.**

GERMANY.

Letter returned unclaimed from former office, Weilmünster, Hessen-Nassau, Germany. Has auriferous and argentiferous lead, copper and zinc sulphides, with steam and electric power.

#### **MELBA MINING CO.**

ARIZONA.

Dead. Formerly at Patagonia, Santa Cruz Co., Ariz.

#### **MELOZER MINING CO.**

MEXICO.

Office: 1104-27 William St., New York, N. Y. Mine office: Pesqueira, Ures, Sonora, Mex. Company holds direct title to property formerly claimed by the Copete Mining Co., and transferred later thereby to Copete Consolidated Copper Co. For further light on a complicated and rascally situation, see Copete Mining Co.

#### **MELKEDALEN COPPER MINES, LTD.**

NORWAY.

Dead. Reorganized, 1904, as Melkedalen, Ltd. Formerly at Evenæs, Ofoten Fjord, Tromsø, Norway.

#### **MELKEDALEN, LTD.**

NORWAY.

Office: 28 Leadenhall St., London, E. C., Eng. Mine office: Evenæs, Ofoten Fjord, Tromsø, Norway. Geo. Book Mee, chairman; W. A. Stearna,

secretary; J. D. Holman, consulting engineer. Organized Apr. 26, 1904, under laws of Great Britain, as a reconstruction of the Melkedalen Copper Mines, Ltd., with capitalization £125,000, shares 10s. par; issued, £78,103. Lands, 440 acres, freehold. An electric railroad, connecting mines with the sea, was under construction, 1908. Mill, near Rosevanden, rated at 150 tons daily capacity, was begun June, 1907. Company plans operations on the basis of a yearly production of 60,000 tons of iron pyrites and cupriferous pyrites, to be exported.

**MELROSE COPPER MINE.****AUSTRALIA.**

Office: 10-114 Pitt St., Sydney, Australia. Mine office: Condobolin, Cunningham Co., N. S. W., Australia. H. Ernest A. Miller, managing director and secretary; Geo. Eason, treasurer; preceding officers and Samuel Solomons, directors; Malcolm Darrach, mine superintendent. Organized Dec. 1, 1903, under laws of New South Wales, with capitalization £12,000, shares £5 par.

Lands, 2 claims, area 120 acres, held under 21-year lease from the crown, at 5s. royalty per acre yearly, with option of renewal, also a 10-acre water-right, in the Melrose and Condobolin districts. Property is well timbered, but water is scarce, nearest permanent water being the Lachlan River, 26 miles south. The government railway is 29 miles distant. Mine was first known as the Boone West, and later as the Anaconda.

Property shows upthrust Silurian slates, merging into schistose slate, carrying fissure veins with chutes, of which 4 are proven, these ranging 6' to 20' in width, 30' to 50' in length, and depth, proven on the Southern chute, of 280'. Development is by shafts of 95', 280', 65' and 100', and by a tunnel. No. 1 chute carries 3' of chalcocite and 3' of mixed ore. No. 2 chute has a paystreak carrying cuprite and chalcocite, balance of vein carrying chalcopyrite, of circa 4% tenor, with combined gold and silver values of circa 16s. per long ton, with gangue of altered iron sulphides. No. 3 chute shows 6' of lead and copper ores. Values are erratic, ranging from 2.5 up to 30% copper, with a general average, for pay ore, of 6 to 8% copper, circa 3 oz. silver and 2 dwts. gold per ton. Management estimates about 15,000 long tons of ore in sight, with circa 8,000 tons blocked out for stoping.

The mine has no machinery equipment, using horsepower and windlass. Property considered promising.

**MEMPHIS COPPER CO.****NEW MEXICO.**

Office: 601 Postal Bldg., Kansas City, Mo. Mine office: Organ, Donna Ana Co., N. M. J. I. McCullough, president and general manager; J. E. Bowersox, vice-president; Hill P. Wilson, secretary; F. M. Johnson, treasurer; preceding officers, C. B. Gill, G. F. Sanford, J. T. Wallace and A. M. Peck, directors. Organized June, 1905, under laws of New Mexico, with capitalization \$1,000,000, shares \$1 par. Has 2 shafts, of circa 175' each, and shipped from same, 1905, ore worth \$7,965, averaging 17.5% copper and 7 oz. silver per ton. Presumably idle.

**MEMPHREMAGOG MINING CO.****QUEBEC.**

Mine office: Bolton Centre, Brome Co., Quebec. Property is the Smith mine. Idle some years.

**LORENZO MENA.****CHILE.**

Office: Cabildo, La Ligua, Aconcagua, Chile. Mine office: Nipa, La Ligua, Aconcagua, Chile. Lands include La Mina Cata, at El Queñado, 9 kilometers from Cabildo, showing a vein of 6' to 7' average width, in granite, with strike N. 20° W., and dip of 78°, carrying cupriferous pyrite with calcite gangue, averaging only 4 to 5% copper tenor, and available mainly as a fluxing ore. Production, 1903, was circa 1,800 metric tons of 4% ore, secured by 35 men. La Mina Santa Rosa y Anexas has a vein of 2' to 3' width, opened to depth of 140' and length of 200 meters, producing, 1903,

circa 30 tons of 30% ore, after hand selection. Production, 1903, estimated at 125,000 lbs. fine copper.

**MENDOCINO COFFEE KING MINING CO.**

CALIFORNIA.

Mine office: Yorkville, Mendocino Co., Cal. Has slight development, by tunnel. Idle since circa 1903.

**MENDOZA CONSOLIDATED COPPER CO.**

MEXICO.

Office: 709-104 North Spring St., Los Angeles, Cal. Mine office: La Paz, Sur, Baja California, Mex. Juan H. Mendoza, president; Jesse J. MacDonald, general manager. Has auriferous and argentiferous lead and copper ore, carrying values mainly in the precious metals. Has a mill with crusher, 10-stamps and a Huntington mill. Was said to employ circa 150 men, at one time, which probably was an overestimate. Idle at last accounts.

**MENLO PARK COPPER MINING CO., LTD.**

NEW JERSEY.

Dead. Formerly at Menlo Park, Middlesex Co., N. J.

**SOCIEDAD ANOMINA COBRES DE MENORCA.**

SPAIN.

Offices: Gran Via, 32, Bilbao, Spain. Mine office: Mercadal, Mahón, Menorca, Spain. Cirilo de Gana, president; Fernando Olascoaga, vice-president; Manuel de Ozamir, secretary; Esteban Puego, managing director; Baron de Prisbuer, purchasing agent; Santiago de Arechago, consulting engineer. Organized October, 1901, under laws of Spain, with capitalization 2,000,000 pesetas, shares 250 pesetas par, 35% paid up.

Lands, 411 hectares, including the Rubia, Partida, Emilia and other copper mines, at the base of Mt. Toro. Presumably idle.

**JOSÉ DEL C. MENSES.**

CHILE.

Mine office: El Cobre, La Ligua, Aconcagua, Chile. Property is La Nueva and La Esperanza mines, showing a vein of 2 meters average width with northeasterly-southwesterly strike, carrying sulphide ores. In 1903 produced circa 600 tons of 5% copper ore with 14 men.

**AKTIESELSKABET MERAKER GRUBER.**

NORWAY.

Office and mine: Meraker, Trondhjem, Norway. P. C. Soelberg, chairman; Edmund Harbitz, vice-chairman; Fr. Krohg, secretary; R. Sivertsen, treasurer; Joh. C. Andresen, managing director; M. Rasmussen, superintendent; Harold Dahl, mill superintendent. Organized 1906, under laws of Norway, with capitalization 1,200,000 kroner, shares 500 kroner par. Ore carries 1.5 to 6% copper, and 45 to 47% sulphur. Company plans an ultimate yearly productive capacity of 50,000 metric tons of ore.

**MERCEDES COPPER CO.**

MEXICO.

Office: care of I. K. Franklin, Nogales, Ariz. Mine office: Santa Cruz, Magdalena, Sonora, Mex. Under development with a small force since circa 1905.

**MERCER-SAN RAFAEL MINING CO.**

MEXICO.

Mine office: Tapalpa, Sayula, Jalisco, Mex. Lands are on the eastern slope of the Sierra Cacoma, circa 21 miles west of Ayutla. Topography is rugged, and claims are well located for development by tunnel. Property shows a wide belt of quartzite and diorite. Mine is an antigua, ores carrying gold, silver and copper values, with a little lead and zinc. Equipment includes a water-power installation, 5-stamp mill, cyanide plant and patio, and a concentrator is planned.

**MERCER SYNDICATE.**

ARIZONA.

Mine office: care of W. H. Mercer, P. O. Box 56, Globe, Gila Co., Ariz. Lands, sundry claims, in vicinity of the Five Points property, on which a shaft was sunk in 1906. Presumably idle.

**MERISSKI WORKS.**

RUSSIA.

Office: care of R. A. Richner, Batum, Russia. Mines office: Kutais, Russia. Production, 1899, was 164,092 lbs fine copper. Presumably idle.

**MERRILLA COPPER MINING CO.****AUSTRALIA.**

Mine office: Goulburn, N. S. W., Australia. Has a 124' shaft, with erosion cut at 112', expected to cut ore.

**MERRIMAC COPPER CO.****COLORADO.**

Dead. Formerly claimed to be located at Taylor, Colorado, which is not a postoffice.

**MERRY ENGLAND SYNDICATE.****NEW GUINEA.**

Mine office: Port Moresby, New Guinea. Property, adjoining the Astrolabe, was under development, on a small scale, early 1908.

**MESA MINING & REDUCTION CO.****ARIZONA.**

Dead. Formerly at Mesa, Maricopa Co., Ariz.

**MESCALERO MINING & MILLING CO.****NEW MEXICO.**

Mine office: Roswell, N. M. Mine office: Parsons, Lincoln Co., N. M. J. A. Ryan, president; J. A. Cottingham, secretary; John S. Lenox, general manager; James E. Hunt, superintendent; John Kinnie, mill superintendent. Mine, developed by a 400' tunnel, carries auriferous and argentiferous copper ores. Has steam and electric power, 20-stamp mill, concentrator, 100-ton cyanide plant and 50-ton smelter. Presumably idle.

**MESCAL MINING CO.****ARIZONA.**

Office: Southern Trust Bldg., Little Rock, Ark. Mine office: Jerome, Yavapai Co., Ariz. Employs 10 men. Capt. Samuel B. Adams, president; Wm. M. Kavanagh, treasurer; preceding officers, C. Traves Drennen, J. E. Leeper and Walter C. Miller, directors; J. Prather, secretary; Jas. F. Mowles, superintendent. Organized under laws of Arizona, with capitalization \$1,500,000, shares £1 par.

Lands, 7 claims, 3 patented, in Metcal Gulch, near Mingus Mountain, showing fissure veins in slate and contact deposits between slate and dolomite. Main ore body, of circa 3' width, traceable circa 1,600', opened to depth of 245' by an 85' shaft and tunnels of 220' and 900', with circa 1,200' of workings, shows chalcopyrite assaying 1 to 2% copper, with a trace of gold.

Property has 5 buildings. Company plans continuing development by tunnel, and eventually sinking a shaft.

**MESCAL MINING & MILLING CO.****ARIZONA.**

Dead. Formerly at Providence, Yavapai Co., Ariz.

**MESSINA COPPER EXTENSIONS, LTD.****TRANSVAAL.**

Office: P. O. Box 1955, Johannesburg, Transvaal. Organized under laws of Transvaal, with capitalization £8,000, shares £1 par; fully issued. Lands, 100 base metal claims, on the government farm Mondfarlan No. 1435, near the Limpopo River, in the Zoutpansberg district, Transvaal. Nearly out of cash and reorganization proposed, at last accounts.

**MESSINA (TRANSVAAL) DEVELOPMENT CO., LTD.****TRANSVAAL.**

Office: 6 Princes St., London, E. C., Eng. Mine office: Berkenrode, Zoutpansberg, Transvaal. Arthur M. Grenfell, chairman; preceding officer, J. S. P. Samborne, J. P. Grenfell and R. J. Frecheville, directors; Wm. J. Challis, secretary; Chas. Stuart, chairman local board; C. H. Norman, secretary local board; J. M. Calderwood, consulting engineer; A. J. Fraser, mine manager.

Organized Jan. 30, 1906, under laws of Great Britain, with capitalization £110,000, increased, Jan. 27, 1906, to £200,000, shares £1 par. Debentures, £50,000 authorized; £48,500 issued, at 6%, and company authorized, 1908, an issue of £210,000 convertible debentures, at 6%, for retirement of outstanding debentures, acquisition of additional lands and general development.

Lands are 1,209 claims, on the farm Berkenrode, held under a 99-year lease from the Transvaal government, also 3 freehold farms, with a total area of circa 14,000 acres, to which the farm Vogelsang, adjoining the farm Berken-

lode, and carrying the extension of the Messina ore bodies, was added, 1908. Lands formerly were in dispute with the Oceana Consolidated Co., Ltd., but satisfactory titles have been secured. Lands are near the Limpopo River, and water is available at fairly shallow depth. The property carries some timber fit for mining and building purposes, with good timber circa 50 miles distant.

The property shows extensive remains of ancient workings, with scoria from old smelting operations. Formation is mainly granite, carrying a mineralized zone of circa 1,300' width, having 5 parallel veins, traceable several miles. There are two main ore bodies, of which the north main lode has been proven for 1,700' length and the south main lode for 2,400'. Ore is largely chalcocite, with considerable bornite and chalcopyrite, and the property shows very high grade ore in quantity.

The mine is opened by 7 shafts, mainly shallow, No. 3 shaft being 315' deep, with 3 levels opened, the bottom level, at 300', showing a 42" vein of chalcocite, giving average assays of 25.25% copper. Workings, July 1, 1908, aggregated 11,774' in length, and for year ending June 30, 1907, development was 220' of sinking and 3,328' of drifting and crosscutting. Ore reserves, Jan. 1, 1908, were estimated at 15,423 long tons, averaging 24.04% copper, with 4,236 tons of second grade ore, assaying 11.06% copper, <sup>at surface</sup>. On July 1, 1908, the mine had upwards of 7,000 tons of high grade ore blocked out, for stoping. The figures of ore reserves are conservative, and, despite the exceedingly high average assay tenor, the estimates of values are reliable.

Equipment includes a double hoist and 3-drill air-compressor. Property has a number of good buildings, including shops, engine houses and dwellings for officials. Wood and coal are scarce, but it is thought that coal exists on the Rhodesian side of the Limpopo River.

The 50-ton mill, designed by Mr. Calderwood, begun work May 1, 1908. Equipment includes a Blake crusher, delivering ore to a 70-ton bin, whence it is fed automatically to coarse crushing rolls, and delivered therefrom to a bucket elevator, which leaves crushed ore at the top of the mill, whence it is delivered through spout to the first of a series of 4 revolving trommels having water sprays. Mill equipment includes Hartz jigs, 2 Wilfley tables and classifiers. The mill has a monthly productive capacity of about 250 long tons of concentrates, averaging 64.05% copper, with rich middlings and slimes accumulated for future treatment. The mill has reservoirs for water supply, obtained from the mine and a well, and fuel is gas, obtained from a Tangye suction gas producer plant, retorting charcoal.

Transportation facilities are poor, consisting mainly of donkey wagons from the mine to Pietersburg, via Brak River, a distance of 180 miles, with a freight rate of £6 per ton. A new government wagon-road will aid greatly, and a railroad to the district is projected by the Transvaal government.

There is a shortage of native labor, which has hampered operations materially.

The management plans building a small smelter, to have a reverberatory furnace, and such a smelter should pay for itself within a short time, owing to high freight rates, though the scarcity of fuel might render smelting difficult and costly.

Considerable production has been secured, under disadvantageous circumstances, ore being hand-cubed and brought up to high tenor on picking-tables and hand jigs. Production, for two years ending Dec. 31, 1907, was 2,616,000 lbs. fine copper. For fiscal year ending June 30, 1907, production was 2,967 long tons of ore, averaging 23.9% copper, by assay, of which 768 tons, 10 cwt., assaying 60.66% copper, were shipped to London, yielding 1,044,219 lbs. fine copper, realizing £24,626 and returning a net profit of £14,832. For fiscal year

ending June 30, 1908, ore shipped averaged 58.03% copper, and yielded gross returns of £33,102..

The Messina is a property of exceptional promise, and has been excellently handled. It is the principal and only important copper producer of the Transvaal, and bids fair to develop into a large and profitable mine.

#### METALS MILLING CO.

Mine office: Walker, Yavapai Co., Ariz. Geo. C. Marrs, superintendent. Property is the Shelton group, carrying auriferous and argentiferous copper ores. Has steam and electric power and 10-stamp mill.

#### COMPANIA METALURGICA.

Office: Santiago de Chile. Mine office: Chuquicamata, Calama, Antofagasta, Chile. Organized March 9, 1905, under laws of Chile, with capitalization 2,500,000 pesos, shares 100 pesos par.

#### COMPANIA METALURGICA NACIONAL.

MEXICO.

Is the Mexican incorporation of the National Metallurgical Co.

#### METATES MINING CO.

MEXICO.

Letter returned unclaimed from former office; Columbus, Ohio. Mine office: Guadalupe de los Reyes, Cosalá, Sinaloa, Mex. Organized December, 1902, with capitalization \$1,000,000, shares \$1 par. Is controlled, through stock ownership by Sinaloa Exploration Co. Lands are circa 80 miles north of Mazatlán. Apparently moribund.

#### METHOW GOLD & COPPER MINING CO.

WASHINGTON.

Office: 77 Jamieson Blk., Spokane, Wash. Mine office: Winthrop, Okanogan Co., Wash. W. D. Scott, president; J. N. Tewinkel, secretary and treasurer. Organized, 1889, under laws of Washington, with capitalization \$90,000, shares 5 cents par. Lands, 8 claims, area 150 acres, showing fissure veins, in metamorphosed conglomerates of Huronian age, carrying sulphide ores assaying 9% copper, 2 oz. silver and \$5.50 gold per ton, developed by a 52' shaft and three tunnels, longest 564'. Has available water power and timber. Idle several years, except for annual assessment work.

#### METROPOLITAN MINING CO.

WASHINGTON.

Mine office: Berlin, King Co., Wash. Ores carry gold, silver and copper. Has water power. Idle several years.

#### COMPANIA METALURGICA MEXICANA.

MEXICO.

Office: 82 Beaver St., New York, N. Y. Mine offices, Sierra Mojada, Monclova, Coahuila, Mex., and Concepción del Oro, Mazapil, Zacatecas, Mex. Works office: San Luis Potosí, S. L. P., Mex. Employs circa 1,300 men. Robert S. Towne, president and treasurer; Geo. Foster Peabody, first vice-president; A. Foster Higgins, second vice-president; Chas. J. Nourse, Jr., secretary and assistant treasurer; Donald C. Brown, general manager; Geo. H. Carnahan, general mine superintendent; J. L. Saint-Dizier, assistant superintendent; C. M. Van Cleve, smelter superintendent; Frank W. Carnahan, engineer; T. L. Carnahan, local superintendent at Concepción del Oro; J. M. Williams, Jr., local superintendent at Sierra Mojada; W. K. Woodruff, local superintendent at San Luis Potosí.

Organized 1890, under laws of New Jersey, with capitalization \$4,000,000, shares \$100 par, in \$1,000,000 cumulative 8% preferred, \$1,250,000 guaranteed 6% second preferred, and \$1,750,000 common stock. Bonds, \$2,000,000, at 5%; sinking fund, 2% per annum of outstanding bond issue. Morton Trust Co., New York, registrar. Annual meeting, first Monday in June.

Property interests are extensive, including control of numerous subsidiary mining, transportation and land companies, among the more important being the Sombrerete Mining Co. and the Mexican Lead Co., at Sombrerete, Zacatecas, Mex., and the Montezuma Lead Co., Alvarez Lead & Timber Co., Mex-

can Mineral Railway Co. and Potosí & Rio Verde Railway Co. The company owns extensive tracts of timber lands, and has steam and electric power.

The Veta Rica mine, at Sierra Mojada, produces silver-lead and copper ores, latter averaging circa 3% copper, 5% zinc and 20 oz. silver per ton. Development is by a 600' main shaft, and values are mainly in lead and silver.

The Cerro Prieto and adjoining mines, at Concepción del Oro, are developed by tunnels, producing auriferous copper ores.

The San Pedro and San Pablo mines are important producers.

The smelter, of circa 750 tons daily capacity, has a modern equipment throughout, including 12 furnaces for reduction of gold, silver and lead ores, and a special copper department of 100 tons daily capacity. The works have steam and electric power, and employ circa 1,000 men. The company is a large producer of lead and silver, with considerable outputs of copper and gold, secured mainly as by-products.

#### **MEXICAN-AMERICAN SMELTING CO.**

**MEXICO.**

Letter returned unclaimed from former office, 24 Broad St., New York, N. Y. Works office: Guaymas, Sonora, Mex. Supposedly is controlled by Greene Gold-Silver Co. Property is a smelting plant, nominally rated at 250 tons daily capacity, apparently incomplete, and never blown in.

#### **MEXICAN-ARIZONA MINING CO.**

**ARIZONA.**

Dead. Absorbed, 1903, by New England & Clifton Copper Mines of Arizona. Formerly at Clifton, Graham Co., Ariz.

#### **MEXICAN COPPER CO.**

**ARIZONA.**

Dead. Formerly at Martinez, Yavapai Co., Ariz.

#### **MEXICAN COPPER CO.**

**MEXICO.**

Mine office: Salinas del Peñón Blanco, Salinas, San Luis Potosí, Mex. Has steam and gasoline power and a small smelter. Idle.

#### **MEXICAN COPPER REDUCTION CO.**

**MEXICO.**

Office: care of J. A. Haralson, vice-president and general manager, Mexico. D. F. Works office: San Luis de la Paz, Guanajuato, Mex. H. Marsans, president; J. E. Hartman, secretary; preceding officers, E. Benoit and O. C. Omer, directors. Property apparently consists of a patented process of reduction, by which the company expects to reduce ores without fluxes.

#### **MEXICAN COPPER SYNDICATE, LTD.**

**MEXICO.**

Dead. Formerly had an office at St. George's House, Eastcheap, London, E. C., Eng.

#### **MEXICAN DEVELOPMENT CO.**

**MEXICO.**

Office: 69 Wall St., New York, N. Y. Mine office: Coapa, Morelia, Michoacán, Mex. Geo. Buckman, president; G. E. Fauquier, vice-president; C. D. Knapp, Jr., secretary and treasurer. Organized 1906, under laws of Maine, with capitalization \$2,000,000. Is a holding company only, controlling, through stock ownership, the Santa Emilia Copper Co.

#### **MEXICAN EXPLORATION & MINING CO.**

**MEXICO.**

Office: 42 Broadway, New York, N. Y. Mine office: Sauqui de Batuc, Ures, Sonora, Mex. Organized 1908, to take over all rights and concessions of the Yaqui Development Co. Has authorized a \$1,500,000 bond issue. Is said to control, through ownership of 51% of issued stock, the Douglas Copper Co., and apparently was organized to finance the Douglas Copper Co. and its allied and subsidiary corporations. Lands are reported to be mineral rights to 2,165 square miles, including a number of antiguas.

#### **MEXICAN INVESTMENT & DEVELOPMENT CO.**

**MEXICO.**

Office: 82 Wall St., New York, N. Y. Operating office: Guanajuato, Gto. Mex. Mine office: Autlán, Jalisco, Mex. Employs 150 men. Dwight Furness, president and general manager; B. Morgan Esler, vice-president; Wm. Eaton, secretary and treasurer; S. N. Craig, superintendent; H. P. Wherry, mill super-

intendent. Organized under laws of Arizona, with capitalization \$300,000, shares \$5 par.

Lands, 158 acres, also miscellaneous lands of 2,100 acres, former including the Agua Blanca mine, area 40 hectares, 30 miles northeast of Autlán and about 75 miles from a railroad. The Agua Blanca, opened circa 1860, by John and Edward Blake, and the leading copper mine of Mexico for two decades, shows diorite and andesite, carrying fissure veins with a brecciated zone of 30' to 50' width, traceable 2,000', carrying mainly chalcopyrite of 4 to 5% copper tenor, the Agua Blanca being unique among the copper mines of the district in carrying neither gold nor silver values.

Development is by a 150' shaft and a 1,000' tunnel, showing about 30,000 metric tons of ore.

Equipment includes a 75-h. p. steam plant at the mine, 25-h. p. hoist and 12 mine buildings, including a 20x40' stone machine shop.

The 100-ton concentrator, 50x150', of wood, has an 80-h. p. steam plant, 2 Sturtevant crushers of 200 tons daily capacity, 3 rolls, four 3-compartment jigs, 2 Wilfley tables and one slime table, putting about 8 into 1, and producing circa 300 tons of concentrates monthly, which are shipped, by mule, to Ameca, thence by rail to Aguascalientes smelter.

A hydro-electric power installation has been given tentative consideration. Company plans continuing development, and hopes to produce about 1,000,000 lbs. fine copper in 1909. Property considered valuable and management good.

#### MEXICO.

Office: 28 Budge Row, London, E. C., Eng. Letter returned unclaimed from former mine office, Zimapán, Hidalgo, Mex. S. Crowder, managing director. Organized under laws of Great Britain, with capitalization £36,000; issued, £31,507. Debentures, £10,000. Lands, 300 hectares, including the Montezuma mine, carrying auriferous and argentiferous ores of copper, developed open-east, with a hydro-electric power installation. Idle several years and moribund.

#### MEXICAN MINES CORPORATION.

#### MEXICO.

Office: 25 Broad St., New York, N. Y. Mine office: Baca, Hidalgo, Chihuahua, Mex. C. L. Graves, general manager; W. D. Pearce, resident manager; E. J. Ernest, mine superintendent. Organized under laws of Maine, with capitalization \$3,500,000, and is protocolized in Mexico. Lands are 4 groups, including the Ventura mine, about one-half mile from the Mina Cigarro, having a 230' three-compartment shaft, showing fissure veins carrying streaks of auriferous and argentiferous copper below commercial grade. Is said to have developed a little ore of commercial tenor.

#### MEXICAN MINES SYNDICATE, LTD.

#### MEXICO.

Letter returned unclaimed from former mine office, Cusihuriáchic, Iturbide, Chihuahua, Mex. Chas. Moffat, manager. Property is La Reipa mine, carrying argentiferous and auriferous lead and copper ores, latter secured in small quantities, as a by-product. Has gasoline power and 3 Huntington mills.

#### MEXICAN MINING & DEVELOPMENT CO.

#### MEXICO.

Office: 511 Baker Blk., Springfield, Mo. Mine office: Ocotlán, Oaxaca, Mex. S. W. Grant, president; J. A. Taylor, vice-president; C. E. Davis, secretary; H. Parmenter, treasurer; C. C. Goldsworthy, mine superintendent. Capitalization \$1,250,000.

#### MEXICAN MINING, REFINING & EXPLORATION CO.

#### MEXICO.

Office: 501 L. W. Hellman Bldg., Los Angeles, Cal. Mine office: Hermosillo, Sonora, Mex. Employes 25 men. Wm. T. Calderwood, president and general manager; F. H. Vahrenkamp, vice-president; F. G. Lamb, secretary and treasurer; preceding officers, Chas. S. Montgomery, F. L. Wiles and E. B. Lovie, directors; F. Smith, superintendent; H. H. Light, engineer. Organized

Apr. 20, 1904, under laws of Arizona, with capitalization \$5,000,000, shares \$1 par.

Lands, 104 hectares, in 2 groups, first being the Creston de Cobre, circa 25 miles west of Hermosillo, said to be an antigua dating from the eighteenth century. This group shows 5 ore bodies, of which 3, under development, are reported by the company as of 30' to 40' width, carrying oxidized and sulphide ores of copper and lead assaying 7% copper, 50% lead, 80 oz. silver and \$8 gold per ton. Development is by 5 shafts, of circa 1,000' aggregate depth, and by a 300' tunnel, estimated to show 100,000 tons of ore, which seems entirely too high. Property has a 30-h. p. steam plant, with 2 hoists.

Lands also include La Cobriza group, at Soyopa, area 4' hectares, said to show a 16' vein with a 7' paystreak carrying ore of 10 to 25% copper tenor, with silver values.

#### **MEXICAN MINING SYNDICATE.**

**MEXICO.**

Dead. Formerly at Acuitzio, Morelia, Michoacán, Mex. Described Vol. VII.

**MEXICO.**

#### **MEXICAN SMELTER CO.**

**MEXICO.**

Office: Chicago, Ills. Works office: Pedricella, Cuencamé, Durango, Mex. Property is a 50-ton furnace, built on the patents of Jas. E. Anderson, using petroleum for fuel.

#### **MEXICAN SMELTING CORPORATION.**

**MEXICO.**

Office: 678 Salisbury House, London, E. C., Eng. Works office: Monclova, Coahuila, Mex. Maj.-Gen. G. de la Poer Beresford, chairman; A. F. Roberts, secretary. Organized Aug. 29, 1908, under laws of Great Britain, with capitalization £150,000, in 100,000 ordinary shares of £1 par and 1,000,000 shares of 1s. par. Debentures, £200,000 first-mortgage profit-sharing debentures at 6½% authorized; £15,600 issued. Lands, circa 3,000 acres. Company is said to plan a \$1,000,000 smelter, to compete with the American Smelting & Refining Co.

#### **MEXICAN SMELTING & REFINING CO.**

**MEXICO.**

Works office: Taxco, Alarcón, Guerrero, Mex. Lawrence Tatum, president and general manager; Fredk. M. Perkins, superintendant. Lands, 200 hectares, including several antiguas, principal being the San José mines, carrying auriferous copper ores, with values mainly in silver. Has gas power, and a 60-ton smelter with water-jacket blast-furnace and a small refining furnace.

#### **MEXICAN UNION MINING CO.**

**MEXICO.**

Office: 753 Monadnock Bldg., Chicago, Ills. Mine office: Unión de Tula, Autlán, Jalisco, Mex. Newton B. Storer, president; Chas. G. Thompson, secretary; Wm. H. Lees, general manager; B. W. Sweet, mill superintendent and engineer. Organized April, 1902, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 100 pertenencias, area 247 acres, in the Ayutla district, including the Soquite Prieto mine, having a 30' fissure vein, with laterals, in limestone, opened by a 275' shaft, showing carbonate ores, chalcocite and chalcopyrite giving assays of 7% copper, 10 to 50 oz. silver and from a trace to \$10 gold per ton. Has a 75-h. p. steam plant and is said to have contracted for the development of a water power. The 35-ton concentrator has a 7x9" Dodge crusher, one train of rolls, one 5' Huntington mill and 3 Overstrom tables.

#### **MEXICAN WESTERN DEVELOPMENT CO.**

**MEXICO.**

Office: 71 Broadway, New York, N. Y. Mine office: Chimala, Jalisco, Mex. John Hays Hammond, president; Maj. Frédéric R. Burrough, general manager. Lands include the Rosario, La Luz and other mines, in the Bramador district.

#### **MEXICOLA GOLD-COPPER MINING CO.**

**COLORADO.**

Dead. Formerly at Howard, Frémont Co., Colo., and Cripple Creek, Teller Co., Colo. Described Vol. VII.

**MEYER-CLARK-ROWE MINES CO.****ARIZONA.**

Mine office: care of A. N. Forbes, agent, Tucson, Pima Co., Ariz. Lands, 7 claims, area 140 acres, known as the San Xavier group, 20 miles south of Tucson, showing argentiferous lead, zinc and copper ores. Is claimed to have 10,000' of openings. Presumably idle.

**MIAMI COPPER CO.****ARIZONA.**

Dead. The first company by this name, having Samuel L. Gibson as president, was organized 1905, with capitalization \$500,000, shares \$1 par, and was succeeded, Nov. 30, 1907, by present company of same name. Formerly at Globe, Gila Co., Ariz.

**MIAMI COPPER CO.****ARIZONA.**

Office: 42 Broadway, New York, N. Y. Mine office: Globe, Gila Co., Ariz. Employs circa 150 men. Adolph Lewisohn, president; J. Parke Channing, vice-president; Julius H. Susmann, treasurer; preceding officers, Wm. H. Nichols, Jacob Langeloth, Walter T. Rosen and Ralph C. Lupton, directors; Herman Cook, secretary; Louis A. Wright, general manager; F. C. Alsdorf, assistant general manager; N. O. Lawton, mine superintendent; H. Kenyon Burch, mill superintendent; Edw. C. Taylor, clerk.

Organized Nov. 30, 1907, under laws of Delaware, with capitalization \$3,000,000, shares \$5 par, fully issued and fully paid. Is controlled, through ownership of one-half of stock, by General Development Co. National Copper Bank, New York, registrar; Bankers Trust Co., New York, transfer agent. Shares are listed on the Boston stock exchange. Annual meeting, third Wednesday in April.

Lands, 22 claims, partly fractional, area 200 acres, in process of patenting, also 100 acres in mill and smelter sites, giving total holdings of circa 300 acres, in the Red Springs district, 6 to 8 miles west of Globe. Property includes water rights on Pinal Creek, carrying abundant water for a large mill.

The property shows an area of highly silicified Pinal schist, at or near the point of contact with Schultze granite. The schistose area shows strong evidences of shearing, and mineral occurs as veinlets and coatings of chalcocite on the brecciated material, with some chalcopyrite showing on the 470' level. The ore body is leached above a depth of 220', and is somewhat similar to the Ely and Bingham porphyry deposits, but is higher in average tenor, the mean of numerous assays being 2.9% copper.

Development is by two 3-compartment shafts, known as the Red Rock and Red Springs, a third shaft of 220' depth, and a new 4-compartment main working shaft. The mine had 7,677' of workings Oct. 15, 1908.

Principal developments are on the Red Rock shaft, which cut commercial ore at 220', and was 720' deep Nov. 1, 1908, with levels opened at 270', 370' and 470', and with plats cut for levels at 570' and 670'. The 270' level of this shaft shows about one acre of ore of commercial tenor, while the 370' level, only 100' lower, shows a very much larger ore body; and the 470' level shows a still greater increase. The exact dimensions of the payable area of ore have not been determined on either the 370' or 470' levels, but the entire development is under about 20 acres of ground, with the certainty of further payable ore beyond the limits yet proven, and a strong likelihood that workable ore will be found to extend to the Red Springs shaft, to the northward. The schist, at a depth of 570', apparently averages about 1.5% copper only, and it is likely that the limits of payable ore in large quantities will be reached at approximately 500', though it is not unreasonable to expect a considerable tonnage of commercial ore at various points below this depth. On Nov. 1, 1908, the workings in this shaft had blocked out, on 3 levels, circa 4,500,000 tons of ore, with about 2,500,000 tons additional practically blocked out, and with about 10,000,000 tons fairly in sight.

The Red Springs shaft, 2,150' northwest of the Red Rock shaft, was copped 348' deep Oct. 15, 1908, and shows ore of about the same grade as the Red Rock shaft, with good prospects of developing a large ore tonnage, and a reasonable chance of proving a continuous ore body between the two shafts.

Extraction is to be through a 14x18' main working shaft, with 4 compartments, sunk outside of the proven mineral zone, in order to render it immune from drawing. This shaft will operate two 8-ton skips, and will have circa 2,000 tons daily productive capacity.

Equipment includes a 250-h. p. hoist and air-compressor, pumps, etc., and a heavy equipment will be given the 4-compartment shaft. Buildings include a general store, for the convenience of employees.

Survey has been made for the extension of the Gila Valley, Globe & Northern railway to the mine, and this is to be built in 1909.

Careful study is being given to the matter of reduction, and an experimental mill has been built, with one Nissen stamp, 2 Johnson vanners and 5 Wilfley tables. A careful study is being made of the porphyry mills of Utah and Nevada, and it is not likely that the company's concentrator will be in operation before 1910. The mill will be built at the mine, and water pumped in from Pinal Creek, which is the correct method. The company's first plans called for a first-unit mill of 1,000 tons daily capacity, but ore has been developed so rapidly, and in such enormous quantities, that two units may be built, as soon as the metallurgical processes are fully decided upon. The ore concentrates readily 10 into 1, and possibly may concentrate 12 or even 15 into 1, though necessarily with higher tailings losses, and the ratio of concentration will be determined by the mean between the point of highest concentration and that of lowest losses. The company's estimates, which are conservative throughout, having been prepared by Mr. J. Parke Channing, are based on a final copper extraction of 2% only, from ore of 2.9% average copper tenor, but it is probable that, in actual practice, extraction will average better than 40 lbs. per ton, and possibly as high as 45 lbs. per ton, or 2.25%.

An initial milling unit of 1,000 tons daily capacity would give the property a productive capacity of 12,000,000 to 15,000,000 lbs. fine copper yearly, while a 2,000-ton mill would make it possible to produce 25,000,000 to 30,000,000 lbs. fine copper per annum. Mr. Channing estimates that copper can be laid down in New York for 9 cents per pound, and his figures are entitled to exceptional weight, for the reason that similar predictions by the same authority, made in the earlier stages of development, have been fully verified in the cases of the Tennessee and Nevada Consolidated, where Mr. Channing laid bare to the public figures, and deductions therefrom, that usually are withheld, thereby proving the courage of his convictions, and reaping the reward of confidence due the man whose forecasts come true..

The Miami was unique among American copper mines in the method of its flotation. The company advertised extensively, in the daily press, its advertisements being strong, but conservatively worded. As a rule, advertised stocks in the United States are put out by utterly irresponsible parties, though the British method of promotion calls for extensive advertising. The company secured \$1,000,000 additional by selling its treasury stock, September, 1908, and is in a strong position financially. The Miami is a property of altogether exceptional promise, and is practically certain to make a very large and profitable mine, while the management is thoroughly experienced and capable, with the prestige of success in other fields.

#### MICHIGAN-ARIZONA COPPER CO.

ARIZONA.

Office: 2 Ingersoll Block, Lansing, Mich. Mine office: Bonita, Graham Co., Ariz. Emory W. Olds, president; John Holbrook, vice-president; Dr. Ely F. Allen, secretary; Jacob Stahl, treasurer; preceding officers and M. H. Jewell,

directors. Organized June 17, 1907, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands, 80 acres, in the Sulphur Springs Valley, at the foot of Graham Mountain, showing two 8" parallel veins of ore assaying up to 29% copper, with traces of gold and silver, opened by a 42' shaft.

**MICHIGAN & ARIZONA DEVELOPMENT CO. ARIZONA.**

Office: 905 Metropolitan Life Bldg., Minneapolis, Minn. Mine office: Helvetia, Pima Co., Ariz. C. C. Prindle, president; R. M. Bennett, vice-president; Chas. W. Sexton, secretary and treasurer. This company reorganized the Helvetia Copper Co., under a plan of reconstruction explained in Vol. V. Property is a considerable share interest in the Helvetia, and about 40 undeveloped claims adjoining the Helvetia.

**MICHIGAN-ARIZONA MINING CO. ARIZONA.**

Office: 17 First St., Muskegon, Mich. Mine office: Mammoth, Pinal Co., Ariz. S. H. Hamilton, president and general manager; James Hamilton, vice-president; Theo. P. Swift, secretary, treasurer and engineer. Organized Aug. 22, 1904, under laws of Arizona, with capitalization \$5,000,000, shares \$1 par.

Lands, 7 claims, area 140 acres, in the Bunker Hill district, 22 miles from a railroad, showing fissure veins, and impregnations in the granite, and, at times, in brecciated masses of country rock, with porphyritic intrusions. Has a 50' shaft and tunnels of 93' and 150', showing cuprite, malachite, mafachite, chalocite and occasional chrysocolla, giving average assays of 29.2% copper, 5 oz. silver and \$1.20 gold per ton. Company planned a small concentrator. Presumably idle.

**MICHIGAN BOY MINING & MILLING CO. WYOMING.**

Dead. Formerly at Encampment, Carbon Co., Wyo.

**MICHIGAN & COLORADO MINING & MILLING CO. COLORADO.**

Office: Colon, Mich. Mine office: Fribourg, El Paso Co., Colo. W. H. Wagner, president; J. W. Bryant, vice-president; Dr. A. J. Kiser, secretary; A. C. Himebaugh, treasurer; John M. Kellogg, general manager. Organized Dec. 10, 1902, under laws of Michigan, with capitalization \$500,000, shares \$25 par. Annual meeting, first Tuesday in December.

Lands, 14 claims, area 280 acres, also a 5-acre millsite and sundry water rights. Succeeded to properties of Colorado Springs Copper Mining & Tunnel Co., and Blue Mountain Copper Mining Co., circa January, 1906. Development is by tunnel. Presumably idle.

**MICHIGAN COPPER & GOLD MINING CO. UTAH.**

Office: 404 West Third South St., Salt Lake City, Utah. Mine office: Frisco, Beaver Co., Utah. Michael H. Osborne, president; L. O. Johnson, secretary. Organized December, 1902, under laws of Utah, with capitalization \$300,000, shares \$1 par. Lands, 4 claims, area 80 acres, known as the New York group, in the San Francisco district, near the Horn Silver mine, opened by a 40' shaft. Idle several years, except for assessments levied.

**MICHIGAN COPPER MINING CO. MICHIGAN.**

Office: 15 William St., New York, N. Y. Mine office: Rockland, Ontonagon Co., Mich. Employs 360 men. Jos. E. Gay, president; C. R. Corning, vice-president; J. Wheeler Hardley, secretary; John R. Stanton, treasurer; Samuel Brady, superintendent; Barney F. Shearer, mill superintendent; G. N. Haight, engineer; Adolph Priess, mining captain; Henry Stubensky, clerk; S. S. Jensen, master mechanician.

Organized Jan. 5, 1899, under laws of Michigan, with capitalization \$2,500,000, shares \$10 par; \$19 paid in. Last assessment, \$2, was levied March 10, 1908. American Loan & Trust Co., Boston, transfer agent; Old Colony Trust Co., Boston, registrar. Annual meeting, first Tuesday in May.

Lands, 4,870 acres of mineral territory, 1,466 acres of timber and miscellaneous lands, and a 150-acre millsite, giving total holdings of 6,686 acres,

mineral lands being in Sections 1, 2, 3, 9, 10, 11, 13, 14, 15, 16, 17, 21, 22, 23, 24, 25, 26 and 27, Town 50 North, Range 30 West. The main tract is 3 miles east and west by 4½ miles north and south, in addition to which there are four scattering tracts to the westward, one of 40 acres, two of 80 acres each and one of 180 acres, all carrying the outcrop of the Calico amygdaloid. The Michigan lands include the old Minnesota, Rockland and Superior mines. The Superior made 567,331 lbs. fine copper, 1856-1869 and 1876-1879. The Rockland, lying next east of the Minnesota, was operated 1853-1870, making 6,210,309 lbs. fine copper, from the Minnesota contact vein, which averaged about 2' width and carried considerable silver, in that mine. The old Minnesota mine, opened 1847, closed 1870, made 34,704,668 lbs. fine copper, and paid dividends of \$1,820,000.

The Minnesota, or Minesota mine, as it was then spelled, was discovered by a line of prehistoric pits, in one of which was a 6-ton mass of copper, raised on skids, on top of which grew a hemlock tree having nearly 400 rings of annual growth. Immense masses of virgin copper were taken from the Minnesota, the largest, found 1856, measuring 12' 6"x18' 6"x46', weighing 527 short tons, and requiring the work of 20 men for 15 months in cutting it into pieces small enough for hoisting. The Minnesota was opened on a contact vein, having a gangue of quartz, epidote and calcite, with an amygdaloidal hanging and conglomerate footwall, both impregnated with copper near the contact. Miners called the Minnesota a conglomerate mine, because more copper was found in the footwall than in the denser amygdaloidal hanging-wall. The richest ground occurred near the "counter vein," a transverse fissure. The Minnesota had 10 shafts, deepest circa 1,100'. Four central shafts were sunk from surface on the North Minnesota fissure, which joined the contact vein at circa 300' depth. The Minnesota had a 40-ton mill, with gravity stamps, but the production was mainly from masses, and the smaller pieces of native metal called barrel-work. In 1870 the old Minnesota company met, simultaneously, low prices for copper, a pinching of the vein, and the necessity for more powerful hoists, and gave up the struggle. The openings above the adit level, being free from water, were worked by tributors, for years afterwards, and yielded hundreds of tons of mass and barrel copper, affording evidence that a large amount of heavy copper must remain in the lower stopes, then inaccessible to tributors, because filled with water, and these also should yield considerable stamp rock, left unmined in the days when nothing under 3% rock paid for milling.

The Michigan mine is a combination of two entirely new mines and a re-opened old mine, its shafts being sunk on the Calico amygdaloid, a bed outcropping 140' north of the Minnesota contact vein, and a few feet north of the North Minnesota fissure. In addition to the Calico lode, Minnesota contact, North contact and Branch vein, all more or less developed by the present workings, the Michigan tract carries the Knowlton, Mass, Ogima and South Amygdaloid beds, also an unnamed amygdaloid farther south, these latter belonging to the Evergreen belt, worked a few miles to the northeastward by the Mass and Adventure mines. The Knowlton, or northernmost of the Evergreen series of parallel lodes, lies circa 1,000' south of the old Minnesota shafts, and a 7' amygdaloid, supposed to be the Butler, opened to some extent in Peninsula Bluff, 2,000' south of B shaft, shows heavy copper and stamp rock. There are 3 old shafts on the Butler lode, also an adit cutting several parallel cupiferous beds. There also are copper-bearing amygdaloid outcrops north of the Calico bed, on which no work has been done.

The Calico amygdaloidal bed parallels the contact vein of the old Minnesota mine, which has been reopened to some extent by crosscuts. The country rock is a melaphyr trap, and the Calico bed ranges from almost a trap to nearly a conglomerate, carrying considerable felsite, with occasional sandstone

and large patches of prehnite, epidote and calcite. The strike of the Calico bed is approximately N. 68° E., with a dip of about 47° to 50° at the bottom of the mine. The Calico bed is 5' to 25' in width, with an average of about 9' in the upper workings, but, on the 2,000' level is only 4' to 6' wide, though rich in copper. Most of the copper in the upper workings occurs in a 2' to 3' paystreak near the footwall, though occasionally patches of good ground occur in the center, and on the hanging-wall. The Calico copper carries a little silver, and is mostly in nodules, called shot-copper, with occasional barrel-work and some small masses, the heavy copper occurring mainly near the intersections of numerous cross-fissures that are filled with clay gouge. The bed is strong, standing well without timber, and is sinuous, both as to strike and dip, with very irregular walls, the amygdaloid bed merging into the trap-footwall by almost imperceptible degrees. There also is a marked tendency on the part of the Calico to split, the "footwall vein" being rich in such cases, but leaving the main bed very lean in copper. There also is a "hanging-wall vein," and branch veins, in addition to which are the Minnesota contact and North Minnesota fissure veins, within 140' distance of the Calico.

The "Branch Vein" lies between the Calico amygdaloid and the Minnesota contact vein, closely underlying the former on the fifth level, but steadily receding therefrom until it touches the contact vein just above the thirteenth level, rolling away therefrom again at greater depth. The "Branch Vein" is narrow, being 3' to 5' in width, but very rich, and is now the largest producer of heavy masses of native metal in the Lake Superior district, a 20-ton mass, found 1905, having been the largest mass of native copper secured from any Lake Superior mine for some years. The eastern drifts of the "Branch Vein" makes the best showing, as a rule. The "Branch Vein" is thought to be identical with the "North Vein" formerly worked in the Rockland mine, now a part of the Michigan, tributary to C shaft. The "Branch Vein" yield about 30 lbs fine copper per ton and furnishes about one-third of the tonnage and one-half of the copper production of the mine, product being approximately one-third heavy copper and two-thirds stamp copper. The "Branch Vein" dips at approximately 58° and carries largely mass and barrel copper with considerable stamp rock. The "Branch Vein" has been traced for about 2 miles and has considerable reserve openings. The heavy copper from the "Branch Vein" is in pieces weighing from a few hundred lbs up to 20 tons each, and 2 men using pneumatic chisels, are employed, steadily, cutting these masses into pieces sizable for hoisting.

The mine has about 10 miles of workings and is opened by 3 shafts, all sunk on the Calico bed, reaching the other copper-bearing beds and veins by crosscuts. The mine works 45 drills. With the exception of the ninth level, all levels down to the twelfth have reached the northern boundary of the Calico bed.

A shaft, the westernmost, lies about 1,000', on the strike of the bed, from the boundary line of the National mine. This shaft is 7x18' inside of timbers, with 3 compartments and is 2,030' in depth. The Calico is as wide as 18' in places, in some of the upper levels, and shows some excellent ground. A crosscut on the 14th level, sent to the contact vein of the old Minnesota, found the latter to average about 4' in width, and to be rich in copper for a distance of about 150' only.

B shaft, 985' east of A, with 2 compartments, is 1,781' in depth, and has not been deepened for several years. The Calico bed runs 20' to 25' wide in places in the upper workings, and the lower levels show some good stopes. This shaft has a Burnham sinking pump, with capacity to lift 400 gallons per minute from a quarter-mile depth. The old Minnesota mine was up-watered, from B shaft, by diamond drill holes, bored across at each successive

level. The old workings were found in very bad shape, after three decades of neglect. The contact vein is reached also by crosscuts on the 11th and 13th levels, below the bottom of the old workings, showing a vein of 20' width, with 6' to 7' on the hanging-wall carrying copper in fair quantities.

C shaft, 1,353' northeast of B, is 1,650' in depth, and rock production was begun therefrom circa February, 1908. The formation is somewhat more settled than to the westward. Adjoining C shaft is an old shaft of the Minnesota, of circa 675' depth, with collar 90' below the collar of C shaft.

There is room on the main tract of the Michigan for an additional shaft west of A, and the great extent of the landed holdings provides ample room for opening mines on any other available cupriferous bed that may be developed on any part of the company's lands.

The shaft-rockhouses at A and B are duplicates, each having 800-ton storage bins, and were partially remodeled, 1908, and given double dumps, the lower for poor rock. Equipment of each includes a 50-h. p. Nordberg engine, two 18x24" crushers, one 13x20" crusher and a steam-hammer for mass and barrel work.

The engine-house, 50x115', stands midway between shafts A and B. The A section has a 24x60" Webster, Camp & Lane double-cone straight-face hoist, with a 7' drum having a 15' face, carrying 4,000' of cable and capable of raising 4-ton skips in counterbalance at 3,500' per minute from a depth of 3,500'. The hoisting cable passes around solidly anchored sheaves, giving a straight pull at each shaft. The B hoist, installed 1905-1906, is a 24x60" Allis-Chalmers duplex-cylinder straight-face hoist, operating 2 drums in balance, or separately, also good for 8,500' depth. The hoist at C shaft, formerly at B, is 13x16", with 6' drums. The boiler-house, between the two sections of the engine-house, has four 165-h. p. Burt locomotive firebox boilers, with room for a fifth, also a 1,000-h. p. Cochrane feed-water-heater and purifier. The power-plant includes a 40-drill Ingersoll-Sergeant two-stage air-compressor. A 12-drill Norwalk air-compressor and a 10-drill Ingersoll-Sergeant air-compressor, displaced by the new compressor, have been installed in the basement of the engine-house, as auxiliaries.

The machine shop is 30x60', and other mine buildings include a stone smithy, carpenter shop, warehouse, office building, and a 22x50' changing house. Water is secured from the old Minnesota dam, the mine and location having mains and hydrants, with a Knowles pump in the basement of the power-house capable of raising a 5" stream against a 400' head, and an auxiliary Deane pump, 200' distant, capable of raising a 5" stream against a head of 425'. There are acetylene gas plants in the power-house and in each rock-house, and a 250' coal-trestle, with inclined tunnel and tramway underneath, leading to the boiler-house. All buildings are connected by a private telephone system, and the mine is served by the Mineral Range railroad.

In view of the very promising developments of the Lake Copper Co., and the rich drill cores secured by the Adventure, diamond drilling was begun July, 1908, in search of the extensions of these beds in the southwest quarter of Section 14. The Michigan lands carry about 3 miles of the hypothetical extension of the veins opened by the Lake and cut by the diamond drill of the Adventure, and the prospects of finding payable ore bodies in this territory are excellent, as the field is practically unexplored. The diamond drill, late 1908, cut 3 fine-grained metamorphosed conglomerates, somewhat resembling the Calumet conglomerate, each carrying copper in somewhat encouraging quantities. The drill also cut a 12' amygdaloid, from which the sludge assayed 1.29% copper, and cores from several other beds carried copper in promising quantities, though none were notably rich.

The Superior mine, about one mile east of the present workings, is a property of some promise.

Production was begun Nov. 12, 1903, with a leased head, at the Mass mill. This was surrendered Sept. 1, 1906, since which date rock has been stamped at the Atlantic mill.

Work was begun April, 1906, on a new mill, to cost circa \$200,000, about one mile north of the Mass mill, on Keweenaw Bay, with ample water frontage for the wasting of sands. Construction was suspended, late 1907, on account of unsettled financial conditions, but was resumed in 1908. The mill, of steel, under construction by the Wisconsin Bridge & Iron Co., is 97x177' in size, and is to have a 750-ton Nordberg steeple-compound stamp, with Woodbury jigs. The rock bins are of exceptionally large size, and the equipment will include a 5-stamp gravity battery and 10 Overstrom tables, installed by the Michigan company in the Mass mill.

The mill is to have a central power plant, with a separate boiler building, of concrete, equipment including an engine, 3 Atlas boilers and a Sturtevant economizer.

The power plant will have a coal trestle, from which coal will be dumped in two piles, flanked by two tunnels, through which coal will be trammed in cars to the boiler-house. At the top of the trestle there will be a hoist, to take cars from the railroad to the bins.

Water will be secured from Keweenaw Bay, through a 1,200' tunnel, nearly completed, connecting with a 76' shaft at the millsite. Instead of having a separate boiler-house for the pumps, there will be a motor-driven pump, taking energy from the generator in the mill. It is estimated that the new mill will save about one cent per pound on the cost of finished copper. The copper of the Michigan has the highest electrical conductivity of any Lake Superior brand, showing, on test, conductivity up to 102.

Production, in pounds of fine copper, has been as follows: 275,708 lbs. in 1903; 2,746,127 lbs. in 1904; 2,891,796 lbs. in 1905; 2,875,341 lbs. in 1906; 2,665,404 lbs. in 1907. Production, October, 1908, was 193 tons of mineral, from 600 to 700 tons of rock stamped daily, and production for 1908 should be approximately 3,000,000 lbs., the largest yet secured. Rock stamped was 140,225 tons in 1906, and 150,407 tons in 1907, returns being 20.5 lbs. fine copper in 1906 and 17.72 lbs. in 1907. Total expenses in 1907 were \$645,056, including \$183,671 for new construction. Costs, less construction, per ton of rock treated, were \$2.84 in 1904; \$2.63 in 1905; \$2.79 in 1906 and \$3.06 in 1907. Costs per pound of fine copper, exclusive of construction, were 21.5 cents in 1904; 18.9 cents in 1905; 20.5 cents in 1906 and 17.72 cents in 1907. With the aid of the new mill the property should be able to make a considerably improved showing, and the prospects of finding payable copper beds in the southern portion of the Michigan territory are excellent. The management of the property is of the best, throughout.

#### MICHIGAN & MONTANA COPPER MINING

#### MONTANA.

##### & SMELTING CO.

Office: Kalispell, Mont. Mine office: Altyn, Teton Co., Mont. J. M. Harris, manager, at last accounts. Lands, some distance from rail transportation, carry auriferous and argentiferous copper ores, giving fair assays. Is said to have a 100-ton concentrator. Idle.

#### MICHIGAN & MONTANA DEVELOPMENT CO.

#### MONTANA.

Office: care of E. J. Rompf, secretary and treasurer, Houghton, Mich. Letter returned unclaimed from former mine office, Butte, Silver Bow Co., Mont. Capt. Richard Edwards, president; Thos. F. Busgan, vice-president; preceding officers, Jas. T. Healy, W. A. Burritt and Thos. O. Bennett, directors. Organized March, 1907, with capitalization \$500,000, shares \$10 par. Lands,

4 claims, held under bond and lease, in the Park Cañon district of Butte, said to show a 75' lode. Idle and presumably moribund.

**MICHIGAN & MONTANA MINING & DEVELOPMENT CO. MONTANA.**

Office: Escanaba, Mich. Mine office: Wickes, Jefferson Co., Mont. Clark Kirkpatrick, president; J. F. Carey, secretary; Jas. A. McKillican, superintendent. Organized 1905, with capitalization \$20,000, and reorganized with capitalization \$100,000.

Lands, 5 claims, including the Blue Bird mine, formerly operated for silver, showing a vein of 4' to 6' width, opened by a 1,200' tunnel, giving assays of 5 to 7% copper, 5% lead, 23 oz. silver and \$2.80 gold per ton. Property has electric power and employs circa 20 men.

**MICHIGAN & NEW MEXICAN MINING CO.**

**NEW MEXICO.**

Office: Ishpeming, Mich. Mine office: Nogal, Lincoln Co., N. M. W. A. McIver, deceased, was president. Lands are known as the Mildon group. Idle and apparently moribund.

**MICHIGAN-NEW MEXICO COPPER CO.**

**NEW MEXICO.**

Office: Grand Rapids, Mich. Letter returned unclaimed from former mine office, Lordsburg; Grant Co., N. M. J. L. Hamilton, president; C. R. Luton, secretary and general manager. Lands, 4 claims, area 80 acres, known as the Dakotas-Pearl mine, in the Barro Mountains, carrying ore assaying up to 8.5% copper, 5 oz. silver and \$4 gold per ton. Has a 280' shaft, and planned installing a 50-ton leaching plant and smelter, but failed to do so. Idle several years and apparently moribund.

**MICHIGAN SMELTING CO.**

**MICHIGAN.**

Office: 82 Devonshire St., Boston, Mass. Works office: Houghton, Houghton Co., Mich. Wm. A. Paine, president; Chas. H. Paine, vice-president; Frederic Stanwood, secretary and treasurer; Frederick I. Cairns, general manager; preceding officers and John R. Stanton, directors; Frank Klepetko, consulting engineer; John Mugford, superintendent.

Organized 1903, under laws of Michigan, with capitalization \$500,000, shares \$25 par. Is controlled through ownership of entire stock issue, by 6 mining companies, the Copper Range group holding 12,000 shares and the Stanton companies 8,000 shares, holdings in shares being as follows: Champion, 4,400 shares; Trimountain, 4,400; Baltic, 3,200; Mohawk, 3,200; Wolverine, 3,200; Atlantic, 1,600. No dividends have been paid, profits being turned back into improvements.

Property is a reduction plant, 3 miles west of Houghton, near the old Atlantic stamp-mill, with frontage on Portage Lake. It was designed by Frank Klepetko and is the largest and most modern smelter in the Lake Superior district, with capacity of 90,000,000 lbs. fine copper yearly.

The plant is terraced throughout, permitting economical and largely automatic handling of material. The terraces for the different structures are sand-graded, with stone retaining walls. Mineral is delivered to the works in 40-ton bottom-dumping steel cars, by the Copper Range railroad, which also hauls away the refined copper, for shipment from the Copper Range wharves, in Houghton.

The 3,000-ton mineral storage bins, holding ten days' supply for the works, are located on the upper terrace. Mineral is dehydrated in rotary dryers, by waste gases from the furnaces, taken to the furnaces in tram-cars and dumped into hoppers on the charging floor. Coal-trestles, on an upper plateau, hold 15,000 tons of hard and soft coal, with separate storage compartments for charcoal, sand and limestone. Tunnels under the coal-trestle lead to the boiler-rooms and furnaces, fuel being delivered in tram-cars, loaded cars descending by gravity.

The 160x205' reverberatory furnace building, of steel and brick, with

truss roof, and two 5-ton traveling cranes, has 6 furnaces, 2 being 16x36' each, two 14x23' each, one 15x18', and one 16x40', of 100 tons daily capacity. The two 16x36' furnaces were built 18x50', over all, but gave so much trouble that they were cut down to 40' length.

Alternating with the larger reverberatories are one 300-h. p. and two 200-h. p. Stirling water-tube boilers, heated by waste gases from the furnaces. After leaving the boilers the waste gases are drawn through a 6x8' subterranean flue, with arched roof, up the hill to a 150' smokestack with base 100' above the furnace building.

From the reverberatories molten copper goes to 2 blast furnaces, on a lower level to the north, where blister copper is cast mechanically, in moulds, upon a circular table, cooled in water and carried by a link-elevator to the loading platform. The cupola building is 40x70', of steel and brick, with two floors. Slags are carried mechanically to the sampling mill, and reduced in a 30-ton crusher of 1,000 tons daily capacity, for resmelting. The waste slags from the final fusion are granulated by jets of water, and discharged through launders, to low ground northward, for grading.

The combination machine-shop and power-house, of steel and brick, has a complete equipment of shop tools, driven by an independent engine, and a 300-h. p. Nordberg horizontal tandem-compound engine driving a 200-kw. generator actuates the rotary blowers for the blast-furnaces. Electric power is used extensively, for operating the drying plant, cranes, casting machinery and lighting, and actuates 3 specially designed Jeffrey electric locomotives, of 100-ton draw-bar pull, taking current from overhead trolleys and hauling 8 pressed steel Sheffield mineral and coal cars, tracks reaching practically every part of the plant.

Miscellaneous buildings include a combination two-story and basement office and laboratory, of brick, heated by exhaust steam; also a 40x60' iron-sheathed frame warehouse, barn, etc. The plant has two 50' track-scales, of 150 tons capacity each, one for mineral and one for coal and flux, with smaller scales at other points. Water is obtained from the old Atlantic dam, on Cole's creek, through a 4,800' flume, with capacity of 5,000 gallons per minute, leading to a 50,000-gallon water-storage tank, located 100' above the works, giving good pressure at all points.

The works are treating the mineral of six mines, each of which is smelted separately, and are turning out circa 5,500,000 lbs. of refined copper monthly. The sixth reverberatory will give a monthly capacity of 10,000,000 lbs. fine copper, providing for growth of the mines for some years to come. In August, 1907, these works broke a world's record for casting from a single furnace, by turning out a charge containing 375,000 lbs. fine copper. This work was done by a crew of ten men, of whom 5 attended the furnace, and one operated the casting machine, while 4 men were required to inspect, sort and load the ingots in cars.

The Michigan smelter is well planned and well handled, the results secured being creditable alike to the designer and the management.

#### **MICHOACÁN DEVELOPMENT CO.**

**ARIZONA.**

Dead. Option surrendered and company wound up, 1905. Formerly at Pearce, Cochise Co., Ariz. Described Vol. V.

#### **COMPANÍA METALÚRGICA DE MICHOACÁN.**

**MEXICO.**

Works office: Ocampo, Zitácuaro, Michoacán, Mex. O. F. Westlund, manager; C. W. Carpenter and F. M. Flynn, superintendents. Property is a 10-year lease on the reduction plant of the Michoacán Mining & Railway Co., Ltd. Smelter, known as Los Trojes, rated at 250 tons daily capacity, has a 44x163" water-jacket blast furnace and 8 Baker blowers, burning coke and charcoal in equal quantities, charcoal being made from the company's own

timber. Power plant includes two 4' Pelton water wheels, operated under a head of 450', and a small electric plant, with a 150-h. p. auxiliary steam plant. Idle, with indifferent prospects of resumption.

**MICHOACÁN RAILWAY & MINING CO., LTD.**

**MEXICO.**

Office: 2 Suffolk Lane, Cannon St., London, E. C., Eng. Mine office: Angangueo, Michoacán, Mex. Henry W. Foster, M. P., chairman; G. A. Mitchell, secretary; Jas. W. Malcolmson, consulting engineer. Organized Jan. 29, 1889, under laws of Great Britain, with capitalization £105,364, shares \$1 par, in £21,015 A cumulative 7% preference shares, £12,190 B non-cumulative 7% preference shares, £70,745 ordinary shares and £1,414 founders' shares; issued, £99,870. Debentures, £27,090, in a 4% prior lien, and £103,000 in 4% mortgage bonds. Railway rights originally held have been disposed of, remaining property being sundry mines and mineral lands, leased, 1906, to Compañía Metalurgica de Angangueo for 10 years.

**MICHOACÁN SAN FRANCISCO COPPER MINES**

**MEXICO.**

**SYNDICATE, LTD.**

Dead. Voluntarily liquidated, March, 1902. Formerly in Michoacán, Mexico.

**MICULICICH & VALENTINE.**

**PERÚ.**

Mine office: San Tadeo, Yauli, Junín, Perú. Lands, 2 pertenencias, known as the Mina Gertrudis, opened 1897, having a vein with strike of N. 51° E. and nearly vertical dip, of about 2 meters width, with paystreak of 60 centimeters to 1 meter, carrying ore averaging 14% copper and 1,000 grams silver per metric ton, balance of vein carrying circa 5% copper and 300 grams silver per metric ton. Production, 1904, was 2,455 metric tons of ore averaging 14% in tenor, yielding 757,950 lbs. fine copper. Employs circa 50 men.

**MIDDLEMARCH COPPER CO.**

**ARIZONA.**

Office: 212 Henne Bldg., Los Angeles, Cal. Mine office: Middlemarch, Coeheise Co., Ariz. H. Bert Ellis, president; M. M. O'Gorman, vice-president and general manager; Wm. Le Moyne Wills, secretary; preceding officers, Richard Gird, Wm. King Gird and F. S. Austin, directors; Broadway Bank & Trust Co., Los Angeles, treasurer; Edw. K. Kelly, mine superintendent.

Organized Apr. 26, 1907, under laws of California, with capitalization \$1,000,000, shares \$1 par; increased, March 28, 1908, to \$3,000,000, shares \$100 par. Annual meeting, first Monday in April.

Lands, 68 claims, area 1,360 acres, in the Dragoon Mountains, showing 6 practically parallel contact deposits, between limestone and granite-porphyr, having a generally northwesterly strike, with dip of 42° to 54°. Two ore bodies under development, of 30' to 80' width, show oxidized ores, succeeded by sulphides, mainly chalcopyrite, with some chalcocite.

Development is by shafts of 210', 248', 100', 165', 65', 50', 120', 90' and 40', and by tunnels of 625', 150', 367', 450', 390' and 170', giving about 2 miles of workings, estimated by company to show 200,900 tons of ore, with 100,000 tons blocked out for stoping in the Missouri mine, with ore in other properties, but not extensively developed. The area of the Missouri ore body at depth, and deficient in iron and lime, while not sufficiently pyritic to concentrate well.

Equipment includes a 300-h. p. steam plant, 50-h. p. hoist and 4-drill Laidlaw air-compressor. There are 12 buildings, including a 30x38' engine-house, 32x38' boiler-house, 30x38' machine shop and 20x30' smithy.

The reduction plant includes a concentrator and smelter under one roof, 40x100' in size. The concentrator has an 8x12" Blake crusher, 2 Huntington mills, 2 rolls, 2 Bartlett tables, 1 slime table and 3 sizers. The concentrator, of 40 to 60 tons rated daily capacity, receives ore by tram from the mouth

of the Missouri tunnel, 300' distant. When operated the smelter made matte averaging 55 to 70% copper, 20 to 100 oz. silver and 0.25 to 2 oz. gold per ton.

The company plans development of sulphide ores in the lower levels, and erection of a larger smelter. Property considered promising.

#### MIDDLE RANGE MINING CO.

**MICHIGAN.**

Office and mine: care of Thos. L. Chadbourne, president, Houghton, Houghton Co., Mich. Capitalization \$500,000, shares \$25 par. Idle since circa 1895.

#### MIDDLE SWANSEA MINING CO.

**UTAH.**

Mine office: Eureka, Juab Co., Utah. Richard B. Shepard, president; E. A. Shepard, secretary and treasurer; preceding officers, Dana T. Smith, Harrison O. Shepard and John M. Condon, directors. Lands adjoin the Eureka-Swansea Extension. Presumably idle.

#### MIDLAND GOLD & COPPER MINING & REDUCTION CO.

**UTAH.**

Office and mine: Hot Springs, Box Elder Co., Utah. Geo. B. Dean, president; F. J. Hirt, vice-president; Albert Swingewood, secretary and treasurer; Daniel Convery, manager. Organized 1904, with capitalization \$1,000,000, shares \$1 par. Lands, 14 claims, 2 miles from Hot Springs, in the Sierra Madre district. Idle several years.

#### MID MOONTA COPPER MINES, LTD.

**AUSTRALIA.**

Dead. Reconstructed, Oct. 29, 1901, as Moonta Central Copper Co., Ltd. Formerly at Moonta, Daly Co., South Australia.

#### MEDNOROUDLIANSK MINE.

**RUSSIA.**

Described under title Rudianski mines.

#### MIEDZIANKA MINE.

**AUSTRIA.**

Office: Kielce-Checiny, Galicia, Austria. Laszcynski Brothers, owners. The property is an old mine, circa 55 miles north of Cracow, abandoned for nearly a century, until taken over by the present owners. The mine shows a belt of copperiferous limestone, of about 150' width, traceable for 1½ miles, reported to carry copper ore in streaks of  $\frac{1}{2}$ " to 1" thickness only, ore being mainly chalcocite, with some azurite and malachite, having a gangue of calspar and quartz, ranging 15 to 45% in copper tenor. The property has been proven to a depth of 150'.

On reaching surface, ore is hand-picked, crushed by rolls and moulded into blocks, with 5% of clay for a binder, bricks being dried by waste heat from the furnace, and partially roasted in a kiln.

The reduction plant is of an experimental nature, and of small capacity only. Roasted ore is crushed fine and leached in lead-lined tanks with spent liquor from the electrolytic baths containing about 5% of free sulphuric acid, giving, as a product, a liquor containing about 5% copper and 1% free acid. This is put through a filter-press, then goes to electrolytic tanks having insoluble anodes of lead plates, in cloth bags, with thin copper cathodes. Current is 1,000 amperes, at 2.5 volts, giving a current density of 1 ampere per square decimeter of cathode surface. Deposition of copper is about 1.1 gram per ampere-hour, nearly equal to the theoretical deposit, and power consumed, per kilogram of copper deposited, is 2.48-kw.-hours. Liquor is exhausted in about 36 hours, when it is returned to extraction baths, for treatment of fresh ore. Cathodes remain in the bath for about one month, when the deposit becomes 1" to 1¼" thick. Product is said to be of greater purity than ordinary electrolytic copper. The process is simple, and requires but a single trained workman for its operation.

#### MIHARA MINE.

**JAPAN.**

Office: Mihara-mura, Chitsuki-gori, Bitchu, Japan. Production was 136,266 lbs. fine copper in 1903, and 293,045 lbs. in 1906.

#### MILAN MINING & MILLING CO.

**NEW HAMPSHIRE.**

Office: 120 Exchange St., Portland, Me. Mine office: West Milan, Coos

Co., N. H. Employs circa 35 men. J. B. Carper, president and general manager; R. C. Bradford, secretary and treasurer. Organized August, 1906, under laws of Maine, with capitalization \$125,000, shares \$100 par. Reported, Feb. 21, 1908, having \$100,000 cash on hand.

Lands, 240 acres, freehold, also 140 acres timber lands. Mineral lands show serpentinite, with fissure veins in schist, carrying chalcopyrite associated with pyrite, there being 2 veins under development, these averaging about 20' width, with northwest and southeast strike, giving average assays of about 3% copper, 5% zinc, 1 to 3 oz. silver and 44% sulphur. Has shafts of 40' and 280', and 4 short tunnels, with about one-half mile of underground openings, estimated to show 200,000 tons of ore, with 25,000 tons blocked out for stoping. Work was begun by present company August, 1906.

Equipment includes a 150-h. p. steam plant, with 35-h. p. hoist, 4-drill air-compressor, machine shop, carpenter shop, crusher house, several dwellings, etc., with total of 11 buildings. Has a 40x60' wooden concentrator building, with one jaw-crusher and 4 Wilfley tables. Is served by the Grand Trunk railroad,  $\frac{1}{4}$  mile from the shaft, connected by siding. Production, 1906, was about 11,000 tons of pyrites and 100 tons of 20% copper ore, produced at an average cost of about \$1.50 per ton. Company plans installation of new machinery in mill land adding 6 Wedge furnaces, with chlorination works.

#### MILFORD COPPER MINING & SMELTING CO.

UTAH.

Office: 5 Walker Bank Bldg., Salt Lake City, Utah. Mine office: Milford, Beaver Co., Utah. Geo. H. Dern, president; Chas. E. Hudson, secretary and treasurer; Frank H. Lathrap, general manager. Organized 1902, under laws of Utah, with capitalization \$300,000, shares \$1 par. Lands, 11 claims, area 220 acres, near the O. K. mine of the Majestic. Idle and apparently moribund.

#### MILFORD GOLD & COPPER MINING CO.

UTAH.

Mine office: Milford, Beaver Co., Utah. Long idle and apparently moribund.

#### MILLER MINING CO.

MEXICO.

Dead. Was succeeded, circa August, 1908, by Kansas-Cananea Copper Co. Formerly at La Cananea, Arizpe, Sonora, Mex.

#### MILLER MINING, MILLING & SMELTING CO.

UTAH.

Mine office: American Fork, Utah Co., Utah. Russell Benedict, president. Property, in American Fork Cañon, formerly was leased, but work was resumed by company circa July, 1908.

#### CHAS. S. MILLS & CO.

MEXICO.

Office and mine: Hocasitas, Ures, Sonora, Mex. Chas. S. Mills, general manager. Lands, 103 hectares, known as La Colorado group, also a 6-hectare millsite, showing 5 veins, ranging 2' to 100' in width, occurring as fissures in porphyry and as contacts between porphyry and phonolite, carrying gold, silver, copper, nickel, cobalt and platinum. Mine has a 100' shaft and a 440' tunnel, steam power and a 20-ton stamp-mill and concentrator. Nearest railroad, 25 miles, is the Sonora branch of the Southern Pacific. Idle since 1905.

#### MILTON COPPER CO.

MICHIGAN.

Dead. Wound up 1902. Formerly at Victoria, Ontonagon Co., Mich. Described Vol. II.

#### MILWAUKEE-MONTANA NATURAL BRIDGE

MONTANA.

#### GOLD & COPPER MINING CO.

Dead. Was promoted by C. T. McElroy. Formerly at Contact, Park Co., Mont.

#### MILWAUKEE & NEW MEXICO MINING CO.

NEW MEXICO.

Office: 97 Wisconsin St., Milwaukee, Wis. Mine office: Tres Piedras,

Taos Co., N. M. J. D. Draught, secretary and treasurer. Property is known as the Sardine group. Presumably idle.

**MILWAUKEE-PALMER MOUNTAIN GOLD & COPPER MINING CO.** WASHINGTON.

Dead. Formerly at Loomis, Okanogan Co., Wash.

**MINDOULI MINE.**

FRENCH CONGO.

Mine office: Comba, via Brazzaville, French Congo. Lands, in the Kouilou-Niari basin, circa 300 kilometers from the coast, show cupriferous sandstone overlying limestone, surface ores being mainly malachite, with some cuprite, both argentiferous. These deposits were worked by the natives, in a primitive way, for centuries, and a considerable trade once existed in copper and copper utensils, but this became extinct with French occupation. Mine probably is unworkable under modern conditions without railroad transportation, now lacking.

**MINE DEVELOPMENT ASSOCIATION.**

NEW MEXICO.

Mine office: Socorro, Socorro Co., N. M. W. H. Bullard, president; H. A. True, secretary; Cony T. Brown, manager. Property includes the Stonewall Jackson mine, carrying zinc-lead ores, also sundry copper-zinc-lead lands.

**COMPÀNIA MINERA DE MINAS NUEVAS.**

MEXICO.

Mine office: Alamos, Sonora, Mex. Has auriferous and argentiferous copper ore, with steam power, employing circa 30 men at last accounts.

**MINERAL CREEK COPPER CO.**

ARIZONA.

Dead. Formerly at Globe, Gila Co., Ariz.

**MINERAL CREEK MINES CO.**

ARIZONA.

Letter returned unclaimed from former office and mine, Globe, Gila Co., Ariz. A. J. Kaltenbach, president; E. E. Kaltenbach, vice-president; Harold E. Bierce, secretary and treasurer. Organized 1907, under laws of Arizona, with capitalization \$250,000, shares \$10 par.

**MINERAL CREEK MINING CO.**

ARIZONA.

Dead. Operated circa 1881. Formerly at Red Rock, Pinal Co., Ariz.

**MINERAL CREEK MINING & SMELTING CO.**

WASHINGTON.

Office: 515 California Bldg., Tacoma, Wash. Mine office: Mineral, Lewis Co., Wash. Adrian F. Kirkpatrick, president; Chas. H. Little, secretary. Organized June 14, 1901, under laws of Washington, with capitalization \$2,000,000. Ores carry gold, silver, lead and copper. Has water power and a 20-ton smelter. Idle several years.

**MINERAL FARM MINING CO.**

IDAHO.

Office: Spokane, Wash. Mine office: Mullan, Shoshone Co., Idaho. Daniel McQuarrie, president; M. J. McHugh, vice-president; Irvin D. Whitmore, secretary and treasurer; Louis C. Jaquish, manager; preceding officers, E. G. Ellis, D. R. Beck and M. Robert Weidner, directors. Lands, 11 claims, 8 patented, circa 1½ miles from Mullan, showing a fissure vein of 100' reported average width, opened by 3 tunnels, No. 3 being 115' long.

**MINERAL HILL CONSOLIDATED COPPER CO.**

ARIZONA.

Office: 331 Fourth Ave., Pittsburg, Pa. Mine office: Tucson, Pima Co., Ariz. M. S. Isherwood, president; Boon Ingella, vice-president; E. B. Reeser, secretary, treasurer and superintendent; E. N. Ray, general manager. Organized March, 1904, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par, as successor of Azurite Copper & Gold Mining Co.

Lands, 26 claims, 12 patented, area 520 acres, in the San Xavier district, 18 miles southwest of Tucson, including the Azurite group of 13 claims, said to have produced \$550,000 worth of ore under former ownership, the American group of 8 claims, and the Mineral Hill group of 5 claims. The mine is said to show a large body of sulphide ore, of concentrating grade, averaging about 3.5% copper.

Development is by 74 pits and open-cuts, 8 tunnels, mostly short, longest being 250', and 48 shafts, mostly shallow, 5 deepest being 130', 125', 150', 345' and 200', mine having a total of circa one mile of workings, claimed to have blocked out, in the lower levels, 100,000 tons of 5% sulphide ore, which figures are considered unduly high.

The property is said to have a 150-h. p. steam plant, with hoists good for 350' and 2,000'.

There is an antiquated smelter having a 30-ton water-jacket blast-furnace, which is of no present value, and the company was said, April, 1908, to have contracted for a 100-ton concentrator, but in 1907 it was stated that a 500-ton smelter had been ordered, this not proving true. It was claimed, by fiscal agents, who made some exaggerated statements, that the cost of mining and transportation to smelter was \$4.50 per ton. In 1907 the mine shipped circa 2,500 tons of selected ore, of circa 3.5% copper tenor, to the Douglas smelter, yielding 169,538 lbs. fine copper and 1,478 oz. silver. Property is considered promising, though ore is low in grade.

#### **MINERAL HILL COPPER & GOLD MINING CO.**

**ARIZONA.**

Mine office: Tucson, Pima Co., Ariz. Lands, 36 claims, having circa 1,000' of workings, showing auriferous and argentiferous lead and copper ore.

#### **MINERAL HILL COPPER SYNDICATE, LTD.**

**ARIZONA.**

Dead. Formerly at Huron, Yavapai Co., Ariz.

#### **MINERAL HILL CHINA MINING CO.**

**WASHINGTON.**

Offices: 49 West 125th St., New York, N. Y. Mine office: Conconully, Okanogan Co., Wash. Dr. Jacob May, president; A. R. Lacey, secretary; E. P. Wheeler, superintendent. Lands, 20 claims, having a 1,800' tunnel said to cut 3 veins carrying argentiferous copper and lead ores, mainly argentiferous tetrashedrite. Has steam power, ore bunkers with crusher and a saw-mill, with an available waterfall, rated at circa 4,000-h. p. It was expected, early 1907, that company would be merged in the Washington Consolidated Copper Co. Idle at last accounts.

#### **MINERAL HILL MINING & SMELTING CO.**

**CALIFORNIA.**

Letter returned unclaimed from former office, 237 Twelfth St., San Francisco, Cal. Mine office: Spenceville, Nevada Co., Cal. C. C. Bitner, manager. Lands, 5 claims, opened by a 535' tunnel showing gold-copper ore. Has water power. Idle.

#### **MINERAL HILL TUNNEL & COPPER MINING CO.**

**WASHINGTON.**

Office: 1140 Old South Bldg., Boston, Mass. Mine office: Danville, Ferry Co., Wash. Albert Vittum, president. Organized 1906, with capitalization \$1,500,000, shares \$1 par, as successor of Minnehaha Copper-Gold Mining Co. Is controlled, through ownership of majority of stock, by Boston Consolidated Mining Co.

Lands, 8 groups, lying at average distance of circa 2 miles south of the international boundary line, in the Wannicutt Lake district of Okanogan county, Washington, and in Ferry county, Washington. The Minnehaha group, 4 claims, area 70 acres, has several shafts, deepest 250', and a 20' tunnel, showing a vein of low grade auriferous copper ore with a 12" pay-streak of ore of good tenor. Shipped some ore, December, 1904, to the Granby smelter, that gave net returns of circa \$250 to \$400 per car.

#### **MINERAL MINING CO.**

**OREGON.**

Mine office: Huntington, Baker Co., Ore. Has a tunnel, showing copper ore, also a small smelter. Idle.

#### **MINERAL MINING & SMELTING CO.**

**NEVADA.**

Office: Reno, Nev. Mine office: Palisade, Eureka Co., Nev. Lands, sundry claims, on Mineral Hill, midway between Eureka and Palisade, said to show a 16' vein, carrying auriferous and argentiferous copper and lead

ores, giving assays up to \$1,108 per ton in gold. Is said to have started a 60-ton smelter. Idle.

**MINERAL MOUNTAIN MINING CO.**

**ARIZONA.**

Dead. Operated circa 1902. Formerly at Calabasas, Santa Cruz Co., Ariz.

**MINERAL MOUNTAIN MINING CO., LTD.**

**NEW MEXICO.**

Mine office: Steins, Grant Co., N. M. Has argentiferous lead and copper ore. Idle several years and apparently moribund.

**MINERAL POINT MINING CO.**

**COLORADO.**

Mine office: Marble, Gunnison Co., Colo. Lands include the Carbonate group, carrying auriferous and argentiferous copper ore. Has gasoline power and a 50-ton smelter. Presumably idle.

**MINERAL POINT MINING CO.**

**IDAHO.**

Mine office: Osburn, Shoshone Co., Idaho. S. V. Osburn, manager. Lands, south of Osburn, adjoining the Marie, have 2 tunnels, lower showing a 12' vein of tetrahedrite.

**MINERS COPPER CO.**

**MICHIGAN.**

Dead. Merged, March, 1899, in Isle Royale Copper Co. Formerly at Houghton, Houghton Co., Mich.

**MINERS' SMELTING CO.**

**UTAH.**

Letter returned unclaimed from former office, 42 Broadway, New York, N. Y. Works office: Garfield, Salt Lake Co., Utah. Organized July, 1907, under laws of Maine, with capitalization \$10,000,000. Property is a smelter-site, well located, at Lake Point, circa 2 miles west of Garfield Beach, on the southern end of Great Salt Lake, on which it was planned, early 1908, building a 3,000-ton smelter, at an estimated cost of \$2,000,000. Company is said to have a 10-year contract for smelting the ores of the Silver King Coalition.

**MINES DEVELOPMENT CO. OF NEVADA.**

**NEVADA.**

Office and mine: Lovelock, Humboldt Co., Nev. John T. Reid, president, treasurer and general manager; Patrick K. Reid, vice-president; Paul G. Reid, secretary and superintendent; preceding officers, Emmet E. Reid, R. C. Moore, J. Thies, Peter Anchor, E. B. Loring and John O'Kane, directors. Organized Sept. 1, 1904, under laws of Arizona, with capitalization \$750,000, shares \$1 par; issued, \$300,000.

Lands, 5 claims, area 100 acres, in the Juniper Mountain district, showing various fissure veins, of which 2, of about 4' average width, under development, show chalcocite, bornite and tetrahedrite, giving average assays of 2% copper, 11 oz. silver and \$3.50 gold per ton. Development is by a 30' shaft and a 185' tunnel. Is practically idle, except for annual assessment work, but company plans resumption on a considerable scale.

**MINNESOTA MINING CO.**

**MICHIGAN.**

Dead. Lands now owned by Michigan Copper Mining Co. Paid large dividends. Formerly at Rockland, Ontonagon Co., Mich. Very fully described, under title Michigan Copper Mining Co., Vol. II.

**MINES VENTURE SYNDICATE.**

**CALIFORNIA & OREGON.**

Office: 327 Pacific Electric Bldg., Los Angeles, Cal. E. Shirley Wilson, president; J. Munroe Layman, general manager. Organized under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands are sundry undeveloped copper claims in Modoc county, California, and Lake county, Oregon.

**MINGENEW COPPER SYNDICATE, LTD.**

**AUSTRALIA.**

Dead. Formerly at Mingene, Western Australia.

**MINGUS MOUNTAIN COPPER CO., LTD.**

**ARIZONA.**

Office: 516 Grant Bldg., Los Angeles, Cal. Mine office: Jerome, Yavapai Co., Ariz. E. A. Thomas, president; Thos. E. Metcalf, vice-president; W. W. Thomas, second vice-president; J. R. Thomas, secretary and treasurer; A. M. McDermott, assistant secretary; preceding officers, W. B. Simmons and W. B.

Metealf, directors; Thomas Brothers & Metealf, managers. Organized March, 1900, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par; issued, \$2,350,000.

Lands, 38 claims, area 750 acres, fairly timbered and watered, in the Black Hills district, 12 miles south of Jerome, the nearest railroad point, showing 3 fissure veins carrying oxide and sulphide ores, one vein, having a claimed extreme width of 40' and said to be traceable 4,000', giving good surface showings of carbonate ores, assaying up to 16% copper. Development is by shafts of 120', 250' and 370', with several tunnels, giving a total of 3,670' of workings. Company estimates average tenor of ore at 8% copper, with small gold and silver values, which is thought too high.

Equipment includes a 50-h. p. steam plant, with 2 hoists good for 1,000' each, and several mine buildings. Company is out of cash and apparently in a bad way.

#### **MINING EXPLORATION CO., LTD.**

#### **ARGENTINA**

Office: 19 New Union St., London, E. C., Eng. Operating office: 1123 Agustinas, Santiago de Chile. Works office: Tinguiririca, Chile. Col. Sir Thos. Hungerford Holdich, K. C. M. G., chairman; Wm. Rich, consulting engineer; Frank Lumley, general manager; F. A. Bagnell, secretary. Organized Sept. 29, 1900, under laws of Great Britain, with capitalization £175,000, shares £1 par; issued, £205,000.

Lands include La Victoria and Las Choicas mines, which are in Argentina, circa 80 miles from Tinguiririca, Chile, which is the nearest rail point, and, although lands are in Argentina, operations, to all practical effect, are in Chile. Las Choicas mine, on the eastern slope of the Andes, shows considerable rich ore carrying high values in both silver and copper, and was estimated, 1908, to have in sight 100,000 long tons of ore averaging 8% copper and 50 oz. silver per ton, which figures are considered high. Development is mainly by tunnels.

The reduction plant, on the Rio Tinguiririca, has water power available for development. Company ordered, 1907, material for a 53-kilometer railway, of 60-cm. gauge, from the Choicas mine to the reduction works, which include a 100-ton mill and smelter, expected to begin smelting late in 1908. A wagon-road for traction engines has been built from Tinguiririca to the mine. Property is considered promising.

#### **MINNEAPOLIS COPPER CO.**

#### **MEXICO**

Mine office: 550 Security Bank Bldg., Minneapolis, Minn. J. W. Christy, general manager; Tom. L. West, resident manager. Lands are near the Belen and Transvaal mines. Has gasoline power. Was developing, 1908, with a small force.

#### **MINNEAPOLIS COPPER MINING & MILLING CO.**

#### **WYOMING & MONTANA**

Dead. Formerly at Boulder, Jefferson Co., Mont., and Encampment, Carbon Co., Wyo.

#### **MINNEHAHA COPPER-GOLD MINING CO.**

#### **WASHINGTON**

Dead. Absorbed, 1906, by Mineral Hill Tunnel & Copper Mining Co. Formerly at Danville, Ferry Co., Wash. Described Vol. VI.

#### **MINA MINNIE.**

#### **CHILE**

Mine office: Higuera, La Serena, Coquimbo, Chile. T. H. Everitt, Juan Bade and J. Aldai, owners and managers. Lands, 1 pertenencia, area 5 hectares, circa 13 miles north of Higuera, showing a vein of 10' width at surface, producing carbonate ore of 10% average tenor. Mine is opened by 2 adit levels, and ore is sold to Sociedad Minera San Juan. Employs 16 men.

**MINNIE GULCH MINING & TUNNEL CO.****COLORADO.**

Mine office: Silverton, San Juan Co., Colo. Ores carry gold, silver and copper. Has steam power. Idle several years.

**MINNIE HEALY MINING CO.****MONTANA.**

Dead. Property sold, 1906, to Butte Coalition Mining Co. Formerly at Butte, Silver Bow Co., Mont.

**MINNIE MABEL GOLD & COPPER MINING CO.****WYOMING.**

Dead. Formerly at Rambler, Carbon Co., Wyo.

**MINNIE MINING & MILLING CO.****UTAH.**

Mine office: Bingham Canyon, Salt Lake Co., Utah. Long idle and presumably out of business.

**MINONG MINING CO.****MICHIGAN.**

Dead. Was the most important copper mine on Isle Royale, having made 498,650 lbs. fine copper. Formerly on Isle Royale, Mich. Described Vol. II.

**MINONG RANGE COPPER CO.****WISCONSIN.**

Dead. Succeeded, 1906, by Rudolph Land Co. Formerly at Gordon, Douglas Co., Wis. Fully described Vol. III.

**MINNT GROUP.****WASHINGTON.**

Office: care of D. F. Strobeck, owner, Spokane, Wash. Mine office: Meyer's Falls, Stevens Co., Wash. Lands, on Gold Hill, show 3 veins, of 8' to 25' width, giving assays up to 8% copper, 5 oz. silver and \$8 gold per ton. Idle several years.

**MIRANDA HERMANOS.****PERU.**

Office and mine: Cajamarca Cajamarca, Peru. Mine, known as the Negrites, carries rich argentiferous copper ore, and is reputed to be highly profitable.

**MISKWABIK DEVELOPMENT ASSOCIATION, LTD.****MICHIGAN.**

Dead. Lands sold, March, 1907, to Ojibway Mining Co. Formerly at Phoenix, Keweenaw Co., Mich. Described Vol. VI.

**MISSIZONA GOLD & COPPER CO.****NEVADA.**

Mine office: Las Vegas, Lincoln Co., Nev. D. F. Watson, manager. Lands are on the Colorado River, near the Sears mine.

**MISSOULA & COEUR D'ALENE COPPER CO.****IDAHO.**

Letter returned unclaimed from former mine office, Murray, Shoshone Co., Idaho. Property, on the old Murray trail, known as the Cook & Barnes group, has a 600' tunnel with a 480' back, showing a fissure vein, apparently of fair width, carrying copper ore.

**MISSOULA COPPER MINING CO.****IDAHO.**

Mine office: Mullan, Shoshone Co., Idaho. Robert B. McCormick, president and general manager; Thos. G. Kennedy, secretary and treasurer; J. A. Bushnell, superintendent. Capitalization increased, 1907, from \$100,000 to \$1,500,000, shares \$1 par. Lands, 20 claims, 2 fractional, in Deadman's Cañon, 4 miles east of Mullan. Has 2 tunnels, longest 1,000', and is continuing the Independent tunnel 700' into Missoula ground, to open a wide ledge of quartzite showing occasional stringers of high-grade copper carbonates. Has secured ores assaying up to 30% copper. Has electric power and an 8-drill air-compressor.

**MISSOURI & ARIZONA COPPER MINING CO.****ARIZONA.**

Office: 733 R. A. Long Bldg., Kansas City, Mo. Mine office: Mayer, Yavapai Co., Ariz. A. A. Whitney, president; B. A. Stiles, vice-president; B. E. Stevenson, secretary; E. C. Cooper, treasurer. Organized 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 5 claims, area 100 acres, in the Big Bug district, claimed to have a shaft showing sulphides assaying 4.5% copper and \$2 gold per ton, with a trace of silver. Is not regarded favorably.

**MISSOURI COPPER CO.****MISSOURI.**

Dead. Formerly had an office, circa 1903, at 50 State St., Boston, Mass.  
**MISSOURI COPPER MOUNTAIN MINING CO.** **MISSOURI.**

Office: 323 West 7th St., Sedalia, Mo. Mine office: Sullivan, Crawford Co., Mo. L. M. Barnard, president; W. H. H. Myers, secretary. Capitalization \$1,000,000, shares \$100 par. Lands, 74 acres freehold and 690 acres leasehold. Mine, worked in a small way, before 1850, has 4 shafts and tunnels of 24' and 1,000', showing carbonate ores, with hematite gangue and heavy clay gouge, claimed to average about 10% copper. Has steam power and concentrator with a Blake crusher, 18" and 22" rolls, 4 New Century jigs, Card concentrating table and hydraulic classifiers. Smelter has a 40-ton Allis-Chalmers water-jacket furnace, with Root blower. Country rock is magnesian limestone, ore body having a good gossan capping, with vein showing chalcopyrite and pyrite in the sulphide zone. Idle several years and apparently moribund.

**MISSOURI & MEXICAN MINING CO.****MEXICO.**

Office: Dwight Bldg., Kansas City, Mo. Mine office: Suaqui de Batuc, Ures, Sonora, Mex. Geo. A. Wittig, president; Leo N. Leslie, secretary. Lands, 370 acres, on the Yaqui River, 9 miles northwest of Suaqui de Batuc, and circa 100 miles from a railroad, said to show ore carrying values of \$60 to \$300 per ton. Idle several years and apparently moribund.

**MITCHELL COPPER MINING CO.****MONTANA.**

Letters returned unclaimed from former office, Missoula, Mont., and from former mine office, Florence, Ravalli Co., Mont. Organized July, 1907, under laws of Montana, with capitalization \$1,000,000.

**MITCHELL DEVELOPMENT CO.****ARIZONA.**

Dead. Liquidated, 1906. Formerly at Bisbee, Cochise Co., Ariz. Fully described Vols. IV and V.

**MITCHELL MINING CO.****MEXICO.**

Office: 52 Wall St., New York, N. Y. Mine office: Chilpancingo, Bravos, Guerrero, Mex. John A. I. Cassidy, president; Thos. H. Anderson, vice-president; Wm. F. Fluhrer, treasurer; preceding officers, Samuel V. Woodward, Martin F. Morris, B. F. Cole, Robt. E. Morrison, Geo. W. Burleigh and Philip S. Dyer, directors; J. McD. Mellen, secretary; E. D. Elson, general manager; E. E. Noon, mine superintendent.

Organized Apr. 16, 1902, under laws of Arizona, with capitalization \$5,000,000, increased circa August, 1906, to \$8,000,000, shares \$10 par. Holds lands through La Dicha Mining & Smelting Co., S. A., organized under laws of Mexico. Controls, through ownership of stock, La Dicha & Pacific Railroad Co., which has an issue of \$1,000,000 bonds, at 6%, said to have been underwritten by large shareholders of the Mitchell, and guaranteed, both principal and interest, by the Mitchell Mining Co. Knickerbocker Trust Co., New York, registrar. Annual meeting, first Monday in April.

A 5% dividend was declared, December, 1906, but this proved a promised dividend only, payable in bi-monthly installments of 1%, of which only the first and second installments were paid, in January and March, 1906, the pretext for passing further payments being the cost of enlarging the plant, etc. Geo. Mitchell, promoter of the company, and its former president, is said to have voted himself two years' back salary, at \$25,000 per annum, just before quitting office.

Lands, 1,800 pertenencias, area 4,446 acres, in 7 groups, forming a parallelogram of 1 by 7 miles, with axis of the tract along the strike of the vein, in the districts of Bravos and Tabares, circa 40 miles in an air-line from Acapulco. There are also circa 18,000 acres of plantation lands, and 164,000 acres of virgin timber lands, including some good oak, yellow pine and hardwoods. The district is fertile and healthy, with an excellent climate, the temperature

averaging 74° F. El Rancon ranch, area 18,000 acres, is said to have 8,000 coffee trees, 16,000 cacao trees, pineapples, oranges, etc., besides raising vegetables and cereals, and grazing large herds of cattle, and flocks of sheep, furnishing all food supplies for the workmen at the mine.

In addition to the copper property, the Mexican lands of the company include deposits of coal and iron ore, also mineralized veins carrying gold and silver values.

Principal mining property is La Dicha group, said to carry a continuous vein of sulphide ore upwards of 5 miles in length, continuity being proven by a heavy gossan capping, and by exposures where a series of mountain streams have cut the vein, at intervals of a quarter to a half mile, claimed width of the ore body being 150' to 225', with a granite footwall and schistose hanging. The vein is said to have been exposed to a depth of 745' at one point, by a stream cutting through. Below the gossan, and above the base zone constituting the great bulk of ore, is a layer of 1' to 6' of chalcocite, assaying up to 74% copper tenor. The vein matter is essentially chalcopyrite, pyrite and pyrrhotite.

The Rio Alcaparosa parallels a considerable portion of La Dicha vein, receiving as affluents numerous smaller streams that have cut across the vein at approximately right angles, wearing down new beds, sometimes for hundreds of feet, affording perfect cross-sections of the ore body.

Development is by 8 shafts and 4 tunnels, with circa 3 miles of workings, all shafts and tunnels being reported to be in ore. Principal developments are between shaft No. 1 and tunnel No. 8, a distance of circa 2,800'. Shafts are the following depths: No. 1 is 65'; No. 2 is 151'; No. 3 is 130'; No. 4 is 253'; No. 5 is 74'; No. 6 is 690'; No. 7 is 338'; No. 8 is 470'; No. 9 is 640'; No. 10 is 85'; No. 11 is 356', and No. 12 is 308'. All shafts are of 2-compartment size, solidly timbered and equipped with temporary wooden shafthouse, iron-sheathed. Development is mainly by tunnels, of which Nos. 4, 6, 8 and 9 have tram-tracks. At different times various officers of the company have claimed 12,000,000 to 18,000,000 tons of ore in sight, and former President Mitchell claimed to shareholders that the ores of the mine would average 6% copper. In August, 1904, the company claimed to have 861,975 tons of ore blocked out for stoping, with 6,898,636 tons in sight. These figures were gross exaggerations, though the mine has large ore bodies, and the original claims of President Mitchell that the ore would average 6% copper tenor were modified to a later claim that the mine had 2,500,000 tons of ore blocked out averaging above 4%, and 6,000,000 tons averaging better than 3.5% in copper tenor. In view of many past exaggerations these claims must be viewed with deep suspicion.

Mine equipment is light, owing partially to the development of the mine by tunnels. The power plant includes two 40-h. p. and two 120-h. p. hoists, 2 Rand air-compressors and 12 power drills.

Buildings include a general store and a considerable number of cabins for employes. The supply of native labor is said to be ample, and fairly efficient, wages ranging from 29 cents to 42 cents, gold, per day.

The Rio Papagalla, circa 3 miles from the southern end of the mine, has an available head of 200', if reached by a tunnel of about 1,000' length, estimated as capable of developing 8,000 h. p. in the dry season, and there is a smaller horsepower available on the Rio Alcaparosa, for which it is claimed that a 350-h. p. installation was ordered, but it cannot be learned that this was received. The management had a cheerful way of stating as facts things that should have been facts, but were not.

The smelter, located at a 75' waterfall, has a 200-ton Mitchell economic hot-blast furnace, and it was claimed that a 300-ton blast-furnace of the same

make was being installed, March, 1906, but apparently the second furnace failed to materialize. Blast is furnished by 3 Connersville blowers. The converter plant, of 25 tons daily capacity, has one stand and 3 shells, and was put in commission circa August, 1906. Fuel was coke, wood and charcoal.

La Dicha & Pacific Railroad, planned to be 83 miles long, from the mines near Chilpancingo to Puerto Marquez, 10 miles south of Acapulco, has been surveyed, and it was claimed, early 1906, that contracts were let for grading and laying steel. Apparently work actually was begun May, 1906, but at last accounts the first section of 30 miles was uncompleted, and none of the line in operation.

Production, 1905, was estimated, 1906, by the Copper Handbook, at 3,000,000 lbs., with the statement that the estimate might be too high, which it undoubtedly was, as the company dealt consistently in exaggerations regarding production, as well as all other features of operation. The company is said to have shipped 201,000 lbs. of copper, 1906, via Panamá, which may or may not have been true.

The company was said, 1906, to have given up the Point Vesuvius group, on Galena Bay, Prince William Sound, Alaska, but it is not certain that these lands were held by the Mitchell Mining Co., as the boundaries separating this company from the other Mitchell promotions were very hazy.

The company formerly held the Schultz mine and adjoining properties, near Globe, Gila county, Arizona, but threw up its bonds.

On June 13, 1908, Geo. Mitchell assigned, to the Mitchell Mining Co., the company's note to him for \$156,875.93, issued to cover alleged advances made personally by Mitchell to La Dicha Mining & Smelting Co., S. A. Two reorganization committees were appointed, 1907, and apparently these are pulling at cross purposes. Company's property was attached, October, 1908, by Frederick Cuthbertson, for \$57,291. The company apparently is hopelessly involved, and the miserable manner in which the property has been managed is highly discreditable to Mitchell and all others connected with the promotion. The outcome fully verifies the criticisms of the Copper Handbook, made in Vols. V, VI and VII.

#### MITSU BISHI GOSHI-KWAISHA.

JAPAN.

Office: Mitsu Bishi Bldg., Yaesucho Itchome, Kojimachi-ku, Tokio, Japan. Branch office: 10 Aioicho, Itchome, Kobe, Japan. Mine offices are given in detailed mine descriptions following. K. Nambu, president; S. Harada, vice-president; S. Sho, secretary; R. Tayakawa, treasurer; A. Yamada, general manager; K. Kimura, manager Kobe office.

The company is an extensive producer of copper, its principal mines being the Yoshioka, Arawaka, Makamine, Ikuno, Sawatari, Omodani, Mozumi, Takara and Sado, with various smaller properties.

The Osaruzawa mines are at Hanawa, Kazuno, Rikuchu, Japan. K. Ishihara, superintendent; K. Okamoto, smelter superintendent; W. Matsuhashi, mine superintendent; K. Ikeda, mill superintendent; T. Kawamura, engineer. Lands, circa 1,000 acres, also 200 acres of miscellaneous lands adjoining. Mines are very ancient, having been opened in the Eighth Century, but were worked for gold only, until circa 1650, when copper ores were developed. Ore is mainly chalcopyrite, with occasional bornite and a little native copper, associated with pyrite and small quantities of sphalerite, galena and hematite. Occasionally native gold is found, mixed with the copper ores, and in a quartz fahland, gold values occurring mainly in the upper workings. The veins are very numerous, ranging from 5" to 30' in width, with average width of 3'. The veins, which are very persistent in strike, and hold workable to an average depth of 500', traverse Tertiary shales and tuffs, with intrusive augite-andesite and kiparite. Development is by 8 working shafts, deepest 470', and 7 main

tunnels, longest 7,500', the mines having upwards of 15 miles of workings. The smelter has two 40-ton water-jacket blast-furnaces and a 250-h. p. electric plant, turning out blister copper of 99.09% tenor. The Osaruzawa mines employ circa 1,000 men, and, in 1,200 years of operation, have produced immense quantities of gold, silver and copper. Production was 2,448,090 lbs. fine copper in 1902; 2,817,152 lbs. copper, 142,492 grams silver and 6,161 grams gold in 1906, and 2,537,710 lbs. copper, 204,313 momme silver and 2,600 momme gold in 1907.

The Yoshioka mine is at Fukiya-mura, Kawadami-gori, Bitchu, Japan. M. Fujioka, general superintendent. The mine, opened 1806, was worked continuously, but never became a considerable producer until taken over, 1873, by present owners. The property was very difficult of access until a new road was built by the Mitsu Bishi company. Ore is chalcopyrite, associated with sphalerite, pyrite and pyrrhotite, with quartz gangue, and averages, after dressing, 9% copper. Ore occurs in veins in country rocks of clay slate, sandstone and schalkstein, traversed by porphyry dykes. Production was 1,081,346 lbs. fine copper and 1,722,000 momme silver in 1900; 1,674,648 lbs. fine copper and 2,011,725 grams silver in 1906, and 1,809,679 lbs. fine copper, 461,179 momme silver and 1,080 momme gold in 1907.

The Arakawa mine is at Arakawa-mura, Sephoku-gori, Ugo, Japan. M. Ooye, general superintendent. This property, formerly known as the Ugaiwa mine was reopened 1871, and, after passing through various hands, was bought, 1896, by the present owners. Country rocks, of Tertiary and Quaternary ages, include hornblende-andesite, liparite and propylite, carrying numerous parallel veins in propylite, with strike approximately northeast and southwest. Production has been as follows: 566,268 lbs. fine copper in 1900; 1,200,215 lbs. in 1906, and 1,645,921 lbs. in 1907.

The Hisanichi mine is at Arakawa-mura, Senhoku-gori, Ugo, Japan. M. Ooye, general superintendent. This property, near the Arakawa, shows 6 main veins; the largest, known as the Ugaiwa, of about 24' average width, carries about 8' of payable ore, and occasionally branches into several smaller veins. The 5 other workable veins range 5' to 7' in width. Ore is chiefly argentiferous chalcopyrite, associated with pyrite, frequently carrying native copper, cuprite and chrysocolla, associated with pyrite, sphalerite and galena, with quartz gangue. The property has water and electric power, and a 50-ton smelter, employing circa 1,200 men. Production, 1900, was 1,734,522 lbs. fine copper.

The Ikuno mines are at Ikuno, Tajima, Japan. T. Hori, general manager. These properties employ circa 1,000 men. Mines were discovered A. D. 807, and were extensively worked, 1596-1620, under the direction of the Tokugawa government, but were taken over, 1868, by the Imperial government, and sold, 1896, to the present owners. The three principal mines of this group are the Tasei, Kanagase and Kasei. The Tasei mine has a main vein of 14' average width, with numerous branches traversing. Liparite, propylite and Tertiary tuffa, carrying native gold, argentite, and silver, malachite, chalcopyrite, sphalerite and galena, associated with pyrite. The Kanagase mine, near the Tasei, has the same country rocks, but is traversed by basalt dykes, a great fault-seam, 30' to 40' in width, filled with brecciated country rock, showing 6 veins carrying native copper, bornite, chalcopyrite, tetrahedrite, argentite, sphalerite, galena, pyrargyrite and stibnite. The Kasei mine shows diorite, traversed by liparite and propylite dykes, the metalliferous veins, occurring in diorite, carrying chalcopyrite and native silver, with ores of lead, zinc and antimony. The properties have steam, water and electric power. Production of the Ikuno mines has been as follows: 984,355 lbs. fine copper, 1,260,932 momme silver and 5,620 momme gold in 1900; 1,435,234 lbs. fine copper in 1903; 1,845,091 lbs. fine copper, 6,368,010 grams silver and 131,794 grams gold in 1906;

1,979,789 lbs. fine copper, 1,499,864 momme silver and 22,596 momme gold in 1907.

The Makamine mine is at Kitakata-mura, Higashi-Usuki-gori, Hyuga, Japan. This property is an old mine, idle for many years, until reopened, circa 1896, by the Mitsu Bishi company. Ore is chalcopyrite, associated with pyrite, averaging 3.5 to 4% in copper tenor. The property has been modernized in equipment and methods. Production has been as follows: 1,208,282 lbs. fine copper in 1900; 1,933,227 lbs. in 1903; 1,275,097 lbs. in 1906; 1,179,212 lbs. in 1907.

The Omodani mine is at Kami-Anana-mura, Ono-gori, Echizen, Japan. This property, opened A. D. 1350, has numerous small veins, none exceeding 4' in width, carrying bornite, chalcopyrite, sphalerite and galena, all argentiferous and showing occasional native silver. Production has been as follows: 614,438 lbs. fine copper and 103,682 momme silver in 1900; 432,248 lbs. copper and 1,043,115 grams silver in 1906; 502,381 lbs. copper and 282,723 momme silver in 1907.

The Sawatari mine is at Kitakata-mura, Higashi-Usuki-gori, Hyuga, Japan. This property, adjoining the Hibira mine, carries small lenses of ore in Paleozoic clay slate and sandstone. Production was 187,191 lbs. fine copper in 1900 and 227,684 lbs. in 1903. There is no later production reported, and mine probably is idle.

The Kamioka mine is at Funatsu, Yoshiki-gori, Hida, Japan. Bichru Matsuda, superintendent. The property is essentially a silver-lead mine, making copper as a by-product. Ores are mainly argentiferous chalcopyrite, arsenopyrite, galena, sphalerite and pyrite, associated with occasional malachite and chrysocolla. The mine has steam and electric power, and a small smelter, employing circa 600 men. Production has been as follows: 8,475 lbs. fine copper, 537,487 kin lead and 148,670 momme silver in 1900; 46,621 lbs. fine copper and 3,704,437 grams silver in 1903, and 84,331 lbs. fine copper and 1,336,239 momme silver in 1907.

The Sado mines are at Arakawa-cho, Sado, Japan. Y. Uriu, general superintendent. This property, 425 miles from Tokio, on the Island of Sado, formerly was owned by the Mikado and operated as a sort of government mining school, until 1898, when bought by the Mitsu Bishi company. The mines carry auriferous and argentiferous copper ores, being primarily gold and silver mines, with a little copper secured as a by-product. Equipment includes steam, water and electric power, with an exceptionally good plant of modern mining machinery. Production has been as follows: 12,730 lbs. fine copper, 3,098,265 grams silver and 374,899 grams gold in 1906; 12,812 lbs. fine copper, 963,753 momme silver and 109,344 momme gold in 1907.

Production by all mines of the company was 12,727,944 lbs. fine copper in 1905, and 13,535,458 lbs. copper, 19,084 kgs. silver and 578 kgs. gold in 1907. The Mitsu Bishi is one of the four large copper mining companies operating in Japan, and, like the others, is exceptionally progressive. Success has not been won by the possession of mines of exceptional value, though the company has some excellent properties, but rather by the utilization of the most modern methods and appliances in mining and metallurgy, directed by the best technical skill available.

#### MITSUI & CO.

JAPAN.

Mine office: Funatsu, Yoshiki-gori, Hida, Japan. C. Tanikawa, superintendent. Property is the Mozumi mine, near the Kamioka of the Mitsu Bishi Goshi-Kwaisha. The Mozumi mine, opened A. D. 1573, is primarily a silver-lead mine, but a little copper is secured as a by-product. Production, 1906, was 119,044 lbs. fine copper and 858,900 grams fine silver.

In addition to metalliferous mines, Mitsui & Co. are extensive miners of coal, and their various properties are well equipped and handled with technical skill.

#### MITTERBERG COPPER CO., LTD.

AUSTRIA.

Office: 16 St. Helens Place, London, E. C., Eng. Mine office: Innsbruck, Tyrol, Austria. Chas. C. Turnbull, J. P., chairman; Gerald B. Elkington, J. P., vice-chairman; H. Read Smith, secretary; preceding officers, Jaquas Oppenheim and G. Muir Ritchie, directors; Robt. Addie, consulting engineer; Henry Merton & Co., commercial agents. Organized Dec. 14, 1905, under laws of Great Britain, with capitalization £200,000, shares £1 par; issued, £175,000. Paid a 1s. dividend early 1907.

Lands, 10 mining claims and 10 prospecting claims, area 1,551 acres, also 3,304 acres of timber lands, 15 miles from Bishopshofen, midway between Salzburg and Innsbruck, in the Austrian Tyrol. The Mitterberger mine shows argillaceous Silurian schists, limestone and dolomite, carrying 3 parallel veins, known as the Josephi, Johanni and Marien, of 6' to 9' average width, carrying auriferous, argentiferous and nickeliferous chalcopyrite, associated with arsenopyrite, pyrrhotite and siderite, with gangue chiefly of quartz. The veins do not carry synchronous values, there being only one payable lode in any given cross-section, mineral values switching from one vein to another at intervals. The veins carry high values in stringers of 1" to 30" width, with balance of ore body payable throughout the vein, at the points mineralized, ore averaging circa 3% in copper tenor.

The Mitterberger mine is an old property, and has extensive underground workings, estimated to show 3,000,000 tons of ore, with circa 400,000 long tons blocked out for stoping, but these estimates are considered high. The mine is developed exclusively by tunnels, with small concentrators at the portals.

The reduction works, at Ausserfelden, include a mill, in which it was said, 1907, that an Elmore vacuum flotation process was being installed, and an antiquated smelter, which the company is said to plan reconstructing upon a modern scale. It is said also that the new management plans sinking two shafts, to open the mine at depth.

Production, under former ownership, was about 600 long tons of fine copper yearly, and for the first 9 months of operation, ending early 1907, production under present management was 473 long tons of fine copper, and a small quantity of bluestone, showing that the new owners apparently are making no more copper, despite the very high capitalization, than was made formerly. The arrangements of the company with the directors are considered unfavorable to the corporation, and the management has been sharply criticised, by Austrian mining publications of good standing, which complain that a raft of relatives and place-seekers were turned loose on the property.

#### MITTERBERGER KUPFER GEWERKSCHAFT.

AUSTRIA.

Mine office: Innsbruck, Tyrol, Austria. Is controlled, through stock ownership, by Mitterberg Copper Co., Ltd., and property is described under title of that company.

#### COMPANIA MINERA MIXTA MICHOACANA.

MEXICO.

Mine office: Ario de Rosales, Ario, Michoacán, Mex. Tomás González, manager. Has gold, silver and copper ores, employing circa 60 men at last accounts.

#### MIZPAH CONSOLIDATED COPPER & GOLD MINING CO.

NEVADA.

Mine office: Mizpah, Elko Co., Nev. T. J. Duddleson, president; H. P. Crist, secretary and treasurer; Henry Darlington, manager. Lands, in the southeastern portion of Elko county, 5 miles east of a railroad, have a 70' two-compartment incline shaft, planned to be sunk 250', said to show ore assaying 17% copper and \$7 per ton in combined gold and silver values.

**MIZPAH COPPER CO.**

NEVADA.

Dead. Organized circa February, 1907, and was succeeded, 1907, by Ely National Copper Co. Formerly at Ely, White Pine Co., Nev.

**MIZPAH COPPER & GOLD MINING CO.**

NEVADA.

Mine office: Mizpah, Elko Co., Nev. Has secured assays of 12 to 20% copper, with combined gold and silver values of \$8 to \$20 per ton.

**MIZPAH COPPER KING MINING CO.**

NEVADA.

Mine office: Mizpah, Elko Co., Nev. J. H. Wilson, president; Hon. John Donaldson, vice-president; C. C. Shettles, secretary and treasurer; Chas. Young, superintendent; preceding officers, W. E. Young, Chas. S. Watson and A. E. Strong, directors. Organized 1907, under laws of Arizona, with capitalization \$1,000,000. Lands, 5 miles from Nevada Northern railway, show quartzite and granite-porphry dykes, carrying a 3' fissure with ore assaying up to 32% copper, 23 oz. silver and \$10 gold per ton, opened by a 60' shaft and 100' tunnel.

**MIZPAH COPPER MINING CO.**

IDAHO.

Office and mine: Palouse, Whitman Co., Wash. C. E. Frederick, president; J. C. Northrup, vice-president; H. C. Johnson, secretary; W. F. Chalenor, treasurer. Organized October, 1906, under laws of Washington, with capitalization \$1,500,000. Lands, in the Hoodoo district of Latah county, Idaho, have about 1,000' of workings, main tunnel showing high-grade cuprite, azurite and malachite, all argentiferous and of good copper tenor. Expended, 1907, about \$20,000, and plans a 2,000' aerial tramway to connect with a branch railway.

**MIZPAH MINES & REALTY CO.**

NEVADA.

Dead. Was organized circa March, 1907. Formerly at Ely, White Pine Co., Nev.

**MIZUSAWA MINE.**

JAPAN.

Owned by Furukawa Mining Co.

**MOAB COPPER MINING CO.**

N. UTAH.

Office and mine: Moab, Grand Co., Utah. Organized Nov. 2, 1905, under laws of Utah, to take over claims in the La Sal district. Apparently idle since birth.

**MOBILE MINE.**

GEORGIA.

Mine office: Piercerville, Fannin Co., Ga. Is an old and slightly developed property, idle many years.

**MINA MOCTEZUMA.**

MEXICO.

Mine office: San Juan de Guadelupe, Durango, Mex. Ramón Gaitan, owner and manager. Mine, opened by tunnel, carries argentiferous lead and copper ores, employing circa 50 men.

**MOCTEZUMA-ARIZPE DEVELOPMENT CO., S. A.**

MEXICO.

Is the Mexican incorporation of the Arizpe Development Co.

**MOCTEZUMA COPPER CO.**

MEXICO.

Office: 20-99 John St., New York, N. Y. Mine office: Nacozari, Moctezuma, Sonora, Mex. Jas. Douglas, president; A. C. James, vice-president; Geo. Notman, secretary and treasurer; Jas. S. Douglas, superintendent; T. A. Stanton, assistant superintendent; Geo. Kingdon and Geo. Reed, mine superintendents; Al. Berner, mill superintendent; Dr. A. Sandberg, metallurgist; D. S. Giddings, engineer; Geo. M. Douglas, superintendent of motive power.

Organized under laws of West Virginia, with capitalization \$3,000,000. Is a close corporation, owned and managed by members of the firm of Phelps, Dodge & Co.

Lands, circa 2,000 acres, in the Moctezuma and Arizpe districts of Sonora, including the Pilares de Nacozari mine, 6 miles east of Nacozari, also the Juárez and Nicolás ranches, area circa 35,000 acres.

The Pilares mine lies in a hilly country, near the divide of the Yaqui and

Opoatura rivers. The lands have been probed extensively, by diamond drill borings. Ore occurs in a broad friction zone, in which the original rock has been broken into pieces, ranging in size from gravel up to masses many tons in weight, the porphyritic rock in this crushed zone, which is the matrix of the ore, carrying mainly auriferous chalcopyrite, with occasional bornite, associated with pyrite. The deposit has no clearly defined footwall, and the hanging dips at an angle of about 80°. There is a small outcrop of rich carbonate ore, but croppings are mainly red-stained porphyry, carrying considerable low grade hematite. The leached zone is about 20' in depth only, with pay-ore coming in at depth of circa 60'. The ore body apparently is about 800' wide by 1,500' long, at surface, with increased area at depth. The matrix is a fine-grained silicious rhyolite, and ore averages about 2.7% in copper tenor, as mined, before concentration, though some high grade ore is found.

Development is mainly by tunnel, though there are two vertical shafts, with a 687' incline shaft on the San Pedro, deepest workings being only 700'. Extraction is mainly through the Porvenir tunnel, about one mile long, with a vertical shaft at the end, the tunnel, which is on the 700' level, being equipped with railroad tracks of 20" gauge. The Porvenir tunnel has extensive driftings at either side, with storage bins in a 25x100' chamber, to which ore is milled down from the upper workings. The mine shows some enormous stopes, No. 4 stope, on the third level, being 85' high, 125' wide and 150' long. The mine has about 50 miles of workings, and is very dry and well ventilated.

Ore is extracted in stopes 100' square, and, after removal of ore, the depleted stopes are caved in from surface, after which another 100' section is opened. This is repeated for the entire length of the ore body, after which another 100' section is started, at a distance of 100' from the previously mined section, leaving a 100' strip of unmined ore between the length of the property, after which the unmined section, 100' wide, is stoped, ground being held by the broken rock on either side. The Pilares has one of the largest copper ore bodies in the world, and it is comparable, in many respects, with the Rio Tinto. The mine has several million tons of ore blocked out for stoping, with reserves of known ore of enormous tonnage.

The new 1,200-h. p. power plant, completed 1908, has a battery of Stirling boilers, with a 196' reinforced concrete smokestack, and is equipped with steam turbines and electric generators, distributing electric power to the new concentrator and the mine. The old power plant has both steam and gas power, mainly the latter, with Loomis-Pettibone generators making both producer and water gases, which are stored in separate gasometers, of 15,000 and 5,000 cubic feet capacity respectively, gases being mixed in due proportions, before use. The consumption of fuel in the producer gas plant is under 3 lbs. of very inferior wood, per horsepower hour. The old power plant has eight 100-h. p. Crossley single-cylinder 4-cycle gas engines, with 18½" cylinders and 24" stroke, making 200 revolutions per minute, each direct-connected to a 65-kw. direct current generator, and one 200-h. p. Crossley engine, driving a 150-kw. generator. Current is sent from the central station, at 250 volts, to some 40 different motors, installations ranging from 5 to 175 h. p. each. Electric power for the mine is transmitted 6 miles, at 6,600 volts, and at the mine is stepped down to 230 volts, for the pumps, while the hoists and the electric locomotives use a 250-volt direct current.

Buildings, mainly of steel, include a brick machine-shop. Lighting at the mine and mills is by arc and incandescent electric lights.

The mine, mill and smelter are connected by a 6-mile narrow-gauge railway, known as the High Line, which was extended, improved and relaid with 80-lb. steel rails, in 1908. Rolling stock includes 60-ton locomotives and 25-ton steel ore-cars.

There are two mills, the old concentrator, of 600 tons daily capacity, being in 2 sections, equipped with 2 Blake crushers, 4 sets of 54x3" roughing rolls, 2 sets of finishing rolls, 24 revolving screens, ten 5' Huntington mills, 48 Hartz jigs, 56 six-foot Frue vanners, 20 Bartlett tables, 7 settling tanks and hydraulic classifiers. Slimes from the settlers are worked by vanners exclusively, and rolls are used in crushing, as far as possible, to obviate sliming. Tailings are reground and treated on Frue vanners. Equipment of the old mill includes five 50-h. p. motors, eight 30-h. p. motors and one 20-h. p. motor. The old mill, designed by Dr. L. D. Ricketts, is said to save upwards of 90% of assay values, although the ore is not readily amenable to satisfactory treatment.

The new mill, of 2,000 tons nominal daily capacity, 6 miles from the mine, is in 2 sections, the first half having gone into commission circa July 1, 1908. Equipment includes 15 Allis-Chalmers 3-phase, 60-cycle, 220-volt induction motors, of 10 to 75 h. p. each, and the mill has 70 Eisdon-Johnston concentrating tables. The new mill makes concentrates of about 12% copper tenor, with a saving of about 82% of assay values. Equipment includes 20 thirty-ton Ingoldsby side-dumping cars.

The mills are supplied with water by one Triplex and 3 Worthington pumps, forked from a well in the river to a reservoir at the millsite, and wash-water from the concentrators is settled and re-used.

The smelter, near the mill and 5 miles from the mine, has two 42x130" elliptical water-jacket blast-furnaces, of the Copper Queen type, flanked by tilting wells that can be tilted both front and rear. The converter department has 2 stands, with 96x114" shells of the Copper Queen type. Fumes from furnaces and converters pass into an 8' horizontal steel flue, connecting with a 750' brick flue that discharges into a 70' brick stack. Blast is furnished by a blower, direct-connected to a 75-h. p. dynamo. This smelter was closed, September, 1904, upon completion of the railroad line from Cos to Nacozari, since which time all concentrates have been shipped to the Douglas smelter of the Copper Queen, 77 miles distant.

The company maintains both English and Spanish schools, for children of employes, also a hospital, public library and well-stocked general store.

The mine workers are mainly Mexicans, as are many of the employes at the mill, and the bulk of the forces employed on surface. Native labor is paid 2 to 3 pesos per 10-hour shift. Forces are about 800 men.

Production has been as follows: 9,632,000 lbs. fine copper in 1904; 10,160,016 lbs. fine copper in 1905; 12,714,726 lbs. in 1906; 9,640,390 lbs. in 1907. Production for latter half of 1908 was considerably increased, as a result of starting the first section of the new mill, and should be raised, ultimately, to 25,000,000 to 30,000,000 lbs. fine copper yearly. The management is excellent, and the property, while low in average grade, has an enormous tonnage of ore, and is certain to become a much heavier producer in the future than it has been in the past.

#### MOCTEZUMA DEVELOPMENT CO.

MEXICO.

Office: Douglas, Ariz. Mine office: Moctezuma, Sonora, Mex. Jas. E. Suits, T. S. Lamberson, Geo. W. Cass, J. J. Brown and Gid Graham, directors. Organized Aug. 6, 1906, under laws of Arizona, with capitalization \$200,000, shares \$1 par. Mine, having 4 tunnels, with about 2 miles of workings, greatest depth being 700', is claimed to have produced, under former ownership, about \$2,000,000 worth of copper, lead, gold and silver ores.

#### MOCTIGAN MINING CO.

MONTANA.

Office: care of J. H. Vivian, president, Butte, Silver Bow Co., Mont. Mine office: Corbin, Jefferson Co., Mont. Jas. Higgins, vice-president; J. K. Rowe, secretary and treasurer; preceding officers and Jas. B. White, directors. Organized February, 1907, under laws of Montana, with capitalization

\$1,000,000, shares \$1 par. Lands, 8 patented lode claims and 2 patented placer claims, area circa 150 acres, also a millsite and right of way to railroad, including properties formerly held by the Minah Consolidated. Presumably idle.

**MODEL GOLD MINING CO.** ARIZONA.

Dead. Was a bad egg. Formerly at McCabe, Yavapai Co., Ariz.

**MODERN COPPER MINING CO.** ARIZONA.

Office: Utica, N. Y. Mine office: Bisbee, Cochise Co., Ariz. W. J. Thistlethwaite, president; R. Harlan, general manager; J. C. Green, secretary. Lands, 28 claims, unpatented, area circa 500 acres, at the northwestern end of Tombstone Cañon, in the Warren district, showing 5 fissure veins, carrying carbonate and sulphide ores, of which one vein, slightly developed, is said to give average assays of 7% copper, 10% lead, 14 oz. silver and 1 oz. gold per ton. Has shafts of 25', 40', 50' and 100', and has started a tunnel, to strike a vein claimed to show a gossan outerop. Claims considered poorly located.

**MODOC MINING CO.** NEW MEXICO.

Dead. Lands passed to American Metals Co. Formerly at Organ, Donna Ana Co., N. M. Described Vol. VI.

**MOGOLLON GOLD & COPPER CO.** NEW MEXICO

Office: 516-290 Broadway, New York, N. Y. Mine office: Cooney, Socorro Co., N. M. Thos. J. Curran, president and general manager; Walter D Buchanan, vice-president; Geo. H. Masten, secretary and treasurer; preceding officers, Geo. W. Stubbs and William J. Weatherby, directors; James P. Batchen, superintendent; J. D. Murphy, mine superintendent; Robert G. Reilley, mill superintendent. Organized Sept. 12, 1901, under laws of New Mexico, with capitalization \$1,250,000, shares \$1 par; issued, \$950,000. Bonds, \$350,000 authorized, \$105,000 issued. Paid dividends of \$22,500 to March 12, 1906.

Lands, 29 claims, area 500 acres, partly patented, also a 40-acre millsite, in the Cooney district of the Mogollon Mountains, circa 85 miles northeast of Silver City, the nearest railroad point, including 5 groups, known as the Cooney, Peacock, Little Charley, Independence and Fluoride.

The Peacock mine has a 400' shaft, about 1,500' distant from the Cooney shaft, and connected therewith by drifts on several levels. The Cooney group, 9 claims, is developed by a 550' two-compartment main shaft. The mine is opened on a fissure vein, in porphyry and andesite, that averages 5' to 10' width, with occasional greater width, carrying a pay streak of 3' to 30' width, with numerous narrow feeders, some of which have high values in gold. Ores are principally slightly auriferous and highly argentiferous chalcocite, bornite and chalcopyrite, with silver values increasing at depth. The Cooney has 6 levels opened, and the Cooney and Peacock have been producers of ores to the estimated value of \$1,250,000, in the past.

Equipment includes a machine shop, electric light plant and a small concentrator. A receivership was asked, May, 1907, on the alleged ground of insolvency and bad management, but apparently was not granted by the courts, and the property was working, with a small force, at last accounts.

**MOGOLLON MINING CO.** NEW MEXICO.

Office: Deming, N. M. Mine office: Cooney, Socorro Co., N. M. W. L. Nixon, president and general manager; T. B. Dillon, vice-president and mill superintendent; W. B. Westgate, secretary; E. S. Milford, treasurer. Company has a 5-year lease of the Deep Down mill.

**MOHAWK MINING CO.**

Office: 615 William St., New York, N. Y. Mine office: Mohawk, Keweenaw Co., Mich. Mill office: Gay, Keweenaw Co., Mich. Employs circa 1,000 men. Jos. E. Gay, president and treasurer; J. Wheeler Hardley, secretary; John R. Stanton, vice-president; Fred Smith, agent; preceding officers and

Wm. A. Paine, directors; Willard J. Smith, superintendent; Frank Getchell, clerk; John Trevorow, mining captain; F. Wm. Hartmann, engineer.

Organized November, 1898, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par; paid in, \$21. Dividends have been as follows: \$500,000 in 1906; \$900,000 in 1907; \$200,000 in 1908. Boston Safe Deposit & Trust Co., registrar; American Trust Co., Boston, transfer agent. Annual meeting, last Tuesday in March.

Lands, 800 acres, forming an irregular tract having its axis on the strike of the lode, in Sections 27, 28, 33 and 34, T. 57 N., R. 32 W. The Mohawk is about 4 miles northeast of Calumet, having the Ahmeek and Seneca on the north, and Ahmeek on the west. The Mohawk, formerly known as the Fulton, was supposed to lie too far east to carry the outcrop of the Kearsarge bed, until it was found, accidentally, circa 1896, by the cutting of a wood-road. The Kearsarge amygdaloidal bed, on which the mine is opened, outcrops for about one mile on the Mohawk tract, and the deepest shaft can be sunk, on the dip of the bed, for nearly  $1\frac{1}{2}$  miles, before reaching the boundary.

Crossing the Kearsarge lode at approximately right angles, with nearly vertical dip, are 3 fissure veins, carrying sundry arsenides of copper, including mohawkite, keweenawite, mohawk-whitneyite and stibio-domeykite, the two former being peculiar to this mine. Mohawkite occurs in considerable quantities in the upper north drifts of No. 1 shaft, in a vein ranging 3" to 3' in width, which was found mineralized at the crossing of the amygdaloidal bed, and for an indefinite but unusually short distance on either side, the mohawkite and allied arsenides of copper occasionally occurring massive, though usually disseminated in an arenaceous gangue. On the deeper levels the mineral contents of the principal fissure veins are small, and apparently the production of mohawkite for the future will be trifling. Sales of mohawkite and allied arsenides, to end of 1907, returned \$116,407.79.

In addition to the Kearsarge amygdaloid and the arsenical fissure veins, the Mohawk property carries sundry other copper-bearing amygdaloidal beds, which may be given attention later, but work, very wisely, has been confined, to date, to the development of a profitable mine on the Kearsarge bed.

The mine has 5 shafts, numbered from north to south. New openings have been as follows: 10,812' in 1905; 13,314' in 1906; 11,043' in 1907. The mine is equipped with Richmond electric signals, and operates 65 power drills. The shafts are connected by drifts down to and including the 5th level, these drifts running from the northern boundary to circa 1,500' south of No. 5 shaft. Shafts 1 to 4, inclusive, are connected down to and including the 8th level, and shafts 1 and 2 are connected to the 14th level. The use of concrete stringers was begun in 1905, in shafts 1, 2, 3 and 4, below the timbering formerly installed, and No. 5 has concrete stringers from surface. The wooden sleepers in the four older and deeper shafts will be replaced by concrete, from time to time, as the wooden sleepers decay.

Shafts are of uniform size, 8x18" inside of timbers, with solid cribbing through the overburden, and are to have identical equipments. The lode runs 15' to 18' wide, or about the same as in the Wolverine, and carries about the same percentage of copper as the Wolverine at similar depth, but is not nearly so rich as the bottom workings of the Wolverine.

No. 1 shaft, circa 1,500' south of the northern boundary, on the strike of the lode, is 1,700' deep. This shaft gave a good showing near surface, which became poor at depth, but is improving again in the lower levels. The hoist for No. 1, located in the central power plant of No. 2 shaft, operates two 4-ton skips in counterbalance. No. 1 has a combination shaft-rockhouse, equipped with a 12x24" Nordberg engine and rock-crushers.

No. 2 shaft, 1,100' southwest of No. 1, is 1,575' deep. Like No. 1, the

showing was good near surface, but poor at depth, though improving below the 12th level. The power plant at No. 2 shaft, serving both of the northern shafts, includes an engine-house and boiler-house of mine rock with redstone trimmings. Hoists are Nordberg double-conical-drum duplex-cylinder engines, good for 6,000' depth, each handling two 4-ton skips in counterbalance. The boiler-house has 2 locomotive firebox boilers, with foundations for 3 additional, and the engine-house has an auxiliary compressor plant, with 2 Ingersoll-Sergeant air-compressors, of 40 drills combined capacity. No. 2 has a combination shaft-rockhouse, similar to No. 1 in design and equipment.

No. 3 shaft, 1,100' southwest of No. 2, is 1,225' deep, and will reach the western boundary at a depth of circa 2,000'. Equipment includes a shaft-rockhouse similar to the northern shafts, and a Fraser & Chalmers geared hoist, good for 3,000' depth, operating 2-ton skips in balance.

No. 4 shaft, 1,300' southwest of No. 3, is 1,175' deep, developing good average ground from surface. Equipment includes a steel shaft-rockhouse with 3 crushers and a steam-hammer. The engine-house, of redstone, has a Nordberg double-conical-drum hoist, good for 6,000' depth. The central compressor plant, at No. 4, has a 60-drill Nordberg air-compressor and a 60-drill Ingersoll-Sergeant cross-compound 2-stage air-compressor, with steam cylinders of 22" and 46" diameter, and air cylinders of 27 $\frac{1}{4}$ " and 42 $\frac{1}{4}$ " diameter, with stroke of 48", having a piston efficiency of 5,260 cubic feet of free air per minute, compressed to a pressure of 70 lbs. per square inch. The boiler-house at No. 4, of redstone, has 5 locomotive firebox boilers and a 160' self-supporting brick-lined steel smokestack.

No. 5 shaft, 1,800' south of No. 4, is 575' deep, with an excellent showing of copper from surface. The temporary rockhouse, with one crusher, is to be replaced by a shaft-rockhouse similar to those at the other shafts. Equipment includes a frame power-house, with a Fraser & Chalmers straight-face drum hoist good for 2,000', brought from No. 1. A Bullock hoist, good for 4,000' depth, formerly at No. 4 shaft of the Wolverine, is on the ground, and to be installed, during 1909.

There are large coal-trestles at No. 4 shaft and between shafts 2 and 3. The mine has a complete telephone system, on surface and underground. Buildings include two miners' changing houses, a machine shop, smithy, combination carpenter shop and warehouse, 30x40' office, a well equipped hospital, numerous minor buildings and dwellings for employes. A considerable village, with business houses, a bank, newspaper, etc., has grown up around the mine.

The mill, near the mouth of the Tobacco river, on Traverse Bay, Lake Superior, opposite the mill of the Wolverine, is 178x206' in size, of steel frame, sheathed with iron, on foundations of sandstone quarried from the company's own land. A steel trestle, 350' long and 50' high, leads into the mill, loaded cars being pulled up the incline by a winding engine. The mill has 4 stamps, all compounded, giving a daily capacity of about 3,000 tons. The mill has a Chilean mill and 3 sets of auxiliary crushing rolls, with fixed bearings, to reduce oversize material from the mortar-boxes of the heads, this averaging 20 to 25% of rock stamped. Mineral from the wash discharges automatically, and is sluiced into the basement, where shoveled into 1 $\frac{1}{2}$ -ton mineral cars, having 14-mesh perforated steel bottoms that allow the draining out of water, after which the cars are weighed, then lifted by a cage-elevator and dumped into bins. The bin-house has 4 compartments, each with a cement floor and steam pipes underneath for drying the remaining moisture from the wash. The mineral is taken from the bin-house, in self-dumping steel mineral cars, to the Michigan smelter at Houghton, for reduction.

The boiler-house, of steel, adjoining the mill, has four 250-h. p. Stirling water-tube boilers.

Water for both the Mohawk and Wolverine mills is furnished from a joint pumphouse, standing near the Tobacco River, from which water is taken. The pumphouse has a 20,000,000-gallon triple expansion Snow pump, supplemented by a new 9,000,000-gallon Nordberg pump, giving an ample water supply for both mills.

A 30x300' wharf, on Traverse Bay, a short distance from the mill, with 14' of clear water alongside, is fitted with coal-hoists and storage sheds, ample for the needs of both mills.

The townsite at the Mohawk and Wolverine mills, named in deserved honor of Jos. E. Gay, long identified with honest and successful copper mining in the Lake Superior district, is well laid out, with wide streets, water-mains and hydrants, and has a number of substantial dwellings for employees.

Production has been as follows: 6,284,327 lbs. fine copper in 1903; 8,149,515 lbs. in 1904; 9,387,614 lbs. in 1905; 9,352,252 lbs. in 1906; 10,107,266 lbs. in 1907. In October, 1908, the fourth stamp was being worked part time, and production for 1909 should be circa 13,000,000 lbs. fine copper. Yield of fine copper per ton of rock stamped was 21.79 lbs. in 1903; 17.76 lbs. in 1904; 16.01 lbs. in 1905; 15.12 lbs. in 1906, and 15.77 lbs. in 1907. Costs per ton of rock stamped, less construction, were \$1.92 in 1903; \$1.63 in 1904; \$1.56 in 1905, \$1.59 in 1906 and \$1.54 in 1907. The cost of copper per pound, exclusive of construction, was 8.78 cents in 1903; 9.19 cents in 1904; 9.77 cents in 1905; 10.5 cents in 1906, and 10.725 cents in 1907, with total costs, for 1907, including construction, of 11.75 cents per pound. Costs for 1908 should be circa 10 cents per pound. The Mohawk, while it has not proven as rich a mine as was generally anticipated, is a magnificent property, with an assured future, and has a strong, honest and thoroughly competent management.

#### **MOHAWK MINING CO.**

**UTAH.**

Mine office: Bingham Canyon, Salt Lake Co., Utah. F. S. Bascom, president; E. B. Critchlow, vice-president; Edward W. Duncan, secretary and treasurer. Organized Nov. 28, 1902, under laws of Utah, with capitalization \$150,000. Lands, 7 claims. Idle and apparently moribund.

#### **MOIRA COPPER CO.**

**ALASKA.**

Office: Milwaukee, Wis. Letter returned unclaimed from former mine office, Ketchikan, Alaska. Lands, 7 claims, adjoining the Niblack Copper Co., on Prince of Wales Island. Idle.

#### **MOJAVE COPPER CO.**

**CALIFORNIA.**

Dead. Operated circa 1902. Formerly at Mojave, Kern Co., Cal.

#### **MOLLIE STARK COPPER MINING CO.**

**WYOMING.**

Dead. Formerly at Encampment, Carbon Co., Wyo. Described Vol. VI.

#### **MOLOOCA MINING CO.**

**MEXICO.**

Office: Toronto, Ont. Mine office: Hostotipaquito, Ahualulco, Jalisco, Mex. Dr. Willet G. Miller, president; Frank G. Stevens, managing director. Organized 1908, under laws of Ontario, with capitalization \$250,000. Property, bought of Carlos Romero, is said to show good ore.

#### **MONA & PARYS MINES, LTD.**

**WALES.**

Office: Amlwch, Anglesey, Wales. Mine office: Mona, Amlwch, Anglesey, Wales. R. Bridson, secretary. Organized Jan. 13, 1899, with capitalization £75,000, shares £1 par; issued, £55,000. Debentures, £20,000 first mortgage, at 6%, and £10,000 second mortgage, at 7%. Lands, 1,067 acres, with improved water-frontage, warehouses, ochre works, tramways, etc. Also has a color-works plant at Amlwch. Makes a little copper, by cementation, from mine-waters. Mines in this district were worked by the Romans. The Parys mine

was opened 1768, and made 3,000 tons of copper in 1784. Present production is 25 to 50 tons fine copper yearly.

**MONARCH CONSOLIDATED GOLD & COPPER****COLORADO.****MINING & SMELTING CO.**

Office: 1932 Thirteenth St., Boulder, Colo. Mine office: Sunshine, Boulder Co., Colo. Thos. S. Waltenmeyer, president and treasurer; Chas. Wcott, vice-president; F. H. Wolcott, secretary. Organized September, 1903, under laws of Colorado, with capitalization \$1,000,000, shares \$1 par. Bonds, \$300,000, at 6%, running 3 years; \$200,000 outstanding.

Lands include the Buena and Pilot mines, at Sunshine, Colorado, which are gold properties, and the Copper King group, on the south fork of the Grand River, in Middle Park, Grant county, Colorado, latter, area 1,740 acres, carrying 3 miles of the strike of a copper vein said to be 15' to 50' wide. The Copper King group has a 25-h. p. hydro-electric power installation, and developments thereon have been suspended for several years. The company claims to have 50,000 tons of ore blocked out in its gold mines, and the mill was remodeled, 1907. Early 1908 company planned production on a considerable scale, but at last accounts, circa September, 1908, a reorganization was under consideration.

**MONARCH COPPER MINING CO.****CALIFORNIA.**

Dead. Was a swindle, promoted by "Baron" W. E. von Johannsen. Formerly at Callahan, Siskiyou Co., Cal. Fully described Vol. VII.

**MONARCH GOLD & COPPER MINES, LTD.****BRITISH COLUMBIA.**

Dead. Formerly at Nelson, Trail district, B. C.

**MONARCH GOLD & COPPER MINING CO.****ARIZONA.**

Dead. Was promoted by G. P. Morrill. Formerly at Big Bug, Yavapai Co., Ariz.

**MONARCH MINES & SMELTERS CORPORATION.****UTAH.**

Dead. Name changed, Nov. 26, 1904, to Nevada-Utah Mines & Smelters Corporation. Formerly at Milford, Beaver Co., Utah.

**MONARCH MINING, MILLING & SMELTING CO.****ARIZONA.**

Mine office: Macon, Ga. Mine office: Wickenburg, Maricopa Co., Ariz. Has about 7,000' of workings, including various tunnels, shafts, pits and trenches. Equipment includes an air-compressor and experimental mill.

**MONARCH MINING & SMELTING CO.****ARIZONA.**

Mine office: Wickenburg, Maricopa Co., Ariz. J. T. Ross, president; J. K. Harris, vice-president; J. F. Minton, secretary and treasurer. Organized August, 1904, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 10 claims, known as the Three Black Buttes, in the Black Rock district, 9 miles southeast of Wickenburg, opened by tunnel, with circa 4,000' of workings. Ores are low in average tenor, giving assays of 3 to 20% copper and \$3 to \$15 gold per ton. Old 50-ton mill, burned April, 1907, was replaced, 1908, by a 50-ton mill on same site.

**MONARCH-SMUGGLER MINING & REDUCTION CO.****COLORADO.**

Office: 521 Commonwealth Bldg., Denver, Colo. Mine office: Eldora, Boulder Co., Colo. Earl W. Kelly, president and general manager; Fred S. Sweet, vice-president; J. Horace Shepard, treasurer; preceding officers, Eda D. Kelly and Oscar Sorsonsen, directors; Charles E. Dawson, secretary. Organized Jan. 2, 1906, under laws of Colorado, with capitalization \$3,000,000, shares \$1 par.

Lands, 14 claims, area 137 acres, in the Harmon district of Grant county, Colorado, circa 50 miles northwest of Denver, said to show surface ores assaying \$6 to \$98 per ton. Company planned a 1,500' tunnel, designed to cut the main vein at 800' depth. Idle.

**AGUIRRE MONCADA & HERMANOS.****CHILE.**

Mine office: Higuera, La Serena, Coquimbo, Chile. Property is the Car-melita mine, at Yerbas Buenas, circa 13 leagues from Higuera, the nearest railroad point, with 10 pesos per ton transportation charges on ore and supplies. Mine, opened to depth of 115 meters, produced 200 metric tons of 12% ore, after discarding about 2,000 tons of 5% ore, from a vein of 6' to 7' width, in 1903.

**MOND NICKEL CO., LTD.****ONTARIO.**

Office: 39 Victoria St., London, S. W., Eng. Mine office: Victoria Mine, Algoma, Ont. Works office: Clydach, Wales. Dr. Ludwig Mond, F. R. S., chairman; Robt. Mathias, secretary; Dr. Bernard Mohr, general manager; C. V. Corliss, mine superintendent. Organized Sept. 20, 1900, under laws of Great Britain, with capitalization £600,000, in £250,000 cumulative 7% shares of £5 par, £300,000 ordinary shares of £1 par, and £50,000 deferred shares of £1 par, all issued and fully paid. Paid dividends on ordinary shares of 6% in 1905, 10% in 1906, and 12½% in 1907. Paid dividends on deferred shares of 18% in 1906 and 33% in 1907.

Lands, 3,350 acres freehold and 1,550 acres leasehold, held under 3-year option, in the townships of Blezard, Denison, Snider and Garson, in the Sudbury district of Ontario, carrying nickeliferous and cupriferous pyrrhotite.

The Victoria mine, which is the principal property, has a 3-compartment vertical shaft, 4x12' inside of timbers, sunk to depth of circa 720', with 9 levels opened, the bottom level showing ore bodies maintaining their size and quality of ore. The Victoria carries 2 lenses of nickeliferous pyrrhotite and chalcopyrite about 160' apart, with east and west strike, and uniform dip of about 75° to the east, connected by stringers, in schistose diorite near a granite contact. No. 1 shaft has a rockhouse and shafthouse. Equipment includes 5-drill and 10-drill Rand straight-line air-compressors, and hoists.

The Garson mine has a 225' shaft, and apparently has been idle for some years.

The mine and works are operated by electric power, transmitted 10 miles from the Wahnapitae River, by the Wahnapitae Power Co.

A 11,000' Bleichert aerial gravity tram connects the Victoria mine with the roast-heaps and smelters. Ore is dumped from the buckets of the aerial tram at the roast-yard, and, after burning, is carried by bucket to the smelter.

The smelter, of steel, sheathed with corrugated iron, has 2 water-jacket blast-furnaces, and 2 converter stands with a traveling crane. The smelter power plant has five 100-h. p. return tubular boilers, a Riedler air-compressor for converter blast, 2 Connersville blowers with direct connected engines, and a 125-kw. dynamo. The works have direct connection with the Canadian Pacific railway.

About 200 men are employed at the mine and smelter.

At the refining works, in the Swansea Valley, the bessemerized copper-nickel matte from the smelter is dead-roasted and treated with dilute sulphuric acid, which permits the extraction of about two-thirds of the copper and 2% of the contained nickel. The residue, after drying, assaying 45 to 60% nickel, is treated, in charges of 500 kgs., with water-gas, in a reduction tower, at a temperature of about 300° Centigrade. This tower has shelves, and the ore is moved from shelf to shelf by automatic rakes, the lower shelves being cooled. After treatment in the reduction tower, the charge is transferred to a volatilizing tower, and treated with carbon monoxide, at a temperature of about 100° C. The residue therefrom is returned to the reducing tower, and the charge goes forward and back between the two towers, for 10 to 15 days, and when 60% of the nickel has been volatilized, as nickel carbonyl, the residue of the charge is returned to the roasting furnace. The nickel carbonyl

is treated in a decomposing apparatus, wherein the metal is recovered in granules, assaying 99.4% to 99.8% nickel. The copper is turned out as bluestone.

Production for 1906 was 54,079 short tons of ore, yielding 3,365 short tons of nickel-copper matte that returned 2,588,000 lbs. fine copper and 2,798,000 lbs. refined nickel.

#### **MONETT GOLD & COPPER MINING & MILLING CO.**

**UTAH.**

Office: care of J. J. Davis, secretary, Monett, Mo. Mine office: Ibaphah, Tooele Co., Utah. O. P. Shaffer, president; H. L. Eckert, vice-president; F. E. Shaffer, treasurer. Organized under laws of Utah, with capitalization \$100,000, shares 10 cents par. Lands, 37 claims, area 740 acres, showing argentiferous copper and lead ores.

#### **MONEY METALS MINING CO.**

**ARIZONA.**

Office: Prescott, Arizona. Mine office: Jerome, Yavapai Co., Ariz. H. L. Sweeney, vice-president; W. H. Reiterman, secretary, treasurer and general manager. Organized 1905, with capitalization \$1,200,000, shares \$1 par. Lands, 7 claims, unpatented, also sundry timber lands, giving total holdings of 120 acres, in the Big Bug and Black Hills districts, circa 3 miles south of the Yaeger Cañon mine, and 6 miles from a railroad. Mine has 275' of workings, including the Bordeaux shaft of 165', showing a 3' vein of argentiferous lead and copper sulphides.

#### **MONFARLAND COPPER EXPLORATION, LTD.**

**TRANSVAAL.**

Office: 52 New Stock Exchange, Johannesburg, Transvaal. H. Martyn Burgess, manager. Organized April, 1908, under laws of Transvaal, with capitalization £2,350. Lands show 2 practically parallel veins, one of circa 6' average width, carrying considerable chalcocite, and one of about 8' width showing chalcopyrite and what the manager terms carbonate of copper glance. Some trenching was done, and a shaft was started, in the 6' vein, July, 1908.

#### **MONIDA GOLD & COPPER MINING CO.**

**IDAHO.**

Letter returned unclaimed from former office and mine, Mullan, Shoshone Co., Idaho. Organized under laws of Idaho, with capitalization \$1,000,000, shares \$1 par, by L. T. Nystrom, et al. Lands, 6 claims, in the Hunter district.

#### **MONITOR CONSOLIDATED COPPER MINING CO.**

**IDAHO.**

Office: Wallace, Idaho. Mine office: Saltese, Missoula Co., Mont. Hon. Herman J. Rossi and Dr. Harold J. Reed, managers; Thos. Jay, superintendent. Paid a dividend, 1907, of \$9,500.

Lands, 12 claims, near the Richmond, 6 miles west of Saltese, just over the line in Shoshone county, Idaho, carrying a fissure vein up to 14' in width, with northeast and southwest strike, standing nearly vertical. Mine has a 410' shaft and management plans a tunnel to carry a back of about 1,000'. Shipments, 1907, of selected ore, returned 17 to 22% copper, circa 7 oz. silver and \$1.50 to \$2 gold per ton, ore being mainly chalcopyrite, carrying an excess of iron with very little silica, and occasional native copper. Has steam power and a 3-drill air-compressor. Surveyed line for extension of Chicago, Milwaukee & St. Paul Railway passes within 3 miles of the mine. Production, 1906, was 320,000 lbs. fine copper.

#### **MONITOR COPPER MINING & SMELTING CO.**

Office: Wallace, Idaho.

#### **MONITOR MINING CO.**

**BRITISH COLUMBIA.**

Dead. Formerly at Alberni, Vancouver Island, B. C. Described Vol. III.

#### **MONITOR TUNNEL & PARK CANYON MINING CO.**

**MONTANA.**

Mine office: Butte, Silver Bow Co., Mont. Capitalization, \$3,750,000, shares \$1 par. Lands are in Park Cañon, about 2 miles east of Butte, near the

Homestake claim of the Butte Coalition, having a 1,500' crosscut tunnel showing a wide ledge.

**MONO-BALTIC MINING & SMELTING CO.**

**COLORADO.**

Office: 50 Congress St., Boston, Mass. Mine office: Red Mountain, Ouray Co., Colo. E. W. Averill, president and treasurer; Frank Woodbury, vice-president; E. J. Wescott, secretary; Joseph Irving, general manager; preceding officers, M. T. Chestnut and S. J. Ryan, directors. Organized 1907, under laws of Colorado, with capitalization \$500,000, shares \$10 par; issued, \$300,000.

Lands, circa 180 acres, in the Red Mountain district, showing fissure veins and contact deposits having large bodies of oxidized siliceous ores of low tenor, but carrying high silver values, with some gold, also bornite and chalcopyrite associated with pyrite, all auriferous and argentiferous, a complete sampling of the mine, with 500 assays, giving an average of 3.5% copper and 12 oz. silver per ton, with small gold values.

Development is by 4 shafts, deepest 140', and by tunnels of 120', 700', 1,000', and 1,100', with circa 8,000' of workings, estimated by company to show 122,000 tons of ore.

Equipment includes a smithy and shops. The property carries limestone for fluxing, and a smelter site has been graded and the company contemplates building a steel smelter building, with bins, aerial tram, and a 42x120" water-jacket blast-furnace, planned to be blown in circa July, 1909.

**MONROE CONSOLIDATED MINES CO.**

**ARIZONA.**

Dead. Formerly at Prescott, Yavapai Co., Ariz.

**MONSTER MINING CO.**

**UTAH.**

Dead. Was merged, circa 1907, in Garrison-Monster Mining Co. Formerly at Ibapah, Tooele Co., Utah.

**MONTAGNAT MINE.**

**NEW CALEDONIA.**

Mine office: Diahaut, New Caledonia. Property, slightly prospected, shows ore for upwards of 500 meters length. Idle some years.

**MONTANA APEX COPPER CO.**

**MONTANA.**

Office and mine: Dillon, Beaverhead Co., Mont. Organized circa February, 1907, under laws of Arizona, with capitalization \$800,000. Lands, 3 claims, known as the Snowball, Whale and Los Angeles, in the Utopia district, near the Indian Queen mine, showing indications of copper.

**MONTANA & ARIZONA CONSOLIDATED COPPER CO.**

**MONTANA.**

Dead. Disincorporated circa 1902. Formerly had an office at 68 State St., Boston, Mass.

**MONTANA-ARIZONA COPPER CO.**

**ARIZONA.**

Office: Spokane, Wash. Mine office: Planet, Yuma Co., Ariz. J. W. Greenough, manager. Lands, 26 claims, area 520 acres, circa 30 miles north of Wendendale, the nearest railroad station. Property is said to show 5 veins, of 3' to 100' width, traceable circa 7,000', including a 3' vein carrying good gold values. Development is by a 2-compartment 300' shaft and a considerable number of trenches. Equipment includes a 60-h. p. gasoline hoist. Management considered good.

**MONTANA BELLE COPPER CO.**

**ARIZONA.**

Office: 52 Jacobson Bldg., Denver, Colo. Mine office: Wendendale, Yuma Co., Ariz. Chas. P. Pierce, president; Luther Bain, vice-president; A. L. Emberson, secretary and treasurer; preceding officers and A. T. Cronin, directors. Organized Feb. 7, 1906, under laws of Arizona, with capitalization \$800,000, shares \$1 par.

Lands, 6 claims, area 120 acres, one mile west of Cunningham Pass and 6 miles north of Wellton, in the Ellsworth district of the Harevar Mountains, said to show a vein of 8' to 25' width, with a good gossan carrying

oxidized ores to a depth of 100' to 150', succeeded by sulphides. Shaft is said to show ore assaying 5 to 17% copper, and the property is said also to have considerable free milling gold ore. Company's advertising is much disliked, because misleading on many points.

**MONTANA-BOSTON MINING & MILLING CO.****MONTANA.**

Office and mine: De Borgia, Missoula Co., Mont. Emil Anderson, superintendent. Organized July, 1907, under laws of Montana, with capitalization \$100,000, shares 10 cents par.

**MONTANA CONSOLIDATED COPPER CO.****MONTANA.**

Office: 46 Wall St., New York, N. Y. Mine office: Basin, Jefferson Co., Mont. Samuel L. Fuller, president; Marcus L. Hewett, vice-president; Otto Julius Merkel, secretary; preceding officers, G. Herman Kinnicut, Ellis Postlethwaite and D. Crawford Clark, directors; Capt. John L. Armit, general manager; M. E. Barr, engineer.

Organized June 13, 1906, under laws of Maine, as International Copper Co., with capitalization \$10,000,000, and name changed to present title July 19, 1906.

Lands, 699 acres, in 4 groups, lying northeast of the New Boston, including several old properties, idle, except for operations of leasers, for 9 to 13 years before purchase by present company. The Hope group, 192 acres, includes the Hope and Comet mines, formerly considerable producers, popularly credited with a gross output of \$10,000,000, which probably is a considerable overestimate. The Gray Eagle group, 139 acres, includes the Gray Eagle and Minneapolis mines. There also are placer claims and millsites aggregating 101 acres. The Comet mine, 820' deep, and the Hope mine, 220' deep, are the principal properties, these showing fissure veins in granite, carrying mainly argentiferous and auriferous copper and zinc sulphides, ore reserves in the old mines being mainly refractory zinc and lead sulphides, associated with cupriferous pyrite, unprofitable for direct shipment and requiring concentration. Management expects an increase of copper and silver values with depth. Equipment includes an electric plant.

Company refuses to furnish a statement, declaring that there is nothing of interest, and that property is in the hands of a few friends only. Development apparently is along business-like and well considered lines, and property is considered promising.

**MONTANA CONSOLIDATED COPPER CO.****MONTANA.**

Office: 42 Broadway, New York, N. Y. Mine office: Butte, Silver Bow Co., Mont. H. C. Wilmot, superintendent. Organized circa June, 1907, under laws of Maine, with capitalization \$2,500,000, shares \$1 par. Is controlled by the General Development Co.

Lands include the Granite Mountain claim, near the Jessie mine of the North Butte, but do not include the Flatiron mine, near the Butte-Ballaklava. The Altoona mine, in the northern part of Butte, held, 1906, under bond and lease, has been abandoned.

**MONTANA CONSOLIDATED MINING CO.****MONTANA.**

Dead. A swindle, put out, circa 1903, by M. P. Hillyer & Co. Formerly at Saltese, Missoula Co., Mont.

**MONTANA COPPER CO.****MONTANA.**

Office: care of John F. Davies, Butte, Mont. Letter returned unclaimed from former mine office, Helena, Lewis & Clark Co., Mont. Lands, known as the Spokane Hill group, 7 miles northeast of East Helena, have a 115' shaft, showing ore said to give average assays of 10% copper. Has steam power and several mine buildings.

**MONTANA COPPER & GOLD MINING CO.****MONTANA.**

Office: 1122-135 Adams St., Chicago, Ills. Letter returned unclaimed

from former mine office, Dillon, Beaverhead Co., Mont. Was controlled, through stock ownership, by International Copper & Gold Co., supposedly succeeded by Sonora Central Mines Co. Lands were 6 claims, in the Stone Creek district of Madison county, Montana, claimed to show carbonate ore. Is regarded with suspicion.

**MONTANA COPPER MINING CO.**

**MONTANA.**

Dead. Formerly at Helmville, Pewell Co., Mont. Described Vol. II.

**MONTANA COPPER & SILVER MINING CO.**

**MONTANA.**

Office: Butte, Mont. Mine office: Clancey, Jefferson Co., Mont. C. H. Lane, superintendent. Capitalization \$2,000,000, shares \$10 par. Lands, 4 claims, in Lump Gulch, 2 miles from Clancey, opened by the 275' Clara Bell shaft, lower drift of which shows tetratedrite assaying 60 to 400 oz. silver per ton. Has steam power.

**MONTANA ELECTROLYTIC CO.**

**MONTANA.**

Works office: Wickes, Jefferson Co., Mont. J. L. Malm, superintendent.

**MONTANA FURNACE CREEK COPPER CO.**

**CALIFORNIA.**

Office: care of Hon. John MacGinnis, Butte, Mont. Mine office: Greenwater, Inyo Co., Cal. Organized Dec. 6, 1906, under laws of Montana, with capitalization \$1,000,000, shares \$1 par. Lands, 8 claims. Idle at last accounts.

**MONTANA-HECLA MINING CO.**

**MONTANA.**

Office: 1004 Broadway, Oakland, Cal. Mine office: Norris, Madison Co., Mont. J. K. Riordan, president, treasurer and general manager; M. F. Webster, vice-president; Mark E. Davis, secretary; Daniel O'Shea, superintendent. Organized Jan. 20, 1906, under laws of Washington, with capitalization \$375,000, shares \$2 par; issued, \$225,000.

Lands, 28 claims, area 560 acres, on Old Colony Hill, a few miles from Norris, in the Lower Warm Springs unorganized district. Property shows 5 fissure veins, in granite, of which one, under development, of about 6' average width, traceable 2 miles, shows, below circa 200' depth, sulphide ores with silicious gangue, giving assays of 0.5 to 1% copper, 3% lead, 50 to 75 oz. silver and \$2 gold per ton, with ledge matter giving assays up to \$4.12 gold per ton. Development is by numerous pits of 10' to 50' depth, shafts of 95', 100' and 210', and tunnels of 250' and 700', with a total of 2,340' of workings.

Company plans installing a 200-h. p. water plant, having circa 1,000 h. p. available, also a new mining plant with a 3-drill air-compressor and 50-h. p. Westinghouse electric motor. There are 7 mine buildings, and a good wagon road to the Northern Pacific, 3 miles distant.

Property is not yet deep enough for copper in considerable quantities, but indications are decidedly favorable, and company plans steady development and extending No. 1 tunnel 1,500' on the ledge. Property considered promising.

**MONTANA-ILLINOIS COPPER MINING CO.**

**MONTANA.**

Office: 218 LaSalle St., Chicago, Ills. Mine office: Mammoth, Madison Co., Mont. W. G. Bennett, president. Organized circa 1907, under laws of Montana, with capitalization \$2,000,000, shares \$1 par. Lands, 11 lode claims, 2 placer claims, 1 millsite, 1 water right and 320 acres timber lands, giving total holdings of circa 550 acres, including part of lands formerly held by Bismarck-Nugget Gulch, in the Ruby Mountains. Mine, said to have circa 1,100' of workings, shows bornite and chalcopyrite said to average about 5% copper, 1.25 oz. silver and 40 cents gold per ton. The Bismarck-Nugget Gulch had a 30-ton smelter, presumably held by present company. According to company's advertising, its shares offer a better investment than North Butte, which nobody but fools will believe. Is not regarded favorably.

**MONTANA MINE.**

Mine office: Sunny Corner, N. S. W., Australia. M. Welch, superintendent. Has a shaft about 150' deep and has secured ore up to 16% in copper tenor.

**MONTANA MINERAL LAND DEVELOPMENT CO.****MONTANA.**

Office: Findlay, Ohio. Mine office: Basin, Jefferson Co., Mont. John G. Mizer, president and treasurer; Antoine Lutz, vice-president; Alfred Gruber, secretary; Thos. C. Kelly, superintendent. Organized 1902, under laws of Montana, with capitalization \$3,500,000, shares \$1 par.

Lands, 19 claims, area circa 300 acres, known as the Eva May and Red Bird group, on Cataract Creek. Property shows fissure veins in granite carrying sulphide ores, mainly chalcopyrite. Development is by a 1,200' vertical shaft and tunnels of 525', 1,400' and 800', developing a vein of 100' claimed width, giving assays of 6% copper, 6 to 12% lead, 15 to 30 oz. silver and 20 cents to \$3 gold per ton. The property shows a considerable body of low to medium grade ore, and the company estimates 50,000 tons blocked out for stoping.

Equipment includes a 200-h. p. steam hoist having two 75-h. p. hoists, one being a 14x16" Vulcan hoist raising single-deck cages, and a 4-drill Ingersoll-Sergeant air-compressor. Buildings include a 20x40' log machine shop, 20x30' smithy, 24x34' carpenter-shop, and a 30x80' powerhouse. The concentrator, of logs, is 35x120', with a 7x10" Blake crusher, one set of rolls, 8 three-compartment jigs and 2 Wilfley tables. The property, which has been developed steadily, and has produced circa 7,000 tons of ore, sold for \$166,238, is considered promising.

**MONTANA MINING & DEVELOPMENT CO.****MONTANA.**

Dead. Stock was "guaranteed" by "gold bonds." Formerly at Carter, Missoula Co., Mont. Fully described Vol. V.

**MONTANA MORNING MINING CO.****MONTANA.**

Mine office: Libby, Flathead Co., Mont. Lands, on Callihan Creek, show a vein of about 8' width, carrying a 5' paystreak of mixed galena and sphalerite, apparently of smelting grade, with about 3' of copper sulphides of concentrating grade.

**MONTANA-NEVADA COPPER CO.****NEVADA.**

Mine office: Ely, White Pine Co., Nev. Capitalization \$5,000,000, shares \$1 par. Lands are said to be fairly located, but in limestone.

**MONTANA ORE PURCHASING CO.****MONTANA.**

Office: 42 Broadway, New York, N. Y. Mine office: Butte, Silver Bow Co., Mont. F. August Heinze, president and general manager; John MacGinnis, vice-president; Arthur P. Heinze, secretary; Stanley Gifford, treasurer. Organized 1883, under laws of Montana, with capitalization \$2,500,000; debentures, \$1,000,000, first-mortgage 6% bonds. Is controlled by United Copper Co., which holds 76,791 shares out of 80,000 shares issued, and which formerly owned the entire bond issue. The mining property of the company was sold, 1906, to Butte Coalition Mining Co.

**MONTANA REDUCTION CO.****MONTANA.**

Mine office: Cooke, Park Co., Mont. C. R. Tuttle, president; Robt. I. McKay, secretary. Organized under laws of Arizona, with alleged capitalization \$101,000,000, shares \$1 par. Idle and apparently moribund.

**MONTANA SCOTCH BONNET COPPER****MONTANA.****& GOLD MINING CO.**

Office: Spokane, Wash. Mine office: Cooke, Park Co., Mont. W. M. Anderson, general manager. Capitalization \$3,000,000. Lands include the Cora, Maggie and Jennie V. groups, carrying ores of gold, silver and copper, in the New World district, 70 miles from a railroad. A radical change in

management, made September, 1907, is hoped to prove a betterment, and scarcely can prove otherwise.

**MONTANA STANDARD MINING CO.**

**MONTANA.**

Office: Columbus, Ohio. Mine office: Thompson, Sanders Co., Mont. M. J. Lisle, president; M. J. Maher, vice-president; Otto A. Schenk, secretary and treasurer; preceding officers, B. B. Baker, John Chester and H. Eddy, directors; Fremont S. Rowe, manager. Capitalization 1,000,000 shares, presumably \$1 par. Lands, 10 miles east of the Bitter Root Mountains and 11 miles from Thompson, show 3 veins, 2 of which have been prospected, one being said to show 6' to 8' of concentrating ore.

**MONTANA VERDE COPPER CO.**

**MONTANA.**

Dead. Formerly at Corbin, Jefferson Co., Mont.

**MONTANA ZINC CO.**

**MONTANA.**

Mine office: Butte, Silver Bow Co., Mont. A. L. Strasberger, president. Practically succeeded by Butte Copper & Zinc Co., only assets, 1907, being 7,500 shares of Alice stock. Fully described Vol. VI.

**HILARIO MONTAÑO.**

**MEXICO.**

Office and mine: Guachinango, Mascota, Jalisco, Mex. Lands, 8 pertenencias, showing strong veins, carrying auriferous and argentiferous copper ore, with antigua workings and recent workings.

**SOCIÉTÉ DES MINES DE CUIVRE DE MONT CHALMERS. AUSTRALIA.**

Dead. Voluntarily wound up, May 1, 1901. Formerly at Mt. Chalmers, Queensland, Australia.

**MONTE CARLO CONSOLIDATED COPPER CO.**

**NEW MEXICO.**

Office: 1013 Union Bank Bldg., Pittsburg, Pa. Mine office: Orogande, Otero Co., N. M. Chas. H. Spriggs, president; H. H. Schneider, secretary; G. B. Wharey, treasurer. Organized 1907, under laws of New Mexico, with capitalization \$1,000,000, shares \$25 par. Lands, 170 acres, 5 miles north of Orogande, in the northern end of the Jarilla Mountains, having two 70' shafts and a 100' three-compartment shaft, showing ore that has assayed up to 35% copper, 800 oz. silver and \$4 gold per ton. Was developing steadily at last accounts.

**SOCIETÀ ANONIMA DELLE MINIERE DI MONTECATINI.**

**ITALY.**

Office: 49 Piazza Santa Apostoli, Rome, Italy. Mine offices: Bocchegiano, Grosseto, Tuscany, Italy, and Massa Marittima, Grosseto, Tuscany, Italy. I. Castelbolognesi, president; Alfred Deschars, vice-president; Alfredo Santori, secretary; Paolo Marengo, general manager; Paolo Cerrina, superintendent; Guglielmo Vallada, engineer. Organized 1888, under laws of Italy, with capitalization 5,000,000 lire, increased, circa 1906, to 6,500,000 lire, shares 100 lire par. Paid dividends, 1899-1902, of 82 lire per share.

Lands include the Montecatini, Bocchegiano, Capanne Vecchie, Fenice Massetana and Val di Nievo mines, all very ancient properties, worked successively by the Etruscans, Romans, Goths and Italians. The principal properties are 20 miles from Massa Marittima, the nearest station on the Mediterranean railroad. The Montecatini mines have a brecciated red porphyry, carrying occasional native copper, massive disseminated chalcocite, bornite and chalcopyrite, ores averaging about 3.5% in copper tenor, as mined. Development is by a 125-metre shaft and 5 tunnels, with nearly 10,000 metres of workings, putting about 500,000 tons of ore in sight. The property is equipped with steam power, and has a concentrator with 5 crushers. Production of the Montecatini mine, 1905, was 1,197 metric tons fine copper.

The Bocchegiano mine, which is the principal property, has a quartzite vein with ore in the southern end mainly zinciferous, carrying small quantities of copper and lead, the veins ranging from 13' to 16' in width, with a dip of

about 50° East, carrying paystreaks along the hanging wall. The vein occupies a fault between micaceous Permian shales and Eocene limestone, carrying chalcopyrite disseminated in pyrite and occasional hematite, with a quartz gangue. There also are occasional veinlets of highly argentiferous tetrahedrite. The Boccheggiano carries about 0.05% tin. Development has been difficult, on account of the heavy inflow of thermal waters, at a temperature of 105° Fahrenheit. For 1905 the Boccheggiano yielded 3,138 metric tons of high grade ore averaging 8.88% copper, and 13,158 metric tons of second grade ore averaging 3.09% copper, and the mine also produced 441 metric tons of copper precipitate of 69.25% tenor.

The Capanne Vecchie and Poggio Bindo mines are ancient properties, reopened 1846, since which time they have been small but steady producers. These mines were taken over by the company, circa 1904. The principal vein is 6" to 50' in width, ore being mainly chalcopyrite, which is assorted into first grade smelting ore of about 10% copper tenor, and second grade ore, carrying about 3% copper only, which is heap-roasted and leached. Production, 1905, was 572 metric tons fine copper, all obtained as precipitate.

The Fenice Massetana mine, also at Massa Marittima, shows ore bodies of 6" to 65' width, apparently lenticular, carrying chalcopyrite associated with pyrite, in a quartz gangue, with occasional sulphides of higher grade. The high grade ore, averaging 10% in tenor, is heap-roasted at the mine, and smelted at Leghorn, and second grade ore, averaging about 3% copper, is heap-roasted and leached at the mine. Production, 1905, was 693 metric tons fine copper, in precipitate, and 94 metric tons fine copper secured by smelting first grade ore.

The Val di Nievole mine carries low grade ores that can be worked profitably only when copper prices are high, and this property is idle.

The smelter, at Leghorn, has 4 reverberatory furnaces and a converter plant. In connection with the smelter is a sulphuric acid plant, for the utilization of the sulphur fumes, the low grade ores of 3.5% copper tenor averaging about 40% sulphur contents.

Production, 1903, was 3,086,440 lbs. fine copper, and 1905 was 5,892,895 lbs. The property is well managed, with a magnificent market at its command, and is likely to prove an increasingly important producer in years to come.

#### **MONTE CRISTO CONSERVATIVE MINING CO. ARIZONA.**

Mine office: Paradise, Cochise Co., Ariz. Lands, sundry claims, circa 2 miles north of Paradise. Idle several years and apparently moribund.

#### **MONTE CRISTO GOLD & COPPER CO. UTAH.**

Dead. Formerly at Milford, Beaver Co., Utah. Described Vol. V.

#### **MONTE CRISTO MINING CO. ARIZONA.**

Office and mine: Metcalf, Graham Co., Ariz. Henry Brigham, president; Refugio Murillo, secretary and general manager. Lands, 5 claims, on Chase Creek, about 2 miles above Metcalf, carrying a fissure vein in porphyry, showing 3' to 4' of oxidized ores, assaying up to 45% copper, opened by a shallow shaft and tunnels of 100' and 200'. Made small ore shipments, 1904. Idle several years.

#### **MONTEREY GOLD & COPPER MINING CO.**

Dead. Formerly had an office at 11 Broadway, New York.

#### **MONTEREY GOLD MINING CO. WASHINGTON.**

Dead. Formerly at Bolster, Okanogan Co., Wash.

#### **MONTEREY SMELTING & REFINING CO. MEXICO.**

Works office: Monterey, Nuevo León, Mex. Is controlled by American Smelting & Refining Co. and described under Mexican title of Compañía Minera Fundidora y Afanadora de Monterey, S. A.

**COMPAÑIA MINERA FUNDIDORA y AFINADORA  
DE MONTERREY, S. A.**

MEXICO.

Office and works: Monterrey, Nuevo León, Mex. Mine offices: Mineral de la Mula, Monclova, Coahuila, Mex., and Pánuco de Coronado, San Juan del Rio, Durango, Mex. Arthur K. Brewster, manager; Juan Chiado, superintendent; José M. Padilla, superintendent Pánuco mines. Organized under laws of Mexico, with capitalization increased, 1903, to 8,000,000 pesos. Is controlled by American Smelting & Refining Co.

Lands include the Ocampo and Santa Elena mines, at Mineral de la Mula, carrying auriferous copper and lead ores, and La Cruz y Anexas mines, at Pánuco de Coronado, carrying argentiferous lead and copper ores.

The smelter, at Monterrey, of circa 1,200 tons daily capacity, does an extensive custom business, in addition to treating the ores of the company's own mines. About 1,500 men are employed, and latest reported production, 1903, was 215,568 lbs. fine copper.

**MONTEZUMA COPPER CO.**

NEW MEXICO.

Dead. Formerly at Albuquerque, Bernalillo Co., N. M.

**MONTEZUMA COPPER MINING CO.**

ARIZONA.

Mine office: Globe, Gila Co., Ariz. Lyman C. Woods, president and manager; Mrs. Lyman C. Woods, secretary; Louis Berndt, treasurer; Chas. Maybush, superintendent. Lands, 17 claims, shortly west of the Live Oak and Inspiration mines, and about one mile west of the Miami, with somewhat similar geological conditions. Lands show porphyry and quartz, with a mineralized zone of 23' estimated average width, opened by a 150' shaft, showing carbonate ore assaying about 1% copper and \$2 gold per ton. Property is held by A. G. Smith, of Globe, Arizona, under an 18-month bond and lease, running from Aug. 1, 1908, for \$150,000.

**MONTEZUMA MINING CO.**

MEXICO.

Office: San Antonio, Tex. Mine office: Charcas, Monteza, San Luis Potosí, Mex. C. H. Hoffman, superintendent. Property carries copper ores, and company was said, 1907, to be employing 75 men.

**MONTEZUMA MINING & SMELTING CO.**

CALIFORNIA.

Office: care of Southwestern Securities Co., Los Angeles, Cal. Capitalization \$1,000,000, shares \$1 par. Lands, supposed to be somewhere in Inyo county, California, are claimed to carry gold, silver, lead and copper ore. Company was claimed, July, 1908, to be paying dividends at rate of 15% per annum, on price at which stock was sold. Is regarded with much suspicion.

**MONTEZUMA & THE WHIZZERS MINE.**

SOUTH DAKOTA.

Office and mine: Deadwood, Lawrence Co., S. D. J. T. Gilmore, manager. Lands, 13 claims, patented, area 135 acres, on the divide between Deadwood and Whitewood Cañons, showing Algonkian schists, slates and quartzites, and carrying about 3,000' of a strong gossan of 45' estimated average width. Principal development is on the Whizzers mine, by 2 tunnels, the Montezuma having superficial development on a parallel quartzite reef. The Whizzers was worked for gold, producing circa 30,000 tons of low grade fluxing ore, sent to the Golden Reward smelter, at Deadwood. Ore is slightly auriferous chalcopyrite, with gangue of hornblende schist, carrying 0.5 to 1.5% copper, up to 1 oz. silver and 50 cents to \$2.50 gold per ton. Though low in grade, property is considered decidedly promising, because of immense tonnage assured. Idle.

**MONTGOMERY GOLD LEAF MINING CO.**

NEW JERSEY.

Dead. Apparently succeeded by Pahaquarry Copper Mining Co. Formerly in Warren county, New Jersey.

**MONTOSA COPPER CO.**

ARIZONA.

Mine office: Patagonia, Santa Cruz Co., Ariz. W. H. Thompson, general

manager. Lands, in the Tyndall district, at the western end of the Santa Rita Mountains, were held formerly by the Calabasas Copper Co., Ltd., a Douglas-Lacey swindle. Mine has a 110' two-compartment shaft, and an antiquated smelter with a 50-ton water-jacket blast-furnace. Presumably idle.

**MONTPELIER COPPER MINING & SMELTING CO. IDAHO.**

Dead. Merged November, 1905, in Bonanza Mining Co. Formerly at Montpelier, Bear Lake Co., Idaho.

**MONTRÉAL & BOSTON CONSOLIDATED MINING & SMELTING CO., LTD. BRITISH COLUMBIA.**

Dead. Absorbed by Dominion Copper Co., Ltd. Formerly at Greenwood, Boundary district, B. C. Fully described Vol. V.

**MONTRÉAL SMELTING & REDUCTION CO. ONTARIO.**

Works office: North Bay, Nipissing, Ont. E. E. Leonard, president; J. H. Brown, vice-president and managing director; Benj. Burlan, treasurer; L. J. Cartier, secretary; P. W. Brown, manager. Works, sometimes known as the North Bay or Trout Lake smelter, said to have cost \$700,000, were designed primarily to reduce the argentiferous ores of the Cobalt district, but are planned also to smelt copper ores. Blown in Jan. 7, 1908.

**SUCESIÓN MONTT. CHILE.**

Office and mine: San Juan, Freirina, Atacama, Chile. Principal properties are the Quebradita, 300 meters deep, opened 1834; Rosario, 290 meters deep, opened 1864; Manto, 160 meters deep, opened 1846, and San José, 180 meters deep, opened 1851. Properties have been considerable producers in the past, but at last accounts output was practically nil.

**MONUMENT COPPER MINING CO. MONTANA.**

Mine office: Dillon, Beaverhead Co., Mont. Organized August, 1902, under laws of Montana, with capitalization \$75,000. Lands, on Bloody Dick creek, are developed by a 165' shaft, bottomed in auriferous copper ore, and a 270' tunnel, planned to be driven 500', at which length it should strike a vein of high-grade auriferous copper ore.

**MOOIPLAATS (NO. 83) COPPER DEVELOPING SYNDICATE, LTD. NATAL.**

Office: care of E. J. Edmonds, Newcastle, Natal. Mine office: Entonjaneni, Zululand, Natal. Chas. Earl, chairman. Organized, 1907, under laws of Natal, with capitalization £5,000, shares £1 par. Property is a lease, with right of purchase for £8,000, of the Farm Mooiplaats No. 83, area 6,156 acres.

**MOON-ANCHOR COPPER MINING CO. WYOMING.**

Office and mine: Encampment, Carbon Co., Wyo. L. W. Tenant, president and general manager; W. J. Wernli, secretary and treasurer. Organized 1901, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par. Lands, 3 claims, area 60 acres, on Green Mountain, in the Upper Platte district, said to show a 50' fissure vein of sulphide ore, giving assays up to 10% copper, developed by a 200' shaft. Has steam power. Idle.

**MOON GOLD MINING CO. CALIFORNIA.**

Office: Valley Springs, Cal. Mine office: Richey, Amador Co., Cal. J. B. Lucas, vice-president and general manager. Has shafts of 100' and 140'. Vein-stuff is a sulphide mineralization of diabase and talcose schist, carrying gold and copper values. Idle.

**MOONLIGHT MINE. MONTANA.**

Owned by Washoe Copper Co.

**MOONMERA COPPER MINING CO., LTD. AUSTRALIA.**

Office: 69 Queen St., Brisbane, Australia. Mine office: Moonmera, Rockhampton, Queensland, Australia. T. G. Dewar, secretary; Samuel Phillips, general manager.

Lands, 4 leases, area 200 acres, showing 4 ore bodies, of which 2 are partly

developed. Country rocks are sandstone and granite, veins having an arenaceous gangue. Gold is found in the oxidized zone, but values turn to copper at a little depth, ores being mainly sulphide, with a little oxidized ore and some native copper, latter sometimes occurring as flakes and small sheets, but commonly disseminated in small particles. The property also shows large bodies of low-grade carbonate ores. The ores average 1.75 to 2% copper only, but by rejecting about 70% of the ground broken, can furnish 5% ore to the mill, making concentrates carrying circa 17.5% copper and 9 dwts. gold per long ton. The mine is opened by shafts of 50' and 93', and by 5 tunnels, of 90' to 280' length. Idle.

**MOONTA CENTRAL COPPER CO., LTD.**

**AUSTRALIA.**

Offices: 30 Moorgate St., London, E. C., Eng., and Adelaide, South Australia. Mine office: Wallaroo, Daly Co., South Australia. A. Lesser, chairman; John Alex. Russell, secretary; John S. Scott, manager. Organized Oct. 29, 1901, as a reconstruction of the Mid-Moonta Copper Mines, Ltd., with capitalization £110,000, shares £1 par, in 50,000 cumulative preference 6% shares and 60,000 ordinary shares. Debentures, £1,400 issued, at 10%.

Lands, 152 acres, held under 99-year lease, expiring 1991. Has 4 shafts, deepest 432', said to show considerable medium grade ore, with steam power and a small concentrator. Idle since circa 1904, and apparently moribund.

**MOONTA SYNDICATE, LTD.**

**AUSTRALIA.**

Dead. Wound up March 5, 1907. Formerly at Moonta, Daly Co., South Australia.

**MOORE COPPER CO.**

**ALASKA.**

Office and mine: care of J. R. Heckman & Co., Ketchikan, Alaska. Property is on the southern arm of Moira Sound. Presumably idle.

**MOQUI COPPER CO.**

**VIRGINIA.**

Office: 42 Broadway, New York, N. Y. Mine office: Reager, Rappahannock Co., Va. Is successor of Mannassas-Gap Copper Mines, Inc.

Lands, 700 acres, freehold, including circa 400 acres of timber land, in Fanquier county, Virginia, 3 and 6 miles from 2 railroads, carrying 2 contact veins between Cambrian sandstone and Silurian slates, claimed to range 3' to 11' in width, and claimed to give average assays of 5% copper, 10 oz. silver and \$4 gold per ton, which figures are considered unduly high, from malachite, bornite and chalcopyrite, associated with a little native copper. Mine has about 600' of workings.

**SOCIEDAD ESPLOTADORA DEL MORADO.**

**CHILE.**

Office: Santiago de Chile. Mine office: Freirina, Atacama, Chile. Organized Dec. 22, 1906, under laws of Chile, with capitalization 500,000 pesos, shares 20 pesos par. Property is the Arenillas mine, opened 1860, and a small smelting furnace, idle for several years until taken over by present company.

**SOCIEDAD MINERA DEL MORADO.**

**CHILE.**

Dead. Succeeded, Dec. 22, 1906, by Sociedad Esplotadora del Morado. Formerly at Freirina, Atacama, Chile.

**MOREDYKE MINING CO.**

**ARIZONA.**

Office: 404 Jackson Bldg., Denver, Colo. Mine office: Casa Grande, Pinal Co., Ariz. J. E. Smith, president; J. F. Kramer, vice-president; W. H. Haven, secretary and treasurer; A. R. Benzie, general manager; preceding officers and W. B. LeFave, directors. Organized Sept. 10, 1907, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par. Lands, 8 claims, area 160 acres, 28 miles from a railroad, showing a 2' vein of silver-lead ore, with occasional gold values, opened by several pits and a 60' shaft.

**COMPANIA COBRE DE MORELOS, S. A.**

**MEXICO.**

Is the Mexican incorporation of the Royal Morelos Copper Co.

**MORENCI COPPER CO.****ARIZONA.**

Dead. Formerly at Morenci, Graham Co., Ariz. Described Vol. V.

**MORENCI COPPER MINES, LTD.****ARIZONA.**

Dead. Merged, 1903, in Clifton Consolidated Copper Mines of Arizona, Ltd. Formerly at Morenci, Graham Co., Ariz.

**MORGAN-ARGENTINE MINING CO.****UTAH.**

Office: 54 West Second South St., Salt Lake City, Utah. Mine office: Peterson, Morgan Co., Utah. Herbert Pembroke, president and general manager; W. H. Croft, vice-president; A. B. Pembroke, secretary and treasurer; Earle R. Pembroke, engineer; preceding officers, John Croft and S. J. Pembroke, directors. Organized 1900, under laws of Utah, with capitalization \$50,000, shares 1 cent par. Annual meeting, third Tuesday in May.

Lands, 10 claims, area circa 175 acres, partly patented, 11 miles from Union Pacific railway, in the Argentine district, showing fissure veins in Carboniferous limestone, and contact deposits between limestone and quartzite. Main vein, of 2' to 10' width, with northwesterly strike, carries mainly silver-lead ore, with copper and gold values, opened by a 175' shaft, with circa 2,000' of workings. Property supposedly is in the same limestone belt as Park City, about 30 miles to the south.

**KUPFERBERGWERK MORGENSTERN.****GERMANY.**

Mine office: Kupferberg, Schlesien, Germany. Employs circa 200 men.

**MORMON GIRL MINING CO.****ARIZONA.**

Dead. Was a bad egg. Formerly at Cave Creek, Maricopa Co., Ariz. Described Vols. V and VI.

**MORNING BELL COPPER MINING &****BRITISH COLUMBIA.****Smelting Co.**

Office: Spokane, Wash. Registered 1907, under laws of British Columbia, as a foreign corporation, with capitalization \$250,000, shares 25 cents par.

**MORNING GLORY MINE.****ARIZONA.**

Office and mine: care of Chas. Wilson, owner, Patagonia, Santa Cruz Co., Ariz. Mine has a 5' vein of medium grade sulphide ore, and shipped, 1907, about 1,000 tons.

**MORNING STAR MINE.****CALIFORNIA.**

Mine office: Markleeville, Alpine Co., Cal. An old mine, in the Mogul district, north of Markleeville, showing ores assaying up to 17% copper, 49 oz. silver and \$32 gold per ton. Long idle.

**MORNING STAR MINING CO.****ARIZONA.**

Dead. Formerly at Dewey, Yavapai Co., Ariz.

**MORRIS MINING CO.****WYOMING.**

Office: Morris, Ills. Letter returned unclaimed from former mine office, Battle, Carbon Co., Wyo. F. H. Mattison, president; J. R. Collins, vice-president; G. A. Leach, secretary; A. Hollenbeck, treasurer; J. T. Brown, general manager.

Lands, sundry claims, on Nellie Creek, one mile below Battle, adjoining the Continental Copper Mining Co., opened by a 500' tunnel, said to cut a 15' vein of copper ore. Also has a 50' shaft showing a 7' vein assaying 5% copper. Presumably idle.

**MORRISON MINES, LTD.****BRITISH COLUMBIA.**

Dead. Absorbed, 1904, by Montreal &amp; Boston Consolidated Mining &amp; Smelting Co., also dead. Formerly at Greenwood, Boundary district, B. C. Fully described Vol. IV.

**MORRISON MINING CO.****NEVADA.**

Dead. Name changed, 1907, to Imlay Copper Mining Co. Formerly at Humboldt House, Humboldt Co., Nev.

**MORROW COPPER CO.****ARIZONA.**

Dead. Was merged, August, 1908, in Clara Consolidated Gold & Copper Mining Co. Formerly at Planet, Yuma Co., Ariz.

**MOSCOW MINING CO.****UTAH.**

Office: Salt Lake City, Utah. Mine office: Milford, Beaver Co., Utah. Mathew Cullen, manager; Daniel Ferguson, superintendent. Mine, 15 miles west of Milford, opened to depth of circa 400', is a small producer of medium and high grade silver-lead and gold-copper ores, averaging about \$1,000 per carload in gross values. Shipment of 45 tons, circa May, 1908, returned 12.6% copper and 6% lead, with small silver and gold values.

**MOTHER LODE COPPER CO.****ARIZONA.**

Mine office: Prescott, Yavapai Co., Ariz. Organized 1907. Lands, 7 claims, area 140 acres, in the Copper Basin, 10 miles west of Prescott, showing an ore body between limestone and porphyry, said to give average assays of circa 12% copper and \$6 gold per ton.

**MOTHER LODE COPPER MINES OF ALASKA.****ALASKA.**

Office: 902 Lowman Bldg., Seattle, Wash. Mine office: McCarthy Creek, Alaska. Clarence L. Warner, president; Joshua Menach, vice-president; Jas A. Godfrey, secretary and treasurer; preceding officers, Chas. G. Hubbard and John Miller, trustees. Organized under laws of Washington, with capitalization \$5,000,000, shares \$1 par. Lands include 120 acres of placer claims, said to be well timbered, presumably in the interior of Alaska; claims on Dryer Bay, known as the Valdez group, and the Copper River group, 19 claims, adjoining the Bonanza group, on McCarthy's Creek, in the Copper River district, Alaska, claimed by company to have a better showing than the Bonanza, which statement is not believed. The Copper River group, having a 105' tunnel, is said to show a mineralized zone of 50' to 60' width, carrying a 6' to 8' pay streak of massive chalcocite assaying 18 oz. silver per ton, with small gold values. Company's prospectus is very loosely written, and filled with a vast amount of misinformation regarding general copper conditions, but property is considered of more than usual promise.

**MOTHERLODE COPPER MINING CO.****VIRGINIA.**

Office: 623-18 Broadway, New York, N. Y. Mine office: Virgilina, Halifax Co., Va. Joseph H. Morong, president and general manager. Organized September, 1902, under laws of New York, with capitalization \$1,500,000. Idle.

**MOTHER LODE MINES.****BRITISH COLUMBIA.**

Owned by British Columbia Copper Co., Ltd.

**MOUNTAIN COPPER CO., LTD.****CALIFORNIA.**

Office: 22 Abchurch Lane, London, E. C., Eng. American agency office: 811-56 Beaver St., New York, N. Y. Mine office: Keswick, Shasta Co., Cal. Works office: Marfinez, Contra Costa Co., Cal. Wm. Keswick, M. P., chairman; preceding officer, Sir Andrew Noble, Bart., K. C. B., Henry J. Wenham, Sir Walter Scott, J. P., and Chas. W. Fielding, directors; Alfred N. Frewer, secretary; Lewis T. Wright, resident manager; W. F. Kett, assistant general manager; T. J. Jones, mine superintendent; J. A. Black, smelter superintendent; J. J. Murray, assistant smelter superintendent; W. Cole, railway superintendent.

Organized Dec. 1, 1896, under laws of Great Britain, and reorganized May 10, 1902, with capitalization £250,000, shares £1 par. In 1899 the company changed its capitalization of £1,250,000 into £250,000 in shares and £1,000,000 in 6% debenture stock, shares £4 par, on which a first repayment of £1 per share was made Jan. 16, 1905, leaving £750,000 of stock now outstanding. The change in 1899 was practically a complete amortization. Dividends before reconstruction, 1897-1901, aggregated 58½%. Profits for 1907 were £150,254.

Lands are extensive, including the Iron Mountain and Hornet mines, 10

miles northwest of Redding. The Iron Mountain mine was worked originally, in a small way, for gold and silver values carried in the gossan. The main ore body of the Iron Mountain mine is a solid pyritic mass, approximately 100' to 400' wide, 800' long and 500' deep, with a gossan of 100' to 300' width. Ore is mainly chalcopyrite, associated with pyrite and pyrrhotite, occurring in a shear zone of meta-rhyolite, the ore averaging circa 5% copper, 2 oz. silver and slightly under \$1 gold per ton. The mine was worked pillar-and-stall, and depleted stopes filled with rock, quarried just west of the mine. Considerable ore has been left in the pillars, which undoubtedly will be robbed, eventually, by open-cast work. Ore reserves are estimated at less than 500,000 tons, and diamond drill borings show comparatively little ore outside of the fire zone. The ore being strongly pyritic, there has been considerable trouble from mine fires, caused by spontaneous combustion. In 1902 C. Colcock Jones was engaged as engineer, for the special object of controlling fire conditions, and, as a result of the combined efforts of Messrs. Wright and Jones, the plenum system of ventilation was applied, overcoming heat troubles in the masses of pyritic ore, and restoring normal conditions sufficiently to save a large tonnage of ore. J. J. Shaw, then in charge of underground work, later applied the same ideas, under even more drastic conditions, in the United Verde mine, with like success. Considerable copper is secured by precipitation from the charged mine water coming from the fire zone.

The Hornet mine, lying to the north of the Iron Mountain, has developed about 5,000,000 tons of ore, apparently averaging about 1% only in tenor, though some of the ore carries up to 2.5% copper, all ore being strongly pyritic, ranging 47 to 50% in sulphur tenor.

The mine is connected with the Keswick smelter by an 11-mile narrow-gauge electric railway, traversing a rugged country, with an average grade of nearly 2%, the elevation gained being 2,000'.

Ore is heap-roasted in open air, 8 to 10 weeks being required for burning, raw ore carrying about 45% sulphur and roasted ore only 7%. The roasted ore is loaded by steam-shovel.

The Keswick smelter, in the cañon of Spring Creek, less than a mile from the Sacramento river, does considerable custom smelting. The plant has 5 water-jacket blast-furnaces, of 300 tons daily capacity each, with 11 Wright circular calcining furnaces having settlers with slag overflow to ladle cars, and a slag railway, the matte pouring into iron casting-moulds on a slow-moving belt-conveyor, and passing under jets of water to chill the pigs, which are dumped into barrows and hoisted to the charging floor. The first-fusion matte, of 25 to 30% copper tenor, is resmelted, and the second-fusion matte is roasted and blown up to white metal, running into settlers, and being taken thence, in ladles, by traveling crane, to the converters. Stands are controlled hydraulically, from a single pulpit, and linings are tamped by power. Fumes from roasters, furnaces and converters are carried through dust-chambers, and flue-dust is briquetted and resmelted. Fines and ores from the roast-heaps are calcined in Wright turret roasters, and briquetted by 3 machines, which also handle flue-dust and calcined granulated matte, using lime for a binder.

The power plant of the Keswick smelter includes rotary blowers, driven by 3 engines, including an Allis-Chalmers cross-compound, Risdon cross-compound and a small auxiliary straight-line engine, steam being furnished by 3 Babcock & Wilcox boilers and a Heine water-tube boiled, all fired with petroleum. Blast is heated by stoves fired with oil, before entering the tuyeres. The converter plant has an air-compressor driven by a 500-h. p. Allis-Chalmers engine. Electric power, generated 80 miles distant, is used, at a cost of 3 cent per h. p.-hour. In connection with the smelter are a large machine shop, foundry and smithy.

The operation of the Keswick smelter has been greatly hampered by suits of neighboring ranchers, and the plant was idle for some time, on account of this trouble. The company has withdrawn its appeal from an adverse decision in the case of a suit for damages brought by the United States government, for injury done to federal lands, and the company has promised to pay damages to the government.

The Keswick smelter is not modern, and doubtless would be rebuilt were there sufficient ore in sight to justify such an expenditure. The results secured, however, are unusually good, and this plant stands second only to the works of the Mount Lyell as a successful pioneer in the field of pyritic smelting. After idleness for a long period, the roasters were started, circa March, 1908, to treat fines from the mines, before shipment to the Martinez smelter.

The Martinez smelter, on San Francisco Bay, includes the old works of the San Francisco Chemical Co., taken over as the nucleus of the new plant. The Martinez works have one of the most extensive and best planned acid works in existence, built at a cost of approximately \$1,000,000. The Hornet ores, which are low in copper, but rich in sulphur, are burned, and the sulphur fumes collected in lead-lined chambers and transformed into sulphuric acid by the contact process, and the cinder remaining after the roasting is leached for its copper contents. The acid is sold crude, and also is used as the basis of commercial fertilizers, for which there is an enormous demand in the rich fruit and agricultural districts of California and the other Pacific coast states. The Martinez works have a smelting capacity of 350 tons daily, and also do a general custom business.

Production of the Iron Mountain mine has greatly decreased, figures of output in fine copper being as follows: 29,727,040 lbs. in 1901; 19,116,160 lbs. in 1903; 5,708,000 lbs. in 1906; 6,814,000 lbs. in 1907. In October, 1908, the Iron Mountain mine was shipping 100 tons daily, with a considerable production of cupriferous pyrites from the Hornet mine. Notwithstanding the depletion of the company's reserves of medium and high grade ore, the finances have been managed with great prudence and marked success, and the company, while facing a partially exhausted mine, has been able to make a successful change of base, by which low grade pyritic ores are utilized for acid making, and the company is in excellent condition financially.

#### MOUNTAIN GEM MINING CO.

**MONTANA.**

Office: care of W. D. Greenough, Wallace, Idaho. Mine office: Saltese, Missoula Co., Mont. Organized late in 1907.

#### MOUNTAIN HOME COPPER CO.

**AUSTRALIA.**

Mine office: Cloncurry, Beaconsfield Co., Queensland, Australia. A considerable share interest is said to be owned by Queensland Copper Freeholds, Ltd. Lands are circa 600 acres.

#### MOUNTAIN KEY MINE.

**NEW MEXICO.**

Office: Pinos Altos, Grant Co., N. M. W. C. Chandler, owner and manager. Property is one of the oldest mines in Grant county, having a 700' shaft, and producing auriferous and argentiferous copper sulphides. Has steam power. Presumably idle.

#### MOUNTAIN LAKE CONSOLIDATED MINING CO.

**UTAH.**

Office: Provo, Utah. Mine office: Brighton, Salt Lake Co., Utah. Jesse Knight, president. Organized circa 1906, under laws of Utah, as successor of Mountain Lake Mining Co.

Lands include the Original group, 24 claims, area circa 400 acres, and the Mountain Lake Extension, an adjoining property, bought circa April, 1908. The Original group, at the head of Big Cottonwood Cañon, adjoining the Big Cottonwood Gold & Copper Co., shows 2 contact deposits, between diorite and limestone, of 100' claimed average width, traceable circa 2,000', carrying

bornite and chalcopyrite, giving average assays of 2.5% copper, 2 oz. silver and \$1 gold per ton. Development is by a 100' shaft and 5 tunnels, longest, known as the Steamboat tunnel, circa 2,500'.

#### MOUNTAIN LAKE MINING CO.

UTAH.

Dead. Succeeded, circa 1906, by Mountain Lake Consolidated Mining Co. Formerly at Brighton, Salt Lake Co., Utah. Fully described Vol. VI.

#### MOUNTAIN LION GOLD & COPPER CO.

MEXICO.

Letter returned unclaimed from former office, La Cananea, Sonora, Mex. Organized 1905, with capitalization \$50,000. Lands were circa 400 pertenencias, in the Magdalena district of Sonora. Moribund.

#### MOUNTAIN MEADOWS COPPER CO.

CALIFORNIA.

Mine office: Quincy, Plumas Co., Cal. Property, in Lights Cañon, has a 200' tunnel, said to show native copper.

#### MOUNTAIN MONARCH GOLD MINING CO.

CALIFORNIA.

Office: 319 Yuba St., Redding, Cal. Mine office: Shasta, Shasta Co., Cal. W. F. Aram, president and general manager; J. H. Hunter, secretary; C. E. Armstrong, treasurer. Organized Nov. 25, 1905, under laws of California, with capitalization \$75,000, shares \$1 par, in \$25,000 preferred and \$50,000 common stock; issued, \$68,500.

Lands, 11 claims, unpatented, area 220 acres, in the Whiskeytown district, north of Redding, 10 miles from Southern Pacific railway, showing 3 fissure veins in rhyolite, main vein, of 140' estimated width, traceable circa 2,500', carrying malachite, bornite and chalcopyrite associated with pyrite, giving average assays of 7% copper, 1.5 oz. silver and \$3.40 gold per ton. Development is by tunnels of 200' and 750', with 1,200' of workings. Equipment includes a 6,000' sawmill and 5 mine buildings. Company plans extension of main tunnel.

#### MOUNTAIN RUN MINE.

AUSTRALIA.

Mine office: Rockley, N. S. W., Australia. Has shafts of 120' and 180', and at last accounts was erecting a smelter with a small water-jacket blast-furnace.

#### MOUNTAIN VIEW COPPER CO.

OREGON.

Dead. Lands sold, 1903, to Vulcan Copper Co. Formerly at Kerby, Josephine Co., Ore.

#### MOUNTAIN VIEW DEVELOPMENT CO.

ARIZONA.

Letter returned unclaimed from former mine office, Bisbee, Cochise Co., Ariz. Geo. Bennett, president; H. M. Woods, vice-president; W. D. Kinsey, secretary; Chas. Trotman, treasurer. Organized 1903, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 9 claims, 4 miles northwest of Bisbee, opened by 2 shallow shafts and a tunnel. Ores carry occasional lead values, and a small test shipment gave returns of 16.74% copper and 100 oz. silver per ton. Idle and apparently moribund.

#### MOUNTAIN VIEW MINING CO.

UTAH.

Dead. Property sold, 1908, to Yankee Consolidated Mining Co. Formerly at Eureka, Juab Co., Utah.

#### MOUNT ANDREW MINING CO.

ALASKA.

Office: 1500-52 William St., New York, N. Y. Mine office: Ketchikan, Alaska. Property, leased to Britannia Smelting Co., Ltd., is described under title of that company.

#### MOUNT BAKER & SHUKSAN MINING CO.

WASHINGTON.

Office: 18 Post-Intelligencer Bldg., Seattle, Wash. Mine office: Maple Falls, Whatcom Co., Wash. J. Conaway, president; C. M. Welsh, secretary; Geo. B. Conaway, superintendent. Lands, 320 acres, having an available water power and said to carry 7,000,000' of good standing timber. Has 4 tunnels, longest 320', with about a quarter-mile of workings, showing ore said to

average circa 3.5% copper and \$5 to \$8 gold per ton. Has an air-compressor and plans a mill and smelter.

#### **MOUNT BOPPY BLOCKS, LTD.**

AUSTRALIA.

Dead. Was being liquidated 1908, and property is for sale. Formerly at Cobar, Robinson Co., N. S. W., Australia.

#### **MOUNT BOPPY COPPER MINING CO., N. L.**

AUSTRALIA.

Office: Cobar, N. S. W., Australia. Mine office: Canbelego, Canbelego Co., N. S. W., Australia. J. P. Conley, chairman; G. Marshe, secretary; C. J. Elliott, general manager; E. H. Harris, superintendent; John Butler, mine superintendent; G. Elliott, mill superintendent; H. Bailey, engineer. Organized 1906, under laws of New South Wales, with capitalization £25,000, shares 12s. par, fully issued. Shares are listed on the Sydney stock exchange.

Lands, 3 claims, area 120 acres, held under mineral lease, also a 4-acre millsite and 100,000 acres of timber lands, in the Geweroo mining district, 7 miles from the government railway. Mine, formerly known as the Burra Burra, shows 2 ore bodies, occurring as contact deposits between slate and porphyry, of about 6' average width, carrying malachite, bornite, chalcopyrite, tetrahedrite and sphalerite said to average 8% copper, 20 oz. silver and 2 dwts. gold per long ton. Development is by shafts of 300' and 200', and by tunnels of 100' and 300', showing circa 20,000 tons of ore, with 15,000 long tons blocked out for stoping.

Equipment includes 100-h. p. steam plant, with a 16-h. p. hoist, and there are 4 buildings, including a general office and assay office.

The mill, of 50 long tons daily capacity, has 15 gravity stamps, 3 Alley tables, 1 Wilfley table and 3 slime tables.

The company plans deepening one shaft, developing the mine more extensively, constructing several new buildings and erecting a smelter, to have a 100-ton furnace.

#### **MOUNT BOPPY SOUTH COPPER MINING CO., N. L.**

AUSTRALIA.

Office: Cobar, N. S. W., Australia. Mine office: Canbelego, Canbelego Co., N. S. W., Australia. Organized early 1907, under laws of New South Wales, with capitalization £2,250, shares £15 par.

#### **MOUNT BOWEN COPPER DEVELOPMENT CO.**

AUSTRALIA.

Mine office: Bonang, East Gippsland, Victoria, Australia. Is said to have proven a vein for 50' carrying ore averaging about 10% copper. Is chiefly interesting as the only Victorian copper mine listed in this work.

#### **MOUNT BROWN MINE.**

AUSTRALIA.

Mine office: Grafton, N. S. W., Australia. Has a 10' vein with a 2' pay-streak carrying copper carbonates and tetrahedrite, averaging about 30% copper. Has a 64' main shaft and, early 1908, was driving a tunnel.

#### **MOUNT BULGA COPPER CO.**

AUSTRALIA.

Mine office: Springfield, Bathurst Co., N. S. W., Australia. In 1906 was shipping circa 25 tons of ore weekly, to the Lithgow smelter. Presumably idle.

#### **MOUNT CANNINDAH COPPER CO.**

AUSTRALIA.

Dead. Reorganized, 1906, as Mount Cannindah Copper Mines, Ltd. Formerly at Mt. Cannindah, Queensland, Australia.

#### **MOUNT CANNINDAH COPPER MINES, LTD.**

AUSTRALIA.

Office: Commercial Union Chambers, Eagle St., Brisbane, Queensland, Australia. Mine office: Mount Cannindah, via Miriam Vale, Queensland, Australia. Hon. Robt. Philp, chairman; Thos. Welsby, secretary; Allan Gibb, general manager; Wm. Shaffrey, mine manager; N. Farquhar, mill manager; R. Chas. Philp, metallurgist. Organized 1906, under laws of Queensland, with capitalization £30,000, shares 2s. par, as a reconstruction of Mt. Cannindah Copper Co.

Lands, 97 acres, well watered and timbered, carrying ore in brecciated

dykes running through slates, in Gympie beds of upper Devonian age. The Mount Cannindah dyke, running north and south, has an extreme width of 110', carrying oxidized ores, mainly azurite, and secondary sulphides, largely chalcocite and bornite, with gangue of impure kaolinized slate, richer portions running 35 to 40% copper, and, excluding rich patches, which are of fairly frequent occurrence, estimated average tenor of ore is 3.5 to 4% copper.

The reduction plant includes a mill and smelter, mill, completed October, 1906, being rated at 50 tons daily capacity, but actually treating an average of 25 tons daily. Equipment includes a rock-crusher, Krupp ball mill, classifier, jigs, Wilfley tables and Wilfley slimer, turning out concentrates of 20 to 35% copper tenor. Tailings carry about 1% copper, and it is planned to leach them, eventually. Smelter, of about 25 tons daily capacity, has a 19x13' 6" reverberatory furnace, fuel being ironbark wood, costing about 12s. per cord, delivered. The McMurtry pot process for desulphurization of concentrates before smelting is employed, apparently with very satisfactory results.

Production, 1906, was 1,879 long tons of ore, making 139,776 lbs. fine copper and 784 oz. silver, giving an average extraction of 3.3% copper from ore treated. Employed circa 50 men, 1907, until suspension of operations. Heavy rains, March and April, 1908, washed away company's dams. Idle.

**MOUNT CATTLIN COPPER MINING CO., LTD. AUSTRALIA.**

Office: Salisbury House, London Wall, London, E. C., Eng. Mine office: Ravensthorpe, Phillips River goldfield, Western Australia. J. Tyhurst, chairman; Selwyn Goldstein, general manager; E. Protheroe Jones, secretary; Geo. Chas. Klug, consulting engineer. Organized Oct. 23, 1906, under laws of Great Britain, with capitalization £200,000, shares £1 par, fully issued.

Lands, 50 acres, circa 30 miles from Port Hopetoun, showing a vein of about 7' width, opened to depth of nearly 400', carrying, at depth of circa 300', ore giving average assays of 3% copper and 2 dwts. gold per long ton, improving, for depth of 30', to tenor of 5% copper and 3 dwts. gold per ton. Mine is proving very wet. The Western Australian government is said to plan building a railway from Ravensthorpe to the mine. Ore treated, 1907, returned 6% copper and .6 dwts., 10 grains gold per long ton, copper produced costing £81 per ton, but company estimates that copper can be made, eventually, for £51 per ton. Production, 1907, was 1,147,020 lbs. fine copper, and upwards of 2,500 oz. of gold, with a little silver.

**MOUNT CHALMERS COPPER MINES, LTD. AUSTRALIA.**

Dead. Voluntarily wound up, May 1, 1901. Formerly at Mt. Chalmers, Rockhampton, Queensland, Australia.

**MOUNT CHALMERS MINE. AUSTRALIA.**

Owned by Great Fitzroy Gold & Copper Mines, Ltd.

**MOUNT CUTHERBERT, N. L. AUSTRALIA.**

Offices: 395 Collins St., Melbourne, Australia, and Palmerston House, London, E. C., Eng. Mine office: Coolullab, Beaconsfield Co., Queensland, Australia. Hon. R. Philp, chairman; F. G. Hughes, secretary; E. Habben, London secretary. Organized January, 1907, under laws of Victoria, with capitalization £240,000, shares £1 par; issued, £160,000.

Lands, 21 claims, area 230 acres, on the Leichhardt river, in the Mount Cuthbert district, opened by several trenches and a shallow shaft, showing copper carbonates and a little chalcopyrite, in chloritic schists.

**MOUNT DIAMOND COPPER CORPORATION, LTD. AUSTRALIA.**

Dead. Formerly at Wandie, Northern Territories, South Australia. Described Vol. VI.

**MOUNT DONALDSON COPPER CO., LTD. TASMANIA.**

Dead. Formerly at Corinna, Russell Co., Tasmania. Described Vol. VI.

**MOUNT EDDY MINING & DEVELOPMENT CO.****CALIFORNIA.**

Dead. Formerly at Sisson, Siskiyou Co., Cal.

**MOUNT ELLIOTT, LTD.****AUSTRALIA.**

Offices: Palmerston House, Old Broad St., London, E. C., Eng., and 375 Collins St., Melbourne, Australia. Mine office: Selwyn, Cloncurry, Beaconsfield Co., Queensland, Australia. E. Habben, London secretary; E. H. Shackell, Melbourne secretary; G. A. Walker, general manager. Organized June 14, 1907, under laws of Great Britain, with capitalization £750,000, shares £1 par; issued, £600,000, as reconstruction of a corporation of same name organized 1906, under laws of Victoria.

Lands, 260 acres, 58 miles south of Cloncurry, on the 2 upper branches of Maggie's Creek, a tributary of the Cloncurry River. Has a townsite called Selwyn, one-half mile north of the mine. Lands show a big outcrop of rich ore, in an area of pre-Devonian upturned slates and schists, there being the usual oxidized ores, with considerable chrysocolla and a fine showing of chalco-cite. Main shaft is 231', sunk at an angle of 65°. Ore reserves estimated, August, 1907, at 71,000 long tons, first estimated to average 25% copper, but, after resampling, estimated to carry 16.4% copper and 2 dwts. gold per ton, which figures still seem high, though ore shipped, 1907, assayed 37% copper, 1 oz. silver and 9 dwts. gold per ton. A railway is projected to reach the mines, and it is planned working the property open-east to depth of 135'.

Smelter, built 1907-1908, has a water-jacket blast-furnace. Production, 1906, was 182 long tons of high grade copper ore, yielding circa 140,000 lbs. fine copper. Property considered decidedly promising.

**MOUNT FISHER PROPRIETARY CO.****AUSTRALIA.**

Office: 114 Pitt St., Sydney, N. S. W., Australia. H. Ernest A. Miller, secretary. Idle and apparently moribund.

**MOUNT FLORA COPPER CO.****AUSTRALIA.**

Mine office: Mackay, Queensland, Australia. Lands, 300 acres, in three 100-acre tracts, known as the Mount Flora, Wallaroo and Eastern Selections, opened by a 140' shaft on the Wallaroo vein, said to be 18' in width, surface ores being melaconite, azurite and malachite, with some native copper, bottom of shaft carrying chalcopyrite, ores shipped ranging 15.5 to 43.5% in copper tenor. Property also has a number of other copper veins. Begun 1908 with indebtedness of £2,250, and it was planned, February, 1908, to form a local company, with capitalization of £12,000, and build a smelter.

**MOUNT FRASER COPPER MINES (N. S. W.), LTD.****AUSTRALIA.**

Dead. Voluntarily wound up, June, 1902. Formerly at Springfield, Bathurst Co., N. S. W., Australia.

**MOUNT GARNET & CHILLAGOE EXPLORATION CO., N. L.****AUSTRALIA.**

Dead. Formerly at Mt. Garnet, Queensland, Australia.

**MOUNT GARNET FREEHOLD COPPER & SILVER****AUSTRALIA.****MINING CO., LTD.**

Dead. Company liquidated, and property taken over by bondholders. Formerly at Mt. Garnet, Queensland, Australia.

**MOUNT GARNET RAILWAY & FREEHOLD MINES.****AUSTRALIA.**

Dead. Voluntarily wound up, 1903. Formerly at Mt. Garnet, Queensland, Australia.

**MOUNT GLASSFORD COPPER CO.****AUSTRALIA.**

Mine office: Glassford Creek, via Miriam Vale, Queensland, Australia. Has expended circa £1,250 in exploratory work on claims adjoining the Glassford Creek mine, finding a little copper ore of fair grade. Out of funds and idle at last accounts.

**MOUNT GLINES GOLD & SILVER MINING CO.****MAINE**

Mine office: Bryant Pond, Oxford Co., Me. W. N. McGrillis, superin-

teadent. Property shows auriferous and argentiferous copper and lead ores. Has steam power and a small mill. Presumably idle.

**MOUNT GODDARD COPPER MINING CO.**

CALIFORNIA.

Office: Fresno, Cal. Property is located in San Bernardino Co., California. Long idle and apparently moribund.

**MOUNT GUNSON MINING CO.**

AUSTRALIA.

Mine office: Pernatty Lagoon, South Australia. Works office: Port Augusta, South Australia. Lands, 460 acres, one mile west of Pernatty Lagoon, 5 miles southeast of Mount Gunson, and circa 90 miles northwest of Port Augusta. Property, discovered 1875, and worked in an exceedingly small way before present ownership, shows 2 practically parallel ore bodies, of 6' to 14' width, with a northeasterly strike, carrying malachite, azurite and tetrabedrite, giving average assays of about 26% copper. The old mine shows carbonate impregnations in practically horizontal beds of quartzose sandstone, with adjoining seams and cracks carrying copper carbonates and chalcocite. Company was said, 1905, to have built a small reverberatory smelter. Property considered promising.

**MOUNT HECTOR COPPER MINES, LTD.**

AUSTRALIA.

Office: William St., Rockhampton, Queensland, Australia. Mine office: Glassford Creek, Queensland, Australia. Thos. Gibb, managing director; A. A. Slack, secretary; Matthew Caldwell, mine manager; Clifton G. Rutledge, smelter superintendent. Capitalization £25,000, shares £1 par, divided equally into full-paid and half-paid stock. Lands, 346 acres, 7 miles north of Glassford Creek, and 29 miles from a railroad, in the Monal Goldfield, showing rocks of Devonian age. Mine has a tunnel and a 270' shaft, and also is worked open-east, producing auriferous and slightly argentiferous copper ores. Smelter, blown in, 1907; has one 20-ton reverberatory furnace, producing matte of about 55% copper tenor. Production, 1907, from circa 3,000 tons of ore treated, was 262 tons of 55% matte, carrying circa 325,000 lbs. fine copper. Employs about 40 men.

**MOUNT HOPE COPPER PROPRIETARY.**

AUSTRALIA.

Office: 114 Pitt St., Sydney, Australia. Mine office: Mount Hope, Blaxland Co., N. S. W., Australia. H. Ernest A. Miller, agent. Organized 1904, under laws of New South Wales, as successor of New Mount Hope Copper Mining Co., N. L.

Lands, circa 600 acres, freehold, well watered, about 90 miles south of Cobar and 80 miles west of Condobolin. District is subject to drought, but good provision is made for the conservation of water, there being 2 dams, of 22,000 cubic yards aggregate storage capacity.

The property has had a somewhat checkered career, since opened in 1880, and has been closed down and reopened fully a half dozen times. The mine produced upwards of \$500,000 worth of copper, to the end of 1901.

The property shows altered sandstone, carrying 3 parallel outcrops of close-grained ferruginous slates, and quartz seams with silicious sulphide ore ranging 4.5 to 7% in copper tenor, as broken in the stopes. Above 250' the ores are oxidized, being mainly earthy carbonates, and a considerable amount of oxidized ore remains available in the upper workings. The ore shades into the walls, which are impregnated for some distance, the main ore body having an extreme width of 80'. The property resembles the Great Cobar in many respects.

Development is by a 400' main shaft, showing on the bottom level a 30' vein, with some stopes of 30' to 50' width, ore occurring in chutes of 200' to 500' length.

Equipment includes a fair machinery plant, with reduction works having Hancock jigs making concentrates of 15 to 25% copper tenor. The smelter has

4 reverberatory furnaces, formerly making rough copper of about 96% tenor, but planned, at last accounts, to turn out high-grade blister copper. Flux is iron ore, secured from a quarry 12 miles from the mine. Forces are about 85 men. Production, 1878-1898, inclusive, was 5,070 long tons fine copper, and for 1906 was 485,280 lbs. fine copper, valued at £14,672.

**MOUNT HOPE COPPER MINES CO.**

**AUSTRALIA.**

Mine office: Cloncurry, Beaconsfield Co., Queensland, Australia. Organized circa 1906, under laws of Queensland, with capitalization £30,000. Lands include the Mount Hope, Mount Hope North, Regina and Aurum mines, all leasehold, showing 2 veins, of which No. 1 vein is said not to be payable, while No. 2, in schist, carries chalcopyrite. Property was idle, late 1908, with 6 months exemption from labor conditions.

**MOUNT JUKES PROPRIETARY MINING CO., N. L.**

**TASMANIA.**

Office: care of T. L. Hood, agent, Hobart, Tasmania. Lands are in the Mt. Jukes field, Tasmania. Idle and apparently moribund.

**MOUNT LYELL ANACONDA MINING CO., N. L.**

**TASMANIA.**

Office: 60 Queen St., Melbourne, Australia. Mine office: Mt. Lyell, Montagu Co., Tasmania. N. Madden, manager. Organized under laws of Victoria, with capitalization £50,000, shares 10s. par; fully issued. Lands, 38 acres, leasehold. Idle some years.

**MOUNT LYELL BLOCKS COPPER CORPORATION, LTD.**

**TASMANIA.**

Dead. Reorganized, 1903, as Mt. Lyell Blocks Mining Co., N. L. Formerly at Mt. Lyell, Montagu Co., Tasmania.

**MOUNT LYELL BLOCKS MINING CO., N. L.**

**TASMANIA.**

Offices: 47 Queen St., Melbourne, Australia, and Palmerston House, London, E. C., Eng. Mine office: North Mount Lyell, Montagu Co., Tasmania. Employs, normally, about 250 men. Colin Templeton, chairman; preceding officer, Alfred Tolhurst, Thos. Harvey and Alex. Campbell, directors; Thos. Rollason, secretary; Edwin Habben, London secretary; Robert Ferguson, general manager. Organized March 20, 1908, under laws of Victoria, as a reconstruction of Mount Lyell Blocks Copper Corporation, Ltd., with capitalization £300,000, shares £1 par; paid in, 19s. 9d. First half of 1907 made a profit of £3,247. Half yearly meetings, February and August.

Lands, 317 acres, including 17 acres held under mineral lease, 60 acres timber lands, 150 acres miscellaneous lands and a millsite. In addition the company has the right to mine on adjoining lands of the Mount Lyell Consols for 7 years, on a royalty of 40% of net profits.

The property shows two ore bodies, carrying native copper, in minute particles, disseminated quite evenly through argillaceous schists, locally termed clays, as the schists are very soft and weather readily. These ore bodies were estimated to carry 3% copper, but revised figures, 1906, gave average estimates of 2.15% copper, and, as a matter of fact, the average probably is about 1% copper. Development is by the 240' Balance shaft and 250' Main shaft, and by the Consols tunnel of 1,638' and the Office tunnel of 680', mine being estimated to show 100,000 long tons of ore. The ground is very soft, turning to clay when weathered, and is exceedingly treacherous, requiring heavy timbering and constant watchfulness.

In addition to the two schistose ore bodies, the property shows sulphide ores giving assays up to 6% copper, in a 30' bed of conglomerate, but this has not been worked for some time.

The company also holds options on lands in the Mount Darwin district, Tasmania, on which some prospecting work was done, 1907.

Miscellaneous improvements at the mine include a small sawmill, and a framing mill for mine timbers. The Mount Lyell & North Mount Lyell Railway is 5 miles distant. Fuel is wood, costing 10s. per cord.

The 350-ton concentrator begun work August, 1904, and gave very unsatisfactory results at first, but has done better latterly, after some minor changes. The mill, of steel frame, has 10 gravity stamps, 20 Wilfley and Phoenix-Weir tables, canvas tables and 12 Frue vanners. The ore is concentrated quite easily.

During the first half of 1905 the mine showed a working profit of £551 lls. 11d., and at the end of 1905 was treating circa 1,000 tons of ore weekly, making 15 to 20 tons of fine copper therefrom. At last accounts the mine was practically closed, on account of the low price of copper. Mr. Ferguson seems to be handling a hard proposition with skill and technical ability.

**MT. LYELL COMSTOCK COPPER CO., LTD. TASMANIA.**

Offices: Alderman's House, Bishopsgate, London, E. C., Eng., and Broken Hill Chambers, 31 Queen St., Melbourne, Australia. Mine office: Mount Lyell, Montagu Co., Tasmania. Works office: Pillinger, Macquarie Harbour, Tasmania. T. J. Ive, chairman; Chas. Alfred Sack, secretary; Geo. A. Moore, manager. Organized June 1, 1907, under laws of Great Britain, with capitalization £150,000, shares 4s. par; issued, £105,066 8s., with 2s. 6d. per share paid in. Was organized as a reconstruction of the Lyell Comstock Consolidated Copper Co., Ltd., which was a reconstruction of the Mount Lyell-Comstock Copper Co., Ltd., thus changing back to the original title.

Lands, 300 acres, on Mount Lyell, considered fairly located, showing a considerable amount of ore of low to medium tenor. Some boring was done, 1908, by a petrol drill.

Development is by the Central tunnel, showing ore assaying 3.7% copper, and by a 450' main shaft, with levels opened at depths of 50', 137', 163', 250', 325' and 425', which is poor mining practice. The main shaft shows a fissure carrying ore said to give average assays of 6.8% copper, 5.7% tin and 25 oz. silver, which figures seem large. The property, as a whole, shows considerable ore of low to medium grade, best ore averaging circa 4.5% copper. A tramway is built to within 2 miles of the mine. Company employs circa 15 men.

**MT. LYELL COMSTOCK MINING ASSOCIATION, N. L. TASMANIA.**

Dead. Was succeeded by Mount Lyell-Comstock Copper Co., Ltd. Formerly at Mount Lyell, Montagu Co., Tasmania.

**MT. LYELL CONSOLS, N. L. TASMANIA.**

Dead. Was succeeded, July, 1906, by Mount Lyell Consols Mining Corporation, N. L. Formerly at North Mount Lyell, Montagu Co., Tasmania. Described Vol. VI.

**MT. LYELL CONSOLS EXTENDED MINING CO., N. L. TASMANIA.**

Dead. Formerly at North Mt. Lyell, Montagu Co., Tasmania.

**MT. LYELL CONSOLS MINING CORPORATION, N. L. TASMANIA.**

Offices: 47 Queen St., Melbourne, Australia, and Palmerston House, London, E. C., Eng. Mine office: North Mount Lyell, Montagu Co., Tasmania. Arthur J. Price, chairman; preceding officer, Wm. P. Jarvie and Wm. Colman, directors; Thos. Rollason, secretary; Edwin Habben, London secretary; Henry Hoyle, mine manager. Organized July, 1906, under laws of Victoria, with capitalization £93,750, shares 7s. 6d. par, fully issued and fully paid. Authorized, June, 1908, a £15,000 debenture issue.

Lands, 78 acres, leasehold, on Mount Lyell, south of the Mount Lyell Blocks, and 40 acres at Mount Darwin, Tasmania, though lease on latter possibly forfeited.

The Mount Lyell property has a 90' shaft, near the mouth of No. 2 tunnel, showing a gossan said to carry native copper. Principal development is by 2 tunnels, driven in hope of striking a continuation of the sulphide ore body worked in the adjoining North Mount Lyell mine. Circa 600' south of the shaft is a body of cupriferous clay, similar to that of the Mount Lyell Blocks,

outcropping for 900', with an average overburden of 6', estimated to carry approximately 700,000 tons of ore, and management estimated Jan. 31, 1907, that there was in sight 94,117 long tons of cupriferous clays, of about 2.5% average copper tenor.

The mill, completed October, 1907, of circa 200 tons daily capacity, has 5 stamps, puddling machines and Wilfley tables, water being secured from a pumping plant at Linda Creek. The property employed 12 men, previous to May, 1908, when all hands were discharged, on account of financial stringency.

**MOUNT LYELL CONSOLS REGISTERED, N. L.**

**MOUNT LYELL MINING & RAILWAY CO., LTD.**

**TASMANIA.**

Offices: 39 Queen St., Melbourne, Australia, and Palmerston House, Old Broad St., London, E. C., Eng. Operating office: Queenstown, Tasmania. Mine office: Gormanston, Montagu Co., Tasmania. Employs circa 2,000 men. Bowes Kelly, chairman; Hon. Wm. Knox, M. P., vice chairman; preceding officers, Wm. Jamieson, Jos. Cowen Syme and Lindsey Tullock, directors; A. Williamson, J. Dowling, Sir John A. Cockburn, K. C. M. G., and John Ball Ball, directors London Board; Robt. C. Sticht, general manager; Alfred Mellor, secretary; Edwin Habben, London secretary; R. M. Murray, engineer in charge of mine; A. Lewis Dean, metallurgist; W. H. Wesley, assistant metallurgist; G. W. Wright, mechanical engineer; P. A. Mackay, manager chemical works; E. Carus Driffield, railway superintendent; Dr. F. J. Howell, superintendent; Hon. B. Stafford Bird, Tasmanian agent; A. G. S. Williams and Thos. Woodward, auditors.

Organized Aug. 11, 1903, under laws of Victoria, as a merger of an old company of same name with North Mount Lyell Copper Co., Ltd., with capitalization £1,300,000, shares £1 par; issued, £1,200,000. Debentures of £140,000, at 5%, were retired, 1908, leaving the company without bonded debt. Dividends were £150,000 in 1904; £205,000 in 1905; £285,000 in 1906, and £380,000 in 1907. Company and its predecessors paid dividends, to end of 1907, of £1,966,574. Balance of liquid assets, March 31, 1908, was £455,500. Half yearly meeting, May; annual meeting, November.

Lands, 4,108 acres, including 3 consolidated leases and a large number of ordinary leases from the crown, for 20-year and 30-year periods, also 563 acres of mill and smelter sites, 17 miles southeast of Zeehan, in the West Coast mining district of Tasmania. The company also holds an option on the Tasman & Crown Lyell property, and is prospecting in other mineral fields, and holds, outright and under option, 1,368 acres of tin-bearing leases, in addition to damsites and water rights of circa 900 acres area. The mines are

several miles from the smelter, and are connected therewith by surface and aerial trams.

The Mt. Lyell mine was discovered 1883, and the gossan was worked, in a small way, as a gold mine, until taken over by the predecessor of the present company, in 1892. The North Lyell mine was developed in 1897.

Country rocks are schist, conglomerate, quartzite and sandstone, ore bodies occurring as massive lenses in the schist, near conglomerate contacts, the lenses having a generally NW. and SE. trend. There are 15 known lenses, of which 6 are under development, these having average dimensions, at the Mt. Lyell mine, of 270' width, 660' length, and a proven depth of 730', and at the North Mt. Lyell mine, 100' width, 180' length and 600' proven depth. Ores are of two varieties, the Mt. Lyell ores consisting of massive pyrite carrying disseminated bornite and chalcopyrite, with average values of 2.18% copper, 1.85 oz. silver and 0.055 oz. gold per long ton, while the North Mt. Lyell mine carries silicious sulphide ores, including chalcocite, bornite and chalcopyrite, with quartzose schist gangue. There are occasional occurrences of native copper and tetrahedrite, but the ores of commercial importance are almost exclusively sulphide. In addition to the ores previously enumerated, the Mt. Lyell has large bodies of very low-grade sulphide ores, averaging circa 0.65% copper, 2 oz. silver and 0.0725 oz. gold per ton, which doubtless will become valuable in time. The North Mt. Lyell ores are higher in copper tenor than those of the main mines, but are decidedly refractory, unless heavily fluxed, carrying 15 to 20% alumina and 60 to 75% silica. An average analysis of ores, made circa 1903, gave, in addition to copper, silver and gold contents, 40.3% iron, 46.5% sulphur, 4.4% silica, 2.5% barium sulphate and 2% alumina.

The Mount Lyell mine proper is developed by tunnels of 320' and 1,450', with a 260' blind shaft, and has circa 15 miles of workings, with estimated ore reserves of upwards of 1,000,000 long tons available for open-cast extraction, and upwards of 2,100,000 long tons available for underground extraction. Mining is done open-cast, in terraces, at the Mount Lyell and its principal subsidiary mines, underground extraction at these properties being confined largely to the removal of the richer patches of ground encountered during exploitation. A traveling crane is used in open-cast mining. The overburden of the Mount Lyell main ore body is estimated at 1,500,000 cubic yards, all of which must be stripped, eventually. The mine is lighted by electricity, and 2 diamond drills are employed, steadily, in exploratory work. A little cement copper is secured by leaching the charged mine waters.

The North Mount Lyell mine is a comparatively small property, though with ore of excellent average grade, showing considerable bornite of better than 12% average copper tenor. Development is by 2 shafts, known as the Main and Auxiliary, former 1,122' and the latter 1,000' in depth, both being blind shafts, with tunnels of 850' and 1,080' length. Stoping is mainly on the 700' and 850' levels, with promising developments under way on the 1,000' level, levels being driven at 150' intervals. The ore body is variable in size, pinching out at the fourth level, but showing a 60' stope below. The North Lyell ore is the richest produced in Tasmania, but is refractory in smelting, unless blended with the basic ores of the Mount Lyell.

Owing to extraction of ore largely by tunnel and from quarries, the power plant at the mine is of only 300 indicated horsepower, taking energy transmitted electrically from the main power plant at the smelter. There are 4 hoists, including an Ilgner electric engine, and 2 Corliss cross-compound air-compressors of 40' drills aggregate capacity.

Buildings include 13 smithies, of various sizes, a 40x50' machine shop, 17x30' carpenter shop, boiler and compressor-house, engine-house, warehouse,

office, locomotive roundhouse and numerous dwellings for employees. The company also owns and operates three sawmills, at various points, for the preparation of mine timber, and lumber for general building purposes. In addition to the ore mines there are extensive silica and limestone quarries, with a crushing plant, near the reduction works.

The mines are connected with the Queenstown smelting plant by an aerial tramway and counterbalanced inclines, surmounting the intervening hills, the tramway being of 1,500 long tons daily capacity.

The company has two private railroad systems, of 31 and 38 miles, respectively, also a 24" gauge line, with 6 locomotives, connecting the mines, flux quarries, smelters, warehouses and yards. The 31-mile line, of 42" gauge, runs from the smelter at Queenstown to the seaport of Strahan, with extensive wharves on Macquarie Harbor, connecting at the latter point with the Strahan-Zeehan government line, giving rail connections with all parts of the colony. The Queenstown-Strahan line traverses an exceedingly difficult country, 4½ miles of this line having gradients of 1 in 20 and 1 in 16, employing 4 special Abt type locomotives and centre-rack railway, in addition to ordinary adhesion engines. The company's private lines have 238 cars, and do a good general business, in addition to handling the company's traffic.

The 250-ton North Lyell smelter, 28 miles from the mine, is 75x210' in size, with four 16x32' reverberatory furnaces, 4 blast furnaces and a converter plant. The North Lyell works also have a 69x72' sampling mill, 41x66' boiler-house with three 250-h. p. Stirling water-tube boilers, and a 60x100' power-house with 200-kw. generators and cross-compound blowers. This plant is idle, and likely to remain out of commission permanently.

The Queenstown smelter, on the Queen river, 1¼ miles from the mines, receives ore by aerial tram and counterbalance inclines. This plant, which also treats custom ores, is in 2 sections, known as Nos. 1 and 2, latter being the principal plant. No. 1 smelter has 5 water-jacket blast-furnaces, 40x169" at the tuyeres, and No. 2 has 6 water-jacket blast-furnaces, 32x127" at the tuyeres and 20' in height over all, all furnaces having cast-iron water-jackets, while a twelfth furnace, of greater capacity, was added to No. 2 plant, in 1908. The capacity of the 6 furnaces in No. 2 smelter is circa 2,000 tons daily. No. 2 smelter has mechanical feeders, and the two grades of ore from the two principal mines afford an excellent furnace mixture. A 48-oz. blast formerly was supplied by 9 No. 8 Root blowers, and 3 No. 7 Root blowers, each driven by a 12x22x28" direct-connected compound condensing vertical engine, but these were replaced, circa 1908, by 2 large steam turbo blowers, of 36,000 cubic feet capacity each, with a pressure of 4 lbs., and a similar smaller turbo blower of 18,000 cubic feet capacity per minute, at the same pressure. Blast is heated by 8 hot-blast stoves, of the hanging U-pipe type.

Pyritic smelting is employed for the first fusion, which gives a 15% matte, showing a concentration of 6 into 1, with slags averaging 46% iron, 38% silica and only 0.3% copper. The low-grade first-fusion matte is blown up, to a tenor of 40 to 50%, without previous calcining, in a small hot-blast furnace, using only a 5% coke charge, the consumption of coke amounting, 1908, to about 120 lbs. per long ton, or practically 5%.

In front of the furnaces are 4 rectangular forehearts, slag and matte flowing into the first and slag skimming from the fourth into a stream of running water, granulating the slag, which is carried to a pit, whence 2 centrifugal pumps raise it to a launder running to the slag-dump. Matte is tapped from the first foreheart three times hourly, and from the others about every two hours.

The 75-ton converter plant has 2 remelting furnaces, 6 stands and 15 Stahlmann shells, each 60x96". Converter blast is furnished by two 16x24x30"

compound condensing air-compressors. The final product is blister copper averaging 98.83% copper, 100 oz. silver and 3.21 oz. gold per long ton, sent to the United States for electrolytic refining.

The power plant at the smelter has twelve 125-h. p. Babcock & Wilcox boilers, and 16 multitubular boilers, with aggregate steaming capacity of 2,700 h. p. There is a Green fuel economizer with induced draft, and super-heaters, the joint use of the various steam economies effecting a saving of 31% in fuel costs. The electric plant, of 1,200 h. p., includes 2 Brown-Boveri-Parsons steam turbines, direct-connected to generators, and a complete electric light plant.

Fuel is mainly cordwood costing 8 to 11s. per long ton, with a little soft coal costing circa 27s. per ton, and coke costing 30s. per long ton. Yearly consumption of fuel is 67,500 tons of firewood, 42,200 cords of cordwood, 2,500 tons of bituminous coal and 10,000 tons of coke.

The company owns and operates coke works at Port Kembla, N. S. W., Australia, these having 62 funnel-shaped ovens. The coking plant does a general custom business, in addition to meeting the company's requirements.

Miscellaneous enterprises include a machine shop, iron foundry, brass foundry, brickyard and 3 sawmills.

The company built, 1905, at Yarraville, a suburb of Melbourne, Australia, an acid and fertilizer plant that makes sulphuric acid from the low grade cupriferous pyrites of the Mount Lyell mine.

A second acid and fertilizer plant at New Birkenhead, Port Adelaide, South Australia, was put in commission Apr. 1, 1908. The basis of the Port Adelaide plant is the old Junction smelter, which has been remodeled and greatly enlarged. These works are built of timber and roofed with rubberoid, in order to withstand the strongly acid fumes. The plant has 6 Herreshoff furnaces, each discharging into hoppers at the bottom, fumes going by flue to lead-lined acid-chambers, where, by the agency of nitrous gases and steam, the fumes are condensed and made into dilute sulphuric acid, which is run into storage tanks, and forced, by pneumatic power, to the tower of the super-phosphate building. The plant has 2 Westinghouse engines, with Babcock & Wilcox boilers, and electric power is used throughout. Guano rock is secured from Ocean Island, in the Pacific, and the product of the works is super-phosphates of high grade, for which there is a large demand in the Australian commonwealth. The acid and fertilizer plants have proven highly successful.

Although the company's ore averages under 2½% in copper tenor, the cost-sheet makes an excellent showing, ore secured by quarrying costing approximately one-third as much as that taken by underground extraction from the North Mount Lyell mine, the latter furnishing one-fourth to one-third the total ore supply. The average cost of mining and treatment, for the fiscal year 1907, was only \$3.58 per long ton, reflecting great credit upon the manager and staff.

To the end of 1907 the mine had produced about 100,000 tons of copper, and large quantities of gold and silver. Production, for fiscal year 1904, was circa 406,000 long tons of ore, and remained practically unchanged until the latter half of 1907, when there was a considerable falling off, owing to depression in the metal industry. For the half-year ending March 31, 1908, production was circa 202,000 long tons of ore, yielding 4,247 long tons fine copper, 344,608 oz. silver and 10,489 oz. gold, and ore production for quarter ending June 30, 1908, was 108,181 long tons. For half year ending Sept. 30, 1907, the ore treated returned an average of 2.32% copper, 1.72 oz. silver and 0.045 oz. gold per ton. Production of fine copper has been as follows: 8,513,600 lbs. in 1904; 18,592,000 lbs. in 1905; 19,293,120 lbs. in 1906; 17,664,640 lbs. fine copper, 7,087 oz. silver and 19,849 oz. gold in 1907.

The Mount Lyell has been a hard property to handle, presenting a series of financial, mining and metallurgical problems, all of which have been solved with great skill. The management is most excellent, in all departments, and the company obviously is endeavoring to extend its operations and production, which is the part of wisdom.

**MOUNT LYELL NORTH CO.**

TASMANIA.

**LEAD & COPPER MINING CO., LTD.**

Office: Launceston, Tasmania. Mine office: Mt. Lyell, Montagu Co., Tasmania. Bernard Bradley, manager. C. H. F. Shern, agent. Lands, 113 acres, leasehold. Idle and apparently moribund.

**MOUNT LYELL WEST CO.**

TASMANIA.

Dead. Formerly at Mt. Lyell, Montagu Co., Tasmania.

**MOUNT MERLIN COPPER CO., LTD.**

AUSTRALIA.

Office: Eagle St., Brisbane, Queensland, Australia. Thos. Welsby, secretary. Property is the Horse Creek mine, having a 114' shaft, showing a practically vertical ore body.

**MOUNT MOLLOY, LTD.**

AUSTRALIA.

Office: Irvinebank, Queensland, Australia. Mine office: Molloy, Cardwell Co., Queensland, Australia. G. C. Young, secretary; J. Horsburgh, general manager; R. Reile, superintendent Mount Molloy mine; T. Gurrin, superintendent Mount Cardwell mine. Organized 1906, under laws of Queensland, with capitalization £100,000, shares £1 par. Planned, circa June, 1908, increasing capitalization by £50,000. Profits, for half year ending Dec. 31, 1906, were £41,257. Company paid dividends, to June 30, 1907, of 10a. 6d. per share, amounting to £52,500.

Lands include a timber reservation, shortly north of the mine, and a quarry of ironstone, said to carry 1.5 to 2% copper, which is used for fluxing. There also is a limestone quarry, near Nine-Mile Siding, about midway between Molloy and Bihoohra. The Mount Cardwell mine, at Nymbool, Cardwell County, employed 13 men only at last accounts, and is but slightly developed. The Mount Molloy mine has 5 shafts, No. 5, the main shaft, being 475' deep. The 370' level does not show an ore body as big or as rich as anticipated, though of fair size and grade. The 190' level proved disappointing also, showing a wide vein, low in copper contents, the 270' level being the best in the mine. Ore occurs in rich chutes, mainly as chalcopyrite, much of which is massive, said to assay as high as 50% in copper tenor, which evidently cannot be, as if ores do assay up to 50% copper, the so-called chalcopyrite must be mainly chalcocite, associated with some chalcopyrite and pyrite. On the 270' level the vein is 17' wide, carrying a 5' paystreak of high grade sulphides, balance of 12' consisting of low grade cupriferous pyrite. The mine is estimated to show ore reserves of circa 20,000 long tons.

Equipment, at No. 5 shaft, includes a good engine-house, with first-motion hoist, boiler-house, air-compressor, etc. There is a 20,000-gallon underground

tank, holding water for boilers and water-jackets of the 16-drill Thompson air-compressor. The company plans building a sawmill.

The smelter had a very troublesome water-jacket blast-furnace, which was replaced by a larger furnace, blown in early 1907, and plans a second new blast-furnace. Matte is taken from a storage forehearth to the converter department, which has one stand with 6x7' shells, of barrel type, turning out converter bars of 99% average copper tenor.

A 20-mile railway line, from Bihoohra' to Mt. Molloy, was completed Dec. 1, 1908. This line, of 42" gauge, laid with 45-lb. rails, is of great advantage to the company.

Production, 1906, was 10,359 tons of ore, of slightly better than 10% average copper tenor, which yielded 2,441,846 lbs. fine copper and 9,118 oz. silver. Property is valuable, being one of the best copper mines in Queensland, and management is considered good.

#### MOUNT MORGAN COPPER CO.

#### AUSTRALIA.

Dead. Reorganized as Moonmera Copper Mining Co., Ltd. Formerly at Mt. Morgan, Queensland, Australia.

#### MOUNT MORGAN GOLD MINING CO., LTD.

#### AUSTRALIA.

Office: 118 Pitt St., Sydney, Australia. English office: 9 Gracechurch St., London, E. C., Eng. Mine office: Rockhampton, Palmerston Co., Queensland, Australia. Robt. Stubbs Archer, chairman; Walter Russell Hall, chairman Sydney board; Wm. Knox D'Arcy, chairman London board; preceding officers, Hon. Albert James Callan, Kelso King, Richard Gardiner Casey and Kenneth De Lacy Cudmore, directors; George Anderson Richard, general manager; H. P. Seale, assistant manager; Holyoake Wood, secretary; John Jenkins, London secretary; J. B. Wilson, mine manager; N. F. White, engineer.

Organized Oct. 1, 1886, under laws of Queensland, with capitalization £1,000,000, shares £1 par; 17s. 6d. paid in. From organization to and including May 31, 1908, company paid dividends of £7,079,166, 13s. 4d. Dividends, 1907, were £237,500, and largest dividends were £1,100,000, in 1889. Declared, circa February, 1908, a 1s. dividend. Company is second only to the Broken Hill Proprietary as a dividend payer among Australian mines, and is one of the most profitable mines of any metal in existence.

Lands, circa 640 acres, freehold, also 80 acres leasehold and 90 acres perpetual leasehold, about 25 miles southwest of Rockhampton, also miscellaneous landed holdings, including the Many Peaks mine. The Mount Morgan has been, for two decades, one of the greatest gold producers of the world, but has shown declining values and decreasing gold output for several years, due mainly to increased depth, but partially to the mistaken policy formerly followed of extracting the richest ore without due regard for reserves.

The Mount Morgan gold mine apparently is merely the gossan of a mammoth copper deposit. This showing increased copper values at depth, the company wisely begun extensive diamond drill borings, which proved an immense tonnage of copper ore. While the Mount Morgan formerly was a gold mine, and now is a copper mine also, the two mines really are one, the copper ores coming mainly from the 750' level, or below. The gold ore of the mine carries copper, and the copper ore carries gold, the classing of the ore being largely a matter of selection according to predominant mineral values. The mine, while a single mammoth property, is worked as two connected mines, the upper section being worked open-cast, yielding oxidized gold ores, while the underground workings yield cupriferous gold sulphides and auriferous copper sulphides. The overburden is removed by steam shovels, which are used also in ore extraction, to some extent, and about one-half of the gold ore treated is secured by open-cast workings. The oxidized ores are decreasing in tonnage and values, oxidized ores, for fiscal year ending May

31, 1908, yielding an average of only 3.4 dwts. gold per ton, a considerable decline from the high values formerly secured. The sulphide gold ore, known locally as mundic, being pyrite, yielded circa 11 dwts. gold per long ton.

The underground workings are developed by the 1,035' Main shaft and the 650' Lynda incline shaft, which is the largest in the Commonwealth of Australia. Extraction is mainly from the 750' level, and the deepest level is at 850'. For fiscal year ending May 31, 1908, the mine made 4,752' of new underground openings, in addition to extensive open-cast operations. The mine shows reserves of low grade sulphide ores, from the 315' to 750' levels, inclusive, estimated at 7,000,000 long tons, but it is not certain just what proportion of this tonnage is payable. Estimates of auriferous copper ore, 1906, were 1,212,000 long tons of ore averaging 3.5% copper and 8 dwts. gold per ton, and 1,597,000 tons of ore averaging 3% copper and 2.5 dwts. gold per ton, with considerably larger quantities carrying 2 to 3% copper and 1 to 2 dwts. gold per ton, all of which should be available for extraction later. For 1908 the copper ore treated averaged circa 2.5% copper and 7 dwts. gold per ton.

The Many Peaks mine, some miles distant from Mount Morgan, carries a considerable body of low grade pyritic ore, averaging circa 2.5% copper, which is excellently adapted to fluxing the Mount Morgan copper ores. A railroad connecting the Many Peaks mines with Mount Morgan is planned, and it is expected to use circa 100,000 tons of low grade ore yearly, from the Many Peaks, for fluxing, on the completion of this line.

Ironstone for fluxing is brought by vessel from Iron Island, circa 150 miles north of Keppel Bay, and limestone is secured from a quarry at Marmor, which has electric lights.

The district being arid, extensive dams have been built, these having a total capacity of 380,000,000 gallons. It is planned to transfer water by pipeline, thus obviating considerable present losses through seepage and evaporation.

The company has an extensive mill for reduction of gold ores, gold being secured from oxidized ores and from sulphide ores by chlorination, while gold also is secured from blister copper by electrolytic refining, and the gold mill furnishes circa 500 tons yearly of copper precipitate, of about 60% copper tenor.

The copper reduction plant, built at a cost of about £250,000, was completed, and the first furnace blown in, January, 1906, the third furnace going into commission early 1908. The smelter has 3 blast-furnaces, and a converter department with 2 stands. The product is blister copper averaging 98.6% copper and 14.5 oz. gold per ton, which is shipped to the De Lamar works, in New Jersey, U. S. A., for electrolytic refining, but the company will have in operation, 1909, its own electrolytic refinery, at Port Kembla.

Forces employed are circa 2,500 men, and ore is broken mainly on contract, this system proving very satisfactory to both employer and employee.

The Mount Morgan has yielded over £12,000,000 in gold, and crushes yearly circa 225,000 long tons of gold-bearing quartz, carrying an average of about 8 dwts gold per long ton. Production, for fiscal years ending May 31, has been as follows: 5,760,458 lbs. fine copper and 120,606 oz. fine gold in 1906; 12,456,640 lbs. fine copper and 153,092 oz. fine gold, valued at £911,723, in 1908. Copper ore treated for fiscal year 1908 gave an average extraction of 3.3% copper and 8.75 dwts. gold per long ton. In August, 1908, the works treated 16,780 long tons of ore, yielding 539 long tons blister copper and 6,730 oz. gold, and secured also, from the gold mill, 45 long tons of copper precipitate, carrying 34 long tons fine copper and 13 oz. gold, in addition to the gold production from the gold mill.

The Mount Morgan is one of the very best gold mines in the world, and in addition is a copper property of altogether exceptional promise.

**MOUNT MORGAN PROSPECTING CO., LTD.****AUSTRALIA.**

Office and mine: East St., Rockhampton, Palmerston Co., Queensland, Australia. Organized Nov. 28, 1907, under laws of Queensland, with capitalization £5,000, shares 1s. par. Company contracted, early 1908, for a 1,000' borehole, by diamond drill, with a view to locating the continuation of the ore body of the Mount Morgan Gold Mining Co., Ltd.

**MOUNT ORANGE MINING CO.****AUSTRALIA.**

Mine and works office: Mt. Flora, Queensland, Australia. Has a smelter with 1 small reverberatory furnace, which it was planned, early 1908, to lease for 5 years. In June, 1908, smelter was reported to be treating 60 tons of ore daily, making 60% matte.

**MOUNT PERRY COPPER CO., LTD.****AUSTRALIA.**

Dead. Formerly at Mount Perry, Bowen Co., Queensland, Australia.

**MOUNT PERRY COPPER & REID'S CREEK****AUSTRALIA.****GOLD MINES & SMELTING CO., LTD.**

Dead. Voluntarily wound up, June, 1902. Formerly at Mount Perry, Bowen Co., Queensland, Australia.

**MOUNT READ MINING CO., LTD.****TASMANIA.**

Office: Worcester House, Walbrook, London, E. C., Eng. Operating office: Cook's Chambers, Elizabeth St., Hobart, Tasmania. Mine office: Dundas, Montagu Co., Tasmania. Harold G. Campion, chairman; J. Hickson, secretary; Newman M. Ogle, London secretary; Stafford Bird, manager. Organized May 13, 1896, and reorganized Nov. 4, 1901, with capitalization £150,000, shares £1 par; paid in, 18s.

Lands, 80 acres, carrying gold, silver, lead and zinc ores assaying about 0.5% copper, also mill and smelter sites of 121 acres, with water-rights. Development is by tunnel, with considerable ore in sight, but no feasible process of treatment has been devised, the mixed sulphides being very difficult of separation and reduction. Idle some years.

**MOUNT ROSE MINING & SMELTING CO.****SOUTH AUSTRALIA.**

Mine office: Wallaroo, Daly Co., South Australia. J. Remfrey, manager. Early 1908 employed circa 20 men.

**MOUNT ROYAL MINE.****AUSTRALIA.**

Mine office: Dandaloo, New South Wales, Australia. Mine, circa 20 miles west of Dandaloo, in the Orange Plains field, has 2 shallow shafts, with about 500' of workings, showing a considerable body of oxidized ores, and chalcocite assaying up to 40% in copper tenor. Has a smelter, with 1 small reverberatory furnace and November, 1907, had 20 tons of 60% matte ready for shipment.

**MOUNT ROYAL MINING & REDUCTION CO.****MONTANA.**

Mine office: Philipsburg, Granite Co., Mont. L. N. Loomis, president. Lands, 4 claims, a tunnelsite and water rights, on Royal Mountain, 8 miles from Philipsburg, opened by tunnel, with about a quarter-mile of workings, showing auriferous and argentiferous copper ore.

**MOUNT ST. HELENS CONSOLIDATED MINING CO.****WASHINGTON.**

Office: 606 Marquam Bldg., Portland, Ore. Mine office: Spirit Lake, Skamania Co., Wash. Thos. Prince, president; H. P. Christiansen, vice president; Chas. H. March, secretary; L. O'Connor, assistant secretary; Dr. Henry Waldo Coe, treasurer and managing director; Andrew Olson, superintendent; Geo. W. Lilly, engineer. Organized 1902, under laws of Oregon, with capitalization \$1,800,000, shares \$1 par.

Lands, 101 claims, 65 patented, area 2,000 acres, estimated to carry 100,000,000' of standing timber, on the north fork of the Toutle river and

on the shores of Spirit Lake, in the St. Helen's district, circa 50 miles from Portland. Lands include former holdings of the Sweden Copper Co., Calumet Copper Mining Co., Bronze Monarch Mining Co., Chicago Mining Co., Yellow Metal Mining Co., Earl Mining Co. and Cascade Copper Mining Co. The company also owns a three-fourths in the United mines, the holdings being practically a parallelogram of 1½ miles width by 4 miles in length. In addition to copper ores the tract contains sundry gold veins, an ochre bed, granite quarry, and a deposit of pumice stone.

The property shows syenite, diorite and slate, carrying fissure veins and contact deposits between diorite and syenite, with about 20 ore bodies more or less developed, these ranging from 5' to 100' in width, carrying mainly sulphide ores, including chalcocite, bornite and chalcopyrite, giving assays of 2 to 25% copper, 2 to 50 oz. silver and \$1 to \$40 gold per ton, with occasional lead values, the usual oxidized ores being absent.

Development is almost exclusively by tunnels, there being a 50' shaft and tunnels of 250', 400', 600' and 2,300', with total workings of circa 5,500', estimated to show 125,000 tons of ore of medium and high grades, with a greater tonnage of milling ore.

The Sweden-Norway-Denmark group carries a vein of 30' to 40' width, between diorite and syenite, mineralization being mainly on the footwall, with frequent chutes of rich ore, running from 3 to 20% copper, 4 oz. silver and \$1.50 to \$7 gold per ton.

The Earl group shows a strong gossan carrying small gold values; with occasional bunches of high grade copper ore, the gossan apparently overlying a breccia.

The Bronze Monarch group, adjoining the Sweden, opened by a 300' tunnel, has produced circa 1,000 tons of auriferous and argentiferous copper sulphides.

The Polar Star mine is said to show a 2' to 5' vein of ore giving assays of 10 to 30% copper, 8 to 70 oz. silver and \$3 to \$11 gold per ton.

The Minnie Lee group, 4 miles from the Polar Star, has about 500' of workings, showing low grade auriferous and argentiferous copper ore.

The Index mine, circa 2½ miles from the main group, shows a vein of 44' estimated average width, carrying ore said to average 1.5% copper, 8 oz. silver and \$4 gold per ton.

Equipment includes an 80-h. p. Pelton water-wheel and a 6-drill Sullivan air-compressor. There is a sawmill, with about 25 shops and cabins at the various camps.

The property has been practically idle for several years, but a small amount of development work is planned for 1909. Lands are owned outright, and the company has no bonds or debts, with a small amount of cash on hand. Property considered promising and management good.

#### **MOUNT SHASTA GOLD MINES CORPORATION. CALIFORNIA.**

Dead. Was partly "succeeded," 1904, by Phoenix Gold Mining Co. Was an unsavory bit of stock jobbery. Formerly at Shasta, Shasta Co., Cal. Fully described Vol. IV.

#### **Mount Sicker & British Columbia Development Co., Ltd. BRITISH COLUMBIA.**

Office: 116 St. Vincent St., Glasgow, Scotland. Mine office: Mount Sicker, Vancouver Island, B. C. Kenneth H. M. Connal, chairman; John D. Steel, secretary. Organized Oct. 20, 1898, under laws of Great Britain, with capitalization £125,000, shares £1 par. Lands, sundry claims on Mount Sicker, Vancouver Island and in the East Kootenai district of British Columbia. Idle for some years.

**MOUNTS SICKER & BRENTON MINES, LTD. BRITISH COLUMBIA.**

Office: 764 Bullitt Bldg., Philadelphia, Pa. Mine office: Mount Sicker, Vancouver Island, B. C. Dr. T. J. Jones, president; John Edmonds, vice president; Jas. A. Cameron, secretary, treasurer and managing director; Jas. Humes, superintendent. Capitalization, \$1,000,000.

Lands, 9 claims, area 352 acres, 49 miles north of Victoria, in 2 groups, known as the Copper Cañon group of 5 claims, on Mount Sicker, and a group of 4 claims on Mount Brenton. Property is in the same geological horizon as the Tyee and Lenora mines, and carries a continuation of the schistose ore formation of those mines. Development is by a two-compartment shaft, sunk at an angle of 76°, variously reported as 80' to 144' deep, showing a little good ore in the bottom, values apparently improving with depth. Considerable development work, done at different times, on various claims, has given encouragement, but the company has not yet secured a workable ore body. Equipment is said to include necessary mine buildings.

**MOUNT STANLEY MINING CO. ARIZONA.**

Mine office: San Carlos, Gila Co., Ariz. Martin Davis, superintendent, at last accounts. Organized, 1905, with capitalization \$1,000,000, shares \$1 par.

**MOUNT TRITLE COPPER CO. ARIZONA.**

Mine office: Prescott, Yavapai Co., Ariz. H. R. Ward, consulting engineer. Organized under laws of Arizona, with capitalization \$500,000, shares \$1 par. Lands, 11 claims, on the southern slope of Mount Tritle, near the head of Slate Creek, circa 12 miles south of Prescott. Mine, formerly known as the Dunkirk, is an old property, once worked as a gold mine, having 4 tunnels, of 150', 160', 170' and 270' length, driven at vertical intervals of 100', showing argentiferous and auriferous copper and lead ores, apparently carrying values in copper, gold, silver and lead, in order named. Has steam power, air-compressor and electric light plant. Has a 30-ton mill with 4 Nissen stamps, 3 Wilfley tables, 100-ton ore bin and 10,000-gallon water tank. Began production early 1907, and middle of year was producing about 200 tons of ore monthly. Property considered promising, but creditors applied for a receiver, October, 1908.

**MOUNT TURNBULL COPPER MINING & SMELTING CO. ARIZONA.**

Mine office: Safford, Graham Co., Ariz. P. W. Keller, president; Larkin A. Rockwell, secretary. Idle since circa 1899, and presumably moribund.

**MOUNT UNION CONSOLIDATED MINING CO. ARIZONA.**

Office Germania Bldg., St. Paul, Minn. Mine office: Prescott, Yavapai Co., Ariz. R. H. Green, president; W. H. Fagley, vice president; H. M. Temple, secretary; J. E. Whalen, general manager; Edward M. L'Engle, superintendent. Organized 1904, under laws of Arizona, with capitalization \$3,600,000, shares \$1 par, as successor of the Mount Union Mining Co. and Arizona-Michigan Mining Co. Lands, 19 claims, in Cook Cañon, on the southwestern slope of the Mount Union, in the Senator Range of the Bradshaw Mountains, Hassayampa district, circa 14 miles south of Prescott. The property has about 2,000' of workings. The Arizona-Michigan mine, 9 claims, has a 175' shaft, with circa 1,000' of workings, showing a vein of 3' to 6' width, carrying a 12" paystreak of argentiferous and auriferous copper ore and galena. The property also is reported to have a 460' shaft. Equipment includes a 75-ton mill. Idle.

**MOUNT UNION MINING CO. ARIZONA.**

Dead. Merged, 1904, in Mount Union Consolidated Mining Co. Formerly at Prescott, Yavapai Co., Ariz.

**MOUNT WARATAH COPPER MINES, LTD. TASMANIA.**

Office: 6 Moorgate St., London, E. C., Eng. Operating office: Zeehan,

**TASMANIA.** Mine office: Heazlewood, Tasmania. J. H. Wolf, chairman; J. E. Meadowcroft, secretary; preceding officers and S. F. Ralli, directors; Capt. John Walters, general manager. Organized Feb. 18, 1907, under laws of Great Britain, with capitalization £125,000, shares £1 par; issued, £100,000.

Lands, 202 acres, in 3 leases from the Tasmanian government, showing 5 ore bodies, carrying chalcopyrite, associated with pyrite in a quartz gangue, averaging circa 5% in copper tenor, also a body of galena. Development is by shafts of 60' and 170', with tunnels aggregating 1,000' length. Company plans continuous development.

**MOUNT WARMINSTER MINE.**

**AUSTRALIA.**

Office: 166 Bolsover St., Rockhampton, Queensland, Australia. Mine office: Mt. Chalmers, Palmerston Co., Queensland, Australia. Wm. Thompson, secretary; J. Bruce, mine manager. Lands, 100 acres, 80 acres freehold, 2 miles from Fitzroy and 10 miles northeast of Rockhampton. Mine has 2 shallow shafts and a short tunnel, latter showing a 12' vein of oxidized and sulphide ores of 2% copper tenor. Shipped, 1907, a parcel of 23 tons of 20% copper ore to Waratah smelter. Employs 10 men.

**MOUNT WASHINGTON COPPER CO.**

**MARYLAND.**

Dead. Property sold under foreclosure, March, 1903. Formerly at Mount Washington, Baltimore Co., Md.

**MOUNT WHIPPLE MINING CO.**

**CALIFORNIA.**

Mine office: Needles, San Bernardino Co., Cal. Lands are near Empire Flats, on the Colorado river, near the junction of the Bill Williams Fork river. Presumably idle.

**MOUNT ZIRKEL COPPER MINING CO.**

**COLORADO.**

Office: 240 La Salle St., Chicago, Ills. Mine office: Pearl, Larimer Co., Colo. Wm. A. McGuire, president; E. B. Boisot, secretary and treasurer. Organized 1901, under laws of Washington, with capitalization \$1,000,000, shares \$1 par. Is controlled by Standard Development Co. Lands, 7 claims, area 60 acres, also a 5-acre millsite, in the Big Horn district, showing a 75' fissure vein, claimed by company to average 20% copper, 4 oz. silver and \$10 gold per ton, which is untrue, opened by a 250' shaft. Idle some years. Is not regarded favorably.

**MOURGOUL RIVER COPPER CO., LTD.**

**RUSSIA.**

Dead. Formerly at Dzansulski, Kutais, Russia.

**SOCIÉTÉ ANONYME DE MOUZALA.**

**ALGERIA.**

Office: 5 Rue St. Vincent-de-Paul, Paris, Xe, France. Mine office: Camp des Chenes, par Blida, Alger, Algeria. E. Raschle, president; R. Lava, secretary; M. Duvialard, general manager. Organized 1891, with capitalization 350,000 francs.

Lands, 5,362 hectares, showing 6 fissure veins, in schists, carrying chalcopyrite, and 10 contact veins carrying antimonial gray copper, veins ranging from 2cm. to 1m. wide and averaging 4 to 5% copper, and from nothing to 27 oz. silver per ton. Mine is opened by a 17m. shaft and 7 tunnels of 39m. to 63m. length, in chalcopyrite, and by 12 tunnels, four longest 220m., 240m., 255m. and 265m., in gray copper ore. Property is served by the West Algerian railroad, 2km. distant. Copper properties have been idle since 1899, but the company has developed large bodies of hematite and spathic iron, estimated to contain 4,200,000 metric tons of ore of merchantable grade.

**MOZUMI MINE.**

**JAPAN.**

Owned by Mitsu Bishi Goshi-Kwaisha.

**M'TAMBA COPPER DEVELOPMENT CO., LTD.**

**TRANSVAAL.**

Office: Johannesburg, Transvaal. J. H. Rainier, P. J. Dennyssen, F. T. Blane and Geo. Pecl, directors. Organized circa February, 1908, under laws of Transvaal, with capitalization £16,000, shares £1 par. Vendors took £9,000

in shares. Lands, 1,284 claims, in a tract circa one mile wide and three miles long, 107 miles from Pietersburg.

**MULATOS MINING CO.**

**MEXICO.**

Dead. Formerly at Mulatos, Sahuaripa, Sonora, Mex.

**MULLAN MINING CO.**

**IDAHO.**

Mine office: Mullan, Shoshone Co., Ida. Lands are on the east fork of Deadman Creek. Resumed operations, October, 1908, after about 3 years idleness.

**MULOCK MINE.**

**MICHIGAN.**

Office: care of R. P. Mulock, owner, Colfax, Ia. Mine office: Matchwood, Ontonagon Co., Mich. John F. Dreiss, superintendent. Lands, 160 acres, being the Northwest  $\frac{1}{4}$  of Section 9, Town 49 North, Range 41 West, near the Norwich. Exploratory work, 1903-1905, has shown 2 amygdaloidal beds, outcropping at a distance of about 400' apart, with average widths of circa 6' and 15', opened by several pits, showing copper.

**MULTNOMAH MINING & MILLING CO.**

**WASHINGTON.**

Office: 1214 Harmon Ave., Minneapolis, Minn. Mine office: Nespelem, Okanogan Co., Wash. J. N. Hudnut, president; M. J. Hills, vice president; David W. Peabody, secretary; Geo. S. Wickman, treasurer; Dr. F. O. Hudnutt, general manager; Thos. B. Early, superintendent. Organized under laws of Washington, with capitalization \$2,000,000, shares \$1 par.

Lands, 8 claims, opened by a 930' tunnel, planned to be driven 1,500', said to cut a 15' vein, carrying mainly auriferous and argentiferous lead ore.

**MUNGANA (CHILLAGOE) MINING CO., LTD.**

**AUSTRALIA.**

Office: 39 Queen St., Melbourne, Australia. English office: Palmerston House, Old Broad St., London, E. C., Eng. Mine office: Mungana, Lynd Co., Queensland, Australia. Employs 350 men. Harvey Patterson, chairman; V. J. Saddler, vice-chairman; C. L. Hewitt, secretary; Edwin Habben, London secretary; Stanley N. Rodda, manager. Organized March 1, 1901, under laws of Queensland, with capitalization £125,000, shares 5s. par, fully issued. Statement of finances, as of date June 30, 1908, gave assets of £185,672 7s. 3d., and liabilities of £134,088 13s. 8d., with £6,123 13s. 10d. on hand. For fiscal year ending June 30, 1908, net profit was £8,090 17s. 2d. Annual meeting, second Monday in October.

Lands, 5 claims, area 287 acres, in the Walsh and Tinaroo districts, circa 10 miles west of Chillagoe, including a number of mines, of which the principal properties are the Girofia and Lady Jane. The property shows considerable ore, assaying up to 8% in copper tenor, but is primarily a silver-lead mine, with greatest values in silver, followed in turn by lead and copper. The mine is very wet, and considerable trouble has been had in shaft sinking at times, inflow of water being beyond the pumping capacity. Timbering is by square sets.

The Girofia mine gives a good surface showing, and carries a large ore body containing workable values in silver, lead and copper, developed by three shafts, No. 3 being 510' deep. There also is a large open-cut, stripped to depth of 60'.

The Lady Jane mine lost its old shaft from a crush, and is very wet, having a water flow of circa 200,000 gallons daily. The old main shaft, lost through drawing, has been replaced by the 420' Saddler shaft, which has 4 compartments and is 4' 6"x15' 9" in size, inside measurement, sunk circa 100' west of old Lady Jane No. 3 shaft.

There also are minor properties, including the Griffiths, having an 80' open-cut; Calumet, having an 80' shaft; Magazine, having an 83' shaft and an open pit, and the Dorothy, having a 100' shaft.

The mine has a number of shops and buildings, including a new general

workshop, built 1908. Waterworks include a service furnished to the town, with fire protection for all mine buildings, with tanks holding 48 hours' supply at each mine. The property is served by the Chillagoe to Mareeba Railway. Fuel is wood.

Production for fiscal year ending June 30, 1906, was 969,280 lbs. fine copper, 652 long tons lead and 128,600 oz. silver, and for fiscal year ending June 30, 1907, was 30,275 tons of ore, yielding 2,719,360 lbs. fine copper, 2,974 long tons lead and 298,505 oz. silver.

#### SUCESIÓN JUAN MUÑOZ.

CHILE.

Office and mine: Higuera, La Serena, Coquimbo, Chile. José Muñoz, general manager. The mines are Las Casas and Ají, opened to depth of 220 meters, with horizontal workings 1,350 meters in length, development being partly by tunnel. Country rock is syenite. Equipment includes a Siemens & Halske electric plant. Near the mine is the smelting establishment, known as San Juan, having a modern equipment, including an electric light plant, intercommunicating telephone system, etc. Ores under 5% in copper tenor are not treated. Smelter has 3 reverberatory furnaces. Production, 1903, was 3,770 tons of ore averaging 9.5% in copper tenor, from which were produced 775,680 kilos of ejes, averaging 46.31% copper tenor, giving an output equal to 791,958 lbs. fine copper. The mines offer good working conditions, and the property is managed with vigor and success.

#### MUNROE-THOMPSON ORE REDUCTION CO.

NOVA SCOTIA.

Dead. Was a bad egg. Formerly at Wentworth Centre, Cumberland Co., N. S. Fully described Vol. IV.

#### MURCHISON COPPER MINING SYNDICATE.

AUSTRALIA.

Mine office: Barraba, N. S. W., Australia. Lands, 30 acres, leasehold, 2 miles north of Gulf Creek, slightly prospected.

#### MURRAY COPPER MINING CO.

UTAH.

Mine office: Brighton, Salt Lake Co., Utah. Henry Harker, president; Matt. Gilby, vice-president; A. R. Condict, secretary. Organized 1907, under laws of Utah, with capitalization \$50,000, shares 10 cents par.

#### MURRIN COPPER MINES, LTD.

AUSTRALIA.

Dead. Voluntarily wound up, March, 1905. Formerly at Murrin, West Australia.

#### MURTEGA MINERALS CO., LTD.

PORTUGAL.

Office: 8 Princes St., London, E. C., Eng. Letter returned unclaimed from former mine office, Barrancos, Alemtejo, Portugal. J. Dunham Massey, chairman; H. G. Jones, secretary. Organized Dec. 8, 1900, under laws of Great Britain, with capitalization £80,000, shares £1 par; issued, £67,567. Lands include 5 old copper mines. Company endeavored to open a mine at the presumable point of intersection of 3 main veins, in the center of a hill, under a promising gossan capping, by shaft and tunnel. Idle several years and apparently moribund.

#### MUTOOREO COPPER & SILVER MINING CO., LTD.

AUSTRALIA.

Office: care of J. P. Winch, Hindley St., Adelaide, South Australia. Mine office: Cockburn, South Australia. Lands, 320 acres, leasehold, 14 miles southwest of Cockburn, carrying lenticular ore bodies of considerable size, in contact deposits near intrusive rocks, ores including cuprite, malachite, azurite, chrysocolla and atacamite in the oxidized zone, changing at depth to chalcoelite, bornite and chalcopyrite, associated with pyrite. Latest reported production, first half 1905, was 100 long tons of 16% copper ore. Property has paid several small dividends. Idle.

#### COMPÀNIA MINERA y FUNDIDORA DE LA MUTUA.

MEXICO.

Mine office: Zimapán, Hidalgo, Mex. León Lemaire, general manager.

Has argentiferous copper and lead ores, with steam power and 50-ton smelter, employing circa 200 men at last accounts.

**MUTUAL COPPER CO.**

Office: 100 Boylston St., Boston, Mass. Location of lands, if any, not learned.

**MUTUAL GOLD & COPPER MINING CO.**

**WYOMING.**

Dead. Formerly at Rawlins, Carbon Co., Wyo. Described Vol. VI.

**MYERS MINING & MILLING CO.**

**MEXICO.**

Office: care of Thos. C. Myers, manager, San Luis Potosí, Mex. Mine office: Etzatlán, Jalisco, Mex. A. Larkin, president; C. E. Ratchell, secretary and treasurer; T. L. Myers, comisario. Organized 1906, under laws of Mexico, with capitalization 40,000 pesos, shares 1 peso par. Property is the Culebra, an antigua mine, 1 mile south of Etzatlán, said to have been a large producer in the past. Development is by 2 tunnels, showing ore carrying varying percentages of copper, up to 59 kilograms silver, and 5 to 30 grams gold per metric ton.

**MYSTIC SHRINE GOLD & COPPER MINING CO.**

**UTAH.**

Dead. Lands sold to Intermountain Mining & Industrial Association. Formerly at Bingham Cañon, Salt Lake City, Utah. Fully described Vol. V.

**MYSTIC SHRINE MINE.**

**UTAH.**

Owned by Intermountain Mining & Industrial Association.

**NABOB CONSOLIDATED MINING CO.**

**UTAH.**

Office: care of H. Barnett, secretary and treasurer, Salt Lake City, Utah. Jos. Geoghegan, president. Organized 1907, under laws of Utah, with capitalization \$250,000, shares 50 cents par. Lands are in Beaver county, Utah.

**COMPANIA METALURGICA NACIONAL.**

**MEXICO.**

Is the Mexican incorporation of the National Metallurgical Co.

**COMPANIA MINERA LA NACIONAL.**

**MEXICO.**

Mine office: El Salado, Catorce, San Luis Potosí, Mex. Miguel, Ferrara, president; José M. Parga, manager. Company operates El Saltillito mines, producing silver, gold, copper and iron ore. Employs circa 200 men.

**NACKARA PROPRIETARY COPPER MINING CO., N. L.** **AUSTRALIA.**

Mine office: Nackara, South Australia.

**NACO CONSOLIDATED COPPER CO.**

**ARIZONA.**

Office: 428-228 West Fourth St., Los Angeles, Cal. Mine office: Turkey, Yavapai Co., Ariz. A. J. Padan, president; Wm. Theising, vice-president; Chas. W. Stewart, secretary and treasurer; preceding officers, J. Ross Campbell and J. W. McBride, directors. Organized Oct. 26, 1906, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands, 20 claims, area 400 acres, including the Yankee Chief and Comet groups, in the Black Cañon district, circa 3 miles from Turkey. Development is by 2 shafts, with about 700' of workings, showing sulphide ore.

**NACO SMELTING & REFINING CO.**

**ARIZONA.**

Office: 522 Bradbury Bldg., Los Angeles, Cal. Works office: Naco, Cochise Co., Ariz. Robert Mitchell, president and treasurer; Robert E. Morrison, vice-president; Chas. B. Lewis, secretary; preceding officers, Henry J. Stevens and N. M. Edwards, directors. Organized under laws of Arizona, with capitalization \$500,000, shares \$10 par.

Lands, 53 acres, just east of the Naco townsite, reached by the El Paso & Southwestern Railway, on which it was planned, 1906, to build a 250-ton custom smelter, costing circa \$75,000. Smelter not built and company apparently abortive.

**NACOZARA MINING & REDUCTION CO.**

**MEXICO.**

Dead. Formerly at Moctezuma, Sonora, Mex.

**NACOZARI CONSOLIDATED COPPER CO.****MEXICO.**

Office: care of W. L. Musick, president, Burlington Bldg., St. Louis, Mo. Mine office: Pilares de Teras, Moctezuma, Sonora, Mex. John G. Alexander, superintendent. Organized under laws of Arizona, apparently succeeding the Nacozari Copper Co., and protocolized under laws of Mexico. Lands, 40 pertenencias, area 98 acres, including La Galera, La Puerta and Copper Queen mines, one said to be an antigua, near the Moctezuma Copper Co., and carrying a 10' to 20' vein, supposed to be the extension of the Pilares ore body of the Moctezuma.

**NACOZARI COPPER CO.****MEXICO.**

Dead. Organized September, 1906, and apparently succeeded, 1907, by Nacozari Consolidated Copper Co. Formerly at Pilares de Teras, Moctezuma, Sonora, Mex.

**NADAR COPPER MINES, LTD.**

Office: Bassishaw House, London, E. C., Eng. Robt. Biggar, secretary. Organized Apr. 5, 1907, under laws of Great Britain, with capitalization £100,000, shares £1 par. Apparently inoperative.

**NAFVERBERGS KOPPABERVERK.****SWEDEN.**

Owned by Naversberg Falun Copper Mines & Works, Ltd.

**NAGAMATSU MINE.****JAPAN.**

Owned by Furukawa Mining Co.

**NAHMINT MINING CO., LTD.****BRITISH COLUMBIA.**

Mine office: Alberni, Vancouver Island, B. C. A. C. Cabel, superintendent. Organized 1898, with capitalization \$100,000. Property is the Hayes mine, on the western side of the Alberni Canal, having 3 tunnels, longest 1,200', with about 1 mile of workings. Has a 1-mile aerial tram, leading to a shipping wharf at tidewater. Ore shipped, 1898-1899, to Tacoma smelter, gave average returns of 13% copper, 1 oz. silver and 65 cents gold per ton. Suspended operations, 1902, when mine was said to be nearly exhausted, and idle since circa 1904.

**F. B. NAJARA y CA.****MEXICO.**

Office and mine: Topia, Tamazula, Durango, Mex. Properly has auriferous and argentiferous copper ores. Employed circa 40 men at last accounts.

**COMPAÑIA MINERA DE NALTAGUA.****CHILE.**

Dead. Was succeeded, Jan. 26, 1907, by Société des Mines de Cuivre de Naltagua (Chili). Formerly at Naltagua, Milipilla, Santiago, Chile.

**SOCIÉTÉ DES MINES DE CUIVRE DE NALTAGUA (CHILI).****CHILE.**

Office: 52 Blvd. Haussmann, Paris, France. Mine office: Naltagua, Milipilla, Santiago, Chile. J. de Bethan, A. Boscher, Chas. Chalput, H. de Lamarre, A. de Bitrict, P. Keller, E. Leolino, M. Lyon and A. de Mun, directors. Organized Jan. 26, 1907, under laws of France with capitalization 10,000,000 francs, shares 100 francs par. Mine, opened 1898, was owned previously by Compañía Minera de Naltagua.

**NAMAQUA VENTURE SYNDICATE.****CAPE COLONY.**

Mine office: Wittwater, Little Namaqualand, Cape Colony. Did some development work, circa 1904. Presumably idle.

**NANAIMO JUBILEE MINING &  
DEVELOPMENT CO., LTD.****BRITISH COLUMBIA.**

Mine office: Dunsmuir, Vancouver Island, B. C. Lands, known as the Delphi group, on the south fork of the Nanaimo River, circa 18 miles from the Esquimalt & Nanaimo railway, show a vein of 10' to 15' width, carrying fair copper values. Property considered promising.

**NANCOT COPPER CO.****NEW MEXICO.**

Office: care of H. S. Clark, president, Southboro, Mass. Mine office:

Belen, Valencia Co., N. M. Organized October, 1902, under laws of New Mexico, with capitalization \$1,000,000, shares \$1 par. Bonds, \$250,000 authorized, running 5 years, at 6%, company giving a \$2 stock bonus with each dollar of bonds sold. Lands, 26 claims, in the Manzana Mountains, near Belen, fairly timbered and watered. Mine has a 2-compartment shaft, and shipped a few carloads of ore running 15 to 20% copper. Presumably idle.

**NANTLLE VALE COPPER MINING CO., LTD.****WALES.**

Office: 11 Dale St., Liverpool, Eng. Mine office: Llanllyfni, Carnarvon, Wales. O. A. Harling, chairman; W. H. Hill, secretary. Organized Sept. 9, 1900, with capitalization £5,000, shares £1 par. Issued, £4,007. Debentures, £8,500, "protected" by first, second and fourth mortgages. Idle and apparently moribund.

**NAPA COUNTY COPPER MINING CO.****CALIFORNIA.**

Dead. Formerly at Middletown, Lake Co., Cal., but with lands in Napa county, California. Described Vol. VI.

**NAPOLEON & MAGHIERA COPPER MINING & REDUCTION CO. UTAH.**

Office: Lock Box 537, Cedar Rapids, Ia. Operating office: Ogden, Utah. Mine office: Utah Hot Springs, Box Elder Co., Utah. Employs 10 to 40 men. Don McGuire, president and general manager; John H. Kincaid, vice-president; Dr. Frank Carroll, secretary and treasurer; John E. Dalbey, superintendent; preceding officers, Lee Kincaid, Wm. Zaff and Dr. C. T. Chandler, directors. Organized Feb. 23, 1904, under laws of Utah, with capitalization \$1,000,000, shares \$1 par. Annual meeting, second Tuesday in June.

Lands, 12 claims, area 240 acres, also a 10-acre millsite, in the Sierra Madre district, showing gneiss carrying 4 fissure veins, of which 2, under development, are practically parallel, estimated by company at 20' average width and traceable 5,000'. Veins show malachite, bornite and chalcopyrite, with occasional chalcocite and copper silicates, estimated to average 2% copper, 4 oz. silver and \$2 gold per ton. Development is by a 120' shaft and by tunnels of 1,800', 1,100', 300' and 50', with about 4,000' of workings, estimated to show 400,000 tons of ore, with 75,000 tons blocked out for stoping. There is a 2,682' Broderick & Bascom aerial tram.

Equipment includes a 20-h. p. steam plant. There is a 30x36' machine shop and a 30x36' carpenter shop, both of frame construction, covered by sheet steel. Company plans a concentrator.

**NAPOLEON MINE.****CALIFORNIA.**

Mine office: Copperopolis, Calaveras Co., Cal. Is the oldest copper mine in California, and once was a considerable producer. Vein channel is 100' wide and ranges from diabase to talcose schist, ore bodies occurring in lenses up to 20' wide. Ores are principally sulphide, with a fair sprinkling of carbonates and oxides. Old shaft, 325'. A new shaft has been sunk to the westward. Some copper has been produced, during past few years, by leaching the old dumps.

**NAPOLEON MINE.****WASHINGTON.**

Mine office: Boyds, Ferry Co., Wash. Is owned by British Columbia Copper Co. Ore is low in grade, carrying small values in copper, silver and gold, with about 20% silica and 40% iron, being valuable mainly for fluxing. Has 3-drill and 7-drill air-compressors, and a 4,100' tram. Is said to plan a 500-ton cyanide plant to treat low grade auriferous ores. Was shipping, 1907, circa 100 tons of ore daily.

**NARLARLA SILVER-LEAD MINING CO., LTD.****AUSTRALIA.**

Mine office: Mount Marmion, Western Australia. Y. H. Grant, mine manager. Lands, 240 acres, 30 miles from Mount Marmion and 90 miles from Derby, on the Barker River, in the Napier Range, carrying a ledge of 30' to 50', assaying 2.4 to 16.4% copper, 47 to 68% lead and 3 to 70 oz. silver, esti-

mated by company to average 8% copper, 50% lead and 10 oz. silver, which, in all likelihood, is an overestimate. Also has property at Moondooma, 30 miles from Narlarla, said to show a 20' vein traceable 3,000', showing outcrops of ore that can be hand-sorted to 30% copper tenor.

**NASSAU COPPER CO.**

**CALIFORNIA.**

Mine office: Milton, Calaveras Co., Cal. A. S. Pool, superintendent. Property, known as the Goat Ranch mine, was developing with about 20 men, at last accounts.

**NAST MINING & MILLING CO.**

**UTAH.**

Dead. Was absorbed by New England Gold & Copper Mining Co. Formerly at Bingham Canyon, Salt Lake Co., Utah.

**NATICK COPPER CO.**

**MICHIGAN.**

Office: Leopold Bldg., Houghton, Mich. Mine office: Copper Falls, Keweenaw Co., Mich. F. W. Nichols, resident manager. Lands, 200 acres, between the Humboldt and Eagle River properties, being the West  $\frac{1}{2}$  of Section 17, Town 58 North, Range 31 West. Idle for many years.

**NATIONAL CAPITAL COPPER CO.**

**MEXICO.**

Office: Dallas, Texas. Mine office: Coapa, Morelia, Michoacán, Mex. Neale Starke, president; W. F. Thatcher, secretary. Organized Apr. 23, 1902, under laws of Virginia, with capitalization \$150,000, shares \$1 par. Lands, 550 pertenencias, area circa 1,375 acres, in the Tacambaro district, showing 6 contact deposits between granite and limestone, carrying native copper and argentiferous and auriferous oxide, carbonate and sulphide ores. Two veins are being developed by tunnels, the Confianza vein being said to be 70' wide. Nearest railway is the Mexican National, 45 miles distant. Property is well watered and timbered.

**NATIONAL CONSOLIDATED MINING CO.**

**ARIZONA.**

Office: 420 Milwaukee Ave., Chicago, Ills. Operating office: Nogales, Ariz. Mine office: Patagonia, Santa Cruz Co., Ariz. Employs 8 men. Oscar E. Porter, president; S. F. Johnson, vice-president; A. F. Richardson, secretary; Alfred Thurtell, treasurer and general manager; preceding officers, and E. E. Bethel, directors; Geo. D. Gross, superintendent. Organized Dec. 9, 1905, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par; issued, circa \$700,000. Annual meeting, first Monday after first Tuesday in January.

Lands, 21 claims, area circa 400 acres, also 40 acres in millsites, property including the Silver Glance group, about 12 miles northwest of Nogales. Lands show granite and diorite, former frequently decomposed, and occasional limestone, carrying a number of fissure veins and contact deposits, of which 6 are partly developed, principal vein of circa 12' average width carrying chalcoite and galena, estimated to average 3% copper, 10% lead, 12 oz. silver and \$9.75 gold per ton. Development is by shafts of 60', 110', 80' and 75', and by tunnels of 193' and 120'.

Equipment includes a 12-h. p. Fairbanks & Morse gasoline hoist and there are 5 mine buildings. Company plans continuous and systematic development.

**NATIONAL COPPER CO.**

**CALIFORNIA.**

Mine office: Needles, San Bernardino Co., Cal. Lands, in the Whipple Mountain district, in the eastern part of San Bernardino county, have several prospecting shafts, with small mine buildings, and company was said, August, 1908, to plan beginning small ore shipments.

**NATIONAL COPPER CO.**

**NEW JERSEY.**

Office: 250 Water St., New York, N. Y. Works office: Elizabeth, Union Co., N. J. H. Heppenheimer, president and general manager. Organized circa August, 1906, under laws of New Jersey. Property is a small smelting plant, treating custom ores and matte. Became bankrupt Jan. 10, 1908.

**NATIONAL COPPER CO.****NEW MEXICO.**

Office: care of Col. Ed. Butler, president, St. Louis, Mo. Mine office: Silver City, Grant Co., N. M. C. P. Laughlin, superintendent. Capitalization: \$1,200,000. Lands, circa 12 claims, 4 miles from Chemung Copper Co., in Whitewater Cañon, Burro Mountains, opened by a tunnel and 200' main shaft, showing a fissure vein in granite, of 60' estimated average width, carrying mainly chalcocite, with considerable ore developed. Has steam power and a Norwalk air-compressor, and is said to plan a concentrator.

**NATIONAL COPPER CO.****WASHINGTON.**

Mine office: Springdale, Stevens Co., Wash.

**NATIONAL COPPER & GOLD MINING CO.****ARIZONA.**

Office: care of Gates M. Fowler, general manager, Phoenix, Ariz. Mine office: Wellton, Yuma Co., Ariz. Organized 1904, under laws of Arizona. Lands are the Rogers Springs group, held on \$60,000 bond and lease from W. E. Marlar. Presumably idle.

**NATIONAL COPPER MINES CO.****IDAHO.**

Office: 605 Couch Bldg., Portland, Ore. Mine office: Cuprum, Washington Co., Idaho. J. J. Richardson, president; Wm. Trevor, vice-president and superintendent; R. A. Proudfoot, treasurer; L. B. Reeder, secretary; preceding officers, J. F. Boone, F. B. Jones, W. E. Jones, H. A. Mautz and J. W. Shaver, directors. Organized May, 1905, under laws of Oregon, with capitalization \$1,000,000, shares \$1 par. Lands, 17 claims, area 330 acres, on Horse Mountain, in the Seven Devils district, opened by a shallow shaft and several tunnels, longest circa 750', with about 1,000' of workings, showing argentiferous and auriferous chalcocite.

**NATIONAL COPPER MINING CO.****IDAHO.**

Office: 115 Howard St., Spokane, Wash. Operating office: Wallace, Idaho. Mine office: Mullan, Shoshone Co., Idaho. D. E. Keys, president; Andrew McCrea, secretary; Chas. McKinnis, manager; F. Cushing Moore, consulting engineer. Organized Sept. 22, 1906, under laws of Washington, with capitalization \$1,250,000, shares \$1 par.

Lands, 6 claims, west of the Lucky Calumet, between the east and west forks of Deadman Creek, circa 4 miles northeast of Mullan, near the Imperial and Copper King properties, and west of the Lucky Calumet. Suit has been brought by C. H. Williams and A. H. Featherstone over title to lands.

Development is by a tunnel and a 2-compartment main shaft, showing a vein of 7' to 10' width, with a 30" paystreak giving average assays of about 4 to 5% copper, 25% lead and 10 oz. silver per ton, copper being mainly from malachite and occasional chalcopyrite, while lead values are mainly from carbonate ores and occasional galena. Both the lead and copper ores are considerably argentiferous.

Equipment includes a 15-drill electric air-compressor, energy being taken from the Washington Water Power Co.

**NATIONAL COPPER MINING CO.****UTAH.**

Office: 400 D. F. Walker Bldg., Salt Lake City, Utah. Letter returned unclaimed from former mine office, Castleton, Grand Co., Utah. F. E. Smith, president; W. H. Tibbals, vice-president; C. E. Peyton, secretary and treasurer. Capitalization \$100,000, shares 10 cents par. Lands, circa 115 acres, in the La Sal Mountains, Sonoma district, showing ore assaying up to 9.5% copper and 17.5 oz. silver per ton, taken from a fissure vein traversing sandstone. Long idle and apparently moribund.

**NATIONAL COPPER MINING CO.****WYOMING.**

Office and mine: Douglas, Converse Co., Wyo. Frank Tinkham, president; G. W. Johnson, secretary; H. C. Paul, general manager. Organized July, 1906, with capitalization \$250,000. Long idle and apparently moribund.

**NATIONAL COPPER ORE CO.****VIRGINIA.**

Mine office: Garrisonville, Stafford Co., Va. Has cupriferous pyrite. Idle and apparently moribund.

**NATIONAL COPPER TEMPERING CO.****COLORADO.**

Office: 808 Continental Bldg., Denver, Colo. David Lamon, president; Henry Stewart, vice-president; Theo. H. Thomas, secretary and treasurer. Organized under laws of Colorado, with capitalization \$500,000, shares \$1 par. Claims to have a process for tempering copper that increases tensile strength by more than 500%, which is untrue. Careful tests of copper, claimed to have been tempered by this process, show no improvement whatever in the metal, and Mr. Lamon excuses himself therefor by the puerile statement that successful tests can be made only on a considerable quantity of material. Process considered worthless. Promised dividends impossible of realization, and company considered a mere bit of stock-jobbery.

**NATIONAL DEVELOPMENT & MINING CO.****ARIZONA.**

Dead. Was succeeded, June 5, 1906, by Sultana-Arizona Copper Mining Co. Formerly at Kolyin, Pinal Co., Ariz.

**NATIONAL GOLD & COPPER CO.**

Office: care of Lewis Lusk, Spokane, Wash. Organized 1906, under laws of Washington, with capitalization \$1,500,000, shares \$1 par, to operate in "the United States, Canada and Mexico." Location of lands, if any, unknown.

**NATIONAL GOLD & COPPER CO.****ARIZONA.**

Office: care of Ben Blanchard, manager, Prescott, Ariz. Mine office: Bouse, Yuma Co., Ariz. Lands are slightly developed by several shallow shafts. Idle.

**NAMAQUA COPPER CO., LTD.****CAPE COLONY.**

Office: 3 Fenchurch St., London, E. C., Eng. Mine office: Concordia, Little Namaqualand, Cape Colony. Frederick J. Mirrieles, manager; Francis Phillips, superintendent; A. W. Outram, secretary. Organized Apr. 23, 1888, under laws of Great Britain, as a reconstruction of Namaqua United Copper Co., Ltd., with capitalization £200,000, shares £1 par; issued, £188,662. Operating profits were £57,819 in 1905, and nearly £100,000 in 1906. Has paid annual dividends of 5 to 40% since organization, except 1891-1894, and 1901-1902. Dividends were 5% in 1903; 7.5% in 1904; 7.5% in 1905; 10% in 1906 and 35% in 1907. A 2s. dividend was announced May, 1908. The company has a surplus fund of more than £40,000, invested in British consols, and has returned in dividends more than its capitalization.

Lands, 680 acres, leasehold, held on royalty of 2s. 6d. per long ton of ore produced. Mines are the Tweetfontein, with 7 shafts; Wheal Julia, with 3 shafts; Flat, with 1 shaft; New East Centre, with 1 shaft; Jubilee, with 2 shafts; Henderson, with 2 shafts, and Prospect, with 2 shafts. Ore is high grade chalcopyrite, occurring in intrusive greenstone traversing granite, and the property has considerable ore reserves.

There are concentrating plants at the Flat and New East Centre mines, where crude ore is dressed up to circa 25% copper tenor and shipped for smelting to Swansea, via Port Nolloth.

Production was 5,276,712 lbs. fine copper in 1905, and 5,931,521 lbs. in 1906. The property is managed conservatively, and with marked financial success.

**NATIONAL GOLD & SILVER MINING CO.****NEW MEXICO.**

Mine office: Steins, Grant Co., N. M. M. H. Sherman, president; B. L. Berkey, superintendent, at last accounts. Has steam power and a 50-ton concentrator. Shipped a little ore and concentrates, 1906. Presumably idle.

**NATIONAL METAL CO.****MEXICO.**

Offices: 170 Broadway, New York, N. Y., and Apartado 71b, Mexico, D. F.

Works office: Guadalajara, Jalisco, Mex. C. B. Lewis, president; H. B. Lewis, vice-president and general manager; D. C. Doney, metallurgist. Apparently is an auxiliary of the American Smelting & Refining Co. Has sampling plants at Chinipas, Chihuahua; Guanacevi, Durango; Ameca and Guadalajara, Jalisco; Toluca and Temascaltepec, Mexico; San Luis Potosí; Hermosillo, Sonora, and Nogales, Arizona. Also has purchasing agencies at various other points in the Mexican Republic. Had a refinery at Nonoalco, and sold same, circa December, 1907, to Société Affinage des Metaux.

#### NATIONAL METALLURGICAL CO.

#### MEXICO.

Office: 1503 Arrott Bldg., Pittsburg, Pa. Mine office: Matehuala, Catorce, San Luis Potosí, Mex. D. C. Noble, president; C. H. Fogg, vice-president; J. H. McConnell, treasurer and chairman board directors; preceding officers, Geo. T. Ladd, Jas. A. Steele, J. H. Douglas and H. N. Nichols, directors; W. A. Griffith, secretary; Samuel James, general manager; A. P. Callender, general agent; H. T. Schmidt, mine superintendent; W. E. Newnam, smelter superintendent; Grattan Foley, cashier.

Organized August, 1901, under laws of Colorado, with capitalization \$1,000,000, shares \$25 par. Debentures, \$500,000 authorized, at 6%; issued, \$472,000. Annual meeting, last Tuesday in July. Holds lands through a Mexican corporation, the Compañía Metalurgica Nacional.

Lands are circa 1,300 acres, and a 160-acre millsite, in the Matehuala and El Salado subdivisions of the Catorce district. Property shows limestone metamorphosed by intrusive granite-porphyry, ore bodies occurring as irregular contact deposits in an altered zone of garnetiferous limestone and wollastonite. The company's lands carry 26 known ore bodies, of which 7 are more or less developed, these ranging from 3' to 130' in width, and from 200' to 1,200' length, 5 ore bodies being under development at present. Ores are mainly malachite, bornite and chalcopyrite, carrying estimated averages of 5% copper, 6 oz. silver and \$2 gold per ton.

Lands include mines known as La Cobriza, Santa Ana, Las Agustias, Santo Tomás, Monte Cristo, Alpha and Beta mines.

Principal openings include the 100' Aurora shaft; 200' El Carmen shaft; 500' Santiago shaft; 1,000' El Carmen tunnel; 900' No. 3 tunnel; 350' Russian tunnel, and 600' Perico tunnel, all tunnels being crosscuts, with about 25 shorter tunnels and cuts, with a total of circa 6,500' of workings.

La Cobriza y Anexas, opened by shaft and tunnel, have ore carrying 5 to 15% copper, circa 250 grams silver and 3 grams gold per metric ton, and were said, September, 1906, to be shipping 50 tons of ore daily.

Las Agustias mine has a shaft with circa 2,000' of workings, ore averaging about 10% lead and 20 oz. silver per ton.

Santo Tomás mine, developed by shaft, with about one-half mile of openings, has silver-lead ore averaging circa 10% lead and 20 oz. silver per metric ton.

Santa Ana mine, opened by tunnel, has a silver-lead vein carrying 10% lead and 14 oz. silver per metric ton, and also has undeveloped silver-lead ores.

Mining equipment is slight, including a 25-h. p. gasoline hoist and a 10x10" belt-driven air-compressor.

There are 8 buildings at the mine, including office, assay office and dwellings.

The principal mines are connected with the smelter by the 7-mile Matehuala narrow-gauge railroad. A spur of the Mexican Central railway runs into the smelter.

The smelter, receiving ore by rail and burro, and doing a general custom business, in addition to treating the company's own ores, is of 350 tons rated

daily capacity, having 150-ton and 200-ton water-jacket blast-furnaces, one for lead and one for copper, with a 30-ton reverberatory furnace, calcining furnace, briquetting plant and a small sampling mill, the reverberatory being used for treating flue dust. Product is matte averaging circa 45% copper, 50 to 200 oz. silver and 1 oz. gold per metric ton, shipped to the Aguascalientes smelter for refining.

The power plant at the smelter includes three 125-h. p. boilers and a 275-h. p. Corliss tandem-compound engine, direct-connected to a 150-h. p. electric generator, with a number of smaller dynamos and motors.

Miscellaneous enterprises include a brick plant with a capacity of 20,000 finished brick daily, and the company holds various government franchises and concessions, and plans securing a water supply from a distance of 18 miles, and furnishing water to the city of Matchuala.

Production, 1906, is reported by company as 2,295,270 lbs. fine copper, in addition to lead, silver and gold. The mines and smelter employ circa 900 men, mainly at the reduction plant.

The company was promoted from Denver, and estimates of prospective profits made by the promoters, while placing stock, were ridiculously high, but the present management apparently has no connection with the original promoters, and seems operating along sound lines.

#### NATIONAL MINES CO.

#### IDAHO.

Office: Portland, Ore. Mine office: Weiser, Washington Co., Idaho. W. Trevor, vice-president. Lands, 20 claims, in the Seven Devils district, having, on the King group, a 275' tunnel with 100' blind shaft at its end, showing ore assaying up to 5% copper, 33% lead, 90 oz. silver and \$2.50 to \$5 gold per ton.

#### NATIONAL MINING CO.

#### BRITISH COLUMBIA & CALIFORNIA.

Office: Tacoma, Wash. Mine office: Waldo, Josephine Co., Ore. S. J. Pritchard, president; Geo. P. Larsen, secretary; John Sanger, superintendent. Capitalization \$10,000,000. Property is the Sanger group, 35 claims, area 700 acres, in Del Norte county, California, shortly south of Waldo, also sundry mining claims in British Columbia, "oil lands" in western Washington and several mining claims in the lower Arrow Lake district, British Columbia. The Sanger ores give good assay values in copper and gold. Capitalization is excessive and claims made for company even more inflated. Idle and presumably moribund.

#### NATIONAL MINING CO.

#### MICHIGAN.

Office: 15 Congress St., Boston, Mass. Mine office: Rockland, Ontonagon Co., Mich. John C. Watson, president; Alvin R. Bailey, secretary and treasurer; preceding officers, F. H. Raymond, Geo. H. Flint and Capt. Jas. Chynoweth, directors. Organized 1848, and rechartered 1878, with capitalization increased later to \$2,500,000, shares \$25 par; issued, \$1,875,000. In November, 1908, company had a floating debt of circa \$25,000. Has paid dividends of \$320,000.

Lands lie west of the old Minnesota mine, now owned by Michigan Copper Mining Co. The National has produced nearly 6,000 short tons of fine copper, but has been idle since 1893. At last accounts management was making tentative plans for resumption. Fully described Vol. II.

#### NATIONAL MINING & DEVELOPMENT CO.

#### WYOMING.

Office: 1314 Eleventh St., N. W., Washington, D. C. Mine office: Liberty, Frémont Co., Wyo. Chas. Jacobsen, president; H. Clay Browning, Jr., vice-president; Melvin A. Wertz, secretary; preceding officers, J. Frank Hess, Achille E. Burklin, John H. Muirhead, John R. Galloway, Burt H. Brockway and Chas. J. Berner, directors; Col. John T. Wertz, general manager; A. L. LaViers, engineer. Organized May 22, 1903, under laws of Maine, with capitalization \$500,000, shares \$10 par. Annual meeting, first Monday in June.

Lands, 43 claims, unpatented, area 875 acres, in the Willow Creek district, showing about a dozen ore bodies, of which 5, mainly fissure veins, are under development, these being estimated by company to average 25' width and to be traceable 5 miles, carrying an average of 8% copper, up to 100 oz. silver and up to \$2 gold per ton, mainly from chalcopyrite with quartz gangue, which figures are excessive. Development is by 5 pits and shafts, deepest 60', and by 3 tunnels, longest 93', with 378' of workings. Property is 30 to 35 miles from nearest railroads.

**NATIONAL MINING EXPLORATION CO.****ARIZONA.**

Office: 1012-60 State St., Boston, Mass. Mine offices: Globe, Gila Co., Ariz., Kelvin, Pinal Co., Ariz., and Safford, Graham Co., Ariz. Hon. Chas. M. Bruce, president; Wm. W. Williamson, vice-president; Jas. A. Otis, secretary and treasurer; Frank A. Woodward, general manager. Organized November, 1905, under laws of Maine, with capitalization \$1,500,000, shares \$1 par; issued, \$796,013. Authorized, Sept. 21, 1908, an issue of \$250,000 first-mortgage 10-year 6% gold coupon bonds, convertible into stock at par at any time within 2 years, and retrievable by company at any time on 60 days' notice, at 5% premium. Bond issue apparently was not put out, though supposed to be placed, and money advanced the company thereon. A note, supposedly for advance on bond issue, is said to have been repaid, November, 1908.

Lands are in 3 groups in Gila, Pinal and Graham counties, Arizona, the principal property being at Globe.

The Iron Cap group of 7 claims, patented, area circa 130 acres, at Globe, is well located between the two properties of the Arizona Commercial, and not far from the Superior & Boston. The upper workings of the Iron Cap show leached ore, with promising ore in the lower workings, the mine having nearly a mile of openings. A crosscut from the 350' level has cut what is believed to be an extension of either the Black Hawk or Old Dominion fissures, presumably the former, considerably leached, but with indications of good ore at a little greater depth, this being circa 14' wide, with a paystreak of 20" to 24" of commercial ore. The company plans locating a new 3-compartment shaft, early 1909, and shipped, circa August, 1908, to the Old Dominion smelter, some ore returning net values of \$8.08 per ton.

The Fumarole group, of 15 claims, circa 10 miles south of Safford, shows an oval ore body, circa 125x160' in extreme area, with a 700' two-compartment shaft, near the centre, having levels opened at depths of 200' and 500', with about a quarter-mile of workings. Apparently the Fumarole has a pipe vein, carrying gold in a disintegrated quartz gangue, ore assaying \$5 to \$16 gold per ton. Active development is in progress at the Fumarole.

The Copper Ridge group, 8 claims, area 160 acres, lying on the northern bank of the Gila river, circa 7 miles west of Kelvin, shows 3 veins, in a mineralized zone of circa 500' width, opened by an old 130' shaft. The Copper Peak group, on the northern bank of the Gila River, circa 2 miles southwest of the Copper Ridge, has a 100' tunnel in conglomerate. Apparently both of the Pinal county properties are idle.

**NATIONAL MINING & INVESTMENT CO.****MONTANA.**

Mine office: Butte, Silver Bow Co., Mont. Is said to hold an option on a controlling interest in the stock of the Farrell Copper Co.

**NATIONAL MINING & MILLING CO.****COLORADO & WYOMING.**

Dead. Formerly at Pearl, Larimer Co., Colo. Fully described Vol. VI.

**NATIONAL MINING & SMELTING CO.****MONTANA.**

Dead. Changed title, 1906, to New York & Saltese Copper Mining Co. Formerly at Saltese, Missoula Co., Mont.

**NATIONAL RADIUM & COPPER CO.****COLORADO.**

Dead. Formerly at Denver, Denver Co., Colo. Described Vol. VI.

**NATIONAL SMELTING CO.****MEXICO.**

Office: 2030 Land Title Bldg., Philadelphia, Pa. Mine office: Chalchihuantes, Sombrerete, Zacatecas, Mex. L. H. Taylor, Jr., president; Richard G. Park, vice-president; Paul W. Meyers, secretary; John J. Little, treasurer; preceding officers, John P. Logan, Clarkson Clothier and John P. Whitney, directors; Theo. Montgomery, general manager; John M. Bell, mine superintendent; Albert R. Wores, smelter superintendent; Henry Carnaghan, mill superintendent. Organized March 27, 1906, under laws of Maine, with capitalization \$1,000,000, shares \$5 par; issued, \$389,375. Formerly had a \$150,000 bond issue, at 6%, which has been converted into stock, at par. Dividends, 1907, were \$14,000. The company reports that it has no debts or liabilities, other than outstanding capital stock, and that properties are free from any incumbrances. Annual meeting, first Monday in June.

Lands, 194 pertenencias, held through a Mexican incorporation, known as the Compañía Minera y Beneficiadora do Minerales de Chalchihuantes, S. A. There also are 38 acres of mill and smelter sites and sundry water rights, mining lands being in 10 groups, in the Sombrerete district.

The property shows limestone, with frequent intrusions of eruptive rocks, carrying fissure veins in the eruptives, and contact deposits between igneous rocks and limestone, and in limestone near the point of contact. Ore values are mainly in silver-lead.

The company's mines consist of the Colorado silver-lead mine, San Juan silver mine, Anaconda mine of iron ore flux, Esplendida gold mine, El Manto and El Tigre silver-gold mines, Estufa silver-lead mine, Constancia silver-lead mine, Santa Rita de Las Boas mine, and stock control of the Núñango silver-lead-copper mine. The company has state concessions exempting it from taxation and granting various privileges.

The Anaconda mine shows a 36' vein, mined open-east, carrying some ore averaging 2.5 to 3% copper. The Núñango has an ore body of 6' to 15' width, developed for 120' in length and 160' in depth, giving ore of 2.5 to 3% copper tenor, opened by shafts of 30', 60' and 160', and by tunnels of 250' and 300', being estimated to show 100,000 tons of ore, which seems high. The other mines carry silver-lead ores, mainly auriferous, ranging in tenor from 20 to 45% lead, 10 to 50 oz. silver and \$2 to \$5 gold per ton. The mines have extensive openings, but were not developed in a systematic manner, by the former owners, having been opened in the Seventeenth Century, and, until taken over by present company, July, 1906, had been worked, from circa 1850, in a small way, by local owners, the mines being operated exclusively by hand-power, with malacates, and the ores reduced in adobe smelters.

Equipment includes a 30-h. p. producer gas engine, with malacates used at different mines for hoisting, and stoping is entirely by hand. Buildings, about 20 in number, mainly of timber and adobe, include a 20x20' carpenter-shop, 50x60' machine-shop and 20x25' smithy.

The concentrator, of wood and iron, of 60 tons daily capacity, has a 14x17" Dodge crusher, 2 pairs of rolls, 3 New Century jigs, 2 Standard concentrating tables and settling tanks.

The smelter, at Chalchihuantes, is 2 to 12 miles from the various mines, receiving ores by burros and wagons. Equipment of the smelter includes 7 brick stall calciners, a 10-ton reverberatory furnace and 40-ton and 50-ton water-jacket blast-furnaces, latter working interchangeably on lead and copper ores. The smelter has circa 125 tons daily capacity, product being mainly lead silver bars, with some copper matte averaging about 45% copper, 180

oz. silver and 2 oz. gold per ton, sent to the Aguascalientes smelter for refining. The works do a general custom smelting business.

The company, in its short career, has met with a variety of misfortunes, becoming involved in legal difficulties upon the completion of its smelter. These were adjusted, temporarily, in September, 1906, but in June, 1907, new troubles arose, and were adjusted February, 1908, leaving the company free from debt, and in full legal possession of its properties, but without working capital for resumption.

**NATIONAL SMELTING & REFINING CO.** NEW MEXICO.

Dead. Formerly at Lordsburg, Grant Co., N. M. Described Vol. V.

**NATIVE COPPER CO.** MICHIGAN.

Office: 68 Devonshire St., Boston, Mass. Mine office: Delaware Mine, Keweenaw Co., Mich. M. Augustus O'Neil, president; F. W. Morandi, secretary and treasurer. Lands, 480 acres, being the South  $\frac{1}{2}$  of Section 3 and Northeast  $\frac{1}{4}$  of Section 10, Town 58 North, Range 30 West. A little work was done on a fissure vein crossing the ashbed, 1852-1855, company levying assessments of about \$39,000. Since idle.

**NATIVE COPPER MINING CO.** NEVADA.

Office: Reno, Nev. Mine office: Yerington, Lyon Co., Nev. Benj. Currier, president; H. Pennington, vice-president; Sophia Knox, secretary and treasurer; preceding officers, John Pothoff, Theresa Pennington and F. B. King, directors. Organized under laws of Nevada, with capitalization \$500,000, shares \$1 par. Lands 3 miles west of Yerington, said to be near the Bluestone, are claimed to have an 8' vein, carrying auriferous and argentiferous copper ore, with free gold, opened by 3 short tunnels, longest, 185'.

**NATIVE COPPER MINING CO.** NEW MEXICO.

Dead. Succeeded, 1907, by Native Copper Mining & Smelting Co. Formerly at Hanover, Grant Co., N. M.

**NATIVE COPPER MINING & SMELTING CO.** NEW MEXICO.

Office and mine: Hanover, Grant Co., N. M. Organized 1907, under laws of New Mexico, with capitalization \$5,000,000, as successor of Native Copper Mining Co.

**SOCIEDAD MINERA NATIVIDAD.** PERÚ.

Mine office: Morococha, Junín, Perú. Nicholás Azalia, manager; Manuel Quintana, superintendent. Employs 114 men. Organized 1895, under laws of Perú. Lands, 4 pertenencias, showing a vein with northeast and southwest strike, opened by a 360-meter tunnel, with upper workings practically barren, succeeded below the barren zone by very evenly mineralized ore that is mainly chalcopyrite and tennantite, associated with pyrite. For first 9 years of operation, average smelter returns were 21.65% copper and 530 grams silver per metric ton, with a total production of 2,988,300 kilograms fine copper, and 7,304 kilograms fine silver. Production, 1904, was circa 2,400 metric tons of 20% ore, yielding 1,058,108 lbs. fine copper.

**NAUMKEAG MINING CO.** MICHIGAN.

Office and mine: Houghton, Houghton Co., Mich. Thos L. Chadbourne, manager. To Dec. 31, 1871, old company of this name had levied assessments of \$20,000. Lands, 400 acres, being the N.  $\frac{1}{4}$  of Section 3, and the N.  $\frac{1}{4}$  of SE.  $\frac{1}{4}$  of Section 3, Town 54 North, Range 34 West. Has a 112' shaft, sunk cirea 1870, since idle, until 1907, when diamond drilling was begun. Property is so located that it should carry the southern extension of the Pewabic lode of the Quincy.

**NAVERSBERG FALUN COPPER MINES & WORKS, LTD.** SWEDEN.

Office: 25-35 New Broad St., London, E. C., Eng. Mine office: Falun, Dalarne, Kopparbergslän, Sweden. J. Lee, chairman; R. W. Blackburn,

secretary. Organized July 5, 1907, under laws of Great Britain, with capitalization £100,000, shares £1 par, in 20,000 A shares and 80,000 B shares; issued, £5,200, in A shares. Production, 1902, under old ownership, was 361,800 kilograms of low grade copper matte.

**NAVY GOLD & COPPER MINING CO.**

WASHINGTON.

Mine office: Orient, Ferry Co., Wash.

**NEEDLES EYE COPPER MINING CO.**

CALIFORNIA.

Letter returned unclaimed from former mine office, Needles, San Bernardino Co., Cal. Organized May, 1907. Lands, 11 claims, circa, 7 miles from Needles, having a 100' shaft, said to show a little good ore. Company apparently had claims also in Dulzura, Rawhide and other mining camps in the southwest. Apparently organized mainly to sell stock.

**NEEDLES SMELTER.**

CALIFORNIA.

Owned by Arizona-Mexican Mining & Smelting Co.

**NELSON COPPER FIELDS, LTD.**

BRITISH COLUMBIA.

Dead. Formerly at Nelson, Kootenay district, B. C. Described Vol. VII.

**NELSON COPPER MINING CO.**

NEVADA.

Dead. Formerly at Amos, Humboldt Co., Nev.

**NELSON COPPER SYNDICATE, LTD.**

BRITISH COLUMBIA.

Mine office: Nelson, Kootenay district, B. C. Organized January, 1905, under laws of British Columbia, with capitalization \$10,000, shares \$100 par. Idle and apparently moribund.

**MINAS DE COBRE DE NERVA, S. A.**

SPAIN.

Office: Madrid, Spain. Mine office: Valverde del Camino, Huelva, Spain. Sr. Don Andres Mellerdo, president; Marques de Portago, vice-president; R. Sanchez Ocaño, secretary; J. J. C. Fernan, general manager; Chas. Hansen, smelter superintendent. Organized April, 1907, under laws of Spain, with capitalization 20,000,000 pesetas, in 250,000 shares of 50 pesetas par, fully paid, and 15,000 shares of 500 pesetas par in deferred stock. Dividend rate is 4% for 3 years on the preferred shares. Company reports three dividends, of 2 pesetas each, for three half-years ending Dec. 31, 1907, amounting to 750,000 pesetas.

Lands, formerly held by Arenillas Copper Mines, Ltd., which was liquidated May, 1904, include the Chaparrita group, in the commune of Nerva, and the Ratera group, 8 kilometers from a railroad station. Company reports that its ores are cupriferous pyrites, averaging 3.5% copper, which estimate is considered excessive. Company reports steam plants of 250 h. p. at the mines and 400 h. p. at the smelter.

The company reports a 300-ton smelter, 2 miles from the mine, receiving ore by rail, having 2 water-jacket blast-furnaces, with a converter department having one stand, turning out blister copper of 98% tenor, carrying small quantities of silver, the works doing custom smelting also.

The company reports that its mine is served by its own 5-mile branch railroad, to Buitron. The company reports that production for 1906 was nil, but says nothing about production for later years.

The prospectus issued by this company, or by some other person interested in pushing its shares, was most misleading. The compiler of the prospectus in question secured, presumably by accident, a photograph of the village at the mines of the Compañía del Castillo de las Guardas, showing a hospital, etc., and printed a reproduction of this photograph in the prospectus, but the Castillo de las Guardas mines are 150 kilometers from La Ratera. The same careless compiler of prospectus also secured a photograph showing the shipping facilities of the Sotiel Coronada mine, instead of the Nerva, and this also appeared in the prospectus. Under these circumstances, and because

of excessive capitalization, the company is viewed with suspicion, notwithstanding the fact that its president is a senator of the Spanish Cortes, and its vice-president a member of the Spanish grandeza.

**NEST EGG GOLD & COPPER MINING CO.**

**NEVADA.**

Office: 402 Majestic Bldg., Denver, Colo. Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. David J. Reed, president; E. B. Henderson, vice-president; Albert L. Hiller, secretary and treasurer, preceding officers, Dr. C. S. Roberts and Geo. A. Huestiss, directors. Organized under laws of Arizona, with capitalization \$3,000,000, shares \$1 par. Lands include the Portland group, 6 claims, area 440 acres, in the Ely district, and 2 claims in the Bullfrog district, and company is said also to have claims near Searchlight. Cannot be learned that any work is in progress, and company apparently was promoted mainly to sell shares.

**C. NEUMANN & CO.**

**CAPE COLONY.**

Mine office: O'okiep, Little Namaqualand, Cape Colony. Did some development work on copper lands, circa 1903. Presumably idle.

**NEVADA BELL COPPER MINING & REDUCTION CO.**

**NEVADA.**

Dead. Formerly at Lovelock, Humboldt Co., Nev. Fully described Vol. VI.

**NEVADA BLACKHORSE MINING CO.**

**NEVADA.**

Letter returned unclaimed from former mine office, Black Horse, White Pine Co., Nev. Organized circa April, 1907. Idle and apparently moribund.

**NEVADA-BONANZA COPPER CO.**

**NEVADA.**

Office: care of Freeman Morningstar, president and general manager, Salt Lake City, Utah. Mine office: Aurora, Esmeralda Co., Nev. Lands, 15 claims, shortly west of the Ludwig mine, showing ore assaying 5 to 15% copper and \$4.15 gold per ton.

**NEVADA-BRITON MINING CO.**

**NEVADA.**

Office: care of Alfred Fletcher, president, Leeds, Eng. Letter returned unclaimed from former mine office, Golconda, Humboldt Co., Nev. J. W. Walker, general manager; Wm. F. Fletcher, secretary. Capitalization \$1,000,000, shares \$1 par. Lands, sundry claims, known as the Chief of the Hills group, in the Cherry Creek district, west of the Adelaide Star Mines, Ltd. Idle.

**NEVADA BUNKER HILL MINING CO.**

**NEVADA.**

Office: Elko, Nev. Mine office: Bullion, Elko Co., Nev. Employs 8 men. L. H. Johnson, president; W. W. Booker, vice-president; Frederick Davis, secretary and general manager; John Henderson, treasurer; preceding officers, John Zelch and Chas. E. Van Barneveld, directors. Organized Apr. 28, 1905, under laws of Nevada, with capitalization \$2,000,000, shares \$1 par.

Lands, 20 claims, area circa 320 acres, 10 miles from a railway and about 28 miles south of Elko, showing argentiferous and auriferous copper, lead, zinc and iron sulphides. Has a 15-h. p. gasoline air-compressor. In 1907 shipped 372 tons of ore to Salt Lake smelter, securing therefrom average returns of circa 6% copper, 12% lead, 6% zinc and 20 oz. silver per ton. Company plans continuous development and production.

**NEVADA-CALIFORNIA PROSPECTING CO.    CALIFORNIA & NEVADA.**

Letter returned unclaimed from former office, Hall St., Goldfield, Nev. Mine office: Greenwater, Inyo Co., Cal. Robt. T. Todd, president; Milton M. Detch, vice-president; T. F. Carney, treasurer; J. B. Hainer, secretary; preceding officers, Lewis W. Aubrey, N. M. Willett and Leonard Merrell, directors. Organized under laws of Nevada, with capitalization \$240,000, shares \$240 par. Lands, 27 claims, circa 30 miles west of Goldfield, 6 claims in the Tule district, and 10 claims in the Greenwater district. Presumably idle.

**NEVADA CALUMET COPPER MINING CO.**

**NEVADA.**

Office: 52 Journal Bldg., Boston, Mass. Mine office: Buckskin, Lyon Co.,

Nev. John D. Kazar, president and general manager; Francis E. Higgins, vice-president; John O. Brigham, secretary; Chas. E. Hayes, treasurer; preceding officers, Arnold Schaer, Henry A. Stearns, Thos. Malcolm, Geo. W. Dryden and Wm. E. Blanchard, directors; Philip J. Stacey, superintendent; Arthur Prill, engineer. Organized May 4, 1907, under laws of Arizona, with capitalization \$200,000, shares \$5 par.

Lands, 22 claims, unpatented, area circa 440 acres, 6 miles northeast of Buckskin and circa 10 miles northwest of Yerington, showing diorite, porphyry and silicious limestone, carrying 3 contact deposits with gossans estimated as averaging 12', 30' and 40' in width, and traceable 500' to 1,200', of which two, under development, opened by vertical shafts of 60' and 200', show cuprite, malachite, chalcocite and chalcopyrite, giving assays of 4 to 6% copper and \$5 to \$8 gold per ton.

Equipment includes two 25-h. p. gasoline hoists, good for 600' each and 5 mine buildings, including a 20-room boarding house. Company plans continuous development and deepening both shafts to 500'. While no great quantity of ore has been developed as yet, the cappings are wide and promising, and if the company continues development, its prospects of finding a mine are considered fair.

#### **NEVADA CARBONATE COPPER MINING CO.**

NEVADA.

Letter returned unclaimed from former office, Globe, Ariz. Mine office: Siegel, White Pine Co., Nev. D. A. McCarthy, president and treasurer; A. J. Rieman, vice-president; M. E. Brooke, secretary. Organized Oct. 10, 1906, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 120 acres, adjoining the Vulcan, having a 33' tunnel.

#### **NEVADA CENTRAL COPPER CO.**

NEVADA.

Office: 157 Michigan Ave., Chicago, Ills. Mine office: Palisade, Eureka Co., Nev. Col. Chas. Lay, president; Geo. W. Leighton, vice-president; Robt. L. Benson, secretary and treasurer; preceding officers, Wm. Andrews, Jos. D. Wright, John A. Saull and Edwin L. Wilson, directors. Organized under laws of District of Columbia, with capitalization \$1,000,000, shares \$10 par, in \$750,000 preferred non-cumulative 7% stock and \$250,000 common stock.

Lands, 10 claims, area 200 acres, in the Antelope district, on the western slope of the Sulphur Mountains, opened by a 130' shaft, showing ore said to give average assays of 21% copper. There is some litigation over titles, but company seems likely to win out. Property formerly was held by Whalen Consolidated Copper Mining Co., for which Wm. Whalen, while president, secured large sums, but did little work. Whalen eventually was driven out by shareholders, but not until he had destroyed the standing of the company, so that it went to pieces in 1903. Whalen is in prison at San Quintin, California, sentenced to 10 years for swindling women of Sacramento and Minneapolis out of about \$8,000, on alleged gold mines at Alpha, this being Whalen's second sentence, as he served 5 years in the Missouri penitentiary. The company has taken action in the Federal courts against Davies and others. The development work was in progress at last accounts.

#### **NEVADA CENTRAL GOLD & COPPER CO.**

NEVADA.

Mine office: Pioche, Lincoln Co., Nev. R. D. Montgomery, secretary and treasurer; L. F. Peer, manager. Lands adjoin the Nevada Horn Silver Mining Co., in the Bristol district, and property was under development at last accounts.

#### **NEVADA CHAMPION COPPER CO.**

NEVADA.

Office: care of J. C. McCormick, president, Goldfield, Nev. Mine office: Mina, Esmeralda Co., Nev. E. J. Amann, vice-president; C. M. Miller, secretary; F. M. Dorsey, treasurer; J. F. Meikle, general manager; preceding

officers and A. E. Beetles, directors; Geo. Oswell, superintendent. Organized circa February, 1907, under laws of Arizona, with capitalization \$500,000, shares \$5 par.

Lands, 7 claims, area 130 acres, 9 miles northwest of Mina, carrying a 6' to 25' contact deposit between limestone and quartzite. Has a 400' three-compartment shaft, planning to be sunk to 700', and about 15 other shallow shafts, pits and tunnels, showing ore assaying 3.7 to 11.2% copper and up to 6 oz. silver per ton. Sulphides were encountered at depth of circa 300'. Has considerable ore on the dumps, ranging 2 to 3% only in copper tenor. Is claimed to have contracted to furnished 100,000 tons of ore to a new smelter, but developments scarcely seem adequate to warrant such a contract.

#### **NEVADA-COLORADO COPPER CO.**

**NEVADA.**

Office: Colorado Springs, Colo. Letter returned unclaimed from former mine office, Yerington, Lyon Co., Nev. Lands, 19 claims, near the Ludwig, said to have been bought for circa \$30,000. Idle.

#### **NEVADA-COLORADO GOLD & COPPER MINING CO.**

**COLORADO & NEVADA.**

Office: care of B. Ross, general manager, Denver, Colo. Mine office: Idaho Springs, Clear Creek Co., Colo. Grant L. Hudson, president; Ben K. Duffy, vice-president; Robt. H. White, secretary. Capitalization, supposedly \$3,000,000, shares \$1 par. Lands, 7 claims, on Chicago Mountain, near Idaho Springs, and 10 claims and a millsite in the Walker Lake district of Nevada. The Colorado property has a 200' tunnel. Early 1908 was developing Colorado properties only.

#### **NEVADA-COMMONWEALTH MINING & MILLING CO.**

**NEVADA.**

Office: 502 Hall Bld., Kansas City, Mo. Mine office: Galena, Lander Co., Nev. J. B. Hamner president; W. F. Miller, secretary and treasurer; C. W. Clapp, general manager; Jas. W. Boileau, engineer. Organized 1906, under laws of Arizona, with capitalization \$10,000,000, shares \$1 par, practically all issued.

Lands, 20 claims, 1 patented, area circa 400 acres, also a 12-acre millsite, showing 8 ore bodies, reported as fissures in andesite and as contact deposits, of 35' average width, of which 3, under development, are said to carry an average of 1% copper, 4% lead, 5% zinc, 60 oz. silver and 60 cents gold per ton. A new ore body showing chalcopyrite, with occasional bornite, is said to give average assays of 6% copper and up to 170 oz. silver and \$18 gold per ton.

Development is by a shaft of 500' and by tunnels of 600', 800' and 1,550', with about 5,000' of workings, estimated to show 800,000 tons of ore, with about 500,000 tons blocked out for stoping, which estimates are excessive. Ore is argentiferous and auriferous antimonial arsenical copper, lead and zinc sulphides, badly mixed for either milling or smelting purposes.

Equipment includes a 200-h. p. water plant, with a Pelton wheel, and several mine buildings.

The mill, 70x150', of wood, rated by company as of 300 tons daily capacity, has a 9x16" Blake crusher, 4 rolls, 4 jigs, 4 Wilfley tables and 4 buddles, the rating of the mill seeming excessive.

The mine shipped, 1907, some ore of 6 to 7% copper tenor, and has about 8,000 tons of low grade ore on the dump. At present values are mainly in lead and silver, with indications of increasing copper values at depth. Idle, owing to low price of metals, and need of additional equipment, but management hopes for an early resumption.

#### **NEVADA CONSOLIDATED COPPER CO.**

**NEVADA.**

Office: City Investing Bldg., New York, N. Y. Mine office: Ely, White Pine Co., Nev. Jas. Phillips, Jr., president; Silas W. Eccles, vice-president;

G. M. Borden, secretary; preceding officers, W. Hinckle Smith, M. L. Requa, Col. Chas. Hayden, Wm. B. Thompson, F. W. Hills and J. K. MacGowan, directors; Pope Yeatman, general manager; Jos. Gazzam, local manager; Thos. W. Cox, general superintendent; E. F. Gray, mine superintendent; Peter B. McCracken, chief engineer.

Organized Nov. 17, 1904, under laws of Maine, as a merger of the Boston & Nevada Copper Co. and White Pine Copper Co., with capitalization \$5,000,000, shares \$5 par, increased, Feb. 5, 1908, to \$8,000,000, shares \$5 par, increase being made to provide for retirement of a \$3,000,000 issue of first-mortgage 6% convertible gold bonds, dated Apr. 1, 1908, due April, 1918, convertible into shares, at any time prior to Apr. 1, 1913, on the basis of \$10 per share, and redeemable, by company, at par, on one month's notice. Ended fiscal year Sept. 30, 1908, with \$793,940 in cash and call loans, with \$178,152 in accounts payable, and expenditures, to that date, aggregated \$4,481,208. Stock is listed on the Boston Stock Exchange and New York Produce Exchange. Boston Safe Deposit & Trust Co., transfer agent. Annual meeting, first Tuesday in November.

The Nevada Consolidated is controlled by the Guggenheim interests, through their control of the American Smelting & Refining Co., through control by latter of the American Smelters Securities Co., which controls the Nevada Consolidated Copper Co., through the ownership of 51% of the stock issue.

The company controls, through stock ownership, the Nevada Northern Railroad, circa 90 miles in length, running from Ely to Cobre Station, on the Southern Pacific Railway. Company also owns a half interest in the Steptoe Mining & Smelting Co., and a large share interest in the Cumberland-Ely, the par value of stock held in subsidiary companies, Sept. 30, 1908, being \$4,848,500. The company's financial arrangements with the subsidiary and affiliated companies are not as clear as might be desired, and the reason for some of the juggling with shares and bonds, between the Nevada Consolidated, Cumberland-Ely and subsidiary corporations, is not readily apparent.

Lands, 63 claims, partly patented, area circa 850 acres, being the Eureka group of 27 claims and the Ruth group of 36 claims. The company took over the Chainman property, but surrendered it later.

Lands include properties formerly held by White Pine Copper Co., New York-Nevada Copper Co., and sundry other corporations and individuals. The company also owns the Georgetown Ranch, area circa 320 acres, including available water-rights on Murray Creek, which carries a flow of 4,000,000 gallons daily, assuring an ample water supply.

The company's mineral lands show an outcrop of gray sintered quartz, carrying occasional copper carbonates. One portion of the tract shows an extreme width of 2,000' of these croppings, below which, at a depth of circa 300', are found low-grade ores in the original plutonic quartz-porphyry, the ground above being quite thoroughly leached. The upper workings show melaconite and chalcocite, changing at depth to sulphides, mainly disseminated chalcocite, with some chalcopyrite, associated with pyrite, in fine seams, and as a coating of the gangue rock, also occurring as speiss, disseminated through the rock-mass. The ore body is without defined walls, the entire country rock being impregnated by ore to a greater or less extent. The mine water is strongly impregnated with copper, causing trouble with pumps and pump-columns. Estimates of ore in sight vary greatly, but the tonnage is enormous. It was estimated, November, 1907, by Mr. Yeatman, a competent authority, that the mine had in sight 14,432,962 tons of ore averaging 2% copper, with combined gold and silver values of circa 15 cents per ton, and, at the end of 1908, the mine had blocked out nearly or quite 20,000,000 tons of ore.

The Ruth group includes the Ruth and Star Pointer mines, operated as a

unit, the mines being connected by a 2,700' tunnel, with an extensive electric haulage system, with practically all hoisting done through the Star Pointer shaft. It is planned to use the caving system in the Ruth mine, as the ore is soft and can be broken cheaply. The Ruth has an incline shaft of circa 640' depth, showing large bodies of low and medium grade ore, with a marked tendency toward decreased values at depth, leading to the opinion that the shaft may have reached the bottom limit of payable ore. Mr. J. Parke Channing estimated this mine, in 1905, to show 2,400,000 tons of ore, averaging 2.6% copper, 0.05 oz. silver and 0.02 oz. gold per ton, and the ultimate amount of ore available in the Ruth obviously will be much greater than the original estimate. Surface improvements at the Ruth include an engine-house, boarding-house, office, stable and numerous dwellings.

The Star Pointer mine has a mammoth 4-compartment shaft, of 3,500 tons estimated daily capacity. This great shaft has a timber compartment 9' in the clear, handling loaded timber cars on cages. The shaft has a 140' steel headgear, on concrete foundations, perhaps the largest in the world, and the equipment includes a crushing plant.

The Eureka mine, or group of mines, shows ore of somewhat lower average value than the Ruth group, though in larger tonnage, careful sampling of which, in 1905, gave average assays of 3.2% copper, 0.03 oz. silver and 0.02 oz. gold per ton. This group has 2 shafts, one being the Eureka, with vertical depth of 400', bottomed in poor ore, the other shaft being known as the Star of the West, but the Eureka group is being worked open-cast, by steam-shovel. The ore is very soft, but requires blasting, and holes of 50' to 670' depth are drilled for the explosives, each blast breaking tremendous quantities of ground. There are five 95-ton steam-shovels, with dippers of 2½ cu. yds. capacity, to be replaced by shovels with dippers of 5 cu. yds. capacity. In November, 1908, in one day, there was removed, by steam-shovels, 9,680 tons of overburden and ore, of which circa 3,500 tons was ore. It is probable that the Eureka group has little less than 20,000,000 tons of ore in sight, with every prospect of a much larger tonnage eventually.

Ore is milled and smelted by the Steptoe Mining & Smelting Co., a subsidiary corporation, the works of which are separately described, under the title of that company.

The Nevada Northern Railway Co., controlled by the Nevada Consolidated Copper Co., has a standard-gauge line of circa 90 miles length, running from Ely to a junction with the Southern Pacific Railway at Cobre Station, 3 miles east of Toano. Capitalization of the railway company is \$3,000,000, with a \$1,000,000 bond issue, at 5%. This line does a large general business, in addition to handling the traffic of the Nevada Consolidated and affiliated companies.

Production for 1908, begun early in the year, was circa 20,000,000 lbs. jointly, for the Nevada Consolidated and Cumberland-Ely, of which the Nevada Consolidated had a major portion, and for August, 1908, the Nevada Consolidated produced 785,766 lbs. fine copper. For September, 1908, the company produced circa 46,000 tons of ore, putting about 12 into 1, ore assaying 2.7% copper and yielding an actual extraction of 69.3% of the assay values. The company hopes to make circa 25,000,000 lbs. fine copper in 1909, and eventually production should be much larger. Finished product is handled by the American Smelting & Refining Co., on a 1% commission basis.

The Nevada Consolidated is a property of the first magnitude, and mining costs are said to be as low as 40 cents per ton, for steam-shovel ore. The property has not been developed as rapidly as was anticipated at the time of organization of the company, but the work has been well done, and there is no question about the great future of the mine.

**NEVADA CONSOLIDATED COPPER & GOLD  
MINING & MILLING CO.**

NEVADA

Dead. Formerly at Yerington, Lyon Co., Nev. Described Vol. VI.

**NEVADA CONSOLIDATED EXTENSION CO.**

NEVADA

Office: 475 Broadway, New York, N. Y. Mine office: Ely, White Pine Co., Nev. Organized circa 1907, under laws of Arizona, with capitalization \$1,000,000. Presumably idle.

**NEVADA CONSOLIDATED MINES, LTD.**

NEVADA

Dead. Reorganized, circa 1907, as Philadelphia Searchlight Gold & Copper Mining Co. Formerly at Searchlight, Lincoln Co., Nev.

**NEVADA CONSOLIDATED MINES & SELLING CO.**

NEVADA

Office: 316 Lick Bldg., San Francisco, Cal. Alex Brown, president; Chas. L. Newton, vice-president; F. G. Carey, treasurer. Lands are said to be on Cat Creek, in Esmeralda county, Nevada, and company claims over 4,000' of workings, which seems doubtful, and is said to plan a 100-ton concentrator. Officers are said to stand well, but the company's advertising is not liked.

**NEVADA CONSOLIDATED SMELTING & REFINING CO.**

NEVADA

Letter returned unclaimed from former office, 201 Exchange Bldg., Denver, Colo. Works office: Pioche, Lincoln Co., Nev. Wm. Gelder, manager. Was practically a subsidiary corporation of the Bristol Copper Mining Co., since reorganized, and stock is said to have been furnished gratis to shareholders of the latter. Property is a 200-ton smelter and a 22-mile narrow-gauge railroad. At last accounts was in debt and moribund.

**NEVADA COPPER CO.**

NEVADA

Office: 372 Bullitt Bldg., Philadelphia, Pa. Operating office: Tonopah, Nev. Mine office: Mina, Esmeralda Co., Nev. John W. Brock, president; Chas. R. Miller, vice-president; C. A. Higbee, secretary and treasurer. Lands, near the Blue Light mine, include the Dunlap property. Company declined to furnish a statement, September, 1908, and presumably is idle.

**NEVADA COPPER CO.**

NEVADA

Office and mine: care of W. K. Robinson, secretary, Goldfield, Esmeralda Co., Nev. Organized 1907, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands, 4 claims, including the Blue Jay and Gold Coin, circa 12 miles northwest of Goldfield, said to show argentiferous cuprite averaging 20% copper. Presumably idle.

**NEVADA COPPER CO.**

NEVADA

Dead. Merged, 1902, in Nevada Bell Copper Mining & Reduction Co. Formerly at Lovelock, Humboldt Co., Nev. Described Vol. II.

**NEVADA COPPER CO.**

NEVADA

Mine office. Sandy, Lincoln Co., Nev. N. M. McFatridge, president. Lands, 13 claims, showing an auriferous copper vein, assaying up to 32% copper and \$20 gold per ton, paralleled by a silver-lead vein, showing gross assay values up to \$150 per ton, opened by a 90' shaft. A small smelter shipment, circa 1906, to El Paso, gave returns of 50% copper, with gold and silver values. Idle.

**NEVADA COPPER CO.**

NEVADA

Mine office: Yerington, Lyon Co., Nev. Lands are said to show a vein of 60' to 100' width, opened by a 330' main shaft. Company is said to hold the old Boston & Nevada smelter, across the river from Yerington. Idle and apparently moribund.

**NEVADA COPPER CO.**

NEVADA

Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. Organized, 1906, by residents of Spokane, Washington. Lands were 12 claims, adjoining the Vulcan, said to carry carbonate and sulphide copper ores.

**NEVADA COPPER BUTTE MINING CO.****NEVADA.**

Office: 2376 Mission St., San Francisco, Cal. Letter returned unclaimed from former mine office, Austin, Lander Co., Nev. J. Herbert Reeve, president; A. L. Hanson, vice-president and treasurer; Peter McAuslan, secretary; preceding officers, H. W. Matthews and F. A. Linbaugh, directors. Organized Dec. 18, 1906, under laws of Nevada, with capitalization \$500,000, shares 50 cents par.

Lands, 5 claims, area 100 acres, in Trenton Cañon, near Valmy, in the Battle Mountain district, said to show a vein of argentiferous and auriferous copper ore up to 90' in width, opened by tunnels of 40', 50' and 60', yielding ore assaying up to 11.2% copper, 10 oz. silver and \$2.20 gold per ton. Presumably idle.

**NEVADA COPPER MINING & SMELTING CO.****NEVADA.**

Office: 806-25 Broad St., New York, N. Y. Mine office: Cuprite, Esmeralda Co., Nev. Col. Oliver P. Posey, president; Hon. W. E. Mitchell, vice-president; W. M. Hoagland, secretary and treasurer; preceding officers, Wm. Bayley, R. F. Stewart and Edwin B. Tustin, directors. Organized Aug. 28, 1906, under laws of Maine, with capitalization \$5,000,000, shares \$5 par. Owns a controlling interest in the Lida Thanksgiving Gold Mining Co., at Lida, Nev.

Lands, 85 claims, area circa 1,700 acres, in 3 groups, circa 4 miles apart, including the Cuprite group of 50 claims, the Bea group of 20 claims and the Parrot group of 15 claims. Company also owns a townsite. The Parrot group, slightly developed by shafts of 55' and 70', is said to show a 12' vein of ore averaging 10 to 15% copper, which is doubted. Ores are said to carry copper, lead, silver and gold.

Early 1907 the company planned building a 500-ton smelter, and at last accounts was talking of building a smelter at Mina, Gillies, Goldfield, or elsewhere. Financial statement, as of date Aug. 1, 1907, gave total receipts of \$303,395, with expenditures leaving a balance of \$202,013, mainly in form of bills receivable, and a stockholders' committee has been appointed, to investigate the company, on an accusation of making fraudulent claims. Company is regarded with suspicion.

**NEVADA COPPER, PLATINUM & NICKEL CO.****NEVADA.**

Office and mine: Bunkerville, Lincoln Co., Nev. Property is the Great Western group, with about one-fourth mile of openings, said to show ore averaging about 4% copper, 2.5% nickel and one-third oz. platinum per ton. Presumably idle.

**NEVADA COPPER QUEEN MINING & MILLING CO.****NEVADA.**

Office: care of Raymond D. Frisbie, fiscal agent, Tonopah, Nev. Letter returned unclaimed from alleged former mine office, Mina, Esmeralda Co., Nev., with notation from postmaster that no such company is known there. Lands claimed were 5 claims, 7 miles northwest of Mina. Is not regarded favorably.

**NEVADA DEVELOPMENT CO.****NEVADA.**

Office: 201 Walnut Place, Philadelphia, Pa. Mine office: Lovelock, Humboldt Co., Nev. Theo. H. Lowe, superintendent, at last accounts. Lands are the Copper Glance group and adjoining claims. Idle several years.

**NEVADA DOUGLAS COPPER CO.****NEVADA.**

Office: 60 State St., Boston, Mass. Operating office: 306 Auerbach Bldg., Salt Lake City, Utah. Mine office: Yerington, Lyon Co., Nev. Employs 60 men. J. D. Wood, president; Frank J. Hagenbarth, vice-president; Walter C. Orem, secretary and general manager; Windsor V. Rice, treasurer; Preceding officers, A. J. Orem, H. P. Henderson, E. R. Hastings, Frank A. Schirmer and Arthur L. Pearse, directors; S. S. Arentz, superintendent; C. S. Forbes, engineer. Organized Sept. 4, 1906, under laws of Utah, with capitalization \$5,000,000, shares \$5 par; issued, \$3,750,000. Debentures, \$600,000 first

mortgage 5-year 6% convertible bonds, issued May 1, 1908, convertible into stock on basis of \$7.50 per share. Of the 250,000 shares remaining unissued, 80,000 have been set aside for conversion and redemption of bonds. Of the bond issue \$500,000 was issued to pay balance due on the Ludwig mine.

Lands, 30 claims, area circa 550 acres, also 80 acres in two millsites, with miscellaneous lands, including water-rights, giving total holdings of circa 700 acres, in the Buckskin district. Property includes former holdings of the Douglas Copper Mining Co. and Ludwig Copper Mining Co. The original group of 11 claims formerly was owned by the Douglas Copper Co., these and adjoining claims, circa 7 miles west of Yerington, lying at an average elevation of one mile above sea-level. The Ludwig group included 2 patented claims and 3 claims formerly in conflict with the Nevada-Douglas. There also is one claim carrying fluxing iron ore, at Buckskin, several miles distant.

The property shows granite-porphyr and wollastonite, carrying fissure veins and contact deposits, and is said to have 3 different intersecting ore systems. The principal ore bodies consist of contact metamorphic deposits, with quartz fissures carrying oxidized ores and cupriferous pyrite, mainly in wollastonite, walls being strongly impregnated with ore. The property shows very strong and promising gossans, the surface carrying low grade oxidized ores of about 2% copper tenor, followed by low grade garnetiferous sulphide ores of circa 3% tenor, and, at depth, by sulphide ores of 5 to 6% copper tenor. At surface and to depth of circa 10' the property shows oxidized ores and chrysocolla, succeeded by a secondary zone carrying oxidized ores and secondary sulphides. The zone of oxidation and secondary enrichment apparently extends to depth of 500', giving an ore zone of 100' to 400' thickness, in wollastonite, with claimed superficial area of 1,800,000 square foot, or approximately 42 acres, in addition to strong gossans showing elsewhere on the property. The principal ore body is chalcopyrite, associated with pyrite, in granules, in wollastonite. The vein system has a generally meridional strike, with average dip of circa 60°, and the 3 principal veins, of about 20' average width, are estimated by company to carry an average of 6.5% copper.

The Douglas mine has a number of shallow shafts and open-cuts, in addition to the main workings, which include the 2,500' Douglas tunnel, planned to cut the main ore body at a vertical depth of circa 600', and 3 shafts, known as the Sunlight, Double Ess and Amalgamated, latter vertical. The mine as a whole has about 7,500' of workings, showing large quantities of sulphide ore, with circa 150,000 tons of 3% ore blocked out, latter in the upper levels, with high grade ore ranging 10 to 30% in copper tenor. Ore has been proven to a depth of 700' below the base of the mountain, and the lower levels show a sulphide ore body ranging upwards of 300' in length and up to 80' in width, giving a general average sample of 6.5% copper and 20% iron.

The Ludwig mine, bought June 29, 1907, for a price said to have been \$1,000,000, includes 2 claims, on which the mine is opened, and a 40-acre tract in Smith Valley having a well and pumping station. The Ludwig, about one mile northwest of the main workings of the Nevada-Douglas, is developed by a 400' vertical shaft, work by former owners being poorly planned, but the property was a shipper of small quantities of high grade auriferous and argentiferous ore for some years, production including some very handsome malachite and azurite, a portion of which was sold to lapidaries. The old ore bodies of high grade have been developed more extensively, and new ore bodies have been found, these including both oxidized ores and sulphides, with some carbonate ore assaying up to 25% copper, and a fair showing of chalcocite. The Ludwig mine was opened circa 1865, and was worked, at intervals, for bluestone and high grade copper, having been last reopened 1905.

Equipment includes four 100-h. p. hoists, good for 1,000' depth each, and an 18-drill 2-stage belt-driven air-compressor.

The property is operated by electric power, transmitted 20 miles from Como, Nevada, by the Truckee River General Electric Co.

Water is secured from artesian wells in Smith Valley, brought to the mines by a 17,000' pipe-line.

The properties have 33 buildings, including a 14x16' machine-shop, 14x18' smithy, 14x20' carpenter-shop, all of wood, also a compressor-house, office, laboratory and dwellings.

The nearest railway station is at Wabuska, 20 miles northward, on the Southern Pacific Railway, and the company plans organizing a subsidiary corporation to build a branch railway line. A wagon road has been built from the mine to a point on the Southern Pacific Railway 6 miles west of Wabuska, and transportation is by Best traction engine.

The company plans building a 100-ton smelter, which apparently is a mistaken policy, as the amount of ore already in sight would seem to warrant at least a 500-ton concentrator and a 250-ton smelter, which, in the end, probably would be cheaper, though requiring a much larger initial outlay.

The report of Mr. E. P. Jennings, 1906, estimated that the lands carry 10,000,000 tons of ore averaging 3.5% copper, and that, by expending \$175,000 for a railroad, \$750,000 for a 1,000-ton mill and \$500,000 for a 500-ton smelter, the company should be able to produce 24,000,000 lbs. fine copper yearly, laid down on the Atlantic seaboard at 8.5 cents per pound.

Production, 1906, apparently was circa 300,000 lbs. fine copper, from the Douglas, in addition to a larger output from the Ludwig, then owned independently. In 1906 considerable ore was shipped, under numerous disadvantages, the Ludwig shipping ore returning 10.75 to 18.70% copper. During the last half of 1907 the company produced 1,065 tons of ore, returning an average of 15.3% copper, and yielding 319,748 lbs. fine copper.

The Nevada-Douglas is the leading property of the Yerington district, including practically all of the best ground on the west or Smith Valley side of the mountain. The property has numerous ore bodies, but some exaggerated claims have been made in the press, which were unnecessary, as the mine is sufficiently promising without exaggeration. The property is being developed systematically, and, when given a railroad and reduction works, which are absolutely necessary, should make a large and profitable mine.

#### NEVADA ELY COPPER CO.

NEVADA.

Mine office: Ely, White Pine Co., Nev. Organized circa April, 1907, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par. Lands, 7 claims, including the Timberline group of 3 claims and the Copper Bottom group of 4 claims, on which some diamond drilling was done, 1907. Presumably idle.

#### NEVADA EMPIRE MINE.

NEVADA.

Mine office: Yerington, Lyon Co., Nev. Lands, west of Yerington, have been slightly prospected by churn drill. Presumably idle.

#### NEVADA EXPLORATION & MINING CO.

NEVADA.

Office and mine: Bingham Canyon, Salt Lake Co., Utah. Organized circa 1907. Lands, 15 claims, near the Eagle Bird Mining & Milling Co. Presumably idle.

#### NEVADA GOLD & COPPER MINING CO.

NEVADA.

Dead. Had an office, circa 1903, in the Parrot Bldg., San Francisco, Cal.

#### NEVADA GOLDFIELD MINING, MILLING & SMELTING CO.

NEVADA.

Office: 404 Rector Bldg., Chicago, Ills. Mine office: Yerington, Lyon Co., Nev. John H. Reniger, vice-president; W. T. Watson, secretary and general superintendent; T. H. Windsor, treasurer; preceding officers, John E. Harper and Frank L. Wiles, directors. Capitalization \$5,000,000, shares \$5

par. Lands, 50 claims, area 995 acres. Company's "conservative" figures claimed millions of tons of ore in sight, with at least 1,000,000 tons of ore in the Home Bee mine, said to assay 6 to 31% copper, but the information must have been obtained by a clairvoyant, as developments do not show the ore. Apparently merely a bit of stock-jobbery, and presumably idle.

#### **NEVADA GREENWATER MINING CO.**

**CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Geo. Jones, superintendent. A Nevada Greenwater Mining Co. was organized November, 1906, under laws of Arizona, with capitalization \$2,000,000, by Marius Duvall, Jas. Gleason and T. W. Kendall, and a Nevada Greenwater Mining Co. was organized circa November, 1906, under laws of Arizona, with capitalization \$3,000,000, by A. J. Daggs and L. Morgan Darby. Lands, in Willow Creek section of the Greenwater district, are said to show a 16' vein of 16% ore, which is not true.

#### **NEVADA GREENWATER MINING,**

**CALIFORNIA & NEVADA.**

#### **MILLING & SMELTING CO.**

Office: 1118-67 Exchange Place, New York, N. Y. Mine office: Greenwater, Inyo Co., Cal. Wallace H. Hopkins, president; T. H. McInnerney, vice-president; Thos. J. Delahunt, secretary; Maj. L. H. French, managing director. Capitalization \$5,000,000, shares \$5 par.

Lands, 15 claims, at Greenwater, 5 at Lida, 2 at Tonopah and 2 at Goldfield, with sundry alleged Goldfield leases. The president became an embezzler and fugitive from justice, and the company is considered merely a bit of stock-jobbery.

#### **NEVADA NICKEL & COPPER CO.**

**NEVADA.**

Mine office: Bunkerville, Lincoln Co., Nev. Property is the Key West group, said to have about one mile of workings, left by a former owner, said to give average assays of 5 to 6% copper, 2% nickel and 0.3 to 0.5 oz. platinum per ton. Presumably idle.

#### **NEVADA NORTHERN COPPER CO.**

**NEVADA.**

Dead. Was reorganized, circa December, 1906, as Ely Northern Copper Co. Formerly at Ely, White Pine Co., Nev.

#### **NEVADA NORTHERN COPPER MINING & MILLING CO.**

**NEVADA.**

Office: 51 Sherman St., Deadwood, S. D. Mine office: Winnemucca, Humboldt Co., Nev. Dr. Jas. A. Ogden, president; C. H. Miller, vice-president; G. S. Harper, secretary; S. T. Arnold, treasurer; J. C. Fuller, general manager; F. W. Barbee, mine superintendent. Organized May, 1907, under laws of South Dakota, with capitalization \$1,500,000, shares \$1 par; issued, \$115,000.

Lands, 17 claims, unpatented, area 340 acres, also a 20-acre millsite, in the Sonora range, 12 miles southcast of Winnemucca, showing 8 contact deposits, of which 4, under development, are reported as of 18' average width, traceable circa one mile, carrying native copper, oxides, bornite and chalcopyrite, with slate gangue, estimated by company to average 15% copper, 5 oz. silver and \$1.50 gold per ton, which figures are excessive. Development is by 10' and 20' pits, a 50' shaft and a 330' tunnel. Company plans continuous development.

#### **NEVADA-PHOENIX MINING CO.**

**NEVADA.**

Mine office: Beowawe, Eureka Co., Nev. P. V. Locker, manager. Lands, 22 claims, south of Beowawe, having a shallow 2-compartment shaft and a 300' crosscut tunnel, showing a 3' vein said to give average assays of 7.2% copper, 55 oz. silver and \$16 gold per ton.

#### **NEVADA QUEEN COPPER CO.**

**NEVADA.**

Office: care of D. Chisholm, Colorado Springs, Colo. Organized 1906, under laws of Colorado, with capitalization \$1,500,000. Presumably is successor of the Nevada Queen Mining Co. Location of lands, if any, unknown.

**NEVADA QUEEN MINING CO.****NEVADA.**

Office: care of J. K. Miller, P. O. Box 1202, Colorado Springs, Colo. Never active and presumably succeeded, 1906, by Nevada Queen Copper Co.

**NEVADA SMELTING & MINES CORPORATION.****CALIFORNIA.**

Office: 25 Broad St., New York, N. Y. Mine office: Greenwater, Inyo Co., Cal. Malcolm L. Macdonald, president; M. R. Ward, vice-president; Arthur W. Joseph, treasurer; H. L. Fridenberg, secretary; Chas. Kirchen, general manager. Organized June, 1906, under laws of South Dakota, with capitalization \$5,000,000, shares \$5 par. Lands include copper claims at Greenwater and gold claims at Kawich, Reveille and elsewhere in Nevada. Idle at last accounts.

**NEVADA UNITED MINING CO.****NEVADA.**

Office: 51 Wall St., New York, N. Y. Mine office: Lovelock, Humboldt Co., Nev. Oliver G. Jennings, president and treasurer; Louis J. Merkel, vice-president; David R. Foster, secretary; John T. Reed, general manager; preceding officers, Geo. Lowther and John G. Gillig, directors. Organized May 1, 1906, under laws of Arizona, with capitalization \$200,000, shares \$1 par; issued, \$145,000.

Lands, 33 claims, partly patented, area circa 500 acres, also a 68-acre mill-site, in the White Cloud district of Churchill county, Nevada, showing mainly limestone, with 2 ore zones, having gossans of cupriferous hematite, carrying oxidized ores in the gossan, and sulphides at depth.

Development is by shafts of 40', 60', 70' and 120', and by 5 tunnels, longest 2,000', with circa 4,000' of workings, estimated to show 10,000 tons of ore, with 1,000 tons blocked out for stoping. Property was worked, 1871-1873, and again 1890-1895, and was reopened, 1906, by present management.

Equipment includes a 160-h. p. steam plant, with hoist good for 750' depth; and a 4-drill Ingersoll-Rand air-compressor. There are 10 mine buildings, and an antiquated smelter having a 30-ton Fraser & Chalmers water-jacket blast-furnace, of no present value. Company plans continuing exploratory work, and adding new equipment as development will justify.

**NEVADA-UTAH MINES & SMELTERS****NEVADA & UTAH.****CORPORATION.**

Office: 100 Broadway, New York, N. Y. Mine offices: Pioche, Lincoln Co., Nev., Cactus, Beaver Co., Utah, and Bingham Canyon, Salt Lake Co., Utah. Geo. E. Learnard, president; Dr. L. R. Loomis, vice-president and manager; Frederick F. Burgin, treasurer; preceding officers, John W. Griffis and Hemann Dowd, directors; Millard W. Baldwin, clerk; Morris D. Kirk, superintendent Bingham property. Organized 1904, under laws of Maine, with capitalization \$7,500,000, increased later to \$15,000,000, shares \$10 par. On June 10, 1907, company took over the Imperial Gold & Copper Mining Co., of Beaver county, Nevada, and the Manhattan Copper & Gold Mining Co. and Pioche Consolidated Mining Co., two latter of Pioche, the Pioche Consolidated having been bought at a price said to be \$425,000, less 7.5% cash discount. Debentures, \$1,000,000, in registered 5-year 6% gold bonds, due Sept. 1, 1909, convertible, at option of holders, into common stock, at par. Is said to have circa 12,000 shareholders.

Landed holdings are extensive and valuable, but definite statements regarding same have not been secured, despite repeated efforts. The company once held options on various properties, including the Montreal, in Beaver county, Utah, which apparently were not exercised.

Landed holdings include property formerly held by the Pioche Consolidated, which had 38 claims, of which 33 were patented, also 51 town lots and 1,528 acres miscellaneous lands.

The Pioche mine, which was a good silver-lead property, circa 1870-1876,

and which was closed down 1893, is popularly credited with a past production of \$20,000,000 in gross value. The May Day mine of this property has a 1,100' shaft, and there are 2 old shafts on the Yuba mine, an adjoining property, also the 400' Meadow Valley No. 5 three-compartment incline shaft. The old Independence shaft is said to show a 40' body of sulphide ore between the third and fourth levels. There is a 700' Leschen aerial tram from the May Day shaft to the ore-bins on the company's private railway, running from the mine to Pioche. The Pioche has a good mining equipment.

The Half Moon group of 6 claims, area 42 acres, lies circa one and one-half miles west of Pioche.

The Manhattan mine, in the Pioche district, is supposed to be owned by this company, but apparently is idle.

Company's holdings in the Jack Rabbit district, 15 miles west of Pioche, are 5 patented claims, area 115 acres, including the Day and Onondaga mines. The Day mine has a tunnel, completed late 1908, with a back of 1,300', showing ore said to assay up to 2.5% copper, 217 oz. silver and 0.06% gold.

The Imperial group, which includes the Comet mine, area 400 acres, lies near the Horn Silver, Cactus and Majestic mines, in Beaver county, Utah. The Imperial group, developed by tunnels, has carbonate ores above and sulphides at little depth, ore being claimed to average circa 3% copper, 15% lead, 18 oz. silver and \$9 gold. Ore is mainly of concentrating grade, but considerable ore has been shipped to smelters, from time to time. The Comet mine, a single claim, adjoining the Cactus, undoubtedly carries a continuation of the Cactus ore bodies of the Newhouse Mines & Smelters. The Comet has a single shaft of circa 300' depth, in a gossan carrying about 1% copper, and company planned beginning crosscutting on the 300' level. The former management figured on 3.5% copper ore in the Comet, which carries ore mainly of concentrating grade, with values in copper, silver and gold. The adjoining Cactus mine is opened by a 6,000' tunnel, and the development of the Comet would necessitate an even longer tunnel, or an extensive aerial tram.

The Last Chance mine, 13 claims, area 115 acres, formerly owned by the New England-Utah Mining Co., lies between the Highland Boy and United States, southwest of the Boston Consolidated, in the West Mountain district of Utah, and shows fissure veins and contact deposits of 3' to 50' width, carrying fair values in copper, lead, silver and gold, with values mainly in silver and lead. The principal ore body is said to have produced circa \$1,250,000 in ore values. Development is by tunnels of circa 7,000' aggregate length, with about 2 miles of workings.

The Last Chance has a mill of 125 tons rated daily capacity, in commission February, 1907, which, a few months later, was producing about 5 tons daily of concentrates averaging circa 10% lead and 70 oz. silver per ton. The mill was closed October, 1907. The Last Chance is well located, and is considered promising.

The Jack Rabbit group is connected with Pioche by a 20-mile narrow-gauge railway, and Pioche is connected with the San Pedro Railway by a 28-mile branch line, known as the Caliente & Pioche, completed 1907, toward the construction of which the company is said to have advanced \$80,000. to apply on first freights.

There is an old smelter, with 2 small furnaces, about a mile from Pioche, owned by the company, but this is antiquated in design and equipment, and of small present value. It was claimed, July, 1907, that the Nevada-Utah might buy the reduction plant of the Consolidated Arizona Smelting Co., at Humboldt, Arizona, but it is difficult to see how a smelter in Yavapai county, Arizona, could be of any particular value to the mines of this company in Utah and Nevada.

The standing of the company has been greatly injured by its connection with the notorious Thos. W. Lawson, who concocted a very clever scheme, in connection with the rigging of the stock market, in March, 1907. On Feb. 28, 1907, Lawson advertised, at heavy cost, that he was planning taking up Nevada-Utah, and, by clever manipulation, strung along the speculators for two weeks, but, on March 13, announced that he was through with the property, as it was not as represented, following this statement with another that he, himself, would double the market price, or thereabouts, to help out the speculators, and, of course, unloaded his holdings. The stock was sold mainly to street hawkers, newsboys, bar porters, scrubwomen and other unfortunates of similar caliber, who comprise the bulk of Lawson's following. These, as a rule, were wiped out completely, and the profits accruing doubtless went to the virtuous Lawson. The company states that Lawson took an option on a large amount of its stock, and allowed the option to lapse, this being the company's version of its connection with this malodorous campaign.

Apparently it was predicted by President Learnard that at the end of 1908 the Day mine would be producing daily 250 tons of silver-lead ore, netting the company \$45,000 per month. Apparently only the Day mine is being worked at present. Forces were greatly reduced, October, 1907, owing to the slump in the metal market. The property includes several mines of promise, but, on account of Lawson's connection, the company necessarily rests under a cloud, in the minds of prudent investors.

**NEVADA VERDE COPPER CO.**

Office: Goldfield, Nev. Mine office: Yerington, Lyon Co., Nev. Organized Oct. 24, 1906, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. F. G. Sieneke, president; W. D. Boulter, vice-president; C. Barnes, secretary and treasurer; preceding officers, L. L. Bradford and Chas. Patrick, directors. Lands, 25 claims, area 500 acres, near Yerington, with about one-fourth mile of openings, showing copper carbonates and sulphides.

**NEVADA VULCAN MINES CO.**

Dead. Was successor of the Vulcan Consolidated Copper Co. Formerly at Sodaville, Esmeralda Co., Nev.

**NEVER SWEAT MINE.**

Owned by Anaconda Copper Mining Co.  
**NEVILLE, DEUCE & CO.**

Office: 4 Corbet Court, Gracechurch St., London, E. C., Eng. Works office: Llanelli, Caermarthenshire, Wales. Property is the Llanelli copper works, built 1805.

**NEW AMERICAN MINING & MILLING CO.**

Dead. Formerly at Brigham, Box Elder Co., Utah.

**NEW ANNIVERSARY MINE.**

Mine office: Herberton, Queensland, Australia. Ore is shipped to Chilagoe smelter, and production, 1907, was 550 long tons of ore, yielding 208,320 lbs. fine copper and 5,600 oz. silver.

**NEW ARIOS COPPER & EXPLORATION CO., LTD.**

Dead. Dissolved, May 7, 1907. Formerly at Ario de Rosales, Ario, Michoacán, Mex. Described Vol. VI.

**NEW BALLA BALLA COPPER MINES, LTD.**

Office: 6 Great St. Helen's, London, E. C., Eng. Mine office: Port Balla Balla, Western Australia. Theophilus W. Williams, J. P., chairman; Ernest A. Foster, secretary; W. H. Mitchell, legal manager in Western Australia. Organized Apr. 16, 1901, under laws of Great Britain, as a reconstruction of the Balla Balla Copper Mines, Ltd., with capitalization £250,000, shares £1 par; issued, £138,599. Lands, 130 acres, in 2 groups, known as the Balla Balla and Mons Cupri groups, in the Pilbara district, 14 miles from Port Balla Balla.

**NEVADA.****NEVADA.****MONTANA.****WALES.****UTAH.****AUSTRALIA.****MEXICO.****UTAH.****AUSTRALIA.**

Has a 30-ton smelter, and a smelting test, 1905, is said to have given satisfactory results. Receiver appointed and company being liquidated.

**NEW BINGHAM CONSOLIDATED MINING CO.**

**UTAH.**

Office: care of Jesse Knight, president, Provo, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Wm. W. Mathews, vice-president; W. Lester Mangum, secretary and treasurer; preceding officers, Wm. Christopherson and J. Wm. Knight, directors. Organized circa January, 1907, under laws of Utah, with capitalization \$100,000, shares \$1 par. Lands, 6 claims, in the northern part of the Bingham district.

**NEW BOSTON MINING CO.**

**MONTANA.**

Office: Eden Valley, Minn. Mine office: Corbin, Jefferson Co., Mont. Jas. Davidson, president; Hugo Traylor, secretary and treasurer. Capitalization \$600,000, shares \$1 par. Lands, 8 claims, 2 fractional, adjoining the Boston & Corbin, said to carry upwards of 20 different veins, including the Daphne claim, showing a 5' vein with a 16" paystreak assaying 10.5% copper, 42 oz. silver and \$3 gold per ton, balance of vein assaying about 3% copper. Company's fiscal agent advertised that it would make its shareholders wealthy, and that its stock is "fully guaranteed by 10-year gold bonds, bearing 3% interest—50 per cent. commission to agents—why not become a mining king!" Property considered somewhat promising, but company not regarded favorably.

**NEWBURY MINING CO.**

**ARIZONA.**

Mine office: Florence, Pinal Co., Ariz. W. V. Lander, vice-president; C. M. Schofield, superintendent. Organized circa 1901, with capitalization \$2,000,000, shares \$10 par. Lands, 49 acres, and a smelter-site on the Gila River. Company also is said to have 22 claims in the Pioneer district of the Superstition Mountains. Mine has a 300' tunnel, and 4 shafts of 285' to 350' depth, and is said to have several miles of workings, with reserves estimated at 175,000 tons of ore, said to average about 4% copper and \$6 gold per ton. Property formerly was a silver mine, having 4 practically parallel veins, but values changed to copper at depth. Has steam and electric power and a 15-drill air-compressor, and plans an aerial tram from mines to railway. Property considered promising, though some advertising by the fiscal agents, F. W. McAleer & Co., was decidedly raw. Employs circa 30 men.

**NEW CALEDONIA COPPER CO., LTD.**

**NEW CALEDONIA.**

Dead. Reorganized, 1899, as Caledonia Copper Co., Ltd. Formerly at Noumea, Diahot district, New Caledonia.

**NEW CENTURY COPPER MINING CO.**

**WYOMING.**

Office: Enid, Okla. Mine office: Battle, Carbon Co., Wyo. G. F. Hinton, superintendent. Organized 1907. Lands are the Century group, adjoining the Verde mine, in the Battle Lake district.

**NEW CENTURY EXPLORATION**

**IDAHO, OREGON & WASHINGTON.**

**& INVESTMENT CO.**

Office: 500-125 La Salle St., Chicago, Ills. Mine office: Darrington, Snohomish Co., Wash. J. W. McCoy, president; J. C. Morehouse, vice-president; Joseph G. English, treasurer; H. A. Burdick, secretary; T. T. Watson, assistant secretary; N. L. Franke, mine manager. Organized November, 1903, under laws of Arizona, with capitalization \$7,500,000, shares \$10 par. Lands, 46 claims, area circa 900 acres, including claims near Atlanta, Elmore Co., Idaho, claims near Baker City, Baker Co., Oregon, and the Forrest-Chickamun mine, on Gold Mountain, near Darrington, area circa 400 acres, which is claimed by company to have 700,000 tons of auriferous and argentiferous copper ore, worth \$10 per ton, blocked out, which claim is regarded as preposterous. A projected 250-ton reduction plant did not materialize. Regarded with suspicion.

**NEW CHICAGO MINING CO.**

**IDAHO.**

Mine office: Murray, Shoshone Co., Idaho. Geo. H. Heller, manager.

Development is by a crosscut tunnel, said to show a 6' vein of argentiferous copper ore of good grade.

**NEW CHILLAGOE RAILWAY & MINES, LTD.** AUSTRALIA.

Dead. Title changed back, 1905, to Chillagoe Railway & Mines, Ltd. Formerly at Chillagoe, Queensland, Australia.

**NEW CLARA ST. DORA MINING CO., N. L.** AUSTRALIA.

Office: Kennedy St., Port Adelaide, South Australia. Mine office: Alberin Creek, South Australia. F. S. Chany, chairman and secretary; Hermann Paull, manager. Organized March, 1898, under laws of South Australia, with capitalization £10,000, shares £1 par; issued, £5,345.

Lands, 4 claims, area 160 acres, held under 40-year lease, in the Hergott district, showing limestone country rock, carrying an ore body, opened by shallow shafts and open-cuts, showing malachite and chalcocite, occurring as nodules in hard limestone, and as veins in soft limestone. Equipment includes a 38-h. p. steam plant, with hoist good for 400' depth. Ores, as treated, average 26% copper, without gold or silver values. Has a small mill, with one crusher, one set of rolls and one Mays jig. Mine is served by the South Australian Railway, 5½ miles distant.

**NEW COLUMBIA MINING CO.** IDAHO.

Mine office: Salmon, Lemhi Co., Idaho. Ores carry copper and gold. Has steam power and a 10-stamp mill. Idle.

**NEW CLONCURRY COPPER & SMELTING CO., LTD.** AUSTRALIA.

Offices: 116 St. Vincent St., Glasgow, Scotland. Mine office: Cloncurry, Beaconsfield Co., Queensland, Australia. R. L. Alston, chairman; B. F. G. Meldrum, secretary. Organized Oct. 29, 1895, under laws of Great Britain, with capitalization £3,300, shares 6s. each, as successor of Cloncurry Copper & Smelting Co., Ltd. Lands, sundry small mines in North Queensland. Idle for some years, pending construction of a hoped-for railroad.

**NEW DEPARTURE MINING CO.** MONTANA.

Office: Butte, Mont. Mine office: Dillon, Beaverhead Co., Mont. Lands, 12 miles from Dillon, show irregular deposits of 2' to 20' width, carrying auriferous and argentiferous copper ores, values being mainly in silver. Has a 100' shaft and a 700' tunnel. Shipped ore, 1907, giving returns of 2.2% copper, 338 oz. silver and \$1 gold per ton.

**NEW DOMINION MINES CO.** ARIZONA.

Office and mine: Globe, Gila Co., Ariz. Organized 1905, with capitalization \$1,000,000. Lands, about a quarter-mile west of the Gibson Copper Co., are said to show a 12" vein, opened by 240' shaft. Presumably idle.

**NEW EINASLEIGH COPPER MINES, LTD.** AUSTRALIA.

Offices: 522 Salisbury House, London, E. C., Eng., and Queen St., Brisbane, Queensland, Australia. Mine office: Einasleigh, Gilbert Co., Queensland, Australia. Hon Reginald Parker, chairman; W. H. Woodhead, managing director; Thos. Mullett, secretary. Organized Jan. 17, 1907, under laws of Great Britain, with capitalization £200,000, shares £1 par; issued, £150,500. Debentures, £32,000, first-mortgage 6% bonds, redeemable Jan. 19, 1912, with option to holders of conversion into fully paid shares. Company is said to have expended about £45,000 in development.

Lands, 200 acres, freehold, at junction of Einasleigh and Copperfield rivers, showing an outcrop of about 100' width where cut by Einasleigh river, carrying high grade ore said to average circa 10% copper, and low grade ore of about 6% copper tenor. Has a 191' main shaft, with a 14x20" first-motion hoist and air-compressor. Smelter, burning wood, has a 32x75" water-jacket blast-furnace. Development has been hampered by lack of transportation facilities, which now seem assured. Production, 1901, was 1,009 long tons of ore smelted, yielding 232,960 lbs. fine copper and 1,330 oz. silver.

**NEW ENGLAND-ARIZONA COPPER CO.****ARIZONA.**

Dead. Merged, 1907, in Verde River Copper Co. Formerly at Cherry, Yavapai Co., Ariz.

**NEW ENGLAND-ARIZONA COPPER-GOLD MINING CO.****ARIZONA.**

Office: care of J. W. Stonehouse, Douglas, Ariz. Mine offices: Paradise, Cochise Co., Ariz., and Dudleyville, Pinal Co., Ariz. Organized 1905, with capitalization \$3,000,000. Idle.

**NEW ENGLAND & ARIZONA GOLD & COPPER CO.****ARIZONA.**

Office: 69 Pearl St., Boston, Mass. Mine office: McCabe, Yavapai Co., Ariz. Geo. A. Whitney, president; Frank Harlow, vice-president; Louis Harlow, secretary and treasurer; preceding officers, J. J. Bernie, W. R. Lambert, A. H. Smith, A. M. Ireland, F. J. Rolfe, Fred C. Bidwell and E. P. Libby, directors; John H. Farrell, general superintendent. Organized Jan. 19, 1901, under laws of Arizona, with capitalization \$750,000, shares \$1 par. Lands, 6 claims, area 120 acres, including the Red Star group of 3 claims and the Calumet group of 2 claims, circa 4 miles north of McCabe and about 2 miles from the Humboldt smelter. Mine, opened by a number of short tunnels, pits and a 325' two-compartment main shaft, has 2 practically parallel veins, about 30' apart, carrying pay streaks up to 2' in width, of about 10% average copper tenor. Has steam power and several mine buildings.

**NEW ENGLAND & CLIFTON COPPER CO.****ARIZONA.**

Office: 43 State St., Boston, Mass. Mine office: Clifton, Graham Co., Ariz. E. Rollins Morse, president; Edmund Bristol, vice-president and managing director; Alex. Veitch, general manager; C. E. Phippen, secretary and treasurer; Horace Moses, superintendent. Organized 1903, under laws of Maine, with capitalization \$5,000,000, shares \$5 par, in \$2,000,000 preferred 8% stock, cumulative after payment of 8% dividends, and \$3,000,000 common stock. Issued, \$1,373,745 preferred and \$2,722,750 common shares. Offered, September, 1908, for sale, \$100,000 first-mortgage 7% bonds, running 2 years, to raise funds for building a 100-ton concentrator. Company was a merger of the New England Copper Co. and Clifton Consolidated Mines of Arizona. Annual meeting, second Monday in August.

Lands, 78 claims, area 1,006 acres, lying mainly near the Shannon, circa 5 miles northwest of Clifton, on the north side of the San Francisco river. The property includes the Clifton, New England, Antietam and Copper King mines, with principal developments of value mainly on the New England. The principal group shows a main vein, occurring as a fissure in granite, of about 5' average width, said to show an extreme width of 150', with an ore chute up to 400' in length, carrying highly silicious sulphide ores, mainly chalcopyrite, with some chalcocite and occasional oxides and carbonates, all slightly auriferous and argentiferous, said to average about 12% copper to depth of circa 350', the ore chute declining rapidly in grade below depth of 350', running to silicious sulphides of about 2.5% average copper tenor on the tunnel level. The main group is opened by shafts and tunnels, connecting at depth of circa 750'. The Clifton has 7 shafts, of 70' to 315' depth, and tunnels of 220', 450', 700', 800', 1,000' and 1,700'. The New England is opened by shafts of 200' and 400', and by a 2,000' tunnel, the principal vein of the latter being circa 5' in average width, carrying high grade cuprite, chalcocite and chalcopyrite. The various mines of the company show a considerable amount of ore, ranging in grade from very rich to very poor.

The Antietam mine, area 3 claims, has a 140' two-compartment shaft, showing an ore body of 15' to 35' width, carrying chalcocite and chalcopyrite, giving assays of 4 to 10% copper, up to 7 oz. silver and \$2 gold per ton, and is said to have about 40,000 tons of ore in sight. There is a tram-line from the Antietam to the Shannon railway. The property has ore-bunkers about 2

miles below the mine, connected therewith by wagon road, and connecting by a 3-mile ground-tram, of 20" gauge, with the Arizona Railroad.

The Copper King mine, which apparently is but slightly developed, is said to have about 40,000 tons of ore in sight, which estimate perhaps is high.

Equipment includes steam, gasoline and electric power, and there are a number of mine buildings.

Production has been as follows: 1,140,770 lbs. fine copper, 10,472 oz. silver and 43 oz. gold in 1906; 1,981,189 lbs. fine copper, 19,578 oz. silver and 62 oz. gold in 1907. The property has shipped considerable ore averaging better than 10% in copper tenor, and, until the break in the metal market, 1907, was shipping circa 1,000 tons monthly. Work was resumed March, 1908. Management considered good and property promising.

**NEW ENGLAND-COLOEADO COPPER MINES CO.** **COLORADO.**

Dead. Formerly in Chaffee and Frémont counties, Colorado.

**NEW ENGLAND COPPER CO.** **ARIZONA.**

Dead. Succeeded, circa 1904, by New England & Clifton Copper Co. Formerly at Clifton, Graham Co., Ariz.

**NEW ENGLAND COPPER CO.** **MICHIGAN.**

Dead. Wound up, 1907, by Jeremiah T. Finnegan, receiver. Formerly owned circa 500 acres of land, in Town 58 N., Range 27 W., about 2 miles from the end of Keweenaw Point, Keweenaw county, Michigan.

**NEW ENGLAND GOLD & COPPER MINING CO.** **UTAH.**

Office: 67 Milk St., Boston, Mass. Mine office: Bingham Canyon, Salt Lake Co., Utah. Employs circa 40 men. Daniel W. Williams, president; E. E. Abercrombie, vice-president and managing director; Geo. F. Bradstreet, secretary and treasurer; preceding officers, Jas. S. Williams, Geo. Bancroft, Woodford Yerxa and Thos. Kellough, directors; David J. Cook, superintendent. Organized June, 1899, under laws of Colorado, with capitalization \$2,000,000, shares \$10 par; issued, \$1,201,130. Bonds, \$500,000 authorized, at 6%; issued, \$119,800. Federal Trust Co., Boston, registrar; Geo. F. Bradstreet & Co., transfer agents. Annual meeting, first Monday in June.

Lands, 13 claims, 9 patented, area circa 115 acres, including a group of 9 fractional claims, area circa 18 acres, in the West Mountain or Bingham district, and sundry claims near Goldfield, Esmeralda Co., Nev.

The Bingham group shows porphyritic country rock, carrying 3 principal fissure veins, of 30" average width, 1,000' average length and known depth of 400', opened by the 1,600' Nast tunnel, and the 1,670' Benton tunnel, both in ore, and a 159' shaft, with a total of circa 5,600' of workings. Apparently the veins are growing wider at depth. Ores are said to give average assays of 30% lead, 10% zinc, 15 oz. silver and \$4.50 gold per ton, with small and variable values in copper, in addition to which the monzonite country rock carries small copper values, and perhaps may prove workable, in parts, at some later date.

Equipment includes a steam plant, with a 30-h. p. hoist good for 800' depth.

The concentrator, of 50 tons rated daily capacity, uses electric power, bought from a commercial company. Equipment includes a 4x12" Sturtevant crusher, 2 rolls, 2 double Hartz jigs and 1 Wilfley table.

Production, 1907, was 2,108 tons of lead concentrates and 165 tons of copper ore. Property closed down, late 1907, on account of low metal prices.

**NEW ENGLAND MINING CO.** **MASSACHUSETTS.**

Office: 35 School St., Greenfield, Mass. Mine office: Charlemont, Franklin Co., Mass. Othello A. Fay, president; Capt. Geo. H. Davenport, treasurer and general manager. Organized 1902, with capitalization \$500,000, shares \$5 par. Lands, circa 1,000 acres, 2 miles west of the Davis pyrite mine. Vein,

traced 700', is approximately vertical, conforming closely in dip and strike with the Savoy schist in which it occurs, and apparently is a fahlband, lacking well-defined walls, ore occurring scattered through 15' to 20' of the schist, with a 6" to 12" vein of quartz, well mineralized, on the south wall, and a heavy impregnation of chalcopyrite, 1' to 2' wide, on the north wall. Has been partly stripped, and vein trenched across. Idle several years.

**NEW ENGLAND-UTAH MINING CO.**

**UTAH.**

Mine office. Bingham Canyon, Salt Lake Co., Utah. Is controlled by Nevada-Utah Mines & Smelters Corporation.

**NEW ERA MINING CO.**

**MEXICO.**

Mine office: La Cananea, Arizpe, Sonora, Mex. Lands are south of La Cananea. Idle since circa 1903 and presumably moribund.

**NEWFOUNDLAND COPPER CO., LTD.**

**NEWFOUNDLAND.**

Dead. Absorbed, 1901, by Carmen Copper Mines, Ltd. Formerly at Lady Pont, Newfoundland. Described Vol. III.

**B. NEWGASS & CO.**

**SPAIN.**

Office: 7 Lothbury, London, E. C., Eng. Mine office: Changoa, Navarra, Spain. Lands, at Arrieta and Changoa, include the Ollin, Arrieta and Changoa mines, carrying silver, lead and copper ores. Idle some years.

**NEW HIGHLAND GOLD & COPPER MINING CO.**

**CALIFORNIA.**

Letter returned unclaimed from former office, 1209 Broadway, Oakland, Cal. Mine office: Georgetown, El Dorado Co., Cal. Thos. F. Graber, vice-president; C. L. Colvin, secretary and treasurer. Organized Sept. 11, 1903, under laws of California, with capitalization \$2,000,000, shares \$1 par. Lands, 11 copper claims and 9 gold claims, area 355 acres, on the mother lode, in the Georgetown district, showing a fissure vein in slate, giving assays of 15% copper, 15 oz. silver and \$2.50 gold per ton. Copper property idle several years and company apparently moribund.

**NEWHOUSE MINES & SMOLETERS.**

**UTAH.**

Office: 512-71 Broadway, New York, N. Y. Operating office: P. O. Box 1388, Salt Lake City, Utah. Mine office: Newhouse, Beaver Co., Utah. Employs circa 250 men. Samuel Newhouse, president; Jas. W. Hoban, vice-president; John Josten, secretary and treasurer; preceding officers, J. F. A. Clark, Alvin Untermeyer and Hon. Heber M. Wells, directors; Lafayette Hanchett, general manager; Lawrence Townsend, assistant manager; Thos. R. Drummond, superintendent; Harry Kee, mill superintendent; A. C. Dart, engineer.

Organized May 16, 1903, under laws of New York, with capitalization \$6,000,000, shares \$10 par. Debentures, \$1,500,000 first-mortgage 6% sinking fund gold bonds, due 1913, of which amount it is variously reported that \$900,000 and \$1,400,000 are outstanding. Colonial Trust Co., New York, transfer agent; Windsor Trust Co., New York, registrar. Stock is listed on the Boston Stock Exchange and New York Produce Exchange. Annual meeting, fourth Friday in March.

A dividend of 50 cents per share, amounting to \$300,000, was paid August 31, 1907, and was called the first quarterly, but was not succeeded by other quarterlies, owing to there being no profits to divide. The management should have known, when declaring this dividend, in July, 1907, that market conditions were such that a continuation of quarterly dividends was something more than doubtful, and apparently the action of the management, in calling this a quarterly dividend, was for market effect only, hence highly censurable. For fiscal year ending June 30, 1908, the property made net earnings of \$79,921, against which was bond interest of \$81,000, showing a small actual net loss on the year's operations.

Lands, 13 claims, patented, area 201 acres, in Copper Gulch, 7 miles from Frisco, carrying about one mile of the strike of the Cactus vein, also the Mid-

vale placer, area 168 acres, available water rights at Wah Wah Springs, and agricultural and grazing lands, giving total holdings of 7,882 acres.

The Cactus group, formerly operated, in a small way, without success, by several previous owners, shows country rock of monzonite porphyry, and the Cactus mine is essentially a pyritic impregnation, near the limestone contact, the ore being largely mineralized monzonite, carrying some oxidized ores in the upper workings, but at depth mainly chalcopyrite in pyrite, both slightly argentiferous and auriferous, averaging perhaps 30 cents per ton in combined gold and silver values, and being practically without lead and zinc. Previous to 1905 the Cactus ores are said to have averaged about 1% copper only, and the average grade of ore in the mine is very low, though there is some high grade sulphide ore, mainly chalcopyrite, assaying up to 15 to 20% in copper tenor. The mine has ore bodies of large size, ranging up to 200' in width and 600' in length, and the company reports its main ore body as 175' wide, 700' long and 600' deep, with a northwesterly strike and vertical dip. Reserves were estimated, early 1908, at 4,332,023 tons, averaging 2.5% copper, above the 700' level. There are persistent rumors that the mine shows diminished values at depth, and that the high grade ore body is nearing exhaustion.

Development is by two 3-compartment main shafts, of 600' and 900' depth, with levels at 100' intervals, connected on the 600' level with a 6,200' tunnel, which has a grade of 5%, and is laid with 30-lb. steel rails. There is an electric hoist on the second level. The lower level is reported to be developing satisfactorily, and the mine is said to have a good ore body on the 800' level, averaging circa 4% copper. Tramming in the tunnel is done by 2 electric locomotives, each hauling trains of 21 cars. The tunnel is electric-lighted throughout, and cut several cupriferous veins before reaching the main vein. The mine has about 3 miles of workings, and for fiscal year 1908 made 3,025' of new openings.

A steam-shovel, used for stripping, is capable of handling about 1,000 tons of material daily, and company plans extracting a large portion of its ore by steam-shovel, first blasting with black powder. There was some trouble, 1908, from caving, and the management is said to plan winning ore by the caving system.

After reaching the portal of the main tunnel, the electric trains pass over a high trestle to an ore-building, where 7 cars at a time are run into a great steel tube, which is partially rotated, and the ore in the cars dumped onto grizzlies, oversize going to Blake crushers, that reduce it to lumps of 1" size and smaller, fines and crushed ore going to 800-ton storage bins, whence the ore is loaded into railroad cars and taken to the mill.

The mine has a 200-h. p. steam plant, with a 150-h. p. hoist good for 600'. and a 40-drill Ingersoll-Sergeant air-compressor, both hoist and compressor being operated electrically. Power formerly was furnished the mine from the central plant, by compressed air, piped through a line 13,000' long, this operating steam-shovels and hoists, water for steaming purposes not being available at the mine.

The mine and mill are connected by the Newhouse, Copper Gulch & Sevier Lake Railroad, 2.3 miles in length, of standard gauge, owned by the company, which connects with the San Pedro & Salt Lake Railroad, equipment including a Shay mountain-climbing locomotive and 5 dump-cars.

The mill is 100x400' in size, in two 500-ton duplicate sections, being designed on the unit plan to allow for future expansion. The western section, which is the concentrator proper, is of structural steel, with corrugated iron sides and roof, while the power plant, under the same roof, is of structural steel and brick. Equipment includes three 10x24" Blake crushers, 4 sets of rolls, 18 Hartz jigs, 32 Wilfley tables, 8 Wilfley slimmers, Sherman settling tanks

and classifiers and a 15-ton Whiting traveling crane. Ore is dumped, as received, into 1,000-ton steel bins, whence it is drawn out by belt-conveyors, equipped with plunger feed, and transferred to elevators, of which there are 2 for each section, one for dry and one for wet ore. Some additional machinery was installed, 1908, bringing the mill up to its rated capacity of 1,000 tons daily. The mill puts about 8 tons into 1, and is said to effect a saving of circa 80% of assay values, making a concentrate carrying 10 to 25% excess of iron, which commands a premium of about 10 cents per unit.

In connection with the mill is a 40-ton experimental lixiviation plant, planned to leach oxidized ores of the Cactus, which average circa 2.5% copper, with small gold and silver values. This plant has certain features patented by Mr. D. H. Waterbury.

The power plant includes five 350-h. p. Babcock & Wilcox boilers and a Green fuel economizer, the boiler plant having a 165' self-supporting steel smokestack of 8' diameter. The steam plant is held in reserve, machinery being actuated by electric energy, brought 50 miles over the lines of the Telluride Power Co. There are two 500-h. p. Westinghouse-Parsons steel turbines, making 3,600 revolutions per minute, formerly direct-connected to two 400-kw. generators that furnished all power, except compressed air, used in the mine and mill.

The property has an antiquated old smelter, put up by a French company that formerly owned the Cactus, but this is of no particular value at present.

Water is brought from 6 large springs, at Wah Wah, 8½ miles from the mill, through a line of 12" and 14" riveted steel pipe, laid across Preuss valley, discharging into a cement reservoir of 300,000 gallons capacity, located on high ground above the mill and townsite, the springs having a flow of circa 1,000 gallons per minute.

Buildings of the company include a 30x50' brick machine shop, 30x40' carpenter shop, smithy, bunk-house and boarding-house. There also is a saw-mill and a 3-ton ice plant, the latter being necessary in summer, as the property is on the edge of the Escalante desert.

A townsite called Newhouse has been platted near the mill, and the company owns therein 47 dwellings, a club-house and a brick hotel with accommodations for 150 men. From the profits of the club-house and clubs, sufficient money was realized to build a small opera-house, which is much appreciated by the company's employees.

Production has been as follows: 5,020,992 lbs. fine copper for 1906; 5,670,993 lbs. fine copper, 53,862 oz. silver and 2,272 oz. gold for fiscal year ending June 30, 1906; 176,766 tons of ore, of which 10,014 tons was smelting ore, and 19,367 tons of concentrates, yielding 7,244,179 lbs. fine copper, 48,595 oz. silver and 1,721 oz. gold, for fiscal year ending June 30, 1908. The property was closed down October, and reopened December, 1907, but in March, 1908, the mill was being run only one shift daily, and production was about half from smelting ore and half from concentrates. The mine and mill have been handled with skill and technical ability, and a large tonnage has been extracted and treated with a comparatively small force. The property has milling capacity for an output of 12,000,000 lbs. copper yearly, or upwards.

Samuel Newhouse, president of the company, was quoted January, 1908, as stating that company was then producing copper for 6 cents per pound, including refining and selling. This simply was not the case. Costs were said to have been 8 cents per pound for 1907, but apparently these figures do not include marketing. Costs are said to be about 40 cents per ton for milling, which probably is rather low, though the mill is doing excellent work, at low cost. For fiscal year 1908 the management figures copper costs at 7.05 cents per pound or 10.5 cents per pound with freight, refining and smelting charges

added, but the fiscal year 1908 showed that the entire net profits had been absorbed by bond interest, leaving a small deficiency. Apparently there has been much manipulation of this stock in the New York and Boston markets, and many misleading statements have been put out regarding production, costs and net earnings.

**NEW JERSEY-ARIZONA MINING CO.****MEXICO.**

Office: P. O. Box 750, Bisbee, Ariz. Letter returned unclaimed from former mine office, Fronteras, Arizpe, Sonora, Mex. Property was claimed to be in the vicinity of the Greene Consolidated, Hidalgo, Picacho and Moctezuma mines, which was physically impossible. Apparently the only certainty as to location is that the property was claimed to be in northern Mexico, and apparently in Sonora. Property supposedly is controlled, through stock ownership, by United Mining Co., of New York, F. L. Brinkerhoff, president. The company claimed to have 18,000,000 tons of ore, capable of making a profit of \$450,000,000, and these figures tell the story of what it was—or wasn't.

**NEW JERSEY METAL REFINING WORKS, LTD.****NEW JERSEY.**

Works office: Elizabeth, Union Co., N. J. Is controlled by Mountain Copper Co., Ltd.

**NEW KING SOLOMON'S MINES, LTD.****TRANSVAAL.**

Office: Johannesburg, Transvaal. Capitalization, £5,000. Property is the Farm Anjater's Kop No. 152, in the Zeerust district of the Transvaal.

**NEW LINCOLN COPPER CO.****WYOMING.**

Dead. Was merged, circa 1907, in Rambler Copper & Platinum Co. Formerly at Holmes, Albany Co., Wyo. Described Vol. VI.

**NEW MAMMOTH MINING & MILLING CO.****UTAH.**

Mine office: Bingham Canyon, Salt Lake Co., Utah. Ores carry gold, silver and copper. Idle several years and apparently moribund.

**NEW MESSINA COPPERS, LTD.****TRANSVAAL.**

Office: National Mutual Bldg., Rissik St., Johannesburg, Transvaal. Organized, 1907, under laws of Transvaal, with capitalization £10,000, shares 5s. par; working capital, £4,000. Property is 192 base metal claims, on the government farm Oestenryk No. 1421, in the Zoutpansberg district, Transvaal.

**NEW MEXICO COPPER MINING & SMELTING CO.****NEW MEXICO.**

Dead. Formerly at Lucero, Mora Co., N. M.

**NEW MEXICO DEVELOPMENT CO.****NEW MEXICO.**

Mine office: Pierro, Grant Co., N. M. Idle and apparently moribund.

**NEW MEXICO GOLD & COPPER MINING CO.****NEW MEXICO.**

Office: 39 Cawker Bldg., Milwaukee, Wis. Mine office: Tres Piedras, Taos Co., N. M. Wm. H. Devos, president; Geo. R. Hayden, secretary. Organized 1897, under laws of New Mexico, with capitalization \$2,500,000, shares \$1 par. Bonds, \$25,000 authorized, \$4,850 issued, at 7%.

Lands, 11 claims, area 140 acres, in the Bromide district, showing fissure veins in schist, and contact deposits between schist and granite. Five veins developed, are claimed to average 7" in width and to carry native copper, carbonate and sulphide ores, assaying 5 to 40% copper, with occasional high values in gold. Has a 130' shaft with 350' of workings. Has steam power and a Norwalk air-compressor. Has a worthless townsite, called Bromide City. Is in debt, and facing bankruptcy.

**NEW MEXICO IRON & COPPER CO.****NEW MEXICO.**

Office: care of Hon. J. Maurice Finn, president and manager, Denver, Colo. Mine office: Corona, Lincoln Co., N. M. Lands, in the Red Cloud district, were undergoing development, 1907.

**NEW MEXICO VERDE COPPER CO.****NEW MEXICO.**

Office: 100 First St., Elizabeth, N. J. Organized, late 1906, under laws

Digitized by Google

of New Jersey, with capitalization \$1,000,000, by Walter A. Smith, Cornelius M. Garrison and Wm. P. Wallace. Location of lands, if any, unknown.

**NEW MICHIGAN COPPER MINING CO.**

WYOMING.

Office and mine: Laramie, Albany Co., Wyo. Idle since circa 1904, and presumably moribund.

**NEW MOONTA MINE.**

AUSTRALIA.

Office and mine: Mount Perry, Queensland, Australia. T. Hanifan, superintendent. Property, 12 miles northeast of Mount Perry, was a small producer, 1906, employing 59 men.

**NEW MOUNT HOPE COPPER MINING CO., LTD.**

AUSTRALIA.

Dead. Succeeded, circa 1906, by Mount Hope Copper Proprietary. Formerly at Mount Hope, Blaxland Co., N. S. W., Australia.

**NEW MOUNT HOPE COPPER MINING CO., LTD.**

AUSTRALIA.

Dead. Formerly at Mount Hope, Blaxland Co., N. S. W., Australia. Described Vol. VI.

**NEW ORE KNOB COPPER CO.**

NORTH CAROLINA.

Dead. Formerly at Jefferson, Ashe Co., N. C.

**NEWPORT & ARIZONA COPPER & GOLD MINING CO.**

ARIZONA.

Dead. Had an office, circa 1900, at 60 State St., Boston, Mass.

**NEW RED WING MINING CO.**

UTAH.

Mine office: Bingham Canyon, Salt Lake Co., Utah. Benj. L. Corum, president; A. D. Lee, vice-president; F. M. Orem, secretary and treasurer. Organized circa 1900, with capitalization \$500,000, as successor of Red Wing Gold Mining Co. Is said to have a \$50,000 bond issue. Is controlled, through ownership of majority of stock, by Utah Development Co., and owns a half interest in the Markham Gulch Milling Co., which has a 200-ton concentrator. Lands, 110 acres, partly patented, with 2 adverses in litigation. Mine has 3 tunnels, No. 3, circa 700' long, being claimed to show a 15' vein of milling ore, carrying values mainly in lead and silver. Also has a 5' vein, carrying a 3' paystreak, said to assay 23.2% copper, 12% lead, 60 oz. silver and \$1 gold per ton.

**NEW RIO TINTO COPPER CO., LTD.**

SPAIN.

Dead. Absorbed, circa 1904, by Caridad Copper Co., Ltd. Formerly at Lozoyuela, Madrid, Spain.

**NEW RIVER COPPER CO.**

Office: care of F. W. Pratt, Huntsville, Ala. Organized August, 1902, under laws of Delaware, with capitalization \$1,000,000. Apparently abortive.

NEWSBOY COPPER MINING CO.

WYOMING.

Dead. Formerly at Encampment, Carbon Co., Wyo.

**NEWS COPPER MINING CO.**

ARIZONA.

Mine office: Jerome, Yavapai Co., Ariz. Lands, sundry claims, 1½ miles southeast of Jerome. Shaft was unwatered and retimbered, 1905, after several years' idleness, and property was investigated by F. August Heinze, but not taken by him, failing to prove as represented. Since idle.

**NEW SOUTH WALES MINES & SMOLETERS, LTD.**

AUSTRALIA.

Mine office: Blayney, N. S. W., Australia. Organized circa January, 1907, with capitalization £75,000, shares 10s. par. Property, is the Blayney mine, known also as the Great Blayney and Annandale, reopened April, 1907, showing a 40' vein carrying chalcopyrite with andesitic gangue, opened by a 390' shaft. Has a 50-ton smelter, with 2 small water-jacket blast-furnaces. In 1901 produced 418 long tons of copper, from 18,666 long tons of ore smelted.

**NEW STATE COPPER MINING CO.**

ARIZONA.

Office and mine: Tucson, Pima Co., Ariz. James W. Bogan, president; Chas. Bent, vice-president; Lyman W. Wakefield, treasurer; Ralph K. Shelton, secretary. Capitalization, \$2,000,000, shares \$1 par. Lands, 9 claims, in the

Tucson Mountains, 14 miles west of Tucson, showing a prominent gossan, carrying oxidized ores and a little chalcocite with small gold and silver values, suitable for fluxing ore, and presumably underlaid by copper ores of better tenor. Has a 40' shaft showing a little chalcopyrite, and a short tunnel, with circa 400' of workings. Has shipped about 300 tons of ore. Idle.

**NEW STRATAN COPPERS, LTD.****TRANSVAAL.**

Office: P. O. Box 1276, Johannesburg, Transvaal. J. M. Calderwood, M. I. M. M., consulting engineer. Organized under laws of Transvaal, with capitalization £11,000, shares £1 par, fully issued. Lands include 96 claims on the Limpopo River, and 360 base metal claims on government Farm Stratan No. 1,386, in the Zoutpansberg district of the Transvaal, latter, slightly prospected, giving, 1907, average assays of 17.72% copper, with traces of silver and gold.

**NEWTON COPPER CO.****CALIFORNIA.**

Office: 420 Montgomery St., San Francisco, Cal. Mine office: Ranlett, Amador Co., Cal. Col. Horace D. Ranlett, president and general manager. Organized 1887, under laws of California, with capitalization \$200,000, shares \$5 par. Lands, 100 acres, patented, showing 3 fissure veins in slate, carrying mainly sulphide ores, averaging circa 8% in copper tenor. Mine, opened 1881, has shafts of 200' and 430', with about 20,000 tons of ore in sight. Has steam power, and smelter with an 80-ton water-jacket blast-furnace, also a 100-ton leaching plant, ore being especially adapted to lixiviation. Idle since circa 1903.

**NEWTON COPPER MINING CO.****WYOMING.**

Dead. M. B. McKillep was manager. Property, near Elwood, 7 miles from Encampment, was said to have 12' vein of copper ore, opened by a 125' shaft. Formerly at Encampment, Carbon Co., Wyo.

**NEWTON, KEATES & BOLTON.****ENGLAND.**

Office: 13 Charles St., Princess St., Manchester, Eng. Works office: St. Helens, Lancashire, Eng. Property is copper smelting and refining works.

**NEW UTAH MINING CO.****UTAH.**

Office: Salt Lake City, Utah. Mine office: Ibapah, Tooele Co., Utah. Hugh Heffernan, president; W. W. Thompson, vice-president; Geo. A. Udall, secretary; James Norman, treasurer; Timothy Manion, manager. Lands are near the Flying Dutchman mine. Idle.

**NEW VELVET-PORTLAND MINE, LTD.****BRITISH COLUMBIA.**

Office: 535 Salisbury House, London, E. C., Eng. Letter returned unclaimed from former mine office, Rossland, Trail district, B. C. Allan Maclean, chairman; F. A. Labouchere, secretary; S. Severin Sørensen, general manager. Organized Nov. 18, 1905, as successor of the Velvet-Portland Mine, Ltd., with capitalization £10,000, shares £1 par; issued, £5,699. Lands on Sophie Mountain, Rossland, carry low-grade auriferous copper ores. Has a 75-ton concentrator with three Tremaine two-stamp mills, 2 Overstrom tables, two sets of Brown's hydrometric classifiers, and one Jenckes crusher, putting five tons into one. Idle.

**NEW VIGSNAES COPPER CO., LTD.****NORWAY.**

Office: 32 Charles St., Cardiff, Wales. T. J. Masters, chairman; Herbert A. Evans, secretary. Organized Oct. 28, 1905, under laws of Great Britain, with capitalization £10,000, shares £1 par; issued, £9,000. Property is the Vigsnæs copper mine, on Karme Island, Norway. Presumably idle.

**NEW WEST MUTOOROO COPPER MINING CO.****AUSTRALIA.**

Office: Melbourne, Australia. Mine office: Cockburn, South Australia. Lands, 120 acres, leasehold, 12 miles from Cockburn, having a 110' shaft, sunk vertically for 60', cutting an 8' vein carrying 2 to 3% copper ore, after which the shaft follows the dip of the vein, which is said to be 20' wide on the 110'

level. Company planned, late 1907, installing a 100-ton reduction plant, but apparently failed to do so.

**NEW WORLD SMELTING CO.**

**MONTANA.**

Office: 306 Pacific Blk., Seattle, Wash. Mine office: Gardiner, Park Co., Mont. Dr. G. L. Tanzer, president. Lands are 60 miles from Gardiner and 3½ miles east of Yellowstone National Park. Company contracted with the Colorado Iron Works Co. for a 100-ton copper matting furnace. Presumably idle.

**NEW YELTA COPPER MINING & SMELTING CO., LTD. AUSTRALIA.**

Dead. Mines, sold, 1903, to Paramatta Copper Mines, Ltd. Formerly at Wallaroo, Daly Co., South Australia.

**NEW YORK-ARIZONA COPPER CO.**

**ARIZONA.**

Letter returned unclaimed from former mine office, Dewey, Yavapai Co., Ariz. Lands are the Denver group, in the Black Hills district, 3 miles east of Dewey. Has a 400' shaft. Idle and apparently moribund.

**NEW YORK & ARIZONA COPPER MINING & SMELTING CO. ARIZONA.**

Office: 261 Broadway, New York, N. Y. Letter returned unclaimed from former mine office, Globe, Gila Co., Ariz. Lionel Hagenaers, president; E. G. Macqueston, secretary. Organized 1901, with capitalization \$3,000,000. Management poor, property fair, company moribund. Idle since circa 1902.

**NEW YORK-ARIZONA GOLD & COPPER CO.**

**ARIZONA.**

Office and mine: Morenci, Graham Co., Ariz. A. L. Work, president; J. F. Cleaveland, vice-president; C. E. Tyler, secretary and treasurer; preceding officers, R. E. Moore, W. C. Crawford and D. M. Causler, directors; John C. Molder, general manager; J. R. Wester, superintendent. Organized Apr. 15, 1907, under laws of Arizona, with capitalization \$900,000, shares \$1 par.

Lands, 30 claims, unpatented, area 600 acres, in the Copper Mountain district, 4 miles west of Morenci, also a 150-acre millsite. Property includes the Buzzard Shadow and adjacent groups, showing quartzite, shale, limestone and porphyritic rocks, carrying contact ore bodies having a generally east and west strike, with vertical dip. Four ore bodies, under development, range from a few inches to 50' in width, one showing auriferous and argentiferous sulphides assaying 15% copper, 10 oz. silver and \$10 gold per ton.

Development is by 5 shafts, deepest 80', and by 4 tunnels, of 100', 450', 600' and 900' length, with a total of circa 2,500' of workings, estimated to show 100,000 tons of ore. The Lillian tunnel is said to show a 50' ore body carrying average values of \$12 gold per ton, which, in all likelihood, is an overestimate. The Buzzard Shadow group shows a 2' to 4' vein carrying auriferous and argentiferous copper ore. Values, as developed, are mainly in gold.

Equipment includes a 19-h. p. gasoline hoist, and 5 mine buildings. Company plans drifting and sinking on the Lillian and Buzzard Shadow groups, adding an air-compressor, and building a 10-stamp mill and cyanide plant. Development on the principal copper claim has been hampered by excess of water.

**NEW YORK CANADIAN COPPER CO., LTD.**

**ONTARIO.**

Dead. Formerly at Kashaboiwe, Rainy River district, Ont. Fully described Vol. IV.

**NEW YORK CONSOLIDATED MINING CO.**

**MICHIGAN.**

Office: Leopold Bldg., Houghton, Mich. Lands, 720 acres, being Sections 3, 10 and 15, in Town 57 North, Range 32 West, Keweenaw County, Michigan, lying just east of the Manhattan. Idle many years.

**NEW YORK COPPER MINING & SMELTING CO.**

**ARIZONA.**

Office: 46 North Stone Ave., Tucson, Ariz. Mine office: Helvetia, Pima Co., Ariz. Frank H. Lee, president; Samuel Seinsheimer, vice-president; E. J. Trippel, secretary; Harry A. Drachman, treasurer; Henry Buehman, general

**manager.** Organized Nov. 4, 1901, under laws of Arizona, with capitalization \$500,000, shares \$1 par. Lands, 8 claims, area 110 acres, showing contact deposits between limestone and porphyry, opened by 3 shafts, with total depth of 175', and 3 tunnels with total length of 475', showing copper carbonates and sulphides giving average assays of about 4% copper.

**NEW YORK & ELY CONSOLIDATED COPPER CO.** **NEVADA.**

Dead. Formerly had an office at 1103-66 Broadway, New York, N. Y. Formerly at Ely, White Pine Co., Nev.

**NEW YORK & GREENWATER COPPER CO.** **CALIFORNIA.**

Mine office: Greenwater, Inyo Co., Cal. Organized October, 1906, under laws of Arizona, with capitalization \$1,000,000. Idle.

**NEW YORK & INYO COPPER CO.** **CALIFORNIA.**

Office: 254 Wilcox Bldg., Los Angeles, Cal. Mine office: Citrus, Inyo Co., Cal. G. J. Lang, president; A. G. Lang, vice-president; A. N. Francisco, secretary; T. D. Gordon, treasurer; F. S. Gordon, consulting engineer. Lands, 5 claims, area 100 acres, circa 6 miles from Citrus, taken over from the Inyo County Consolidated Copper Co. Property has a 100' tunnel, showing oxidized ores assaying 2.5 to 17% copper, with combined gold and silver values of \$1.50 to \$7.50 per ton.

**NEW YORK & MEXICO EXPLORATION & DEVELOPMENT CO.** **ARIZONA & MEXICO.**

Dead. Was organized March 1, 1906, under laws of Maine, and name changed, Oct. 31, 1906, to Cananea & Globe Exploration & Development Co. Formerly at Globe, Gila Co., Ariz., and La Cananea, Arizpe, Sonora, Mex.

**NEW YORK & MONTANA COPPER MINING CO.** **MONTANA.**

Office: 32 Broadway, New York, N. Y. Mine office: Corbin, Jefferson Co., Mont. J. H. McCabe, general manager. Organized 1903, under laws of Delaware, with capitalization \$1,000,000, shares \$1 par. Lands, circa 250 acres, including the Erickson, Scioto and Copper Gulch groups, opened by 3 two-compartment shafts, said to make a good showing of medium-grade ore. Idle several years.

**NEW YORK & NEVADA COPPER CO.** **NEVADA.**

Dead. Lunds sold, 1905, to Nevada Consolidated Copper Co. Fully described Vols. III. and IV.

**NEW YORK-NEVADA GOLD-COPPER MINING CO.** **NEVADA.**

Office: 504 Rector Bldg., Chicago, Ills. Mine office: Goldfield, Esmeralda Co., Nev. Jas. Rice, president; W. B. McConnell, vice-president and treasurer; Geo. S. Webb, secretary; Harry F. Parker, general manager. Organized August, 1907, under laws of Arizona, with capitalization \$5,000,000, shares \$1 par.

Lands are said to be 31 claims, including 12 claims 3 miles from Copperfield, Esmeralda Co., Nev., circa 50 miles northwest of Tonopah, which are said to show veins of 7' to 12' width, carrying high grade copper ores; 19 claims 12 miles northeast of Goldfield, near Red Mountain, and a 5-acre millsite near Acme, Nev. The company claims to have one mile of workings, with 20,000 tons of ore blocked out, carrying values in copper, lead, silver and gold.

**NEW YORK & SALTESE COPPER MINING CO.** **MONTANA.**

Mine office: Saltese, Missoula Co., Mont. Organized 1906, with capitalization \$5,000,000, shares \$10 par, as a reconstruction of the National Mining & Smelting Co. Presumably idle.

**NEW YORK-SEATTLE COPPER MINING CO.** **WASHINGTON.**

Office: 237 Broadway, New York, N. Y. Mine office: Index, Snohomish Co., Wash. Harry D. Cowden, president; R. H. Hingston, secretary; Philip Hingston, treasurer and superintendent. Organized Aug. 17, 1901, with capitalization \$1,000,000, shares \$1 par.

Lands, 8 claims, area 160 acres, well timbered and watered, with an avail-

able water-power, 13 miles from the Great Northern railroad, with a good wagon-road thereto, in the Mineral City and Silver Creek districts. Mine has a 212' shaft and circa 1,250' of tunnels, showing 4 veins, of 4' to 20' average width, carrying copper ore that gave average returns of \$14.42 per ton, in mill tests.

Equipment includes a hydraulic power installation, air-compressor and sawmill. Has a 100-ton concentrator, milling circa 60 tons daily, at last accounts, shipping concentrates to Everett smelter. Management seems vigorous and efficient.

#### **NEW YORK & UTAH COPPER & GOLD MINING & MILLING CO. UTAH.**

Office: Salt Lake City, Utah. Letter returned unclaimed from former mine office, Milford, Beaver Co., Utah. J. E. Galigher, president; A. F. Schneider, vice-president; G. D. B. Turner, secretary and treasurer. Organized July, 1907. Property is the Blue Bird group, formerly owned by Blue Bird Copper-Gold Mining Co., near the Hickory group of the Majestic Mines Co., having a 275' shaft.

#### **NEW YORK & VIRGINIA COPPER CO.**

**VIRGINIA.**

Office: 50 Broadway, New York, N. Y. Letter returned unclaimed from former mine office, Woltz, Carroll Co., Va. Ambrose C. Dunn, president and general manager; Wm. D. Boggs, secretary and treasurer. Organized 1901, under laws of West Virginia, with capitalization \$2,500,000, shares \$1 par. Lands, 740 acres, showing 7 cupriferous fissure veins and 2 gold veins, 2 copper veins being developed by shafts of 372' and 381' and 2 tunnels of 100' each. Main vein is claimed by company to average 96' width, and to show argentiferous melaconite, bornite and chalcopyrite, carrying 10% copper, 25 oz. silver and 1 oz. gold per ton, which is an exaggeration. Claims to have about 40,000 tons of smelting ore on the dumps, with a larger amount blocked out for stoping. Idle and presumably moribund.

#### **NEW ZEALAND COPPER ESTATES CO., LTD.**

**NEW ZEALAND.**

Dead, though not buried at last accounts. Formerly in New Zealand.

#### **NIAGARA COPPER CO.**

**ARIZONA.**

Office and mine: Prescott, Yavapai Co., Ariz. Herman Voge, president and treasurer; G. H. Schuerman, vice-president; J. P. Bauder, secretary and general manager. Capitalization \$1,000,000, shares \$1 par.

Lands, 7 claims, area 140 acres, and a 5-acre millsite, in the Copper Creek district, circa 25 miles southwest of Prescott, showing native copper, melaconite, malachite, azurite, chalcocite, bornite and chalcopyrite. Property formerly was claimed to show a vein of 50' to 150' width, with footwall and hanging wall paystreaks, giving assays up to 50% copper, 9 oz. silver and \$1.55 gold per ton, opened by shafts of 60', 60', and 125' and by several tunnels. The property was reported, 1908, by company to have shafts of 40', 50' and 85', with tunnels of 50', 200', 100', 400', 200' and 260', with circa 2,000' of workings, showing ore estimated to average 3 to 6% copper, 2 to 7 oz. silver and \$1 to \$10 gold per ton. The shrinkage in depth of shafts doubtless was due to seismological disturbances causing severe contraction of the earth's crust in Yavapai county, whereby the shafts were forced upwards and the portions thus protruding above the earth's surface were broken off by their own weight. This would seem the most plausible explanation, as none other has been supplied.

#### **NIAGARA MINING & SMELTING CO.**

**UTAH.**

Letter returned unclaimed from former mine office, Bingham Canyon, Salt Lake Co., Utah. Is controlled, through ownership of majority of stock, by United States Mining Co., which operates the mine. To all practical intents and purposes, is out of business.

**NIBLACK COPPER CO.****ALASKA.**

Office: 310 American Trust Bldg., Cleveland, Ohio. Mine office: Niblack, Prince of Wales Island, Alaska. M. P. O'Brien, president and treasurer; Frank B. Richards, vice-president; S. C. Vessy, secretary; Benedict Crowell, consulting engineer; Burton B. Nieding, general manager; Wm. N. Fink, engineer. Organized Oct. 12, 1904, under laws of Arizona, with capitalization \$250,000.

Lands, 2 claims, leased from the Geo. M. Wakefield Mineral Land Co., with litigation over royalties, on the eastern side of the island, having a lake estimated as capable of developing 2,000 h. p. under a 290' head. Main shaft, 275', with 4 levels opened at 50' intervals. Geology of property is similar to that of the Ketchikan district, on the mainland, showing sedimentary deposits, mainly limestone of Devonian or Silurian age, having a general dip to the southwest, with intrusions of later eruptive rocks, that have forced their way between the beds, and altered them to such an extent that identification is difficult. The greenstone, in various phases of alteration, carries a mineralized zone parallel to the fault planes, with ore-bodies having a general strike of northwest to southeast, with dip of circa 60° to southwest. The principal ore body is a lense in greenstone, having a width of 60', with another ore body on the 160' level, estimated at 20' width, and a third lense outcropping on the mountain above the mine. Ore is chalcopyrite, averaging circa 4% copper, and high in iron, silica and sulphur, with combined gold and silver values of about \$1.50 per ton. Property also shows covellite and chalcopyrite, in quartz-sericite schists, at present undeveloped.

Equipment includes a steam hoist, good for 1,000', and a 6-drill air-compressor. Buildings include a power-house, machine-shop, carpenter-shop, smithy, office, general store, boarding-house and cabins for miners. Large ore-bunkers, near the shaft, are connected by tramway with a 700' wharf, tramway and wharf being double-tracked, and tram operated by gravity. The wharf is on Niblack Anchorage, a nearly landlocked harbor having deep water, but high tides, necessitating a long pier, which is built with pockets, similar to those at the Lake Superior iron ports. Production, 1905, was 10,209 tons of ore, containing circa 850,000 lbs. fine copper.

**NIBLACK COPPER DEVELOPMENT CO.****ALASKA.**

Dead. Succeeded Oct. 12, 1904, by Niblack Copper Co. Formerly at Niblack, Prince of Wales Island, Alaska.

**NICHOLS CHEMICAL CO.****QUEBEC & NEW YORK.**

Dead. Succeeded May, 1905, by Nichols Copper Co. Formerly at Capelton, Sherbrooke Co., Que. Fully described Vol. VI.

**NICHOLS COPPER CO.****QUEBEC & NEW YORK.**

Office: 25 Broad St., New York, N. Y. Mine office: Capelton, Sherbrooke Co., Quebec. Works office: Laurel Hill, Queens Co., N. Y. Employs about 250 men. Wm. H. Nichols, president; John B. F. Herreshoff, vice-president; Geo. Martin Luther, secretary and general manager; Edw. R. Nichols, treasurer; preceding officers, Wm. H. Nichols, Jr., G. G. Teller and Sanford T. Steele, directors; W. L. Spofford, mine superintendent. Organized May, 1905, under laws of New York, with capitalization \$10,000, shares \$100 par, as successor of Nichols Chemical Co. Controls, through ownership of majority of stock, the San Carlos Copper Co., of Tamaulipas, Mexico.

The Albert mine, at Capelton, area 640 acres, carries lenses of chalcopyrite and pyrite, the former carrying circa 5% copper and the latter about 38% sulphur. Development is by 6 shafts, 4 under 500' depth each, with one of 800' and one of 2,000', with upwards of 5 miles of workings.

Equipment includes steam power, a 150-ton concentrator, and a smelter. There also is an acid plant at Capelton, completed, 1907, at a cost of about \$1,000,000, with capacity of about 150 tons of commercial sulphuric acid daily,

which is one of the most complete in existence. The acid plant burns pyrites, and cupriferous cinder is smelted in a small blast-furnace, producing 1 to 2 tons daily of matte averaging about 40% copper, with small silver contents, which is shipped to the Laurel Hill works for refining, production being circa 350,000 lbs. fine copper yearly.

The company also operates the Davis pyrite mine, at Davis, Franklin Co., Mass., which produces slightly cupriferous pyrites, the principal values being in the sulphur, with copper as a small by-product.

The Laurel Hill works include a smelter and electrolytic refinery, with steam and electric power. Material treated is mainly ores and matte from outside producers in the smelter, and western blister copper in the electrolytic plant.

The Laurel Hill smelter has 10 reverberatory furnaces, taking 40-ton charges, with hearth-linings of quartz sand containing a small quantity of feldspar, each furnace heating a tubular boiler with waste gases. There are two 46x120" Herreshoff water-jacket blast-furnaces, of 210 tons rated daily capacity each. Matte and slag flow, in an uninterrupted stream, to a large settler, whence slag skims into pots, and matte is tapped into an iron bed. Fuel charges average 14%. Waste gases pass into a 1,000' main flue, of iron and brick, leading to a 300' chimney. About 100 tons of flue-dust, recovered monthly, is briquetted and resmelted. The first-fusion product is a matte of 40 to 60% copper tenor, which is resmelted in a water-jacket blast-furnace, with 9% coke charges.

The converter department of the Laurel Hill works has 4 stands, tilted by hydraulic accumulators, with 12 shells, linings for which are made of 85% crushed quartz and 15% clay, ground and mixed in 3 silica-mills with revolving bottoms, linings being tamped by hand, to a thickness of 18". The linings last from 12 to 16 blows, and the shells vary in capacity, according to the state of linings, from 2 to 6 tons each. The converter blast, at only 8 to 10 lbs. pressure per square inch, is furnished by 100-h. p. and 120-h. p. Connersville blowers. The final converter product is blister copper assaying 99 to 99.5% copper, 50 to 100 oz. silver and 1 to 2 oz. gold per ton. There is a Herreshoff casting table, with 9 moulds, casting anodes. After electrolytic refining cathodes are melted down, in 8 reverberatory furnaces, taking charges of 30 to 45 tons each.

The Laurel Hill electrolytic plant is operated on the series system, with a current of 800 amperes, at 155 volts, generated by 17 dynamos, and the plant has 120 tanks. Anodes are cast  $\frac{1}{4}$ x16x59", with an average weight of 57 lbs., and are smoothed by passing between rolls, after casting. The final product is cast mainly into wire-bars, in moulds painted with a mixture of lampblack and benzine after each casting. This company enjoys a deservedly high reputation for the purity of its product and the efficiency of its metallurgical practice.

#### **JOHN NICHOLSON & SONS, LTD.**

**ENGLAND.**

Office: Leeds, Eng. Mine office: Hunslet, Yorkshire, Eng. Property is copper reduction works using the wet process for extracting values from cupriferous cinders remaining from the burning of iron pyrites for making sulphuric acid.

#### **NICKEL-COPPER CO.**

**ONTARIO.**

Office and mine: Worthington, Algoma, Ont. Company experimented with a new process of reducing nickel-copper ores, with the result of failure. Mine idle some years, finances muddled and company apparently hopelessly involved.

#### **NICKEL PLATE MINE.**

**BRITISH COLUMBIA.**

Owned by Daly Reduction Co.

**NIGHT HAWK MINING CO.****WASHINGTON.**

Office: 201 Uihlein Bldg., Milwaukee, Wis. Mine office: Loomis, Okanogan Co., Wash. W. E. Stevens, president; A. W. Schroeder, vice-president; H. D. James, secretary and general manager; Chas. A. Druse, treasurer; preceding officers, P. Meehan and Edward Kolb, directors; Chas. T. Peterson, superintendent. Organized 1901, under laws of Montana, with capitalization \$5,000,000, shares \$1 par.

Lands, 65 claims, 10 fractional, area circa 1,250 acres, also 150 acres miscellaneous lands, including a millsite and townsite, on Mount Ellemeham, in the Wannicut Lake district, east of the Similkameen River. Company bought the Grand View property, at Loomis. Development is by 3 shallow shafts and 4 tunnels, longest circa 1,200'. Property shows numerous fissure veins, of which 5 have been partly developed, these ranging 6' to 10' in width, carrying estimated averages of 8% copper and 1 oz. gold per ton, which estimate unquestionably is excessive.

Equipment includes an electric plant, installed 1908, and a 20-stamp mill, bought, 1908, from the Grand View Mining Co. Property considered promising.

**NIKKO COPPER WORKS.****JAPAN.**

Owned by Furukawa Mining Co.

**RUSSIA.****NIKOLOJAV WORKS.**

Office and works: Nijni Novgorod, Russia. Property is a copper reduction plant, with an electrolytic refinery of 70 tanks having multiple arrangement of electrodes, with a daily capacity of 1 ton of electrolytic copper.

**NILPENA COPPER MINING CO., LTD.****AUSTRALIA.**

Mine office: Blinman, South Australia.

**NIPISSING COPPER & SILVER CO., LTD.****ONTARIO.**

Office: 609 Temple Bldg., Toronto, Ont. Mine office: Cobalt, Nipissing, Ont. A. Aubin, president; Duncan Donald, vice-president; F. Aaa Hall, secretary; T. Baycroft, mine manager. Organized under laws of Ontario, with capitalization \$3,500,000, shares \$1 par. Lands, 2,200 acres, said to show a 19' vein of sulphide ore assaying 11% copper and 41 oz. silver per ton. Company not regarded favorably, on account of the extravagant nature of its advertising.

**NIPPER CONSOLIDATED COPPER CO.****MONTANA.**

Office: 42 Broadway, New York, N. Y. F. August Heinze, general manager; Stanley Gifford, secretary and treasurer. Capitalization \$3,750,000; bonded debt, \$2,500,000. Is a subsidiary corporation of the United Copper Co. Lands sold, 1906, to Butte Coalition Mining Co.

**NIPPER MINE.****MONTANA.**

Owned by Butte Coalition Mining Co.

**NISHINOKAWA MINE.****JAPAN.**

Mine office: Oboki-mura, Nii-gori, Iyo, Japan. Property shows lenses of 3' to 12' thickness, in quartz-schists carrying chalcopyrite associated with sphalerite, pyrite, magnetite and hematite, with quartz gangue, assaying 3 to 4% copper. Production was 183,415 lbs. fine copper in 1900; 242,215 lbs. in 1903, and 164,645 lbs. in 1907.

**NIZINA GOLD & COPPER CO., OF ALASKA.****ALASKA.**

Dead. Formerly at McCarthy Creek, Copper River district, Alaska. Described Vol. VII.

**N'KANDHLA SYNDICATE, LTD.****NATAL.**

Office: 1 Great Winchester St., London, E. C., Eng. A. Lee, secretary. Organized March 13, 1902, under laws of Great Britain, with capitalization £2,000, shares £1 par; issued, £1,800. Property was prospecting rights over 4 blocks, each 600 yards square, on the Umhlatuzi river, N'Kandha district, Zululand. Moribund and should be buried.

**NOBLE GOLD MINES, LTD.****MONTANA.**

Dead. Was organized under laws of South Dakota, with capitalization \$1,000,000, shares \$1 par. Lands were 11 claims, area 320 acres, in the Silver Star district, said to carry gold and copper ores, and company claimed to have a mill. Formerly at Sheridan, Madison Co., Mont.

**NOBLE MINING & MILLING CO.****MONTANA.**

Office: 209 Railway Exchange Bldg., St. Louis, Mo. Mine office: Sheridan, Madison Co., Mont. S. M. Kennard, president; J. H. Wyeth, secretary and treasurer; D. H. Noble, general manager. Organized 1887, under laws of Montana, with capitalization \$2,000,000, shares \$10 par.

Lands, 7 claims, area 75 acres, patented, also a 20-acre millsite, in the Wisconsin district, carrying fissure veins in gneiss, of which two 4' veins are developed by a 200' shaft and by tunnels of 16', 200', 333' and 2,150', showing siliceous sulphide ores claimed to average 1.5% copper, 10 oz. silver and \$60 gold per ton. Equipment includes a small hoist and a 2-drill Ingersoll-Sergeant air-compressor. Has a small concentrator and a 10-stamp mill. Presumably idle.

**NOGALES COPPER CO.****ARIZONA & MEXICO.**

Dead. Reorganized, 1904, as Black Mountain Mining Co. Formerly at Nogales, Santa Cruz Co., Ariz. Described Vol. IV.

**NOLANGENI NICKEL & COPPER SYNDICATE, LTD.****CAPE COLONY.**

Mine office: Mount Ayliff, Griqualand, Cape Colony. A. E. Gilson, E. S. Campbell, J. Taylor and Maj. A. Webster, directors; J. P. Johnson, engineer. Capitalization £10,000, vendors taking £200 cash and £7,800 in shares. Lands are 2 areas, bought of E. S. Campbell, showing surface ores assaying up to 0.97% copper and 2.08% nickel. A short tunnel shows chalcopyrite disseminated in pyrite, assaying 7.6% copper and 4.89% nickel.

**NOME-MONTANA-NEW MEXICO****NEW MEXICO & MONTANA.****MINING CO.**

Office: Iron Blk., Milwaukee, Wis. Mine offices: Tusas, Rio Arriba Co., N. M., and Elliston, Powell Co., Mont. Chas. E. Freet, president; Geo. C. Weiss, secretary. Organized 1902, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par. Lands include 8,000 acres of placer ground, on creeks near Nome, Alaska, estimated by company to carry an average of \$1 gold per cubic yard of gravel, which probably is much too high, also 6 claims adjoining the Copper Cliff mine, near Elliston, and 3 claims in the Bromide district of New Mexico, showing copper and lead sulphides. Is said to have a bucket dredge working in Alaska. Montana and New Mexico properties idle. Is not regarded favorably.

**NONESUCH MINE.****MICHIGAN.**

Office: 78 Prospect Ave., Milwaukee, Wis. Mine office: Ontonagon, Ontonagon Co., Mich. A. K. Camp and M. P. O'Brien, owners; Thos. Wilcox, superintendent. Lands, 640 acres. This is the pioneer and principal mine of the Porcupine Mountain district, carrying native copper freely in an argillaceous sandstone-conglomerate. Property was idle for many years, until tested, under option, 1906-1907, through diamond drill borings, by the Calumet & Hecla Mining Co. Very fully described Vol. II.

**NONOALCO REFINERY.****MEXICO.**

Owned by Société Affinage des Metaux.

**SOCIEDAD FRANCÈSCA DE MINAS Y  
FUNDICION DE NONOGASTA.****ARGENTINA.**

Mine and works office: Nonogasta, Rioja, Argentina. Lands include the Andueza, Atacama, Muerto and San Toribio copper mines, also various silver mines, in the Tigre district. Ores of the Andueza are claimed to average 5 to 20% copper, 3 oz. silver and 2 oz. gold per ton, which either is an excessive

estimate, or veins are very narrow. Has steam power and a small smelter, built 1887 to treat dry silver ores, but altered to smelt copper.

**NONPAREIL CONSOLIDATED COPPER CO.**

WASHINGTON.

Mine office: Index, Snohomish Co., Wash. Dr. S. P. Ecki, president; Monroe Harmon, vice-president; F. G. Mahlman, secretary; R. S. McCreery, treasurer. Lands, adjoining the Sunset, show 3 veins, slightly developed.

**NONPAREIL COPPER MINING CO.**

IDAHO.

Office: Wallace, Idaho. Letter returned unclaimed from former mine office, Mullan, Shoshone Co., Idaho. Amos M. Stroud, president and general manager. Lands, 8 claims, patented, across Willow Creek from the Carney, having a tunnel planned to give a back of 700' at length of 1,200'. Surface ores have assayed up to 1.5% copper and 8 to 19 oz. silver per ton.

**NORDDEUTSCHE AFFINERIE.**

GERMANY.

Office and works: Hamburg, Germany. Works have a yearly capacity of about 3,000 metric tons of refined copper. Electrolytic plant includes 600 tanks, with multiple arrangement of electrodes.

**NORMANBY SYNDICATE, LTD.**

AUSTRALIA.

Office: 16 O'Connell St., Sydney, N. S. W., Australia. Mine office: Mount Perry, Bowen Co., Queensland, Australia. J. G. Tait, secretary; W. E. Dent, mine manager. Lands, 240 acres, freehold, known as the Harpur's Hill mine, circa 8 miles northwest of Mount Perry, in the Tenningering district. In 1907 the Lady Jane shaft, having 4 levels, was retimbered, the White shaft was cut down to 3-compartment size and retimbered and the Manning shaft was retimbered, deepened and given a new hoist, and the tunnel was extended 400'. Principal production, 1907, was from Virgin No. 1 and Virgin No. 2 shafts, which yielded good ore. Selected ores, averaging circa 13% copper and 10 to 15 dwts. gold per ton, were sent, first to Aldershot smelter, and later to Mount Perry, for reduction, and company plans building a small smelter at Harpur's Hill. Property considered promising. Employs circa 125 men.

**NORMANTON-CLONCURRY RAILWAY &**

AUSTRALIA.

**COPPER MINES, LTD.**

Dead. Name changed, 1902, to North Queensland Railway Co., Ltd.

**NORSK-BELGISK MINEKOMPANI.**

NORWAY.

Dead. Formerly at Melhus, Flaa sogn, Trondhjem, Norway. Described Vol. VI.

**NORTH ALICE MINING CO.**

MONTANA.

Office and mine: care of John Bielenberg, Butte, Silver Bow Co., Mont. Organized Dec. 8, 1906, under laws of Montana, with capitalization \$1,000,000, shares \$1 par. Presumably idle.

**NORTH AMERICAN COPPER CO.**

NEW MEXICO.

Office: 30 Trust Bldg., Williamsport, Pa. Mine office: Lordsburg, Grant Co., N. M. J. W. Christman, president and general manager; Dr. F. A. Godcharles, vice-president; K. E. Jackson, secretary; D. F. Dieffenbacher, treasurer; preceding officers, J. W. Villinger, Samuel Stabler, C. E. Heller, G. M. Metzger, W. Hager and C. A. Barron, directors. Organized Apr. 30, 1906, under laws of Arizona, as successor of North American Mining Co., with capitalization \$750,000, increased later to \$1,000,000, shares \$1 par; issued, \$748,000. Annual meeting, last Monday in April.

Lands, 280 acres, in the Pyramid district, including the Nellie Bly and Cobra Negra groups, showing fissure veins in porphyry carrying argentiferous copper oxides, carbonates and sulphides, giving assays up to 18% copper, 15 oz. silver and \$10 gold per ton, said by company to average 5.5% copper, the ore body being stated, by an observer not connected with the company, to carry flakes of copper in absolutely unpayable percentages.

Equipment includes steam power, with a hoist good for 1,000' depth, sev-

eral mine buildings and 4 dwellings. Company shipped, 1907, to El Paso and Douglas smelters, 98 carloads of ore netting \$43,333.36. Company plans moving the Lena concentrator to the Nellie Bly mine, and deepening the shaft 300'.  
**NORTH AMERICAN COPPER CO.**

**OREGON.**

Office: Baker City, Ore. Mine office: Burkemont, Baker Co., Ore. A. B. Spencer, president; W. G. Drawley, vice-president; D. W. C. Nelson, secretary, treasurer and general manager. Organized circa 1907, with capitalization \$3,000,000, shares \$1 par, as a reconstruction of the North American Mining Co., which was organized, 1905, as a reconstruction of a company organized 1898 under same title. Has authorized a \$25,000 bond issue.

Lands, 26 claims, 4 patented, also 440 acres of timber land, circa 25 miles northeast of Baker City, showing a mineralized zone up to 500' in claimed width, opened by numerous pits and trenches, and by a 2-compartment incline main shaft, circa 300' deep, said to have cut several low grade bodies of copper ore carrying circa \$5 per ton in combined silver and gold values. Property shows auriferous and argentiferous ores of copper assaying up to 10% in copper tenor, also a little native copper.

Equipment includes a first-motion hoist and a small air-compressor. The old management lied atrociously in its advertisements, until the reorganization in 1905, but apparently the new officials have no connection with the old management.

**NORTH AMERICAN COPPER CO.****WYOMING.**

Dead. Succeeded by Penn-Wyoming Copper Co. Formerly at Encampment, Carbon Co., Wyo. Fully described Vol. IV.

**NORTH AMERICAN EXPLORATION CO.****ARIZONA.**

Mine office: Gilbert, Yavapai Co., Ariz. Geo. W. Middleton, superintendent. Ores carry gold and copper. Idle some years and apparently moribund.

**NORTH AMERICAN EXPLOITATION CO.****ARIZONA & MONTANA.**

Office: 327 New York Life Bldg., Chicago, Ills. William R. Everett, president; Chas. W. Cheney, vice-president; Davis Ewing, secretary; Western Trust & Guaranty Co., treasurer; Frank F. Day, managing director; Frank A. Summerville, assistant general manager. Capitalization \$10,000,000, shares \$1 par. Controls, or did control, under lease, the Rambler Mining & Smelting Co., of Wyoming, Mormon Girl Mining Co., of Arizona, Bradshaw Mining Co., of Arizona, and sundry gold mining companies. The North American Exploration Co. claimed to own 54% of the Rambler stock, 91% of the Bradshaw and 96% of Mormon Girl stock. Company has sold stock on a special repayment contract, alleging that under these terms investments will be repaid in full, with interest, and that the stock is certain to advance immediately upon the installation of smelters. The plan of promotion is a self-evident delusion, as no corporation, even those of the most philanthropic intent, sells stock that is backed by a thoroughly sound guaranty. Stockholders must take their chances, and a guaranteed stock always should be viewed with distrust. Company claimed, in an advertisement, March, 1906, to have 40,000 tons of ore developed, ready for smelting, and to plan installing copper furnaces, of some patent design, at each property, in the near future, notwithstanding which the Mormon Girl property, controlled by this company, was sold for debt, early in 1906, this property bringing the truly magnificent price of \$400, cash, at sheriff's sale. The Rambler Mining & Smelting Co. has been reorganized. Company is regarded with deep suspicion as a mere bit of stock-jobbery, or something worse.

**NORTH AMERICAN LEAD CO.****MISSOURI.**

Office: -824 Columbus Savings & Trust Bldg., Columbus, Ohio. Mine office: Fredericktown, Madison Co., Mo. Jos. F. Davidson, president; E. A. Cole, vice-

president; Wm. D. McCullough, secretary; V. Hybinette, assistant general manager; preceding officers and N. Gumble, directors. Employs 400 men. Organized 1906, under laws of Ohio, with capitalization \$2,000,000, shares \$100 par, divided into 5,000 shares of 8% preferred and 15,000 shares of common stock, of which 3,500 shares preferred and all common stock are issued. Bonds, \$150,000 authorized, at 6%; issued, none.

Lands, 2,000 acres, about 2 miles east of Fredericktown, including the old Buckeye copper mine, which, circa 1860, was worked in a small way for copper. Property is a short distance southeast of the celebrated Mine La Motte, country rock being magnesian limestone, with porphyritic intrusions, carrying practically horizontal blanket veins, the ore body having a width of about 500' and being traceable about 4 miles, carrying chalcopyrite, linneite, galena and marcasite, estimated by company to average 5% copper, 4% lead, 2% nickel and 1% cobalt.

The predecessor of the present company opened, circa 1901, a new lead mine, northeast of the old copper mine, and, in addition to opening one of the best lead mines in southeastern Missouri, also has a very extensive body of copper-nickel-cobalt-lead ore. The mine has shafts of 280', 200' and 125', with a total of about 5,000' of workings, and is estimated to show about 1,000,000 tons of workable ore.

Equipment is excellent, including a 2,000-h. p. steam plant, 600-kw. electric plant and 350-h. p. air plant, 2 hoists, and Norwalk and Laidlow-Dunn-Gordon air-compressors of 50 drills combined capacity.

The reduction plant includes a 500-ton lead concentrator and a copper smelter, latter, begun July, 1906, and completed late 1907, having been built on the plans and under the supervision of Mr. Hybinette, who was general manager of the Orford works for 10 years, and was the inventor of the greater part of the processes for nickel reduction used at those works, which unquestionably lead in the metallurgy of nickel. Several new processes and modifications of old processes were devised by Mr. Hybinette for the North American plant, which has shaft-furnaces, and a complete electrolytic refinery, for the making of both copper and nickel.

The company has a 2-mile standard-gauge railroad, with one locomotive, connecting with Iron Mountain railway at Fredericktown.

Production includes varying quantities of lead concentrates, also high grade electrolytic copper, electrolytic nickel in cathodes, cobalt oxide and lead concentrates, amounting, 1907, to 125,000 lbs. electrolytic copper, 50,000 lbs. electrolytic nickel and 15,000 lbs. cobalt oxide monthly. Production, 1908, was circa 500,000 lbs. fine copper. Property considered valuable and management good.

**NORTH AMERICAN MINING CO.**

**NEW MEXICO.**

Dead. Succeeded, 1906, by North American Copper Co. Formerly at Lordsburg, Grant Co., N. M. Fully described Vol. VI.

**NORTH AMERICAN MINING CO.**

**OREGON.**

Dead. Succeeded, circa 1907, by North American Copper Co. Formerly at Burkemont, Baker Co., Ore. Fully described Vol. VI.

**NORTH AMERICAN PROSPECTING & MINING  
ASSOCIATION.**

**COLORADO.**

Office: 405 Temple Court Bldg., Denver, Colo. Mine office: White Pine, Gunnison Co., Colo. Chris. C. Sierk, president and general manager; Jas. T. Chase, secretary. Lands, 60 acres, showing 7 contact veins, between limestone and shale, said to give average assays of 2% copper, 25% lead and 20% zinc, from carbonate and sulphide ores. Has water power and a small concentrator, making 55% zinc concentrates and 55% lead concentrates, carrying copper and gold values, when working. Idle.

**NORTH ARKANSAS ZINC, LEAD, COPPER,  
SILVER & GOLD MINING CO.** **ARIZONA, ARKANSAS  
& CALIFORNIA.**

Dead. Formerly at Morristown, Maricopa Co., Ariz. Described Vol. VII.  
**NORTH BAY SMELTER.** **ONTARIO.**

Owned by North Ontario Reduction & Refining Co., Ltd.  
**NORTH BISBEE DEVELOPMENT CO.** **ARIZONA.**

Office and mine: Bisbee, Cochise Co., Ariz. H. S. Jones, president; W. E. Davis, vice-president; Oscar Zapf, secretary; E. H. Clark, superintendent. Organized Apr. 19, 1906, under laws of Arizona, with capitalization \$600,000. shares \$3 par, increased, Apr. 9, 1907, to \$999,999, shares \$3 par. Lands, 23 claims, area 400 acres, in Tombstone Cañon, near the Mountain View Development Co., circa 4 miles northwest of Bisbee, opened by a shallow shaft and a 260' tunnel, showing ore assaying up to 19.7% copper, with small gold and silver values. Has gasoline power.

**NORTH BURRO COPPER MINING CO.** **NEW MEXICO.**

Office: Silver City, N. M. Mine office: Leopold, Grant Co., N. M. Geo. Sublett, manager. Lands, 14 claims, adjoining the National Copper Mining Co., in Whitewater Cañon, Burro Mountains.

**NORTH BUTTE EXTENSION COPPER MINING CO.** **MONTANA.**

Office: 1911-74 Broadway, New York, N. Y. Mine office: Butte, Silver Bow Co., Mont. W. T. Van Brunt, president; Thos. Lavell, vice-president; Fayette Harrington, secretary and treasurer; D. S. Harding, assistant secretary and treasurer; G. A. Lauzier, managing director; preceding officers, Geoffrey Lovell, Chas. Passmore and Wm. McDermott, directors; John A. Ryan, superintendent. Organized October, 1906, under laws of Arizona, with capitalization \$5,000,000, shares \$5 par, as North Butte Extension Mining Co., and name changed, January, 1907, to present title. Is said to have circa 2,500 shareholders. In August, 1908, contemplated an issue of \$400,000 five-year 6% bonds, but apparently was unable to place same.

Lands originally were 4 claims and 2 millsites, area 55 acres, lying north of the Butte & London and supposed to carry the extension of the Black Rock vein. In March, 1908, the company added the Michigan and Third Sphinx claims, on which options were extended, October, 1908. The company allowed its options on the Occidental and Free Trade claims to lapse, 1908, after payment of \$90,000 on the bonds. Apparently the only property owned outright is the Black Crow fractional claim, of circa 2½ acres area, and the Clipper and Assay millsites.

Development was by a 600' shaft, planned to have been sunk to 1,000', which proved to be quite wet. A crosscut on the 300' level showed a small vein, slightly mineralized, and on the 520' level a plat, cut April, 1908, showed a stringer of 2" to 18" width, carrying ore assaying up to 20% copper, 3 oz. silver and 50 cents gold per ton.

The company planned a large electric installation, including a double-drum hoist, air-compressor and pump, but failed to get it.

A curb pool in the stock of this company was badly nipped, through the dumping of shares held by a bank, as collateral for a loan, hence the property has few friends among the New York curb brokers, who rest under the impression that they were handled a package, by friends in Butte.

It is alleged that G. A. Lauzier, vendor, made a contract, Jan. 17, 1907, with W. T. Van Brunt, the president, giving an option on 700,000 shares at 76 2/7 cents per share, and that, by conspiracy, false and fictitious shares, to the amount of 222,150, were issued from the treasury, with a further over-issue of 100,000 shares, held by Lauzier, and there also is alleged a misappropriation of \$50,000.

The first bankruptcy proceedings begun against the vendors were settled

in the company's favor, but a second series was started. Both Lauzier, the vendor, and John A. Ryan, the manager, sued the company.

In October, 1908, sundry interests planned a reorganization, under the laws of Maine, with capitalization \$1,500,000, shares \$1 par, these plans calling for the elimination of the entire former directorate, which is in exceedingly bad odor with investors. The title selected for the proposed reorganization was North Butte Extension Development Co., and the plan of reorganization called for the issue of 1,000,000 shares of stock in the new corporation, in exchange for old shares on a parity, plus payment of a 50-cent assessment, in 2 installments, the first money to be turned over to the old company for settlement of its debts, which are pressing. The company owed, late 1907, a large balance on its bonds on 2 claims, in addition to floating indebtedness estimated at \$125,000, but, on June 27, 1908, the floating debt, amounting to circa \$70,000, was partially met by the sale of notes. The entire proposition has been badly handled, and everybody connected with it comes out with a smirched reputation, while some of the principals can congratulate themselves as lucky in having escaped jail.

#### **NORTH BUTTE EXTENSION MINING CO.**

#### **MONTANA.**

Dead. Was organized October, 1906, under laws of Arizona, with capitalization \$5,000,000, and title changed, January, 1907, to North Butte Extension Copper Mining Co. Formerly at Butte, Silver Bow Co., Mont.

#### **NORTH BUTTE MINING CO.**

#### **MONTANA.**

Office: 508 Lyceum Bldg., Duluth, Minn. Mine office: Butte, Silver Bow Co., Mont. Employs circa 900 men. Capt. Jas. Hoatson, president; Chas. A. Duncan, vice-president and treasurer; Jos. Cotton, second vice-president and solicitor; preceding officers, Wm. J. Olcott, John Uno Scbenius, Chester A. Congdon, James Gayley, Thomas F. Cole and Daniel M. Clemson, directors; Frederic R. Kennedy, secretary; Arthur C. Carson, general manager.

Organized Apr. 5, 1905, under laws of Minnesota, with capitalization \$9,000,000, shares \$15 par; issued, \$6,000,000. American Loan & Trust Co., Boston, transfer agent; Old Colony Trust Co., Boston, registrar. Shares are listed on the Boston Stock Exchange. Has about 5,000 shareholders.

Dividends have been as follows: \$1.25 per share in 1905; \$7.25 per share in 1906; \$6 per share in 1907; \$8 per share in 1908; a total of \$17.50 per share, or \$7,000,000, for four years' operations. Last regular dividend was passed at end of 1907, owing to depression in the metal market. Net earnings, 1907, were \$2.14 per share. Company ended 1908 earning at the rate of about \$7 per share per annum. Balance sheet, at end of fiscal year March 31, 1907, gave actual cost of lands at \$7,211,277.

Lands are circa 200 acres, mainly owned outright, but with some small fractional interests outstanding, in the case of several properties. The tract is as compact as could be expected in a district where claims are so irregularly located as in Butte, with small fractions so valuable as is the case. Holdings include the following claims: Speculator, Edith May, Jessie, Adirondack, John Emmett, Berlin, Ground Hog, Gustavus, East Gem, West Gem, Copper Dream, Croesus, Miners' Union, Eva, Emily, Snow Ball, Margaretha, Hancock, Lynchburg and Mill View. Several small fractional interests were exchanged, 1907, with the Davis-Daly Estates Copper Co. The Berlin group includes 5 claims, and the Ground Hog claim is a small 700' fraction between the Jessie and Hancock. The lands are in the northern part of the proven portion of the Butte district, near the Anaconda and Boston & Montana mines.

The North Butte is the largest single mine in the camp, and also mines the highest average grade of ore of any Butte mine. The ore is typical of the Butte district, including much high grade chalcocite, frequently massive, but mainly disseminated, with considerable quantities of enargite, and smaller

proportions of other secondary sulphides and chalcopyrite. All ores are more or less argentiferous, frequently carrying high silver values.

Development is mainly on the Speculator, Jessie and Edith May properties, the lands carrying about one-half mile of the Edith May vein. All ore is raised through the Speculator shaft, and the mines are connected underground with the High Ore mine of the Anaconda, and the new Badger State shaft of the Boston & Montana. The old Speculator shaft, taken over in bad condition, was cut down to 4 compartments, and entirely retimbered, in 19 weeks, in 1905, during which time ore was hoisted through the High Ore shaft. The Speculator shaft, 1,700' deep when the property was taken over, 1905, is now 2,240' deep, with levels opened at 200' intervals, from the 1,400' to 2,200' levels inclusive. At the end of 1908 stoping was in progress on the 1,400', 1,600' and 1,800' levels, with development in progress on the 2,000' and 2,200' levels. This shaft develops the Speculator, Edith May, Gem and Jessie veins.

The veins are treacherous, requiring heavy timbering and close attention, square sets being employed throughout, with monthly timber requirements of about 1,000,000', board measure. No waste is hoisted, all ore being sorted underground, and culs used for dry filling. Cull material is largely low grade ore, a considerable portion of which probably will be available for smelting at some future date, and can be extracted merely by loading. On Apr. 1, 1907, the mine had about 18,000' of workings, and 6,961' of new workings were made in 1907. The company ended 1907 with 4 years' ore reserves, and at the end of 1908 had ore reserves of at least 8 years, the openings on the 2,000' and 2,200' levels at least doubling the amount of former reserves, with every prospect of immense bodies of exceptionally rich ore at greater depth. The first ore was hoisted September, 1908, from the 2,200' level.

The Edith May vein, the principal ore body of the property, as now developed, is 18' to 42' in width, carrying phenomenally high grade ores. This vein is opened at 200' intervals from the 800' to the 2,200' levels, carrying much chalcocite and bornite, with considerable enargite, the vein increasing in richness at depth, the north drift on the 1,800' level of the Edith May vein being the show stope of Butte, and one of the most phenomenal stopes ever opened in any copper mine. The Edith May vein divides east of the shaft, and on the 1,600' and 1,800' levels shows no commercial ore in the south branch, but apparently these branches should unite, some distance west of the shaft.

The Jessie mine has an old and idle 500' shaft, extraction being through the Speculator, which reaches the Jessie vein by crosscuts. The Jessie shows a well-mineralized 12' vein, with a paystreak of high grade chalcocite on the 1,600' level.

The Gem mine has an old 700' shaft, now idle, and to all practical purposes may be considered a portion of the Jessie workings.

The Miners' Union claim, reached on the 1,600' level through the Speculator shaft, via the Edith May vein, shows a fine body of high grade ore.

The Ground Hog mine, reached from the Jessie workings, shows good ore on the 1,600' level.

The Adirondack mine has an old 500' shaft, and presumably will be opened by crosscuts from the Speculator shaft.

The Berlin mine, to the north of the Speculator, Edith May, Gem and Jessie, has an old 350' two-compartment shaft, out of commission, and a new shaft of larger capacity is planned. The Berlin has been opened from the Speculator shaft by crosscuts on the 1,000' and 1,200' levels, showing rather disappointing ore of low average grade, but, late 1908, crosscutting was in progress on 3 levels, from the Speculator shaft, for the Berlin vein, the 1,800'

crosscut showing low grade ore. The Berlin, however, should prove to carry higher grade ore with further development.

The Speculator shaft has a 128' steel gallows-frame, standing on a 41x60' concrete foundation, having self-dumping skips and pockets with a daily capacity of circa 1,500 tons of ore, as no waste is hoisted, all being used to advantage for underground filling.

The engine-house has a 20-ton traveling crane and a 32x72" Nordberg duplex-cylinder hoist, operating two cages in counterbalance, with two 8-ton Kimberley skips swung under each, hoisting with 1½" steel cable, and is capable of raising 2,000 tons daily from an average depth of 2,000', with capacity to hoist from a depth of 3,500'. An 18x36" duplex-cylinder hoist operates a double-deck cage in a third compartment, for handling men, material and timber, and the shaft has a fourth compartment for ladder and pipes.

The compressor-house, 24x70' in size, has a 40-drill air-compressor, with piston efficiency of 3,282 cubic feet of free air per minute reduced to a pressure of 70 lbs. per square inch.

The boiler-house has two batteries of boilers, including boilers of 500 h. p. capacity installed late 1907.

Ore is smelted by the Washoe works of the Anaconda. The original 3-year contract, made 1905, was renewed for 3 years June 1, 1908, the new contract reducing the cost of smelting by about \$1 per ton, and providing for settlements on the basis of the average price of copper for the third month after delivery of ore, on the 14th day of the month, which is advantageous on a rising market, but disadvantageous on a falling market. The North Butte contract with the Washoe smelter permits the North Butte to supply the smelter to one-fifth of its capacity, which nominally is 10,000 tons, and actually is nearly or quite 12,000 tons, providing for smelting an output from the North Butte of 2,000 to 2,400 tons daily, which is beyond the present possible productive capacity of the mine, with a single shaft. The Butte Reduction Works treated some ore for the North Butte, when the Washoe works were closed, 1907-1908.

Relations between the North Butte and the Amalgamated Copper Co. are very close and cordial. While this may prove to the disadvantage of the company at such times as the Amalgamated interests see fit to hold the umbrella over the metal market, there can be no question that, on the whole, the North Butte is in better position for being on such friendly terms with its powerful neighbor.

Production for fiscal years ending March 31 has been as follows: 30,954,788 lbs. in 1906; 32,865,907 lbs. in 1907; 16,520,062 lbs. in 1908. For calendar year 1908 the production was circa 37,500,000 lbs. Production was curtailed for the fiscal year ending March 31, 1907, by repairs on the shaft and the installation of a new hoisting plant, and for fiscal year ending March 31, 1908, production was greatly curtailed by suspension of output late in 1907 until early 1908. Company shipped, for last 3 quarters of 1908, circa 1,400 tons daily of ore returning 3,500,000 to 4,000,000 lbs. fine copper monthly.

Gross earnings and net profits, after the deduction of all expenditures for improvements, have been as follows, for fiscal years ending March 31: \$5,005,788 gross earnings, from copper, silver and gold produced, with net profits of \$2,720,670, in 1906; gross earnings of \$6,694,844 and net profits of \$3,623,162 in 1907; gross earnings of \$2,703,971 and net profits of \$857,880 in 1908. Company ended fiscal year March 31, 1908, with \$174,774 cash on hand, with accounts receivable of \$10,620, and accounts payable of \$74,412.

Returns to the State of Montana, for year ending June 1, 1908, gave a production of 284,003 short tons of ore, with average gross values of \$11.36 per ton, with gross proceeds of \$3,224,763 and net profit of \$1,113,647. Costs were

\$3.49 per ton for mining and \$3.76 per ton for reduction, with average cost of \$7.43 per ton. Apparently the gross costs for refining, freight and selling charges are about 2.05 cents per lb. Mining costs, for year ending June 1, 1908, of \$3.49, were \$1.40 per ton lower than for the preceding year, and mining costs are said to have been reduced to \$2.70 per ton, which is a very creditable figure. Costs for July, 1908, were 7.35 cents per lb. of copper, with average extraction of about 6.5%, or about double the average of the Anaconda, and costs were said, October, 1908, to be between 7 and 8 cents per lb. Production includes circa 150,000 oz. silver monthly, with considerable gold values, on a basis of 1,400 tons of ore daily, or nearly \$1,000,000 yearly returns from the precious metals.

Apparently the company's ores returned an average of about 5% copper only, for fiscal year ending March 31, 1907, as against 7% in the preceding year, but this apparent decline in values was due to the policy of the company in extracting largely second class ores, during the era of high prices for copper. This policy greatly increased the gross cost per lb., but secured a handsome profit on ores that would net the company nothing during a period of low prices. While this policy is criticized, it seems fundamentally sound, as it permits the profitable extraction of much ore that otherwise would be unavailable.

The North Butte is capable of making nearly or quite the cheapest copper produced from any mine in the camp. The company has been criticized for its smelting contract with the Anaconda, but a careful consideration of the facts leads to the conclusion that its contract is advantageous, rather than the reverse, to the North Butte Mining Co. The property is capable, with its present equipment, of producing, at its full capacity, from high grade ores, nearly or quite 60,000,000 lbs. fine copper yearly, but is following a better policy by extracting considerable quantities of medium grade ores in periods of low prices for copper, and large quantities of low grade ores in times of high copper prices. The North Butte is a magnificent property, and is excellently managed.

#### **NORTH BUTTE MOUNTAIN COPPER CO.**

**MONTANA.**

Letter returned unclaimed from former office, 803-43 Exchange Place, New York, N. Y., and from former mine office, Butte, Silver Bow Co., Mont. Thos. A. Marlowe, president; Chas. M. Webster, vice-president; J. L. Smith, treasurer; E. L. Mayo, secretary and manager; preceding officers, F. E. Kessler, H. L. Wilson, Thos. Bryant, M. S. Largy, T. B. Miller and H. R. Cunningham, directors; Jas. E. Higgins, superintendent. Organized April, 1906, under laws of Montana, with capitalization \$5,000,000, shares \$5 par. Lands, 8 claims, area circa 150 acres, lying north of Walkerville and northwest of the Butte & Bacorn, including the J. I. C. group, 8 claims, circa one mile north of the Jessie mine of the North Butte, said to have a good surface showing, with 5 veins, one of which, of 7' estimated width, shows a little copper and silver, at depth of 35'. Lands are said to include 9 distinct veins, with one, of 6' to 8' width, giving surface assays of 0.2 to 1.25% copper, 6 to 14 oz. silver and \$4 to \$6 gold per ton. Idle at last accounts, but said to have cash on hand, and to plan resumption.

#### **NORTH BUTTE SUMMIT COPPER MINING CO.**

**MONTANA.**

Dead. Was organized January, 1907, by residents of Butte. Lands were 7 claims, in the Lost Child district, circa 5 miles northeast of Butte, showing ore giving assays of 1.3% copper. Formerly at Butte, Silver Bow Co., Mont.

#### **NORTH CAROLINA & VIRGINIA DEVELOPMENT CO.**

**NORTH CAROLINA & VIRGINIA.**

Dead. Formerly at Virgilina, Halifax Co., Va.

**NORTH CERRO MURIANO COPPER MINING CO., LTD.** SPAIN.

Office: 6 Queen Street Place, London, E. C., Eng. Mine office: Estación de Cerro Muriano, Córdoba, Spain. Lord Vaux, chairman; Richard Eshott Carr, resident agent; John Taylor, manager; preceding officers, J. P. Champney and Edgar Taylor, directors; W. H. Rundall, resident agent; H. F. Collins, mine superintendent; F. H. Williams, secretary. Organized March 8, 1906, under laws of Great Britain, with capitalization £250,000, shares £1 par; issued, £134,000 fully paid and £116,000 having 16s. per share paid in. Property was bought for £159,500, paid £29,500 cash and £130,000 in shares.

Lands, 155 hectares, adjoining the Cerro Muriano Mines, Ltd., circa 10 miles from Córdoba, showing extensive traces of ancient workings, presumably dating from Roman times. To June 30, 1907, company had made 2,873' of workings.

**NORTH CERRO MURIANO COPPER MINING CO., LTD.** SPAIN.

Dead. Was succeeded, March 8, 1906, by North Cerro Muriano Copper Mines, Ltd. Formerly at Cerro Muriano, Córdoba, Spain. Described Vol. VI.

**NORTH COAST MINING & MILLING CO.** WASHINGTON.

Office: 508 Bankers Trust Bldg., Tacoma, Wash. W. W. Shenk, president; W. H. McAllister, vice-president; A. M. Richards, secretary and treasurer. Organized Jan. 2, 1908, under laws of Washington, with capitalization \$1,500,000, shares \$1 par. Lands, 3 groups, on Thunder Creek, in Whatcom and Skagit counties, Washington, said to carry 2 parallel veins of bornite and silver-lead ore.

**NORTH COAST MINING & REDUCTION CO.** WASHINGTON.

Office: 547 First National Bank Bldg., Chicago, Ills. Mine office: Darrington, Snohomish Co., Wash. J. W. McCoy, president; J. C. Moorehouse, treasurer; Glenn M. Deuel, secretary. Organized under laws of Arizona, with capitalization \$5,000,000. Has authorized a \$300,000 bond issue.

Lands, 300 acres, on Gold Mountain, known as the Chickamun-Forest group, claimed by company to have upwards of 2,000' of tunnels, exposing more than \$7,000,000 worth of ore, which is an overestimate, and to be capable of producing upwards of 5,000 tons of ore daily, which is a ridiculous perversion of the truth. Claims to plan a 500-ton mill. Advertisements make preposterous claims, and apparently company is merely a stock-jobbing enterprise.

**NORTH COPPER CO., LTD.** SWEDEN.

Office: 24 Queen Victoria St., London, E. C., Eng. W. Watson Rutherford, M. P., chairman; Andrew Findlay, secretary. Organized July 4, 1906, under laws of Great Britain, with capitalization £1,000,000, shares £1 par, half preferred and half deferred ordinary shares. Lands are 12 copper and zinc claims, area circa 100 acres, and the Inglamala iron mines, in the Province of Småland, Sweden.

**NORTH COAST COPPER CO.**

Office: Everett, Wash. Location of lands, if any, unknown.

**NORTHEAST BUTTE COPPER MINING CO.** MONTANA.

Letter returned unclaimed from former mine office, Butte, Silver Bow Co., Mont. Organized Feb. 8, 1906, under laws of Oklahoma, with capitalization \$1,000,000, shares \$1 par, by Martin P. Winston and others. Lands are north and west of the Butte & Bacorn. Idle.

**NORTHERN COPPER (B. S. A.) CO., LTD.** RHODESIA.

Office: Salisbury House, London, E. C., Eng. Mine office: Bulawayo, Rhodesia, South Africa. Lord Gifford, V. C., chairman; preceding officer, E. Davis, H. Wilson Fox and P. C. Tarbutt, directors; Bechuanaland Exploration Co., Ltd., and name changed June, 1899, to present title, with capitalization Thos. D. Davey, resident engineer; Tom Donald, secretary. Organized Feb. 16, 1895, under laws of Great Britain as Northern Territories (B. S. A.) Exploring

Co., Ltd., and name, changed June, 1899, to present title, with capitalization £250,000, shares £1 par; issued, £178,000. Debentures, £45,900 outstanding, at 6%; issued 1903, redeemable at £105, December, 1908, and convertible, when fully paid, into £10 shares, on one month's notice, in writing.

The company large share interests in the Rhodesia Copper Co., Ltd., also in the Kafue and other corporations. Apparently the Bwana M'Kubwa mine, formerly owned by this company, has been sold to a subsidiary corporation, the Northern & General Syndicate, Ltd. Owing to the interchange of share ownerships between these different companies, it is extremely difficult to arrive at their true status, such vast and loose financing rendering the work of investigation extremely difficult, while the various companies give reports upon the properties in which they are interested, without detailed explanation of whether such properties are owned outright, or are merely interests owned through holding shares in other corporations possessing direct title.

Lands, originally were 500 square miles, near the Zambesi river, also 12,000 acres of coal lands and 220 gold claims in the Umnati and Guay districts, but 500 square miles were sold to the Rhodesia Copper Co., Ltd., leaving 5 blocks of 10 square miles each, on either side of the northern reach of the Kafue river, scattered over an area of 160 miles east and west by 100 miles north and south. Lands include the Silver King, Sable Antelope, North Star, Maurice Gifford, True Blue, Wonder Rocks, Crystal Jacket, Blue Jacket, Bob, Lou-Lou, Sugar Loaf, Lishambika, Inyarka, Kwemba, Hippo, and Beehive, in the main concession, also the Chanobi concession of 10 square miles, southeast of the main concession. Of the 11 so-called mines, but 3 are really worthy the name, these being the Chanobi, Silver King and Sable Antelope, the two latter being small, pockety mines. Apparently the lands are being prospected in connection with the Rhodesia Copper Co., Ltd.

The principal copper deposits so far located are at and near sundry ancient workings, located in a belt of limestone, about 10 miles wide, running nearly north and south for almost the entire length of the concession. The limestone belt is flanked and sometimes intruded by talcose, quartzose and micaceous schists, and by granite, feldspar and quartz-porphyrries, the copper occurring as irregular deposits in limestone, and in veins traversing schists, with oxidation at surface, the predominant ores being tetrahedrite and chalcocite, with occasional bornite and chalcopyrite, the ores in schists being more highly oxidized than those in limestone. The company has secured ores in greater or less quantities, ranging from 2.5 to 50% copper tenor, and also has ores of lead and zinc, sundry gold claims and a 12" to 24" seam of bituminous coal, with indications of the existence of larger coal measures of better quality.

The company's main camp is at the Silver King mine, in south latitude 14° 36' 11" and east longitude 26° 55', twelve miles south of the northerly reach of the Kafue river. The main shaft was 205' deep at last accounts, the ore body, which apparently is a lense, pinching out before the bottom of the shaft was reached, with the possibility that other lenses will follow.

The Chanobi mine, 45 miles from the Silver King, has 5 shafts on 4 separate outcrops. No. 1 shaft is 100'; No. 2 outerop has a north shaft of 92' and a south shaft of 98', latter showing favorable copper values at bottom; No. 3 outerop has a 78' shaft showing chalcopyrite and occasional chalcocite; No. 4 outeron shows copper carbonates on surface. Apparently the various outcrops are of the same small sulphide vein. The Chanobi has a warehouse, and a compound for native workmen.

The Sable Antelope has 3 shafts, showing high-grade chalcopyrite in a vein of 20' width, on the 50' level.

The Hippo mine has a 99' shaft, showing from depth of 34' to 99' a good vein of 4' 8" average width, assaying 21.36% copper and 2.4 dwts. to 13 dwts.

gold per long ton. A second shaft, of 100', seems not to have developed anything of especial promise.

The True Blue mine has steam power and a pump. The Sugar Loaf mine has an immense ore outcrop standing 120' high, and a tunnel showing a considerable body of low-grade copper ore. No. 3 shaft of the Blue Jacket mine, 138' deep, shows carbonate copper ores and chalcopyrite.

Transportation is by traction engines to the nearest railroad, which is planned to reach the Kafue river eventually, and probably will touch the mines.

The management seems good, and some of the copper properties are considered promising, but further extensive development will be required before the company can become a producer, with any reasonable degree of safety, none of the properties having been opened to sufficient depth to give assured tonnage.

#### NORTHERN EXPLORATION CO.

#### BRITISH COLUMBIA.

Office: 655 New York Blk., Seattle, Wash. Mine office: Gribbell Island, Skeena River division, Cassiar district, B. C. Capitalization \$500,000, shares \$1 par. Presumably idle.

#### NORTHERN & GENERAL SYNDICATE, LTD.

#### RHODESIA.

Office: 19 St. Swithin's Lane, London, E. C., Eng. H. T. Adams, secretary. Organized Apr. 12, 1905, under laws of Great Britain, with capitalization £13,050, in 13,000 ordinary shares of £1 par and 1,000 deferred shares of 1s. par. Was organized to take over the Bwana M'Kubwa mine of the Rhodesia Copper Co., Ltd., but apparently has done nothing with same.

#### NORTHERN LIGHT COPPER CO.

#### NEVADA.

Mine office: Yerington, Lyon Co., Nev. Lands, 6 claims, said to carry 3,000' of the strike of a vein of sulphide copper ore 5' wide on the 150' level. Is developing by shaft.

#### NORTHERN MINING & SMELTING CO.

#### SOUTH AUSTRALIA.

Mine office: Mount Rose, South Australia. Lands, in the Lehigh's Creek district, circa 2 miles north of Mount Rose and about 66 miles northeast of the Blinman mine, show good gassans carrying considerable malachite and some azurite. Apparently ore occurs in 2 or 3 short pipe veins, with steep westerly dip, ore being mainly sulphide, including chalcocite and chalcopyrite, associated with pyrite in a gangue of micaceous slaty shale. Development is by shafts of 60', 78' and 198'. To February, 1906, property, under various ownerships, had produced 370,720 lbs. fine copper. Production, last half of 1907, was 51 long tons of ore shipped, yielding 17 long tons 17 cwts. fine copper.

#### NORTHERN ONTARIO CONSOLIDATED COPPER CO., LTD.

#### ONTARIO.

Office: Sault Ste. Marie, Ont. Mine office: Dean Lake, Algoma, Ont. Dr. John H. Gimby, president; A. Cyril Boyce, M. P. P., treasurer; Uriah McFadden, secretary; preceding officers, Dr. W. E. Gimby, A. A. Burk, A. Jury, R. W. Freemuth, Dr. W. H. Preston and A. B. McMahon, directors; J. A. Montague, superintendent. Organized 1906, under laws of Ontario, with capitalization \$1,500,000, shares \$1 par, as successor of Northern Ontario Copper Co., Ltd.

Lands, 768 acres, in the townships of Thompson and Cobden, including the Lizert and Bronson mines, showing 2 contact veins, of about 9' width, one being between clay-slate and a trap dyke, with intrusions of granite and quartzite, slate, granite and trap being impregnated, near the contact, with slightly auriferous and argentiferous chalcopyrite, of low average tenor. No. 1 shaft, 9x16', with 3 compartments, on the south vein, is 130' deep, showing ore assaying 4.6% copper, 2.5 oz. silver and \$1 gold per ton. To end of 1907 made several small shipments to Chicago, returning 13.83% copper. Has necessary mine buildings and planned, 1906, a smelter. Presumably idle.

**NORTHERN ONTARIO COPPER CO., LTD.**

ONTARIO.

Dead. Succeeded, 1906, by Northern Ontario Consolidated Copper Co., Ltd. Formerly at Dean Lake, Algoma, Ontario. Described Vol. VI.

**NORTHERN SIERRA MADRE MINING CO.**

MEXICO.

Mine office: Suaqui de Batuc, Ures, Sonora, Mex. Lands are 2 copper properties, La Reina de Cobre and Providencia, and a silver-lead mine, known as El Colosus, lying circa 25 miles west of Suaqui de Batuc. Idle and apparently moribund.

**NORTHERN TERRITORIES MINES OF AUSTRALIA, LTD.** AUSTRALIA.

Office: Broad Street House, London, E. C., Eng. Mine offices: Palmerston, Northern Territories, South Australia, and Dundas, Montagu Co., Tasmania. H. J. Nevill, chairman; T. I. Dyson, manager; H. Simpson, secretary. Organized Jan. 25, 1905, under laws of Great Britain, as a reconstruction of Northern Territories Mining & Smelting Co., Ltd., with capitalization £175,000, shares 10s. par; issued, £160,003.

Lands are in two groups, in South Australia and Tasmania, including the Howley mine and adjoining properties, area 604 acres, circa 70 miles from Palmerston and 113 miles by rail from Port Darwin. The copper properties of this group include the Mount Ellison mine, opened by a 143' shaft, showing auriferous and argentiferous copper ores, assaying up to 12% in copper tenor. The mine is very wet, and apparently nearly exhausted. The Iron Blow mine has a 196' main shaft, and a mining plant with an air-compressor, with ore bins at the mine, connected by a one-mile tram with the smelter.

The Yam Creek smelter, in South Australia, formerly had two reverberatory furnaces, and a converter that was not installed. This smelter, completed 1904, ran 3 months only, treating an average of 66 long tons of ore daily, producing 204 long tons of matte carrying 61 long tons copper, circa 17,500 oz. silver and 350 oz. gold. In 1907 the smelter was dismantled, and material shipped to Tasmania.

The Northern Territories property includes a 40-stamp mill at the Howley mine, Yam Creek, and a 20-stamp mill at Brock's Creek. Apparently both are idle.

The Tasmanian properties include the Adelaide lead mine, area 160 acres, at Dundas, where operations are largely centered, with a small lead smelter.

The company and its various predecessors have struggled against financial difficulties, due mainly to lack of cash, from their births.

**NORTHERN TERRITORIES MINING &**

AUSTRALIA.

**SMEILING CO., LTD.**

Dead. Succeeded, Jan. 25, 1905, by Northern Territories Mines of Australia, Ltd. Formerly at Palmerston, Northern Territories, South Australia.

**NORTH FORK COPPER MINING CO.**

WYOMING.

Dead. Formerly at Battle, Carbon Co., Wyo.

**NORTH FORK COPPER MINING & MILLING CO.**

IDAHO.

Office: Wardner, Idaho. Mine office: Mullan, Shoshone Co., Idaho. S. P. Herron, manager. Lands show a 6' fissure vein in quartzite, carrying cupriferous silver-lead ore, cut by a 715' tunnel.

**NORTH FRANKLIN MINING CO.**

IDAHO.

Office: Wallace, Idaho. Letter returned unclaimed from former mine office, Mullan, Shoshone Co., Idaho. Organized under laws of Idaho, with capitalization \$1,000,000, shares \$1 par. Lands, 6 claims, area 120 acres, near the Morning mine, in the Hunter Creek district, circa 2 miles north of Mullan, having an 80' shaft and tunnels of 160', 60' and 40', showing argentiferous lead and copper ores.

**NORTH HORN SILVER & COPPER MINING CO.**

UTAH.

Mine office: Frisco, Beaver Co., Utah. C. C. Thompson, president. Lands,

adjoining the Frisco Contact mine, show argentiferous lead and copper ores.

**NORTH LAKE MINING CO.**

**MICHIGAN.**

Office: 50 Congress St., Boston, Mass. Operating office: Shelden Bldg., Houghton, Mich. Mine office: Greenland, Ontonagon Co., Mich. Stephen R. Dow, president; Alvin R. Bailey, secretary and treasurer; Richard M. Edwards, superintendent; preceding officers, Henry Tolman and John C. Watson, directors. Organized Aug. 22, 1908, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par, fully issued; paid in, \$8. Company began business with full title to lands and \$300,000 cash in treasury. American Trust Co., Boston, transfer agent; Federal Trust Co., Boston, registrar. Shares are listed on the Boston Stock Exchange.

Lands, 1,120 acres, in Sections 28, 29, 32 and 33, lying immediately north and east of the Lake Copper Co. The tract should carry about 880 acres of the underlay of the Lake amygdaloidal bed, with circa 7,000' of the strike of the lode. Property also carries the copper bearing series of the Evergreen belt of amygdaloidal beds. The company's lands are traversed by both the Mineral Range and Copper Range railways, and are crossed by the Fire Steel river.

The rich copper bearing chute of the Lake Copper Co. apparently rakes to the northeast, hence should be found well mineralized on the property of the North Lake. Work was begun about the center of the southwest quarter of Section 28, near the Fire Steel river, but the lands carry an extremely heavy overburden of alluvium, and, Nov. 15, 1908, the first sand pipe being driven to the ledge was down nearly 400', without having encountered solid rock, and the management was planning to start sinking a second pipe.

The company's plans call for a thorough test of the ground, by diamond drilling, previous to locating permanent shafts. There is practically no question that this property carries the extension of the Lake amygdaloid. Property considered decidedly promising and management good.

**NORTHLAND DEVELOPMENT CO.**

**ALASKA.**

Office: care of P. A. Tucker, manager, Seattle, Wash. Letter returned unclaimed from former mine office, Ketchikan, Alaska. Mine, on Big Harbor, is said to have shipped, to April, 1908, circa 300 tons of ore, secured from development work. Company planned a tram-line, with a locomotive. Idle.

**NORTH MOUNT LYELL CONSOLIDATED MINING CO., N. L. TASMANIA.**

Office: 60 Queen St., Melbourne, Australia. Mine office: North Mt. Lyell, Montagu Co., Tasmania. N. Madden, manager. Capitalization £50,000, shares 10s. par. Lands, 70 acres, leasehold. Idle some years and apparently moribund.

**NORTH MOUNT LYELL COPPER CO., LTD.**

**TASMANIA.**

Dead. Absorbed, 1903, by Mt. Lyell Mining & Railway Co., Ltd. Formerly at North Mt. Lyell, Montagu Co., Tasmania.

**NORTH MOWRY MINES CO.**

**ARIZONA.**

Dead. Was organized 1906. Property was the Golden Gate group and 4 adjoining properties, shortly north of the Mowry mines. S. M. Franklin was manager. Formerly at Patagonia, Santa Cruz Co., Ariz.

**NORTH NYMAGEE COPPER MINING CO., N. L.**

**AUSTRALIA.**

Office: Sydney, N. S. W., Australia. Mine office: Nymagee, N. S. W., Australia. John Waugh, chairman. Idle.

Office: 88 Yonge St., Toronto, Ont. Works office: Sturgeon Falls, Nipissing, Ont. Lieut.-Col. J. I. Davidson, president; A. Ansley, vice-president; J. J. Wright, secretary; O. L. Young, superintendent. Property is a smelting plant, built for treating the silver-cobalt ores of the Cobalt district and the copper ores of the Nipissing and Algoma districts.

**NORTH PARK (U. S. A.) COPPER SYNDICATE, LTD.****WYOMING.**

Office: 110 Cannon St., London, E. C., Eng. Mine office: Keystone, Albany Co., Wyo. Henry C. Batchelor, president; H. Blondell, secretary. Organized July 11, 1906, under laws of Great Britain, with capitalization £25,000, shares £1 par; issued, £20,000. Lands, in the Keystone district of Albany county, Wyoming, and in northern Colorado, apparently show values mainly in gold. Is said to plan a 20-stamp mill.

**NORTH PLATTE COPPER MINING & SMELTING CO.****WYOMING.**

Dead. Was a swindle, perpetrated by F. S. Pusey, of Philadelphia. Formerly at Douglas, Converse Co., Wyo.

**NORTH POLE MINING CO.****COLORADO.**

Office: Aspen, Colo. Mine office: Crystal, Gunnison Co., Colo. Jas. T. Stewart, chairman and general manager; Geo. N. Smalley, vice-president; W. Porter Nelson, secretary; Frank Meyer, treasurer; preceding officers, James R. O'Hara, Geo. H. Poor and A. T. Ferris, directors; C. Casagrande, mine superintendent. Organized 1902, under laws of Colorado, with capitalization \$500,000, shares \$5 par. Lands, 37 claims, area circa 640 acres, in the Rock Creek district, showing 9 fissure veins, of which 3, of 3' average width, have tunnels of 340', 680', 450', 300' and 600', with a total of 3,000' of openings, estimated to show 100,000 tons of ore, with 50,000 tons blocked out for stoping, ore being mainly chalcopyrite with quartz gangue, claimed to give average returns of 8% copper, 1.5% lead, 2% zinc, 8.75 oz. silver and \$1 gold per ton, which estimates are considered excessive. Has a 50-h. p. steam plant, with a 7-drill Rand air-compressor, 15x30" machine shop, and several other small mine buildings.

**NORTHPORT SMELTING & REFINING CO., LTD.** **BRITISH COLUMBIA.**

Controlled and operated by Le Roi Mining Co., Ltd.

**NORTH PRINCE LYELL CO., N. L.****TASMANIA.**

Dead. Formerly at North Mt. Lyell, Montagu Co., Tasmania.

**NORTH SHANGO COPPER MINING CO., N. L.****AUSTRALIA.**

Mine office: Cobar, Robinson Co., N. S. W., Australia. Organized circa January, 1907, under laws of New South Wales, with capitalization £2,640, shares £1 par. Has a shallow shaft showing gold, with indications of copper at greater depth.

**NORTH SHORE COPPER & SMELTING CO.****ONTARIO.**

Dead. A stock-jobbing scheme. Formerly in Aberdeen Twp., Algoma, Ont.

**NORTH STAR MINING CO.****MICHIGAN.**

Office and mine: 420 East McLeod Ave., Ironwood, Gogebic Co., Mich. Peter Lofberg, president; Adolf W. Peterson, secretary. Organized May 1, 1903, under laws of Michigan, with capitalization \$25,000, shares \$25 par. Lands, 240 acres, under option, showing several cupriferous amygdaloids, on which a 60' shaft was sunk. Idle several years and apparently moribund.

**NORTH STAR MINING CO.****WASHINGTON.**

Office: 502 Mutual Life Bldg., Seattle, Wash. Letter returned unclaimed from former mine office, Index, Snohomish Co., Wash. J. T. Ronald, president; Hon. John S. Jurey, vice-president; J. S. Chase, secretary; John A. Soderberg, treasurer; preceding officers and E. L. McAlister, directors. Organized 1901, under laws of Washington, with capitalization \$1,500,000, shares \$1 par. Is controlled, through stock ownership, by Chelan Consolidated Copper Co.

Lands, 70 claims, area 1,200 acres, of which one group, of 11 claims, lying between the Ethel and Bunker Hill-Sullivan properties, shows a 4' vein with a 6" paystreak carrying high grade bornite. Development is by a 220' shaft and crosscut tunnels of 200' and 600', with circa 2,000' of workings. Ore is mainly bornite and chalcopyrite, said to give average assays of 10% copper.

A second group of 120 acres lies on the western slope of the Cascade Mountains.

The third group of 53 claims, on Red Mountain, in the Leavenworth district, lying on the eastern slope of the Cascade Mountains, adjoining the Chelan Consolidated Copper Co., is said to show gold ore, with several shafts and open-cuts, and tunnels of 20' and 100'.

The properties have several mine buildings, with a flume, water pipe and air-compressor.

**NORTH STAR MINING & MILLING CO.**

**COLORADO.**

Dead. Property sold to Silverton Mining Co. Formerly at Silverton, San Juan Co., Colo.

**NORTH STATE GOLD & COPPER MINING CO.**

**NORTH CAROLINA.**

Mine office: Jamestown, Guilford Co., N. C. Has a vein of 2' to 25' width, carrying auriferous copper sulphides, opened to depth of circa 400'. Has steam and water power, 50-ton concentrator and a mill with 20 gravity stamps. Idle.

**NORTH UTAH MINING CO., OF BINGHAM.**

**UTAH.**

Mine office: Bingham Canyon, Salt Lake Co., Utah. Organized Feb. 23, 1906, under laws of Maine. No trace of operations secured.

**NORTH VERDE COPPER CO.**

**ARIZONA.**

Office: 303-167 Dearborn St., Chicago, Ills. Mine office: Jerome, Yavapai Co., Ariz. W. P. Cooper, president; E. C. Weatherley, vice-president; John Tierney, general manager; J. J. O'Donohue, secretary and treasurer; J. F. Mowles, superintendent. Organized January, 1904, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par. Lands, 6 claims, area 120 acres, near the United Verde, having an 80' shaft and a 250' tunnel, latter showing calspar, iron and soft rock, in a zone of circa 150' width, with a very little ore carrying about 2.5% copper and 3 oz. silver per ton, with traces of gold. Equipment includes a 40-h. p. Fairbanks-Morse double-cylinder hoist and an air-compressor. Lands were jumped, January, 1908, but company claims 1907 assessment work was done properly, and jumping illegal. Idle and practically moribund.

**NORTHWEST COPPER CO.**

**BRITISH COLUMBIA.**

Dead. Operated the Van Anda mine, 1901-1902. Formerly at Van Anda, Texada Island, B. C.

**NORTHWESTERN CONSOLIDATED LUMBER,**

**OREGON.**

**OIL & COPPER CO.**

Office: care of Glenn M. Deuell, secretary, Grand Rapids, Mich. Mine office: Baker City, Baker Co., Ore. Dr. O. A. Lacrone, president and general manager. Idle several years and presumably moribund.

**NORTHWESTERN COPPER MINING CO.**

**WYOMING.**

Office: 509 New York Life Bldg., Omaha, Neb. Letter returned unclaimed from former mine office, Dillon, Carbon Co., Wyo. Chas. R. Courtney, president; W. D. Reed, vice-president; F. E. Brown, secretary and general manager; N. A. Kuhn, treasurer; H. H. Roberts, secretary; preceding officers, W. H. Dakin, J. H. Farlie, C. W. Murdock and R. E. Sutherland, directors; C. A. Nevitt, superintendent. Organized 1902, under laws of Wyoming, with capitalization \$100,000, shares 10 cents par.

Lands, 15 claims, area 300 acres, including the Batchelder group of 9 claims and the Eclipse group of 6 claims. The Batchelder mine, in the Battle Lake district, circa one mile from the Ferris-Haggarty mine of the Penn-Wyoming Copper Co., carries about one mile of the strike of a vein, formerly reported as of 10' to 50' width, but apparently of 2' to 15' actual width, which presumably is a continuation of the Ferris-Haggarty vein. Development is by a tunnel and a 100' shaft, with circa 1,000' of workings, showing some copper

oxides and carbonates, with mainly auriferous sulphide ores of concentrating grade, giving assays of 3 to 40% copper and \$2 to \$20 gold per ton. A little ore was shipped, late 1907, to the Penn-Wyoming smelter. Property considered promising. Idle.

**NORTHWESTERN GOLD & COPPER MINING CO.**

**OREGON.**

Mine office: Susanville, Grant Co., Oré. J. R. Murrin, general manager; Lewis Walker, superintendent. Organized circa 1907. Lands, 9 claims, opened by a shaft of 90' and a tunnel of 120', showing good gold and copper values.

**NORTHWESTERN MINING CO.**

**IDAHO.**

Office: Baltimore, Md. Mine office: Lucile, Idaho Co., Idaho. Employs 18 men. Wm. B. Clark, president; Francis T. Homer, vice-president; Chas. G. Heim, secretary and treasurer; Frank E. Johnnes, general manager. Organized May, 1905, under laws of New Jersey, with capitalization \$200,000, shares \$1 par. Lands, 10 claims, area 200 acres, surveyed for patents, and a 5-acre mill-site, showing diorite, diabase and altered schists, having 2 ore bodies, estimated to range 40' to 70' in width, carrying oxidized ores above circa 200' depth, followed by native copper, chalcocite and chalcopyrite, ore being estimated to average 5% copper, 5.5 oz. silver and \$2.80 gold per ton. Development is by shafts of 100' and 650', and an 868' tunnel, with circa 4,100' of workings, estimated to show 60,000 tons of ore, with 25,000 tons blocked out for stoping. Company expects a railroad by 1910, and plans production thereafter.

**NORTHWESTERN SMELTING & REFINING CO.** **BRITISH COLUMBIA.**

Dead. Smelter sold, 1905, to Britannia Smelting Co., Ltd. Formerly at Crofton, Vancouver Island, B. C. Described Vol. IV.

**NORTHWEST GOLD & COPPER CO.**

**OREGON.**

Dead. Formerly at Sumpter, Baker Co., Ore.

**NORTHWEST MINING CO.**

**WASHINGTON.**

Dead. Formerly at Kettle Falls, Stevens Co., Wash.

**NORTH WISCONSIN COPPER MINING CO.**

**WISCONSIN.**

Dead. Succeeded, circa 1899, by Chippewa Copper Mining Co., also dead. Formerly in Douglas county, Wisconsin.

**A. O. NORTON.**

**QUEBEC.**

Office: 286 Congress St., Boston, Mass. Mine office: Suffield, Sherbrooke Co., Que. A. O. Norton, manager; Wm. Jenkins, superintendent. Lands, 350 acres freehold, and 150 acres of mining rights in Ascot township, 7 miles from Sherbrooke, with railroads within 2 miles on either side. Property, known as the Suffield and King mines, opened circa 1865, has a 165' shaft with about 900' of workings, on a vein of 8' to 9' average width, and a shaft of 245' on a vein of 2' to 20' width, developing ore said to give average assays of 6% copper, from a trace to 10% zinc, 10 to 120 oz. silver and \$2.50 gold per ton. Equipment includes a plant, installed 1907, having hoists, pumps and power-drills. Property considered promising.

**NORVELL-PICKRELL COPPER MINING CO.**

**WYOMING.**

Dead. Formerly at Encampment, Carbon Co., Wyo.

**NORWAY MOUNTAIN GOLD & BRITISH COLUMBIA.  
COPPER MINING CO.**

Dead. A swindle, put out by Thomas & Co., Philadelphia, who "guaranteed" dividends that never materialized. Formerly at Rossland, Trail district, B. C.

**NORWEGIAN-AMERICAN COPPER  
MINING & SMELTING CO.**

**NORWAY.**

Office: 1618 Milwaukee Ave., Chicago, Ills. Mine offices: 3 Fjordgaden, Trondhjem, Norway, and Goulasjok, Lyngenfjord, Tromsö, Norway. Employs 100 men. Adolph Larson, president; John Iverson, vice-president; Andrew J.

Breda, secretary; Hakon Thompson, treasurer; Hans Boholm, general manager; D. Bryn and J. Johansen, superintendents; Harald Bodtke, engineer. Organized Apr. 20, 1905, under laws of South Dakota, with capitalization \$1,000,000, shares \$1 par; issued, \$450,000. Annual meeting, first Monday in April.

Lands, 54 claims, in 5 groups situated in 4 districts. Formation is much the same at the various properties, country rock being micaceous schists, of lower Silurian age, with eruptive greenstone conformable with the schists, ore bodies occurring as extended lenses, very persistent in strike and depth, on the contact of the schists with metamorphosed olivine gabbro. Ore is cupriferous iron pyrites, carrying 3 to 10% copper and 10 to 30% sulphur, with small gold and silver values.

The principal mines, known as Fines and Tingstad, formerly belonging to King Christian Frederik of Denmark, were worked, 1765-1817. These mines are circa 60 miles from Trondhjem, and about  $\frac{1}{2}$  mile from tidewater, lying in 2 different valleys of about 20 miles length, connecting with the Trondhjemsfjord, giving fine water transportation. The Fines mine is held under a contract, by which it can be bought for \$40,000 cash, or the same price in yearly installments, or can be operated on a royalty basis for 90 years. This mine carries a 5' vein, estimated to show 50,000 tons of ore averaging 6 to 7% copper. The Tingstad mine is held under a similar contract, on the basis of \$45,000 cash, or a royalty of 35 cents per metric ton.

The company also has sundry claims, including the Lyngenfjord mine, having an aerial tram to Kaafjord. This mine is near tidewater that does not freeze in winter, and is favorably located for shipping. There also are claims on the Island of Vanden, at the mouth of the Lyngenfjord, 25 miles north of Tromsö.

The various lands of the company have several available water powers, and the company plans installing a concentrator and beginning shipments of cupriferous pyrites to Great Britain. Property considered promising.

#### NORWEGIAN COPPER MINES, LTD.

NORWAY.

Dead. Dissolved, October, 1905. Formerly at Gonlasjok, Lyngenfjord, Tromsö, Norway. Described Vol. V.

#### NORWEGIAN EXPLORATION CO., LTD.

NORWAY.

Office: 23 Leadenhall St., London, E. C., Eng. Mine office: Vaddasguisa, Oxfjordulen, Norway. Geo. B. Mee, chairman; I. C. Ozanne, secretary. Organized Sept. 26, 1903, under laws of Guernsey, with capitalization £260,000, shares £1 par; issued; £119,259. Lands are 32 mining claims, at Vaddasguisa, Lankvarres, and Rojelguisa, in the Oxfjordalen, Norway. Presumably idle.

#### NORWEGIAN OTTA COPPER CO., LTD.

NORWAY.

Dead. Formerly at Asoren, Gudbrandsdalen, Christiania, Norway.

#### NOTAWAY GOLD & COPPER MINING CO.

COLORADO.

Dead. Was a stock-jobbing enterprise. Formerly at Silverton, San Juan Co., Colo., and Central City, Gilpin Co., Colo. Described Vol. VI.

#### NOVARRA MINE.

ITALY.

Mine office: Novarra, Piedmont, Italy. Is an old mine, which was a very small producer, at last accounts.

#### SOCIEDAD MINERA NUESTRA SEÑORA DE LA SALUD.

SPAIN.

Office: Sevilla, Spain. Mine office: Chaparrita, por Rio Tinto, Huelva, Spain. Don Manuel Piérola y Orozco, manager. Lands, 110 hectares, including 11 old mine openings, idle for some years. A small production of cement copper is secured by leaching tereros left from former operations.

#### SOCIEDAD MINERA NUEVA AMALIA.

CHILE.

Mine office: Chuquicamata, Antofagasta, Chile.

#### MINA NUEVA AUSTRALIA.

PERÚ.

Mine office: Pacasmayo, Cajamarcia, Perú. Hilarión Laforeal, manager; Juan Diaz, smelter superintendent. Mine has a lense of low grade disseminated

pyritic ore, of considerable size, opened by tunnel. Has a smelter with calcining and reverberatory furnaces, burning wood, which is of good quality and available in large quantities. Product is shipped, as bars, to Cajamarca.

**COMPAÑIA MINERA LOS NUEVES.**

SPAIN.

Dead. Formerly at Tijola, Almeria, Spain.

**NUMBER ONE MINING CO.**

WASHINGTON.

Mine office: Nighthawk, Okanogan Co., Wash. A. B. Lee, manager. Mine is said to have a 33' vein carrying a 9% paystreak of ore of concentrating grade, containing lead and copper values, developed by tunnel and shaft. Is said to plan a 25-ton mill.

**NUMBER 7 MINING CO., LTD.**

BRITISH COLUMBIA.

Dead. Property sold to British Columbia Copper Co. Formerly at Greenwood, Boundary district, B. C. Described Vol. V.

**NYACK MINING CO.**

ARIZONA.

Dead. Absorbed by Anita Consolidated Copper Co. Formerly at Williams, Coconino Co., Ariz.

**NYMAGEE COPPER, LTD.**

AUSTRALIA.

Office: 95a Winchester House, Old Broad St., London, E. C., Eng. Mine office: Nymagee, Mouramba Co., N. S. W., Australia; Chas. J. McMahon, chairman; W. H. Corbould, managing director; J. D. Kendall, consulting engineer; H. A. McMahon, secretary. Organized Dec. 10, 1906, under laws of Great Britain, with capitalization £150,000, shares £1 par, fully paid. Lands, circa 50 miles from Cobar, include the Nymagee mine, area 750 acres, freehold, bought, 1907, of the Great Cobar Copper Mining Syndicate. Country rocks are slate and sandstone, showing a main vein of 15' to 20' width, carrying ore of about 2% average copper tenor, with a rich chute, of about 250' length and unknown depth, carrying ore up to 10% in copper tenor. Mine, opened 1880, has 3 shafts, deepest 680', with about 100,000 tons of ore blocked out, and 150,000 long tons additional reasonably inferred. Developments at depth are said to be promising. Old mining plant was replaced, 1907, by modern machinery, involving suspension of production for six months. The mine lacks railway facilities, which are much needed.

The smelter has 3 small water-jacket blast-furnaces, and 4 reverberatories for bringing up matte to blister copper of 99.5% copper tenor. Largest production, in 1886, was 1,468 long tons fine copper. Production, 1898, was 728 long tons fine copper, and for 1906 was 26,649 long tons of ore smelted, giving average returns of 2.5% copper, producing 1,491,840 lbs. fine copper. Property considered valuable, though average of ore is dangerously low in grade. Employs circa 200 men.

**NYMAGEE COPPER MINING SYNDICATE.**

AUSTRALIA.

Dead. Lands sold to Great Cobar Copper Mining Syndicate. Formerly at Nymagee, Mouramba Co., N. S. W., Australia.

**OAK CONSOLIDATED MINING & MILLING CO.**

OREGON.

Office: 226 Failing Bldg., Portland, Ore. D. L. McLeod, manager. Property includes the Oak and Hidden Fortune mines, in Josephine and Jackson counties, Oregon.

**OAKESDALE COPPER CO.**

MONTANA.

Office: Wallace, Idaho. Mine office: Java, Dawson Co., Mont. Capitalization \$1,000,000, shares \$1 par. Lands, 8 claims, 1 fractional, on Beaver Creek. Development is by tunnel, showing ore assaying up to 59.9% copper, 6 oz. silver and \$4 gold per ton.

**OAKS MINING & MILLING CO.**

UTAH.

Office: Eagle Block, Salt Lake City, Utah. Mine office: Alta, Salt Lake Co., Utah. A. H. Cutright, secretary and treasurer. Capitalization \$250,000.

**OASIS GOLD & COPPER MINING CO.**

UTAH.

Office: care of Joseph A. Jennings, secretary, Salt Lake City, Utah. Mine office: Oasis, Millard Co., Utah. M. S. Browning, president; John T. White, vice-president; Joseph B. Toronto, treasurer; J. D. Clive, manager. Organized April, 1904, under laws of Utah, with capitalization \$250,000, shares \$1 par. Lands, in the Drum district, are opened by a 185' shaft, showing 6 ore chutes, from which ore assaying 4.3% copper, 10 oz. silver and \$19.20 gold per ton, was shipped, 1904, to Salt Lake smelters. Idle several years.

**OATES-NEWMAN COPPER CO.**

ARIZONA.

Mine office: Globe, Gila Co., Ariz. F. C. Alsdorf, superintendent, at last accounts.

**OAXACA CONSOLIDATED COPPER CO.**

MEXICO.

Office: Ap. 49, Oaxaca, Oax., Mex. C. C. Lastinger, manager, at last accounts. Property includes the Magistral and Predilecta mines, near Oaxaca, carrying copper ores. Has water power.

**OAXACA EXPLORATION CO.**

MEXICO.

Mine office: Ocotlán, Oaxaca, Mex. Has auriferous and argentiferous copper ores, opened by 2 shafts, of about 150' each, and is equipped with steam power. Presumably idle.

**OAXACA MINES & EXPLORATION CO.**

MEXICO.

Office: care of Kaye, DeWolf & Co., New York, N. Y. Works office: Oaxaca, Oaxaca, Mex. Harry M. Holbrook, president; O. F. Westlund, general manager; R. R. Moore, superintendent; Jos. T. Wallace, receiver.

Property is a smelter, 4 kilometers from Oaxaca, completed August, 1907, rated at 600 tons daily capacity, having two 46x162" water-jacket blast-furnaces, 22' high over all. These are planned for reduction of either lead or copper ore, with daily capacity each of about 175 tons of lead ore or 300 tons of copper ore. Has electric power and crushers. Receiver appointed, and bondholders plan reorganization. With finances on a substantial basis, and given good management, the plant might prove successful, as it could draw ore from a rich district.

**OAXACA MINING, MILLING & INVESTMENT CO.**

MEXICO.

Office: Wilmington, Del. Mine office: Ixtlán de Juárez, Ixtlán, Oaxaca, Mex. C. Arthur, manager; Robert McCormick, superintendent. Property includes La Esperanza mine, having auriferous and argentiferous lead, copper and zinc sulphides, with water power and 10-stamp mill.

**OAXACA SMELTING & REFINING CO.**

MEXICO.

Dead. Property was sold, circa July, 1908, at public auction, and was bid in, by bondholders, for \$275,546. Formerly at Oaxaca, Oaxaca, Mex.

**OBIE MINE.**

JAPAN.

Mine office: Nakanosha-mura, Tsu-gori, Bitchu, Japan. Employs circa 1,200 men. T. Sakamoto, owner; K. Ogawa, manager. Is a very old mine, having numerous 2' to 4' veins carrying chalcopyrite, and small quantities of argentiferous galena, with quartz gangue, traversing clay-slate and granite. Has steam power and a good smelter. Production was 1,281,146 lbs. fine copper in 1903; 1,455,488 lbs. in 1906, and 1,541,806 lbs. in 1907.

**O. B. GRAY COPPER CO.**

NEW JERSEY.

Dead. Formerly at Pennington, Mercer Co., N. J. Described Vol. VI.

**OCALA COPPER CO.**

NEW MEXICO.

Mine office: Silver City, Grant Co., N. M. R. P. Thompson, superintendent. Lands, in the Burro Mountains, said to give a promising surface showing, have a 185' shaft, showing low grade copper sulphide ore.

**OCAMPO MINING CO.**

MEXICO.

Mine office: Cuatro Ciéneas, Monclova, Coahuila, Mex. José Marco, manager. Lands include El Barrio mine, carrying auriferous and argentiferous

copper ores, equipped with steam power. Employed circa 100 men, at last accounts.

#### CAMILO OCANA.

CHILE.

Office and mine: Taltal, Antofagasta, Chile. Ramón A. Heredia and David B. Contreras, superintendents. La Estrella de Venus mine, opened to depth of 125 meters, but hampered in operation by excess of water, produces ore said to average 24.1% copper, after selection. La Ligua and La Gyacolla mines carry auriferous and argentiferous copper ores. Equipment includes steam power and a concentrator with 4 Chilean mills. Mine and works employ circa 75 men.

#### OCCIDENTAL COPPER CO.

MEXICO.

Office: 120 Broadway, New York, N. Y. Mine office: Hatchita, Grant Co., N. M. Idle. Saml. W. Fergusson, president and general manager; Walter R. Hensey, vice-president and treasurer; Joseph R. Draney, secretary; preceding officers, Garth W. Fergusson, Emlyn Lewis, Anthony J. Romagna, Geo. Rosendale, Geo. F. Small and Horace P. May, directors. Organized Dec. 4, 1906, under laws of Arizona, with capitalization \$5,000,000, shares \$5 par; issued, \$3,025,000, as successor of the Royal Morelos Copper Co. Annual meeting, first Tuesday in December.

Lands, circa 700 acres, in the Suna Rica district of Chihuahua, Mexico, 7 miles south of El Paso & Southwestern railway and just south of the New Mexico line, showing limestone, with eruptive dikes, carrying mainly oxidized ores, with some bornite and chalcopyrite. Development is by 5 pits and shafts, of 16' to 68' depth, and a small tunnel. Property has 8 buildings. Idle.

#### OCCIDENTAL MINING CO.

CALIFORNIA.

Office: 6 Eddy St., San Francisco, Cal. Mine office: Keswick, Shasta Co., Cal. Lands are claimed to be 3 miles south of the Iron Mountain mine, opened by 2 tunnels. Company's advertising is filled with misstatements, and corporation presumably is merely a stock-jobbing device.

#### MINERAL DE COBRE LOS OCOTES, S. A.

MEXICO.

Dead. Lands sold, 1906, to Teziutlán Copper Mining & Smelting Co., for \$565,000. Formerly at Ejutla, Oaxaca, Mex. Described Vol. VI.

#### OCTAVIA MINING CO.

WYOMING.

Mine office: Cambria, Weston Co., Wyo. David Jones, president. Lands, 54 claims, including the Straight Up group, near the head of Jack Creek, slightly developed by a 60' tunnel. Idle, since circa 1904, but for annual assessment work.

#### ODIN MINING CO.

UTAH.

Mine office: Park City, Summit Co., Utah. Main tunnel, 740', cuts the Odin and Columbus veins, former, of about 2' width, showing an average of about 3% copper, with some ore assaying up to 4% copper, 40% lead and 18 oz. silver per ton. First smelter shipment returned 2.7% copper, 11.3% lead, 49 oz. silver and \$2 gold per ton.

#### O'DONNELL COPPER CO.

ARIZONA.

Dead. Formerly at Clifton, Graham Co., Ariz.

#### OGDEN-BUCKHORN MINING CO.

UTAH.

Office and mine: Ogden, Weber Co., Utah. F. L. Woods, manager; Chas. S. Burluck, superintendent. Lands, in Coldwater Cañon, shortly east of Ogden, have a 17' vein, with paystreak giving assays of 34% copper, 9 oz. silver and \$3 gold per ton.

#### OGOYA MINE.

JAPAN.

Mine office: Nishio-mura, Nomi-gori, Kaga, Japan. T. Yokoyama, owner and general manager.

Mine, opened 1878, carries chalcopyrite, associated with melaconite, azurite, bornite, native copper and pyrite, with quartz gangue, in numerous

veins traversing liparite. Three practically parallel veins main are worked, these ranging 1" to 4' in width, and 500' to 2,000' in length. Mining plant is modern, and property has a hydro-electric power installation. Smelter is rated at only 30 tons daily capacity, but probably is larger. Production was 1,503,967 lbs. fine copper in 1906 and 1,412,706 lbs. in 1907, an increase of practically 50% in eight years.

**O'HARA MOUNTAIN GOLD & COPPER CO.****NEVADA.**

Office: Denver, Colo. Mine office: Reno, Washoe Co., Nev. Alleged property was claims in the Grapevine district of Nevada, and O'Hara, the promoter, is a professional buncro-steerer, masquerading as a mine promoter. He was arrested, tried and found guilty of swindling operations in connection with the promotion of this company, and for punishment was given a light fine and a sentence of one day in jail, which leads to the inevitable conclusion that there is a very strong sentiment in Denver in favor of fake mining promoters. Denver is one of the most beautiful towns in the United States, but its population includes some of the greatest scoundrels in existence, and it has an unenviable reputation among investors as the hatching place of a multitude of fraudulent mining companies. So notorious is this fact that legitimate mining companies with offices in Denver are seriously handicapped.

**OHIO & ARIZONA COPPER MINING & SMELTING CO.****ARIZONA.**

Dead. Corporation dissolved, 1903. Formerly had an office in Covington, Ky.

**OHIO & COLORADO SMELTING & REFINING CO.****COLORADO.**

Office and works: Salida, Chaffee Co., Colo. John M. Thomas, general manager; Geo. B. Griswold, superintendent. Smelter, rated at 1,000 tons daily capacity, is equipped with steam and electric power and has a refinery, doing a general custom smelting business in gold, silver, lead and copper ores, from the San Juan district and elsewhere in Colorado.

**OHIO COPPER CO.****UTAH.**

Office: 42 Broadway, New York, N. Y. Mine office: Bingham Canyon, Salt Lake Co., Utah. Jas. MacFarlane, president; Russell Hopkins, first vice-president; Carlos Warfield, second vice-president; George Baglin, secretary and treasurer; preceding officers, David Keith, Thos. Weir, N. J. Catrow, J. P. Hutchinson, F. August Heinze and Philip Carroll, directors; Duncan McViekie, general manager; Colin MacIntosh, superintendent; W. A. Kidney, mill superintendent.

Organized Nov. 1, 1903, under laws of Maine, with capitalization \$1,000,000, and reorganized, 1907, under laws of Maine, with capitalization \$10,000,000, shares \$10 par, and an increase in capitalization to \$15,000,000, shares \$10 par, was authorized February, 1908. Is controlled by United Copper Co., through ownership of about two-thirds of stock issue.

Bonds authorized, \$2,000,000 ten-year 6% gold bonds, in denominations of \$1,000, dated Sept. 1, 1907, convertible into stock at \$10 per share, at any time before maturity. Previous to new bond issue of 1908 company was said to owe circa \$350,000. Company plans a sinking fund, calling for \$120,000 yearly, beginning Sept. 1, 1910.

Lands, 14 claims, patented, area 120 acres, surrounded by holdings of the Utah Copper Co., Boston Consolidated, United States, Fortuna and Copper Glance. Property was bought of the Columbia Copper Mining Co. for \$245,000. Principal ore body formerly was a vein carrying disseminated chalcopyrite, having a width of 30' on the 400' level, but the principal ore, as developed recently, is cupriferous monzonite, similar to that of the Utah Copper Co. and Boston Consolidated, but said to concentrate somewhat better. Late 1907 the company had developed ore under about 5 acres, the porphyritic ore body being estimated at 400' in width, 1,000' in length and 600' in depth, latter

figure being considered excessive, and company estimated, September, 1908, having ore reserves of 13,484,855 tons, averaging 1.606% in copper tenor.

Development is by several shallow shafts, one showing a 3' vein carrying an 8" paystreak of malachite averaging circa 25% copper, balance of vein being disseminated cuprite, estimated to average 5.12% copper. The 3-compartment 580' main shaft, begun circa October, 1906, sunk at an angle of 45°, is to be connected, at depth of 1,100', early 1909, with the Mascotte tunnel of the Dalton & Lark, circa 2½ miles in length. The Mascotte tunnel has been enlarged, retimbered and double-tracked, and ore extraction will be by electric haulage, with 5-ton cars. In addition to the Mascotte tunnel, the property has an 800' main crosscut tunnel, which intercepts the What Cheer and All's Well veins, lying 400' apart and parallel. The All's Well shows a 6' vein assaying up to 5% copper, with small gold values, and a winze on the What Cheer vein is said to show 11' of rich sulphides. Ores shipped by the old management were said to average 12% copper.

The property includes an old gravity mill with 5 stamps, and a 20-ton concentrator, both remains of former ownership, and both idle.

The Winnemucca mill, bought 1904, and enlarged to circa 150 tons daily capacity, has 1 crusher, 3 sets of rolls, 1 Chilean mill, 4 three-compartment jigs, 50 Wilfley tables and 1 Wilfley slime table.

The new mill, at Lark, near the mouth of the Mascotte tunnel, is of steel construction, built, 1907, by the Minnesota Steel Co., at a cost of circa \$200,000. This mill, variously rated at 4,000 to 4,500 tons capacity, when completely equipped, is in eight 500-ton units, of which 4 were practically completed at the end of 1908, when the mill was expected to be in operation during the first quarter of 1909. Water is supplied from wells in the valley.

The company had financial troubles, in common with many other developing copper mines, during 1907 and 1908, and considerable property was attached for debt, but the debts were adjusted with money secured from the new bond issue.

On test the old Winnemucca mill is said to have given extraction up to 85% of assay values, and the company estimates that the new mill should save 75% of the gross values, or circa 24 lbs. fine copper per ton, from the porphyry ores. The ore is said to concentrate as high as 15 into 1, making a 20% copper concentrate, at a cost under 50 cents per ton for milling, and the company estimates that the ore can be mined at a cost of 75 cents per ton. Probable copper costs from the porphyry ores are variously estimated, by different authorities, at 6 to 9 cents per pound, but it is probable that finished copper laid down at the seaboard, will cost much nearer to 10 cents than to 6. The property is considered one of exceptional promise.

#### **OHIO LEAD MINING & SMELTING CO.**

#### **NEVADA.**

Office: Salt Lake City, Utah. Mine office: Sprucemont, Elko Co., Nev. Lands, 8 claims, area 160 acres, showing 7 fissure veins, said to give average assay values of 7% copper and 7 oz. silver per ton, also a silver-lead vein opened by a 400' shaft and tunnels of 700' and 900', with circa 3,000' of workings. Has a 50-ton concentrator, and a smelter with 3 small water-jacket blast furnaces. Presumably idle.

#### **OHIO-MEXICAN MINING CO.**

#### **MEXICO.**

Office: 1703 First National Bank Bldg., Cincinnati, Ohio. Mine office: Caboeca, Altar, Sonora, Mex. J. H. McKibben, president; John Henderson, vice-president and general manager; W. K. McKibben, secretary and treasurer; preceding officers, O. E. Peters, B. B. Tuttle and Hon. J. A. Runyon, directors; I. R. Henderson, mine superintendent; Oscar A. Neminger, smelter superintendent. Organized August, 1904, under laws of Arizona, with capitalization \$3,000,000, shares \$10 par. Lands, 47 acres, also a 25-acre millsite and

6,500 acres ranch lands, showing country rocks of limestone and granite, with porphyritic intrusions, carrying several ore bodies, of which 3, under development, have estimated average widths of 16', 20' and 40', opened by shafts of 400', 156', 156'; 210' and 100' and by a tunnel of 380', with total openings of area 4,000', estimated to show 30,000 to 60,000 tons of ore, with 20,000 tons blocked out for stoping, giving average assays of 9.3% copper, 4 to 10 oz. silver and \$2 to \$5 gold per ton, from carbonate ores and chalcocite. Mine was worked 1857-1860, and reopened, 1904, by present company. Property has a 125-h. p. steam plant at the mine, and a 100-h. p. steam plant at the smelter. Equipment includes 3 hoists, good for 400' to 600' depth, and a 2-drill Rand air-compressor, with 15 shops and mine buildings, of wood, sheathed with iron.

The smelter, at Calera, receiving ore by wagon from the mine, has a 60-ton water-jacket blast-furnace, turning out black copper of 90 to 95% tenor, with included gold and silver values, shipped to the Nichols Copper Co. for electrolytic refining. Presumably idle.

#### OHIO MINES DEVELOPMENT CO., LTD.

#### BRITISH COLUMBIA.

Dead. Succeeded, 1907, by True Fissure Mining & Milling Co. Formerly at Trout Lake, Kootenay district, B. C.

#### OHIO MINING CO.

#### ARIZONA.

Letter returned unclaimed from former mine office, Bisbee, Cochise Co., Ariz. Is controlled by Bisbee-Sonora Development Co., through ownership of 60% of stock issue. Lands, circa one mile southeast of the Warren Development Co., are variously reported as 1,495 acres, and as 18 claims, area 340 acres, said to show 2 low grade copper outcrops. Company is said to plan a smelter, erection of which would be highly ridiculous, until ore is found. Lands considered poorly located.

#### OHIO MINING & MILLING CO.

#### COLORADO.

Mine office: Montezuma, Summit Co., Colo. Ores carry gold, silver and copper. Has a small concentrator. Presumably idle.

#### OHIO & TENNESSEE MINING CO.

#### ARIZONA.

Office: care of W. D. Clymer, president and superintendent, Delaware, Ohio. Mine office: Wickenburg, Maricopa Co., Ariz. Lands, 10 miles south of Wickenburg, have a 115' shaft, showing a 2' vein.

#### OHIO-YAQUI MINING CO.

#### MEXICO.

Office: Columbus, Ohio. Mine office: San Javier, Soyopa, Hermosillo, Sonora, Mex. Lands include the Sierra mines, said to be antiguas, having an 800' tunnel cutting a 2' vein carrying ore assaying up to 2% copper and 75 oz. silver per ton.

#### OJANCOS MINING CO.

#### CHILE.

Dead. Lands sold to Copiapo Mining Co., Ltd. Formerly at Copiapo, Atacama, Chile.

#### COMPÀNIA MINERA DE OJANCOS NUEVOS.

#### CHILE.

Office: Valparaiso, Chile. Mine office: Tierra Amarilla, Antofagasta, Chile. Thos. C. Peddar, manager. Organized Apr. 30, 1903, under laws of Chile, with capitalization £150,000, shares £1 par. Property is the Transito mine.

#### OJIBWAY MINING CO.

#### MICHIGAN.

Office: Lyceum Bldg., Duluth, Minn. Operating office: Houghton, Mich. Mine office: Phoenix, Keweenaw Co., Mich. Dr. L. L. Hubbard, president and general manager; Chas. A. Duncan, first vice-president and treasurer; Gustav Huggart, second vice-president; preceding officers, Thos. F. Cole, Capt. Jas. Hoatson, Capt. Thos. Hoatson, Chas. d'Autremont, Jr., Chester A. Congdon, John D. Ryan and Oscar J. Larson, directors; Frederick Kennedy, secretary; Andre Formis, superintendent; Capt. Richard Trevarthen, chief mining cap-

tain; Henry Roberts, assistant superintendent; Wm. H. Charlton, clerk; Jas. Stephens, master mechanic.

Organized June 8, 1907, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par; issued, \$2,100,000. Company began business with circa \$500,000 cash, and June 1, 1908, had cash resources of \$227,342, and will not need to call for further funds until about the middle of 1909.

Lands, circa 1,600 acres, bounded on the north by the Cliff and on the south by the Seneca. Property includes the old Manhattan tract, Bacon & Jacobs lands, property bought of the Union Copper Land & Mining Co., and the Miskwabik tract of 1,224 acres, in Section 5, Town 57, and Sections 32 and 33, Town 58, North, all in Range 31 West.

The Kearsarge lode was located, circa 1904, on the Miskwabik tract, about 4 miles northeast of No. 1 shaft of the Mohawk. The Kearsarge bed was proven by 5 diamond drill holes, crossing the formation at intervals of 1,200', of which 4 holes gave good cores, predicated the making of a rich mine, the cores being especially rich well toward the northern limits of the tract. The drill cores showed the Kearsarge amygdaloidal bed to be divided into 4 sections, separated by narrow layers of trap, and underground work has verified this peculiar condition.

Development is by 2 shafts, both sunk at an average depth of circa 40' in the footwall, which shows some heavy copper, indicating strong mineralization. Work was begun July, 1907, and good progress has been made. Both shafts are concreted from their collars into the rock ledge, and both have permanent concrete roadbeds.

No. 1 shaft, circa 1,500' from the northern boundary of the property, was sinking for the 650' level at the end of 1908. A crosscut to the westward, on the 500' level, late 1908, penetrated a 30' amygdaloidal bed, thought to be the lower footwall bed of the Kearsarge lode, with principal ore values expected in the upper bed, and the second bed from the base of the series was opened November, 1908, this being about 20' in width.

No. 2 shaft, about 1,100' southwest of No. 1, was circa 500' deep at the end of 1908, opening a well mineralized bed of about 15' width.

The power plant is unusually complete for a new property. The 32x48' central power-house, between the two shafthouses, has 2 duplicate Nordberg duplex-cylinder hoists, good for about 2,000' depth, the cables from the engines passing over idlers and turn-sheaves at each shaft. Steam is furnished by 150-h. p. Burt locomotive-firebox boilers, the steam plant having a 100-h. p. condenser. Buildings are heated by the Webster reheating system, charged by exhaust from the air-compressor, which also heats water for boiler feed. The power plant includes an air-compressor and a 140-h. p. Russell high-speed engine, belt-connected to a 100-kw. generator. Power is furnished the various shops by individual motors, and the mine has an electric pump, with capacity of 85 gallons per minute working against a 500' head. There also is an electric light plant.

Near the central power plant are a carpenter-shop, smithy and machine-shop, each 24x48' in size, and a warehouse with an office in front. The machine-shop has a hardwood floor, laid with 2x4" stringers, bedded in concrete. There also is a 28x48' bunk-house and 24 dwellings for employees, at a townsite about one-half mile from the shafts, the mine and townsite having hydrants and a complete water system, with ample fire protection.

The mine is served by the Keweenaw Central railway, a short spur from the main line reaching the shafts and buildings.

The Ojibway has an exceptionally strong and experienced management, and is being developed along systematic and well considered lines, with every prospect of making an excellent mine.

**O. K. BLOCKS, LTD.****AUSTRALIA.**

Office: Cairns, Queensland, Australia. Mine office: Mungana, Queensland, Australia. A. J. Draper, secretary; A. F. Martyn, mine manager. Has a 7' vein of sulphide copper ore. Decided, June, 1908, to liquidate.

**O. K. COPPER MINES DEVELOPMENT SYNDICATE, N. L. AUSTRALIA.**

Office: Cairns, Queensland, Australia. Mine office: Chillagoe, Queensland, Australia. John Newell, chairman; preceding officer, E. B. Torpey, W. J. Munroe and A. Overend, directors; Thos. Welsby, secretary; Richard Shepherd, general manager; H. Twynam, mine manager. Organized under laws of Queensland, with capitalization £45,000, shares 2s. par. Dividends, 1906, were £50,617 10s., and for first half of 1907 proceeds were £88,637 and profits £44,228. Paid a 1s. dividend Oct. 31, 1907.

Main shaft, early 1907, was 300' deep, with 4 levels opened, at 80', 115', 150' and 200', levels being much too close together, with a plat cut at 250'. Little development work was done during the era of high prices, 1906-1907, until late 1907, when sinking was resumed. This should have been done several years earlier, as company was badly cramped after the fall in copper. A new ore body has been opened to the east of the old lode, on the second and third levels. Lower levels make considerable water. Mine had reserves of 23,400 tons blocked out, at end of 1907, ore as smelted running 9 to 10% copper. Diamond drill borings, 1907, show the main lode to carry 12% copper at depth of 480', indicating that the mine will hold values to good depth. Property also has a northern ore body, cut by drill holes, giving cores assaying 7.5% copper.

Surface equipment was overhauled and amplified, 1906, now including a new steam plant, air-compressor, etc. District is arid, causing occasional shortage of water, but with frequent excess of water in the rainy season, causing bad roads and rendering transportation difficult. Camels, formerly used, have been replaced by traction engines. A railroad, which would greatly reduce cost of operation, is needed badly.

The smelter has a converter, added 1906, and a new stack was built, 1907, to carry off troublesome fumea. For first half of 1907 actual cost of blister copper at the mine was £40 12s. 6d. per long ton, and for last half of 1907 ore treated yielded 8.1% copper, showing a decline in values. Production, 1906, was 13,867 long tons of ore smelted, giving an average return of 10.8% copper and making 3,351,197 lbs. fine copper. Mine is valuable, but company apparently was overly anxious for dividends, when it would have been much better to have accumulated a surplus for emergencies. With a continuance of the more vigorous policy of development, begun 1907, the property should increase in importance and production. Employs circa 250 men.

**O. K. EXTENSION MINING & REDUCTION CO.****UTAH.**

Office: 222 D. F. Walker Bldg., Salt Lake City, Utah. Mine office: Milford, Beaver Co., Utah. A. J. McMullen, president and general manager; T. M. Farrel, vice-president; C. C. Gott, secretary and treasurer. Organized November, 1899, under laws of Utah, with capitalization \$150,000, shares 50 cents par. Annual meeting, second Tuesday in October.

Lands, 21 claims, 3 patented, area 420 acres, near the Majestic, in the Beaver Lake district, showing 2 fissure veins, of 5' to 24' estimated average width, traceable circa 2,000', opened by 7 pits and shafts, of 15' to 510' depth, and by a 150' tunnel, with 1,045' of workings, showing chalcopyrite estimated to average 2% copper, without the gold and silver values formerly claimed. Idle for several years, except for annual assessment work.

**VERWALTUNG DER KÖNIGLICHE PREUSSISCHEN- UND HERZOGLICHE BRAUNSCHWEIGSCHE KOMMUNION****HÜTTEN-STAATSWERKE OKER.**

Is the smelting plant of the Rammelsberg mine.

**O. K. GOLD & COPPER MINING CO.****ARIZONA.**

Office: Lyndon, Kansas. Letter returned unclaimed from former mine office, Florence, Pinal Co., Ariz. W. L. Newcomer, president; S. B. Johnson, secretary; J. Banning, treasurer and general manager. Organized 1902, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 15 claims, area 300 acres, in the Picacho district, showing numerous veins, of which two, of 3' average width, are opened by 6 shallow shafts, deepest 120', and by 4 tunnels, longest 125', showing oxide, carbonate and sulphide ores, giving assays up to 20% copper, with traces of gold and silver. Idle several years and apparently moribund.

**OKLAHOMA COPPER CO.****ARIZONA.**

Office: Shawnee, Okla. English office: Worcester House, Walbrook, London, E. C., Eng. Mine office: Florence, Pinal Co., Ariz. Idle. H. G. Beard, president and general manager; S. T. Pierson, vice-president; H. A. Pierson, secretary and treasurer; preceding officers and W. M. Longmire, directors; Roy Troxel, superintendent. Organized March 29, 1906, under laws of Oklahoma, with capitalization \$2,000,000, shares \$1 par; issued, \$1,120,000.

Lands, 25 claims, unpatented, area circa 500 acres, next south of the Alta Central Copper Co., in the Mineral Hill district, said to show 5 ore bodies, of which one, under development, of 10' claimed width, said to be traceable 2½ miles, is estimated by company to average 3% copper and \$2 gold per ton, from oxidized ores and chalcopyrite. Development is by 8 pits and shafts, of 20' to 200' depth, and by a 50' tunnel. The advertising of Joseph & Wilson, the fiscal agents, was not altogether correct. Idle.

**O. K. SOUTH BLOCK CO.****AUSTRALIA.**

Mine office: Mungana, Queensland, Australia. Lands, adjoining the O. K. Copper Mines Development Syndicate, N. L., have a 100' shaft, with steam power.

**OKUZU MINE.****JAPAN.**

Mine office: Okuzu-mura, Kita-Akita-gori, Ugo, Japan. Property shows numerous fissure veins, of about 1' average and 3' maximum width, traversing Tertiary tuff and augite-andesite, carrying argentiferous chalcopyrite, associated with pyrite and occasional sphalerite. Mine, near Hanawa, discovered 1604, was worked for 2 centuries for silver, making but a trivial amount of copper as a by-product, but in the past few years the copper output has increased, production having been 143,597 lbs. fine copper in 1906, and 131,465 lbs. copper, 6,404 momme silver and 2,739 momme gold in 1907.

**OLALLA COPPER MINING & SMELTING CO.****BRITISH COLUMBIA.**

Office: Second National Bank Bldg., Paterson, N. J. Mine office: Olalla, East Yale district, B. C. Robert Gaede, president; Joseph Bamford, Jr., vice-president; John E. Tylce, secretary and treasurer; A. A. Watson, general manager. Organized October, 1901, under laws of Maine, with capitalization \$8,000,000, shares \$25 par. Company controls the Similkameen & Keremos Ry. Co., capitalized at \$3,000,000. Annual meeting, second Tuesday in November.

Lands, about 50 crown-granted claims, area circa 2,500 acres, also a 100-acre mill and smelter-site, in the lower Similkameen and Keremos camps, Osoyoos division, East Yale district, showing contact veins between diorite and felsite, ore bodies occurring in both, but mainly in the felsite. Veins, about a dozen in number, were claimed, by a former management, to range in width from 3' to 500' and were estimated to average about 5% copper, 2 to 5 oz. silver and \$1 to \$40 gold per ton, but this estimate, which was utterly unwarranted, has been revised to reasonable dimensions by the present management, which claims to be developing a vein averaging 7' width, carrying auriferous chalcopyrite averaging 1% copper and \$4 gold per ton. Gangue is spar, garnetite and magnetite. Development includes a 70' shaft and tunnels of

176', 200', 200' and 600'. Property has hand power only, and is 87 miles from a railroad, 60 miles of which has steamer transportation. Presumable idle.

**OLD AMERICAN MINING CO.** UTAH.

Office: Provo, Utah. Mine office: Eureka, Juab Co., Utah. Jesse Knight, president; J. William Knight, vice-president; R. E. Allen, secretary and treasurer; preceding officers, Hon. O. W. Powers and Fred Schmidt, directors. Capitalization \$125,000, shares 25 cents par. Property is the American mine.

**OLD BALDY GOLD MINING & TUNNEL CO.** NEW MEXICO.

Mine office: Elizabethtown, Colfax Co., N. M. Has auriferous copper ore, with gasoline and electric power. Idle some years.

**OLD COLONY COPPER CO.** MICHIGAN.

Office: 60 State St., Boston, Mass. Mine office: Calumet, Houghton Co., Mich. Employs 15 men. H. F. Fay, president; Geo. G. Endicott, secretary and treasurer; preceding officers, John C. Watson, Stephen R. Dow, Rogers L. Barstow and Wm. Howell Reed, directors. Organized 1898, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par; \$12 paid in. Old Colony Trust Co., Boston, registrar. Annual meeting, second Wednesday in December. Company sold, circa 1906, its share of the Centennial mill, the proceeds therefrom obviating an assessment. Operating expenses for year ending Oct. 1, 1908, were \$22,237.40, leaving a cash balance on hand of \$18,550.78.

Lands were circa 1,200 acres, in Sections 17 and 18, T. 56 N., R. 32 W., east of and adjoining the Calumet & Hecla, from which 40 acres of surface rights, in Section 18, were sold, 1905, to the Centennial, and the NE  $\frac{1}{4}$  of the SE  $\frac{1}{4}$  of Lot 3, Section 5, T. 56, were sold, 1907.

A complete geological cross-section was secured, 1899-1901, by a tunnel driven from the Eastern Sandstone, 57° W. of N., for about 3,000', at right angles to the strike of the formation, N. 33° E., and by diamond drill borings, from the Kearsarge amygdaloid eastward to the western end of the tunnel. This cross-section shows upwards of 75 amygdaloidal and conglomerate beds, a number of which carried a little copper in the drill cores, and where cut in the tunnel.

There are 5 shafts, of the following depths: No. 1 is 700'; No. 2 is 250'; No. 3 is 650'; No. 4 is 400'; No. 5 is 200'. In July, 1906, a little chute of copper was found in the crosscut west from No. 1 shaft, on the 700' level, the rock carrying calcite and epidote in considerable quantities. Late in 1908 an amygdaloidal bed, discovered by the Mayflower several years previous, was showing bunchy values on the ninth level. The Old Colony has secured indifferent results from a decade of underground development, all beds carrying copper proving, so far, both narrow and bunchy.

**OLD DOMINION CO.** ARIZONA.

Office: 99 John St., New York, N. Y. Mine office: Globe, Gila Co., Ariz. Jas. Douglas, president; Chas. Sumner Smith, vice-president; Chas. H. Alt-miller, secretary and treasurer; preceding officers, Cleveland H. Dodge, Jas. McLean, Copley Amory, Chas. S. Lund and J. Waldo Smith, directors. Organized Jan. 15, 1904, under laws of Maine, with capitalization \$8,750,000, shares \$25 par; issued, \$7,313,025. Company issued 12,000 shares circa April, 1907, at \$50. First dividend, of 50 cents per share, was paid Dec. 15, 1905, and a dividend of \$1 per share was paid Aug. 1, 1907.

The company is a securities holding corporation only, organized to promote the operation of the mines of the Old Dominion Copper Mining & Smelting Co. and United Globe Mines under a joint management, while technically complying with injunctions restraining the merging of these two corporations. Property of the Old Dominion Co. is exclusively shares in the two subsidiary cor-

porations named, and the Old Dominion Co. is controlled by the United Globe Mines, owned by Phelps, Dodge & Co., the United Globe having given 138,000 shares of its stock, and \$250,000 cash, for 138,000 shares of the Old Dominion Co. The Old Dominion Co. has exchanged its stock for shares of the Old Dominion Copper Mining & Smelting Co., and owns nearly 95% of the stock of the Old Dominion Copper Mining & Smelting Co. The balance sheet, on Dec. 31, 1907, showed stock holdings, in subsidiary companies, of \$6,981,125, with cash and accounts receivable \$564,066, with \$200,000 floating indebtedness and \$11,073 accounts payable, with cash and accounts receivable of \$453,920.

The Old Dominion and United Globe mines are operated by the Old Dominion Co. as entities, but with a free interchange, upon an equitable basis, of ores for smelting and fluxing. The Old Dominion Co. financed the floating indebtedness of the Old Dominion Mining & Smelting Co., by means of a loan. The properties are described under the titles of their respective owners.

#### **OLD DOMINION COPPER MINING & SMELTING CO. ARIZONA.**

Office: 852-50 Congress St., Boston, Mass. Mine and works office: Globe, Gila Co., Ariz. Employs circa 2,500 men. Chas. Sumner Smith, president; preceding officer, Geo. Napier Towle and Dr. Joseph T. Herrick, executive committee; preceding officers, Chas. T. Lund, E. F. Newton and G. Waldo Smith, directors; Chas. H. Altmiller, secretary and treasurer; Niles S. Berray, general superintendent; R. B. Hegardt, superintendent; Dr. L. D. Ricketts, consulting engineer.

Organized July, 1895, under laws of New Jersey, with capitalization \$5,000,000, shares \$25 par; outstanding, \$4,050,000. Is controlled, through ownership of all but about 8,000 shares, standing in the name of some 25 minority shareholders, by Old Dominion Co. Annual meeting, first Wednesday in April.

Paid, July, 1907, a dividend of \$1.25 per share, amounting to \$202,500, this being the first since 1895. Company formerly had a considerable floating debt, which was taken up by the Old Dominion Co., and last of floating debt, \$100,000, was paid, October, 1908. Earnings for 1907 were about \$4 per share, or circa \$600,000. Balance sheet, of Dec. 31, 1907, showed quick assets of \$1,696,656, with floating debt and accounts payable of \$1,329,848, leaving a net balance of quick assets of \$366,808. For 4 years, ending 1907, improvements cost \$1,875,647.

The company is engaged in extensive litigation with A. S. Bigelow and the Estate of Leonard Lewisohn, suing for recovery of promotion profits. The litigation is extremely involved, being in the state courts of New Jersey and Massachusetts, and also in the Federal courts, and has been further complicated by efforts of the New Jersey courts to restrain the company from prosecuting suit against the promoters in the Massachusetts courts. On Dec. 1, 1907, the company secured, in the Massachusetts court, a verdict for damages of \$1,700,000.

Lands, 9 claims, 3 fractional, and a 10-acre millsite, at Globe, also the Old Dominion and Keystone claims, circa  $3\frac{1}{4}$  miles north of Globe, the Continental group, 240 acres, the Chicago & New York group of 60 acres, and the Geneva mine. Principal developments are on the property at Globe.

The principal ore zone occurs along a displacement having a northeast and southwest strike, with sharp dip eastward. The hanging-wall is limestone and quartzite, with footwall of diabase of more recent age, faulting evidently occurring before and after the intrusion of the diabase. The ore favors the hanging-wall, occurring in lenses parallel to the bedding planes of the limestone and quartzite, the largest lens yet developed being circa 60x100x200' in size. The oxidized ores are mainly cuprite, associated with a little malachite and chrysocolla, in a gangue of iron oxides and quartz. Sulphide ores first appear at a depth of about 350', the principal sulphide ore in the upper work-

ings being chalcocite, with gangue of pyrite and quartz, the lower workings showing chalcopyrite of 3 to 4% copper tenor. All ores are more or less argentiferous, and, as a rule, are highly silicious, requiring heavy lime and iron fluxes in smelting. The mine suffered severely from fire and flood, in 1906, and is very wet, making circa 3,000,000 gallons of water daily. Underground developments are extensive, and during the greater part of 1908, new drifts were opened at the rate of 2,000' to 2,500' monthly.

It was thought, for years, that the ore was cut off in what is known locally as the West Country, by a fault, but the extension has been located, and is of much promise. A dam across Pinal Creek was completed, November, 1908, to obviate the heavy seepage of water that has caused unduly high pumping charges in the past. Principal new developments are on the 10th and 12th levels, in the extreme eastern end of the mine, and on the 10th to 16th levels, inclusive, at the western end. The ore body under Pinal Creek, reopened 1905, shows oxidized ores, up to 20% in copper tenor, on the 8th, 9th and 10th levels, with chalcocite of even better copper tenor on the 11th level. The property has suffered in the past from lack of sulphide ores, which have been bought extensively from small adjoining mines in the Globe district, and also have been imported from other mining fields in Arizona, California and Mexico. The mine shows sulphides, of low average copper tenor, on the 14th, 15th and 16th levels, and these are to be developed extensively, because needed in the smelter.

The mine has a pumping capacity of 6,000,000 gallons daily, with a 1,500-gallon Prescott pump, on the 10th level, which has a 12" water-column, discharging 30' above the collar of the shaft, into a launder on a trestle leading to a storage tank, whence water is drawn for use of the mill and smelter.

The old shafts of the mine suffered severely from crushes and creeping, hence new shafts have been sunk, in the footwall. A shaft, on the western side of Pinal Creek, in what is known as the West Country, has 5 compartments, operating two 3-deck cages and one 2-deck cage, and, November, 1908, was 150' below the 14th level. Crosscuts from A shaft, of about 800' length, on the 8th, 9th and 10th levels, reach the West Country, and crosscuts will be driven on the 14th and 16th levels also.

B shaft, on the eastern side of Pinal Creek, has 4 compartments, and is bottomed on the 14th level, with a big station on the 6th level.

C shaft is bottomed on the 8th level.

D shaft, on the western side of Pinal Creek, about 2,000' west of the most westerly workings previously made, is to be sunk to the 14th or 1,000' level.

The Continental mine shows some high grade sulphide ores, and has considerable ore bodies assaying about 3% only in copper tenor.

Surface equipment includes engine-houses and boiler-house of steel frames, with iron sides and roofs. There is a large and well equipped machine-shop, which is a factor of prime importance, as the mine is located some hundreds of miles from the nearest large custom shops. Equipment includes a 30-drill Nordberg hoist, compound air-compressor with intercooler and water-jacketed air-cylinders, and a complete electric light plant. The management has given consideration to the matter of a new electric power plant. Petroleum is used exclusively for fuel.

The mine, mill and smelter are connected by a private railway having a 14x20" Porter locomotive and 50-ton ore cars.

Ores are graded and furnace charges prepared at the millsite, a short distance from the mine. The grading plant has 6 steel coarse ore bins, of 85 tons capacity each. Ore is drawn from the various pockets onto trommels of manganese steel, undersize dropping to an 18" conveying belt, which carries it to railroad storage bins, while oversize goes to a 10x20" crusher, and thence to

a 36" picking-belt, from which smelting ore is hand-picked, and residual ore put through a 10x20" rock-breaker, and crushed to 2" size, the material from the last crusher being taken, on an 18" belt, to the conveyor storage-bins, of 200 tons capacity each. From the storage-bins ore is drawn automatically to a conveying belt that takes it to the top of the mill, where ore is discharged into a mixing-box, and passed to revolving screens for classification.

The mill, of 300 tons daily capacity, is of structural steel, iron-sheathed, standing on concrete foundations. Equipment includes 18 Frue vanners and 9 Wilfley tables. The plant is entirely automatic, and is one of the best in existence, both in theory and in practice.

The smelter includes several buildings of structural steel on stone foundations. There are 8 double storage-bins, holding 1,000 tons of coke, limestone and ore. Mixing, weighing and charging are done automatically, requiring a force of only 4 men. Equipment includes 6 blast-furnaces, each 44x180" at the tuyeres, set tandem, with common settlers between, charged automatically from side-dumping cars. The 6 furnaces give the smelter a normal capacity of about 2,400 tons daily, but one furnace is held in reserve. The dust-flue chamber is 20x20x250', connecting with a 200' smokestack, of 23' diameter at the bottom and 14' at the top, set on a base 25' above the tuyeres. Flue-dust is briquetted for resmelting. Fuel is New Mexican coke, taken from the Dawson Coke Co., under a one-year contract, at \$9.65 per ton, which compares with a former cost of \$14.75 per ton for eastern coke, this saving reducing cost of finished copper about one-half cent per pound.

The converter department has 8 stands, with shells 84x132", lined with a mixture of clay and quartzite carrying 4.5% copper, the linings averaging about 75% silica, each lining making an average of 18 tons of blister copper. Shells are handled by a 40-ton electric traveling crane. The converters take 50% matte and turn out blister copper of 99.5% copper tenor carrying small silver values. The converter slag-yard is 18x70', with a floor of 2" iron plates, laid on brick bedded in concrete.

The smelter power plant has two 200-h. p. and two 325-h. p. boilers, burning petroleum. Furnace blast is supplied by Connersville blowers, of 45,000 cubic feet aggregate capacity per minute, and converter blast is furnished by a Nordberg air-compressor of 18,000 cubic feet per minute air capacity. An electric generator furnishes energy for the crane, lighting and traction, there being an electric locomotive and three 3,000-lb. tilting cars for charging, and a steam locomotive and dump-cars for handling slags.

The smelter does considerable custom work, and is an extensive purchaser of sulphide ores, which are necessary for fluxing the oxidized ores of the Old Dominion and United Globe mines. The amount of sulphide ore available in the district is increasing rapidly, and the company also is developing large sulphide ore bodies in its own mines.

The old slag-dump is estimated to carry nearly 50,000,000 lbs. fine copper, ranging in tenor from 2 to 4% copper in the more modern slags, made before the present management took charge, up to as high as 8% in the oldest slags. The slag-dump is being resmelted, gradually, with an average recovery of about 2% copper, the slags serving for flux, while their removal will give valuable room that they now occupy.

Production has been as follows: 28,919,217 lbs. fine copper in 1905; 16,602,186 lbs. fine copper, 74,123 oz. silver and 1,798 oz. gold in 1906; 23,294,496 lbs. fine copper, 69,067 oz. silver and 2,407 oz. gold in 1907. Production, October, 1908, was 2,685,891 lbs. blister copper. Production is circa 35,000 tons of ore monthly, in addition to custom ore treated. Copper was being made at a cost of about 11 cents per pound, at the end of 1908, with a prospect of 10-cent copper ultimately.

The Old Dominion has been well handled, physically and financially, by the present management, despite numerous criticisms from shareholders clamorous for dividends. Much of the criticism has been ill advised, as the property has been managed with a view to permanent rather than temporary advantage, and the mine never was in as good shape physically, or the company financially, as at the end of 1908.

**OLD DOMINION DEVELOPMENT****BRITISH COLUMBIA.****SYNDICATE, LTD.**

Mine office: Kamloops, Yale district, B. C. Organized 1906, with capitalization \$35,000, shares \$1 par. Lands, 3 claims, on Coal Hill, 6 miles southwest of Kamloops.

**OLD EMMA MINES CO.****UTAH.**

Office: Provo, Utah. Mine office: Alta, Salt Lake Co., Utah. Organized circa July, 1908, under laws of Utah, with capitalization \$600,000, shares \$1 par. L. R. Martineau, president; Jesse Knight, vice-president; R. E. Miller, secretary; M. M. Miller, treasurer. Property is the Old Emma mine, in the Little Cottonwood district.

**OLD EMMA MINING CO.****UTAH**

Office: Provo, Utah. Mine office: Alta, Salt Lake Co., Utah. Jesse Knight, general manager. Company apparently has been succeeded by Old Emma Mines Co. Property is the Old Emma mine, which was a considerable producer in early days.

**OLD GLORY COPPER CO.****MONTANA.**

Mine office: Butte, Silver Bow Co., Mont. J. Benton Leggat, manager. Organized Jan. 29, 1906, under laws of Maine, with capitalization \$1,000,000. Property is a seven-eighths interest in the Old Glory mine, lying west of and adjoining the Mountain Consolidated mine of the Anaconda, and between the Raven and Snoozer claims of the Raven Copper Co., other eighth being owned by Butte Coalition Mining Co. Mine has a 1,200' shaft, upper levels showing ore carrying small copper values and high gold and silver values, with an increase in copper at depth. Mine, opened 1885, has raised a little ore occasionally, since 1908, through the Buffalo shaft of the Anaconda.

**OLD GOVERNORS COPPER MINING & SMELTING CO. NEW MEXICO.**

Office: 215½ North Main St., Roswell, N. M. Mine office: San Marcial, Socorro Co., N. M. I. B. Rose, president; J. A. Cottingham, vice-president; B. F. Rose, secretary and treasurer; H. Fitzgerald, general manager. Organized September, 1903, under laws of New Mexico, with capitalization \$1,000,000, shares \$1 par; issued, circa \$700,000. Annual meeting, second Tuesday in May.

Lands, 6 claims, area 120 acres, also a 5-acre millsite, in the Dripping Springs district, 25 miles from the Santa Fé railway, with a good wagon road connecting, showing 3 fissure veins in porphyry, of which one, of 18' estimated width, is opened by a 50' tunnel and shafts of 30', 50' and 100', showing malachite and sulphide ore formerly said to assay 12% copper, 2 oz. silver and \$8 gold per ton, and now claimed by company to average 25% copper and \$3 gold per ton, which figures seem excessive. Idle.

**OLD HICKORY COPPER MINING CO.****NEW MEXICO.**

Dead. Absorbed, circa 1901, by Copper Chief Mining Co., later Sater, later Ft. Pitt. Formerly at Clayton, Union Co., N. M.

**OLD HUNDRED MINING CO.****COLORADO.**

Office: 43 Wall St., New York, N. Y. Mine office: Silverton, San Juan Co., Colo. Howell Hinds, president; Thos. A. Nevins, vice-president; Thos. J. Moloney, secretary and treasurer; preceding officers, Wm. C. Eakins and John Werkheiser, directors; Robt. W. Davis, Jr., general manager; J. M. Elmer, superintendent. Organized June, 1906, under laws of Maine, with capitalization \$5,000,000, shares \$5 par; issued, \$4,500,000. Company was stated July,

1908, to have a floating indebtedness of \$75,000. Stock was floated by Thos. Nevins & Son, of New York, and then advanced, by manipulation, to \$5 per share, which was above any possible actual value.

Lands, 26 claims, patented, area circa 500 acres, on Galena Mountain, in Cunningham Gulch, near the Silverton & Northern railway. Property shows a quartz vein of 5' to 12' claimed width, carrying values in gold, silver, lead and copper, with an increase in copper at depth, developed mainly by tunnel, and claimed to have upwards of 4 miles of workings.

Equipment includes a power building of steel and concrete, with steam and electric plants. There also is a tramline, store and numerous buildings.

The mill, of steel frame, of 200 tons rated daily capacity, has a very complete equipment, including 40 stamps, crushers, rolls, jigs, Frue vanners, slime tables and concentrating tables. Company is in bad condition financially, and is not regarded favorably.

#### **OLD IMPERIAL MINING & MILLING CO.**

NEVADA

Mine office: Cherry Creek, White Pine Co., Nev. P. H. Cannon, superintendent. Has auriferous and argentiferous copper ores, employing circa 10 men at last accounts.

#### **OLD IRONSIDES MINING CO.**

BRITISH COLUMBIA

Dead. Was merged, March 29, 1901, in Granby Mining, Smelting & Power Co., Ltd. Formerly at Phoenix, Boundary district, B. C.

#### **OLD PUEBLO MINING & MILLING CO.**

ARIZONA

Mine office: Tucson, Pima Co., Ariz. Alexander Rossi, president; H. W. Roche, vice-president and general manager; W. P. Haynes, secretary and treasurer. Capitalization \$1,000,000, shares \$1 par. Lands, 9 claims, circa 5 miles west of Tucson, having about 600' of workings, with a 70' shaft that cut, at a depth of 30', a 15-ton pocket of chalcocite assaying 33% copper, 16 oz. silver and \$2.50 gold per ton. Has several mine buildings. Arranged, 1907, with Tucson Consolidated Copper Co., for latter to do \$50,000 worth of development work, in exchange for 51% of the stock, to be turned over on completion of work. In October, 1907, made an initial shipment of ore, ranging 10 to 12% copper and \$5 to \$10 combined gold and silver values per ton. Employs circa 20 men.

#### **OLD RELIABLE MINING CO.**

NEW MEXICO

Mine office: Golden, Santa Fé Co., N. M. Ores carry gold and copper. Has two 5' Huntington mills. Presumably idle.

#### **OLD TIEWAUKEE MINING CO.**

UTAH

Office: care of Lewis A. Jeffs, president, Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Capitalization \$500,000, shares \$5 par. Lands include the old Tiewaukee mine, area 120 acres, adjoining the Winnemucca, supposed to carry the Caledonia vein at a depth of circa 600'. Deepest shaft is less than 100', development being mainly by tunnel, and the property has produced some good ore in the past. Company said also to own the Yellow Creek property, area 90 acres, near the Hidden Fortune mine, in the Black Hills district of South Dakota. Presumably idle.

#### **OLD TOWN MINING & MILLING CO.**

COLORADO

Mine office: Russell Gulch, Gilpin Co., Colo. Ores carry gold, silver and copper. Main shaft, 900'. Has steam and electric power. Presumably idle.

#### **OLIGA COPPER CO.**

NEVADA

Letter returned unclaimed from former mine office, Luning, Esmeralda Co., Nev. Property, near Luning, has shafts of 20' to 60' for 2,200' along the outcrop of a vein said to show ore averaging 8% copper, with some assays up to 50% in tenor. Idle and apparently moribund.

#### **OLIVE CAMP MINING CO.**

ARIZONA

Letter returned unclaimed from former office and mine, Tucson, Pima Co.,

Digitized by Google

**Ariz.** W. W. Wishon, general manager; John Ellis, vice-president; D. H. Collins, superintendent. Lands, circa 12 miles south of Tucson, have a 55' shaft. Idle and apparently moribund.

**JOSEPH OLIVER.**

Office and mine: Chloride, Sierra Co., N. M. Employs 4 men. Lands, 120 acres, in the Apache district, showing 6 contact deposits, between limestone and porphyry, of which 2, under development, of 40' reported average width, are said to be traceable 7 miles, carrying oxide, carbonate and sulphide ores of copper, claimed to average 18% copper and 25 oz. silver per ton, which estimates are too high. Mine is opened by shafts of 30', 50', 75', 100' and 110', and by a 200' tunnel.

**OLYMPIA MINING CO. OF WYOMING.**

Office: 187 E. Chicago Ave., Chicago, Ills. Mine office: Encampment, Carbon Co., Wyo. Pehr W. Nilsson, president; Herman C. Johnson, secretary; Carl O. Borgquist, treasurer; John Lundgren, general manager. Idle and apparently moribund.

**OLYMPIC MINING CO.**

Office: 301 Lumber Exchange, Seattle, Wash. E. E. Butterworth, president; Alfred Jeffery, secretary. Company advertised stock on the installment plan, claiming that its lands contained gold, copper and coal, but secretary states that no copper property is being developed, and manifests a reticence regarding the alleged properties of the company utterly at variance with the clarion-toned advertising done in the press. Location of lands, if any, unknown, and company regarded with suspicion.

**OMAHA COPPER MINING CO.**

Office: 1017 New York Life Bldg., Omaha, Neb. Mine office: Encampment, Carbon Co., Wyo. Jas. H. Kyner, secretary. Is a twin of the Blanche Copper Mining Co. Idle.

**OMAHA GOLD & COPPER MINING & SMELTING CO.**

**MONTANA.**

Dead. Formerly at Bigtimber, Sweetgrass Co., Mont.

**OMAKI MINE.**

Mine office: Nishitate-mura, Kita-Akita-gori, Ugo, Japan. Mine was opened circa A. D. 1750, and reopened 1885. Ore bodies are lenses in Tertiary tuff and andesite. Largest lense is 70' deep and 130' long. Ore is argentite, associated with chalcopyrite, sphalerite and galena. Latest reported production, 1896, was 242,690 lbs. fine copper and 858,316 momme fine silver. Idle some years.

**OMAR MINING CO.**

**ALASKA.**

Office: Canterbury Bldg., Portland, Ore. Mine office: Kiam, Prince of Wales Island, Alaska. Chas. E. Ladd, president; W. A. Howe, vice-president; C. E. S. Wood, secretary and treasurer; W. W. Catlin, general manager; H. W. Turner, superintendent. Organized 1904, under laws of Oregon, and is operated as a close corporation.

Lands, 6 claims, area 120 acres, 4 miles from tidewater, on McKenzie Inlet, at an elevation of 3,200', held, on a long lease, from the Khayyam Copper Co. Property shows Kasaan greenstone and schists, latter in part dioritic, carrying 4 parallel ore zones, having lenticular ore bodies in schist, these ranging 4' to 20' in width. Development is by tunnels of 140', 240' and 650', with about a quarter-mile of workings, showing ore giving average assays of about 3% copper, with small gold and silver values, and occasional zinc. Ore is mainly maficite, carrying small percentages of disseminated chalcopyrite, with more or less pyrite and pyrrhotite.

Equipment includes an aerial tram of 4,186', and a surface tram of 12,160', ending at ore-bunkers upon a wharf on McKenzie Inlet. The old management was over-enthusiastic, and built the tramway and wharf before a mine was

opened, and production, 1907, was only 2 carloads of ore. Property considered promising.

**OMEGA COPPER CO.**

Office: Tucson, Ariz. Mine office: Vail, Pima Co., Ariz. L. Zeckendorf, president and treasurer; Capt. T. C. Roberts, vice-president and manager; Frank H. Hereford, secretary. Organized May, 1906, under laws of Arizona, with capitalization \$2,500,000, shares \$10 par.

Lands, 2 claims and a smelter site, 16 miles from Vail, in the Helvetia district, also sundry lode claims in the Tyndall district of Santa Cruz county, Arizona. The Helvetia property was one of the first copper mines in Pima county, having shipped considerable carbonate ore in the past. Mine is opened by a 150' upper tunnel, and the 1,100' Tilly tunnel having a back of circa 600', with about one mile of workings. Main vein, of about 40' average width, carries carbonate and sulphide ores averaging 6 to 9% copper, with fair gold and silver values, selected ore running up to 30% copper and 20 oz. silver per ton. Suspended October, 1907, after shipping a little ore.

**OMEGA MINING CO.**

Dead. Lands sold, May, 1906, to Omega Copper Co. Formerly at Vail, Pima Co., Ariz.

**OMODANI MINE.**

**JAPAN.**

Owned by Mitsu Bishi Goshi-Kwaisha.

**OMORI MINE.**

**JAPAN.**

Mine office: Omori-mura, Nima-gori, Iwami, Japan. Property is an old mine, opened circa A. D. 1300, and reopened 1525. The mine once was highly productive, but output was greatly reduced toward the end of the Nineteenth-Century, and is again increasing. The Eikyu group carries mainly auriferous and argentiferous chalcopyrite, and the Hontani group carries malachite and argentite, with some native silver.

Production has been as follows: 80,139 lbs. fine copper, 122,280 momme silver and 2,880 momme gold in 1900; 210,596 lbs. fine copper in 1903; 490,226 lbs. fine copper, 1,564,702 grams silver and 21,427 grams gold in 1906; 511,419 lbs. copper, 556,269 momme silver and 9,068 momme gold in 1907.

**ONECO COPPER MINING CO.**

**MICHIGAN.**

Office: 64-50 State St., Boston, Mass. Mine office: Demmon, Houghton Co., Mich. Wm. F. Fitzgerald, president; S. S. Millet, secretary and treasurer; Jos. Hocking, superintendent. Organized 1899, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par; issued, \$1,473,500. Levied an assessment of 50 cents per share, Jan. 15, 1906.

Lands, 800 acres, known originally as the Hungarian mine, and later as the Fitzgerald. First work was done 1862, when a shaft was sunk less than 100'. Property was idle until 1899-1900, and a little work was done again, 1906-1907. The mine has one shaft, of circa 500' depth. Improvements include several mine buildings and dwellings. Fully described Vol. II.

**ONEIDA GOLD & COPPER CO.**

**ARIZON<sup>A</sup>.**

Dead. Formerly at Nogales, Santa Cruz Co., Ariz.

**ONOKO MINES CO.**

**COLORADO.**

Office: 203 Kittredge Bldg., Denver, Colo. Letter returned unclaimed from former mine office, Central City, Gilpin Co., Colo. Samuel L. Morris, president; Edgar T. Butler, secretary and treasurer. Organized under laws of Colorado, with capitalization \$1,800,000, shares \$1 par. Lands, 5 claims, opened by a 229' vertical shaft, showing a vein with a 12" paystreak, giving assay values up to 11.95% copper, 3.91 oz. silver and 0.17 oz. gold. Idle and apparently moribund.

**ONTARIO & COEUR D'ALENE MINING CO.**

**IDAHO.**

Office: care of Fred Baier, agent, Saltese, Mont. Mine office: Mullan,

Shoshone Co., Idaho. Geo. Isle, president; M. N. Stratton, secretary and treasurer; preceding officers, Geo. M. Reasoner, J. A. Beinhart and Henry Billberg, directors. Lands, 15 claims, near the East Snowstorm, on which work was begun circa 1906. Development is by a tunnel, planned to cut the vein at about 800' depth.

**ONTARIO & COLORADO GOLD & COPPER MINING CO.**      **COLORADO, ONTARIO & YUKON.**

Dead. Formerly at Central City, Gilpin Co., Colo. Described Vol. VI. **ONTARIO COPPER CO.**      **ONTARIO.**

Office: 520 University Blk., Syracuse, N. Y. Mine office: El Dorado, Hastings Co., Ont. Jas. B. Cook, president; Arthur Coe, mine manager; G. H. Hambly, superintendent. Property formerly was under lease to the Medina Gold Mining Co., which seems to have gone under, and is the only copper mine in Eastern Ontario. Ore occurs in a contact deposit between limestone and granite, showing hematite outcrops, succeeded at depth of circa 75', by chalcopyrite and a little high grade chalcocite, in a vein of 7' to 8' width, estimated by Ontario Geological Survey to carry 4 to 10% copper, and estimated by company to average 7% copper, which probably is too high. Property originally was an iron mine, from which considerable hematite was shipped, but iron ore proved to be merely a gossan. Mine, opened to depth of about 300', has a 140' main shaft. Equipment includes an air-compressor and electric light plant.

Smelter is at the mine, a derrick hoisting ore from the mine dumpa into the furnace building. Smelter, blown in June 25, 1906, and since run at intervals, mine not being sufficiently developed to supply ore steadily, has a 48" circular water-jacket blast-furnace, of 50 tons rated capacity, making a 45% matte in 2 fusions. Was said, 1907, to be producing 30 to 35 tons of ore daily, and to have shipped some matte to the DeLamar works in New Jersey. Apparently company has same officers as the Medina Gold Mining Co., which paid dividends while peddling stock, and which came to grief. Property considered promising, but company not regarded favorably.

**ONTARIO DEVELOPMENT CO.**      **ONTARIO.**

Office: care of Frank Howard, Munising, Mich. M. J. Morrisey, secretary and treasurer. Organized under laws of Ontario, with capitalization \$150,000. Lands, 320 acres, 40 miles north of Sault Ste. Marie, Ontario, and just north of Goulais Bay, opened by 14 shallow pits, deepest 24', showing an 8' vein of ore, with quartz gangue, giving good assays in copper. Idle.

**ONTARIO GOLD & COPPER MINING CO.**      **ARIZONA.**

Dead. Formerly at Prescott, Yavapai Co., Ariz.

**ONTARIO NICKEL CO., LTD.**      **ONTARIO.**

Mine office: Worthington, Algoma, Ont. G. E. McGinley, president; W. S. Gates, manager. Organized Oct. 5, 1906, under laws of Ontario, with capitalization \$1,000,000, succeeding the Canada Nickel Co. Property is the Totten mine, one-half mile west of Worthington, having a 90' shaft. Is said to use a new process for the recovery of nickel.

**ONTARIO SMELTING CO.**      **ONTARIO.**

Dead. Formerly at Massey Station, Algoma, Ont.

**O'OKIEP MINE.**      **CAPE COLONY.**

Owned by Cape Copper Co., Ltd.

**OPAL GOLD MINING & MILLING CO.**      **WASHINGTON.**

Mine office: Chesaw, Okanogan Co., Wash. Ores carry gold, silver and copper. Has steam power. Idle.

**OPEX CONSOLIDATED MINES CO.**      **UTAH.**

Office: Provo, Utah. Mine office: Eureka, Juab Co., Utah. Jesse Knight, president; Elmer R. Jones, vice-president; R. E. Allen, secretary; M. H. Walk-

er, treasurer; Frank P. Swindler, general manager; preceding officers, W. Lester Mangum, Amanda M. Knight, Lafayette Hanchett and Geo. T. Odell, directors. Organized October, 1908, under laws of Utah, with capitalization \$1,000,000, shares \$1 par.

**OPHIR CONSOLIDATED GOLD & COPPER MINING CO.** ARIZONA.

Dead. Formerly at Florence, Pinal Co., Ariz. Described Vol. VI.

**OPHIR CONSOLIDATED MINES CO.** COLORADO.

Office: Madison, Wis. Mine office: Ames, San Miguel Co., Colo. W. B. Ladd, general manager; F. E. Trumble, superintendent. Mine, known as the Silver Bell, has gold, silver and copper ores, of importance in the order noted, copper being merely a by-product. Has hydro-electric power, with a 50-stamp mill, employing circa 60 men.

**OPHIR COPPER MINING CO.**

MONTANA.

Dead. Lands sold, 1906, to Butte Central & Boston Copper Corporation. Formerly at Butte, Silver Bow Co., Mont. Fully described Vol. VI.

**OPHIR GOLD & COPPER MINING CO.**

MONTANA.

Office: Spokane, Wash. Mine office: Helena, Lewis & Clark Co., Mont. Capitalization \$1,000,000. Lands, in the Blackfoot district, near Helena, have a fissure vein carrying copper ore of fair assay tenor.

**OPHIR HILL CONSOLIDATED MINING CO.**

UTAH.

Mine office: Ophir, Tooele Co., Utah. E. W. Clarke, superintendent. Ores carry gold, silver, lead, copper and zinc, with values mainly in silver and lead. Has water, steam and electric power, and a 150-ton concentrator. Is controlled by Hon. W. A. Clark, and is operated as a close corporation, but mine is supposedly profitable. Litigation over land titles was settled favorably to company, February, 1908. Was producing on leases about half normal output, early 1908.

**OPHIR MINING CO.**

MONTANA.

Dead. Formerly at Butte, Silver Bow Co., Mont.

**OPHIR MINING & DEVELOPING CO.**

MONTANA.

Dead. Formerly at Butte, Silver Bow Co., Mont.

**OPHIR QUEEN MINING CO.**

UTAH.

Office: Cedar River, Mich. Letter returned unclaimed from former mine office, Ophir, Tooele Co., Utah. Samuel Crawford, secretary, treasurer and general manager. Organized Apr. 19, 1902, under laws of Utah, with capitalization \$250,000, shares 25 cents par. Lands, 4 claims, area 53 acres, in the Ophir district, showing a 25' vein, giving assays up to 12% copper, 10% lead, 15% zinc, 16 oz. silver and 40 cents gold per ton, opened by a 335' shaft with two 5x8' compartments, and 3 tunnels, longest 220' and 225'. Has a 40-h.p. gasoline hoist, 3-drill Rand air-compressor and power drills. Idle and presumably moribund.

**OPTIMO GOLD & COPPER MINING CO.**

MONTANA.

Office: Missoula, Mont. Mine office: Saltese, Missoula Co., Mont. C. J. Heidenreich, manager. Organized 1904, under laws of Montana, with capitalization \$1,500,000, shares \$1 par. Idle several years.

**OQUIRRH-BINGHAM COPPER CO.**

UTAH & WYOMING.

Dead. Formerly at Bingham Canyon, Salt Lake Co., Utah. Described Vol. VI.

**ORANGE BLOSSOM MINING & MILLING CO.**

CALIFORNIA.

Office: San Diego, Cal. Mine office: Bagdad, San Bernardino Co., Cal. Jas. A. Hodgson, president; J. M. Dodge, vice-president; Will H. Holecomb, secretary; R. V. Dodge, treasurer. Organized circa January, 1908, with capitalization \$2,000,000, shares \$1 par. Lands, 25 claims, including the Bengal mine, and a millsite, circa 10 miles north of Bagdad, having a tunnel and a 650' shaft showing auriferous copper ore. Has 8 miles of 4" and 5" pipe-line,

bringing water from springs having a flow of about 60,000 gallons daily. Has necessary mine buildings, and was building a 20-stamp mill, at last accounts. Is said to plan an electric power installation for mine and mill. Employs circa 30 men.

**ORANGE PLAINS COPPER MINING CO.****AUSTRALIA.**

Mine office: Dandaloo, N. S. W., Australia. Property, in the vicinity of the Bogan River mine, shows ore of good assay tenor.

**ORANGE RIVER SYNDICATE.****ORANGE RIVER COLONY.**

Mine office: Upington, Orange River Colony. Is said to have developed copper ore, early 1908.

**ORDENAURA MINING CO.****MEXICO.**

Mine office: Valardeña, Cuencamé, Durango, Mex. Has auriferous and argentiferous copper ores, with steam power and a 25-ton mill, employing circa 30 men.

**OREGON-ARIZONA COPPER CO.****ARIZONA.**

Mine office: Superior, Pinal Co., Ariz. Lands are 2 miles south of Superior. Has steam power.

**OREGON & ARIZONA MINING CO.****ARIZONA.**

Letter returned unclaimed from former mine office, Old Glory, Santa Cruz Co., Ariz. Lands, known as the Black Diamond group, 2 miles from the Mexican line, are said to carry a vein up to 30' in width. Idle and presumably moribund.

**OREGON COPPER CO.****OREGON.**

Dead. Formerly had an office in Spokane, Wash., and presumably was located in Josephine county, Oregon.

**OREGON GOLD & COPPER CO.****OREGON.**

Dead. Formerly at Sumpter, Baker Co., Ore.

**OREGON HOMESTEAD MINING & REDUCTION CO.****OREGON.**

Office: care of C. J. Allen, president, Portland, Ore. Mine office: Galice, Josephine Co., Ore. Frank B. Roberts, vice-president and general manager; W. T. Perry, secretary and treasurer. Organized, 1904, to take over the Allen copper-gold mine, on Rogue river, 3½ miles south of Galice creek, Josephine county, Oregon, at a reported consideration of \$750,000. Apparently no work done.

**OREGON-IDAHO INVESTMENT CO.****OREGON.**

Mine office: Sparta, Baker Co., Ore. Jas. A. Howard, manager. Lands include the Poorman and Iron Mask claims, showing a heavy gossan. A 120' crosscut tunnel is said to be entirely in ore, giving average assays of about 6% copper, with small gold and silver values.

**OREGON ORE REDUCTION WORKS.****OREGON.**

Dead. Was a fake. Formerly at Portland, Multnomah Co., Ore.

**OREGON.SHORT LINE MINING CO****NEVADA.**

Dead. Sold lands to Bristol Consolidated Mines Co. Formerly at Pioche, Lincoln Co., Nev.

**OREGON SMELTING & REFINING CO.****OREGON.**

Office: Postal Telegraph Bldg., New York, N. Y. Works office: Sumpter, Baker Co., Ore. Walter E. Lindsay, president; G. F. Holmes, vice-president; Wm. S. Nichols, secretary; E. J. Lindsey, treasurer; Fred D. Fuller, general manager; preceding officers, Scott German and Jas. H. Caldwell, directors; R. B. Green, superintendent. Organized March 16, 1902, under laws of Arizona, with capitalization \$600,000, shares \$10 par.

Lands include a 200-acre smelter site, a 640-acre timber tract and 40 acres of miscellaneous lands. Company was said, 1905, to have taken a bond and lease on a sulphide copper property in the Seven Devils district, circa 20 miles from Weiser, Washington Co., Idaho.

The smelter, at Sumpter, of 150 tons nominal daily capacity, has a 33x37 sampling mill, 16x86' ore-bins, 46x88' furnace building, 32x66' briqueting plant, 46x77' boiler-house and 32x52' laboratory. The cupola building has a 38x144" Allis-Chalmers blast-furnace, making matte, formerly estimated by company to average 40% copper, 300 oz. silver and \$150 gold per ton, but actually averaging only about 15 to 40% copper, with an average of 60 oz. silver and \$200 gold per ton, sent for refining to the Tacoma smelter. Fuel is wood, costing \$2.50 per cord; soft coal, costing \$8 per ton, and coke, costing \$8 per ton. In 1905 the smelter treated 8,798 tons of custom ore, making therefrom 174,758 lbs. fine copper, with considerable gold and silver values. The supply of custom ore available is insufficient to keep the plant running at its full capacity. The company was in financial difficulties, February, 1908, but these are said to have been settled April, 1908, and at last accounts resumption was planned.

**ORE KNOB COPPER CO.****CAROLINA.**

Dead. Property was sold, circa 1885. Formerly at Jefferson, Ashe Co., N. C.

**NORTH CAROLINA.**

Office: Ellicott Square Bldg., Buffalo, N. Y. Mine office: Jefferson, Ashe Co., N. C. Capt. John Bent, superintendent. Mine, opened previous to 1850 and closed 1885, is said to have yielded, 1874, net profits of \$60,302. Property shows a fissure vein of 6' to 20' width, of nearly vertical dip, in micaceous granite and mica-schist, carrying mainly high grade sulphides, claimed to average 12 to 20% copper, which is an overestimate. Development is by 11 shafts, deepest 400'. The smelter, built 1902, has a 150-ton Garretson pyritic furnace. Idle since 1905.

**ORE KNOB MINING CO.****NORTH CAROLINA.**

Dead. Formerly at Jefferson, Ashe Co., N. C. Described Vol. V.

**ORFORD COPPER CO.****NEW JERSEY.**

Office: 43 Exchange Pl., New York, N. Y. Works office: Bayonne, Hudson Co., N. J. Robert R. Moffett, superintendent; E. Franki, chief engineer. Is controlled by the International Nickel Co. and refines nickel mattes and ores from New Caledonia and nickel-copper matte from Canada, in addition to treating copper ores and mattes from the United States, Canada, Mexico and elsewhere. Capacity of plant is about 8,000,000 lbs. copper and 1,000,000 lbs. metallic nickel, monthly. Works are exceptionally well equipped, and company enjoys a deservedly high reputation for metallurgical ability, and the fine quality of its metallic products.

**ORIENTAL COPPER CO.****ARIZONA.**

Office: 303 Security Bldg., St. Louis, Mo. Mine office: Cave Creek, Maricopa Co., Ariz. W. F. McDonald, president; John B. Cabanne, vice-president; F. W. Irland, secretary and treasurer; preceding officers, H. C. Townsend, W. C. Stith, S. B. Schuyler, C. A. Deane, E. B. Lane and H. F. Berkley, directors; A. S. Mills, superintendent. Organized, 1904, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par.

Lands, 19 claims and a 5-acre millsite, area 385 acres, having a 475' tunnel, said to crosscut a number of veins showing ores that have given assays of 8.9% copper and 6.8 oz. silver per ton, with occasional small gold values. Management claims many carloads could be shipped, but that such shipments would be inadvisable. Tunnel is in schist, and ore found must have been from small stringers. Property poorly developed and not regarded favorably.

**ORIENTAL MINING & MILLING CO.****ARIZONA.**

Office: Jamestown, N. Y. Mine office: Providence, Yavapai Co., Ariz. A. F. Kent, president; W. A. Keeler, secretary; Wm. A. Kent, assistant treasurer; L. B. Kent, superintendent. Is primarily a gold and silver mine, carrying a small percentage of copper. Has a 20-stamp mill, employing circa 25 men.

**ORIENT GOLD MINING CO.****WASHINGTON.**

Mine office: Bossburg, Stevens Co., Wash. Ores carry gold and copper. Has steam power. Idle several years.

**ORIGINAL BLUE BIRD COPPER MINING CO.****CALIFORNIA.**

Mine office: Oasis, Mono Co., Cal. Capitalization \$1,500,000, shares \$1 par. Mine, circa 2 miles south of Oasis, having shafts of 80' and 130', made shipments, circa 1865, of high grade ore, ranging up to 250 oz. silver per ton, and is claimed to have, on an old dump, several hundred tons of ore averaging 10% copper, 35 oz. silver and \$2 to \$12 gold per ton. Formerly had a mill.

**ORIGINAL CONSOLIDATED MINING CO.****MONTANA.**

Office and mine: Miner Bldg., Butte, Silver Bow Co., Mont. Employs 750 men. Hon. Wm. A. Clark, president; Arthur H. Wethey, vice-president and general manager; W. M. Bickford, secretary; Thos. Bryant, superintendent; Geo. Mennie, assistant superintendent. Organized Feb. 20, 1904, under laws of Washington, with capitalization \$10,000,000, shares \$100 par, as successor of Original Mining Co.

Lands include the Original, West Stewart, East Stewart, Dives, Home, Woolman and other adjoining properties, the Original and West Stewart, both small fractional claims, being the principal producers. The mines are connected underground with adjoining properties.

The Original mine has a 2,200' two-compartment shaft, which was straightened and retimbered, early 1908, this shaft having a 126' steel gallows-frame and a 36x72" first-motion duplex hoist, good for circa 2,600' depth.

The West Stewart mine has a 1,900' vertical shaft, showing, at the bottom, a 30' vein yielding considerable ore assaying up to 10% copper, with fair silver values, with ore of better grade in the bottom levels than above. The West Stewart has a 120' steel gallows-frame, with a hoist duplicating that at the Original.

Equipment includes 4 steam air-compressors and 2 Ingersoll-Sergeant electric air-compressors, each of latter being driven by a 200-h. p. induction motor.

The ore of the Original company is treated at the Butte Reduction Works, under the same ownership, located circa 1½ miles south of the mine, ore being transported, at night, over the line of the Butte Electric Railway Co.

Production normally is circa 18,000,000 lbs. fine copper yearly, but, for 1907, was only 12,500,000 lbs., owing to depression in the metal market during the latter half of year. For year ending June 1, 1907, ore extracted was 264,231 tons, yielding \$9.81 per ton gross, with cost of extraction \$4.08 per ton, and net earnings were \$663,259. The property, despite its small area, is highly productive and valuable, and is well managed in all departments.

**ORIGINAL MINING CO.****MONTANA.**

Dead. Succeeded, Feb. 20, 1904, by Original Consolidated Mining Co. Formerly at Butte, Silver Bow Co., Mont.

**ORIGINAL YERRINGTON COPPER CO.****NEVADA.**

Mine office: Yerington, Lyon Co., Nev. Organized, 1907, under laws of Arizona, with capitalization \$1,000,000.

**ORIOLE COPPER MINING CO.****WYOMING.**

Office: Douglas, Wyo. Mine office: Clarence, Converse Co., Wyo. Hon. C. D. Clark, president; T. H. Howard, vice-president; E. J. Wells, secretary, treasurer and general manager; Chas. J. Wells, superintendent. Organized 1902, under laws of Wyoming, with capitalization \$750,000, shares \$1 par.

Lands, 4 claims, area 80 acres, in the War Bonnet district, carrying an 8' fissure vein in granite, opened by shafts of 75' and 255', showing carbonate ore assaying about 6% copper, with traces of gold and silver. Has a 40-h. p. steam plant, with hoist and 2-drill Leyner air-compressor. Presumably idle.

**ORIOLE MINING & MILLING CO.**

WASHINGTON.

Mine office: Metaline, Stevens Co., Wash. Has secured ores assaying well in lead, copper and silver.

**ORION MINING CO.**

NEW MEXICO.

Office: P. O. Box 12, El Paso, Tex. Mine office: Lordsburg, Grant Co., N. M. A. W. Gifford, manager. Organized 1898, under laws of New Mexico, with capitalization \$200,000, shares \$1 par. Property is the Dundee mine, in the Shakespeare district, Grant county, New Mexico, having about 1,000' of underground openings, claimed to show 10,000 tons of ore, with quartz gangue, carrying \$12 to \$14 per ton in gold, silver and copper, which must be concentrated to afford a profit. Company also owns claims in the Jarilla district of Otero county, New Mexico. Apparently idle for some years.

**COMPÀNIA DE MINAS EL ORITO.**

CHILE.

Office: Valparaiso, Chile. Mine office: Vallenar, Atacama, Chile. Organized July 19, 1904, under laws of Chile, with capitalization £50,000, shares £5 par. Property is Las Breas mines, opened 1888. Preceding company was a considerable producer, making upwards of 1,000,000 lbs. fine copper yearly.

**SOCIEDAD MINERA EL ORITO.**

CHILE.

Dead. Was succeeded, July 19, 1904, by Compañía de Minas El Orito. Formerly at Vallenar, Atacama, Chile. Described Vol. V.

**ORKLA GEUBE AKTIEBOLOG.**

NORWAY.

Norwegian incorporation of Orkla Mining Co., Ltd.

**ORKLA MINING CO., LTD.**

NORWAY.

Office: 61 Gracechurch St., London, E. C., Eng. Norwegian office: Thamshavn, Trondhjem, Norway. Mine office: Lökken Vaerk, Meldalen, Trondhjem, Norway. Thos. Fearnley, chairman; Consul-General Christian Thams, general manager; preceding officers, P. M. Wikström, Thv. Olrog, Mart. Wallenberg, Consul-General Jacob Finne and J. M. Berner, directors. Organized Dec. 7, 1904, under laws of Norway, with title Orkla Grube Aktiebolag, with capitalization kr. 4,140,000, shares 180 kr. par. Controls a subsidiary railway and power company.

Lands, 120 claims, including mining, timber and miscellaneous lands, area 2,500 acres, in the Meldal and Orkedal valleys, Sondre Trondhjem. Principal properties are the Lökken, Höidal and Dragset mines, carrying 2 main ore zones, the southern running from the Dragset, through the Lökken and Höidal, to the Aamot mines, in the southeast, a distance of about 9 miles. The southern zone runs from the Holum mine to various ore deposits in the Grefstadfjeld, in the east, a distance of about 6 miles. Ore occurs in veins and lenses in a brecciated schistose diorite country rock of Silurian age, ore being disseminated chalcopyrite and cupriferous pyrite.

The Lökken mine, opened A. D. 1657, has a 200' upper shaft and 750' incline shaft, with double hoist for ore and double hoist for men, and a 900' tunnel, showing considerable ore bodies.

The Höidal, opened A. D. 1680, includes the Nya Höidal and Gamla Höidal mines, principal openings being tunnels of 200' and 500'.

The Dragset mine has shafts of 200' and 300', and a 100' tunnel.

The Aamot and Kong Karl mines have 100' tunnels each, and the Victoria mine, opened circa 1870, also has comparatively slight development. The Holum mine, recently opened, consists of 3 parallel ore bodies, of 3' to 5' width, traced for distance of about 160'.

The main dressing plant is at the Lökken mine, where the mining equipment includes two 20-h. p. Ingersoll-Rand compressors. There is a 50-ton Elmore experimental mill, and a large mill with 11 Elmore units, rated at 800 tons daily capacity, being the largest copper concentrating plant in Scandinavia. Ore is brought to this mill by aerial trams of 8.4 kilometers from

the Dragset mine, and 2.7 kilometers from the Höidal mine. Electric power is brought 30 kilometers from the Skjaenaldfos waterfall station, at 15,000 volts, in a 3-phase alternating current, about 2,000 h. p. being utilized.

Buildings at the property include 6 dwellings for officers, 40 dwellings for workmen, compressor house, machine shop, transformer station, administration building, warehouses, stores, hotel, etc., with a total of about 20 miscellaneous buildings. Company has its own postoffice and telegraph office, by arrangement with the Norwegian government.

A subsidiary company, organized for the purpose, has installed a fine power plant at the Skjaenaldfos waterfall, and has built an electric railroad line of 26 kilometers for transporting ore from the Lökken mill to Thamshavn, at the mouth of the river Orkla, in the Orkedalsfjord, where the company has large wharves for goods and passenger traffic, and automatic loading devices for the dispatch of ore. The transportation company, which has the official title of Chr. Saldeson & Chr. Tham's Communication Aktieselskab, has a steamer, making 2 round trips daily between Thamshavn and Trondhjem.

The plans of the company, which has a strong and ambitious management, call for the export of circa 100,000 tons of pyrite and cupriferous pyrite, beginning with 1909.

#### **ORO COBRA MINING CO.**

**ARIZONA.**

Office: 715 High St., Burlington, Iowa. Mine office: Wendendale, Yuma Co., Ariz. Thos. Wilkinson, president and general manager; Hon. John J. Hocking, vice-president; S. M. Wilkinson, secretary. Organized October, 1901, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par; issued, \$900,000.

Lands, 10 claims, area 200 acres, adjoining the Harcúvar Copper Co., in the Ellsworth district, 12 miles west of Wendendale, showing country rocks of diorite, granite, and porphyry, carrying several fissure veins in diorite and porphyry, these ranging from a few inches to 20' in width, showing oxide and carbonate surface ores giving assays of 12 to 15% copper and \$1.50 to \$80 combined gold and silver values per ton. Development is by shafts of 40', 40' and 100', and by a tunnel of 175'. Presumably idle.

#### **ORO COBRE MINING CO.**

**ARIZONA.**

Office: care of Geo. Duffy, Globe, Ariz. Organized Oct. 12, 1906, under laws of Arizona, with capitalization \$300,000, shares \$1 par. Presumably idle.

#### **ORO CONSOLIDATED MINING CO.**

**ARIZONA.**

Office: care of R. M. Reid, secretary, Colorado Springs, Colo. Mine office: Prescott, Yavapai Co., Ariz. H. I. Read, president; O. P. Hopkins, treasurer. Lands, 5 claims, patented, area 100 acres, in the Mineral Point district, 2 to 4 miles from two railroads. Ore values apparently are mainly in gold, and company claims to have developed 7,000 tons of ore, worth \$9 to \$100 per ton, which is doubted. Idle.

#### **ORO DENORO MINES, LTD.**

**BRITISH COLUMBIA.**

Dead. Succeeded by Denoro Mines, Ltd. Formerly at Rossland, Trail district, B. C. Fully described Vol. V.

#### **ORO GRANDE MINES CO.**

**ARIZONA.**

Letter returned unclaimed from former office, 1034 Park Row Bldg., New York, N. Y. Mine office: Wickenburg, Maricopa Co., Ariz. Geo. B. Upton, superintendent. Mine has upwards of 3,300' of openings, showing a large ore body, considerably mixed with country rock. Has gasoline power and a 10-stamp mill. Property well regarded, but management not.

#### **ORO GRANDE MINING CO.**

**ARIZONA.**

Office and mine: Globe, Gila Co., Ariz. Lands, on Upper Mineral Creek, have a 110' shaft, showing a 5' vein giving ore assaying up to 5% copper, 30 oz. silver and 1.5 oz. gold per ton. Presumably idle.

**OROGRANDE SMELTER.****NEW MEXICO.**

Owned by Southwest Smelting &amp; Refining Co.

**ORO MAXIMO MINING CO.****MEXICO.**

Office: Detroit, Mich. Mine office: Bacoachi, Arizpe, Sonora, Mex. N. L. Clancey, secretary and superintendent. Has 600,000 shares.

Lands, circa 1,000 acres, about 40 miles from La Cananea, the nearest railroad point. The mine is opened by a 275' two-compartment shaft and a 300' three-compartment shaft, with considerable development. Equipment includes 2 hoists and a 12-drill Rand air-compressor. Water is supplied by a 2-mile pipeline. At last accounts company planned a 60-stamp mill. Property, which is considered promising, was attached, circa September, 1908.

**COMPANIA DE ORO y PLATA, S. A.****MEXICO.**

Is the Mexican incorporation of the Carman Consolidated Copper Co.

**ORO PLATA MINING & DEVELOPMENT CO.****MONTANA.**

Dead. G. W. Simpkins was president and general manager; G. H. House, first vice-president; N. M. MacLeod, second vice-president and secretary; C. G. Laurence, treasurer. Lands, near the Copper Chief, were said to show a vein of 4' to 5' width, carrying auriferous copper ore. Former office was 630 Hyde Block, Spokane, Wash. Formerly at Dillon, Beaverhead Co., Mont.

**ORO QUAY GOLD MINING & REDUCTION CO.****COLORADO.**

Mine office: Ortiz, Conejos Co., Colo. Lands, 12 miles south of Ortiz, show considerable bodies of magnetic iron ore, some of which carries good assay values in copper, silver and gold. Was under development, 1908, by Colorado Fuel and Iron Co., under lease.

**FRANCISCO BODRIGUEZ OROZCO y CA.****MEXICO.**

Office and mine: Mazapil, Zacatecas, Mex. Property is 23 mines, including the Todos Santos and La Nieva, developed by a 175' main shaft, and a 1,000' main working tunnel. Ores carry copper, lead, silver and gold values. Equipment includes a 75-ton mill and a 75-ton smelter. Employs circa 200 men.

**ORPHAN COPPER CO.****ARIZONA.**

Office: 1 West 34th St., New York, N. Y. Mine office: Globe, Gila Co., Ariz. Melville D. Chapman, president; Chas. M. Clark, vice-president and general manager; preceding officers, P. P. Greer, A. J. Smith, Frank Rockefeller, Ezra B. Hamilton, Chas. T. Martin and G. B. Fox, directors; Walter D. Dunlap, secretary and treasurer. Organized May 15, 1908, under laws of Arizona, with capitalization \$3,000,000, shares \$5 par.

Lands, 10 claims, 1 fractional, area 190 acres, southeast of the Keystone and near the Miami, 6 miles southwest of Globe, the nearest railway point. Property is said to show 9 main vein systems and a prominent fault, the principal ore body under development occurring at the contact of schist with granite-porphyrphy, this being estimated by company to average 30" to 3' in width, and to be traceable 1,000', carrying bornite, chalcopyrite and tetrahedrite, estimated to average 5 to 9% in copper tenor. The company planned sinking 500' shafts on both the Orphan and Iron Lode claims, 600' apart, and connecting by a crosscut on the 500' level, but only one shaft, of 230' depth, has been sunk, this showing a 30" vein carrying mainly chalcopyrite, assaying up to 20% copper, with gangue of limestone and calc spar. The property shows ore of good assay tenor in shallow workings.

Improvements include a 20x22' machine shop, carpenter shop, smithy, assay office, warehouse and foreman's dwelling. Connection by Globe is over a good wagon-road. Equipment includes a steam hoist and air-compressor, bought of the Calumet & Globe Development Co.

The company did not finish making its first payment until Aug. 1, 1908, one month after due. The company is in bad odor with careful investors, because of the methods used in booming its shares, and the men connected

with this work. Mr. Frank Rockefeller, one of the directors, a brother of John D. Rockefeller, was accused of dumping considerable stock, in violation of an agreement, and there was talk of a suit against Mr. Rockefeller, but apparently this was merely a bluff. It has been asserted, in the press, that Mr. Rockefeller's stock was donated, for the use of his name, and that the company refused to transfer his certificates, when presented. The stock was boosted in Boston by Cardenio F. King, a notorious personage who succeeded, by manipulation, in getting the stock to \$8 per share, but, late in September, 1908, the stock opened on the Boston curb at 8½ on Monday, and closed Thursday at 1½ bid. Mr. King, who is under indictment for larceny, is said by the company to have no official connection therewith, but to have been booming the shares for a few shareholders, which may or may not have been the case. The property is considered as of some promise, but the methods of promotion and financing are much disliked.

**ORETEGA MINING CO., S. A.****MEXICO.**

Is the Mexican incorporation of the Southwestern Mining Co.

**ORVILLE GOLD & COPPER MINING CO.****BRITISH COLUMBIA.**

Mine office: Golden, Kootenay district, B. C. Idle for some years.

**OSAKA ELECTROLYTIC REFINING CO.****JAPAN.**

Office and works: Osaka, Izumi, Japan.

**OSARUZAWA MINE.****JAPAN.**

Owned by Mitsui Bishi Goshi-Kwaisha.

**OSBORN CONSOLIDATED MINING & MILLING CO.****UTAH.**

Mine office: American Fork, Utah Co., Utah. S. Osborn, superintendent. Lands, 8 claims, west of the Pacific Mining Co.

**OSCEOLA CONSOLIDATED MINING CO.****MICHIGAN.**

Office: 303-199 Washington St., Boston, Mass. Operating office: Houghton, Mich. Mine office: Opechee, Houghton Co., Mich. Employs 1,500 men. Albert S. Bigelow, president; Hon. Norman W. Haire, vice-president and general manager; Wm. J. Ladd, secretary and treasurer; preceding officers, J. Henry Brooks, Edw. S. Grew, Edw. R. Hall and Walter A. S. Chrimes, directors. Wm. J. Uren, general superintendent; Frank H. Haller, assistant superintendent; A. L. Burgan, mill superintendent; A. G. Gullberg, superintendent motive power; Chas. D. Hohl, chief engineer; Jas. Rowe, mining captain Osceola branch; Jos. Biscombe, mining captain North Kearsarge branch; Frank Landers, mining captain South Kearsarge branch; John T. Reeder, purchasing agent; Wm. Veale, clerk; Thos. Burgan, assistant clerk.

Organized 1873, under laws of Michigan, and reincorporated, 1903, for period of 30 years, with capitalization \$2,500,000, shares \$25 par; issued, \$2,403,750. Shares are listed on the Boston stock exchange. Annual meeting, second Thursday in March.

Dividends, begun 1878, were \$7,612,550 to end of 1908, recent dividends being as follows: \$2 in 1904; \$6 in 1905; \$13 in 1907; \$6 in 1908.

Lands, 2,120 acres, in 4 separate tracts, also an extensive millsite, in Houghton county, and considerable holdings of timber and miscellaneous lands in Houghton and Keweenaw counties, Michigan. Company's property includes 4 mines, known as the Osceola, North Kearsarge, South Kearsarge and Tamarack Junior, the latter being idle. The various mines employ about 150 power drills.

New openings, 1907, were as follows: 4,024' in the Osceola branch; 18,532' in the North Kearsarge branch; 635' in the South Kearsarge branch. Cost of all openings is charged direct to operating expenses, which is the correct plan. There is comparatively little rock selection, though discrimination is used, of course, in breaking ground. The amount of rock broken that was rejected

on surface was 9% in 1904; 12% in 1905, and 9% in 1907. The matter of power haulage has been given tentative consideration.

The Osceola mine proper was opened, 1873, on the southern extension of the Calumet conglomerate, upon which 6 shallow shafts were sunk, but this bed proved unremunerative, except under a few acres, and work was abandoned thereon and development begun on the Osceola amygdaloidal bed, lying parallel with and 730' east of the Calumet conglomerate, at surface. The Osceola mine proper, area 720 acres, lying next south of the Calumet & Hecla mine, has 6 shafts on the Osceola amygdaloid, which has a strike of approximately N. 39° E., shafts being numbered from north to south. Cross-cuts have been sent from the Osceola workings to the Calumet conglomerate, at various depths, without encouragement, and diamond drilling was done, 1904, to locate and test the Kearsarge amygdaloid on the old Osceola tract, but the results presumably were not encouraging. The Osceola mine proper uses 50 power drills.

Nos. 1 and 2 Osceola shafts have been abandoned for some years, owing to exhaustion of mineral ground tributary thereto.

No. 3 Osceola shaft, with 3 compartments, circa 3,000' deep, has been idle for some years, and is practically abandoned.

No. 4 Osceola shaft, 600' next south of No. 3, with 3 compartments, is circa 3,700' deep, and has been idle for several years. There is small likelihood of shafts 3 and 4 being reopened, as the ground tributary to them is nearly exhausted, and the good stopes remaining can be reached from the shaft next south.

No. 5 Osceola shaft, 1,300' south of No. 3, was 4,360' deep on Aug. 1, 1908, and was cut down and retimbered throughout, in 1903.

No. 6 Osceola, formerly known as the Opechee shaft, is 1,300' next south of No. 5, and was 4,423' deep on Aug. 1, 1908. This shaft shows some excellent stopes, especially in the southern drifts, toward the Tecumseh line, in the lower levels. This shaft was retimbered with concrete between the 43d and 44th levels, and partly retimbered with wood above, in 1907. There is room on the company's lands for one additional shaft south of No. 6, if desired, but it is probable that the ground will be mined through No. 6, instead of by a new shaft.

The shops of the Osceola, formerly scattered along the line of shafts, have been centered between shafts 5 and 6. The new boiler plant at No. 6 has 5 Burt locomotive firebox boilers, with a coal-trestle and bin, and a 125' brick-lined self-supporting steel smokestack, of 7' inside diameter, standing on a sandstone base. The old boiler-house at No. 6, with stone walls and steel roof, has been lengthened 30', and made into a compressor-house, equipped with a 50-drill Nordberg 2-stage cross-compound air-compressor having 26" and 40" air cylinders, and steam cylinders of 22" and 42", with 48" stroke. A new boiler-house has been built to the north of the old structure.

A new combination smithy and machine shop, between shafts 5 and 6, is 60x144', in 2 sections, with brick walls and steel truss roof, covered with corrugated steel. Electric power is used.

A new electric plant, complete 1907, located in the compressor-house, has a 100-kw. 220-volt direct-connected generator, delivering a direct current, and also furnishes electric light for the Osceola mine and location, using direct current enclosed arc lamps.

In addition to the mine buildings, the Osceola location has a large number of dwellings for workmen. Water is secured from Lake Superior through a 6" pipe line, of 1½ miles length, connecting with the stand-pipe at the Tamarack mine, leading to a 130,000-gallon concrete reservoir between Osceola shafts 5 and 6.

The Osceola mine proper has a local telephone system, connecting all departments, with an exchange in No. 6 engine-house.

The Kearsarge or North Kearsarge mine, area 1,120 acres, lies north of the Wolverine, with which it has underground connections, and with which land was exchanged, to the extent of 13½ acres, permitting both mines to square their boundaries with the strike and dip of the lode. Extensive diamond drilling, done 1905-1907, has shown considerable good stamp-rock in the foot-wall and hanging-wall, at points where the main lode was impoverished. Diamond drill boring costs \$2 to \$3 per foot, as against \$6 to \$8 per foot for drifting. The Kearsarge amygdaloidal bed ranges 16' to 20' in width, in this mine, and has proven very bunchy, though with good average values. The southern workings, approaching the Wolverine, are showing improvement, but the mine is richest near the Ahmeek, to the north. The mine is being deepened at the rate of about 400' yearly. About 60 power drills are used in this property. Shafts are numbered from south to north.

No. 1 North Kearsarge shaft was 3,873' deep, on Aug. 1, 1908. The former cavities under the shaft, resulting from opening through old workings, have been filled with waste-rock, and capped with cement, concrete stringers being used. No. 1 shaft has a Nordberg hoist, good for 6,500' depth, operating two 6-ton skips in counterbalance.

No. 2 North Kearsarge shaft is idle, having been abandoned at depth of 2,400', and the ground formerly tributary thereto is mined from the shafts on either side.

No. 3 North Kearsarge shaft, lying 1,825' northeast of No. 1, was 3,192' in depth on Aug. 1, 1908, developing a large area of good ground, especially toward the Ahmeek. The collar of this shaft has been concreted, and the hoist is a duplicate of the Nordberg engine at No. 6 Osceola.

The No. 4 North Kearsarge shaft, started 1907, is sinking 75' in the foot-wall, and will crosscut to the lode on the 7th level, the ground having been proven previously by diamond drill borings. This shaft should be a producer in 1910. Equipment includes a structural steel boiler-house, with a 150' brick-lined self-supporting steel smokestack of 7' internal diameter.

The North Kearsarge surface plant includes a stone compressor-house and a 30-drill compressor at No. 1 shaft, where are located also the combination machine and carpenter shop, warehouse and office, all of wood. At No. 3 shaft there is a 45-drill compressor, with 2-stage air-end and compound steam-end, having 22x48" and 42x48" steam cylinders, with 40x48" and 36x48" water-jacketed air-cylinders, and vertical intercooler, housed in a 25x55' stone and brick building with steel truss roof. There is a 75-h. p. electric plant, providing electric energy for both the North and South Kearsarge mines.

The South Kearsarge mine, area 160 acres, lying south of the Wolverine and east of the Centennial, was known formerly as the Iroquois. Development was begun September, 1899, and the best stopes are toward the Centennial line, the Kearsarge bed averaging about the same width as in the North Kearsarge and Wolverine mines, the rock being remarkably uniform in copper values.

No. 1 South Kearsarge shaft, to the north, was 2,604' deep on Aug. 1, 1908, and can be sunk to depth of circa 3,000' before reaching the boundary. Two skips are operated, in counterbalance. The shaft-rockhouse is exceptionally large and well equipped, also caring for rock from No. 2 shaft, with which it is connected by a trestle of 1,100' length.

No. 2 South Kearsarge shaft was 1,787' deep Aug. 1, 1908, and can be sunk to depth of circa 2,800', before reaching the boundary. The hoist, taken from No. 2 North Kearsarge shaft, raises 5-ton skips.

Surface equipment of the South Kearsarge is mainly second-hand, taken

from other branches of the mine, but is sufficient for present requirements. This branch has air-compressors of 55 drills aggregate capacity, and employs 40 rock drills.

The Tamarack Junior mine, area 120 acres, lying between the Centennial and Calumet & Hecla, has 2 vertical shafts, on the Calumet conglomerate, No. 2 being 3,360' deep, with 12 levels opened. Mining was stopped, 1902, and exploratory work suspended, 1903. A little rock was shipped from the dumps, on a royalty basis, 1906, and the shaft-house at No. 6 was burned, July, 1908. The Tamarack Junior apparently is dead for all time to come, so far at least as the conglomerate openings are concerned, with poor prospects of finding other workable cupriferous beds on the tract.

Rock is transported from the various mines to the mills by the Hancock & Calumet Railroad, a branch of the Duluth, South Shore & Atlantic Railway.

The Osceola has 2 stamp-mills, adjoining those of the Tamarack, on the shore of Torch Lake, the first mill, of wood, built 1886, having been torn down, 1905. The second mill, completed 1899, is 135x215', having 3 stamps with circular screens having  $\frac{5}{8}$ " openings, allowing the discharge of coarse copper. The third mill, completed 1902, in line with the second, is 176x213', of steel frame, having 4 Nordberg steeple-compound heads, with circular mortars having  $\frac{5}{8}$ " screens and hydraulic separators, about 20% of the copper secured in milling coming from the separators and mortar discharges. The compounding of a stamp by superimposing the low-pressure cylinder upon the high-pressure cylinder was first suggested by A. L. Burgan, mill superintendent of the Osceola, and the idea was carried into execution by Bruno V. Nordberg. The experimental compounded head gave such satisfactory results that the compounded head is now in general use in the Lake Superior district. The wash department of the 2 mills has 110 Hodge jigs, with quick eccentric return motion, each stamp having 6 round tables and one Wilfley table, latter taking headings from the round tables. There also is an Allis-Chalmers Chilean mill for re-grinding, and for reducing oversize material from the mortars of the stamps. Crushing rolls with fixed bearings were introduced also by Mr. Burgan. Cost of stamping at the Osceola mills, 1905, was only 16.95 cents per short ton of rock, which then constituted a world's record, and for 1907 was reported by the company as only 11.71 cents per ton.

The 43x150' steel boiler-house, adjoining the mills and furnishing power for both, has three 72" 250-h. p. boilers, delivering steam at 150 lbs. pressure, and nine 84" 250-h. p. boilers operated under 105 lbs. pressure, all of the locomotive firebox type. Coal is brought to a 500-ton bin, over a trestle, in railroad cars, and draft is furnished by a 150' brick-lined self-supporting steel stack. An automatic ash-discharge washes the ashes through a launder by water flushed from a stand-pipe at intervals of 3 minutes. The power plant includes an Allis-Chalmers Corliss engine, operating a 100-kw. Morgan-Gardner direct-current generator, which furnishes current for 220-volt incandescent enclosed arc lamps.

The joint pump-house of the Osceola and Tamarack mines, of steel, 35x70' in size, houses two 40,000,000-gallon triple-expansion Nordberg pumps having 22", 40" and 60" cylinders, with three 30" horizontal plungers of 52" stroke and 42" discharge. Water is taken through an 8' tunnel, running 1,275' under Torch Lake, drawing water through 3" intake holes, these guarding against clogging by ice.

Production has been as follows: 924,400 tons rock stamped, yielding 16,059,638 lbs. fine copper, in 1903; 1,095,520 tons rock stamped, yielding 20,472,429 lbs. fine copper, in 1904; 1,007,200 tons rock stamped, yielding 18,938,965 lbs. fine copper, in 1905; 1,016,240 tons rock stamped, yielding 18,588,451 lbs. fine copper, in 1906; 811,603 tons rock stamped, yielding

14,134,753 lbs. fine copper, in 1907. The decreased production of 1907 was caused by following the leadership of the Amalgamated Copper Co., which, as once before, in 1901, resulted disastrously to the Osceola shareholders. Copper production was circa 17 lbs. fine metal per ton of rock stamped, in 1908, rock coming mainly from the North Kearsarge mine. For June, July and August, 1908, rock stamped averaged circa 111,000 tons monthly, materially the largest production in the history of the mine. Total cost of fine copper, per pound of production, has been as follows: 10.29 cents in 1903; 9.96 cents in 1904; 10.68 cents in 1905; 10.89 cents in 1906; 12.44 cents in 1907. The company ended 1907 with liabilities, all in accounts payable, of \$433,026.39, with a balance of assets of \$1,386,869.21.

The Calumet & Hecla Mining Co. owns 22,061 shares of Osceola stock, and, at the annual meeting, March, 1907, held proxies for about 50,000 shares additional, thus controlling about 75% of the entire stock issue, but, through court proceedings, was restrained from voting its own stock or proxies, and there was no annual meeting in 1907 or 1908, due to court injunctions. The litigation has been protracted and bitter, but indications strongly favor the success of the Calumet & Hecla in securing control of the property, eventually.

#### **OSCEOLA GOLD & COPPER MINING CO.**

**WYOMING.**

Dead. Property sold, circa 1902, to North American Copper Co. Formerly at Rudefsha, Carbon Co., Wyo.

#### **OSCEOLA JUNIOR MINING CO.**

**WYOMING.**

Office: Rawlins, Wyo. Mine office: Dillon, Carbon Co., Wyo. J. M. Rumsey, secretary; A. L. Clendennin, superintendent. Lands, near the Ferris-Haggarty mine, have an old 120' tunnel. Apparently idle since circa 1906.

#### **OSCUBO COPPER CO.**

Office: care of H. A. Rideout, Wollaston, Mass. Organized March, 1903, under laws of Maine, with capitalization \$250,000. Location of lands, if any, unknown.

#### **OSHKOSH-WYOMING MINING CO.**

**WYOMING.**

Office: 365 Tenth St., Oshkosh, Wis. Mine office: Dillon, Carbon Co., Wyo. O. A. Koch, president; E. E. Mullins, vice-president; H. O. Granberg, secretary, treasurer and general manager; Frank Earle, consulting engineer. Organized June 20, 1904, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par.

Lands, 11 claims, area 220 acres, in the Battle Lake district, carrying 4 fissure veins in gabbro, of 22' estimated average width, opened by shafts of 32' and 72' and a 22' tunnel, showing malachite, azurite and chalcopyrite, estimated to carry average values of 18% copper. Idle several years.

#### **ENRIQUE OSORIO I CA.**

**CHILE.**

Mine office: Mina Grande, La Serena, Coquimbo, Chile. Property is El Misterio mine, which produced, 1903, circa 300 metric tons of 22% ore from a vein of about 40" average width, opened to about 50 meters depth, and La Purisima mine, which in 1903 produced about 400 tons of 18% ore, equal to an output of circa 300,000 lbs. fine copper.

#### **LOS OSOS MINE.**

**CALIFORNIA.**

Office: care of J. M. Gleaves Estate, owner, San Francisco, Cal. Mine, near San Luis Obispo, San Luis Obispo county, California, is opened on a fissure vein, carrying copper ores with porphyritic gangue, traversing sandstone and shales. Idle since circa 1865.

#### **OTA MINE.**

**JAPAN.**

Mine office: Ota-muri, Mine-gori, Nagato, Japan. Production, 1906, was 73,145 lbs. fine copper and, 1907, was 139,125 lbs. fine copper, 10,478 momme silver and 52 momme gold.

**STATE COPPER CO.**

·MEXICO.

Mine office: Llano, Magdalena, Sonora, Mex. L. H. Jansen, president; W. P. Ross, superintendent. Lands, east of Llano, near the Cobre Grande mine of the Sonora Copper Co., are well watered and fairly timbered, and are said to show promising indications of ore.

**OTAVI MINEN- UND EISENBAHN- GESELLSCHAFT.** GERMAN SOUTHWEST AFRICA.

Office: 14 Behrenstrasse, Berlin, W., Germany. Mine office: Tsumeb, Otavi, Ovambaland, German Southwest Africa. Forces, 120 whites and 1,000 blacks. Alex Schoeller, chairman; Dr. P. D. Fischer, vice-chairman; E. Labowsky, chairman executive committee; preceding officers, P. Boettger, Edmund Davis, Dr. Julius Scharlach, Dr. C. Schnabel, Dr. P. von Schwabach and M. Steinthal, directors; K. Hassinger, acting general manager; T. H. Gothmann, mine superintendent; A. Morgenstein, railway superintendent; Dr. P. Gloner and Gustav Gluft, managers. Organized Apr. 6, 1900, and reconstructed, 1903, under laws of Germany, with capitalization increased from 1,000,000 marks to 20,000,000 marks, shares 100 marks par, in 20 series of 10,000 shares each, fully issued. The company's plan of finance calls for carrying a 5% reserve, followed by dividends of 5% on ordinary shares, after which 10% will be allowed the board, as a bonus, out of surplus, and balance will be divided equally between the ordinary and deferred shares. Company is controlled, through ownership of about 55% of stock, by South West Africa Co., Ltd. Annual meeting, in December.

Lands, 500 square miles freehold and 500 additional square miles of mining rights, in strips of 10 kilometers width, along the right of way of the railroad, property including valuable farming lands. Property includes the Otavi and Tsumeb mines, latter having the principal development. The mining properties show blue dolomitic limestone, with ores occurring as replacements, and occasionally as intrusions in dolomite and sandstone.

The Otavi mine has been opened to a depth of 230', and has developed considerable ore, some of which assays up to 30% in copper tenor.

The Tsumeb mine, discovered, 1892, by natives, and taken over, 1901, by present owners, shows a strong gossan, standing above the surface for some distance. The principal ore body, of 40' estimated average width, traceable 400', carries copper oxides and carbonates, succeeded, at shallow depth, by chalcopyrite and galena, with occasional lead carbonates and chalcocite. Development is by the 274' Main shaft, 225' New West shaft, 60' Old West shaft, 160' New East shaft and 66' Old East shaft. Levels are opened at depths of 65', 160' and 225', with connection by three 200' crosscuts between the principal shafts. The mine has about 4,000' of workings, showing about 300,000 metric tons of ore, of which 60,000 tons is of low grade. It is proposed to open and work the entire ore body open-cast, to the present level of 160'.

Equipment includes a 60-h. p. steam plant and a 25-h. p. electric plant at the mine, with a 32-h. p. gasoline plant at the mill and an 80-h. p. plant at the smelter. There are two 60-h. p. hoists, good for depth of 125 meters each. Fuel is coal and wood for the mine and coke and charcoal for the smelter, coke costing 130 marks per metric ton, delivered. The company maintains a general store, and has a sawmill.

The mill has two Bartsch jaw-crushers, and gives the ore merely a rough dressing.

The smelter, at Tsumeb, near the mine and mill, receives ore by rail, and is rated at 40 to 60 tons daily capacity, having been blown in Sept. 10, 1907. Equipment includes 2 small blast-furnaces, one running on copper and the other on lead ores. Local iron ore is used for fluxing, and products are silver-lead bullion and copper matte, latter of 30 to 40% tenor, carrying circa 30 oz.

silver per ton, shipped to Europe for conversion, though possibly a converter plant may be installed later, at Swakopmund, at the other end of the railroad.

The Otavi Railway, 351 miles long, of 600-mm. gauge, runs from Swakopmund, on the coast, to the interior terminus at Tsumeb, and was opened for general traffic, for its entire length, Nov. 16, 1906. Equipment includes 37 locomotives and 330 cars. This railroad is doing a very satisfactory business, and will be of immense utility in developing a district rich in natural resources.

Production, 1907, was circa 15,000 metric tons of ore shipped, and for 1908 was about 30,000 metric tons of lead and copper ore, estimated at 19% average tenor in copper and 23% in lead, yielding circa 6,000,000 lbs. fine copper, with large quantities of lead and silver.

Average costs are estimated by company at 2 marks per metric ton for mining, and 3 to 5 marks per metric ton for concentrating.

The company plans continuing exploratory and development work, opening the Tsumeb mine below the third level; and developing other mines, including the Little Otavi, elsewhere on the company's lands. The property is one of much promise, with a strong management, and bids fair to make one of the really great copper mines of the world.

**OTAVI MINES & RAILWAY CO.**      **GERMAN SOUTHWEST AFRICA.**

English incorporation of Otavi Minen- und Eisenbahn-Gesellschaft.

**OTORI MINE.**

**JAPAN.**

Owned by Furukawa Mining Co.

**OTTUMWA COPPER CO.**

**WYOMING.**

Letter returned unclaimed from former office, Laramie, Wyo. Mine office: Holmes, Albany Co., Wyo. C. B. Richey, president; W. B. Russey, secretary and treasurer. Lands, 9 miles from Holmes, have a 280' tunnel, not in ore. Idle several years.

**OUED-MOUGRAS COPPER & IRON CO., LTD.**

**ALGERIA.**

Office: 135 Wellington St., Glasgow, Scotland. Mine office: 5 Rue Lemercier, Bône, Constantine, Algeria. T. T. Stewart, chairman; J. A. French, secretary. Organized Oct. 9, 1903, under laws of Great Britain, with capitalization £12,500, increased, July 12, 1907, to £30,000, shares £1 par; issued, £24,243.

**OUENZA MINES CO.**

**ALGERIA.**

Mine office: Clairfontaine, Algeria. Property is the Djebel Ouenza mine, near the Tunisian frontier, circa 25 kilometers from Clairfontaine. Lands show a prominent gossan of cupriferous hematite, the copper being in the form of argentiferous oxidized ores. Ore, as mined, 1905, averaged about 5% copper tenor.

**COMPÀNIA MINERA LAS OURAS.**

**MEXICO.**

Dead. Formerly at Tepezalá, Ocampo, Aguascalientes, Mex.

**OURAY CHIEF MINING CO.**

**COLORADO.**

Office: Youngstown, Ohio. Mine office: Ouray, Ouray Co., Colo. W. D. Euwer, president; John Bcil, secretary; David Woods, superintendent. Ores carry gold, silver and copper. Has gasoline power.

**OURAY CONSOLIDATED MINING CO.**

**COLORADO.**

Mine office: Ouray, Ouray Co., Colo. Joseph H. Tumbach, resident manager. Is successor of Colorado Gold-Copper Mining & Tunnel Co. Lands are circa 60 claims, developed by a tunnel of about 5,000' length.

**OVERFLOW MINES, N. L.**

**AUSTRALIA.**

Office: 18 Bridge St., Sydney, N. S. W., Australia. Mine office: Bobadah, N. S. W., Australia. T. H. Palmer, manager, at last accounts. Ores carry gold, silver, lead and copper, latter being produced merely as a by-product. Has a Ball mill, 40-ton cyanide plant and 50-ton smelter.

**OVERLAND GOLD MINING CO.****OREGON.**

Mine office: Cableville, Baker Co., Ore. Has auriferous and argentiferous copper, lead and zinc sulphides. Presumably idle.

**OVERLAND MINING CO.****ARIZONA.**

Letter returned unclaimed from former mine office, Wilcox, Cochise Co., Ariz. Lands are just north of the Mascot Copper Co. At last accounts, circa March, 1908, property was undergoing development.

**OVERLOCK COPPER CO.****MEXICO.**

Letter returned unclaimed from former mine office, Moctezuma, Sonora, Mex. Idle and apparently moribund.

**OVERSIGHT MINING & MILLING CO.****WASHINGTON.**

Office: Seattle, Wash. Mine office: Republic, Ferry Co., Wash. Harold Preston, president; Chas. E. Murphy, vice-president; S. E. Dewsnap, secretary; C. A. Wallace, treasurer; E. J. Delbridge, general manager. Capitalization, \$1,500,000, shares \$1 par.

Lands, 11 claims, adjoining the Copper King, in the Lambert Creek or Eureka district, north and west of the Turtle river, circa 10 miles northeast of Republic, showing 4 veins. Mine has a quarter-mile of workings, with a 60' shaft, but principal development is by the Pinmoney tunnel. The wide Pinmoney vein is mainly auriferous mispickel, carrying small silver and copper values. Has gasoline power, air-compressor and 300-ton shipping bins, and plans an aerial tram.

**OVOCa COPPER SYNDICATE, LTD.****IRELAND.**

Office: 10 Austin Friars, London, E. C., Eng. Mine office: Ovoca, County Wicklow, Ireland. Maj. Ralph P. Cobbold, chairman; W. Smith, secretary. Organized Nov. 27, 1901, under laws of Great Britain, with capitalization £12,000, shares £1 par.

Property is the old Cronnebane mines, in the Vale of Ovoca, which were making about 1,250,000 lbs. refined copper yearly, at the end of the Eighteenth Century. Mines were closed, circa 1875, and reopened, 1902, on the advice of Mr. Philip Argall. High grade oxidized ores were mined out in past operations, but the vein, about 50' in average width, shows immense bodies of low grade disseminated chalcopyrite, with quartz gangue, averaging a scant 3% copper, 1.5% zinc, 1.5 oz. silver and 1 dwt. 6 grains gold per long ton. A new shaft has been sunk and some ore was shipped, 1907. Property considered promising.

**OWL COPPER MINING CO.****CALIFORNIA.**

Office: 777 Bacon Blk., Oakland, Cal. Mine office: Indian Gulch, Mariposa Co., Cal. A. A. Leonard, president; J. T. Victor, vice-president; F. G. Thomas, secretary; Asa B. Mendenhall, treasurer; preceding officers and A. J. Hartung, directors. Organized June 17, 1907, under laws of Arizona, with capitalization \$1,250,000, shares \$1 par.

Lands are one copper claim and two gold claims, latter being near Shingle Springs, El Dorado Co., Cal. The John Dias mine, in Section 12, Town 6 South, Range 16 East, near Indian Gulch, has a 168' shaft on a 3' vein in schistose diabase, carrying mainly cuprite, azurite, chalcopyrite and chrysocolla, from which ore has been smelted returning 2 to 30% copper and 26 cents to \$1.78 combined gold and silver values per ton. Company has secured ore assaying 27.18% copper and \$2.70 gold per ton. There also are several shallow pits, showing ore. Equipment includes gasoline power.

**OWL HEAD MINING CO.****ARIZONA.**

Office and mine: care of Ferris S. Fitch, Tucson, Pima Co., Ariz. Organized 1904, to take over sundry claims in the Owl Head Mountains, 32 miles from Tucson, carrying auriferous and argentiferous copper ores, also claims 10 miles west of Tucson. Idle, apparently since birth.

**OXFJORDALEN COPPER CO., LTD.****NORWAY.**

Dead. Liquidated Sept. 27, 1906. Formerly in Norway. Described Vol. V.  
**OXFORD COPPER MINING CO.** **IDAHO.**

Mine office: Pierce, Nez Perce Co., Idaho. Was developing, with a small force, November, 1908, and planned installing a power hoist and pump.

**OXIDE COPPER CO.****ARIZONA.**

Office: 85 Ames Bldg., Boston, Mass. Mine office: Red Rock, Pinal Co., Ariz. Frank Higgins, superintendent. Is controlled, through stock ownership, by Arimex Consolidated Copper Co. Lands are the Copper Prince group, variously reported as 30, 50 and 140 claims, in the Silver Bell district, circa 7 miles south of the Imperial mine. Apparently landed holdings are about 60 claims, area 1,200 acres, showing contact veins carrying copper sulphides with limestone gangue. Property has been opened to depth of 50' to 150', and is said to have a half-mile of workings. Production, 1907, was 319,591 lbs. fine copper and 3,338 oz. silver.

**PACIFIC COAST COPPER CO.****ALASKA.**

Dead. Reorganized as Pacific Coast Mining, Milling & Developing Co., also dead. Formerly at Ketchikan, Alaska.

**PACIFIC COAST OF MEXICO EXPLORATION CO.****MEXICO.**

Mine office: Magdalena, Sonora, Mex.

**PACIFIC COAST MINING, MILLING & DEVELOPING CO.** **ALASKA.**

Dead. Formerly at Ketchikan, Alaska. Described Vol. VII.

**PACIFIC COAST SMELTER.****CALIFORNIA.**

Office and works: Bay Point, Contra Costa Co., Cal. Was built by the Copper King, Ltd. Plant includes a 100-ton furnace, with steam and electric power. Presumably idle.

**PACIFIC CONSOLIDATED MINING CO.****NEVADA.**

Office: 131-32 Broadway, New York, N. Y. Mine office: Reno, Washoe Co., Nev. Chas. B. Hill, president; Franklin Leonard, vice-president; Loomis A. Newton, secretary; Clinton E. Brain, treasurer; H. L. Cowles, general manager; preceding officers, F. P. Knott, J. A. Alexander and Frank N. Waterman, directors; Robert W. Perry, superintendent; Dr. Jos. Hyde Pratt, consulting engineer. Organized October, 1901, under laws of South Dakota, with capitalization \$3,000,000, shares \$1 par; issued, \$2,500,000, of which originally \$1,000,000 was common and \$2,000,000 cumulative 6% preferred stock, but all preferred shares have been retired.

Lands, 32 claims and a 50-acre millsite, area circa 650 acres, in the Pyramid district, showing 4 parallel ledges, of which 2, of 30' to 60' estimated average widths, give assays of 2 to 40% copper, 6 to 100 oz. silver and \$1.50 gold per ton. The oxidized zone, extending to depths of 200' to 350', carries good gold and silver values, succeeded by base ores having small gold values and fair silver values. Principal ore is chalcopyrite, associated with pyrite, in a silicious gangue. Mine has circa 30 shafts, of 30' to 75' depth, and a main shaft of 522', also tunnels of 250', 1,000' and 2,400', with about 19,000' of underground workings, estimated to show 500,000 tons of ore. Mine was opened, circa 1876, for gold and silver, ore turning to copper at depth. Surface improvements include a smithy, carpenter-shop and various other mine buildings. Nearest railroad is 28 miles, but company has franchise for a railway to connect with Southern Pacific, estimated to cost \$300,000. Property considered promising. Presumably idle.

**PACIFIC COPPER CO.****MICHIGAN.**

Office: 709-199 Washington St., Boston, Mass. Mine office: Leopold Bldg., Houghton, Houghton Co., Mich. Nathaniel Thayer, president; Chas. J. Paine, Jr., secretary; Fred. W. Nichols, agent. Organized August, 1890, under laws of Michigan, with capitalization \$1,000,000, shares \$25 par; paid in, \$2,

Ended 1907 with \$35,715 out at interest, with income exceeding expenditures.

Lands, 960 acres, just northwest of the Atlantic mine, and supposed to carry the northern extension of the Atlantic ashbed, on which a little exploratory work was done, circa 1880, previous to the organization of the company. Idle since circa 1890, but lands considered promising.

#### PACIFIC COPPER CO., LTD.

MEXICO.

Office: 1214 Monadnock Blk., Chicago, Ills. Operating office: Ap. 2146, Mexico, D. F. Mine office: Zihuatanejo, Montes de Oca, Guerrero, Mex. W. S. Cockrell, president; Thos. Milan, vice-president; J. P. Taylor, secretary; Addison H. McKay, treasurer; preceding officers and Col. Eps Randolph, directors; W. H. Austin, general manager; H. L. Swain, superintendent. Organized June, 1906, under laws of Mexico, with capitalization 10,000,000 pesos, shares 100 pesos par.

Lands, circa 30 miles from Zihuatanejo, near the Murga river, include the Copper King group, area 1,000 hectares, carrying copper and supposedly placer gold, having a vein of 30' to 200' width, traceable about 3 miles, and reported by company as tested, for about 1½ miles, to depth of 60', at a point 900' below highest outcrop by erosion of streams at 2 points. Vein carries a gossan, mainly covered by soil, occasional exposures showing chalcopyrite disseminated in pyrrhotite, without appreciable gold or silver values. At slight depth, the pyrrhotite is replaced by argentiferous and auriferous bornite, estimated by company to average 4% copper, with considerable gold and silver values, and which has assayed up to 16% copper, 90 oz. silver and \$26 gold per ton. Company estimates that gold and silver will cover a large part and probably all of the cost of making copper, but this estimate is practically certain of failure. Property also is reported to carry 47 other veins, of 1' to 90' width. Development is by 2 shallow shafts and 3 short tunnels. Trails have been built to and on the property, and company plans eventually building a railroad line from Zihuatanejo, which will be necessary for the economical working of the property on a large scale.

Equipment includes a fair outfit of machinery, installed 1907, with necessary mine buildings and about 25 dwellings for workmen. Property bids fair to make a large low grade mine with careful development and economical management, and is considered promising. Officers include men of financial strength and good standing. Was said to employ circa 350 men, but presumably is idle.

#### PACIFIC COPPER EXPLORATION CO.

ARIZONA.

Mine office: Prescott, Yavapai Co., Ariz. Geo. Roper, general manager. Lands, 15 claims, including a water right, in Spruce Cañon, circa 10 miles west of Prescott, opened by a 220' tunnel.

#### PACIFIC GOLD & COPPER MINING CO.

MEXICO.

Office: 308 East Ninth St., Kansas City, Mo. J. J. Myers, president; D. C. Rhodes, secretary. Organized under laws of South Dakota, to develop extensive mineral holdings in the Taviche district of Oaxaca, Mexico. No traces of operations found, and apparently moribund.

#### PACIFIC MINING & DEVELOPMENT CO.

OREGON.

Dead. Lands sold, circa 1903. Formerly at Galice, Josephine Co., Ore.

#### PACIFIC MINING & METALS CO.

ARIZONA.

Dead. Formerly at Globe, Gila Co., Ariz. Described Vol. VI.

#### COMPAÑIA DE COBRE DEL PACIFICO, S. A.

MEXICO.

Is the Mexican incorporation of the Pacific Copper Co., Ltd.

#### COMPAÑIA METALURGICA y REFINADORA DEL PACIFICO.

MEXICO.

Is the Mexican incorporation of the Pacific Smelting & Refining Co., Ltd.

**PACIFIC SMELTING CO., LTD.**

CHILE.

Dead. Property sold, 1907; to Taltal Railway Co. Formerly at Taltal, Antofagasta, Chile. Described Vol. VI.

**PACIFIC SMELTING & REFINING CO.**

MEXICO.

Office: 42 Broadway, New York, N. Y. Mine office: Fundición, Alamos, Sonora, Mex. Theo. Douglas, president and general manager; E. Kneeland, superintendent; Jas. F. Berry, metallurgical superintendent. Is controlled, through ownership of entire stock issue, by Douglas Copper Co., and holds direct title to property through a Mexican corporation, the Compañía Metalúrgica y Refinadora del Pacífico. Smelter is located circa 30 miles south of the Anita mine of the Douglas Copper Co., and 153 kilometers northeast of Guaymas, on the line of the Cananea, Rio Yaqui y Pacífico railroad. The smelter is planned to do a general custom business, in addition to treating Douglas ores.

Ore is received from the Anita mine by trains of traction engines, each train consisting of an engine and 5 trucks, each of the latter carrying three 4-ton steel ore buckets, which are dumped by overhead electric traveling crane. Equipment of the transportation service includes 4 Holt traction engines, one having a derrick, and each drawing one trainload daily of circa 50 tons of ore. A train crew consists of an engineer, fireman and brakeman, wood being used for fuel.

The works have a 36" gauge railway equipped with 2 Davenport locomotives.

The works, designed throughout by Mr. Douglas, are designed to have an ultimate capacity of 600 tons daily, having a present capacity of 300 tons only, with a single furnace.

The plant includes a small sampling mill, with a Vezin automatic sampler, mounted on trucks, of 30 tons hourly capacity, taking a cut of one-tenth, which goes to the sampling mill.

The smelter has one 44x160" water-jacket blast-furnace, of circa 300 tons daily capacity, and is planned for a second furnace of the same size, with room for a third. Charging is by Jeffrey roller-bearing conveyors, two per furnace, which elevate the weighed charge to the feed floor, discharging into steel bins at each side of the furnace. The side-dumping feed cars have 4 transverse compartments, for coke, limestone, iron ore and copper ore, charges, which are measured by gauges in each compartment, instead of weighed, being dumped into a hopper forming the boot of an incline Jeffrey elevator, which leads to buggies on the feed-floor, there being 2 elevators, of 30 tons hourly capacity. The furnace has a sheet-steel settler, 5' in diameter and 5' deep, lined with magnesia brick laid in magnesia clay.

The steel dust-flue, of the balloon type, with ears running underneath to draw off flue-dust, is 11x14x172' in size, connecting with a 177' self-supporting steel stack, 14' in diameter at the bottom and 8' at the top, standing on a 27' stone foundation. Flue-dust and fines go to a pug-mill, and are pugged to a stiff sludge, which is fed direct to the furnaces, without drying or briquetting.

The power plant has two 150-h. p. Morrison boilers, and an electric plant, for which current is furnished by a 75-kw. Westinghouse generator, direct-connected to a Bates-Corliss vertical compound engine, having 13" and 20" cylinders, and a Western Electric 25-kw. generator, direct-connected to a 9x10" engine. Blast is furnished by a Connersville blower, direct-connected to a Bates-Corliss tandem engine with 12x24x36" cylinders.

Water is secured from an artesian well having an estimated flow of 2,000 gallons daily.

The furnace was blown in circa June, 1908, when the first shipment of

matte was made. Copper is sold to the American Metal Co., Ltd. At end of 1908 smelter was idle.

#### PACIFIC STEEL CO.

#### BRITISH COLUMBIA.

Dead. Formerly at Alberni, Vancouver Island, B. C.

#### PAGOEAT COPPER CO.

#### CELEBES.

Office: Amsterdam, Holland. Mine office: Pagoeat, Celebes, Dutch East Indies. Company is composed of men connected with a prominent steamship line of Amsterdam, Holland. Property is the Bwool mine, showing numerous veins, ranging 4' to 5' in width, carrying copper carbonates, chalcocite and chalcopyrite, with quartz gangue, formerly estimated at 10% average copper tenor, but said locally to carry 4 to 5% copper, with small gold and silver values. Property is but slightly developed, and the management, which is composed of good men, lacking mining experience, is desirous of selling the property.

#### PAHAQUARRY COPPER CO.

#### NEW JERSEY.

Office and mine: Belvidere, Warren Co., N. J. O. R. Deshler, president; H. D. Deshler, secretary; Elias H. Utt, treasurer. Organized under laws of New Jersey, with capitalization \$500,000, shares \$1 par.

Lands, 1,642 acres, freehold, well timbered, in Pahaquarry township, on the northwestern slope of the Blue Ridge Mountains. Mine is said to have been worked by the Dutch as early as 1660, and was worked, 1847-1862, by the Allegheny Mining Co., which secured an average copper extraction of better than 3%. Vein, of 287' claimed width, is traceable circa 3½ miles on the company's lands by strong outcrops, and carries chutes and local enrichments of high grade ore. The entire ore body is said by company to average 3 to 4% copper, which doubtless is an overestimate, and to carry an average of about \$1.80 combined gold and silver values, assays of present company showing from a trace to 17 oz. silver per ton.

A 200-ton concentrator has 2 sets of 16x30" Standard rolls, 4 sets of 10x30" Standard rolls and 32 impact screens. Concentrator was being doubled in size at last accounts. Property, though low in grade, is considered promising, but will require large capital and careful handling to make a successful mine.

#### PALACE GOLD & COPPER CO.

#### ARIZONA.

Office: 1104 D. S. Morgan Bldg., Buffalo, N. Y. Mine office: Wickenburg, Maricopa Co., Ariz. Geo. A. Sanborn, president; C. M. Clark, vice-president and general manager; M. W. Fuller, secretary; Dr. C. H. W. Auel, treasurer; D. Ainsworth, engineer. Organized Nov. 10, 1902, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par.

Lands, 23 claims, in 3 groups. The Union mine, apparently one claim only, in the Winifred district, has a 400' main shaft, with about 2,200' of underground openings, claimed to show good values in gold, silver and copper. The Ainsworth group, 8 miles southeast of Wickenburg, has 4 prospect shafts, deepest 40'. A third group, known as the Tip Top, is in the Bradshaw Mountains.

The plan and methods of promotion employed by this company were utterly indefensible. The company offered to sell stock, all common, at 25 cents, 50 cents or \$1 per share, the purchaser of 25-cent stock getting merely shares, the purchaser of 50-cent stock getting a partial guarantee, and the purchaser of \$1 stock getting a guarantee of 3½% annually, for 20 years, aggregating 70 cents on the dollar, leaving him out the use of 75 cents for an average term of 10 years, while paying 5 cents per share more than his neighbor, at the outset. The company states that it issued none of the guaranteed stock, as intending shareholders preferred the plain variety. The acting secretary writes that it has suffered strange contingencies, through the treasonable and felonious conduct of some of its trusted trustees, directors,

officials, representatives, etc., but certainly these mishaps were through no fault of the management, directly or indirectly. Company is regarded with deep suspicion.

**PALLANT & STOFFEL.****MEXICO.**

Mine office: Charcas, Moctezuma, San Luis Potosí, Mex. Arthur Pallant, manager. Mine is Los Morelos, carrying auriferous and argentiferous copper and lead ores. Has steam power and a 50-ton mill, employing circa 100 men, at last accounts.

**PALM DEVELOPMENT CO.****CALIFORNIA.**

Dead. Formerly at Acton, Los Angeles Co., Cal. Described Vol. VI.

**PALMER MOUNTAIN COPPER****WASHINGTON.****MINING & MILLING CO.**

Office: Spokane, Wash. Mine office: Loomis, Okanogan Co., Wash. Organized under laws of Washington, with capitalization \$1,500,000. Lands are on Palmer Mountain. Idle since circa 1903.

**PALMER MOUNTAIN GOLD & COPPER CO.****WASHINGTON.**

Dead. Formerly at Loomis, Okanogan Co., Wash.

**PALMER MOUNTAIN GOLD MINING & TUNNEL CO.****WASHINGTON.**

Dead. Reorganized, circa 1905, as Palmer Mountain Tunnel & Power Co. Formerly at Loomis, Okanogan Co., Wash.

**PALMER MOUNTAIN TUNNEL & POWER CO.****WASHINGTON.**

Office: 303-56 Wall St., New York, N. Y. Mine office: Loomis, Okanogan Co., Wash. John Tilley, president; F. G. Burnham and E. Burr, vice-presidents; Samuel Porter, treasurer; Lee H. Porter, secretary; John Boyd, general manager. Organized circa 1905, under laws of Arizona, with capitalization \$5,000,000, shares \$1 par, as successor of Palmer Mountain Gold Mining Co.

Lands, 65 claims, on Palmer Mountain, said to show 28 veins, carrying mainly gold values, opened by a 4,000' tunnel, planned to be driven 8,600' to give a back of 4,000'. Has opened, to depth of circa 200', a copper vein giving ores assaying up to 28.8% copper. Mine has an electric haulage system.

Equipment includes necessary mine buildings, 100-stamp mill and a 750-h. p. hydro-electric plant, with estimated energy of 3,000 h. p. available from Tout Coulee Creek.

**PALOMA MINING CO.****MEXICO.**

Dead. Formerly at Ayutla, Autlán, Jalisco, Mex. Described Vol. VI.

**PALO VERDE COPPER MINING CO.****ARIZONA.**

Mine office: Vail, Pima Co., Ariz. W. H. Martin, president; W. T. Payne, secretary. Capitalization, \$3,000,000, shares \$1 par. Lands, 10 claims, 9 miles northeast of Vail, opened by tunnels of circa 200' and 500', showing auriferous and argentiferous copper ore. Presumably idle.

**PALO VERDE MINING CO.****ARIZONA.**

Mine office: Yueca, Mohave Co., Ariz. J. L. Whitney, manager.

**COMPÀNIA MINERA EL PALQUI.****CHILE.**

Mine office: El Palqui, La Ligua, Aconcagua, Chile. Mine, circa 20 kilometers from Cabildo, has a manto, or blanket vein, of about 5 meters thickness, showing an abundance of ore of 5 to 6% average copper tenor, but is handicapped by transportation charges averaging 6.65 pesos per metric ton to the Cabildo smelter. Production, 1903, was circa 300 metric tons of ore averaging 7.5% copper tenor.

**PAN-AMERICAN DEVELOPMENT CO.****MEXICO.**

Office: 83 Dexter Bldg., Chicago, Ills. Mine office: Aguacaliente de Baca, Fuerte, Sinaloa, Mex. Harry Austin Clapp, president and general manager; Paul H. Seymour, secretary; F. B. Grubb, treasurer; Daniel H. Livingston, general superintendent. Apparently has some connection with Las Tablas Copper Co.

**PAN-AMERICAN EXPLORATION CO.****MEXICO.**

Office: 711 Missouri Trust Bldg., St. Louis, Mo. Mine office: Manzanillo, Medellin, Colima, Mex. A. K. Vickers, president; Col. Kent E. Keller, secretary; Schuyler S. Gates, general manager. Organized March 8, 1901, under laws of Missouri, with capitalization \$1,000,000, shares \$10 par.

Property is the Camotlán mine, 10 hours' ride by horseback from Manzanillo, carrying gold, silver and copper ores. Company formerly owned 159 hectares, including the Cacoma mine, sold to Cacoma Mines & Smelter Co.

**PAN-AMERICAN FEDERAL SMELTING & REFINING CO. NEW MEXICO.**

Office: El Paso, Tex. Works office: Socorro, Socorro Co., N. M. J. V. Smith, president; W. P. Stewart, vice-president; J. A. Lowe, general manager. Organized April, 1908, under laws of Arizona, with capitalization \$5,000,000.

The company was claimed, August, 1908, to be building small custom smelters at Lordsburg, Grant Co., N. M., Nogales, Santa Cruz Co., Ariz., and Van Horn, El Paso Co., Tex. Apparently the smelters outside of Socorro remain in the air, and apparently the company expects citizens to donate sites, and subscribe for stock. The Socorro plant is said to be planned to have small lead and copper stacks, of 100 tons daily capacity, with a 5-ton concentrator in connection. Company is not regarded favorably.

**PAN-AMERICAN MINES CO.****MEXICO.**

Dead. Formerly at Etzatlán, Ahualulco, Jalisco, Mex.

**PAN-AMERICAN MINING & SMELTING CO.****ARIZONA & MEXICO.**

Office: 905-11 Broadway, New York, N. Y. Mine office: Prescott, Yavapai Co., Ariz. A. Howard Skinner, president; Harry F. Lindsey, secretary and treasurer. Organized under laws of Arizona, with capitalization \$15,000,000, shares \$5 par, in \$3,000,000 preferred 7% stock and \$12,000,000 common stock.

This company was promoted by the notorious Dr. R. C. Flower, who was successful in swindling many unsuspecting American investors, and who, at last accounts, was supposed to be traveling in Mexico, in various disguises, and hitting the high spots only. The company was also assisted in securing the Quebradillas mine, of Parral, by Grant G. Gillett, the cattle plunger, who left Kansas City—and many creditors—between two suns. That preëminent firm of mining swindlers, L. E. Pike & Co., of Boston, also aided in the promotion. The company succeeded the Lone Pine Mining Co., alias the Arizona, Eastern & Montana Smelting & Ore Purchasing Co., of most unsavory memory, succeeding the Buenos Aires Mining Co., Urique Gold Mining Co., Sunset Mining Co. and La Paz Mining Co., all dubious propositions. Several mines were abandoned, without taking final titles. The Quebradillas mine, of Parral, was optioned, but bond was allowed to lapse. The various Mexican holdings of the Pan-American company, some of which may or may not still be held, included the Recompensa group, at Maguaráchie, the Hernandez group at Minaca, and La Liga and Santa Camilla mines, at Concepción, all of Chihuahua, Mexico, also the Ambidexter group, in Arizona, located circa 1900, on which no ore was found. Idle and moribund.

**PANAMINT GREENWATER GOLD & COPPER MINING CO. CALIFORNIA.**

Office: 234 Empire Bldg., Denver, Colo. Mine office: Greenwater, Inyo Co., Cal. Frank H. Ober, president and general manager; R. H. Biegel, vice-president; F. H. Martin, treasurer; Geo. F. Ober, secretary. Organized 1906, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par. Lands, 7 claims, area 140 acres, including 3 claims at Greenwater and 4 in the Wild Rose district of Nevada and Skidoo district of California. Apparently assessment work not done, and claims at Greenwater subject to relocation, but nobody wants them. Advertised, 1906, that it would ship ore within 90 days,

but of course did not. Bears ever yindication of being a mere bit of Denver stock-jobbery.

**PANDORA COPPER MINING CO., LTD.** IDAHO.

Office: Wallace, Idaho. Mine office: Mullan, Shoshone Co., Idaho. John C. Weatherhead, manager. Lands, adjoining the Illinois claim of the Snow-storm on the east, are supposed to carry the extension of the Snowstorm vein. Has a 500' crosscut tunnel, expected to cut ore at about 1,000', giving a back of 800'.

**PANHANDLE SMELTER.** IDAHO.

Owned by Idaho Smelting & Refining Co.

**PANHANDLE SMELTING CO., LTD.** IDAHO.

Dead. Capitalization was \$5,000,000, shares \$1 par. Officers were J. Herbert Anderson, president; S. B. Phillips, secretary and treasurer; Theo. L. Lammers, general manager; C. C. Titus, superintendent. Company fell into financial difficulties, October, 1907, and was reorganized, circa January, 1908, as Idaho Smelting & Refining Co. Formerly at Ponderay, Bonner Co., Idaho.

**PANTEIDAL COPPER CO., LTD.** WALES.

Office: 21 Lawrence Lane, London, E. C., Eng. Geo. Thompson, secretary. Organized Nov. 15, 1898, under laws of Great Britain, with capitalization £25,000, shares £1 par; issued, £16,007. Property is mineral rights to two farms, in Merionethshire, Wales. Inactive for some years and apparently moribund.

**COMPÀNIA DE COBRE DEL PÁNUCO.** MEXICO.

Mine office: Pánuco, Monclova, Coahuila, Mex. Chas. May, manager.

**PÁNUCO COPPER CO., LTD.** MEXICO.

Dead. Lands sold, circa 1905, to Continental Copper Co. Formerly at Pánuco de Monclova, Coahuila, Mex. Described Vol. V.

**PANULCILLO COPPER CO.** CHILE.

Dead. Succeeded, 1898, by Central Chili Copper Co., Ltd. Formerly at Panulcillo, Ovalle, Coquimbo, Chile.

**PAPAGO COPPER CO.** ARIZONA.

Office and mine: Tucson, Pima Co., Ariz. H. C. Abbott, president; W. T. Simmons, vice-president; E. S. Garrett, secretary. Capitalization \$1,000,000, shares \$1 par. Lands, 50 claims, in the Comobabi Mountains, circa 65 miles southwest of Tucson, nearest railroad point, having about 1,000' of openings, showing azurite, malachite and chalcopyrite. Has a hoist and air-compressor.

**PAPAGO MINING CO.** ARIZONA.

Dead. Formerly at Aztec, Yuma Co., Ariz.

**PAPOVSKI MINE.** SIBERIA.

Office, mine and works: Semipalatinsk, Siberia. Is owned and operated by Papov's Successors, securing an annual production of circa 150,000 lbs. fine copper, at last accounts.

**PARADISE DEVELOPMENT CO.** ARIZONA.

Dead. Succeeded, 1907, by Bisbee Sonora Development Co. Formerly at Paradise, Cochise Co., Ariz. Described Vol. VI.

**PARADISE MINING CO.** ARIZONA.

Mine office: Paradise, Cochise Co., Ariz. Is controlled, through ownership of 60% of stock, by Bisbee-Sonora Development Co. Lands, near the Badger-Hall Mining Co., have a 245' shaft, with crosscuts showing sulphide ore of good grade.

**PARADOX COPPER-GOLD MINING CO.** COLORADO.

Dead. Absorbed, 1903, by San Juan Smelting & Refining Co. Formerly at Silverton, San Juan Co., Colo.

**PARADOX MINING & MILLING CO.** COLORADO.

Office: Grand Junction, Colo. Mine office: Paradox, Montrose Co., Colo.

J. A. McCulloch, president; T. W. James, vice-president; A. A. Miller, secretary and general manager; D. T. Stone, treasurer. Organized Jan. 25, 1905, under laws of Colorado, with capitalization \$1,500,000, shares \$1 par.

Lands, 12 claims, area circa 110 acres, also a 5-acre millsite, in the La Sal and Paradox districts, 65 miles from a railroad, showing limestone, sandstone, shales and quartzite, with intrusive porphyry, carrying 3 fissure and contact veins of 2' to 7' width, opened by tunnels of 85', 100', 200' and 400', showing malacite and argentite, giving assay values of 3 to 75% copper, and 1 to 1,000 oz. silver per ton, with a trace of gold.

#### **PARAMATTA COPPER MINES, LTD.**

**AUSTRALIA.**

Offices: 22 Chancery Lane, London, E. C., Eng., and 29 bis, Rue Nationale, Lille, France. Mine offices: Wallaroo, Daly Co., and North Yelta, Daly Co., South Australia. Eugene Dervaux, chairman; G. de Venancourt, mine manager; Henri Duquesne, secretary. Organized May 18, 1899, under laws of Great Britain, with capitalization £200,000, shares £1 par. Debentures, £20,000 authorized, £9,300 issued, at 5%. Shareholders are mainly French. In 1904 netted £13,165 and in 1905 netted £7,353.

Lands, 1,340 acres, held from the South Australian government on a 99-year lease expiring June 30, 1988, at annual rental of 1s. per acre, plus 2.5% royalty on net profits. Lands include the Paramatta, Yelta, Wheal Hughes and Wheal James mines.

The Paramatta, which is the principal mine, is an old and important producer, adjoining the Wallaroo mine of the Wallaroo & Moonta, reopened, 1900, by present company. Deepest shaft is 500', bottomed in a vein ranging up to 8' width, with richer portions carrying up to 25% copper, and formerly had about 50,000 tons of ore reserves, which have been nearly exhausted by present management. A new shaft was sunk crosswise, and is practically worthless. Water supply is scant, causing trouble at times. Equipment includes a modern machinery plant. The Yelta mine, taken over 1903, has been reopened and equipped with modern machinery.

The reduction plant includes a 200-ton concentrator and a 400-ton smelter, latter having blast-furnaces turning out matte which formerly was converted at the adjoining plant of the Wallaroo & Moonta, but is now shipped to Europe for reduction, at considerably increased cost. Production, for year ending June 30, 1905, was 2,069,760 lbs. fine copper. Local management was changed, circa 1906. Under former direction of L. G. Hancock, money was earned for dividends with copper at £57 per long ton, company paying 25% dividends in 1903 and 5% dividends in 1904. Under present management the company has lost money with copper at £85 per ton. With adequate expenditures for opening of new reserves, and under good management, the property is believed to be capable of making a good mine, but the present management is poor. Operations were suspended, 1907, on account of the depression in copper.

#### **PACIONEERA CONSOLIDATED MINING CO.**

**MEXICO.**

Office: 29 Broadway, New York, N. Y. Mine office: Santa Eulalia, Iturbide, Chihuahua, Mex. Jos. S. Qualey, president; Ernest Henderson, secretary. Is a close corporation, shares \$100 par. Lands, under development at last accounts, are said to give an encouraging copper showing.

#### **PARINGA COPPER MINES, LTD.**

**AUSTRALIA.**

Dead. Formerly at Callington, Adelaide Co., South Australia. Described Vol. V.

#### **PARINGA MINING SYNDICATE.**

**AUSTRALIA.**

Mine office: Callington, Adelaide Co., South Australia. Lands, 172 acres. Presumably idle.

#### **PARIS BOULDER MINING CO.**

**IDAHO**

Office and mine: Paris, Bear Lake Co., Idaho. Andrew Madsen, pres.

dent; J. H. Eversoll, secretary and treasurer; preceding officers, W. D. Passey, A. C. Candland, J. H. Grimmett, J. Russell Shepherd, Chas. Innes and B. F. Woodward, directors; L. W. Johnson, superintendent. Organized 1908, under laws of Idaho, with capitalization \$50,000, shares 5 cents par. Lands, 23 claims, showing ores carrying copper, lead and silver.

**PARK CITY MAJESTIC MINING CO.****UTAH.**

Dead. The promoter, S. T. Rolph, disappeared. Formerly at Park City, Summit Co., Utah. Described Vol. IV.

**PARK CITY MINING CO.****WASHINGTON.**

Mine office: Keller, Ferry Co., Wash. W. T. Connell, manager. Lands include the Mountain Boy and Hercules mines, latter having a 331' tunnel showing ore assaying up to 6.5% copper and 140 oz. silver per ton, with small gold values and traces of lead.

**PARK COPPER CO.****MONTANA.**

Office: 33 West Granite St., Butte, Mont. Letter returned unclaimed from former mine office, Dillon, Beaverhead Co., Mont. Wm. O. Climo, president; John H. Judge, vice-president; R. M. Cobban, treasurer and manager; preceding officers, E. B. Howell and W. M. Bickford, directors; Forbes E. Irvine, secretary. Organized Oct. 6, 1906, under laws of Montana, with capitalization \$1,000,000, shares \$1 par.

Lands, 6 claims, on the Wise River, said to show a 60' vein, outeropping for 2,000'. Has 2 shafts, known as the Park and Williams, latter, 200' deep, with 2 compartments, showing argentiferous copper ore assaying up to 12% copper. Has an air-compressor.

**PARK COPPER & GOLD MINING CO., LTD.****IDAHO.**

Office and mine: Mullan, Shoshone Co., Idaho. Patrick Burke, manager. Lands, 6 claims, on the southern side of Stevens Peak, having tunnels of 550' and 1,000', showing a vein of 3' to 50' width, with average of circa 20', capped by a gossan, of about 40' average width, of mixed hematite and siderite, carrying kidneys of high grade copper carbonates and chalcopyrite, with some native copper. Veins apparently should carry chalcopyrite of fair grade at greater depth.

**PARKS MINING CO.****MONTANA.**

Mine office: Polaris, Beaverhead Co., Mont. Has copper-gold ores.

**COMPAÑIA ESPLOTADORA DE PARRAL.****MEXICO.**

Mine office: San Bartolo, San Juan de Guadalupe, Durango, Mex. Property includes El Lentisco mine, carrying auriferous copper ores. Idle.

**PARRAL SMELTING CO.****MEXICO.**

Office: care of Samuel Garrison, president, Pittsburg, Pa. Works office: Parral, Hidalgo, Chihuahua, Mex. D. M. Evans, general manager. Capitalization, \$1,000,000. Property is a smelting concession, from the State of Chihuahua, and it was planned to build a 250-ton smelter, with both lead and copper stacks. Apparently abortive.

**PARROT MINING & MILLING CO.****COLORADO.**

Letter returned unclaimed from former mine office, Leadville, Lake Co., Colo. Property includes the Golden Fleece mine, said to show auriferous and argentiferous copper ore assaying 5.5 to 22% copper.

**PARROT SILVER & COPPER CO.****MONTANA.**

Office: 42 Broadway, New York, N. Y. Mine office: Butte, Silver Bow Co., Mont. Employs circa 350 men. A. H. Melin, secretary; John D. Ryan, managing director; H. A. Gallwey, superintendent; preceding officers, Sidney Chase, F. P. Addicks, John E. Judson and A. B. Grafius, directors. Organized 1880, under laws of Montana, with capitalization \$2,300,000, shares \$10 par; issued, \$2,298,500. Is controlled, through ownership of slightly more than a majority of stock, by Amalgamated Copper Co. Paid dividends, to end of

1907, of \$6,807,260. Recent dividends have been as follows: 50 cents in 1902; nothing in 1903; \$1 in 1904; \$2 in 1905; \$1.25 in 1906; 75 cents in 1907. A quarterly dividend of 25 cents, due November, 1907, was passed.

Lands, 19 claims, mainly fractional, area 40.6 acres, well located, in the central portion of the Butte district, including the Parrot, Little Minah, Bellona and Original No. 6 mines. The Parrot mine, opened 1884, is one of the pioneer mines of the camp. The property shows a barren zone, at depth of circa 1,000', succeeded by fair ore bodies below. Ore of the mine, as a whole, averages about 3% copper, and carries fair silver and small gold values.

The Parrot mine is opened by a 2,300' shaft, having 3 compartments to the fourth level, and 4 compartments below, retimbered, 1904. The mine is timbered with 10x10" square sets and round timbers, having electric call bells, and is connected underground with the Colusa-Parrot, Neversweat, Nipper and Original No. 6 mines. The lower workings show an ore body up to 30' in width, apparently a continuation of the Anaconda vein, carrying some high grade chalcocite and bornite, but the Blue Vein fault cuts the Anaconda vein in such a manner that the Parrot loses about 100' in length of workable ground with each 100' in depth. The Parrot also is mining the Nipper vein, which shows ore up to 10% copper and 15 oz. silver per ton, but the Parrot owns only a 5/36 interest in the Nipper vein, balance belonging to Butte Coalition. The Parrot shaft has a 112' steel gallows-frame, with maximum load capacity of 50 tons, and a Union Iron Works hoist with 28x96" cylinders, capable of raising 10-ton loads from a depth of 3,000', hoisting 2 double-deck cages with 10-ton skips swung under, using a flat steel rope  $\frac{5}{8}$ " thick and 8" wide.

The Little Minah mine has a 1,000' two-compartment shaft, with levels opened at 600', 800' and 1,000', the bottom level showing to the west a 4' ore body assaying 3.5% copper and 6 oz. silver per ton, and to the eastward an ore body averaging 18' width for 100' length, giving assays of 4% copper and 6 oz. silver per ton. The Blue Vein fault carries some concentrating ore on this property. The temporary equipment at the Little Minah is to be replaced by a hoist good for 2,000' depth.

The Original No. 6 mine, having a shaft of circa 1,000' depth, and connected underground with the Parrot and adjoining mines, is a comparatively small producer.

Equipment includes an 80-drill Ingersoll-Sergeant air-compressor and a 22-drill Rand air-compressor. Mine buildings, mainly of steel, stone and brick, include an engine-house, boiler-house, compressor-house and a model two-story change-house, with cement floors, 24 shower-baths and lockers for 350 men.

There is an antiquated smelter, idle since 1900, which is an asset of no particular value, though some copper is secured by precipitation from the old dumps and slag-piles.

The company owns copper refining works at Bridgeport, Conn., which also are antiquated, and have been idle for some years.

Production, for year ending June 1, 1908, was only 57,964 tons of ore, or about one-third as much as two years previously, and smelter returns averaged about 2.5% copper only, with fair silver values. In August, 1908, the Parrot was yielding about 300 tons and the Little Minah 100 to 150 tons daily. Normal production is circa 8,000,000 lbs. fine copper yearly, but, for 1907, was about 5,000,000 lbs. only. For year ending June 1, 1907, there was a profit of \$141,730, and for year ending June 1, 1908, there was a deficit of \$189,372. The property apparently has seen its best days, though under normal conditions it is capable of yielding small profits, with possibilities of opening new ore bodies of larger size and better average grade.

**PARRY SOUND COPPER MINING CO., LTD.**

Office: 500 Germania Life Bldg., St. Paul, Minn. Mine office: Parry

ONTARIO.

Digitized by Google

Sound, Parry Sound district, Ont. Employs 10 men. Frank Johnson, president; Stanford B. Lewis, vice-president; Otto Monson, secretary and treasurer; preceding officers, John Ogren and Chas. Burton, directors; Chas. Anderson, mine superintendent. Organized March 23, 1899, under laws of Ontario, with capitalization \$5,000,000, shares \$1 par; issued, \$2,500,000. Liabilities are given at \$25,000 floating indebtedness, and a \$5,000 mortgage at 6% on 200 acres of land. Annual meeting, second Tuesday in August.

Lands, 10 claims, area 2,000 acres, one-half freehold and one-half held under a contract requiring \$2,000 to perfect title. Property, on the eastern shore of Georgian Bay, includes the McGowan and Wilcox mines.

The Wilcox mine has indications of 4 parallel veins in a cross-section of about one-quarter mile, with a 145' shaft on a 20' ore body in granite, traceable 1,000', carrying auriferous and argentiferous bornite assaying 2.8 to 11% copper. There also is an open-cut of 20x150', 18' deep, showing 3% chalcopyrite.

The McGowan mine has shafts of 100', 100' and 250', and a 150' crosscut tunnel, showing bornite and tetrahedrite, and occasional chalcopyrite, with quartz gangue. A smelter shipment of 240 tons of selected ore returned 17% copper and \$5 in combined gold and silver values.

Equipment includes a 10-stamp mill, hoisting machinery and several buildings.

#### **PAR VALUE CONSOLIDATED GOLD & COPPER CO.**

**COLORADO.**

Dead. Lost Colorado lands, now held by Redoubtable Gold & Copper Mining & Milling Co., through forfeiture of bonds. Formerly at Turret, Chaffee Co., Colo.

#### **PAR VALUE GOLD MINING CO.**

**COLORADO.**

Dead. Succeeded, 1900, by Par Value Consolidated Gold & Copper Co., also dead. Formerly at Turret, Chaffee Co., Colo.

#### **GEWERKSCHAFT PASCHA.**

**GERMANY.**

Office: Düsseldorf, Rheinprovinz, Germany. Paul Müller, president. Has ores of iron, copper, zinc and lead, employing circa 25 men.

#### **PASO GOLD & COPPER PRODUCING CO.**

**UTAH.**

Office: care of J. W. Guthrie, secretary, Salt Lake City, Utah. A. H. Meredith, president; Leonard Hilpert, treasurer. Organized, 1907, with capitalization \$500,000, shares \$1 par. Lands are said to be 12 claims, in Salt Lake county, Utah.

#### **PASS CITY COPPER CO.**

**MEXICO.**

Office: care of H. E. Runkle, El Paso, Texas. Lands, sundry claims, in the Sierra de Las Arradas, district of Bravos, Chihuahua, Mexico, developed by two shafts, one tunnel and an open-cut, with a total of about 350' of openings, showing stringers of oxide and carbonate copper ores, in limestone. Idle and apparently moribund.

#### **C. PASS & SON, LTD.**

**ENGLAND.**

Office and works: Bristol, Somersetshire, Eng. Property is the Bedminster Smelting Works, treating ores imported from a great variety of sources.

#### **PATAGONIA MINING CO.**

**ARIZONA.**

Office: care of Francis J. Heney, San Francisco, Cal. Mine office: Patagonia, Santa Cruz Co., Ariz. Benj. Heney, president; R. R. Richardson, secretary and treasurer; Fredk. John Zebert, consulting engineer. Capitalization \$200,000, shares \$1 par. Lands, 31 claims, unpatented, area 620 acres, in 2 groups, known as the Hardshell and Flux, in the Patagonia Mountains, having a 505' incline shaft with circa 2,000' of workings. The Hardshell group shows auriferous silver-lead ore, slightly zinciferous in the bottom workings, with copper ores on the Flux group.

#### **PATHFINDER CONSOLIDATED MINES, LTD.**

**BRITISH COLUMBIA.**

Mine office: Grand Forks, Boundary district, B. C. John Rogers, presi-

dent. Lands, on Pathfinder Mountain, circa 14 miles from Grand Forks, show 4 parallel veins of 8' to 20' width, carrying auriferous and slightly argentiferous chalcopyrite, disseminated in pyrrhotite, with quartz gangue, assaying 2.5 to 4% copper and circa \$2 gold per ton. Has 3 shafts, with aggregate depth of 337', and about 800' of tunnels. Has steam power, hoist, 7-drill Rand air-compressor and necessary mine buildings. Property considered promising, but idle for several years.

**PATHFINDER GOLD & COPPER CO.**

IDAHO.

Dead. Lands were 8 claims, on the Queen River, worked in a small way, many years ago, having a 500' crosscut tunnel, showing a vein of about 3' width, carrying auriferous and argentiferous copper ores, with values mainly in the precious metals. Former office was Canton, Ohio. Formerly at Atlanta, Elmore Co., Idaho.

**PAUDORNE COPPER MINING CO.**

VIRGINIA.

Mine office: Houston, Halifax Co., Va. Organized December, 1902, under laws of South Dakota. Apparently idle since birth and presumably moribund.

**PAULL'S CONSOLIDATED COPPER PROPRIETARY, N. L. AUSTRALIA.**

Mine office: Burr Well, South Australia. Presumably idle.

**PAY COPPER CO.**

CALIFORNIA.

Letter returned unclaimed from former office, Tonopah, Nev. Mine office: Greenwater, Inyo Co., Cal. Lands, 4 claims, adjoining the Greenwater-Black Jack Mining Co. Idle and apparently moribund.

**PAYMASTER CONSOLIDATED MINES CO.**

ARIZONA.

Office and mine: Tucson, Pima Co., Ariz. J. Edw. Owen, vice-president and treasurer; John P. Owen, president; R. W. Langworthy, secretary. Capitalization \$5,000,000, shares \$1 par. Is said to have authorized, November, 1907, a \$300,000 bond issue.

Lands, 52 claims, circa 25 miles southeast of Tucson, in the Pima district of the Sierra Mountains, including the paymaster group of 17 claims; Olive group of 2 claims; North Prosperity group of 7 claims; Schumaker group of 2 claims, and Keystone group of 24 claims. The Keystone group has 3 tunnels, showing gold and lead values. The Paymaster mine, opened 1887, and said to have produced upwards of \$500,000 worth of ore, under former ownership, has shafts of 90' to 325', with circa 4,000' of workings, on a vein of 15' to 20' width, carrying argentiferous lead and copper ores, said to average 6% copper, 40% lead and 65 oz. silver per ton, with 100,000 tons of ore in sight, which estimates are considered excessive. Shipped some ore, 1907.

**PAYMASTER COPPER MINING CO.**

WYOMING.

Dead. Formerly at Encampment, Carbon Co., Wyo.

**PAYMASTER MINE.**

IDAHO.

Mine office: Wardner, Shoshone Co., Idaho. Lands, one mile east of Wardner, are said to have a 4' vein carrying lead and copper values. The mine has a 280' upper tunnel and a 100' lower tunnel, with a 100' blind shaft from the lower tunnel, showing good lead and copper ore, former assaying up to 42% in tenor.

**PAYMASTER MINING & SMELTING CO.**

UTAH.

Mine office: St. George, Washington Co., Utah. S. L. Adams, Jr., superintendent. Property was said, 1906, to be operated by Samuel Newhouse and associates. Is said have a 20-ton smelter.

**PEACH BOTTOM COPPER CO.**

NORTH CAROLINA.

Dead. Formerly at Elk Creek, Ashe Co., N. C.

**PEACOCK CONSOLIDATED MINING CO.**

UTAH.

Mine office: Milford, Beaver Co., Utah. Lands show a fissure vein of 2' to 5' width, giving ore assaying up to 42% lead, 23 oz. silver and \$1.00 gold per ton.

**PEACOCK COPPER CO.**

Mine office: Johnson, Cochise Co., Ariz. Ben X. Williams, superintendent. Lands, 7 claims, near the Arizona Consolidated, Johnson Copper Co. and Centurion mine.

**PEACOCK COPPER CO.****ARIZONA.**

Dead. Formerly at Lavic, San Bernardino Co., Cal. Described Vol. V.

**PEACOCK COPPER MINING CO., LTD.****CALIFORNIA.**

Office: care of John H. Nordquist, president, Wallace, Idaho. Mine office: Logan, Idaho Co., Idaho. Organized 1907, under laws of Idaho. Lands, 5 claims, near the Eagle Mining Co., in the St. Joe district.

**PEAK COPPER CO.****MICHIGAN.**

Dead. Formerly at Bessemer, Gogebic Co., Mich. Described Vol. III.

**PEAK DOWNS COPPER CO.****AUSTRALIA.**

Dead. Was succeeded by Peak Downs Freehold Copper & Coal Co., Ltd. Company had 50,000 paid up shares and 80,000 contributing shares. Formerly at Copperfield, Clermont Co., Queensland, Australia.

**PEAK DOWNS FREEHOLD COPPER & COAL CO., LTD.****AUSTRALIA.**

Dead. Was organized April, 1908, under laws of Queensland, as successor of Peak Downs Copper Co., with capitalization £75,000, shares 7s. 6d. par; issued, 130,000 shares, 3s. 6d. paid in. Officers were John Currie, chairman; Currie, Buchanan & Co., secretaries; J. T. Coates, mine manager. Was succeeded, circa May, 1908, by United Peak Downs Copper & Coal Co., Ltd.

**PEARL COPPER MINING CO.****COLORADO.**

Dead. Formerly at Pearl, Larimer Co., Colo.

**PEARL COPPER MINING & SMELTING CO.****COLORADO.**

Office: care of P. B. Coolidge, manager, Lander, Wyo. Mine office: Pearl, Larimer Co., Colo. W. L. Culbertson, president; R. E. Coburn, secretary; T. J. Riley, superintendent. Lands include the Copper King and Swede groups, opened by a 400' shaft, showing considerable ore of good average grade, values being in copper, gold and silver. Has steam power. Was under lease, expiring 1906, to Western Mining & Smelting Co. Idle.

**PEARL SMELTING CO.****COLORADO.**

Dead. Formerly at Pearl, Larimer Co., Colo. Fully described Vol. VI.

**PECK MINING CO.****ARIZONA.**

Dead. Lands passed to Great Peck Mining Co. Formerly at Providence, Yavapai Co., Ariz.

**PECOS COPPER CO.****NEW MEXICO.**

Office: 581 Arcade, Cleveland, Ohio. Mine office: Cowles, San Miguel Co., N. M. Alfred H. Cowles, president; I. C. Clifford, vice-president; Frederick H. Swan, secretary and treasurer. Organized 1904, under laws of Michigan, with capitalization \$50,000, shares \$25 par.

Lands, 260 acres lode claims and 272 acres placer claims, all patented, with total area, including 2 coal claims, of 811 acres, lying in the Hamilton district, circa 12 miles over the mountains from Santa Fe, and about 18 miles from Pecos switch. Lands are well timbered, and a considerable water power is available from the Pecos river, which company controls for 2½ miles.

The property shows granite, slate and quartzite, with underlying strata of lower Carboniferous age, cut through by the valley of the Pecos river. Lands show various contact deposits, having ferruginous quartzite on the south, with granite and slate to the north, of which two, under development, show a mineralized zone up to 225' in width, with ore bodies of 12' to 18' estimated width, carrying massive chalcopyrite and massive sphalerite, formerly reported to give average assays of 3.5% copper, 3.75 oz. silver and \$1.60 gold per ton. The ores are slightly argentiferous and auriferous zinc, lead and copper sulphides, of low average tenor, though in large quantities, and will

require reduction on the ground, in a plant especially adapted to the treatment of complex sulphide ores.

Development is by the Katydid shaft of 60' and the Evangeline shaft of 310', with 450' of tunnels, and about 3,600' of workings. The management claims to have 168,304 tons of ore blocked out. The property was opened 1882, and closed shortly thereafter, owing to zinc ores near surface proving unworkable.

Equipment includes a 165-h. p. steam plant, with 2 hoists, good for 600' depth each, and a 3-drill Rand air-compressor, with several mine buildings. The company has been said to consider building a 23-mile branch line, from the mines to Pecos switch, on the Santa Fé Railway. Idle.

#### **PEERLESS COPPER EXTRACTION CO.**

**ARIZONA.**

Office: 405 Bank Blk., Denver, Colo. Mine office: Florence, Pinal Co., Ariz. J. Bradbury, secretary; A. F. Abbott, manager. Organized circa 1907, with capitalization \$1,000,000. Property is the McIntosh experimental leaching plant.

#### **PEERLESS GOLD & COPPER MINING CO.**

**COLORADO.**

Letter returned unclaimed from former office, 153 La Salle St., Chicago, Ills. Mine office: Silver Cliff, Custer Co., Colo. H. S. Taylor, president and treasurer; C. E. Wilcox and A. G. Gage, vice-presidents; V. N. Brant, secretary. Organized circa 1905, under laws of Colorado. Lands, 29 claims, 3 patented, in the Spruce district, circa 12 miles from Silver Cliff, developed by a 1,655' tunnel, supposed to be closely approaching an ore body.

#### **PEERLESS MINING & MILLING CO.**

**COLORADO.**

Office and mine: Salida, Chaffee Co., Colo. Lands, 6 claims, on Cyclone Mountain, 16 miles west of Salida, opened by an 800' crosscut tunnel, showing ores carrying values in lead, copper, gold and silver, lead predominating. Idle several years and apparently moribund.

#### **PEHOVAZ HERMANOS y CO.**

**PERÚ.**

Mine office: Uliachiu, Cerro de Pasco, Junín, Perú. Property is a small producer of silver and copper, when worked. Presumably idle.

#### **PEÑA COPPER MINES, LTD.**

**SPAIN.**

Office: 3 Laurence Pountney Hill, Cannon St., London, E. C., Eng. Mine office: Nerva, Huelva, Spain. Nicol Brown, chairman; Albert Straube, deputy chairman; T. Stephenson Dick, secretary; Enrique Schreck, mine manager; Wm. Neil, auditor. Organized Sept. 19, 1900, under laws of Great Britain, and capitalization increased, January, 1905, to £600,000, shares £1 par; issued, £537,600. Debentures originally were £200,000 authorized, and £193,800 issued, at 5%, reduced, 1907, to £63,500, with sinking fund for redemption amounting to £51,500. Net profits for fiscal years have been as follows: £17,293 in 1905; £45,697 in 1906; £19,522 in 1907. Dividends have been as follows: 5% in 1903; 5% in 1905; 4% in 1906; 7½% in 1907.

Lands, 183 hectares, 2 miles northeast of the Rio Tinto, being the Peña del Hierro group of 17 old mines, taken over from the Sociedad Peninsular de Brussels. Extraction is mainly open-cast, and large quantities of overburden are removed, stripping having been 195,430 cubic meters in 1905; 220,869 meters in 1906, and 174,324 meters in 1907. Eventually the capping will be removed almost entirely, and the mine worked open-cast down to the 9th level, there being a very limited amount of underground mining in progress. Ore reserves were estimated, 1907, at 3,000,000 long tons.

Equipment includes hoists, crushing plant, shops and dwellings. A 2½-mile private line, equipped with one locomotive and 14 cars, connects the mines and works with the nearest railway.

Ores produced are divided into cupriferous pyrites, iron pyrites and washed sulphur ore, latter being ore previously leached for copper, and sold thereafter

for sulphur contents. The leaching plant has settling tanks, boilers and pumps. The cupriferous pyrites of the Sierra Morena lend themselves with special facility to copper extraction by a combination of natural weathering and artificial leaching, and this process, in use by the Peña, gives cheap costs, but entails long waits and heavy investments before profits are returned, a term of 8 to 10 years being required for complete extraction of copper values, which means that the operators must put more in than is taken out, for a long term of years.

Production was 624 long tons fine copper in 1902, and for 1905 was 1,724,800 lbs. fine copper and circa 110,000 long tons of pyrites, sold for sulphur. At the end of 1905 the quantity of ore in the tereros, or leach-heaps, was 480,803 long tons, and Dec. 31, 1907, was 586,478 long tons, estimated to contain 4,119 long tons fine copper. Owing to prolonged drought, production was hampered in 1907, but heavy rains, at the end of the year, gave sufficient reserves of water. Production, 1907, included 15,104 tons of leached sulphur ore, 19,550 tons of ore extracted and 167,236 long tons of ore added to leach-heaps, and production of fine copper has been as follows: 1,724,800 lbs. in 1905; 2,421,440 lbs. in 1906; 2,036,160 lbs. in 1907. Property is considered valuable and well managed.

**SOCIEDAD ANONIMA MINERA DE PEÑAPLOR.** SPAIN.

Office: Bilbao, Vizcaya, Spain. Mine office: Peñafior, Sevilla, Spain. Don Luis de Salazar, president; Don P. Alzaga, manager; Don Angel Iznarde y Alzate, superintendent. Organized Jan. 1, 1901, under laws of Spain, with capitalization 4,500,000 pesetas. Property includes the Concepción, Descuido and Segunda Preciosa mines, equipped with an electric pumping plant. Is supposed to be working with a small force.

**PEND D'OREILLE GOLD & COPPER MINING CO.** WASHINGTON.

Mine office: Davenport, Lincoln Co., Wash. Idle several years.

**PENINSULA MINING & SMELTING CO.** MEXICO.

Dead. Lost lands, circa 1904. Formerly at Santa Catarina, Norte, Baja California, Mex. Fully described Vol. V.

**SOCIEDAD PENINSULAR DE BRUSSELS.** SPAIN.

Dead. Was wound up, 1900, and mines sold to Peña Copper Mines, Ltd. Formerly at Nerva, Huelva, Spain.

**PENN-ARIZONA COPPER CO.** ARIZONA.

Office: Greenburg, Pa. Mine office: Prescott, Yavapai Co., Ariz. R. H. Koontz, president; N. J. Baxter, vice-president; Geo. S. Sarver, secretary; Jas. L. Freeble, treasurer; S. J. Gnash, general manager. Organized under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 27 claims, in the Copper Basin district.

**PENN CHEMICAL WORKS.** CALIFORNIA.

Office and mine: Campo Seco, Calaveras Co., Cal. J. K. Harmon, president and general manager; Albert C. Harmon, secretary, treasurer and superintendent; A. L. Willie, assistant superintendent; John Cocking, mine foreman; Frank Baird, smelter superintendent. Organized 1880, under laws of California.

Lands, 4 claims, area 80 acres, patented, also a 20-acre smelter-site, 640 acres of timber lands and 450 acres miscellaneous lands, giving total holdings of 1,190 acres, in the Campo Seco district. Property includes the Campo Seco, Hecla and Satellite mines, which were considerable producers, circa 1860-1870. Mines are developed by 5 tunnels and 2 shafts, latter of 500' and 700', cutting a 30' ore body, at depth of 400'. Ore is slightly argentiferous and auriferous chalcopyrite, associated with sphalerite and pyrite, with gangue ranging from talcose schist, through clay, to quartz.

Equipment includes steam plants of 150 h. p. at the mine, and 400 h. p.

at the smelter. Shafts have 44-h. p. and 100-h. p. hoists, good for depths of 1,000' and 2,000' respectively, and there is a 14-drill Ingersoll-Sergeant air-compressor. Fuel is petroleum. A little cement copper is produced by leaching old waste burrows.

The property is served by the Southern Pacific Railway, 6 miles distant, and transportation is by wagon between the mine and Valley Springs, the distance being short, allowing one round trip daily.

The smelter, one-fourth mile from the mine, receiving ore by tram, has a 100-ton blast-furnace and two 50-ton reverberatory furnaces. The works have been much improved, and brought to the point of doing economical work. The works produce matte, brought to 60% copper tenor in 3 fusions, shipped to the American Metal Co., Ltd., New York, for refining and marketing. Semi-pyritic smelting formerly was employed in the blast-furnace, but reduction is now mainly by reverberatories, burning petroleum, effecting an estimated reduction of 40% in cost of smelting. Property considered promising and management good.

#### PENN-MONT MINING & MILLING CO.

#### MONTANA.

Office: 102 Trout Bldg., Lancaster, Pa. Mine office: Elliston, Powell Co., Mont. W. H. Guthrie, president; C. V. Lichty, vice-president and fiscal agent; W. J. Merrill, secretary and treasurer; Thos. S. Rogers, superintendent. Organized under laws of Montana, with capitalization \$1,000,000, shares \$1 par. Lands, 460 acres, including 15 lode claims and one placer claim, circa 3 miles south of Elliston, opened by a 100' incline shaft and a 125' vertical shaft, showing a 4' fissure vein in granite, carrying mainly auriferous and argentiferous lead ore, but it is hoped to develop copper sulphides of good average tenor at greater depth. Is said to plan a concentrator.

#### PENNSYLVANIA & ARIZONA CONSOLIDATED COPPER CO. ARIZONA.

Office: care of Wm. Cunningham, secretary, Phoenix, Ariz. Mine office: Hot Springs, Yavapai Co., Ariz. Jas. H. Bennett, president and manager; Jos. J. Shaw, vice-president. Organized circa January, 1907. Lands, 8 claims, about 10 miles north of Hot Springs, in the Red Picacho district, showing a 47' vein with prominent gossan opened to depth of 300', carrying sulphide ore at depth of 285'. Shipped, 1907, ore of 20 to 40% copper tenor, to the Humboldt smelter.

#### PENNSYLVANIA & CANANEA COPPER CO.

#### MEXICO.

Office: 1220-25 Broad St., New York, N. Y. Mine office: Baca Bldg., La Cananea, Arizpe, Sonora, Mex. Robt. Mitchell, president and general manager; Henry J. Stevens, vice-president; E. B. Crary, treasurer; Geo. A. Fitch, secretary; Chas. McHenry, superintendent. Organized under laws of Arizona, with capitalization \$5,000,000, shares \$10 par; issued, \$2,500,000. Direct title to lands is held through South Cananea Copper Co., S. A., organized under laws of Mexico.

Lands, 587 hectares, including the Collins group of 305 pertenencias, Arizpe group of 40 pertenencias, Homestake group of 60 pertenencias, Last Chance group of 22 pertenencias and Gladys group of 150 pertenencias, latter adjoining the Massey mine of the Greene Consolidated, and supposed to carry the extension of the Massey ore body, bulk of lands being circa 2 miles from La Cananea. Considerable development has been secured, the Collins claim having a 250' shaft. Company was said, 1906, to have bought a tin mine in the state of Jalisco, of which nothing has been heard since, and was said, late 1906, to have sold lands to Cananea & Globe Exploration & Development Co., another Mitchell company.

#### PENNSYLVANIA, CANANEA & GLOBE MINING CO.

#### ARIZONA.

Office: 37 Wall St., New York, N. Y. Mine office: Globe, Gila Co., Ariz. Geo. Mitchell, general manager; John Britt, superintendent. Appar-

ently is closely connected with Pennsylvania & Cananea Copper Co. Is said to have bought a controlling interest in the Five Points Mining Co., having 22 claims in the Pinto Creek district, also 3 groups of claims near Superior, Pinal Co., Ariz. Idle and apparently moribund.

**PENNSYLVANIA CENTRAL GOLD MINING CO.** COLORADO.

Mine office: Russell Gulch, Gilpin Co., Colo. Property is the Delaware Chief mine, carrying ores of gold, silver and copper. Has steam power.

**PENNSYLVANIA COPPER CO.** NEW MEXICO.

Dead. Formerly at San Pedro, Santa Fé Co., N. M. Described Vol. VI.

**PENNSYLVANIA COPPER MINING CO.** PENNSYLVANIA.

Dead. Delaware charter repealed 1903. Was promoted by Paul Morris & Co. Formerly at Pottstown, Montgomery Co., Pa. Described Vol. VI.

**PENNSYLVANIA MINE.** MONTANA.

Owned by Boston & Montana Consolidated Copper & Silver Mining Co.

**PENNSYLVANIA MINING CO.** NEW MEXICO.

Office: Franklin, Pa. Mine office: Los Cerillos, Santa Fé Co., N. M. Ores carry gold, silver, copper and lead. Idle several years.

**PENNSYLVANIA & MONTANA MINING CO.** MONTANA.

Mine office: Basin, Jefferson Co., Mont. Curtiss Denbow, secretary. Lands, circa 100 acres, having a 130' shaft showing a 2' vein carrying an 8" to 18" pay streak.

**PENNSYLVANIA SMELTING CO.** IDAHO.

Works office: Ponderay, Bonner Co., Idaho. Geo. Faunce, president. Property is a one-third share interest in the Idaho Smelting & Refining Co., owning the Ponderay smelter.

**PENN-WYOMING COPPER CO.** WYOMING.

Office: 731 Monadnock Bldg., Chicago, Ills. Branch offices: 1308-74 Broadway, New York, N. Y., and 14 Great Winchester St., London, E. C., Eng.

Mine office: Rudelfeha, Carbon Co., Wyo. Works office: Encampment, Carbon Co., Wyo. E. M. Cobb, president; Frank Burke Draper, first vice-president; Earle A. Norton, secretary and general manager; preceding officers constitute the executive board; John F. Mallory, second vice-president; preceding officers, J. R. Leonard, Frederick Davidson, D. H. Lambertson and J. Q. Riddle, directors; L. M. Fishback, treasurer; H. Gulliver, London secretary; Geo. H. Hand, general superintendent; J. B. Barriani, transportation superintendent.

Organized Sept. 13, 1904, under laws of Wyoming, with capitalization \$10,000,000, shares \$1 par; issued, circa \$9,000,000. Succeeded North American Copper Co., organized 1902, under laws of New Jersey, with capitalization \$20,000,000, shares \$100 par. Of the capitalization of the Penn-Wyoming, half was set aside for the redemption of \$1,500,000 worth of bonds of the North American Copper Co., at the rate of 3½ for 1. Controls, through ownership of 90% of entire stock issue, the Haggarty Copper Mining Co., Encampment Smelting Co., Encampment Tramway Co., Encampment Pipe Line Ditch Co., Encampment Land & Townsite Lot Co., Carbondale Coal Co., Emerson Electric Light Co., Saratoga & Encampment Railroad Co. and North American Mercantile Co., last named corporation being the purchasing and distributing end of the Penn-Wyoming. Controls the Battle Lake Tunnel Site Mining Co., through ownership of \$2,361,400 stock out of total issue of \$2,500,000. The Battle Lake company had outstanding, June 15, 1907, bonds aggregating \$18,400.

The company paid dividends, at the rate of 6% yearly, for 2 years, until March, 1907, on issued stock, when the dividend rate was increased to 8%, but the dividend of July, 1907, was canceled, on account of the burning of the smelter. Dividends paid to July, 1907, were \$531,250, on outstanding share capital of \$5,500,000. The company has circa 8,400 shareholders, a large number of whom are residents of Great Britain.

Lands, including holdings of the Battle Lake Tunnel Site Mining Co., aggregate 1,373 acres, property including 773 acres of patented mineral lands, 80 acres of coal lands, a 24-acre millsite, limestone quarry, 320 acres of timber lands and the entire townsites, less lots sold, of Encampment, Budefeha and Rambler.

The Ferris-Haggarty mine, 8 claims, one fractional, 5 patented, area 103 acres, discovered 1898, shows an outcrop of decomposed spongy limonite, with carbonate copper stains, under which is a fissured zone of about 20' average width, having a mica-schist hanging-wall and slightly stratified footwall, with strike of northwest and southeast, and dip of 50° from the horizon to the southwest. At depth of about 40' the ore is massive bornite, carrying 40 to 45% copper and \$2 to \$9 combined gold and silver values per ton. The rich zone has been partially worked out, the bornite being replaced, in the lower levels, by disseminated chalcopyrite, estimated to average 10% copper, 1.75 oz. silver and \$6 gold per ton, but yielding, in actual production, 4 to 6% copper, about 1 oz. silver and \$2 to \$4 gold per ton, with mixed charges, including ore from the old mine dump, estimated to average about 4% copper. A promising new ore body, opened, 1907, by crosscuts on the 140' level, is about 10' wide, for depth of 75' and length of 350', and is estimated, by Superintendent Hand, as averaging better than 20% copper, which probably is an overestimate. The statement by Swasey & Co., of New York, that the Ferris-Haggarty has a vein of 65' average width averaging 8% copper is a serious exaggeration. A low grade copper vein was located by diamond drill, September, 1908, at a distance of 130' in the footwall. Development is by a 1,490' main working tunnel, connecting with a 540' shaft, and a 180' winze has been sunk below the tunnel level. The mine has about 6,500' of workings. Ore is milled down to the tunnel level, through chutes, and hauled to ore-bins at the portal by compressed air locomotives. The mine was estimated, July, 1907, to be capable of producing 500 tons of ore daily, which seems a serious overestimate, in view of the comparatively limited extent of the workings.

The power plant of the Ferris-Haggarty mine, at the mouth of the tunnel, includes three 180-h. p. boilers, a 25-drill air-compressor, and a 3-stage Norwalk air-compressor furnishing air, at 1,250 lbs. pressure per square inch, to a 5x8' Porter locomotive used for underground traction. There also are 4 hoists, and 24 power drills. Buildings include a 30x40' wooden machine-shop, 20x40' wooden carpenter-shop, a 35x42' wooden smithy, office, warehouses, ore-bins, bunkhouse, eating-house and 14 dwellings.

The Osceola mine, adjoining the Ferris-Haggarty, is but slightly developed, and apparently is not a producer.

The Doane-Rambler mine, 30 claims, area 600 acres, with 80 acres of miscellaneous lands, shows country rocks of granite, diorite and quartzite carrying numerous veins, of which 5, under development, of about 4' average width, show oxidized ores above and sulphides below, latter mainly chalcopyrite, but with considerable chalcocite, covellite and bornite, which have shown an average assay of 40.7% copper from 16 carload shipments. The mine is opened by a 500' working shaft and 3 tunnels, two longest 900' and 1,600', with upwards of one mile of underground workings, and is considered a promising property. Plant includes 3 boilers, an air-compressor and a 70-h. p. hoist.

A 16-mile Leschen aerial tramway, which is the longest installation of the sort ever made, connects the Ferris-Haggarty mine with the smelter. The tram was built in 4 sections, of 4 miles each, but is now operated in two 8-mile sections, by steam power, generated at 2 stations, 8 miles apart, each station having storage-bins. The length of cables is 293,275'; weight of cables, 439,669 lbs.; number of tension stations, 16, four being double; greatest elevation above sea-level, 10,690', on Bridger Peak; highest tower, 69'; number of

towers, 170; highest span, 250' above surface, at Heaning's Gulch; longest span, 2,200', across Cow Creek Cañon; general rise, 900'; number of buckets, 972, in service; capacity 700 lbs. each; speed, 5½ miles per hour; maximum daily capacity, upwards of 1,000 tons. The plant has automatic filling and discharging devices, and was built so that its capacity can be doubled, if desired. The aerial tramway has given some trouble in operation. A 2-mile branch tramway to the Doane-Rambler mine apparently is not completed.

The reduction plant, located on the banks of the Encampment river, does a custom business, in addition to treating the company's own ores. The first concentrator, burned, March, 1906, was replaced, July, 1907, with a larger and better mill, of 800 tons daily capacity. The concentrator is in 2 parts, terraced throughout, with a drop of about 60', permitting the handling of material by gravity. The plant has storage-bins and picking-tables, equipment including a 700-ton Blake crusher, 4 roughing and finishing rolls, automatic sampler, revolving trommels, hydraulic classifiers, two 700-ton Hancock jigs, 2 pairs of grinding rolls, two 6' Calumet regrinding mills, 8 Frue vanners, 12 Wilfley tables and a V-shaped slime tank, 12' deep, 28' wide and 70' long. Tailings from the new mill are reported by the company to assay under 1% of the original metallic values, which seems almost too good to be true. The old smelter was burned May 10, 1907, this being the second bad fire in 3 years, and a new smelter, of steel frame on concrete foundations, rated at 1,000 tons daily capacity, was blown in Aug. 16, 1907. Equipment includes a 100-ton Davies straight-line roaster, a 40-ton mechanical straight-line roaster, and 200-ton and 300-ton water-jacket blast-furnaces. Slag is granulated by a jet of water, and washed through a launder to the dump. Blast for the furnaces is furnished by No. 6 Connersville and No. 7 Greene blowers.

The converter department has a 25-ton electric traveling crane, 3 converter stands, tilted electrically, and 6 shells, of the Copper Queen type. Linings are made of a mixture of clay and quartz, ground in a 7' silica-mill, replaced every third charge. Blast for the converters is supplied by an electrically driven Eiedler air-compressor, with a capacity of 6,000 cubic feet of free air per minute, compressed to 15 lbs. per square inch. There also is a White mineral press, for briquetting fines and flue-dust.

The power plant includes hydraulic and steam installations. Water is brought through a 4-mile pipe-line, of 48" diameter, from a 23' dam on the south fork of the Encampment river, driving 6 DeRemer impact wheels, direct-connected with generators furnishing current for a 1,000-h. p. common system. The water-power plant proved somewhat unreliable, varying in energy delivered from 600 to 1,200 h. p., hence was supplemented by a steam plant with three 200-h. p. Babcock & Wilcox boilers, and a 500-kw. Westinghouse-Parsons steam turbine. Fuel for power purposes is wood, costing circa \$3.50 per cord, and coke is used for smelting. The company has a mine of lignite, on the line of the aerial tramway, at Carbondale, 12 miles from Encampment.

Buildings at the reduction plant include a machine-shop, pattern-shop, boiler-shop, foundry, sawmill, smithy, office and laboratory. The Encampment Water Works Co., owned by the Penn-Wyoming, has a franchise for supplying water to the town of Encampment, and the Emerson Electric Light Co. has the lighting franchise for the town.

The company's operations were greatly hampered by inadequate transportation facilities, the smelter being 45 miles from Waleott, the nearest railroad station. The Saratoga & Encampment Railway Co., capitalized at \$1,000,000, is controlled through ownership of entire stock issue, and, at last accounts, a \$750,000 bond issue by the railway company remained in the Penn-Wyoming treasury. The railway, of 45 miles length, of standard gauge, was completed August, 1908, giving greatly reduced operating costs.

The mine secured more or less production in 1902 and 1903, and the smelter was again blown in June 28, 1905, running continuously until Oct. 20, 1905, making, in that campaign, 2,385,629 lbs. fine copper, 3,549 oz. silver and 226 oz. gold, from 28,039 tons of ore smelted, giving an average extraction of 4.25% copper, said by company to have been made at the cost of slightly under 9 cents per pound. For 1906 production was 2,402,985 lbs. fine copper, secured at a gross cost, for mining, smelting and hauling to railway station at Walcott, of \$203,000.57, giving average costs of 8.45 cents per ton, showing a marked gain over the preceding year, gross receipts being \$378,786.88. In 1906 smelter costs were \$64,213.24, or \$2.46 per ton, on 26,145 tons of ore smelted, the cost of \$2.46 per ton of ore, or 2.67 cents per pound on finished copper, with an average return of 5.36% copper per ton of ore smelted, showing an increase in average copper tenor of ore and decrease in costs. The smelter was again blown in March 15, 1907, running until May 10, 1907, making 1,580,000 lbs. fine copper from 11,000 tons of ore smelted, giving an average return of 7.2% copper. Production was resumed, September, 1907, and was said to average about 4% copper, from Ferris-Haggarty ore. Production was said, February, 1908, by Swasey & Co., who were selling the company's shares, to be 600,000 lbs. fine copper monthly, but these figures are considered excessive, and apparently production, May, 1908, was circa 125 tons of ore daily. Production, 1908, is estimated at 5,000,000 lbs. fine copper.

Assets of the old North American Copper Co. were bought, at public sale, by the present company. A suit against the Penn-Wyoming, by shareholders of the old North American, has been decided against the plaintiffs, who apparently lack grounds for complaints against the Penn-Wyoming company or management. The statement, in a former edition of the Copper Handbook, that Mr. E. M. Cobb, president of the Penn-Wyoming, formerly was connected with Mr. John S. Carey in the management of the North American, was based on misapprehension, as the only connection of Mr. Cobb with Mr. Carey, or with the old North American company, was that of an unfortunate investor.

In past editions of the Copper Handbook the Penn-Wyoming Copper Co. has been criticized for two shortcomings and one misfortune, the latter being the lack of a railroad, which has been remedied by the completion of the rail line. The principal criticism was based upon the payment of dividends contemporaneously with the raising of additional capital by sale of shares, a policy that is wrong, no matter by whom followed, or how strongly endorsed. The last financial statement obtained from the company, of date August, 1907, gave assets of \$76,481.07 accounts receivable, practically all due from subsidiary companies, \$3,657.50 bills receivable of the Battle Lake Tunnel Site Mining Co., and \$6,695.13 cash on hand. Current liabilities included notes payable of \$370,086.76, due on the Ferris-Haggarty mine, and \$318,959.62 trustee notes, running to A. F. Richardson, secured to the trustee by underlying notes of the various subsidiary corporations aggregating \$1,390,798.62, held by the trustee under an agreement to cancel all notes of the various subsidiary corporations upon payment of the Penn-Wyoming notes for \$318,959.62, this amount being the balance due on the underlying notes, on which \$1,072,839 had been paid previously. The anomalous arrangement, formerly existing, by which stock of the Penn-Wyoming, while nominally common stock, and on a parity, was, for all practical purposes, divided into three classes, has been terminated, there being now only common stock outstanding, with all shareholders on an equal footing.

Apparently the company has considerable indebtedness, and its inability to sell its \$750,000 railroad bond issue is said to have caused financial embarrassment. A stockholders' committee was endeavoring, late 1908, to work out a plan of reconstruction. The cost-sheets of the 1906 and 1907 smelting cam-

paigns show that copper has been produced, in considerable quantities, at reasonable prices, and, as pointed out by the Copper Handbook two years ago, the ultimate success of the mine would seem to depend upon its ability to furnish large tonnages for steady smelting operations. Apparently the mine has proven unequal to the task, owing to insufficient development. While the management has been censured, in past editions, for its mistaken policy of paying dividends while raising further share capital, it is believed that the management has been doing its best to work out from under an embarrassing load of debt, and it is to be hoped that some plan of financing may be devised by which the company will be given the considerable working capital needed to enable it to develop its mines to a point where they can furnish a steady and assured tonnage to the smelter.

#### SOCIEDAD ANONIMA MINAS DE PEÑUELAS.

SPAIN.

Office and mine: Paimogo, Huelva, Spain. José María Soto y Rosso, chairman; Miguel Borrero Morón, vice-chairman; Mateo Santos Mora, secretary; Gregorio Peres Díaz, treasurer. Organized July 19, 1898, under laws of Spain, with capitalization 12,600 shares, wholly issued. Annual meeting, in August.

Lands, 139 hectares, with miscellaneous lands giving total holdings of 500 hectares, in the Paimogo district, showing slate and granite, with numerous fissure and contact veins, of which one, under development, of 4' estimated average width, shows oxidized ores and chalcopyrite, giving average assays of 15.34% copper, developed by shafts of 200', 30', 60' and 50', and by tunnels of 150' and 130'.

Equipment includes an 18-h. p. hoist, and there are 17 dwellings and cottages for workmen.

Product is mainly cupriferous pyrites, sold to Thos. Morrison & Co. Mine is served by the Tharsis Railway. Production, to Jan. 1, 1908, was circa 4,000 tons of ore, giving average returns of 15.34% copper. Production, 1907, estimated at 125,000 lbs. fine copper.

#### PEOPLES MINING CO.

ARIZONA.

Office and mine: Wilcox, Cochise Co., Ariz. S. N. Kemp, superintendent. Organized circa 1905. Has auriferous and argentiferous copper ore, said to be shown in considerable quantities, with steam power.

#### PERCIVAL MINING CO.

WISCONSIN.

Dead. Organized 1878, succeeded 1898, by Percival Copper Mining Co. Formerly at Gordon, Douglas Co., Wis.

#### PERCY-CHESTER CONSOLIDATED MINING CO.

COLORADO.

Office: Council Bluffs, Iowa. Mine office: Red Cliff, Eagle Co., Colo. F. M. Donald, lessee. Ores carry gold, silver and copper. Has steam power. Presumably idle.

#### PERCY RIVER SYNDICATE.

AUSTRALIA.

Office: Irvinebank, Queensland, Australia. Mine office: Ortona, via Georgetown, Queensland, Australia. C. E. Young, secretary; J. F. Puxley, general manager; E. Joyce, superintendent. At last accounts employed 12 men, on exploratory work, in connection with the Ortona.

#### FRANCISCO DE PAULA PEREZ.

CHILE.

Mine office: Los Condes, Santiago, Chile. Works office: Núñoa, Santiago de Chile. Property is La Central mine, opened 1880, adjoining the property of the Compañía Esplotadora Los Bronces, and the two were driving a long tunnel, jointly, at last accounts. Ores average, after selection for smelting, about 23% copper. La Central smelter has a matting furnace only, and production, 1903, is estimated at 500,000 lbs. fine copper.

#### PERKIOMEN MINES.

PENNSYLVANIA.

Mine office: Shannonville, Montgomery Co., Pa. Are old mines, that were

quite extensively worked, and produced a large variety of copper and lead ores at one time. Long idle.

**PERMIAN & TRANS-PECOS COPPER CO.** TEXAS.

Dead. Texas charter forfeited, 1905, for non-payment of taxes.

**PERSON CONSOLIDATED COPPER &** NORTH CAROLINA.  
**GOLD MINES CO.**

Office: 1901-42 Broadway, New York, N. Y. Mine office: Virgilina, Halifax Co., Va. E. D. Beecher, president and general manager. Organized under laws of New York, with capitalization \$1,000,000, shares \$10 par.

Lands, 1,372 acres, in several neighboring tracts, including the Dury mine, located in Person county, North Carolina. Main shaft, 330'. Vein averages 4' in width, carrying ores ranging 4 to 20% in copper tenor. Has a 50-ton concentrator. When worked, shipped concentrates averaging 45% copper and 20 oz. silver per ton, with small gold values, sending a limited amount of high-grade ore, averaging 30% copper and 10 oz. silver per ton, direct to smelter. Idle.

**PERÚ COPPER SYNDICATE, LTD.** PERÚ.

Dead. Liquidated July 16, 1906. Formerly in Perú.

**PERUVIAN COPPER MINING & SMELTING CORPORATION.** ARGENTINA.

Dead. Was still-born.

**PERUVIAN MINING & MILLING CO.** UTAH.

Mine office: Alta, Salt Lake Co., Utah. B. F. Clays, superintendent. Capitalization was increased, 1908, to 250,000 shares, presumably \$1 par. Lands, 5 claims, known as the Hungry Ten group, idle several years until 1908. Development is by a 1,100' tunnel, being driven for the main contact, and cutting several fissure veins giving assays up to 12% copper, 20% lead, 78 oz. silver and \$1.60 gold per ton. Property has several mine buildings.

**PERUVIAN MINING, SMELTING & REFINING CO.** PERÚ.

Office: 400-55 Congress St., Boston, Mass. Mine office: Morococha, Junín, Perú. Works office: Rio Blanco, Junín, Perú. A. S. Hight, president; S. E. Farwell, treasurer; Julio L. East, general manager; G. Wagner, mine superintendent; S. C. Hazelton, smelter superintendent; A. A. Abbott, consulting engineer; M. F. Church, constructing engineer. Organized July 16, 1906, under laws of Maine, with capitalization \$5,000,000, shares \$10 par; issued, \$4,000,000. Has outstanding a \$950,000 issue of 7% convertible bonds. Is controlled, through ownership of \$1,000,000 stock, by United States Smelting, Refining & Mining Co.

Lands include the Churraca mine, in the Morococha district, said to be capable of producing 300 tons daily of ore averaging 9% copper, with silver and gold contents.

The reduction plant, blown in July 5, 1908, of 300 tons daily capacity, has a steel building, terraced, to use gravity throughout, and treats largely custom ores. The smelter is at Rio Blanco, on Lake Huacraococha, near Lake Morococha, 135 kilometers from Callao and 120 kilometers from Lima, on the Ferrocarril Central del Perú.

A railroad track, on a trestle behind and above the sampling mill, runs over ore-bins, which discharge to belt-conveyor carrying ore to the sampler, which is of 60 tons hourly capacity, equipped with Vexin automatic sampling machinery. The ore-bins are of 12,000 tons capacity, and storage is provided for 600 tons of limestone and 300 tons of coke.

The smelter has a 100-ton cintering plant, for concentrating ores before smelting, consisting of 12 one-ton pots.

The cupola building has a 44x186" blast-furnace, with room for a second of the same size, making matte of 50 to 55% copper tenor. The furnace has a

dust-flue of brick, on steel columns, bottom being hopped for automatic discharge of accumulated dust, with 2 dust-chambers, of masonry, intervening between the flue and stack, latter being of steel, 150' high and 12' in diameter.

There is a hydro-electric power plant, with a 1,200' pipe-line of 40" diameter from the Rio Blanco, delivering water to the power-house under a head of 120', generating approximately 500 h. p. There is a Connersville blower of 20,000 cubic feet capacity, and three 35-kw. direct-current generators, which also actuate an electric light plant. Miscellaneous buildings include a machine-shop, smithy, office and dwelling.

**PETOSKEY MINING CO.**

**ARIZONA.**

Letter returned unclaimed from former mine office, Williams, Coconino Co., Ariz. Organized 1907. Built a leaching plant, which was burned. Since idle and apparently moribund.

**PETRO MINING CO.**

**UTAH.**

Dead. Lands sold, 1905, for \$30,000, to Utah-Apex Mining Co. Formerly at Bingham Canyon, Salt Lake Co., Utah.

**PEWABIC MINING CO.**

**MICHIGAN.**

Dead. Wound up, 1905. Lands now owned by Quincy Mining Co. Formerly at Hancock, Houghton Co., Mich. Described Vol. II.

**PEYTON CHEMICAL CO.**

**CALIFORNIA.**

Office: 430 Mills Bldg., San Francisco, Cal. Mine office: El Dorado, El Dorado Co., Cal. Works office: Peyton, Contra Costa Co., Cal. Property is the Noonday mine and adjoining claims, in the Diamond Springs district. The Noonday, held under bond and lease, has shipped a little ore to the company's works. Presumably idle.

**PPAU GOLD MINING & REFINING CO.**

**ARIZONA.**

Dead. Merged, 1907, in Verde River Copper Co. Formerly at Jerome, Yavapai Co., Ariz.

**PHI DELTA THETA COPPER MINING CO.**

**WYOMING.**

Dead. Formerly at Dillon, Carbon Co., Wyo.

**PHILADELPHIA & ARIZONA MINING CO.**

**ARIZONA.**

Office: 614 Real Estate & Trust Bldg., Philadelphia, Pa. Mine office: Chloride, Mohave Co., Ariz. H. T. Goodman, president; E. F. Lukins, secretary and treasurer; E. T. Loy, general manager. Organized 1900, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, in the Wallapai district, include the Minnesota, Merrimac, Connor, Manzanita and other mines, carrying sulphide ores, in fissure veins averaging 6' width, with assay values of 1 to 20% copper, 15 oz. silver and \$6 gold per ton, with a little lead. Development is scattered over a number of different mines, including 20 shafts from 20' to 600' in depth, and a 3,500' tunnel. Has steam and electric power, a 10-stamp mill and a 150-ton concentrator. Presumably idle.

**PHILADELPHIA COPPER & GOLD MINING,**

**MEXICO.**

**MILLING & SMOLETER CO.**

Office: 507 Drexel Bldg., Philadelphia, Pa. Mine office: Ameca, Jalisco, Mex. Employs circa 50 men. Edwin F. Hall, president; Dr. S. C. Runkel, vice-president; Francis J. Fee, secretary; Josiah G. Williams, treasurer; A. F. Hall, general manager; J. A. Hall, superintendent; Ernest Koch, mill superintendent; Braulio Medina, mining captain. Organized 1900, under laws of New Jersey, with capitalization \$3,000,000, shares \$1 par.

Lands, 73 hectares, near San Martín Hidalgo, including La Perla, La Fé, La Concha, San Vicente, Ajax and other mines. Property shows veins of 3' to 25' width, carrying auriferous and slightly argentiferous chalcopyrite. San Vicente group, 12 miles southeast of Ameca, with circa 600' of workings, is claimed to have 100,000 tons of ore blocked out, and has a steam hoist and air-compressor.

installed 1907. La Fé mine is said to show ore up to 30% in copper tenor. The Ajax mine shows a 12' vein, estimated to average 7% copper, 2 oz. silver and \$20 gold per ton, which is considered excessive. La Estrella del Norte mine is opened by a 260' tunnel. The property as a whole has 8 shafts, of circa 10' average depth, with a total of about 8,000' of workings. Equipment includes a 25-ton Elspass mill, 25-ton lixiviation plant and a 30-ton concentrator.

#### **PHILADELPHIA COPPER MINES CO.**

**NEW MEXICO.**

Office: 206 Stephenson Bldg., Milwaukee, Wis. Mine office: Hanover Grant Co., N. M. J. W. McAlpine, president; E. W. F. ReQua, vice-president, A. E. Johnson, secretary and treasurer; preceding officers, Wm. Schrubb, M. P. Keough and G. M. Petty, directors; B. F. Baker, superintendent; Fred Kuehn, auditor. Organized circa January, 1907, under laws of New Mexico, with capitalization \$500,000, shares \$1 par.

Lands, 5 claims, partly timbered, on the Santa Fé railroad in the Central mining district, near Hanover, carrying a limestone and porphyry contact of 25' to 75' width, showing copper carbonates and sulphides, latter mainly chalcopyrite, with some bornite and occasional chalcocite, principal values being in cupriferous pyrite. Mine, opened 1880, shipped some good ore, and is said to have paid its way in the past, under various managements. Mine has numerous opencuts and 4 shafts, deepest 75', 100' and 150', all in ore, and a tunnel showing chalcopyrite up to 6% in copper tenor, with gold and silver values. Selected surface ores assay circa 2% copper, 2 oz. silver and \$25.52 gold per ton. Is developing at rate of 75' to 100' per month. Has gasoline power, engine house, smithy and sorting shed, and plans a new machinery equipment. A railroad runs 1,500' from shaft. Made several small shipments, 1907. Employed circa 35 men at last accounts.

#### **PHILADELPHIA MINING & MILLING CO.**

**NEW MEXICO.**

Dead. Lands sold to Hillsboro Consolidated Mines Co., a fraud. Formerly at Hillsboro, Sierra Co., N. M.

#### **PHILADELPHIA-SEARCHLIGHT GOLD & COPPER MINING CO. NEVADA.**

Office: 810 Witherspoon Bldg., Philadelphia, Pa. Mine office: Searchlight, Lincoln Co., Nev. John C. Groome, president; Jos. W. Shannon, vice-president; J. M. Stewart, secretary and treasurer; preceding officers, Richard M. Popham, E. C. Knight, Jr., Richard W. Meirs and Chas. Wheeler, directors; W. H. Bainbridge, superintendent. Organized under laws of Arizona, with capitalization \$5,000,000, shares \$1 par; issued, \$1,000,000.

Lands, 23 claims, 1 fractional, area 450 acres, in the Sunrise district, 4 miles northeast of Searchlight. Has a 356' vertical shaft, with crosscuts from bottom showing several veins of 3" to 4' width, carrying auriferous and argentiferous copper ore, of fair tenor, with quartz gangue. Has steam and gasoline power, with necessary mine buildings. Employs circa 15 men.

#### **PHILLIPS RIVER GOLD & COPPER CO., LTD.**

**AUSTRALIA.**

Office: Salisbury House, London Wall, London, E. C., Eng. Mine and works office: Ravensthorpe, Phillips River Goldfield, Western Australia. Chas. Kaufman, chairman; E. Protheroe Jones, secretary; G. C. Klug, general manager; Fred W. Morgan, mine manager. Organized Jan. 6, 1906, under laws of Great Britain, with capitalization £100,000, shares £1 par. Owns 44,400 shares of Mount Cattlin Copper Mining Co., Ltd.

Lands, 247 acres, apparently held under lease and option, in the Ravensthorpe division of the Phillips River Goldfield, circa 32 miles from Fort Hill-toun, including the Mount Benson and Mount Desmond mines, and an iron-stone quarry of fluxing ore. The Mount Cattlin mine was sold, November, 1906, for £100,000. The Mount Benson mine has a 200' shaft, but principal developments are at the Mount Desmond-Elverdton group, having shafts of 263' and 267', with development under way on the 250' level, this property

showing a cupriferous schist, of 40' to 50' width, traceable some distance. A railway is being built from the mines to Port Hope town.

Smelter, built by the Western Australian government, was bought on condition of treating ore from prospects of the district upon same terms as in force when smelting was under government control. In November, 1907, closed down the blast-furnace, and planned running only one reverberatory furnace on custom ore, until completion of a railway from Ravensthorpe to Port Hope town, work on which was being pushed. Ordered a converter plant, for installation late 1908. Smelting was begun Dec. 4, 1906, and to June 30, 1907, smelter treated 6,106 long tons of ore and 2,575 long tons of slag, yielding 501 long tons copper, 4,846 oz. silver and 1,805 oz. gold. Production, 1907, estimated at 1,250,000 lbs. fine copper. Property is of considerable promise.

#### **PHOENIX AMALGAMATED COPPER MINES, LTD. BRITISH COLUMBIA.**

Office: Sherbrooke, Que. Mine office: Phoenix, Boundary district, B. C. F. B. Buck, president; C. H. Fletcher, vice-president; A. F. Fraser, secretary. Organized circa March, 1906, with capitalization, \$5,000,000, shares, \$10 par. Is controlled, through ownership of majority of stock, by Consolidated Mining & Smelting Co., of Canada, Ltd. Lands, circa 11 claims, including the Wur Eagle mine. Property considered promising.

#### **PHOENIX CONSOLIDATED COPPER CO.**

Office: 42 Broadway, New York, N. Y. Mine office: Phoenix, Keweenaw Co., Mich. Chas. A. Wright, president; Chas. A. Wright, Jr., secretary and treasurer; preceding officers, Jas. N. Wright, Capt. Thos. Hoatson and Spencer R. Hill, directors; H. G. Wright, mill superintendent; John Kraemer, wash boss. Organized April, 1899, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par, \$13.50 paid in. Is controlled, through stock ownership, by the Keweenaw Copper Co., and has circa 700 shareholders. For year 1907 receipts were \$81,708, from assessments, with expenditures of \$4,533, and company ended 1907 with cash assets of \$13,454, and notes and accounts payable of \$43,847.

Lands, 2,505 acres, carrying 5 different fissure veins, on which more or less mining has been done, at various times. The old Phoenix mine, included in the present consolidation, is famous for having produced the largest mass of native copper ever found, this weighing upwards of 500 short tons. The old Phoenix fissure, on which work was first done 1846, was opened to a depth of about 90' only, producing considerable mass copper and silver, one mass of native silver weighing 8 lbs. 10 oz. There also are possibilities on the Ashbed lode, which has been slightly developed by an exploratory tunnel. The mine has extensive openings, and a modern equipment, and was worked for 6 years, without success, until closed down, June 15, 1905. The mine of the Phoenix Consolidated was described very fully in Vol. V, and the various old properties merged in the consolidation were fully described in Vol. II.

The shops, under one roof, have the following dimensions: Machine-shop, 30x60'; power-house, 24x42'; carpenter-shop, 30x60'. Buildings include an office, store, warehouse, barns and a number of substantial dwellings. Water is taken from a 3,000-gallon dam, 300x700' in size and 12' deep, built across the Eagle river. A large stationary Worthington pump connects with the dam, and has 900' of hose, for fire protection. The mine and mill are connected by a 3½-mile railway having 1 locomotive, rock-cars and flat-cars, formerly of narrow gauge, but widened, 1908, to standard gauge, and connected with the Keweenaw Central railway.

The stampmill, 50x190', of wood, on concrete foundations, is located on Eagle river, north of the mine, and is rated at 300 tons daily capacity. Wash-water is secured from a wooden dam, 90' wide and 10' high, through a 12x24" launder, having a drop of 18' in a distance of 3,000'. Mill equipment in-

cludes a steam pump, 14 Cleaves jigs and 4 Woodbury jigs. While the mine is idle, the mill is operated, day-shifts only, on rock from the Medora mine of the Keweenaw Copper Co.

**PHOENIX & EASTERN SMELTING & REFINING CO.**

**ARIZONA.**

Works office: Phoenix, Maricopa Co., Ariz. Geo. F. Goerner, general manager. Late 1906 was said to plan building a 300-ton smelter, in vicinity of Phoenix, but no such smelter built, and probably no prospect of building. Ralph Jacoby was one of the organizers, hence the company is regarded with suspicion.

**PHOENIX GOLD & COPPER MINING CO.**

**NEVADA.**

Office: 218 La Salle St., Chicago, Ills. Mine office: Tenabo, Lander Co., Nev. Organized circa 1907. Property is the Howie lease of the Phoenix lode, on lands of the Gold Quartz Mining Co., said to have a shaft showing a 6' vein with ore assaying up to \$100 per ton in combined copper, silver and gold values.

**PHOENIX MINING CO.**

**CHILE.**

Office: Valparaiso, Chile. Mine office: Tocopilla, Antofagasta, Chile. Organized Apr. 18, 1905, under laws of Chile, with capitalization 250,000 pesos, shares 100 pesos par.

**PHOENIX MINING CO.**

**UTAH.**

Mine office: Bingham Canyon, Salt Lake Co., Utah. H. A. Gebhardt, superintendent. Mine, near the Utah-Apex and Yampa, is opened by 4 tunnels, one, a 2,700' crosscut adit, showing a vein of 7' to 14' width, carrying silver-lead ore. Smelting ore assays 35 to 40% lead and 10 oz. silver per ton, and milling ore, running 10% lead, with small silver values, makes a 40% lead concentrate, after putting 5 into 1. Has a 200-ton mill, on Carr Fork, with electric power, completed 1908. Employs circa 40 men.

**PHOENIX MINING, SMELTING &  
DEVELOPMENT CO., LTD.**

**BRITISH COLUMBIA.**

Office and mine: Phoenix, Boundary district, B. C. Julius Carson, president; A. F. Geddes, vice-president; W. S. Longhurst, secretary; Wm. Delahay, treasurer; preceding officers and M. J. Carson, directors. Organized June, 1908, under laws of British Columbia, with capitalization \$1,000,000, shares \$1 par. Lands, 2 claims, one fractional, in the Wellington camp, circa 3 miles from Phoenix, having a 60' shaft showing auriferous copper ore. Company plans driving a tunnel.

**PHOENIX MINING SYNDICATE.**

**WASHINGTON.**

Office: Seattle, Wash. Mine office: Berlin, King Co., Wash. Lands include the Mona group, east of Miller river, 2½ miles from a railroad, showing a 60' vein, carrying a 20' paystreak of low grade chalcopyrite, opened by a shaft of 50' and by tunnels of 80', 230' and 700'. Presumably idle.

**PICACHO BLANCO MINING CO.**

**ARIZONA.**

Letter returned unclaimed from former mine office, Morristown, Maricopa Co., Ariz. M. E. Waldstein, president; T. O. Otis, secretary and treasurer. Is a consolidation of the San Domingo Gold & Copper Co. and Exposition Mining Co. Capitalization \$5,000,000, shares \$1 par. Lands, 31 claims, in Maricopa and Yavapai counties, Arizona. Has a 400' main shaft, with free-milling gold ores claimed to average \$22 per ton. Has a 15-stamp mill and a 25-ton cyanide plant. Idle several years and apparently moribund.

**MINAS PICACHO y CAMPO RICO.**

**MEXICO.**

Mine office: Bavispe, Moctezuma, Sonora, Mex. Corella & Hone, owners; B. J. Hone, manager. Ores carry copper, gold, silver and lead. Has water power, arrastras and a small adobe smelter. Employ circa 40 men.

**PIC COPPER & GOLD MINING CO. OF LAKE SUPERIOR, LTD. ONTARIO.**

Dead. Formerly at Fort Arthur, Thunder Bay district, Ont.

**PICKET CREEK DEVELOPMENT CO.****OREGON.**

Mine office: Grants Pass, Josephine Co., Ore. Lands, on Picket Creek, are said to show several veins of 3' to 7' width, carrying auriferous copper ore of fair grade. Early 1908 planned development by tunnel.

**PIEDMONT COPPER MINING & SMELTING CO.****VIRGINIA.**

Office: 320 Broadway, New York, N. Y. Letter returned unclaimed from former mine office, Elkton, Rockingham Co., Va. Morris D. Brown, president; Jas. G. Blauvelt, vice-president; E. Porter Emerson, secretary and treasurer; S. D. Brown, general manager. Organized 1901, under laws of New Jersey, with capitalization \$2,000,000, shares \$100 par, \$30 paid in.

Lands show 3 fissure veins, carrying occasional native copper and sulphide ore, with claimed average values of 6% copper, 10 oz. silver and \$15 gold per ton. Veins are said to be persistent and traceable for about a mile, with geological conditions much the same as at the High Top mine, adjoining. Idle some years and apparently moribund.

**PIEDRAS HERMANOS.****CHILE.**

Office and mine: Chañaral, Antofagasta, Chile. Property is the Exploradora mine, situated in the northern limits of the department of Chañaral, at the foot of the Cordillera Encantada. Lands show 3 parallel veins, with an aggregate of about 8 meters width. Mine, opened to vertical depth of 160 meters, has produced a large quantity of 8 to 12% ore, and is estimated to show, on surface, 75,000 tons of ore of 7 to 8% copper tenor. Property lacks transportation facilities and is greatly hampered by high carriage charges. Output, 1903, was 2,485 metric tons of ore, averaging 19.72% copper, equivalent to 1,080,346 lbs. fine copper. Apparently if given adequate transportation facilities and good management, this should make one of the best copper mines in Chile.

**COMPANIA MINERA PIEDRAS VERDES y ANEXAS.****MEXICO.**

Office and mine: Alamos, Sonora, Mex. Angel Almado, president; Joaquin A. Mange, superintendent. Lands, circa 15 miles northwest of Alamos, and 2 miles north of the Rio Mayo, include the Piedras Verdes, Union and Sonora mines, showing a mineralized zone of about one mile width and 4 miles length, with veins outcropping 10' to 40' in width, carrying considerable oxidized ore of high grade, and occasional native copper in masses of considerable size. Development is by a 350' shaft and a 375' tunnel. Has steam power and a small matting furnace, and shipped, 1902, small quantities of matte carrying circa 40% copper, 20% lead and 200 oz. silver per ton. Presumably idle.

**PIEDRAS VERDES MINING CO.****MEXICO.**

Office: Fuerte, Sinaloa, Mex. Has argentiferous copper ores, slightly developed by tunnel. Idle.

**PIEDRAS VERDES MINING CO.****MEXICO.**

Mine office: Suaqui Grande, Hermosillo, Sonora, Mex. Geo. M. Cochrane, superintendent. Presumably idle.

**PIERCE MINING CO.****COLORADO.**

Dead. Formerly at Central City, Gilpin Co., Colo.

**PIKEDALE COPPER CO.****AUSTRALIA.**

Mine office: Stanthorpe, Queensland, Australia. Mine has 13 shafts, mainly very shallow, showing self-fluxing argentiferous copper and lead ores. Has a mill, built 1907, with magnetic separation process, giving very clean concentrates. Smelter has a reverberatory furnace, and addition of a blast-furnace is contemplated. Production, November, 1907, was 147 long tons of ore smelted to matte, carrying 18,600 lbs. copper and 2,928 oz. silver. Production, 1907, is estimated at 160,000 lbs. fine copper.

**PIKE HILL MINES, INC.****VERMONT.**

Office: 82 Beaver St., New York, N. Y. Mine office: Corinth, Orange Co.,

**Vt. N. M. Macdonald**, president; **H. H. Knox**, vice-president; **John H. Allen**, secretary and treasurer; **Harry G. Hunter**, superintendent; preceding officers and **D. S. Conant**, directors. Organized Jan. 9, 1906, under laws of Vermont, with capitalization \$200,000, shares \$100 par. Annual meeting, second Tuesday in January.

Lands, 101 acres, freehold, in the Corinth district, 14 miles from Boston & Maine railroad, showing mica-schist carrying lenses of chalcopyrite disseminated in pyrrhotite, of 3.5% estimated average copper tenor. Property is an old mine, worked at intervals during the Nineteenth Century.

Equipment includes a 75-h. p. steam plant, held in reserve, and a power plant with 20-h. p. and 80-h. p. gas engines and a 25-kw. electric generator, 20 h. p. being used at the mine and 80 h. p. at the mill. Fuel is pea-coal and wood. Buildings include necessary mine structures and 4 houses for workmen.

The wooden concentrator, of 6,600 square feet area, has a 9x15" Blake crusher, 3 rolls and 2 magnetic separators, with roaster and dryer.

Production has been as follows: 131,911 lbs. fine copper in 1905; 304,377 lbs. copper and 1,698 oz. silver in 1906; 425,367 lbs. copper and 2,292 oz. silver in 1907. Product of latter year was secured from 5,951 tons of ore milled, yielding an average extraction of 3.21% copper, and from 624 tons of smelting ore shipped. Company contemplates building a 100-ton smelter. Suspended operations November, 1907.

#### NEGOCIACION MINERA PILARES DE TERAS.

MEXICO.

Mine office: Pilares de Teras, Sonora, Mex. Francisco H. García, general manager; Alberto C. García, superintendent. Is primarily a silver mine, carrying small values in copper, gold and lead, opened by a 1,400' tunnel and 700' main shaft. Has steam power.

#### PILOT-BUTTE COPPER MINING CO.

MONTANA.

Office: 516 Colby-Abbott Bldg., Milwaukee, Wis. Mine office: Butte, Silver Bow Co., Mont. Wm. P. Jahn, president and general manager; Edw. A. Uhrig, vice-president; Geo. P. Meyer, secretary; Geo. F. Brumder, treasurer; Arthur C. Uihlein, assistant secretary. Organized 1907, under laws of Arizona, with capitalization \$5,000,000, shares \$5 par.

Lands, 1 fractional claim, area 10.19 acres, with average width of 320' and length of 1,405'; adjoining the Berlin claim of the North Butte, and supposed to be traversed by several veins having an estimated combined width of 135', all said to apex on the Pilot claim, these including extensions of 2 veins of the Berlin. Development is by a 515' three-compartment shaft, with cross-cuts east and west on the 500' level, in search of the Elm Orlu vein of argentiferous copper ore. Has a 50-h. p. electric hoist and Ingersoll-Rand air-compressor, actuated by 100-h. p. General Electric motor, taking power from the Madison River Power Co. Property, though very small, is well located, and of considerable promise, and the officers and leading shareholders are among the most substantial business men of Milwaukee.

#### PILOT KNOB COPPER MINING CO.

- NEVADA.

Dead. Formerly in Nevada.

#### PILOT RANGE MINING CO.

NEVADA.

Dead. Lands owned, 1908, by Mrs. Fermenia Sarrias. Former office was at 60 State St., Boston, Mass. Lands were 35 claims, circa 7 miles from Luning. Formerly at Luning, Esmeralda Co., Nev.

#### PILOT RANGE MINE.

NEVADA.

Mine office: Luning, Esmeralda Co., Nev. Mrs. Fermenia Sarrias, owner and general manager; Fermin Arrega, superintendent. Lands, 57 claims, area 1,140 acres, with 160 acres miscellaneous lands, in the Santa Fé district, showing syenite and limestone, with 57 reported ore bodies, this number marvelously matching the number of claims, with 5 ore bodies under development,

said to be traceable 7 miles and to give average assays of 10% copper and 2 oz. silver per ton from azurite, malachite, bornite and chalcopyrite, which figures are too high. Development is by tunnels of 60', 100', 150', 150' and 100', with 500' of workings, estimated by management to show 100,000 tons of ore, with 20,000 tons blocked out for stoping, which estimates are excessive.

Equipment includes a small steam plant and 3 mine buildings. The nearest railroad is the Southern Pacific, 8 miles distant. Property considered promising.  
**LES MINES DE CUIVRE PILOU, LTD.** **NEW CALEDONIA.**

**Dead.** Formerly at Noumea, Diahot district, New Caledonia.

**PINAL BUTTE GOLD & COPPER CO.** **CALIFORNIA.**

Office: care of Vernon L. Clark, Los Angeles, Cal. Letter returned unclaimed from former mine office, Forbestown, Butte Co., Cal. Organized, 1907, under laws of Arizona, with capitalization \$2,500,000. Property is the Hazleton mine, idle since 1905, until bought by this company. Has a mill, which was being enlarged at last accounts. Idle.

**PINAL COPPER CO.** **ARIZONA.**

**Dead.** Reorganized, 1905, as Arizona Banner Copper Co. Formerly at Globe, Gila Co., Ariz. Described Vol. III.

**PINE HILL CONSOLIDATED MINING CO.** **CALIFORNIA.**

Office: 1416-141 Broadway, New York, N. Y. Mine office: Wolf, Nevada Co., Cal. J. Frank Mase, secretary and treasurer. Organized under laws of Delaware. Has a copper ledge, claimed to be 100' feet wide, carrying malachite, azurite, bornite, chrysocolla and native copper, with a gold vein on the footwall and an auriferous gossan, opened by a two-compartment main shaft. Idle several years.

**PINE MOUNTAIN COPPER CO.** **ARIZONA.**

Letter returned unclaimed from former office and mine, Globe, Gila Co., Ariz. E. J. Cole, Elmer Long, J. H. Lucas, J. F. Hatrick and Wm. Pohl, directors. Organized Apr. 6, 1907, under laws of Arizona, with capitalization \$750,000, shares \$1 par. Lands are the Ava group, 5 claims. Idle and apparently moribund.

**PINE VALE COPPER SYNDICATE, LTD.** **AUSTRALIA.**

Office: 24 Copthall Ave., London, E. C., Eng. Mine office: Mirani, Queensland, Australia. E. O. Chudleigh, secretary; G. Lloyd Owen, mine manager. Organized May 1, 1906, with capitalization £17,225, in 11,000 preference and 6,000 ordinary shares of £1 par each, and 4,500 shares of 1s. par, preference shares taking all profits up to 100%, with interest at 6% per annum, after which all shares rank alike.

**COMPANIA MINERA PINTADOS.** **CHILE.**

Office: Santiago de Chile. Mine office: Tarapacá, Tarapacá, Chile. Organized Dec. 23, 1905, under laws of Chile, with capitalization 6,000,000 pesos, shares 50 pesos par.

**PINTO COPPER CO.** **NEW MEXICO.**

Office: 9 Bartles Bldg., Iola, Kansas. Mine office: Santa Rita, Grant Co., N. M. Geo. A. Bowlus, president; F. S. Bennett, secretary and general manager. Organized July, 1902, under laws of South Dakota, with capitalization \$2,500,000, shares \$1 par. Lands, 8 claims, area 121 acres, in the Central district, showing 4 veins, said to average 20' width and carry carbonate and sulphide ores assaying 2.5 to 12% copper, 3 to 10 oz. silver and \$2 to \$400 gold per ton, opened by shafts of 65', 75' and 140'. Idle several years.

**PINTO CREEK COPPER CO.** **ARIZONA.**

**Dead.** Title changed, circa 1902, to Arizona & Hancock Mining Co. Formerly at Florence, Pinal Co., Ariz.

**PINTO CREEK COPPER MINING CO.** **ARIZONA.**

Office and mine: Globe, Gila Co., Ariz. Thos. P. Kelly, president. Organ-

ized Nov. 21, 1906, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 9 claims, near the Arizona National and Globe Standard, on Pinto Creek, said to have about one-half mile of workings.

#### PINTO CREEK MINING & SMELTING CO.

ARIZONA.

Office: 402 German American Bank Bldg., St. Joseph, Mo. Mine office: Globe, Gila Co., Ariz. Employs circa 40 men. Thos. G. Cockrill, president; Chas. Riemenschneider, vice-president; Grant S. Watkins, secretary; J. W. Castle, treasurer; preceding officers, H. E. Bragg, J. Berger and Geo. D. Bright, directors; G. P. Fuller, superintendent. Organized Dec. 11, 1896, under laws of Arizona, and capitalization increased, 1906, to \$1,250,000, shares \$1 par.

Lands, 36 claims, area circa 700 acres, showing granite and schists, with 6 fissure veins, in granite, of reported average width of 3' to 6', of which one gives considerable promise, carrying sulphide ores assaying 4 to 12% copper, circa 5 oz. silver and \$2 to \$10 gold per ton. The mine has shafts of 70' and 570', and 8 tunnels, shortest 100', and 2 longest 900' and 1,100', the lower tunnel being connected with the upper workings. The main tunnel is being driven with air-hammer drills, said by the company to be doing double the work of piston drills at half the cost, which seems almost too good to be true. Main development is on the Yo Tambien claim, where the 570' shaft shows a promising body of sulphide ore. The Manitou claim has a 70' shaft, and 3 tunnels of 1,500' aggregate length.

Mining equipment includes a gasoline hoist and a 6-drill Sullivan air-compressor, and there is an aerial tram between the mine and mill.

There is an old 10-stamp mill, and a concentrator, formerly of 30 tons daily capacity, overhauled and rebuilt, 1907, to 100-ton size, with the addition of \$14,000 worth of new machinery, including a Hancock jig. The 100-ton mill requires a force of 3 men only, as against 8 in the old 30-ton mill, and is planned as the first unit of a 600-ton mill.

The management of this company deserves credit for great perseverance. Large sums have been expended, and indications favor the making of a mine. Work was resumed March, 1908.

#### PIONEER COPPER & SILVER MINING CO.

CALIFORNIA.

Office: care of J. H. Platner, president and general manager, Reno, Nev. John Holley, treasurer. Organized February, 1907, with capitalization \$1,500,000. Lands, 15 claims, 11 said to carry silver and 4 to carry gold, in Inyo county, California. Mine, said to have circa 6,000' of workings, was a producer for about 15 years, until 1879.

#### PIONEER WALKER LAKE GOLD & COPPER MINING CO.

NEVADA.

Office: care of J. F. Maier, president, Los Angeles, Cal. Letter returned unclaimed from former mine office, Yerington, Lyon Co., Nev. Col. J. W. Diss, vice-president; Ferdinand K. Rule, Jos. Erzenberger, Samuel F. Davies, H. H. Wallace, O. H. Kiesker, C. E. Killan and H. Hawgwood, directors. Organized 1906, under laws of Arizona, with capitalization \$1,000,000. Lands, 4 claims, 4 miles north of Yerington, said to show a gossan of about 25' average width, carrying copper carbonates.

#### FISHMINSKO-KLUCHEVSKI WORKS.

RUSSIA.

Mine office: Upper Issetzk, Perm, Russia. Count Stenbok-Fermor, owner. Production, 1905, was 868,188 lbs. fine copper.

#### PITKÄRANTA KOPPARBRUK.

FINLAND.

Office: care Russian Imperial Bank, owner, St. Petersburg, Russia. Mine office: Pitkäranta, Viborg, Finland. Lands, circa 10,000 acres, mainly well wooded, near Lake Ladoga. Mine, opened circa 1820, was operated steadily until about 1903, making an average annual production of circa 750,000 lbs. fine copper during the last decade of operation. Has been under present ownership, which is practically that of the Russian government, since 1894.

Lands carry several ore bodies, but the one developed is a 15' bed of "skarn," which is a granular mixture of augite, garnet and other ferromagnesian silicates, impregnated with chalcopyrite, in veinlets. This ore body, which dips to the south, at 40° to 50°, has been opened at intervals for a length of about 1½ miles. To the eastward the ore occurs as bunches, up to several pounds in weight, and at this end of the workings the ore body is separated into 5 sections, the footwall bed of about 70' width carrying finely disseminated chalcopyrite in "skarn," overlaid by a 2' to 3' layer of barren material, followed in turn by 3' of barren schist, succeeded by a cupriferous bed of about 20" thickness, carrying somewhat argentiferous copper sulphides. Property also has iron ore, and is said to have indications of tin. The mine has a small smelter. Idle since circa 1903, but said, June, 1907, to have been optioned to a British syndicate.

**PIT RIVER GOLD, SILVER & COPPER MINING CO.** CALIFORNIA.

Dead. Formerly at Redding, Shasta Co., Cal.

**PITTSBURG & ARIZONA MINING CO.** ARIZONA.

Mine office: Johnson, Cochise Co., Ariz. Lands include the Manila mine, with a double compartment shaft, planned to be sunk 400', showing a promising vein of high-grade ore. Has a steam plant, with hoist, air-compressor and pumps. Presumably idle.

**PITTSBURGH & BOSTON COPPER CO.** MICHIGAN.

Dead. Property sold to Tamarack Mining Co. Was the first dividend-payer among Lake Superior mines. Formerly at Phoenix, Keweenaw Co., Mich. Fully described, under title Cliff mine, Vol. II.

**PITTSBURG & CHIRICAHUA DEVELOPMENT CO.** ARIZONA.

Mine office: Paradise, Cochise Co., Ariz. Lands, 16 claims, in the Chiricahua Mountains. Idle some years.

**PITTSBURG CONSOLIDATED MINING CO.** UTAH.

Dead. Formerly at Alta, Salt Lake Co., Utah. Described Vol. VI.

**PITTSBURG COPPER CO.** NEW MEXICO

Mine office: Clayton, Union Co., N. M. Lands, shortly east of the Rohr Geddes Mining & Development Co., are developed by a 350' tunnel.

**PITTSBURG COPPER MINING & REDUCTION CO.** ARIZONA.

Office: 300 Heist Bldg., Kansas City, Mo. Capitalization, \$150,000,000. Was a swindle, promoted by Theodore Stegner, a notorious crook. Company held 40 acres of alleged copper mining ground in Box Cañon, on the Bill Williams Fork river, about 50 miles from Congress Junction, Arizona, and also claimed to own other lands, none of which can be located. Company's capitalization is preposterous, and the shares are absolutely worthless. Stegner has done time before, and should be locked up permanently.

**PITTSBURG & DULUTH DEVELOPMENT CO.** ARIZONA.

Dead. Succeeded, October, 1904, by Pittsburg & Duluth Mining Co. Formerly at Bisbee, Cochise Co., Ariz.

**PITTSBURG & DULUTH MINING CO.** ARIZONA.

Dead. Was merged, circa 1907, in Superior & Pittsburg Mining Co. Formerly at Bisbee, Cochise Co., Ariz. Fully described Vol. VI.

**PITTSBURG-ELY COPPER CO.** NEVADA.

Office: 721 Symes Bldg., Denver, Colo. Mine office: Ely, White Pine Co., Nev. B. P. Morse, president; Hon. Harry C. Riddle, vice-president; J. A. Varney, secretary; Frank Straub, treasurer and trustee; preceding officers and Edwin A. Kistler, directors. Organized January, 1907, under laws of Arizona, with capitalization \$5,000,000, shares \$5 par. Lands, circa 350 acres, in 2 groups, including the Keyboard group, 6 claims, area 120 acres, near the Keystone claim of the Nevada Consolidated. Another group of 10 claims, area 200 acres, lies to the north, and a third small group is near the Cumberland-

Ely. The Keyboard group has a 60' shaft, sunk 1907, claimed by company to be in the ore formation, which may mean much or little. The Keyboard group is considered promising, but apparently company has done more advertising than development. Employed 3 men at last accounts.

**PITTSBURG & GREENWATER COPPER CO.**

**CALIFORNIA.**

Office: care of L. P. McGarry, president and general manager, Rhyolite, Nev. Mine office: Greenwater, Inyo Co., Cal. Organized October, 1906, under laws of Arizona, with capitalization \$2,000,000. Lands, 16 claims, known as the Iron Mask group, near Resting Springs, about 35 miles south of Greenwater. Was promoted, for purely stock-jobbing purposes, by the notorious Dr. J. Grant Lyman. Idle and presumably moribund.

**PITTSBURG & HECLA DEVELOPMENT CO.**

**ARIZONA.**

Dead. Formerly at Bisbee, Cochise Co., Ariz. Fully described Vol. V.

**PITTSBURG & HECLA MINE.**

**ARIZONA.**

Office and mine: Bisbee, Cochise Co., Ariz. Thos. Tate, manager. Is idle, except for annual assessment work.

**PITTSBURG-IDAHO MINING CO.**

**IDAHO.**

Dead. Was succeeded by Pittsburg-Idaho Mining & Milling Co. Formerly at Greer, Nez Perce Co., Idaho. Fully described Vol. VI.

**PITTSBURG-IDAHO MINING & MILLING CO.**

**IDAHO.**

Office: Kamiah, Idaho. Mine office: Greer, Nez Perce Co., Idaho. Jas F. Bridwell, president; Daniel Laverty, vice-president and general manager; Hugh Laverty, secretary and treasurer; E. E. Krengel, engineer; preceding officers, Fred Worrell, Otto Gorke, Jas. Laverty, William S. Pitman and Patrick Laverty, directors. Organized January, 1903, under laws of Idaho, with capitalization \$1,000,000, shares \$1 par.

Lands, 19 claims, area 380 acres, in the Lo Lo district, said to show 6 contact veins, between gneiss and quartz-porphry, of which 2, of 50' to 100' width, under development, carry cuprite, malachite, bornite and chalcopyrite, giving assays up to 12% copper, 14 oz. silver and \$20 gold per ton. Has about 1,700' of workings, including pits and shafts, deepest 180', with tunnels of 40', 290' and 600'. Has gasoline power and 5 small buildings, and plans a hydro-electric installation, to utilize power from the Clearwater river.

**PITTSBURG-JEROME COPPER CO.**

**ARIZONA.**

Office: 1219 Park Bldg., Pittsburg, Pa. Mine office: Jerome, Yavapai Co., Ariz. Thomas Houlette, president; Jas. Atkins, vice-president; C. S. Cochran, treasurer; T. D. McDonald, secretary; preceding officers, W. E. Crow, Robt. Stewart, A. C. Spindler and D. M. Clemson, directors; W. A. Edeburn, consulting engineer; D. F. Houlette, superintendent. Organized 1904, under laws of Arizona, and capitalization increased, March 9, 1906, to \$3,000,000, shares \$1 par; issued, \$1,482,699. Annual meeting, first Monday in March.

Lands, 26 claims, area circa 520 acres, lying 2 to 3 miles south of Jerome, a short distance northwest of the Black Hills property and about midway between the United Verde and Equator mines. Development is by the Pittsburg shaft, planned to have been sunk 1,000', which is said to show, at 35' depth, argentiferous and auriferous sulphide ore, of about 4% copper tenor. Development was hampered by a heavy inflow of extremely acid water.

Equipment includes a 50-h. p. Fairbanks & Morse hoist, good for 1,800' depth, and an Ingersoll-Rand 2-stage air-compressor. Property was closed down June, 1907, ostensibly on account of differences in the directorate, but perhaps from lack of cash as well.

**PITTSBURG-JEROME COPPER & GOLD MINING CO.**

**ARIZONA.**

Dead. Succeeded, circa 1904, by Pittsburg-Jerome Copper Co. Formerly at Jerome, Yavapai Co., Ariz.

**PITTSBURG-MAYER MINING CO.****ARIZONA.**

Mine office: Mayer, Yavapai Co., Ariz. Louis D. Hall, general manager.  
Idle at last accounts.

**PITTSBURG MINING & MILLING CO.****IDAHO.**

Dead. Formerly at White Bird, Idaho Co., Idaho.

**PITTSBURG & MONTANA COPPER CO.****MONTANA.**

Office: 1124 Farmers Bank Bldg., Pittsburg, Pa. Mine and works office: Butte, Silver Bow Co., Mont. Employs circa 250 men. J. H. Reed, president; preceding officer, T. H. Given, J. W. Friend, Hay Walker, Jr., and D. C. Noble, directors; R. T. Rossell, secretary and treasurer; Oscar Rohn, manager. Organized July 9, 1902, under laws of West Virginia, with capitalization \$30,000,000, shares \$100 par. Has authorized a \$3,000,000 bond issue, at 6%, secured by trust deed. The company has a considerable floating indebtedness, which apparently is being financed by the Pittsmont Copper Co., organized for the purpose. Annual meeting, first Monday in August.

Lands, 46 claims, area 850 acres, also 634 acres miscellaneous lands, giving total holdings of 1,384 acres, in the Butte, Helena, Elk Horn and Greenhorn districts of Montana. Principal property is the main tract of 260 acres, lying on the flat east of Butte, including the McQueen placer and adjoining claims, formerly owned by Franklin Farrell.

Owing to the great depth of overburden, the solid ledge was not reached until a depth of several hundred feet, and sinking was difficult and costly, owing to the existence of considerable quicksand above the ledge. The property carries 4 veins, of 2' to 12' estimate average width, which presumably are continuations of the veins of the Butte & Boston. Development is by 2 shafts, known as Nos. 2 and 3, each of 1,240' depth, with a 300' winze below the bottom level, the mine having about 8 miles of workings. No. 2 shaft has 500-gallon electric pumps on the 700' and 1,200' levels, and the shafts are connected with a half-mile crosscut on the 1,200' level. The ore bodies are small, compared with the big veins to the eastward, but carry good silver values, ore assaying 3.5 to 10% copper and 5 to 12 oz. silver per ton, with small gold values. The richest ore has been found between the 800' and 1,200' levels, and some ore of 7% copper tenor was stoped on the 180' level. First-class ore ranges 6 to 8% copper and 8 to 12 oz. silver per ton.

The Swissmont mine, near Elkhorn, Jefferson county, Montana, bought for \$60,000, shows a large body of low grade sulphide ore, of 1.5 to 3% copper tenor. This is idle.

The Chamounix mine, near Austin, Lewis & Clark county, Montana, includes the Christina group of 6 claims, and the Fannie Parnall group of 33 claims. This property has considerable development, and has shipped some argentiferous copper ore, but was idle at last accounts.

The company also owns mining claims at Pittsburg, 4 miles from Helena, Lewis & Clark county, Montana, which are idle.

Equipment at the Butte property includes a 2,000-h. p. steam plant and a 600-h. p. electric plant, 1,900 h. p. being used at the mine and 700 h. p. at the smelter. There is a 500-h. p. hoist, good for 1,600' depth, and a 600-h. p. hoist, good for 1,300', with a 25-drill Nordberg air-compressor, 40-drill Rand air-compressor, and 20 power drills.

Buildings include a 38x70' brick carpenter shop, frame smithy, 2 engine-houses, 2 boiler-houses, changing-house, office, laboratory and miscellaneous buildings, with a total of about 16 structures. The large office building is equipped with a library, reception room, billiard room and café.

The property has about 3 miles of railroad track, connecting the various shafts and works. The lands, in two tracts, are surrounded by high board fences.

The reduction plant, known as the Pittsmont works, include a 250-ton concentrator, built 1907, near the smelter.

The Pittsmont smelter does a limited custom business, in addition to treating the company's own ores. The furnace building, with room for 5 cupolas, has a 250-ton blast-furnace, added 1908, and an old 150-ton blast-furnace, which it is planned replacing by a new 250-ton furnace. The small cupola is a Garretson pyritic furnace, remodeled by Mr. Baggaley, the former manager, and gave considerable trouble in operation, on semi-pyritic smelting. The converter department has 2 stands, with 96x156" shells, and there also are 2 experimental Baggaley converters, of smaller size, not in use. Product is blister copper, averaging circa 96% copper, 200 oz. silver and 3.5 oz. gold per ton, sent for electrolytic refining to the Nichols Copper Co.

Production, 1905, was 790,600 lbs. fine copper, 81,911 oz. silver and 1,422 oz. gold, secured from 11,000 tons of ore smelted, giving average returns of 3.6% copper, 7.5 oz. silver and \$2.50 gold per ton. The smelter was closed Apr. 14, 1906, but resumed work in 1907, and November, 1908, was said to be smelting circa 250 tons of ore daily, of which about 50 tons was first class and 200 tons was second class ore. Property is considered valuable, though not up to the average of the Butte camp in quantity or quality of ore.

#### PITTSBURG & MOUNT SHASTA GOLD MINING & MILLING CO.

CALIFORNIA.

Office: 424 Fifth Ave., Pittsburg, Pa. Letter returned unclaimed from former mino office, Redding, Shasta Co., Cal. B. H. Scott, president; Dr. J. H. Phillips, vice-president; J. S. Parish, secretary; T. V. Scott, treasurer. Organized 1903, under laws of West Virginia, with capitalization \$500,000, increased later to \$1,000,000, shares \$1 par.

Lands, 9 claims, partly patented, area 170 acres, known as the Bennington group, in the Flat Creek district, north of Redding, said to have been bought for \$18,000 cash and \$60,000 shares. Company claims to have expended about \$50,000 in development and equipment. Property mortgaged, previous to 1907, for \$13,300. Mine has a 280' crosscut tunnel and 2 other tunnels, showing auriferous and argentiferous copper ore of varying tenors. Has a carpenter shop, smithy, boarding house and 3 bunk-houses, with electric power. Shipped, previous to 1907, circa 100 tons of selected ore, running \$3 to \$3<sup>9</sup> gold and averaging about 10 oz. silver per ton. Idle.

#### PITTSBURG-NEW YORK COPPER MINING CO.

MONTANA.

Office: care of W. H. Lindsay, secretary and treasurer, Butte, Mont. Mine office: Elkhorn, Jefferson Co., Mont. Alexander Johnson, president; Thos. S. Killgallon, vice-president; W. J. Dawson, superintendent. Organized under laws of Montana, with capitalization \$1,250,000, shares \$1 par. Lands, 5 claims, adjoining the Park Copper Co.

#### PITTSBURG-OAXACA MINING CO.

MEXICO.

Office: 119 Farmers Bank Bldg., Pittsburg, Pa. Mine office: San Bartolo Coyotepec, Centro, Oaxaca, Mex. W. J. Burke, president; P. J. Kane, vice president; M. J. Gannon, secretary and treasurer; W. H. Baird, manager. Organized 1904, under laws of Delaware, with capitalization \$1,000,000, shares \$1 par.

Mine, said to have circa 6,000' of workings, with 50,000 tons of ore blocked out, has a 5' vein, carrying mainly gold values, with some copper ore ranging 5 to 9% in tenor. Property is served by the Mexican Southern railway, and has a 25-ton mill. Was raising money, at last accounts, for alleged purpose of installing a \$150,000 machinery equipment. Advertising makes exaggerated claims. Is said to employ circa 50 men.

#### PITTSBURG & SONORA DEVELOPMNT CO.

MEXICO.

Office: care of Hon. W. G. McDonald, Douglas, Ariz. Mine office: Cam-

pas, Moctezuma, Sonora, Mex. Holds direct title to property through a Mexican corporation known as the Quatro Grande. Lands include the Estrella de la Plata mine, near Cumpas, also claims circa 18 miles south of Douglas. Presumably idle.

**PITTSBURG & UTAH GOLD, SILVER, COPPER  
& LEAD MINING CO.**

UTAH

Mine office: Ophir, Tooele Co., Utah. Idle.

**PITTSMONT COPPER CO.**

MONTANA.

Office: 1124 Farmers Bank Bldg., Pittsburg, Pa. Mine office: Butte, Silver Bow Co., Mont. Was organized, 1908, as a holding company for the Pittsburg & Montana Copper Co., presumably for the purpose of providing needed funds.

**PITTSMONT SMELTER.**

MONTANA.

Owned by Pittsburg & Montana Copper Co.

**PIZARRO COPPER MINING CO.**

NEW MEXICO.

Dead. Was a swindle, put out by the Financial Security & Trust Co., of Denver, which also promoted the Spanish Lost Bullion Mines, Ceromino Copper Mining Co. and Blanca Copper Mining Co. Formerly at Silver City, Grant Co., N. M.

**PLACERVILLE COPPER MINING & REDUCTION CO.** COLORADO.

Mine office: Placerville, San Miguel Co., Colo. Organized circa May, 1907, under laws of Colorado, with capitalization \$500,000, by A. B. Cooper, F. D. Margowski and L. L. Knutson. Presumably is successor of Placerville Gold & Copper Mining Co.

**PLACERVILLE GOLD & COPPER MINING CO.**

COLORADO.

Mine office: Placerville, San Miguel Co., Colo. W. K. Johnson, president. Organized circa 1903, with capitalization \$1,000,000, shares \$1 par. Lands, 8 claims. Presumably succeeded, 1907, by Placerville Mining & Reduction Co.

**PLAKALNITZA MEDNA PLANINA.**

BULGARIA.

Office: care of M. Mavrokordato, owner, Constantinople, Turkey. Mine office: Plakalnitsa, Vratza, Bulgaria. Lands are sundry claims, held as a concession from the Bulgarian crown, showing bornite and a little chalcopyrite, in dolomite. Copper mines were worked in this vicinity by the Romans. Idle.

**PLANET COPPER MINING CO.**

ARIZONA.

Office: 74 Broadway, New York, N. Y. Mine office: Planet, Yuma Co., Ariz. J. Stanley Jones, president and general manager; Chas. S. Barton, vice-president; W. B. Storer, secretary and treasurer; H. L. McCarn, superintendent. Organized Aug. 14, 1902, under laws of Arizona, with capitalization \$1,500,000, shares \$10 par; issued, \$1,120,000. State Street Trust Co., Boston, registrar and transfer agent. Annual meeting, in May.

Lands, 25 claims, area 500 acres, also 40 acres in millsites, in the Hareúvar district, on the south side of Bill Williams Fork river, 12 miles east of the Colorado river. Property shows about 50 exposures of ore, with 2 ore zones, apparently metamorphic contact deposits, having diorite on the footwall, overlaid by sedimentary shales and impure limestone, much altered by intercalated eruptives, the veins carrying a heavy iron capping, mainly of hematite, for a distance of 3,000', averaging about 30' in thickness and up to 200' in width. Apparently the gossan is of workable grade, and it is estimated that the property shows circa 1,000,000 tons of 60% iron ore. The main ore zone, traceable about 2,700', ranges up to 300' in width, carrying oxidized and silicate ores of copper, estimated to average 7 to 8% copper and 50 cents gold per ton, with traces of silver, but apparently the workable portion of the vein is 3' to 20' in width. The vein is very flat, dipping about 15° only.

Development is by 3 incline shafts, deepest 800', giving a vertical depth of

365', showing ore of 5 to 12% copper tenor, and by 12 vertical pits and shafts, of 25' to 325' depth, and by 8 tunnels, longest 225', with total workings of 4,000', estimated to show 100,000 tons of ore, with 75,000 tons blocked out for stoping. The sulphide zone has not been reached, as yet, by any workings, which is an indication of strong and persistent copper values.

Equipment includes a 75-h. p. gasoline plant with two 15x25" hoists and a 5-drill air-compressor. Buildings include a 15x40' frame carpenter-shop, 10x10' smithy, 2 shafthouse and 3 dwellings.

The mine, opened circa 1864, was worked in a small way until 1874, and was reopened 1884, when a 36" blast-furnace was erected. Property was taken over, 1902, by present company, and has been developed steadily, with a small force, since then. The mine produced upwards of \$500,000 worth of high grade ore, ranging from 15 to 40% in copper tenor, which was shipped by water to a port on the Gulf of California, presumably Guaymas, and transshipped thence to Swansea for reduction. A little ore was sent to San Francisco also, and production is said to have given fair profits, notwithstanding the heavy expenses for freight and smelting, and the harassing difficulties caused by various Indian uprisings.

The property has been handicapped by lack of rail connections, but the Arizona & California railway is now only 27 miles distant by wagon-road, and the company is negotiating for the construction of a branch line from Bouse to Planet. Property considered promising and management good.

#### **PLANT & CALLAHAN MINING CO.**

**WASHINGTON.**

Office: care of J. T. Plant, president, Mora, Minn. Letter returned unclaimed from former mine office, Conconully, Okanogan Co., Wash. C. E. Williams, vice-president; H. Rines, secretary and treasurer. Organized 1907, with capitalization \$1,500,000. Lands, 4 claims, including the Anaconda mine, in the Ruby camp, having a 600' tunnel, showing a 20" vein carrying about 2% copper, with high silver values.

#### **PLATA COBEE MINING & TRANSPORTATION CO.**

Dead. Was still-born. Formerly at Taylorsville, Plumas Co., Cal.

#### **PLUMAS MINING, MILLING & SMELTING CO.**

**CALIFORNIA.**

Dead. Still-born. Formerly at Taylorsville, Plumas Co., Cal.

#### **PLUTO GOLD & COPPER MINING CO.**

**WYOMING.**

Office: 365 Tenth St., Oshkosh, Wis. Mine office: Dillon, Carbon Co., Wyo. Ole Granberg, president and general manager; H. Thorsgaard, vice-president; H. O. Granberg, secretary and treasurer; E. M. Sanders, superin-

tendent; Frank Earle, engineer. Organized Dec. 15, 1902, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par.

Lands, 11 claims, patented, area 220 acres, also a 40-acre millsite, in the Battle Lake district, near the Ferris-Haggarty mine, showing 2 fissure veins in quartzite, and 2 contact veins between diorite and quartzite, ranging 2' to 30' in width, and carrying cuprite, melaconite and copper sulphides, associated with manganese, giving average assays of 1% copper, a trace of silver and \$3 gold per ton, developed by numerous pits of 10' to 20' depth, 5 shafts of 55' to 100' depth, and by a tunnel of 1,000' with circa 2,000' of underground workings. Equipment includes a 40-h. p. steam plant and 3-drill air-compressor. Buildings are a 36x40' machine-shop, 38x20' carpenter-shop, and 6 other mine structures. Idle except for annual assessment work, but hopes to resume shortly.

#### **POCAHONTAS COPPER MINING CO.**

#### **CALIFORNIA.**

Mine office: Lewis, Mariposa Co., Cal. David Ross, general manager; J. G. Roberts, superintendent. Lands, 150 acres, including the Great Northern mine, in the White Rock district, showing several veins of cupriferous iron ore, between diorite, vein matter being mainly diabase, usually altered. The principal ore body, about 100' wide, occurs in a mineral belt up to 1,000' in width, the oxidized zone, circa 100' in depth, having been a limited producer of high grade ores, many years ago. Development is by tunnel and a 200' shaft, showing ore said to carry 6 to 12% copper and circa \$2.50 gold per ton. Has steam power and necessary mine buildings. Ore is shipped, via La Grande, nearest railroad point, 15 miles distant, to Peyton Chemical Works, at Bay Point, California, and some selected ores were shipped, 1907, to the Tacoma smelter. Employs circa 20 men. Property considered promising.

#### **POCAHONTAS COPPER QUEEN MINING CO.**

#### **ARIZONA.**

Office: Pocahontas, Ark. Mine office: Mayer, Yavapai Co., Ariz. Jos. W. Voorhees, president; W. H. Skinner, vice-president and treasurer; T. T. Loy, attorney; A. L. Porterfield, general manager. Organized 1906, under laws of Arizona, with capitalization \$1,000,000, succeeding the Big Bug Gold & Copper Mining Co.

Lands, 14 claims, 4 miles southeast of Mayer, including the Spar group, bought, 1908, of the Spar Mining Co., having a 200' shaft, with a vein up to 14' in width, which, under former ownership, shipped 23 carloads of high grade ore, said to have given sufficient returns to former owner to pay cost of purchase price and development. Has steam power.

#### **POCATELLO GOLD & COPPER MINING CO.**

#### **IDAHO.**

Office and mine: Pocatello, Bannock Co., Idaho. E. Craanson, president; J. J. Guheen, secretary; N. M. Eldredge, general manager; Jos. E. Munn, superintendent. Organized Dec. 1, 1902, under laws of Idaho, with capitalization \$1,000,000, shares 50 cents par.

Lands, 7 claims, area 140 acres, in the Fort Hall district, 12 miles east of Pocatello, showing a vein of about 3' average width, reported to give assays of 40% copper and 75% lead (total 115%), with 35 oz. silver and \$1 gold per ton, from bornite and chalcopyrite. This evidently is very rich ore, as veins carrying 115% in metallic values are unusual. From another source it is gathered that the ore is mainly of milling grade, with a small paystreak of smelting ore, from which small shipments to the White Knob smelter gave returns of 17 to 30% copper and 15 to 18 oz. silver per ton. Development is mainly by short tunnels, with circa 1,000' of workings. Presumably idle.

#### **COMPANIA MINERA PODEROSA DE COLLAHUASI.**

#### **CHILE.**

Office: Valparaiso, Chile. Mine office: Collahuasi, Tarapacá, Chile. Francisco Javier, president; Juan G. Searle, vice-president; Carlos A. L. Dick, secretary; preceding officers, Thompson Matthews, Carlos Gregorio Avalos and

Gustavo Jullian, directors; Robt. Hawhurst, Jr., mine manager. Organized Apr. 4, 1905, under laws of Chile, with capitalization £240,000, shares £5 par.

Lands, 37 contiguous claims, area 185 hectares, equal to 457 acres, carrying strike of the ore formation for 4,500'. Lands include the Mina Poderosa, which is the principal property, and the San Carlos, Rosario and Condor mines. Lands, located at an extreme elevation of 15,400', on the Bolivian plateau, lie above the timber-line, and are barren of vegetation, with the exception of a fungus, bearing the botanical name of *fungi cordillerensi*, which forms the local fuel of the district. There are no high hills in the vicinity, lands being on the top of an elevated plateau, surrounded, at a considerable distance, by high peaks of the Andes. There are no running streams, and potable water is scarce. The climate is extremely bleak, winter prevailing 12 months yearly, with snow or hail falling nearly every day in the year. Copper mines in this district were worked under Spanish domination, and previously by the Indians, as shown by the ancient remains of furnaces, fragments of matte, scoria, and tools left in old workings.

The country rock is feldspar-porphry, stratified and fissile, there being a slight stratification, with dip of about 70° to the westward, with an amygdaloidal diabase running northwest and southeast, dipping with the country rock to the westward, ore bodies occurring in contact with and in the immediate vicinity of the intrusive dykes. There has been considerable disintegration, and overburden covers the rock formation so that latter gives few outcrops, these usually carrying low grade malachite and chrysocolla, or brochantite, gangue being mainly felsitic rock, much decomposed. The Poderosa lode consists of several parallel bodies of partly or wholly decomposed country rock, with considerable faulting, having a general strike of N. 40° W., crossed, at practically right angles, by a secondary set of leaner veins, the master veins being fissures in a shear-zone. Characteristic ores of the Poderosa system are cuprite, melaconite, malachite, chalcocite, covellite, bornite, chalcopyrite, chrysocolla, brochantite, atacamite and tetrahedrite, latter decidedly argentiferous, the ores, as a whole, averaging about 8 to 12 oz. silver per metric ton.

The Poderosa mine, which is the principal property, has a 433' main shaft, with about 7,000' of workings, carrying oxidized ores on the 400' level. Mine has 2 main veins, known as the Poderosa and Portillo, of 3' to 30' width, carrying pay streaks of high grade ore 1' to 20' wide, with average width of about 4', gangue being decomposed quartzose felsite, very soft, requiring heavy timbering, while, unfortunately, the timbering in place is extremely poor. The hanging-wall is well defined, but the ore shades gradually into the altered country rock of the footwall, there being a fluccan, usually of 3" to 12", and even up to 4' width, on the hanging, with an occasional fluccan on the footwall. Main shaft is only 6x8' inside of timbering, and should be cut down to larger size. The shaft is in the hanging-wall, west of the lode, crossing the vein about the fourth level, with 5 levels opened, at only 22-meter intervals, shaft cutting another vein about midway between the fifth and sixth levels, this vein, averaging circa 30" width and dipping toward the main vein, carrying exceedingly high grade ore. The various levels are connected by winzes, with indications that ore will grow richer until the base zone is reached. The mine is quite wet, making about 90,000 gallons of water per day, in the wet season. Estimated ore reserves of the Poderosa mine alone, March, 1907, were 101,600 long tons, with average tenor of 63.66% copper, and circa 10 oz. silver per long ton. These figures, while appearing very high, seem warranted. Equipment of the Poderosa mine is primitive, consisting only of a wooden head-frame, with a 10x15" single Targye hoist, raising half-ton buckets.

The Rosario mine, northwest of the Poderosa, has a 166' incline shaft, on a 30" vein dipping at about 80°, ore assaying about 15% copper, shaft being

bottomed in the top of the base zone, which shows chalcopyrite, arsenopyrite and pyrite. The San Carlos mine, practically an extension of the Poderosa, and to be connected therewith, has a 146' shaft, showing a 3' vein carrying ore of about 19% average copper tenor. The Condor mine has a 147' shaft showing a 2' vein, carrying ore giving average assays of about 18% copper. The Campanil mine, a new property, is being opened by shaft. Mine timber used is Oregon fir and pine, costing at Antofagasta £9 per thousand feet, with 4d. per square foot transportation charges thence to the mine. During the period of development, supplies and ore were hauled 65 miles, over an extremely rough road, between Carcote station and the mine, one week being required for the round trip, but a branch of the Antofagasta & Bolivian railway, building from Ollagile to the mine, was practically completed, at last accounts.

Labor is supplied mainly by Bolivian Indians, from the neighboring republic, who work intermittently, putting in about half time, and are dull, drunken and lazy, but, bad as it is, the labor supply is short, though the completion of the railway should give improvement. The manager desires to import Chinese, which would seem a sensible plan. Mine has 9x18" and 6x20" crushers, reducing ore to 2" to 3" size before shipment. Ore formerly was hand-picked to an average tenor of about 45% copper, for shipment, and ore shipped to end of 1906 was 770,185 kilograms, giving average returns of nearly 40% copper and 17.5 oz. silver per long ton. Production, 1906, is estimated at 500,000 lbs. fine copper.

This is a property of exceptional promise, and has been well handled by Mr. Hawkhurst, under exceedingly trying circumstances. With sufficient outlay, apparently the Poderosa mine alone could be put in condition, in one to two years, to produce 100 to 150 tons daily, of ore of 15 to 20% average copper tenor, giving, on the mean of these figures, an average production of fully 1,000,000 lbs. fine copper monthly.

#### **POLAND-AMERICAN GOLD MINING & MILLING CO. ARIZONA.**

Mine office: Humboldt, Yavapai Co., Ariz. Organized, circa 1904, as a merger of the American Gold & Copper Co. and the Poland Extension Gold Mining & Milling Co., with capitalization \$2,500,000, shares \$1 par. Was promoted by Chas. J. George and is not regarded favorably. Idle.

#### **POLAND EXTENSION GOLD MINING & MILLING CO. ARIZONA.**

Dead. Merged, 1904, in Poland-American Gold Mining & Milling Co. Formerly at Poland, Yavapai Co., Ariz.

#### **POLARIS MINING & MILLING CO. ARIZONA.**

Office and mine: Clifton, Graham Co., Ariz. Samuel Abraham, president; E. M. Williams, vice-president; D. P. W. Eylar, secretary; E. J. Lehmann, treasurer; L. F. Sweeting, general manager; preceding officers, Geo. Crispin, Nicholas Cole, W. A. Hamilton and Ira Harper, directors. Organized March 15, 1902, under laws of Arizona, with capitalization \$2,500,000, shares \$1 par. A bond issue, formerly authorized, has been recalled and canceled. Annual meeting, third Wednesday in January.

Lands, 40 claims, area 700 acres, also a 70-acre millsite and 400 acres miscellaneous lands, in the Greenlee district, on the San Francisco river, circa 5 miles from Clifton. Property, lying northeast of the Clifton Consolidated and New England mines, shows granite, with parallel porphyry dykes, and many phonolite and rhyolite dykes, at acute and right angles to the vein system, ore bodies occurring mainly as contact deposits between limestone and igneous rocks, with disseminated ores in porphyry. Lands show 4 ore bodies, of which 2, under development, are of 8' to 100' estimated average width, traceable circa 6,000', carrying oxide, carbonate and sulphide ores, estimated to average 3% copper, 4 to 15 oz. silver and \$4 to \$15 gold per ton. The copper ores are associated with gold-bearing quartz with argillaceous gangue. The lower work-

ings show mainly auriferous and argentiferous chalcopyrite. Development is by the 105' Black Prince shaft, the 100' Nonesuch shaft, the 140' Golden Eagle shaft, the 560' Black Prince tunnel, the 320' Fraction tunnel, the 307' Golden Eagle tunnel and the 532' Phonolite tunnel, with circa 2,500' of workings, estimated to show 10,000 tons of ore in sight, with 4,000 tons blocked out for stoping.

Improvements include 6 mine buildings. The nearest railroad is the Arizona & New Mexico, 7 miles distant. Property is being operated, under lease, expiring 1912, by the Southwestern Development & Improvement Co., which plans the erection of a concentrator, and, eventually, a smelter.

#### POLLYTON GOLD MINING CO.

WYOMING.

Office: Centennial, Wyo. Mine office: Holmes, Albany Co., Wyo. I. W. Emmons, president; R. F. Lawson, vice-president; E. B. Steadman, secretary; M. D. Reed, treasurer; preceding officers and G. C. Mason, directors; Wm. Benton, superintendent. Organized March, 1908, under laws of Wyoming, with capitalization presumably \$3,000,000, shares \$3 par. Lands, well watered and timbered, near the Maudem mine of the Topeka Copper Co., in the Lake Creek district, are supposed to carry the extension of the Maudem vein. Property has a vein of 4' to 8' width, carrying a 12" paystreak showing ore assaying 20 to 50% copper and \$2 to \$40 gold per ton, with considerable free gold, opened by a shallow shaft.

#### PONDERAY SMELTER.

IDAHO.

Owned by Idaho Smelting & Refining Co.

#### PONDEROSA COPPER CO.

CALIFORNIA.

Office: Delta Bldg., Los Angeles, Cal. Mine office: Bagdad, San Bernardino Co., Cal. J. H. Canovan, president; J. W. Green, superintendent. Lands are circa 14 miles from Bagdad.

#### PONDILLAI & VOLCAN MINES.

NEW CALEDONIA.

Letter returned unclaimed from former mine office, Diahon, New Caledonia. Properties are said to have rich ores, but are only slightly developed, and have been idle some years.

#### PONTIAC COPPER MINES, LTD.

BRITISH COLUMBIA.

Dead. Changed title, 1906, to Keremos-Pontiac Mines, Ltd. Formerly at Olalla, East Yale, B. C.

#### PONTIAC GOLD & COPPER MINING CO.

NEW MEXICO.

Dead. Formerly at Tres Piedras, Taos Co., N. M.

#### PONTIAC MINING CO.

VIRGINIA & NORTH CAROLINA.

Office: 19 Liberty St., New York, N. Y. Mine office: Virgilina, Halifax Co., Va. A. A. Sumner, president; Samuel Bryant, secretary; Robt. G. Lassiter, general manager. Organized 1902, under laws of New York, with capitalization \$1,600,000, shares \$10 par.

Lands, 1,340 acres, in the Virgilina district of Virginia and North Carolina, carrying a fissure vein in schist, opened by the Tuck shaft of 125' and the Glasscock shaft of 203', showing cuprite, malachite and azurite to depth of 60', below which are chalcocite, bornite and chalcopyrite, with quartz and epidote gangue, giving average assays of 4% copper and 1 to 2 oz. silver per ton, with traces of gold. Has gasoline power. Idle several years.

#### PONTOTOC MINING CO.

ARIZONA.

Office: care of T. H. Bass, secretary and treasurer, Beaumont, Tex. Mine office: Tucson, Pima Co., Ariz. J. M. Eastham, president; S. Y. Anderson, general manager. Lands, 15 claims and 4 millsites, 7 miles north of Tucson, having a 75' shaft, showing ore giving assays of 10.3% copper, with an average tenor of circa 5%.

#### POONA COPPER CO.

SOUTH AUSTRALIA.

Office: Adelaide, South Australia. Mine office: Moonta, Daly Co., South

Australia. Organized 1907. Lands, 240 acres, including the Poona and Matta Darra mines, adjacent to the Moonta mine, having shafts of 120' and 228', showing considerable ore of good average tenor.

**PORCUPINE MOUNTAIN COPPER CO.**

**MICHIGAN.**

Office: Cleveland, Ohio. Mine office: Ontonagon, Ontonagon Co., Mich. M. G. Watterson, president; E. S. Hough, secretary and treasurer. Was said to have been organized, 1901, under laws of New Jersey, with capitalization \$2,500,000, but returns from Mr. Watterson give the ownership as vested in a syndicate, promoted 1890, with 7 shareholders, title being held by trustees.

Lands, 1,100 acres, well timbered, including a portion of the old Carp Lake mine, in the Porcupine Mountains, showing a continuation of the Keweenawan copper belt, with amygdaloidal traps, intercalated conglomerate tuffs, and sandstone, having sundry beds carrying native copper, disseminated as speiss, through sandstone. Property has 2 ore bodies, of 27' estimated average width, with easterly and westerly strike and dip of 30° to the north, carrying estimated average values of 3% copper, which is too high. Mine has circa 1,700' of underground workings, estimated to show 150,000 to 200,000 tons of stamp-rock. Idle several years.

**PORTAGE LAKE & BISBEE MINING CO.**

**ARIZONA.**

Office: 12 First National Bank Bldg., Hancock, Mich. Letter returned unclaimed from former mine office, Bisbee, Cochise Co., Ariz. W. S. Cleaves, president; John Funkey, vice-president; W. L. McMaster, secretary; Chas. Lewis, treasurer. Organized April, 1903, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par, succeeding the Portage Lake & Calumet Development Co.

Lands, 12 claims, 3 fractional, area 191 acres, owned in fee and partly patented, 3 miles southeast of Bisbee, showing country rock of limestone, with a porphyry contact. Has a 302' shaft, with 2 compartments, well timbered. Has a small air-compressor, Worthington sinking pump, 75-h. p. hoist, boarding-house, bunkhouse and smithy. Extensive diamond drilling was done, 1903-1904, and considerable leached ore cut, the showing, while not including workable ore bodies, being of an encouraging nature. Idle since 1904.

**PORTAGE LAKE & CALUMET DEVELOPMENT CO.**

**ARIZONA.**

Dead. Reorganized, April, 1903, as Portage Lake & Bisbee Mining Co. Formerly at Bisbee, Cochise Co., Ariz.

**PORTLAND COPPER CO.**

**WASHINGTON.**

Mine office: Berlin, King Co., Wash. Lands are sundry claims 5 miles from Berlin, showing a 17' vein, with east and west strike, carrying native copper, bornite and chalcopyrite, opened by tunnels of 40' and 75'. Idle.

**PORTLAND COPPER MINING CO.**

**WYOMING.**

Office: 20 Broad St., New York, N. Y. Mine office: Rambler, Carbon Co., Wyo. P. S. Delaney, vice-president; Hon. J. C. Helm, secretary and treasurer; W. C. Ledbetter, general manager; preceding officers, W. H. D'Esterr, Jr., and T. C. Delaney, directors. Organized under laws of West Virginia, and charter proclaimed forfeited, 1902; reorganized 1908, under laws of Colorado, with capitalization \$1,500,000, shares \$1 par.

Lands, 5 claims, 3 patented, area 95 acres, known as the Portland mine, in the Battle Lake district, on the line of the Penn-Wyoming aerial tram. Property shows 12 veins, 6" to 40" wide, in a mineralized zone of circa 600' width that averages about 1% copper. Has a sulphide copper vein of 30' to 40' width, estimated to carry average values of 11% copper and \$4 to \$40 gold per ton, which is much too high, the vein actually having a pay streak of 8' to 10' width, carrying about 5% copper and \$2 to \$4.80 gold per ton. Has 13 pits and shafts, deepest 243', and a 650' tunnel, latter said to show 35' of 3% ore. Has steam power, and has been developing steadily for several years, being

one of the few properties in Carbon county to do so. Planned beginning production, 1908, by shipments to the Penn-Wyoming smelter, but apparently did not do so.

**PORTLAND GOLD & COPPER MINING CO.**

**WASHINGTON.**

Office: 7-127½ First St., Portland, Ore. Mine office: Spirit Lake, Siskiyou Co., Wash. Harvey Bailey, president and general manager; Conrad Wyss, vice-president; H. W. Bailey, secretary and treasurer; A. B. Burgoine, general superintendent; preceding officers and Dr. R. D. Wiswall, directors. Organized under laws of Washington, with capitalization \$1,250,000, shares \$1 par. Lands, 17 claims, area 340 acres, well timbered, on the north fork of the Toutle river, having circa 500' of workings, showing ore giving good assay values in gold and copper. Idle.

**PORTLAND-IMNAHA COPPER MINING CO.**

**OREGON.**

Dead. Disincorporated, September, 1902, with all debts paid. Formerly at Imnaha, Wallowa Co., Ore.

**PORTLAND LUNING COPPER CO.**

**NEVADA.**

Letter returned unclaimed from former mine office, Luning, Esmeralda Co., Nev. Property is slightly developed by shaft and tunnel. Idle and apparently moribund.

**PORTLAND MINING CO.**

**BRITISH COLUMBIA.**

Office: 19 North Seventh St., Terre Haute, Ind. Mine office: Aspen Grove, Yale district, B. C. Andrew J. Crawford, president; M. T. Hidden, secretary; J. E. Bates, general manager. Organized 1901, under laws of British Columbia, with capitalization \$15,000, shares 1 cent par.

Lands, 4 patented claims, area 200 acres, also 160 acres miscellaneous lands, in the Aspen Grove district, showing 10 veins, of which 2, under development, give assays of 15% copper, 3 oz. silver and 80 cents gold per ton, from carbonate and sulphide ores, opened by a 155' shaft and a 32' tunnel, said to show a considerable body of low grade ore. Idle several years.

**PORTLAND (ROSSILAND) MINE, LTD.**

**BRITISH COLUMBIA.**

Dead. Merged, 1904, in Velvet-Portland Mine, Ltd. Formerly at Rossland, Trail district, B. C.

**PORT LINCOLN COPPER CO., LTD.**

**AUSTRALIA.**

Offices: 20 Copthall Ave, London, E. C., Eng., and 95 King William St., Adelaide, South Australia. Mine office: Reedy Creek, Robe Co., South Australia. Col. A. G. Pawle, chairman; G. F. B. Hancock, mine manager; R. Gray Orr, secretary. Organized July 13, 1906, under laws of Great Britain, with capitalization £350,000, shares £1 par.

Lands, 400 acres, freehold, on Tumby Bay, north of Port Lincoln, 35 miles northeast of Adelaide, and across Spencer Bay from Wallaroo. Property, known as the Kitticoola, Tungkillo or Reedy Creek mine, opened 1845, is the second oldest copper mine in South Australia, having 2 ore bodies, known as the north and south lodes, ranging up to 11' width, and giving average assays of about 18% copper and 4 dwts. 6 grains gold per ton, from melaconite, bornite and chalcopyrite. Main shaft, 115'. Has steam power.

**SOCIEDAD MINEIRA PORVENIR DE COLLAHUASI.**

**CHILE.**

Office: Valparaíso, Chile. Mine office: Collahuasi, Tarapacá, Chile. Organized Apr. 10, 1904, under laws of Chile, with capitalization 550,000 pesos, shares 100 pesos par.

**POREVENIR DE SONORA CO.**

**MEXICO.**

Dead. Reorganized, 1902, as Coast Line Copper Co. Formerly at La Calera, Altar, Sonora, Mex.

**SINDICATO MINERO DE POSCO.**

**PERÚ.**

Office: Iquique, Chile. Mine office: Posco, Camaná, Perú. Organized Dec. 9, 1905, under laws of Chile, with capitalization £10,000, shares £1 par.

**POSTAL GOLD, PLATINUM & COPPER MINING CO.** **WYOMING.**

Dead. Formerly at Rambler, Carbon Co., Wyo. Fully described Vol. V.  
**POSTAL SAVINGS MINING & MILLING CO.** **WYOMING.**

Office and mine: Centennial, Albany Co., Wyo. Capitalization \$1,000,000, shares \$1 par. Richard F. Lawson, manager. Lands, 90 acres, in the Medicine Bow range, including the old Centennial mine, which produced some gold.

**POTOSI MINING CO., LTD.** **IDAHO.**

Mine office: Silver City, Owyhee Co., Idaho. J. E. Masters, superintendent. Has auriferous and argentiferous lead and copper ores, with electric power.

**COMPANIA MINERA POTOSINA.** **MEXICO.**

Dead. Formerly at Charcas, Moctezuma, San Luis Potosí, Mex.

**COMPANIA MINERA POTERILLOS.** **CHILE.**

Office: Santiago de Chile. Mine office: Chañaral, Atacama, Chile. Organized Dec. 6, 1906, under laws of Chile, with capitalization 650,000 pesos, shares 50 pesos par.

**POWERS GULCH DEVELOPMENT CO.** **ARIZONA.**

Mine office: Globe, Gila Co., Ariz. Lands, on Pinto Creek, show a 6' vein of secondary copper sulphides, with a paystreak giving average assays of about 30% copper.

**NEGOCIACION MINERA DE POZOS.** **MEXICO.**

Mine office: Pozos, Ciudad Porfirio Díaz, Guanajuato, Mex. Property includes Santa Brigida y Anexas, Santa Lucia and La Argentina mines, producing gold, silver and copper, latter as a by-product. Has steam power.

**POZOS MINING CO.** **MEXICO.**

Mine office: Ahualulco, Jalisco, Mex. Kratz & Carroll, managers. Property has auriferous and argentiferous copper ores.

**PRASSENO'S COPPER CO.** **ARIZONA, CALIFORNIA & MEXICO.**

Mine office: Casa Grande, Pima Co., Ariz. S. C. Palmer, president; C. E. Green, secretary; W. H. Birchfield, treasurer; B. S. Wilson, general manager; Geo. S. Wilson, mine superintendent. Organized under laws of South Dakota, with capitalization \$5,000,000, shares \$1 par. Lands include a group of claims circa 30 miles south of Casa Grande, held under bond and lease, said to have shipped \$75,000 worth of silver-lead ore, under former management. Also holds the Cameron group, circa 11 miles southwest of Casa Grande, and has claims 30 miles south of Arizpe, Sonora, Mexico. Controls, through stock ownership, the Amargosa Copper Co., which has lands in Inyo and San Bernardino counties, California.

**PRATT MINE.** **GEORGIA.**

Mine office: Dahlonega, Lumpkin Co., Ga. Ores are cupriferous and auriferous pyrite, carrying up to 2% copper and \$2 gold per ton. Presumably idle.

**PREMIER COPPER & ASBESTOS CO.** **CAPE COLONY.**

Mine office: Prieska, Cape Colony. A. M. Reid, consulting engineer. Capitalization £20,000; issued, £18,000. Lands, 14,000 morgen, or nearly 30,000 acres, known as the Schreuder group, apparently carrying mainly asbestos, having a continuation of the seam developed by the Cape Asbestos Co., Ltd.

**PREMIER MINING, MILLING & LEASING CO.** **NEW MEXICO.**

Office: care of J. H. K. Martin, secretary, Denver, Colo. Letter returned unclaimed from former mine office, Pinon Altos, Grant Co., N. M. Alfred Martin, superintendent. Property is the Copper Hill mine.

**PRESIDENT COPPER & GOLD MINING CO.** **MONTANA.**

Office: Butte, Mont. Mine office: Boulder, Jefferson Co., Mont. Dr. Ferdinand Grattan, president; C. S. Shoemaker, vice-president; Joseph Chauvin,

secretary; Walter Tallant, treasurer; Geo. Reeves, manager; preceding officers, Wm. Creedon and H. P. Bennett, directors. Organized circa August, 1908, under laws of Montana, with capitalization \$1,200,000, shares \$1 par.

Lands, 11 claims, 6 held outright and 5 under option, in the Big Foot district, 14 miles southeast of Butte and 11 miles southwest of Boulder, said to carry  $1\frac{1}{2}$  miles of a vein of 30' to 60' width. Development is by 80' and 210' shafts, 3,000' apart. The 80' shaft has ore giving average assays of about 7% copper, and the 210' Roosevelt shaft is said to give ore assaying 2.5 to 13% copper, 11 to 40 oz. silver and \$2 to \$10 gold per ton.

#### PRESIDENTIAL MINING CO.

Mine office: Patagonia, Santa Cruz Co., Ariz. Lands, 6 claims, circa 4 miles west of Patagonia, having 700' of workings, showing argentiferous lead and copper ores. Employed 12 men, at last accounts.

#### PRESTON PEAK COPPER CO.

#### CALIFORNIA.

Dead. West Virginia charter forfeited 1902; lands sold, 1907, by sheriff, to Chas. F. Hickey, for \$34,750.13. Formerly at Yreka, Siskiyou Co., Cal. Described Vol. V.

#### PRETORIA COPPER & TIN FIELDS, LTD.

#### TRANSVAAL.

Office: P. O. Box 1223, Johannesburg, Transvaal. D. Symons, chairman; J. H. Munnik, manager; G. W. Morrison, secretary. Organized June 20, 1905, under laws of Transvaal, with capitalization £115,000, shares £1 par; issued, £103,333. Lands are the freehold farms Badfontein No. 600, Tweefontein No. 275 and Welgedacht No. 41, total area 10,683 acres, in the Pretoria district, also an option on the farm Elandsfontein No. 1782, area 10,882 acres, in the Waterburg district, Transvaal. Operations are confined to prospecting, on a small scale.

#### PRICE COPPER MINE.

#### COLORADO.

Office: 1313 Fillmore St., Topeka, Kans. Mine office: McCoy, Eagle Co., Colo. Dr. J. C. McClintock, president; Chas. J. Price, vice-president; W. R. Price, general manager; O. D. Mansfield, secretary and treasurer.

#### PRICKETT LAND CO.

#### MICHIGAN.

Office: Marquette, Mich. Walter S. Prickett, chairman; J. E. Ball, secretary; Fred H. Begole, treasurer. Organized Sept. 18, 1905, under laws of Michigan, with capitalization \$10,000, shares \$10 par, fully issued. Has paid dividends, to Dec. 31, 1907, of \$150,300. Lands are 3,694 acres of copper lands, in Keweenaw county, Michigan, including many old copper properties, 440 acres of copper land in Ontonagon county, Michigan, and 520 acres of iron lands in Iron county, Michigan. Company sold circa 4,000 acres in Keweenaw county to the Keweenaw Copper Co., and has a large acreage of well located mineral land on the Keweenawan trap range, carrying considerable timber, with available millsites on both sides of Keweenaw Point, including a good water frontage at the western end of Copper Harbor.

#### PRIDE MINING CO.

#### COLORADO.

Dead. Formerly at Montezuma, Summit Co., Colo.

#### PRIDE OF ARIZONA COPPER CO.

#### ARIZONA.

Dead. Was a swindle, promoted by Douglas, Lacey & Co. See Amalgamated Gold & Copper Co. Formerly in Yavapai county, Arizona.

#### PRIDE OF THE WEST MINING & MILLING CO.

#### ARIZONA.

Office: 1801 Fifteenth St., Denver, Colo. Letter returned unclaimed from former mine office, Washington, Santa Cruz Co., Ariz. Arthur R. Wilfley, president; Herbert E. Fiske, secretary. Organized May 1, 1901, under laws of Colorado, with capitalization \$1,500,000, shares \$10 par. Paid one dividend of \$15,000. Lands, circa 350 acres. Mine was opened 1870, reopened 1897, closed 1902, reopened circa 1906 and presumably closed 1907. Main shaft, about 300'.

Ores are complex argentiferous copper, lead and zinc sulphides. Has a 200-ton concentrator. Very fully described Vol. II.

**PRIESKA COPPER, LTD.**

**CAPE COLONY.**

Office: Johannesburg, Transvaal. Mine office: Prieska, Cape Colony. Lands, 53,000 morgen, or upwards of 100,000 acres, including three farms, known as the Prieska's Poort, Kalkgat and Dikkripspruit.

**PRIEST LAKE MINING CO.**

**IDAHO.**

Office: Detroit, Mich. Mine office: Priest River, Bonner Co., Idaho. Thos. LePage, secretary; C. George, treasurer. Development is by tunnel, planned to cut the extension of the vein of the Idaho Continental, said to show ore assaying up to 16% copper.

**MINA PRIMAVERA.**

**BRAZIL.**

Mine office: Cacapava, Rio Grande do Sul, Brazil. Lands, near the Santa Barbara river, are in a mountainous district, showing Cambrian stratified beds and granite, having a nearly vertical vein variously reported as lying between granite and mica-schist and as between conglomerate and sandstone. Ores are carbonates, silicates and chalcocite, mainly the latter, occurring disseminated and in small nodules, with average tenor of about 7% copper, with traces of silver, opened by a 100' main shaft.

**PRINCE ALFRED MINE.**

**AUSTRALIA.**

Mine office: Belton, South Australia. Produced, in first half of 1905, fine copper to amount of 78,400 lbs. Presumably idle.

**PRINCE LYELL MINING CO., N. L.**

**TASMANIA.**

Office: 90 Queen St., Melbourne, Australia. Mine office: Gormanston, Montagu Co., Tasmania. G. A. Lawson, manager. Capitalization £100,000, shares £1 par. Lands, 25 acres, leasehold. Idle and apparently moribund.

**PRINCE MINING & DEVELOPMENT CO., LTD.**

**BRITISH COLUMBIA.**

Office and mine: Revelstoke, West Kootenay district, B. C. J. T. Laing, president; J. A. Stone, vice-president; J. M. Scott, secretary, treasurer and manager; C. J. Rumens, superintendent; preceding officers, Dr. C. Smyth, J. M. McCracken and A. M. Smith, directors. Organized 1900, under laws of British Columbia, with capitalization \$1,000,000, shares \$1 par. Annual meeting, second Wednesday in March.

Lands, 20 claims, area 800 acres, known as the Standard group, also a 480-acre millsite and 640 acres timber lands, giving total holdings of 1,920 acres, in the Standard basin, Big Bend district, circa 33 miles north of Revelstoke. Country rocks are banded schist and diorite, carrying chalcopyrite and bornite, in a vein of 20' width, with gangue of serpentine and argillaceous schist, ore being estimated to carry average values of 6% copper, 2 oz. silver and \$2 gold per ton. Development is by tunnels of 40', 110', 480', 600', 275' and 720', with circa 3,000' of underground workings, estimated to show 150,000 tons of ore, with 100,000 tons blocked out for stoping. A good water power is available for mining and milling purposes. A tram-line and mill are needed. Property considered promising.

**PRINCESS ROYAL GOLD & COPPER MINING CO.** **BRITISH COLUMBIA.**

Dead. Formerly on Princess Royal Island, B. C. Described Vol. VII.

**PRINCETON COPPER MINING & SMELTING CO.**

**ARIZONA.**

Office: 171 Broadway, New York, N. Y. Mine office: Ft. Huachuca, Cochise Co., Ariz. Henry Hamburg, president and general manager; Henry C. Adams, vice-president and treasurer; Herbert M. Karner, secretary; preceding officers, J. M. McConnell and L. de Vere Hamburg, directors; C. S. Wright, superintendent. Organized 1901, under laws of South Dakota, with capitalization \$2,500,000, shares \$1 par.

Lands, 8 claims, well timbered, in Ramsey Cañon, Hartford district, Huachuca Mountains, opened by 4 shafts, deepest 80', and by tunnels of 60', 70',

115' and 250', with a quarter-mile of underground workings, showing malachite, chalcocite and bornite, giving assays of 10% and up in copper, 10 to 50 oz. silver, and small gold values. Mine, discovered 1880, was worked 1901-1905, and work was resumed, circa 1907, after 2 years' idleness, caused by financial entanglements.

#### **PRINCE WILLIAM COPPER CO.**

ALASKA.

Office: 35 Wall St., New York, N. Y. Mine office: Valdez, Alaska. Wm. C. Nichols, president. Organized 1907, under laws of New Jersey, with capitalization \$500,000. Lands, 12 claims, area 240 acres, at tidewater, on Knights Island, having a vein claimed in press to be 260' wide and to carry 30% copper, which is a self-evident exaggeration. Vein is reported otherwise to be 40' wide, carrying 5 to 9% copper, which is considered an overestimate. First smelter shipment, July, 1907, gave returns of 6.82% copper.

#### **PRINCE WILLIAM SOUND AMALGAMATED COPPER CO. ALASKA.**

Letter returned unclaimed from former office, 1115 Stock Exchange, Chicago, Ills. Mine office: Ellamar, Prince of Wales Island, Alaska. Was said to have been organized, circa 1907, by H. Curtis Elliott and associates, for the purpose of operating the Ellamar and other properties in the Prince William Sound district. Idle and presumably moribund.

#### **PRINCE WILLIAM SOUND MINING CO.**

ALASKA.

Mine office: Valdez, Alaska. Lands, on Mummy Bay, Knights Island, have a 300' tunnel, driving to intersect a shear-zone of about 40' width, carrying bands and scattered grains of chalcopyrite assaying up to 11.5% copper and 1 oz. silver per ton.

#### **PRODUCER MINING & SMELTING CO.**

ARIZONA.

Dead. Lands reverted to Frank Brownell, former owner. Formerly at Casa Grande, Pinal Co., Ariz. Fully described Vol. VI.

#### **PRODUCER GOLD & COPPER MINING & MILLING CO.**

WYOMING.

Mine office: Encampment, Carbon Co., Wyo. Capitalization \$3,000,000, shares \$1 par. Lands, 12 claims, on Copper Mountain, slightly developed. Has an air-compressor and a mill with 10 gravity stamps. Presumably idle.

#### **COMPAÑIA MINERA PROMONTORIO.**

MEXICO.

Office and mine: Apartado 60, Durango, Durango, Mex. Maximiliano Damm, general manager. Property is the Dulces Nombres mine, carrying large bodies of auriferous and slightly argentiferous copper ore. Has gas power and a 60-ton mill, also a small matting furnace, employing circa 75 men, at last accounts.

#### **PROMONTORIO CONSOLIDATED MINING CO.**

MEXICO.

Office and mine: Nogales, Magdalena, Sonora, Mex. Leopold Ephraim, president; R. D. George, secretary. Lands, circa 30 miles south of Nogales, carry auriferous and argentiferous lead and copper sulphides. Was worked for about 12 years, by Mr. Ephraim, before formation of present company, high grade ores being shipped to El Paso smelters and low grade ores accumulated on dumps. Later developments have not come up to expectations, and concentrator planned was not built. Presumably idle.

#### **PROMONTORIO MINING & SMELTING CO.**

MEXICO.

Dead. Formerly at Lampasos, Moctezuma, Sonora, Mex.

#### **PRO PATRIA MINING & MILLING CO.**

COLORADO.

Mine office: Rico, Dolores Co., Colo. W. J. Scoult, superintendent, at last accounts. Ores carry gold, silver, lead and copper. Has water and electric power and a 50-ton concentrator. Presumably idle.

#### **PROSPER COPPER SYNDICATE.**

AUSTRALIA.

Mine office: Essington, N. S. W., Australia. Organized 1907, under laws of New South Wales, with capitalization £1,200, shares £12 par. Lands are in the Rockley district. Presumably idle.

**PROSPER GOLD MINING CO.****NEW MEXICO.**

Mine office: Hillsboro, Sierra Co., N. M. Ores carry gold, silver and copper. Has steam power. Idle.

**PROVIDENCE GOLD & COPPER CO.****CALIFORNIA.**

Office: 617 Homer Laughlin Bldg., Los Angeles, Cal. Mine office: Kelso, San Bernardino Co., Cal. P. H. Mathews, president; W. E. Baxter, vice-president; F. H. Messmore, auditor; preceding officers, C. M. Wood and Jas. H. Dewey, directors; C. J. Callahan, consulting engineer. Organized Nov. 2, 1901, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par. Annual meeting, first Monday in November.

Lands, 15 claims and 8 millsites, area 340 acres, patents applied for, in the unorganized Arrow district, showing 15 fissure veins, carrying sulphide ores, assaying circa 1% copper and \$4 to \$1,000 gold per ton, with small silver values. Has several shafts, all under 100', and an 800' tunnel, with a total of about one-half mile of workings.

**PROVIDENCE MINING CO., LTD.****BRITISH COLUMBIA.**

Office: 525-204 Dearborn St., Chicago, Ills. Mine office: Greenwood, Boundary district, B. C. Mark F. Madden, president; Dr. Frank Byrnes, vice-president; M. S. Madden, secretary; John B. Heney, treasurer; P. J. Dermody, superintendent. Capitalization increased, January, 1907, from \$200,000 to \$2,000,000. Bonds, \$50,000 authorized, at 6%. Paid dividends of \$38,000, to end of 1906.

Mine has a 600' shaft, planned to be sunk to 1,000', showing argentiferous and auriferous copper sulphides, with principal values in gold, and has considerable ore blocked out. Has a 10-drill air-compressor. Production, 1907, given as 700 tons of ore, and, to end of 1907, had produced ore worth \$400,000. Apparently paid in dividends money that should have been retained for development.

**PROVIDENCIA GOLD, SILVER & COPPER MINING CO.****ARIZONA.**

Dead. Formerly at Tucson, Pima Co., Ariz. Described Vol. VI.

**PROVIDENCIA MINES CO.****MEXICO.**

Mine office: Cosalá, Sinaloa, Mex. E. A. Stent, manager, at last accounts. Organized circa 1906, with capitalization \$500,000, to operate the Campanillas mines. Presumably idle.

**PROVINCIAL SMELTING & REFINING CO.****ONTARIO.**

Works office: Parry Sound, Ont. Early 1908 planned building a smelter.

**PRUDENTIAL COPPER MINING CO.****ARIZONA.**

Office: care of Shea Smith, president, 18 Custom House Pl., Chicago, Ills. Letter returned unclaimed from former mine office, Prescott, Yavapai Co., Ariz. Idle and apparently moribund.

**PRUDENTIAL MINING CO.****CALIFORNIA.**

Office: care of H. S. Reed, manager, Medford, Ore. Mine office: Crescent City, Del Norte Co., Cal. Lands, near Shelly Creek, are slightly developed by shaft and tunnel, showing 2 veins of 25' to 30' width, carrying slightly auriferous and argentiferous chalcopyrite, sphalerite and pyrrhotite. Idle several years and apparently moribund.

**PRUDENTIAL MINING & DEVELOPMENT CO.****ARIZONA.**

Dead. Formerly at Nogales, Santa Cruz Co., Ariz.

**SOCIÉTÉ ANONYME FRANÇAISE DES MINES DE  
CUIVRE DE PRUNELLI (CORSE).****CORSICA.**

Office: 51 Rue Vivienne, Paris, France. Mine office: Marignana, Ajaccio, Corsica. Organized Dec. 29, 1906, under laws of France, with capitalization 1,500,000 francs, shares 100 francs par. Lands include the Argentella group, carrying argentiferous copper ores, associated with sulphides.

**PSYCHE MINING CO.**

OREGON.

Dead. Formerly at Greenhorn, Baker Co., Ore. Described Vol. VII.  
**PTAEMIGAN MINES OF THE SELKIRKS.** BRITISH COLUMBIA.

Mine office: Wilmer, Northeast Kootenay, B. C. Thos. Starbird, manager. Lands, at the head of McDonald Creek, an affluent of Horse Thief Creek, show highly auriferous and argentiferous copper ores, with about 3,000' of workings. Has steam and water power. Idle at last accounts, awaiting completion of a projected railroad.

**PUEBLO COPPER MINING & MILLING CO.**

UTAH.

Letter returned unclaimed from former office and mine, Johnson, Kane Co., Utah. T. G. McCarthy, president; John T. West, vice-president; R. Lee Graham, secretary; J. H. Means, treasurer. Organized circa December, 1907, under laws of Utah, with capitalization \$250,000, shares 25 cents par. Lands, 5 claims, in the Rock Spring district.

**PUEBLO MINE.**

YUKON.

Owned by Yukon Pueblo Mines.

**PUERETECITO COPPER CO.**

MEXICO.

Mine office: La Cananea, Arizpe, Sonora, Mex. Succeeded the Sonora Copper Co. Assets consists of a lawsuit against Col. Wm. C. Greene.

**PUGET SOUND COPPER MINES.**

BRITISH COLUMBIA.

Mine office: Van Anda, Texada Island, B. C. Has a copper ore body, with heavy gossan capping of fair grade iron ore. Idle several years.

**PUGET SOUND INVESTMENT CO.**

BRITISH COLUMBIA.

Dead. Formerly at Van Anda, Texada Island, B. C.

**PUGET SOUND IRON CO.**

BRITISH COLUMBIA.

Mine office: Van Anda, Texada Island, B. C. W. H. Lee, superintendent. Has iron ore, also auriferous and argentiferous copper ore.

**PUGET SOUND REDUCTION CO.**

WASHINGTON.

Works office: Everett, Snohomish Co., Wash. Is controlled, through stock ownership, by American Smelters Securities Co. Has three 30x180" blast-furnaces, one running on copper ores, making a 50% matte, which is blown up to blister copper in a reverberatory furnace, and shipped east for electrolytic refining. Also has an arsenic plant, formerly making about 5 tons of arsenic daily, from Monte Christo ores.

**PUGWASH CONSOLIDATED MINING & SMELTING CO.** NOVA SCOTIA.

Dead. Formerly at Pugwash, Cumberland Co., N. S. Described Vol. VI.  
**PUGWASH RIVER COPPER CO.** NOVA SCOTIA.

Dead. Succeeded, circa 1904, by Pugwash Consolidated Mining & Smelting Co., also dead. Formerly at Pugwash, Cumberland Co., N. S. Described Vol. IV.

**PULIDO MINING CO., LTD.**

PORTUGAL.

Office: 20 Bucklesbury, London, E. C., Eng. Mine office: Beja, Alemtejo, Portugal. John Silva, chairman; F. E. Webb, secretary. Organized Apr. 26, 1895, under laws of Great Britain, with capitalization £165,000, shares £1 par; issued, £154,500. Lands, 32 copper and gold mining concessions, area 5,312 acres. Idle since circa 1901.

**COMPAÑIA DE MINAS y FUNDICIONES DE PÚQUIOS.**

CHILE.

Dead. Was succeeded by Compañía Minera de Púquios. Formerly at Púquios, Rancagua, Atacama, Chile.

**COMPAÑIA MINERA DE PÚQUIOS.**

CHILE.

Office: Casilla 178, Valparaiso, Chile. Mine office: Púquios, Rancagua, Atacama, Chile. Employs 60 men. E. J. J. H. Sandiford, chairman; P. H. MacClelland, vice-chairman; H. S. Sydney-Merritt, secretary and treasurer; preceding officers, J. C. Kenrick and Walter Squire, directors; Archibald Stark, general manager; R. Benbow, mine superintendent. Organized Nov. 7, 1905,

under laws of Chile, with capitalization £100,000, shares £1 par, as successor of Compañía de Minas y Fundiciones de Púquios, and reorganized Jan. 8, 1906, under laws of Chile, with capitalization £80,000, shares £1 par. Annual meeting, fourth Saturday in February.

Lands, 44 claims, area 144 hectares, showing country rock of diorite, with 3 east and west ore bodies, known as the Jefe, Repalon and Estaca lodes, intersected at nearly right angles by the Verde, Sofia and Farellon lodes. The line of junction between the Jefe and Verde lodes gives dykes of 30' width. The Sofia and Jefe lodes are under development, latter, of circa 4' average width, traceable 2,500 meters, showing oxidized ores, bornite and chalcopyrite, giving estimated average assays of 12% copper and up to 24 oz. silver per long ton, with traces of gold. Development is by the old Farellon shaft of 693', the old Estaca shaft of 595', the new Sofia shaft of 429', also by the 610' Sofia south tunnel, 612' Jefe east tunnel and 500' Jefe west tunnel, with a total of 3,140' of new workings, showing 3,000 long tons of ore, with 1,100 tons blocked out for stoping.

The mine dates from 1862, and has been in the hands of various owners, but was closed by two floods in the Sofia mine, caused by storm waters, and by reason of the ore becoming base in the transition zone. Property was held formerly by the Compañía Farellón de Púquios.

Equipment includes 2 hoists, good for 900' each, and 2 Rand & Walker air-compressors. There are several buildings and ranchos, including administration building, hotel, office, store and foreman's dwellings. Ores are sent to Caldera for reduction, by the Ferrocarril de Copiapó, connected with the mine by a Bleichert aerial tram of 2 kilometers length, completed May, 1908. Fuel is Australian coal, costing 55s. per long ton.

Production, 1907, was 104,000 lbs. fine copper, secured from 295 tons of ore extracted from development work only, giving returns of 14.7% copper. Company plans sinking the main Sofia shaft into the sulphide zone, opening 3 new levels and building a new headgear and ore-bins. Property considered promising and management good.

#### PURITAN COPPER & GOLD MINING CO.

NEW MEXICO.

Dead. Was a swindle, promoted by Benj. F. Coburn, of Boston, who "guaranteed" 10% dividends for 5 years. Formerly at Tres Piedras, Taos Co., N. M. Described Vol. II.

#### COMPAÑIA DE MINAS I FUNDICIONES DE PUTAENDO. CHILE.

Office: Santiago de Chile. Mine office: Putaendo, Aconcagua, Chile. Organized Jan. 17, 1907, under laws of Chile, with capitalization 720,000 pesos, shares 36,000 pesos par.

#### PYNE SMELTING CO.

CALIFORNIA.

Letter returned unclaimed from former office, 26 First National Bank Bldg., San Francisco, Cal. Works office: West Alameda, Alameda Co., Cal. P. W. Pyne, manager. Works have a daily capacity of 100 tons. Idle since 1903, having been closed by courts, on complaints that fumes injured vegetation, with small prospects of resumption.

#### PYRAMID COPPER CO.

UTAH.

Mine office: La Sal, Grand Co., Utah. Organized 1902, under laws of Maine, with capitalization \$500,000. Lands, in the Sinbad Valley, have a blanket vein between sandstone strata, carrying ore of about 3% copper tenor. Company claims enough ore in sight to run a mill for 2 years. Has a 50-ton leaching plant, using sulphuric acid made at the works from sulphide ores, claimed to effect an extraction of 98% of assay values, which is not believed. Closed down, late 1907.

#### PYRAMID COPPER SYNDICATE, LTD.

BRITISH COLUMBIA.

Dead. Dissolved Aug. 8, 1905. Formerly at Golden, East Kootenay, B. C.

**PYRAMID GOLD & COPPER MINING CO.**

ARIZONA.

Dead. Formerly at Prescott, Yavapai Co., Ariz. Described Vols. V and VI.  
**PYRAMID PEAK MINING CO.**

NEW MEXICO.

Dead. Lands sold, December, 1905, by sheriff. Formerly at Lordsburg, Grant Co., N. M.

**PYRENEES COPPER MINES, LTD.**

FRANCE.

Dead. Dissolved, August, 1904. Formerly in the Basses Pyrenees, France.  
**PYRENEES MINERALS, LTD.**

FRANCE.

Office: 14 Great Winchester St., London, E. C., Eng. E. Glassee, managing director; H. Gulliver, secretary. Organized May 5, 1902, under laws of Great Britain, with capitalization £150,000, shares £1 par; issued, £98,207. Debentures, £60,000, at 6%. Lands, 1,818 acres, including the Alzen silver and copper mines, in the department of Ariège, France. Has a 20-ton smelter. At last accounts was in litigation with former owners of the property.

**"Q" COPPER SYNDICATE, LTD.**

AUSTRALIA.

Office: Worcester House, Walbrook, London, E. C., Eng. Mine office: Mackay, Queensland, Australia. T. W. Gilbert, secretary; G. Lloyd-Owen, mine manager; Edmund Lloyd-Owen, consulting engineer. Organized Nov. 29, 1905, under laws of Great Britain, with capitalization £10,000, in 5,000 cumulative 6% preference shares of £1 par, and 50,000 ordinary shares of 2s. par. Lands, 160 acres, leasehold, known as the Pine Vale and Ben Mohr mines. Presumably idle.

**Q. S. GOLD MINING & SMELTING CO.**

WASHINGTON.

Office: 408 Empire State Bldg., Spokane, Wash. Mine office: Conconully, Okanogan Co., Wash. Col. Adelbert M. Dewey, president and general manager; M. L. Bevis, vice-president; Carl L. Shuff, secretary; E. J. Hyde, treasurer; L. K. Armstrong, consulting engineer. Organized 1897, under laws of Washington, with capitalization \$2,000,000, shares \$1 par.

Lands, 18 claims, also 60 acres of millsites and water-rights on Sinlahekin Creek, in the Salmon district, circa 12 miles south of Loomis. Property shows diorite, with 6 fissure veins, carrying mainly low grade copper values. Company claims an ore body more than 300' wide and more than 4,500' long, which seems a serious overestimate as regards width. Development, begun 1897, is by 2 tunnels, second started circa 1907, at base of the mountain, to cut ore at about 2,000' estimated depth. The tunnel, at distance of 900', is said to cut 50' of ore, without proving the walls, carrying chalcopyrite, estimated at 2 to 4% copper tenor, with small and variable silver values and circa \$1 gold per ton. Ore is said, in the press, to average about \$14 per ton in gross values.

Equipment includes a 200-h. p. hydro-electric power plant, taking water from Sinlahekin Creek. Improvements include a sawmill and several good mine buildings.

The management claims to show more ore than the Granby, which is not true, and of about double the average tenor of Granby ore, which is considered something more than doubtful. Notwithstanding these exaggerations, the company is to be commended for its steady continuance of work, which seems well planned, and the property is considered promising.

**QUANTOCK MINING & MILLING CO.**

MONTANA.

Mine office: Coloma, Powell Co., Mont. H. B. Salisbury, superintendent. It has gold, silver and copper ores, with steam power, employing 12 men at last accounts.

**QUARTZ KING MINING CO.**

ARIZONA.

Mine office: Parker, Yuma Co., Ariz. Capitalization \$1,500,000, shares \$1 par. Lands, circa 2,000 acres, 4 miles north of Parker, having 4 shafts, of about 100' depth each, and several tunnels, longest 125'. Employed circa 35 men at last accounts.

**QUEBEC COPPER CO., LTD.****BRITISH COLUMBIA.**

Dead. Formerly at Deadwood, Boundary district, B. C.

**MINA LA QUEBRADA.****VENEZUELA.**

Mine office: Aroa, Lara, Venezuela. Includes the principal mines of the Quebrada or Aroa district of Venezuela, which have produced about 60,000 tons of fine copper. Lands, 67 miles west of Puerto Cabello, include the Cumuragua mine, having a vein of carbonate ore 1' to 5' wide; the Titiria mine, with vein 2' to 25' wide; the San Antonio mine, with vein of 3' to 18', and the Quebrada mine, with a vein 50' to 75' wide, 2,000' long and of unknown depth, from which oxide and carbonate ore have been mined in the alteration zone, leaving a large body of sulphide ore, averaging possibly 4 to 6% copper, in the lower workings. Was operated extensively, 1881-1894, producing 271,770 long tons copper ore, valued at about £1,250,000. Idle since 1894, and likely to remain so until Venezuela enjoys more settled political conditions, and better treatment is accorded foreign owners of mining concessions.

**QUEEN BEE COPPER MINING CO.**

Dead. Formerly had an office at 220 Broadway, New York, N. Y. Location of lands, if any, unknown.

**QUEEN BEE COPPER MINING CO., N. L.****AUSTRALIA.**

Mine office: Wrightsville, Robinson Co., N. S. W., Australia. T. E. Farquhar, chairman; preceding officer, J. R. Ratcliff and G. D. Elliott, directors. Lands are in the Bee Mountains, about 11 miles southeast of Cobar. Mine has a 500' main shaft, showing ore assaying up to 45% copper, with fair gold and silver values, and, on the 4th level has a vein of circa 20' width, averaging about 7% copper. Has steam power and an air-compressor. Smelter has 4 reverberatory furnaces and a small water-jacket blast-furnace, and company plans installation of larger blast-furnace. Ore smelted, last half of 1907, gave average extraction of 7.75% copper. Production, 1907, was 1,104,320 lbs. fine copper. Employs circa 200 men.

**QUEEN BEE MINING & MILLING CO.****WYOMING.**

Dead. Was succeeded, June, 1902, by Wyoming Queen Mining Co. Formerly at Jelm, Albany Co., Wyo.

**QUEEN COPPER MINING CO.****ARIZONA.**

Office: Globe, Ariz. Mine office: Superior, Pinal Co., Ariz. W. D. Fisk, president; J. H. Thompson, vice-president; Joseph W. Bandhauer, secretary and superintendent; Richard Fleming, treasurer. Organized 1906, under laws of Arizona, with capitalization \$5,000,000, shares \$1 par. Property is the old Silver Queen mine, near the Lake Superior & Arizona, opened circa 1880, and worked some years for silver. Mine, opened to depth of 300', has extensive old workings, showing, on the 300' level, an 18" paystreak of chalcocite and 2' to 4' of malachite assaying up to 40% copper, chalcocite carrying up to 310 oz. silver per ton. Has steam power. Property considered promising.

**QUEEN & CRESCENT COPPER CO.****IDAHO.**

Dead. Was merged, circa 1908, in Copper Queen Mining & Smelting Co., shareholders receiving one share new stock for 8 shares of old. Formerly at Copper Queen, Lemhi Co., Idaho.

**QUEEN GOLD & COPPER MINING & SMELTING CO.****OREGON.**

Office: 1345 Pierce St., San Francisco, Cal. Mine office: Wonder, Josephine Co., Ore. W. H. Ramsey, president; B. M. Cahill, vice-president; John Dawson, secretary; W. A. McElroy, treasurer. Organized under laws of Oregon, with capitalization \$1,000,000, shares \$1 par.

**QUEEN LYELL MINING CO., N. L.****TASMANIA.**

Office: 90 Queen St., Melbourne, Australia. Mine office: Gormanston, Montagu Co., Tasmania. G. A. Lawson, manager. Capitalization £100,000,

shares £1 par. Lands, sundry leasehold claims, in the Mount Lyell field. Idle and presumably moribund.

**QUEEN MINING & MILLING CO.**

**NEW MEXICO.**

Office: Galveston, Tex. Mine office: Cooney, Socorro Co., N. M. H. A. Griffin, secretary. Organized under laws of Texas. Lands, 5 claims, known as the Copper Queen group, showing good bodies of low grade gold-silver-copper ores, developed by about 3,000' of underground workings. Has steam power and a 15-stamp pan-amalgamation mill. Idle.

**QUEEN OF ARIZONA COPPER CO.**

**ARIZONA.**

Dead. Merged, circa 1902, in Great Belcher of Arizona Co. Formerly at Providence, Yavapai Co., Ariz. Described Vol. III.

**QUEEN PRINCESS COPPER CO.**

**COLORADO.**

Mine office: Copperfield, Frémont Co., Colo. John R. Stephen, president; Edward S. Halter, secretary; Edward Baugh, treasurer. Capitalization \$3,000,000, shares \$1 par. Lands, 14 claims, area 147 acres, in the Red Gulch district, 9 miles north of Cotopaxi. Property has a main ore body said to average 2.5% copper, and has secured assays of 40 to 60% in tenor, and company claims that trial shipments returned 17% copper. Main vein is claimed to be 300' wide, which is doubtful. Development is by a 135' shaft. Equipment includes steam power and a hoist.

**QUEEN REGENT COPPER & GOLD CO.**

**NEVADA.**

Office: 368 Bush St., San Francisco, Cal. Letter returned unclaimed from former mine office, Fairview, Churchill Co., Nev. J. E. Kerr, manager. Organized 1907, under laws of Arizona, with capitalization \$2,000,000. Lands, 14 claims, 14 miles south of Fairview, on the southern side of Copper Mountain, known as the Copper King group, claimed to have a hematite gossan of 50' to 100' width, and claimed to show, in a trench, native copper of 12% tenor, with gold and silver values aggregating \$42 per ton, which seems an unusual, if not impossible, combination. Has a 100' tunnel, cutting a 4' vein and planned to cut 5 additional veins in length of about 500'.

**QUEENSLAND COPPER CO., LTD.**

**QUEENSLAND.**

Office: 6 Princes St., London, E. C., Eng. Mine office: Mount Perry, Bowen Co., Queensland, Australia. Employs 337 men. Geo. Grinnell-Milne, chairman; J. G. Tait, secretary; S. T. Williams, mine manager; Sydney H. Fulbrook, superintendent; J. S. MacArthur, consulting engineer. Organized Feb. 1, 1898, under laws of Great Britain, with capitalization £500,000, shares £1 par, in £250,000 cumulative 6% preference shares and £250,000 ordinary shares. After payment of 6% on ordinary shares, in any year, remaining profits are divisible equally between preference and ordinary shares. Last dividend, 1903, on ordinary shares, was 6%. For fiscal years ending July 31, profits have been as follows: £12,756 2s. 11d. in 1905; £28,893, with dividends of £12,810, in 1906; £36,143, with dividends of £19,486, in 1907.

Lands include 1,650 acres bought of the Mount Perry Copper Co., also the Normanby mine, near Mount Perry, taken over June, 1905, under 2 years option, and bought, 1907, for £12,000. Miscellaneous holdings include the Reed's Creek, Great Freehold and New Moonta mines, and company also bought the lands of the Burnett (Queensland) Exploration Co., Ltd. The 3 principal mines of the company have 15 shafts, of 120' to 800' depth, and the company also works various mines in the Wolca and Boolboonda districts. The combined area of the Mount Perry and Reed's Creek mines is 650 acres, freehold.

The Mount Perry mine has fissure veins traversing granite, the main vein, of about 12' average width, having a paystreak 6" to 8" wide in the upper levels and 10" in the lower levels, carrying an average of circa 16% copper. The mine formerly was opened by 3 shafts, poorly located and inadequate,

which have been replaced by new shafts. The ground is growing harder with depth.

The Kennedy shaft, 1,020' deep, with bottom level at 1,000', shows a strong vein of ore of fair copper tenor, opened by crosscut. About two-thirds of the production, 1906, was from the Kennedy shaft.

The Milne shaft, planned to cut the lode at circa 1,000' depth, early 1909, is between the Kennedy and Southern shafts, and is planned to replace the Kennedy as the main working shaft of the mine. The Milne shaft is vertical, and will obviate considerable crosscutting and long trams.

The Southern shaft probably will be abandoned, and the ground tributary thereto developed from the new Milne shaft.

The Palmer shaft is a considerable producer, showing good ore, and has a good hoisting plant, installed 1906.

The Reed's Creek mine has a fissure vein in granite, similar to that of the Mt. Perry, and is extensively developed, but the shafts are small and poorly located for modern mining requirements.

The Normanby mine, 240 acres, freehold, on the other side of the mountain from the Mount Perry, formerly held under option, is now owned outright. The Normanby shows a vein paralleling the Mount Perry, with ore of a similar nature, averaging circa 13% copper and 10 to 15 dwts. gold per ton. The main shaft, on the southern part of the property, 352' deep, is in a vein of about 12" average width, carrying ore averaging circa 12% copper, 6 oz. silver and 10 dwts. gold per long ton. The Normanby mine was producing about 400 tons of ore monthly, at end of 1907.

The Great Freehold mine, area 811 acres, has a nearly vertical fissure vein, in granite, averaging 5' width, with an 18" paystreak carrying chalcopyrite averaging circa 14% copper, with fair gold and silver values, developed by a 200' main shaft. Apparently this mine is idle.

In addition to the mines of the Mt. Perry district, the company holds the Greenback, Potosi and Wolca mines, in the Wolca district, northeast of Mt. Perry, and the New Moonta, Edena and Boolboonda mines, in the Boolboonda district, northeast of the Wolca district. The veins of these latter properties are narrow, but persistent, and carry high-grade auriferous and argentiferous copper ores.

The New Moonta mine, at Boolboonda, 12 miles northeast of Mount Perry, is a new mine having a 121' shaft, from which circa 2,000 long tons of high grade ore were extracted, 1905, and gives promise of holding good ore values to depth.

The smelter, at Mount Perry, built 1902, has 40-ton and 90-ton water-jacket blast-furnaces, and a reverberatory furnace, with a 120' smokestack. The smelter is connected with the principal mines by a tram-line, and does custom smelting.

Production, for fiscal years, has been as follows: 10,388 long tons of ore, about 25% of which was custom ore, yielding 2,952,320 lbs. fine copper, 74,395 oz. silver and 2,055 oz. gold in 1905; 3,857,280 lbs. fine copper, 9,355 oz. silver and 2,201 oz. gold in 1906; 4,575,648 lbs. fine copper, 105,761 oz. silver and 3,341 oz. gold, from 17,944 long tons ore smelted, in 1907, showing an average extraction of about 11.4% copper from all ores treated, including custom ores. Costs, 1907, were £70 14s. 8d. per long ton of copper, in the form of matte.

The company's properties have proven somewhat disappointing as a whole, possibly because the hopes originally entertained were based upon an imperfect understanding of the circumstances, but the management very wisely continued vigorous development work during the era of high prices, hence

was not caught unprepared by the slump of 1907. Property considered valuable and management good.

#### **QUEENSLAND COPPER FREEHOLDS, LTD.**

**AUSTRALIA.**

Office: 2 Broad St. Place, London, E. C., Eng. Mine office: Cloncurry, Beaconsfield Co., Queensland, Australia. T. G. Scott, chairman; Alex Hill & Stewart, consulting and managing engineers; C. D. Comrie, secretary. Organized Jan. 31, 1907, under laws of Great Britain, with capitalization £300,000, shares £1 par; issued, £250,000. Owns a third interest in the Mountain Home Copper Co., Ltd. Lands, 378 acres, freehold, circa 90 miles north of Cloncurry, in 8 groups, including the Malbon and Argylla, former having a 25' shaft showing cuprite, azurite, malachite and chalcocite. Presumably idle.

#### **QUEENSLAND MINES EXPLORATION CO.**

**AUSTRALIA.**

Dead. Formerly at Mt. Perry, Bowen Co., Queensland, Australia.

#### **QUEENSLAND SMELTING CO., LTD.**

**AUSTRALIA.**

Office: Dashwood House, London, E. C., Eng. Works office: Aldershot, Cook Co., Queensland, Australia. Chas. Poston, chairman; Jas. Lewis, secretary; T. Rowe and E. P. Landon, trustees for debenture holders. Organized Jan. 3, 1899, under laws of Great Britain, as reconstruction of a company of same name organized 1888, with capitalization £50,000, in £30,000 cumulative 5% preference shares and £20,000 ordinary shares; issued, £38,630. Debentures, £65,000 authorized, £43,800 issued, in £100 bonds, at 5%. Paid a 5% dividend, on preference shares, 1903. Last published accounts, 1904, showed profits of £3,105. Property is 1,168 acres, freehold, with a smelting plant having furnaces for reduction of copper, gold, silver and lead ores.

#### **QUEEN VICTORIA MINE.**

**BRITISH COLUMBIA.**

Letter returned unclaimed from former mine office, Nelson, Kootenay district, B. C. Lands, at Beasley Siding, 7 miles from Nelson, show a big bluff of ore, claimed to be 300' wide and 400' long, with rhyolite walls, carrying copper ore of low average tenor, with small silver and gold values, and a little nickel. Mine, worked opencast, is estimated to have 200,000 tons of ore in sight, said to assay 5 to 7% copper, but probably averaging 2 to 4% copper and 1 oz. silver per ton, with small gold values. Has a tramway and rail connection, and made, 1907, considerable shipments to the Trail smelter. Is a property of considerable promise, owing to immense size of ore body, though low in copper tenor.

#### **COMPÀNIA EXPLOTADORA DE LA MINA DE COBRE QUILLILLA.**

**MEXICO.**

Office: Seranton, Pa. Mine office: Ameca, Jalisco, Mex. Chas. S. Weston, president; John W. Fowler, secretary and treasurer; Independence Grove, general manager; Felix Orozco, superintendent. Lands, 50 pertenencias, area 123 acres, showing 2 fissure veins in porphyry, of which one, of 4' to 6' average width has 5 shafts, of 40' to 190', and 5 tunnels, longest 460', with about 1,500' of workings. Ores give average assays of about 9% copper, 10 to 25 oz. silver and \$3 gold per ton.

#### **QUINCY & ARIZONA DEVELOPMENT CO.**

**ARIZONA.**

Dead. Formerly at Bisbee, Cochise Co., Ariz. Described Vol. IV.

#### **QUINCY MINING CO.**

**MICHIGAN.**

Office: 1000-32 Broadway, New York, N. Y. Mine and works office: Hancock, Houghton Co., Mich. Employs circa 1,800 men. Wm. R. Todd, president; Walter P. Bliss, vice-president; preceding officers, Cleveland H. Dodge, Jas. L. Bishop, Chas. J. Devereaux, Isaac H. Meserve, Daniel T. Brigham, Wm. M. Belcher and Otto Kirchner, directors; W. A. O. Paul, secretary and treasurer; Chas. L. Lawton, superintendent; Jas. W. Shields, mill superintendent; Alex Laist, smelter superintendent; Thos. Whittle, chief

mining captain; Chas. K. Hitchcock, engineer; M. J. McLain, clerk; E. R. Lynch, assistant clerk; H. M. Tompkins, smelter clerk.

Organized March 30, 1848, under special charter from the state of Michigan, with capitalization \$500,000, for a period of 30 years; reincorporated, March 6, 1878, under laws of Michigan for a second period of 30 years, with capitalization \$1,000,000, shares \$25 par, increased later to \$1,250,000, and again increased, Apr. 16, 1897, to \$2,500,000; reincorporated, 1908, under laws of Michigan, for a third term of 30 years, with capitalization \$3,750,000; issued, \$2,750,000. Old Colony Trust Co., Boston, transfer agent. Shares are listed on the Boston stock exchange.

The Quincy paid its first dividend in 1862, and profits have been disbursed to shareholders in every succeeding year, except 1866 and 1867, giving the company a continuous dividend record of more than 40 years, from 1868, rendering it the oldest dividend paying American copper mine, and, among the copper mines of the world, the second oldest dividend payer, being preceded only by the Tharsis Sulphur & Copper Co., Ltd., which has a record of continuous dividends since 1867, or one year longer than the Quincy's record. Recent dividends, by years, have been as follows: \$550,000 in 1903; \$500,000 in 1904; \$600,000 in 1905; \$1,250,000 in 1906; \$1,350,000 in 1907; \$495,000 in 1908. Dividends for 1908 were \$1.50 for the first quarter, and \$1 each for the three remaining quarters of the year. The new stock issue, of 10,000 shares, was sold to stockholders, at \$70 per share. The company has paid total dividends, to end of 1908, of \$18,450,000.

The following table shows statistics of production, costs, etc., 1864-1905:

Year.	Product. Pounds.	Yield fine copper per fathom broken. Pounds.	Price obtained. Cents.	Cost per pound exclu- sive of con- struction. Cents.	Number of miners.	Average monthly contract wages.
1864.....	2,498,574	562	44.8	26.7	242	\$65.50
1865.....	2,720,980	501	....	....	212	57.53

Lands are very extensive, the Quincy, by virtue of recent purchases, now owning the Pewabic lode, and a number of parallel cupiferous beds, from the Hancock mine, on the northern shore of Portage Lake, to the Franklin Junior mine, or about half way from Hancock to Calumet. The holdings of the Quincy now include lands formerly held by the Quincy, Pewabic, Franklin, Mesnard, Pontiac and St. Mary's companies, in order named, from south to north.

The Quincy mine is opened on the Pewabic amygdaloidal bed, having a strike of circa N. 30° E., with an average dip of 52° to 54° at surface, and a dip of approximately 37° 30' at a depth of more than one mile, in the lowest workings, the shafts following the pitch of the lode, on catenary curves. The bed averages about 20' width, in the upper workings, but is materially narrower at the bottom, with decreased copper values, the rock showing very little heavy copper in the lower stopes, but being more uniform in value than above. The Pewabic lode has an extreme width of 40', at various points, but is only 10' to 15' wide in the upper workings of the Mesnard shaft. In the Ninth Decade of the Nineteenth Century about 40% of the production was heavy copper, but this decreased to 9% in 1905. In the upper levels immense masses of native copper were found frequently, these ranging up to 300 tons in weight. Practically the entire bed is now mined, walls being strong and requiring little timbering. Dry-walls are built of waste rock, in wide stopes, saving the cost of hoisting and the expense of extra timbering. Fire-doors have been installed, and every precaution is taken against fire. Miners are carried to and from their work in man-cars holding 30 men, and hoisting cables are inspected frequently, with every care taken to prevent accidents. Shafts are sunk mainly in the footwall, obviating the necessity of leaving large quantities of payable stamp-rock in pillars. The southernmost drifts of the Quincy are under the city of Hancock, and about 3,000' below mean water datum of Portage Lake, while the northernmost workings, at No. 9 shaft, are fully two miles from the southern breasts.

In addition to the Pewabic amygdaloid, there is a footwall branch, known as the Pewabic East Lode, underlying and paralleling the main bed, which occasionally yields good returns. The mine was opened, 1848, on the Quincy amygdaloid, a parallel bed lying some distance west of the Pewabic bed, which was abandoned, 1856, when the Pewabic was opened. The so-called West Lode, circa 300' west of the Pewabic bed, has been opened from shafts Nos. 4 and 7 by cross-ents on the 30th, 39th, 40th, 44th and 49th levels, and considerable stamp-rock has been extracted therefrom. About 150' west of the West Lode is another amygdaloidal bed, averaging 40' in width, and carrying more or less copper, which possibly may prove workable at some
